Reg. No. 434,158. Registered Nov. 11, 1947. WEYMOUTH ART LEATHER COMPANY, South Braintree, Mass., a corporation of Massachusetts. Republished by registrant.

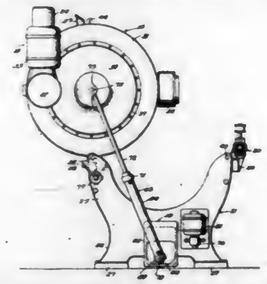
WEYMOLITE

FOR COATED CLOTH RESEMBLING ARTIFICIAL LEATHER.

Claims use since Jan. 2, 1946.

REISSUES

DECEMBER 21, 1948



23,065

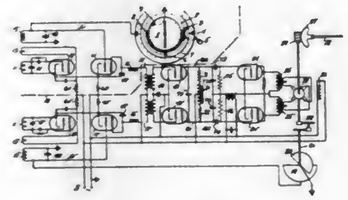
WASHING MACHINE WITH PIVOTALLY SUPPORTED OUTER AND INNER SHELLS AND POWER MEANS ON THE OUTER SHELL FOR ROTATING THE INNER SHELL

Hubert C. Ellis, Evanston, Ill., assignor to The Ellis Drier Co., Chicago, Ill., a corporation of Illinois

Original No. 2,436,883, dated March 2, 1948, Serial No. 565,234, November 27, 1944. Application for reissue October 8, 1948, Serial No. 53,402

16 Claims. (Cl. 68—140)

1. A washing machine of the character described, comprising a supporting structure, an outer shell having an access opening therein and provided with means whereby it is mounted on the supporting structure so that it is capable of being moved bodily back and forth between a normal operating position wherein the access opening faces upwards and a discharging position wherein the access opening faces downwards, an inner shell within the outer shell provided with a door closed access opening, adapted to hold the articles to be washed and supported so that it is rotatable relatively to the outer shell, and power mechanism for rotating the inner shell, mounted entirely on, and movable bodily with, said outer shell.



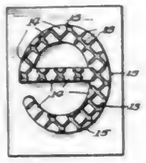
23,066

ELECTRICAL CONTROL SYSTEM

Francis L. Moseley, Chevy Chase, Md., assignor to The Sperry Corporation, a corporation of Delaware

Original No. 2,126,910, dated August 16, 1938, Serial No. 27,471, June 20, 1935. Application for reissue July 23, 1940, Serial No. 347,045

23 Claims. (Cl. 318—489)

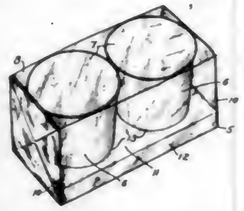


22. An automatic control system for dirigible craft comprising a control surface, a servomotor for operating said surface, a reference device for providing a reference for craft attitude control about a given axis thereof, means for producing a unidirectional signal voltage proportional to displacement of said craft about said axis relative to said reference, a series connected resistance-capacitance circuit to which said signal voltage is applied, said circuit having such values of resistance and capacitance as to develop a voltage across said resistance substantially proportional to a first time derivative of the signal voltage supplied thereto, amplifier means having its output connected in controlling relation to said servomotor, and means connecting said resistance in circuit with said amplifier means to supply the derivative voltage developed across said resistance in controlling relation to said amplifier means.

PATENTS

GRANTED DECEMBER 21, 1948

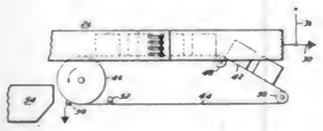
2,456,608
TYPE FOR GRAVURE PRINTING
Harley C. Alger, Chicago, Ill.
Substituted for application Serial No. 69,005, March 16, 1936. This application October 24, 1942, Serial No. 463,232
2 Claims. (Cl. 101—399)



1. A relief type member having a flat printing surface consisting of continuous peripheral walls and a plurality of protuberances more or less uniformly distributed throughout the area bounded by said walls, each protuberance being on the order of from one one-hundredth to two one-hundredths of an inch in width and being separated from adjacent protuberances by a groove substantially narrower than the minimum printing surface dimension of the protuberance, said groove being narrowed and pointed at the ends near the periphery of the member and said walls being substantially thinner than said dimension said flat printing surface being adapted to transfer ink from its walls and protuberances while printing and to leave bare the areas corresponding to said grooves.

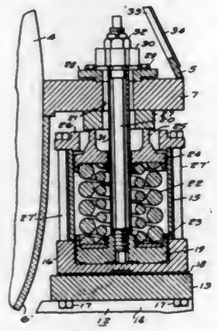
2,456,609
WELDING ELECTRODES
William Andrews, Gateshead-on-Tyne, England, assignor to Metal and Thermit Corporation, New York, N. Y.
No Drawing. Application January 18, 1946, Serial No. 642,117. In Great Britain February 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 14, 1964
10 Claims. (Cl. 219—8)

1. A flux-coated non-ferrous welding electrode for welding non-ferrous metals such as aluminum, copper, nickel, alloys of the foregoing, and nickel-chromium stainless steel, in which the flux coating is made from (1) 15 to 35% by weight of a paste hereinafter described and (2) the balance a mixture of halides of lithium, sodium, potassium, and magnesium, said halides being selected from the class consisting of chlorides and fluorides, said paste comprising 15 to 25% by weight of water, 35 to 45% by weight of sodium chloride, and 30 to 40% by weight of a synthetic colloidal cryolite obtained by the double decomposition of aluminum chloride and a fluoride of an alkali metal selected from the class consisting of sodium and lithium in the presence of water, the amounts of the paste ingredients being based upon the paste, and said flux coating having been dried on the electrode.



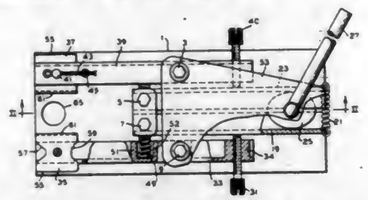
2,456,610
PACKAGE ASSEMBLY
James A. Baker, Shorewood, Wis., assignor to Milprint, Inc., Milwaukee, Wis., a corporation of Delaware
Application July 2, 1945, Serial No. 602,821
4 Claims. (Cl. 206—45.33)

2. A package assembly comprising, a unitary cardboard blank having a base provided with



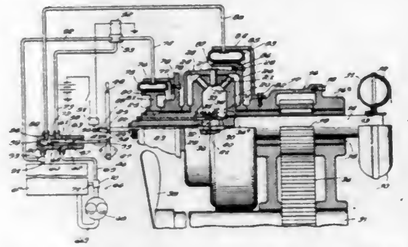
hingedly connected opposite end walls and with a deck having one edge hingedly connected to the adjacent edge of said base by a spacer wall and provided along its opposite edge with a spacer flap, said deck having therein receptacle positioning openings and said blank being foldable to cause said spacer wall and flap to position said deck a definite distance above said base and said end walls being thereafter foldable upwardly against the opposite ends of the deck, receptacles having their lower ends resting directly upon said base and confined within said deck openings while their upper ends lie substantially flush with the upper edges of said walls, and a transparent wrapper coacting with said base and walls and with the tops of said receptacles to provide a prismatic enclosure for the receptacles.

2,456,611
HIGH-FREQUENCY DIELECTRIC HEATING APPARATUS
Robert M. Baker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 28, 1944, Serial No. 556,141
1 Claim. (Cl. 219—47)



Dielectric heating apparatus for the high-frequency heating of dielectric material, comprising, in combination, high frequency power generating and transmitting means comprising a plurality of spaced substantially parallel elongated upstanding plate-like conductors and connections to said conductors for providing a standing-wave voltage pattern lengthwise thereon during operation of said means, said pattern having a pair of spaced points at substantially ground potential, and conveyor means having a material-carrying run having a horizontal portion arranged to move said material horizontally lengthwise between said conductors, and portions at the ends of said horizontal portion arranged to carry the material into and out of the space between said conductors substantially at said points.

2,456,612
DYNAMOELECTRIC MACHINE
René A. Baudry, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 19, 1947, Serial No. 755,697
6 Claims. (Cl. 171—252)

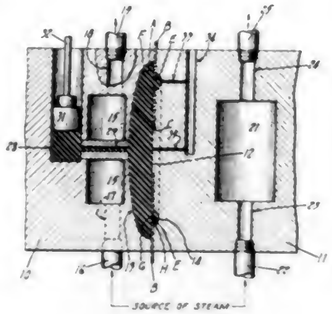


1. A dynamo-electric machine having a stator member and a rotor member, stationary supporting means for said machine, spring means for mounting the stator member on said supporting means to permit limited movement of the stator member relative to the supporting means, and guide means for restricting movement of the stator member to rotary movement.

2,456,613
QUICKLY ADJUSTABLE CLAMPING VISE
Anthony A. Archambault, Canton, Mass.
Application July 13, 1945, Serial No. 604,948
3 Claims. (Cl. 81—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

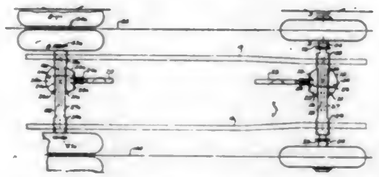
1. An adjustable vise comprising a base, a pair of jaws, means for operating said jaws toward and away from each other comprising a pair of levers disposed substantially parallel to each other and pivoted at one end to said base, a cam disposed between said levers for swinging said levers in opposite directions when said cam is rotated, a tension spring connected between the unpivoted ends of said levers whereby said levers are maintained in contact with said cam, a pair of members on which said jaws are mounted, said members being pivotally mounted on said base and disposed substantially parallel to and oppositely of said levers, said members being operated by said levers to open and close said jaws, means for continuous adjustment of the angular relation of said members with respect to said levers, and a pair of springs adapted to maintain said members in engagement with said levers through said last mentioned means.

2,456,614
MARINE REVERSING GEAR
Oscar H. Banker, Evanston, Ill., assignor to New Products Corporation, Chicago, Ill., a corporation of Delaware
Application September 30, 1943, Serial No. 504,385
7 Claims. (Cl. 74—297)



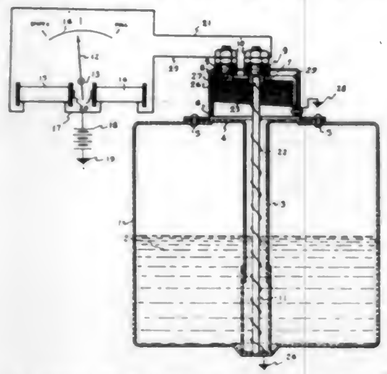
1. In a drive mechanism, in combination, a drive shaft, a driven shaft, and means drivingly connecting said shafts for rotation of said driven shaft in opposite directions from the drive shaft comprising a first gear journaled on said drive shaft, a second gear mounted on said drive shaft to rotate therewith, a planet gear having opposite sides engaging said gears, a carrier for said planet gear rotatably mounted with respect to said drive shaft, means including engageable clutch parts for drivingly engaging said drive shaft and said first gear to rotate said driven shaft in one direction, means responsive to separation of said clutch parts for stopping rotation of said drive and driven shafts, brake means appliable to constrain rotation of the carrier and thereby condition the driving means for rotating the driven shaft in the opposite direction, and means responsive to further separation of said clutch parts for applying said brake means.

2,456,615
METHOD OF MAKING VENT VALVES FOR CONTAINERS
Ralph M. Berglund, Seattle, Wash., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application August 23, 1944, Serial No. 550,744
3 Claims. (Cl. 18—59)



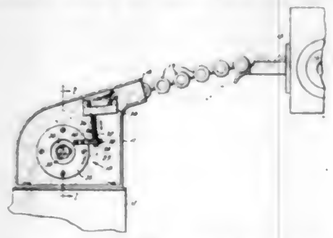
1. The method of molding and securing a member composed of yieldable material in position on opposite sides of a perforated can part having a vent opening therein to form a vent valve therefore, comprising interposing said can part between die members having opposed recesses therein communicating through the perforation in the can part, said recesses together corresponding in shape to the configuration of the completed vent valve, then forcing a yieldable extrudable material against said can part to fill the recess in one die member and thence through the can part perforation into the recess of the other die member to fill the recess therein and thus complete the molded formation of the valve member on opposite sides of the can part to cover the

vent opening in the latter, heating said die members during the described operations to facilitate the molding into shape and securing of the valve member to the can part, and then conditioning said member by deforming the can part adjacent



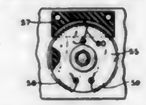
the vent opening so that the valve member will yield under a predetermined gas pressure to permit escape of such gas through the can end vent opening after said end has been secured to a can body filled with a gas generating product.

2,456,616
INTERCHANGEABLE FRONT AND REAR DRIVE AXLE
Lawrence R. Buckendale, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Original application January 6, 1943, Serial No. 471,494. Divided and this application March 19, 1945, Serial No. 583,548
4 Claims. (Cl. 180—71)



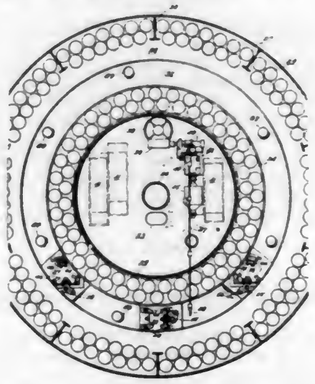
1. An interchangeable front and rear drive axle housing structure for a vehicle comprising an intermediate enlarged differential receiving portion and hollow axle housing arms extending in opposite directions from said differential receiving portion, a drive wheel assembly attachment flange at the outer end of each axle housing arm, said flanges being equidistant from the longitudinal vehicle center line, means for adapting said axle housing structure for interchangeable use as a front steer drive or rear non-steer drive axle housing without rotation of said housing structure in any direction, comprising substantially identical and parallel bolting faces surrounding aligned front and rear openings in said differential receiving portion for attachment thereto of a differential gear carrier or a closure bowl depending on whether the axle housing is used front or rear, and spring seats on the upper sides of said axle housing arms between said differential receiving portion and said attachment flanges, said spring seats having means for locating spring attachment means at different distances apart on the housing depending upon whether the axle housing is used for a front or rear drive axle.

2,456,617
LIQUID LEVEL INDICATOR
Lyndon W. Burch, Detroit, Mich.
Application July 30, 1943, Serial No. 496,697
5 Claims. (Cl. 73—304)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. A liquid level indicator comprising, in combination with a receptacle, a cap mounted on said receptacle, an insulating rod extending from said cap vertically into said receptacle, a conductor supported along said rod and having a temperature coefficient of resistance, a coil mounted in said cap, two solenoids connected respectively to said conductor and said coil, a movable indicator mounted to be moved by said solenoids, and means for passing current through said conductor, coil and solenoids and connected to said solenoids in a manner to cause them to act oppositely on said indicator.

2,456,618
AMMUNITION BOOSTER CONTROL
Lionel S. Carless, Mountain View, N. J.
Application October 5, 1944, Serial No. 557,349
4 Claims. (Cl. 89—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

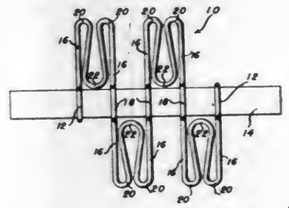


1. A booster for use in feeding a belt of ammunition to a machine gun, said booster comprising a sprocket whereon the belt travels, a motor and means rotative around the motor shaft and operatively connected with the sprocket to operate it so that said motor drives the sprocket enabling it to overrun the motor, a stationary support and bearing means whereby the motor is rotatably mounted in the support, means associated with said support for controlling the motor, said control means including a spring of predetermined loading, and means extending from the bearing means to actuate the spring-equipped control means and being resisted by said spring to normally retain the motor against reactive rotation, whereby, when a torque is applied by the motor to the sprocket for towing the belt a countertorque is set up in the motor and its bearing means, so as to overcome the spring and actuate the control means to cut out the motor whenever a predetermined torque load on the sprocket is reached.

2,456,619
GYROSCOPIC CONTROLLING MEANS
Robert S. Curry, Jr., Baldwin, Arthur W. Lane, Freeport, and Stephen E. Woodbury, Mineola, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application January 19, 1943, Serial No. 472,914
6 Claims. (Cl. 323—75)

5. An electrothermal pick-off comprising a first part having an electrical bridge with an electrically heated resistor having a center tap in a heat conducting quiescent fluid, and a second part movable relative to said first part comprising a heat loss reducing imperforate sheet that in a null position relative to the first part lessens heat loss to the fluid of equal areas of the resistors on the respective sides of the center tap.

2,456,620
AMMUNITION STOWAGE AND HANDLING
George A. Chadwick, Washington Grove, Md., and Philias H. Girouard, Washington, D. C.
Application July 30, 1941, Serial No. 404,676
12 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

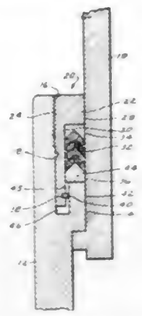


6. A system for stowing and handling large caliber projectiles for guns in rotatable turrets, comprising the combination with a rotatable turret of a plurality of projectile hoists carried by said turret to rotate therewith, a projectile rack disposed around said turret structure at each of two vertically superposed levels, means to secure projectiles individually on said racks, access means in each said hoist at each said level to admit projectiles from said stowage racks into such hoist, and power means to move projectiles between said racks and said hoists.

2,456,621
METHOD OF EXTRUDING POLYTETRAFLUOROETHYLENE AND COATING ARTICLES THEREWITH
Azro Jack Cheney, Jr., Upper Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 17, 1946, Serial No. 691,406
5 Claims. (Cl. 18—59)

5. Method of coating wire with polytetrafluoroethylene comprising prebaking finely divided tetrafluoroethylene polymer at a temperature of 300° C.–500° C., introducing substantially simultaneously said prebaked polymer at a temperature of 200° C.–300° C. and said wire into a die having an internal contour of substantially the size and shape of the desired finished article, and passing said polymer and wire through said die while simultaneously baking said polymer at a temperature above 327° C. but not in excess of 500° C. until sintered, thereby extruding the polymer from the die as a uniform, continuous and flexible coating concentrically surrounding said wire.

2,456,622
TOBACCO CLIP
Reid M. Clark, Stoneville, N. C.
Application March 20, 1946, Serial No. 655,815
1 Claim. (Cl. 294—5.5)



A device of the character described, comprising a clip made from a single strand of wire having end supporting yokes and intermediate supporting yokes and parallel portions having spring loops intermediate said portions extending at right angles from said yokes and formed in parallel planes therewith, but extending in opposed relation to each other on opposite sides of the yokes, and said yokes are made to conform to the support therefor, and said parallel portions are spaced from each other to permit circulation of air about articles suspended thereby.

2,456,623
HYDRAULIC CYLINDER AND PACKING HOLDER
William H. Cooper, Atlanta, Ga.
Application December 3, 1946, Serial No. 713,727
4 Claims. (Cl. 286—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A packing holder which comprises a cylindrical packing housing, an externally threaded portion at the upper end of said housing, a housing bore within said housing adapted to receive a hydraulic ram, a housing counterbore concentric with said housing bore extending upwardly from the underside of the housing adapted to slidably receive a packing consisting of packing rings and packing supporting rings, an annular groove in said housing counterbore considerably below

the lower end of said packing, and a spring snap ring in said annular groove; in combination with a hydraulic cylinder, a cylinder bore in said hydraulic cylinder adapted to slidably receive said hydraulic ram, a cylinder counterbore concentric with said cylinder bore extending downwardly from the upper side of said cylinder adapted to receive said housing, said cylinder counterbore extending to a considerably greater depth than the lower end of said housing, a hollow hub extending upwardly from the lower end of said cylinder counterbore to the underside of said

packing to support said packing, the external diameter of said hub being less than the internal diameter of said snap ring, internal threads at the upper end of said cylinder counterbore adapted to receive the external threads at the upper end of said housing, whereby, when the packing housing is screwed into the cylinder, the packing rings are compressed, and when the packing housing is unscrewed from the cylinder, the packing rings are withdrawn with the housing, and spanner slots for screwing said external housing threads into said internal cylinder threads.

2,456,624

SOLDERING AND TINNING FLUX

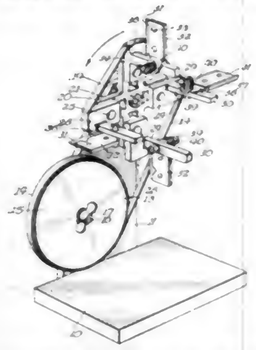
Thomas Brooks Crone, Tacoma, Wash.

No Drawing. Application December 15, 1944, Serial No. 568,401

1 Claim. (Cl. 148—25)

A non-evaporating soldering flux consisting of a saturated solution of metallic zinc in hydrochloric acid containing citronella oil and a saturated solution of sal ammoniac; the volumetric contents of said two saturated solutions being equal and the amount of citronella oil being in the proportion of about 1 ounce to each gallon of the hydrochloric acid solution.

2,456,625



TAPE DISPENSING MECHANISM

Jasper F. Cullin, Detroit, Mich.; Helen A. Cullin administratrix of said Jasper F. Cullin, deceased, assignor, by mesne assignments, to Better Packages, Inc., New York, N. Y., a corporation

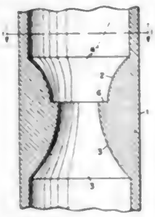
Application September 21, 1942, Serial No. 459,129

9 Claims. (Cl. 164—42)

1. Mechanism for dispensing adhesive tape from a roll comprising a rotatable wheel, means rotatable with the wheel and to which the adhesive face of the tape will adhere, for unwinding the tape from the roll, and a plurality of cutting devices rotatable with the wheel and manually and selectively shiftable for severing a strip from the tape adhering to the wheel, and means whereby the devices may be radially adjusted on the

wheel, for varying the length of the tape between them.

2,456,626



DEVICE FOR THE CONTROL OF FLOW OF FLUIDS

Henry Dahnke, Banning, Calif.

Application May 15, 1945, Serial No. 593,913

3 Claims. (Cl. 138—44)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A fluid flow governor comprising a Venturi tube for automatically restricting the flow of fluid upon increase of velocity of flow, said Venturi tube comprising two separate opposite portions abutting at the throat of the tube and having fluid passageways flaring outwardly from the throat of the tube, the outwardly flaring passageway of one of said portions being of smaller cross-sectional area than the other passageway at the throat of the tube whereby said portions form a right angle annular shoulder in the throat of the tube.

2,456,627

METHOD FOR MAKING POLYSILOXANE RESINS

Charles D. Doyle, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

No Drawing. Application November 21, 1945, Serial No. 630,137

4 Claims. (Cl. 260—46.5)

1. The process of making resinous polysiloxanes which comprises adding a mixture of hydrocarbon chlorosilanes having a hydrocarbon-to-silicon ratio greater than 1 and less than about 1.5 and containing a major portion of methyltrichlorosilane to a hydrolysis medium consisting of water and an ether solvent selected from the class consisting of bis (beta-ethoxyethyl) ether and ethylene glycol diethyl ether at a temperature above room temperature but not exceeding reflux temperatures during at least a major portion of the hydrolysis, the amount of water present in said medium being between 1 and 1.4 times the amount calculated as necessary to convert the chlorosilanes to the corresponding polysiloxanes.

2,456,628

CONDENSATION OF POLYMERIZED FURFURYL ALCOHOL WITH A HYDROXYBENZENE

Andrew P. Dunlop, Riverside, Ill., and Edward A. Reineck, Appleton, Wis., assignors to The Quaker Oats Company, Chicago, Ill., a corporation of New Jersey

No Drawing. Application August 21, 1944, Serial No. 550,491

8 Claims. (Cl. 260—47)

3. The process of producing a new thermosetting resin which consists in mixing resorcinol and a partial condensation-resinification product derived from the condensation of furfuryl alcohol with itself and condensing the aforesaid reactants under the influence of heat until the said resin is formed.

2,456,629

SOLUBLE AND INFUSIBLE SYNTHETIC RESINS AND METHOD OF PRODUCING THE SAME

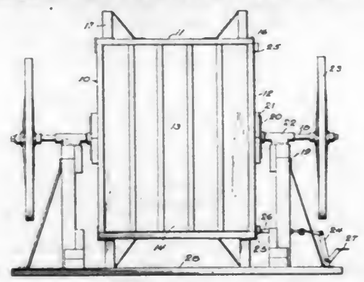
Gilbert B. Gehrenbeck, White Bear Lake, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware

No Drawing. Application January 15, 1942, Serial No. 426,896

6 Claims. (Cl. 260—22)

1. In the preparation of a synthetic resin product, the steps which comprise preparing a tung oil-maleic anhydride adduct, next esterifying said adduct with mannitol, and then reacting sulfuryl chloride with the resulting infusible gelatinous ester.

2,456,630



MILK TURNING MACHINE

John W. Gibler, United States Army, Mattoon, Ill.

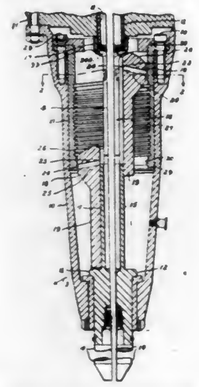
Application October 10, 1945, Serial No. 621,644

5 Claims. (Cl. 259—57)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An inverting device comprising a receptacle adapted to receive a stack of articles, said receptacle having a pair of side walls, a pair of end walls and a back wall, the front of said receptacle being open, means on said side walls for supporting said receptacle in spaced relation from and close to the ground and for swinging said receptacle in an arc of 180°, a base member, and a stop on each of said end walls of said receptacle and extending outwardly therefrom laterally of the plane which is perpendicular to said end walls and which passes through the axis of rotation of said receptacle, to contact said base member upon completion of the swinging movement of said receptacle, whereby said articles may be conjointly inserted into, inverted in, and removed from said receptacle.

2,456,631



PERCUSSION TOOL

Rudolf Goldschmidt, Sheffield, England

Application March 19, 1946, Serial No. 655,632

In Great Britain March 22, 1945

14 Claims. (Cl. 125—33)

1. A percussion tool including a tubular body having a helical groove on its interior surface, an anvil in said body, a striker rotatable within said body and capable of reciprocation along the axis of said body towards and away from said anvil, a motor drivably connected with said striker for maintaining it in rotation, a centrifugal flyweight mounted in said striker so as to be constrained to follow its rotation and reciprocation but free to move at least in part radially under the influence of centrifugal force into engagement with said helical groove, the direction of rotation of said motor and the hand of said helical groove being such that when said flyweight is engaged with said groove said striker is wound away from said anvil, means for reversing the translatory motion of said striker at the end of its stroke away from said anvil, and means for maintaining said flyweight out of said groove during substantially the whole of the stroke of said striker towards said anvil.

2,456,632

EDUCATIONAL DEVICE FOR TEACHING CORRECT PENMANSHIP

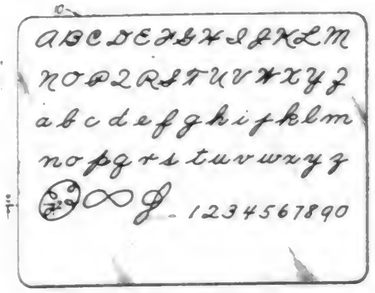
Samuel R. Greenberg, New York, N. Y.

Application September 25, 1945, Serial No. 618,440

4 Claims. (Cl. 35—37)

3. In an educational device for teaching penmanship including a guiding plate having figures in outline form thereon and a writing implement for tracing the figures, the combination of, a plate made of a clear plastic material having a plurality of figures outlined therein by means of grooves, a writing implement, said writing implement having a spherically shaped tracing point, the depth of said grooves being substantially greater than the radius of said spherical tracing point, and the width of said grooves being slightly

greater than the diameter of said tracing point, and opaque material on the under surface of said



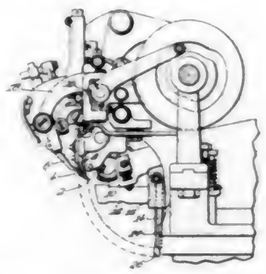


plate outlining the shape of each of the figures on said plate.

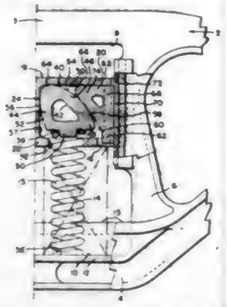
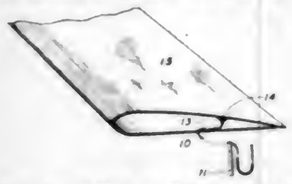
2,456,633
CATALYST PREPARATION
Vladimir Haensel, Clarendon Hills, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application November 29, 1946, Serial No. 713,117
6 Claims. (Cl. 252—250)



1. A process of catalyst manufacture which comprises treating an inorganic oxide carrier material with a solution of a normally solid aromatic hydrocarbon, and subsequently compositing therewith a metal from group 8 of the periodic table.

2,456,634
SHOE INSEAM SEWING MACHINE
Otto R. Haas, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 6, 1947, Serial No. 752,868
3 Claims. (Cl. 112—50)

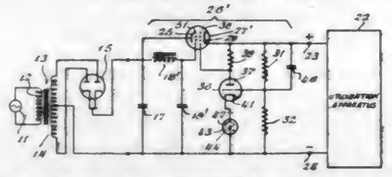


1. A shoe inseam sewing machine having stitch forming devices including a curved hook needle and a needle segment within which the needle is adjustably clamped, a channel guide, mechanism for moving the guide toward and from the work having provision for adjustment to locate the lip of the channel guide transversely to the direction of feed and mechanism for actuating the needle segment to cause the needle to penetrate and retract from the work, in combination with movable gage means arranged to be moved by the operator into a position to indicate the correct relation between the lip of the channel guide and the hook of the needle and to be moved away from said position after the needle and channel guide have been adjusted.

2,456,635
TRUCK
Charles L. Heater, Flossmoor, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Original application August 17, 1945, Serial No. 611,008. Divided and this application January 23, 1947, Serial No. 723,858
17 Claims. (Cl. 105—197)

1. In a railway car truck, a side frame comprising spaced columns, a spring group on said frame, a bolster supported on certain springs of said group, a pocket in said bolster adjacent each column, a friction shoe and bearer member in each pocket, said members being supported on other springs of said group and each presenting arcuate faces on opposite sides thereof merging at one side of the axis of the associated spring, said faces respectively engaging angularly arranged walls of said pocket, and one of said faces additionally engaging a wedge surface on said shoe at the opposite side of the axis of the associated spring, each of said bearer members rotating about its respective points of engagement with said walls under the influence of the associated spring in a direction toward the adjacent column whereby the related shoe is caused to slide on its wedge surface against said one face of the associated member toward the adjacent column for frictional engagement therewith.

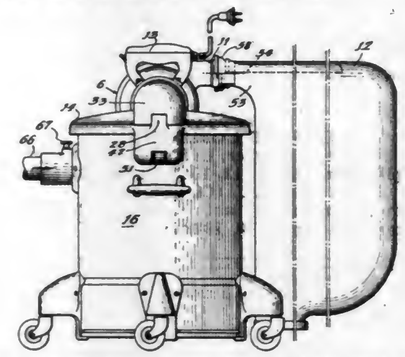
2,456,636
COUPLING ASSEMBLY
Alun R. Jones, Los Altos, and Bonne C. Look, Jr., Palo Alto, Calif.
Application May 1, 1945, Serial No. 591,296
1 Claim. (Cl. 285—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



An adapter providing a fluid connection between a port in a smooth-outersurfaced sheet material covering an airfoil and a conduit inside said airfoil, comprising a body portion of resilient material having a passage therethrough, and a flanged portion on one side thereof in the outer surface of which said passage opens at its one end, said outer surface being adapted for cementing to the inside of said sheet material so as to place said passage in communication with said port whereby the smooth outer surface is maintained free of any obstructions, said body portion having a simple hose-fitting connection at the other end of said passage adapted for attachment to said conduit.

2,456,637
OARLOCK SUPPORT
Cresson H. Kearny, United States Army, New York, N. Y.
Application October 6, 1944, Serial No. 557,541
18 Claims. (Cl. 9—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An oar lock support for a boat comprising rigid supporting members pivotally connected together at one of their ends and connected at their other ends to the boat, and guide members attached to one of said supporting members and adapted to receive a shaft inserted therein.



2,456,638
POWER SUPPLY FILTER AND REGULATOR
David E. Kenyon, Smithtown Branch, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application March 22, 1946, Serial No. 656,199
8 Claims. (Cl. 323—30)

1. Filter and voltage regulator apparatus for receiving a rectified voltage and delivering a filtered and regulated voltage, comprising a filter section having an input capacitor, an output capacitor, and an impedance connected therebetween; a voltage regulator tube having an anode, a cathode, a control electrode and a screen grid; means connecting the junction between said input capacitor and said impedance to the anode of said regulator tube; means connecting the junction between said impedance and said output capacitor to the screen grid of said regulator tube; and means coupled to the cathode of said regulator tube and to said control electrode for applying between said cathode and said control electrode a voltage varying in a predetermined relation to the difference between the voltage across said output capacitor and the voltage drop from anode to cathode of said regulator tube.

2,456,639
VACUUM CLEANER
Clarence W. Lanter, Bartlett, Ill., assignor to Breuer Electric Mfg. Company, Chicago, Ill., a corporation of Illinois
Application November 29, 1946, Serial No. 712,849
7 Claims. (Cl. 183—37)

4. In a vacuum cleaner, a tank having an air inlet, a cover mounted on said tank and formed with an air passageway leading from the interior of said tank to the upper side of the cover, a motor-blower unit having an axial inlet and tangential outlet for the passage of air, a reciprocable clamping jaw provided on said cover to secure the motor-blower unit against displacement and with the axial inlet of the latter in communication with the air passageway provided in the cover, a dirt bag, and a trough-shaped nozzle secured to the tangential outlet of said motor-blower unit to support said dirt bag.

7. In a vacuum cleaner, a cylindrical tank having an air inlet, a cover detachably mounted on said tank and formed with an air passageway leading from adjacent the top center of the tank to the upper side of the cover, a motor-blower unit having an axial inlet and tangential outlet for the passage of air, a stud shaft provided on said cover, a clamping jaw mounted for reciprocable movement along said stud shaft to secure the motor-blower unit against displacement from the cover when the axial inlet of the motor-blower unit is in communication with the air passageway provided in the cover, an air nozzle mounted within the air inlet of said tank to direct a stream of air along the inner wall of the tank, and a pair of latches pivotally mounted on diametrically opposed sides of said cover for engagement with said tank.

2,456,640
ELECTRICAL APPARATUS BUSHING
Leonard J. Linde, Drexel Hill, Nicholas F. Arone, Upper Darby, and Benjamin E. Spiro, Philadelphia, Pa., assignors to General Electric Company, a corporation of New York
Application September 14, 1944, Serial No. 554,100
5 Claims. (Cl. 174—152)

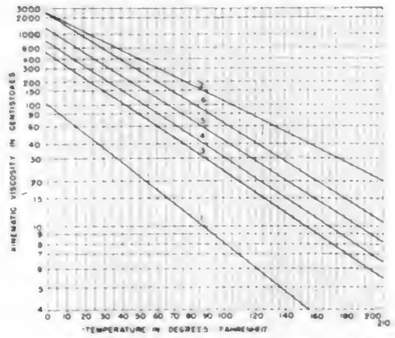
3. A bushing for an electric switch comprising a conducting member, an insulating sleeve having a reduced cross section portion intermediate the ends thereof enclosing a substantial portion of said conducting member, supporting means encircling said sleeve including a pair of flanged semi-cylindrical members cemented to said portion of reduced cross section, a thin walled metal tube surrounding said semi-cylindrical members, and means for causing said tube tightly to grip and reinforce said semi-cylindrical members comprising an annular groove in said semi-cylindrical members and a cooperating deformed portion on said metal tube.

2,456,641

SUGAR CANE WAX REFINING

Elbert S. McLoud, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.

No Drawing. Application July 12, 1946, Serial No. 683,141
5 Claims. (Cl. 260—428.5)



1. A process for removing the resinous fraction from sugar cane wax comprising contacting sugar cane wax from which the soft fraction has been removed with at least four times by weight of a lower alcohol having not more than 3 carbon atoms, heating said mixture sufficiently to put the wax fraction into solution while keeping the alcohol in liquid phase, and separating the resinous fraction from the wax fraction.

2,456,642

GREASE COMPOSITION

Robert L. Merker, United States Navy

Application August 13, 1946, Serial No. 690,195
11 Claims. (Cl. 252—42.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

VISCOSITY CHART FOR BLENDED LUBRICANTS

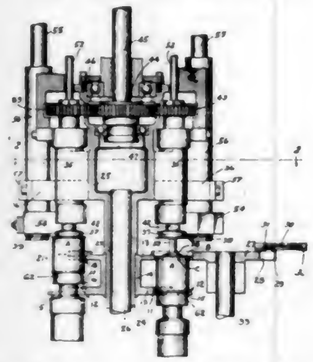
1. A grease composition compatible with the addition of relatively small proportions of polymer thickeners, oxidation, rust and corrosion inhibitors and extreme pressure additives comprising, 5 to 30 parts by weight of a metallic soap and 95 to 70 parts of a fluid blend of between about 5 and about 95 parts by weight of a diester of a dicarboxylic acid and between about 95 and 5 parts by weight of a silicone.

2,456,643

LIGHTWEIGHT MATERIAL AND ITS PREPARATION

Henry Napier, Joliet, Ill., assignor to F. E. Schundler & Co., Inc., Joliet, Ill., a corporation of Illinois

No Drawing. Application June 12, 1943, Serial No. 490,634
9 Claims. (Cl. 106—86)



1. The method of making a material of the character described comprising mixing together in an excess of hot water Portland cement and a quantity of material of the group consisting of bentonite, attapulgite, aluminum hydroxide, precipitate, and asbestos fines sufficient to form a voluminous dispersion substantially to hold the particles of Portland cement in separated condition, agitating the mixture to secure initially a thorough distribution of said particles throughout said dispersion, allowing the mixture to rest, periodically repeating said agitation and rest periods to break up incipient bonding between said Portland cement particles until the particles of cement have substantially completely hydrated and have substantially lost their power to bond with like particles, said material containing some free lime after complete hydration of said Portland cement, molding said material and removing excess water, and then applying heat to cause the lime to form a bond.

2,456,644

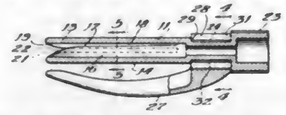
SEAMER FOR FILLED CANS WITH COUNTERSUNK BOTTOMS

Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application July 5, 1945, Serial No. 603,286
2 Claims. (Cl. 113—23)

1. In a can closing machine for sealing a cover onto a filled can having a countersunk bottom end, the combination of a seaming head including a rotatable chuck, a cooperating seaming roller and means for rotating said chuck, a support turret having an opening in alignment with the chuck and a flat can supporting surface surrounding the turret opening and extending outwardly to the turret periphery, said flat surface providing a ledge seat defined by a vertical wall spaced from the edge of said opening and located for receiving and stopping a fed turret-supported filled open can of diameter greater than the turret opening in centered position over the turret opening, said turret opening being of a diameter substantially the same as the diameter of said chuck, and a rotatable lifter plunger disposed within said turret opening in vertically spaced relation to the countersunk bottom of the can supported on said turret ledge seat, said plunger being vertically movable within said turret opening to engage within said countersunk can bottom to lift the filled can from said ledge seat and clamp the can and a superimposed cover against said rotating chuck to cause the can and cover to rotate in sealing engagement with said seaming roller when the latter is moved into sealing engagement with the can cover.

2,456,645



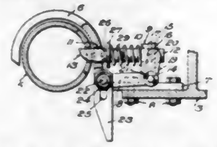
HAIR CURLER

Allan A. Norin and Frank D. Reynolds, Chicago, Ill., assignors to Gaylord Products, Incorporated, Chicago, Ill., a corporation of Delaware

Original application November 24, 1944, Serial No. 564,927. Divided and this application January 24, 1946, Serial No. 643,066
1 Claim. (Cl. 132—34)

A hair curler formed of thermoplastic material, comprising a tubular member having its one

end provided with an enlarged head and its other end formed with diametrically opposed slots extending inwardly toward the enlarged head to provide a pair of opposing fingers, said tubular member being formed with a journal portion of reduced diameter disposed between said enlarged head and the inner ends of said slots, said journal portion being formed with a plurality of spaced longitudinally extending grooves, an arcuate hair confining arm disposed in spaced parallel rota-



tion to the fingers formed on said tubular member, the inner end of said arm being formed with a pair of resilient bearing arms to snugly engage diametrically opposed sides of the journal portion of said tubular member, and a protuberance formed on the free end of one of said bearing arms for engagement in said grooves to yieldably resist relative step-by-step rotational movement of said tubular member and said hair confining arm.

2,456,646

SAFETY DEVICE FOR HOISTS

Julian E. Patterson, Brownfield, Tex.

Application August 12, 1944, Serial No. 549,247
2 Claims. (Cl. 254—89)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

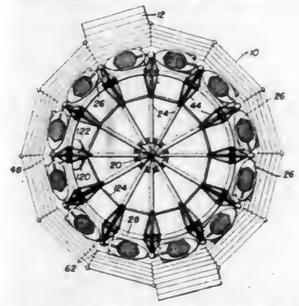
1. In a hoist having a platform, a leg having its upper end pivotally attached thereto on a horizontal axis and adapted to swing by gravity to a vertical position, a bracket attached to said platform at a point thereon spaced from said axis and having a flange engaging said leg to limit upward pivotal movement thereof, a latch member movably mounted on said bracket, a spring arranged to move said latch member into engagement with said leg to hold said leg in locked position adjacent said bracket, a pivotally mounted bell crank lever arranged to move said latch member, and a finger carried by said bell crank lever and extending below said platform for engagement with the ground to retract said latch member when the platform is lowered.

2,456,647

ACRYLIC ESTERS OF OLEFINIC ALCOHOLS AND POLYMERS THEREOF AND METHOD FOR MAKING THEM

Chessie E. Rehberg, Glenside, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application July 15, 1944, Serial No. 545,164
7 Claims. (Cl. 260—79)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



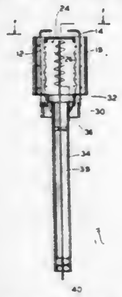
1. The process of preparing an unsaturated resin which comprises copolymerizing an alkenyl acrylate of the formula $CH_2=CHCOOR'$, in which R' is a radical having at least one olefinic double bond and at least four carbon atoms in its open olefinic chain, with a lower alkyl ester of acrylic acid, in the presence of a polymerization regulator taken from the group consisting of mercaptans and carbon tetrachloride, the alkenyl acrylate being present in the proportion of one to five percent of the mixture of lower alkyl acrylate and alkenyl acrylate.

2,456,648

PASSENGER OPERATED ROUNDABOUT

Robert E. Restall, Hamilton, Ontario, Canada

Application November 18, 1946, Serial No. 710,709
9 Claims. (Cl. 272—36)

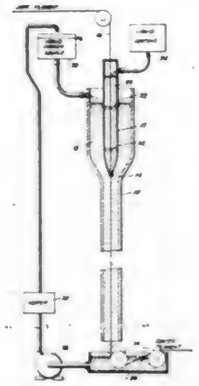


1. In an amusement device having a plurality of supporting arms radially disposed about a vertical axis of rotation and a plurality of passenger cars supported between adjacent arms, in combination, an annular undulating track, supporting wheels adjacent the extremities of said arms and riding on said track, said supporting wheels constituting a power source for effecting rotation of said cars about their longitudinal axes, and passenger operated means for controlling the rotation of said cars.

2,456,649

CATHODE

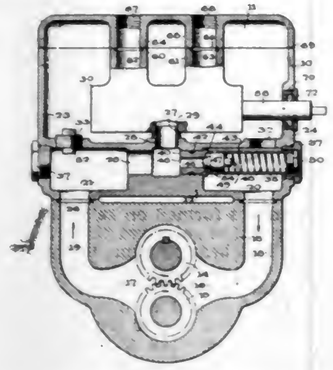
Glenn F. Rouse, Long Branch, N. J.



Application June 12, 1943, Serial No. 490,624
3 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

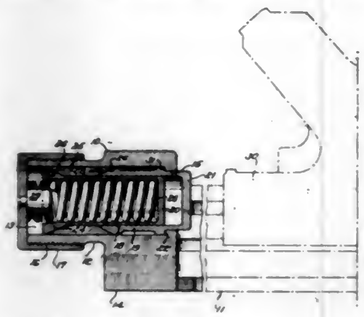
1. A cathode for an electron emission tube, said cathode comprising a piece of wire screen made of high temperature metal bent to cylindrical configuration, and closed at one end by a disc, the opposite end being carried by a tubular lead-in of substantial diameter coaxial with the cathode, a heater filament inside said cathode, a lead-in wire for said heater filament passing coaxially

through the aforesaid tubular lead-in, and a coating of metal oxide electron emissive material applied in varying thickness to the aforesaid cylindrical screen.



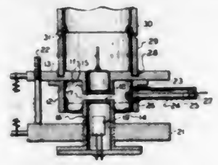
2,456,650
METHOD OF COATING FILAMENTS
Albert O. Ryan, Oradell, N. J., assignor to Redding Manufacturing Company, Inc., Norwalk, Conn., a corporation of Delaware
Application October 20, 1944, Serial No. 559,497
6 Claims. (Cl. 117—115)

1. The method of forming a coated filament which comprises causing a stream of a confining and supporting liquid to flow through a confining space at such a speed that the liquid flows through said space under conditions of viscous flow, discharging under pressure a continuous annular stream of a solidifiable liquid coating material about a continuous axially moving filament, introducing the moving filament and surrounding liquid coating material into the center of said viscously flowing confining liquid stream at substantially the same speed and in the same direction as the center of said stream, continuing the movement of said filament and surrounding coating liquid along with said stream of viscously flowing confining liquid at substantially the same speed while causing the coating material to solidify, whereby said stream of viscously flowing confining liquid supports and holds the liquid coating material in shape during movement thereof through said space, and then withdrawing the filament and the surrounding solidified coating material from said confining liquid in the form of a coated filament.



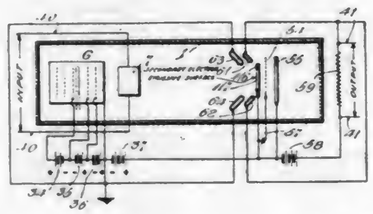
2,456,651
TANK UNIT WITH SUBMERGED VALVE AND EXTERNAL PUMP
Herbert H. Schmiel, Cleveland, Ohio, assignor to Hydraulic Equipment Company, Cleveland, Ohio, a corporation of Ohio
Application October 11, 1946, Serial No. 702,603
21 Claims. (Cl. 60—52)

13. In a pump, valve and tank package unit, in combination, a cast metal tank having a removable side wall, a chamber cast integral with the bottom wall and having a port facing said side wall, a pump mounted on the outer side of the bottom wall and having an inlet passage extending through said bottom wall and a discharge passage extending through said bottom wall and into said chamber, a control valve housing mounted on said removable side wall and having a "hoist" port, a waste discharge opening into the tank and an inlet port positioned to be registered with said chamber port when the wall is secured to the tank.



19. A reservoir for a hydraulic hoist system comprising an open sided tank, means for attaching a pump to the outer surface of a wall of said tank, a cover for the open side of said tank, a control valve housing attached to said cover and having a port opening therethrough, a port in said tank connected to the pump discharge, a port in said housing for the valve inlet, said last mentioned two ports being so positioned that they register when the cover is applied to the tank.

2,456,652
BUFFER MECHANISM FOR FIREARMS
Clarence E. Simpson, Springfield, Mass., assignor to the United States of America as represented by the Secretary of War
Application April 8, 1947, Serial No. 740,035
5 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



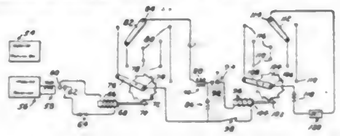
5. In a firearm having a reciprocating breech member, a buffer mechanism comprising, a housing having a longitudinal bore therethrough, a stepped shoulder in said bore, a first tube having a closed end slidably mounted in said bore, said first tube constructed and arranged to abut said shoulder while said closed end projects forwardly out of said housing, said first tube having a conically chamfered open end, a second tube having a closed end, said second tube having an annular conical ring disposed about the open end thereof, said second tube being slidably mounted within said first tube with said closed end adjacent said closed end of said first tube, a split sleeve surrounding said second tube, said sleeve having an inwardly tapered edge on each end being engaged on one end by said conical end of said first tube and by said ring of said second tube on the other end thereof, a helical spring inserted in said second tube, a cap member secured to said housing to retain said spring in said second tube, said spring being provided to resist rearward movement of said sleeve on impact of the breech member with said closed end of said first tube to permit expansion of said sleeve to transmit the recoil energy of the breech member to the bore of said housing and to return said tubes and sleeve forwardly as the breech member returns to battery position.

2,456,653
SEAL FOR HIGH-FREQUENCY TRANSMISSION LINES
Donald L. Snow, Hempstead, and William W. Hansen, Garden City, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application December 10, 1942, Serial No. 468,603
3 Claims. (Cl. 174—28)

2. In an efficient high frequency transmission line, two conductors made of nickel-cobalt-iron alloy, a sealing body of glass between said conductors, said alloy having the same low thermal coefficient of thermal expansion as said glass, and a degasified coating of copper between each of said conductors and the glass body.

2,456,654
SECONDARY ELECTRON EMISSION TUBE
Walter Soller, Cincinnati, Ohio, assignor of one-half to William H. Woodin, Jr., San Mateo, Calif.
Original application August 19, 1943, Serial No. 499,260. Divided and this application August 29, 1944, Serial No. 551,689
6 Claims. (Cl. 250—27)

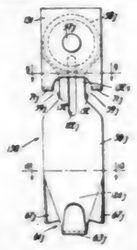
1. An electron discharge system comprising an electron discharge device for propagating an electron beam, means for shaping said beam into substantially rectangular section, means for controlling the angular sweep of said electron beam, a plate system disposed in the path of said electron beam comprising a plate electrode containing a substantially rectangular slot for the passage of said electron beam in central position a secondary electron emitting coating carried by said plate electrode throughout the area surrounding the slot therein, a grid electrode disposed rearwardly of said plate electrode and maintained at negative potential with respect to the aforesaid plate electrode, a plate electrode disposed behind the aforesaid grid electrode and maintained at positive potential with respect to said grid electrode, secondary electron collecting plates disposed adjacent said first mentioned plate electrode, an output circuit including said secondary electron collecting plates and said plate system and activated whenever said electron beam is diverted from a central position passing through the slot in said plate electrode.



2,456,655
WAX PRODUCTION
Oscar J. Swenson, Ithaca, N. Y., assignor to Colonial Sugars Company, New York, N. Y., a corporation of New Jersey, and S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin
Application July 12, 1946, Serial No. 683,136
12 Claims. (Cl. 260—428.5)

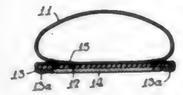
1. A process for separating crude cane wax into various fractions comprising contacting molten crude sugar cane wax with a fat solvent selected from the group consisting of acetone, methylethylketone, ethyl ether, pentane, hexane and heptane in liquid phase to form a hot wax solution, the ratio of fat solvent per pound of crude wax being from about 0.1 to about 0.7, contacting said wax solution with a solvent-wax slurry in which the solvent is selected from the group consisting of acetone, methylethylketone, ethyl ether, pentane, hexane and heptane and the ratio of solvent to wax being at least 4 to 1 by weight, at a temperature at which the hard fraction precipitates from said solution, separating the soluble portion from the precipitate in said solution, reslurrying said precipitate by contacting with a fat solvent selected from the group consisting of acetone, methylethylketone, ethyl ether, pentane, hexane and heptane, heating said slurry sufficiently to put the solids into solution while keeping said solvent in liquid phase, and separating the wax fraction from the resinous fraction.

2,456,656
WAX PRODUCTION
Oscar J. Swenson, Ithaca, N. Y., assignor to Colonial Sugars Company, New York, N. Y., a corporation of New Jersey, and S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin
Application July 12, 1946, Serial No. 683,137
12 Claims. (Cl. 260—428.5)



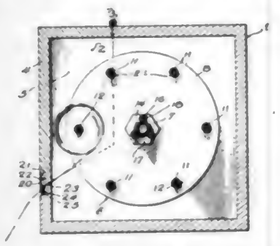
1. A process for recovering a hard wax fraction from crude sugar cane wax comprising contacting molten crude sugar cane wax with a fat solvent selected from the group consisting of acetone, methylethylketone, ethyl ether, pentane, hexane and heptane in liquid phase to form a hot wax solution, the ratio of fat solvent per pound of crude wax being from about 0.1 to about 0.7, contacting said wax solution with a solvent-wax slurry in which the solvent is selected from the group consisting of acetone, methylethylketone, ethyl ether, pentane, hexane and heptane and the ratio of solvent to wax being at least 4:1 by weight, at a temperature at which the hard fraction precipitates from said solution, and recovering the hard wax fraction.

2,456,657
EXPLOSIVE LAND MINE
Hale F. Vagts, San Jose, Calif.
Application December 19, 1944, Serial No. 568,906
1 Claim. (Cl. 102—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



In an explosive mine having a main charge, an electric circuit comprising an electric detonator for exploding said main charge, a battery connected to the detonator for exploding the same, and switch means in said circuit for closing the same thereby actuating said detonator, said switch means comprising a pair of terminals, the first terminal connected to a pivot, a manually operable contact arm rotatably mounted on said pivot and electrically connected thereto, a plurality of spaced contact points disposed along the arc of a circle traversed by the outer end of said contact arm, said contact arm being rotatably adapted to touch any selected contact point, a second pivot electrically connected to the second terminal of said switch means, a second contact arm rotatably mounted on said second pivot and electrically connected thereto, a second plurality of spaced contact points disposed along the arc of the circle traversed by the outer extremity of said second contact arm and equal in number to the first plurality of contact points, corresponding contact points in said first and second pluralities of points being connected together in pairs, electromagnetic means engaging said second pivot for stepwise unidirectional rotation, a source of electric potential for energizing said electromagnetic means for a single impulse, and pressure operated switch means for closing the circuit to said electromagnetic means.

2,456,658
CLOTHESLINE HOLDER
John Waldheim, Elizabeth, N. J.
Original application December 5, 1938, Serial No. 243,955. Divided and this application January 5, 1944, Serial No. 517,288
22 Claims. (Cl. 211—119.02)



4. In a holder for a pulley clothes line having a plurality of travelling reaches, the combination of a body part, means to grip one of the reaches to cause the holder to travel therewith, and transit means on said holder to travel on another one of said reaches, the gripping means comprising a single member on the body part to engage one side of the associated reach, and two members on the body part to engage the opposite side of said associated reach to form with the first mentioned member a bight in the reach, the three members extending to the same side of the body part and being disposed with reference to the body part to form a gap at one side of the holder through which said associated reach may be passed to or from the gripping means.

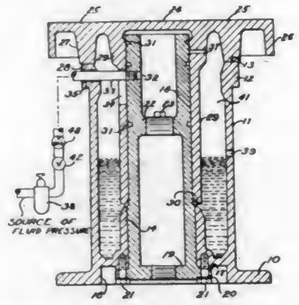
2,456,659
LAMINATED MIDSOLE AND OUTSOLE CONSTRUCTION
William Weidner, New York, N. Y.
Application February 20, 1947, Serial No. 729,695
1 Claim. (Cl. 36—30)

A laminated shoe sole construction comprising a mid sole, a stripping of rubber-like material engaging about the marginal edge of said midsole and extending over the bottom surface thereof so as to form the outmarginal portion of the wearing surface, and an outer sole superimposed upon the undersurface of said midsole within said outer marginal portion of said edge stripping, said outer sole being substantially flush with said outer marginal portion so as to form together therewith a substantially even wearing surface.

2,456,660
DISPENSING ROLL HOLDER
Le Roy L. Werner, Washington, D. C.
Application August 8, 1944, Serial No. 548,591
12 Claims. (Cl. 242—55.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

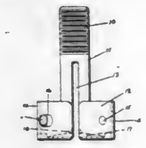
1. A storage and dispensing device, including a cabinet, a closure therefor, a reel rotatably mounted in the cabinet, a knife blade fixed to the free edge of the closure, and a strip of gasket material mounted on the cabinet adjacent the free edge of the closure and lying flat against the knife blade when the closure is shut.

2,456,661
CANE WAX PRODUCTION
Edward A. Wilder, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
No Drawing. Application November 5, 1947, Serial No. 784,301
12 Claims. (Cl. 260—428.5)



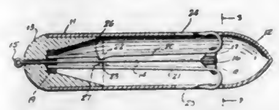
1. A method of treating crude cane wax comprising contacting crude cane wax with at least 3 times its weight of propyl alcohol at a temperature sufficient to place the waxy portion in solution while maintaining the alcohol in liquid phase, then separating the insoluble portion while the waxy portion remains in solution.

2,456,662
HAMMERING DEVICE
William C. Wymer, United States Navy, Oregon City, Oreg.
Application December 10, 1945, Serial No. 634,132
2 Claims. (Cl. 1—50)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A hammering device including, an elongated handle, the handle comprising a pair of telescoping members, means for fastening the members in adjusted telescoped relations, a pair of parallel legs secured to one end of said handle and having their outer ends offset relative to the handle, the outer ends of the legs having means for supporting a fastening element, a lever pivotally supported between the intermediate portions of said legs, an enlarged head mounted on the outer end of the lever and adapted to strike the fastening element upon swinging of said lever relative to the legs, a rope secured to the inner end of the lever and extending to the far end portion of said handle, a ring slidably mounted on the handle and having connection with the rope for swinging said lever, and a sheave rotatably supported between the inner portions of said legs for receiving said rope.

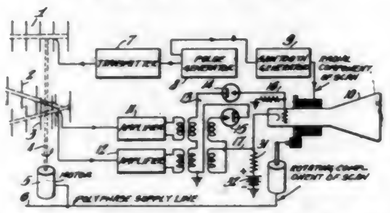
2,456,663
JOLT MOLDING MACHINE
Lester C. Young, Cleveland, Ohio, assignor to Spo, Inc., a corporation of Ohio
Application February 20, 1946, Serial No. 648,997
5 Claims. (Cl. 22—45)



1. A molding machine comprising a base, a shell projecting upwardly from said base and having at its upper end a striking anvil, a jolt table having on the underneath side thereof a surface for striking the anvil, a piston supported and carried by the base and extending upwardly therefrom toward the jolt table, a cylinder surrounding the piston for raising the table relative to the anvil, said piston and cylinder defining an extensible fluid pressure chamber, an inlet for introducing fluid under pressure into said chamber to raise the jolt table relative to the anvil, an outlet through which fluid may be exhausted from said chamber for permitting the table to return by gravity and strike the anvil, said outlet being controllable by the relative movements of the piston and the cylinder, said piston and cylinder each having a portion slidably engaging one another, said piston portion being externally exposed when said cylinder is raised, said cylinder extending downwardly from the table and terminating at a place below the anvil within said shell, whereby when the cylinder is raised the exposed portion of the piston is below the anvil and shielded by said shell.

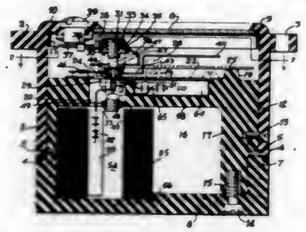
2,456,664
SPLIT CHUCK FOR ELECTRIC WELDING GUNS
William P. Yurgensen, Sharon Hill, Pa.
Application November 29, 1945, Serial No. 631,762
8 Claims. (Cl. 279—55)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

7. A chuck comprising a body, said body at one end being longitudinally slotted to provide a plurality of longitudinally extending portions, said portions being flexible with respect to each other in a transverse direction, and a plurality of ears detachably secured to the periphery of said portions and located at the slotted end of said body.



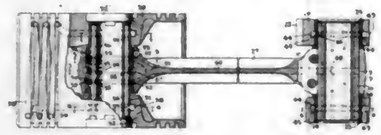
2,456,665
ARTIFICIAL BAIT
Mozel A. Adams, Evangeline, La.
Application March 25, 1947, Serial No. 736,927
3 Claims. (Cl. 43—37)

2. A fishing lure comprising a hollow casing, a plurality of resilient hook members secured in the forward portion of the casing and extending rearwardly therein, a rod member slidably mounted in the forward portion of the casing and substantially centrally disposed with respect to the hook members; a block member carried on the rear portion of the rod member, said block member being formed with radial slots through which the hook members extend, the wall of the casing being open adjacent the rear portions of the hook members, said hook members being formed and arranged with respect to said block member so that the rear portions of the hook members are projected outside the casing responsive to forward movement of said block member, and an inwardly projecting tri-



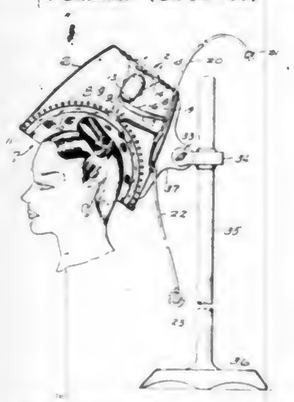
angular lug carried by each hook member at a forward portion thereof adapted to cooperate with said block member to lock the hook member in projected position.

2,456,666
RADIO DIRECTION FINDING SYSTEM
Charlton Stanford Agate, Esher, and Arthur Henry Cooper, Iver, England, assignors to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application November 22, 1943, Serial No. 511,242
In Great Britain September 25, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 25, 1962
16 Claims. (Cl. 343—113)



13. In a radio direction indicating system in which separate energy is received in accordance with each of a plurality of radiant action patterns having an inter-relationship indicative of a line of direction, said radiant action patterns being scanned through a given cyclic rotation, means for comparing the received energies, means operatively associated with said comparing means for releasing energy in response to a predetermined ratio of the values of the received energies, an indicator having a given sweep cycle, means to synchronize said sweep cycle with the scanning cycle of said patterns, and means to apply the released energy to said indicator to produce an indication at a corresponding point in said sweep cycle.

2,456,667
ELECTRICAL MEASURING INSTRUMENT
Harry A. Alter, Dayton, Ohio, assignor to The W. W. Boes Company, Dayton, Ohio, a corporation of Ohio
Application February 7, 1944, Serial No. 521,343
7 Claims. (Cl. 171—95)



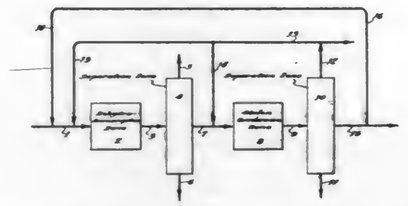
1. An electrical measuring instrument comprising a casing containing a solenoid, an instrument movement cooperating therewith and including a shaft, a pointer secured to one end of the shaft and a magnetic actuating vane secured to the other end of the shaft, a cooperating magnetic vane within the solenoid, a support plate extending across the instrument and a bearing on one side of said plate for supporting the upper end of said shaft, and a bearing on the other side of said plate for supporting the lower end of said shaft.

2,456,668
OIL CIRCULATING MEANS FOR PISTONS AND CONNECTING RODS
Karl V. Anderson, Milwaukee, Wis., assignor to Nordberg Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application September 18, 1946, Serial No. 697,775
4 Claims. (Cl. 123—176)

4. The combination of a piston having an oil cooling passage; a connecting rod having an oil supply passage and an oil return passage; a wrist pin forming a connecting bearing between the piston and connecting rod, said pin having passages which connect the oil supply and oil return passages in the rod with opposite ends of the oil cooling passage in the piston and which respectively communicate at spaced points with the wrist pin bearing; and connections for supplying oil under pressure to said supply passage, the parts being so proportioned and arranged that flowing oil is subjected to a substantial pressure drop as it flows through the piston passage, whereby pressure developed in the wrist pin bearing by oil from the supply passage will resist entrance into the bearing of oil from the return passage.

2,456,669
HAIR DRIER
Russell L. Bauer, Brentwood, Mo.
Application February 25, 1946, Serial No. 649,891
2 Claims. (Cl. 34—99)

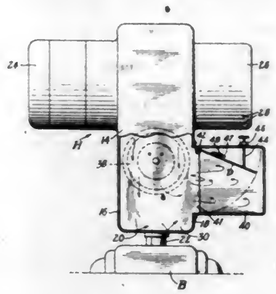
1. In a hair drying apparatus, a hood having an open end to be positioned over the head of a person whose hair is to be dried, a vent spaced from said open end, a substantially semi-spherical source of radiant heat near the open end of said hood, a substantially semi-spherical reflector closely associated with said source to diffuse heat throughout the hood, a substantially semi-spherical guard positioned within said reflector, means to cause a flow of unheated air into the open end of said hood and towards said vent, there being passages through said reflector, said source and said guard to permit air to flow therethrough from said open end to said vent.



2,456,670
CELLULOSE COMPOUND WRINKLE COMPOSITION
Nathan T. Beynon, Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application August 13, 1945, Serial No. 610,675
10 Claims. (Cl. 106—171)

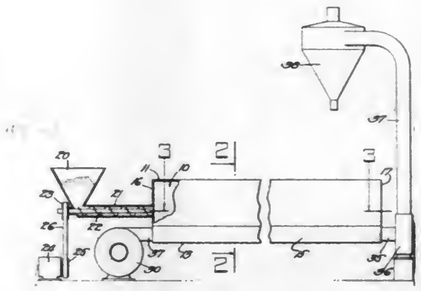
1. As a new composition of matter, a wrinkle drying coating composition consisting of a conjugated double-bonded fatty oil and a cellulose compound selected from the group consisting of cellulose acetate, ethyl cellulose, and nitrocellulose cold-mixed in proportions of 100 parts by weight of said oil to from 10 to 50 parts by weight of the cellulose compound.

2,456,671
FLEXIBLE MATERIAL WITH WRINKLE-TEXTURED COATING
Nathan T. Beynon, Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 7, 1946, Serial No. 652,819
8 Claims. (Cl. 117—161)



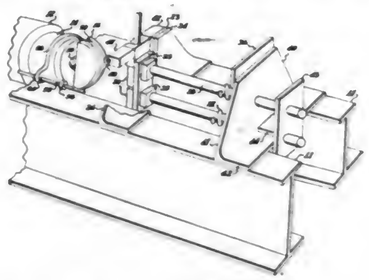
1. The method of manufacturing flexible, wrinkle-coated materials comprising the steps of mixing at room temperature 100 parts by weight of unsaturated fatty oil with varnish solvent and from 10 to 50 parts by weight of aqueous rubber latex, said rubber being selected from the group consisting of butadiene styrene copolymer, butadiene acrylic nitrile copolymer, and neoprene; applying the mixture thus obtained to a base material; and subjecting the coated material to drying, at substantially 130° F. for approximately 30 minutes and then at substantially 180° F. for a period of from about 30 to 60 minutes.

2,456,672
CONVERSION OF HYDROCARBONS
Herman S. Bloch, Chicago, and Raymond E. Schaad, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application March 31, 1945, Serial No. 585,997
4 Claims. (Cl. 260—671)



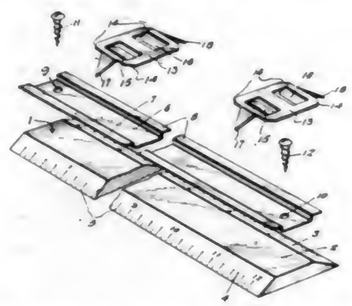
3. A process for the production of branched chain hydrocarbons which comprises simultaneously dehydrogenating and isomerizing a paraffinic hydrocarbon containing at least four carbon atoms per molecule by the action of a dehydrogenating catalyst in physical admixture with a minor proportion of an isomerizing catalyst, reacting the resultant branched chain olefinic product with an alkylatable hydrocarbon at alkylating conditions to form a higher boiling branched chain hydrocarbon and recovering the same, and recycling unconverted paraffinic hydrocarbons to the dehydrogenation-isomerization step.

2,456,673
OIL BURNER BLOWER HOUSING
Ernest Camerino, New York, N. Y.
Application May 14, 1947, Serial No. 748,089
7 Claims. (Cl. 230—114)



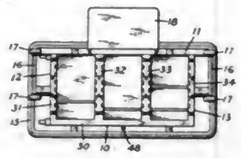
1. In an oil burner blower housing, the combination of an upper impeller section; a substantially rectangular lower section integrally formed with said impeller section; means for dividing the lower section into two separate air chambers; and an intermediate chamber laterally disposed on the side of said lower section for providing air communication between said two chambers.

2,456,674
APPARATUS FOR DRYING FINELY DIVIDED MATERIALS WHILE SUSPENDED IN A GAS
Robert A. Caughey, Wilton, N. H.
Application December 12, 1945, Serial No. 634,417
11 Claims. (Cl. 34—57)



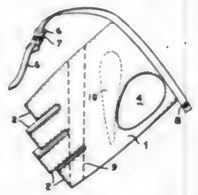
1. An apparatus for drying finely divided material having particles requiring different drying periods which comprises a substantially cylindrical wall and end walls forming a drying chamber, means for introducing a stream of heated air tangentially to the cross section of the said cylindrical wall into the drying chamber at a velocity greater than that required to maintain said material in suspension and for withdrawing air from near one end of the drying chamber and tending to move said heated air in a helical path through said chamber, means for feeding said material into said helically moving stream near the other end of said chamber, and stationary means for successively deflecting said suspended material back away from the withdrawal end of said chamber and against the general direction of movement of the air in said chamber.

2,456,675
TUBE BENDER
Charles Joseph Chaille, Middletown, Ohio, assignor to Aeronca Aircraft Corporation, Middletown, Ohio, a corporation of Ohio
Application January 25, 1947, Serial No. 724,376
2 Claims. (Cl. 153—33)



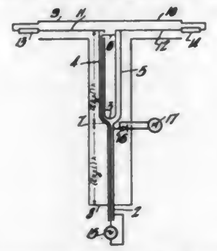
1. A tube bending apparatus comprising, a frame, a hydraulic cylinder and ram unit mounted upon said frame, a forming die carried by said ram and adapted to be advanced and retracted by said ram, a pair of stationary bending dies yieldably mounted upon said frame and cooperating with said forming die, a valve for controlling the advance and retraction of said ram and forming die relative to the bending dies to bend the work to a predetermined angle, a manually operated lever on said valve for initiating the advance of the ram, an adjustable trip mechanism associated with said manually operated lever, and a stop element carried by said ram cooperating with said trip mechanism and arranged to actuate the trip mechanism to reverse the position of said manually operated lever and cause the ram to retract when the forming die bends said work to a predetermined angle.

2,456,676
SLIDE INDICATOR RULE
William C. Chowns, East Detroit, Mich.
Application February 21, 1947, Serial No. 730,003
5 Claims. (Cl. 33—107)



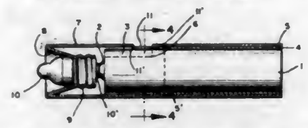
1. In combination with a rule and a slide indicator therefor including a U-shaped guide trackway having opposed outwardly extending bearing flanges formed integrally therewith, means for detachably attaching said trackway to said rule in parallel relation to one edge thereof, and a metal slide indicator having inwardly depending resilient means struck therefrom engageable with the under surfaces of said bearing flanges and slidably mounting said indicator on said trackway.

2,456,677
CHART CARRIER
Josiah S. Clachko, Ridgefield Park, N. J., assignor to S. Blickman, Inc., Weehawken, N. J., a corporation of New York
Application October 17, 1947, Serial No. 780,369
1 Claim. (Cl. 45—2)



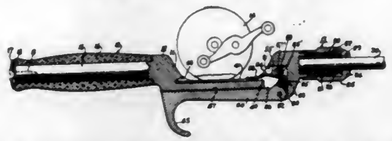
A cabinet having a plurality of spaced slanting parallel racks extending over the top of the cabinet, said racks being provided with spaced pockets open at their upper edges, a locking plate slidably supported on each of the racks and having portions overlying the racks, a side of each of said overlying portions of the locking plates being provided with spaced notches in registration with the pockets in the racks, a pair of slides mounted on the cabinet having roller-engaging cams thereon, and a pair of anti-friction rollers mounted on each locking plate in the path of said cams, a manually operable mechanism for simultaneously moving the slides upwardly on the racks to put the notches in said plates out of register with the pockets in the racks, and means for locking the slides in positions wherein said cams maintain the locking plates in their raised position, combined with chartholders narrower than the distance between the racks and having portions extending from their edges into the pockets in the racks.

2,456,678
GOLF GLOVE
John Dana Cole, Dayton, Ohio
Application September 13, 1946, Serial No. 696,820
1 Claim. (Cl. 2—159)



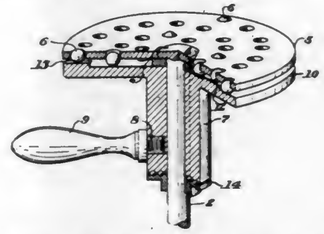
A golf glove comprising an open back, a palm portion and a finger portion, said palm portion having a section removed for the thumb of the user and said finger portion have backs thereon, a projection of triangular shape in plan and of curvilinear shape in section and permanently attached to said palm section with the base of the triangle lying between the removed thumb section and the remotely located side of the glove and extending diagonally across the glove between the said removed thumb section and the finger section so as to leave a diagonally extending area between one side of the projection and the finger section whereby said projection causes the club shaft when grasped to lie in proper inclined position adjacent the finger section so as to be firmly held by the user's fingers and said projection also fills the void in the palm of the user's hand to cause complete gripping contact of the club shaft by said glove during the swing.

2,456,679
HIGH-FREQUENCY IMPEDANCE BRIDGE
Edward Cecil Cork, Ealing, London, and Alan Dower Blumlein, deceased, late of Lescudjack, Penzance, England, by Doreen Blumlein, executrix, Lescudjack, Penzance, England, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application February 17, 1944, Serial No. 522,830
In Great Britain May 5, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 5, 1961
4 Claims. (Cl. 175—183)



1. In combination, a high frequency bridge measuring circuit including a concentric feeder transmission line circuit comprising inner and outer coaxial conductors, means for applying high frequency signals to said feeder circuit, a pair of quarter-wave branched portions of said outer conductor, said inner conductor continuing through one of said branched portions and being terminated on said other branched portion, a pair of concentric lines respectively connected to different ones of said branched portions thus providing relative phase inversion of said signals in said feeder circuit, means for terminating one of said branched lines in an unknown impedance to be measured, a variable known impedance, means for terminating the other of said branched lines in said variable impedance, means branching from said concentric lines for shielding said feeder circuit and said branch portions, and a signal detector, and means connecting said detector to said feeder line circuit and said shielding means to derive currents indicative of the balanced condition of said bridge.

2,456,680
FLASHLIGHT
Harry E. Croft, Chicago, Ill.
Application November 14, 1946, Serial No. 709,890
1 Claim. (Cl. 240—10.61)

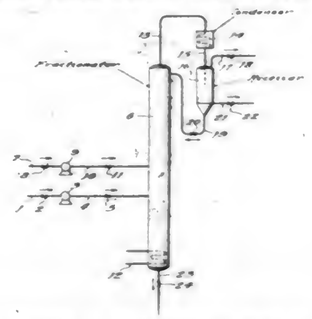


A device of the character described comprising a dry-cell battery having an outer wall, a centrally positioned positive terminal and a cylindrical insulator frictionally secured to said battery, a cutaway portion formed in the forward end of said insulator whereby to expose a portion of said battery wall, in combination with a cylindrical bulb carrying cap, a reflector integrally secured in and to one end of said cap, a bulb socket integrally formed on the inner end of said reflector, a bulb in said socket having a single contact, said contact adapted to continuously abut against said positive terminal, said cap being removably and rotatably frictionally mounted on a portion of the upper end of said battery, and an inwardly extending resilient contact lying in a plane transverse to the axis of said cap and formed by pressing inwardly a portion of the wall of said cap whereby the axial marginal edges of the pressed in portion are connected to the body of the cap and the transverse marginal edges are severed from the body of said cap.

2,456,681
HANDLE ASSEMBLY CASTING ROD
Merlyn M. Culver, Dayton, Ohio
Application February 28, 1946, Serial No. 650,909
16 Claims. (Cl. 43—22)

1. A casting rod handle including, a reel seat, stationary means at one end of said reel seat for holding the base of a reel upon the seat, a movable locking member disposed adjacent the opposite end of said seat and including means upon which said member is oscillatable, and a lever movable relative to said seat operably associated with one end of said locking member for oscillating the same toward or away from said seat.

2,456,682
METAL-WORKING OR LIKE TOOL
William R. Dapprich, Baldwin Township, Allegheny County, Pa.
Application June 21, 1946, Serial No. 678,192
2 Claims. (Cl. 153—32)



1. A metal working or like tool comprising a rotor, a flexible shaft connected with the rotor through which the rotor is rotated, a series of balls carried by the rotor adapted to be projected to act on work and a cam member carried by the shaft behind the rotor but relatively to which the shaft and rotor rotate, the cam member having a handle connected therewith by which the tool is held, the cam member engaging the balls to project them upon rotation of the rotor.

2,456,683
PROCESS FOR OXIDIZING ALCOHOLS
Richard M. Deanesly, Hinsdale, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application April 6, 1946, Serial No. 660,282
6 Claims. (Cl. 260—596)

1. A process for oxidizing an alcohol having a hydrogen atom attached to the carbon atom of the carbinol group which comprises introducing said alcohol into a fractionating column, introducing an oxygen-containing gas into said column, supplying heat to said column to maintain

a reaction zone therein at an oxidizing temperature below the critical temperature of said alcohol, maintaining said column at a pressure sufficient to retain a substantial portion of said alcohol in liquid phase therein, reacting said alcohol

and said oxygen in said reaction zone to form a carbonyl compound from said alcohol, simultaneously fractionating the reaction products in said column, withdrawing said carbonyl compound from the upper portion of said column, and withdrawing water produced in the oxidation reaction from the lower portion of said column.

2,456,684

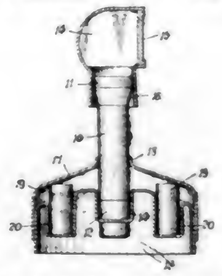
PROCESS OF RENDERING LARD

Fred E. Deatherage, Cincinnati, Ohio, assignor to The Kroger Grocery & Baking Company, Hamilton County, Ohio

Application January 31, 1944, Serial No. 520,519

16 Claims. (Cl. 260—412.7)

1. The process of rendering animal fat of the group consisting of mutton, beef and pig fat, which process consists in macerating the animal fat to disintegrate animal tissue therein, adding an aqueous alkali solution in an amount not in excess by weight of the fat and of a concentration of at least 0.4% alkalinity, mixing the same intimately with the reduced fat and tissues and heating the mixture to a temperature between 70° to 100° C. for a period between about 30 to 60 minutes, separating the fat from the aqueous constituents, washing the separated fat with water and thereafter separating the wash water from the fat.



2,456,685

WARNING SIGNAL CONVERSION KIT FOR STANDARD FLASHLIGHTS

Cyril J. Delmotte, Detroit, Mich., assignor of one-half to Edward J. Herrmann, Detroit, Mich.

Application November 14, 1946, Serial No. 709,705

4 Claims. (Cl. 177—329)

2. In combination with a hand flashlight, conversion elements for adapting the flashlight to use as a warning signal device comprising a light box having a downwardly depending tubular socket member for detachable engagement about the lens end of the flashlight, a light-emitting window in said light box, a foot member adapted to engage the base end of said flashlight, and a second member carried by said foot member to engage the body of said flashlight above said foot member.

2,456,686

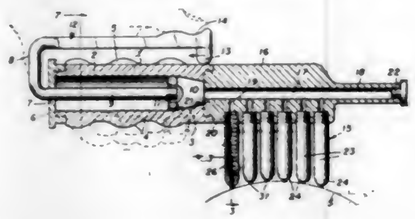
PROCESS FOR OBTAINING VITAMIN K COMPOUNDS

Edward A. Doisy, Webster Groves, and Sidney A. Thayer, St. Louis, Mo., Donald W. MacCorquodale, Highland Park, Ill., Ralph W. McKee, Newton, Mass., and Stephen B. Binkley, Detroit, Mich., assignors to President & Board of Trustees of St. Louis University, St. Louis, Mo.

No Drawing. Application May 11, 1944, Serial No. 535,204

6 Claims. (Cl. 260—396)

1. Process for obtaining an antihemorrhagic compound comprising treating an extract containing a crude form of a compound of the class consisting of vitamins K_1 and K_2 with a reducing agent and an agent of the class consisting of esterifying and etherifying agents thereby obtaining a crude form of dihydro diester of said vitamin, treating said crude diester product by known methods to obtain a substantially pure diester and converting the latter by hydrolysis and mild oxidation into a substantially pure vitamin.



2,456,687

FOUNTAIN COMB

Roberto Dominguez A, Tegucigalpa, D. C., Honduras, assignor of twenty per cent to Maria Agurcia Ayestas, Tegucigalpa, D. C., Honduras

Application March 18, 1947, Serial No. 735,518

3 Claims. (Cl. 132—13.1)

1. In a fountain comb, a hollow handle forming a liquid containing chamber therein, a comb section extending from said handle and including a comb back having a manifold bore therein communicating with said chamber, said back being provided with hollow teeth communicating with said bore, an ejector operative in said chamber from outside the same to force liquid out of said chamber, bore and teeth, and normally closed valve means in said teeth having stems projecting out of said teeth, said valve means being operative to open the same by pressure exerted against said stems, said ejector comprising a U-shaped manipulative member having a leg endwise movable in said chamber with a piston thereon, said member having another leg extending alongside said handle with a thumb grip seat therein for seating the thumb of a hand grasping said handle, whereby said member may be manipulated by the thumb of said hand.

2,456,688

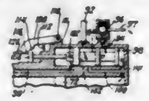
CELLULOSE ESTER STABILIZATION IN ANHYDROUS MEDIUM

Camille Dreyfus, New York, N. Y., and Robert D. Rowley and Robert F. Thompson, Narrows, Va., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application October 9, 1945, Serial No. 621,380

7 Claims. (Cl. 260—230)

1. In a process for the production of highly stable fully esterified organic acid esters of cellulose wherein cellulose is esterified with an aliphatic acid anhydride and an inorganic acid catalyst employing an aliphatic acid as a solvent, the steps which comprise neutralizing substantially all of the acid catalyst in the primary cellulose ester solution obtained on completion of esterification by adding a neutralizing agent thereto, and then heating the neutralized primary solution containing aliphatic acid anhydride whereby the stability of the fully esterified cellulose ester is improved.



2,456,689

FLUID PRESSURE MOTOR

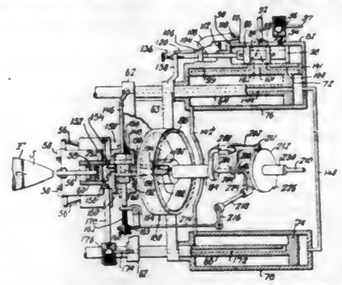
Fred C. Eastman, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Original application August 28, 1942, Serial No. 456,564, now Patent No. 2,436,424, dated February 24, 1948. Divided and this application November 4, 1944, Serial No. 561,917

11 Claims. (Cl. 121—38)

8. In a fluid-pressure-operated mechanism, a fluid-pressure motor, passageways for directing fluid under pressure to one side of the movable element of said motor and for exhausting fluid from the other side of the movable element, and means operative in response to progressive increases in the pressure of the fluid on said one side of the movable element for first cutting off the exhaust of fluid from said other side while the fluid is admitted to said first side, then admitting fluid under pressure to the other side while the fluid is admitted to the first side, and finally exhausting the fluid from the first side.

2,456,690



FLUID-PRESSURE-OPERATED MECHANISM

Fred C. Eastman, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Original application August 28, 1942, Serial No. 456,564, now Patent No. 2,436,424, dated February 24, 1948. Divided and this application November 4, 1944, Serial No. 561,918

7 Claims. (Cl. 60—97)

1. In a fluid-pressure-operated mechanism, a first fluid-pressure-operated motor comprising a cylinder and a piston movable therein, a rotary fluid-pressure-operated motor, means mounting said rotary motor for movement with said piston, means for directing fluid under pressure to said first motor, a passageway through the piston of the first motor for directing fluid under pressure to the rotary motor, a normally closed valve opened in response to a predetermined pressure in said passageway to direct fluid from said passageway to the rotary motor, and means operative after a movement of predetermined extent in one direction only has been imparted to the movable element of the rotary motor for

closing said valve to interrupt the flow of fluid to said rotary motor.

2,456,691

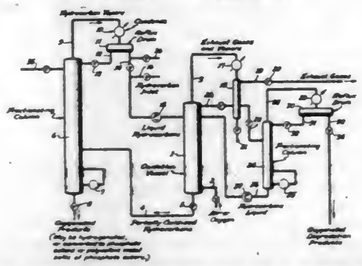
PROCESS FOR TREATING FATTY MATERIALS

William R. Eipper, Philadelphia, Pa.

No Drawing. Application January 27, 1948, Serial No. 4,697

11 Claims. (Cl. 260—405.6)

1. The process of isomerizing a natural fat containing glyceryl esters of oleic acid comprising mixing a solution of said fat in a liquid organic fat solvent with a solution of nitrous acid in a water-miscible organic fat solvent, said solvents being miscible with each other and inert to the acid in the presence of said fat, and maintaining the temperature of the reaction below the temperature at which the isomerized fat will remain in solution.

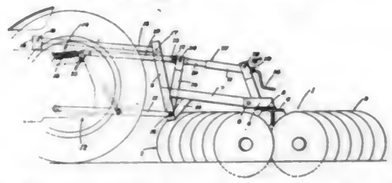


2,456,692

LUBRICATING OIL COMPOSITION

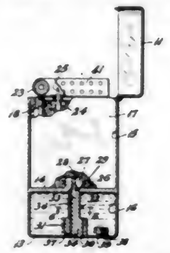
Adalbert Farkas and Arthur F. Stribley, Jr., Long Beach, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California

Application August 16, 1943, Serial No. 498,776



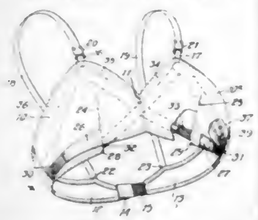
3 Claims. (Cl. 260—429)

1. A process for producing a lubricating oil addition agent comprising the partial oxidation of a non-aromatic cyclic hydrocarbon by contacting said hydrocarbon with an oxygen containing gas at temperatures in the order of from about 100° F. to about 500° F. and at pressures in the order of from about normal atmospheric pressure to about 300 pounds per square inch gage to produce partial oxidation products containing the same number of carbon atoms per molecule as said non-aromatic cyclic hydrocarbon and containing one atom of oxygen per molecule, reacting said partial oxidation products with a phosphorus compound selected from



the class of phosphorus compounds comprising phosphorus pentasulfide and phosphorus pentoxide to form phosphate esters and reacting said phosphate esters with the oxide of a polyvalent metal.

2,456,693
LIFTING HITCH FOR IMPLEMENTS
Frank M. Fraga, Fresno, Calif.
Application August 26, 1946, Serial No. 693,139
13 Claims. (Cl. 97—50)

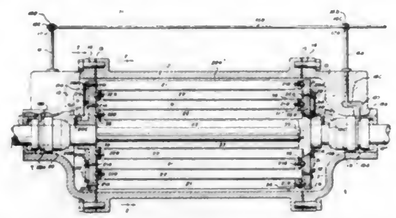


1. An implement lifting hitch for a tractor which includes, at the rear, a transversely spaced pair of lift links, and a longitudinally movable thrust arm operative to cause actuation thereof, the hitch comprising a rigid draft frame structure adapted to pivotally connect between the lift links and the implement, said draft frame structure having a rigid upstanding member thereon, a longitudinal tension link adapted to pivotally connect between the tractor and said member above the lift links, and a thrust assembly adapted to connect between the implement and said thrust arm arranged so that drag reaction of the implement acts to urge said thrust arm longitudinally.

2,456,694
CIGAR OR CIGARETTE LIGHTER
Aaron Geiger, Brooklyn, N. Y.
Application July 23, 1947, Serial No. 762,888
1 Claim. (Cl. 67—7.1)

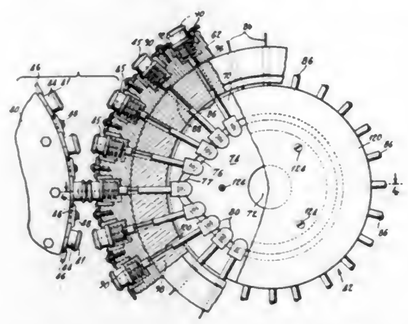
An article of the class described comprising an upright housing having a roof closing the top thereof and a wall closing the bottom thereof, said housing having a partition therein intermediate the height thereof dividing the interior into an upper and a lower compartment, said upper compartment being adapted to have a mass of cotton therein, said roof having an opening therethrough, a wick extending through said opening and having the lower portion thereof positioned in said upper compartment, means for igniting said wick above said roof, said lower compartment being adapted to have liquid fuel therein, said partition and said bottom wall having openings therethrough, valve means mounted in said last-named openings for simultaneously opening or closing said last-named openings, said last-named openings being aligned, said opening in said partition being countersunk on the underside thereof to provide a valve seat, said valve means comprising a stem having the upper end thereof tapered complementarily to said valve seat and adapted to register in said seat, said stem extending downward through said lower compartment and having the lower end thereof longitudinally movably mounted in said opening in said bottom wall, said stem having a non-axial longitudinal passage therein extending from said tapered end thereof to a point adjacent the lower extremity thereof, said stem having a lateral passage therein extending from the side thereof to and communicating with the lower end of said longitudinal passage, said bottom wall having a circumferential upright wall surrounding said opening therethrough, said circumferential wall normally closing the outer free end of said lateral passage and said seat normally closing the upper free end of said longitudinal passage, and means for releasably retaining said stem in normal position whence the free ends of said passages are closed as aforesaid.

2,456,695
BRASSIÈRE AND SIMILAR GARMENTS
Edwin W. Gluckin, Brooklyn, N. Y.
Application February 21, 1945, Serial No. 578,977
3 Claims. (Cl. 2—42)



1. A brassière of the class described comprising a pair of similar breast pockets, means joining adjacent edge portions of the pockets, means attached to outer side edges and upper portions of the pockets for adjustably supporting the same upon the body of the wearer, each pocket having centrally of the lower portion thereof free relatively movable parts, each pocket having diverging suspending straps extending from the free outer part of one pocket to the upper central portion of an opposed pocket and to the outer side edge of said opposed pocket, means adjustably coupling the suspending straps to each pocket, one strap of each pocket crossing the corresponding strap of an opposed pocket centrally between said pockets, and means coupling inner free portions of the pockets with outer edges thereof.

2,456,696
VARIABLE PITCH FLUID TRANSMISSION
Ralph Goldberg, Baltimore, Md., assignor of one-half to Joseph H. Colvin, Baltimore, Md.
Application October 8, 1945, Serial No. 620,989
5 Claims. (Cl. 192—58)



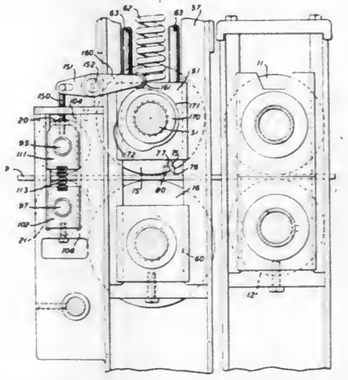
1. In a vehicle power transmission, a housing containing hydraulic fluid therein, a driving shaft rotatably supported in one end of said housing and adapted to be connected to a power source, a driven shaft rotatably supported in the other end of said housing, a plurality of driving vanes arranged longitudinally in said housing and operatively connected to said driving shaft for imparting a rotary motion to said fluid when said driving shaft is rotated, a plurality of driven vanes arranged longitudinally in said housing and operatively connected to said driven shaft

for rotating the latter in response to rotation of said fluid, and means operatively connected to

each of said driving and driven vanes for varying the pitch of the latter.

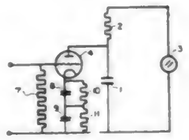
2,456,697
APPARATUS FOR FORMING GLASS BEADS AND THE LIKE ARTICLES
Andrew Gruenwald, New York, N. Y., assignor to Novelty Jewelry Corporation, New York, N. Y., a corporation of New York
Application March 14, 1944, Serial No. 526,428
7 Claims. (Cl. 49—29)

1. A device of the character described comprising a support having thereon a pair of oppositely positioned continuously rotating roller members, a plurality of axially apertured die members on the periphery of each roller and projecting outwardly therefrom and movable along therewith, the rollers being so disposed on the support as to bring successively the dies on one roller into aligned and abutting relation to the dies on the other roller during their rotation, aperturing means in one roller and means to gradually move the aperturing means through one set of dies and then into the dies of the opposing set on the other roller as and when the pairs of opposed dies are brought into aligned and abutting relation.



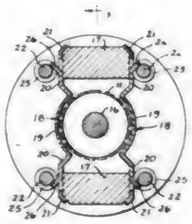
2,456,698
ELECTRIC WATER HEATER
Stanley W. Hall, Oshkosh, Wis., assignor to United States Motor Corporation, a corporation of Wisconsin
Application October 10, 1945, Serial No. 621,451
6 Claims. (Cl. 219—38)

1. In a displacement type water heater, a jacketed tank adapted to contain a body of water and having a lower cold water inlet and an upper warm water outlet, a water circulator tube mounted upright entirely within said tank spacedly between the tank inlet and outlet, the bore of said tube being slightly upwardly tapered, an



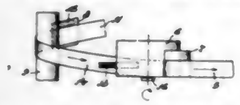
immersion-type electric heating element within a portion of said tube in the path of water circulating therethrough, and an internally baffled syphon head in the warm water outlet in substantial alinement with the upper end of said tube.

2,456,699
APPARATUS FOR SHEARING STRIPS OF PLASTIC MATERIAL
Estyle D. Hanson and Oscar G. Nelson, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 19, 1946, Serial No. 704,372
13 Claims. (Cl. 164—84.5)



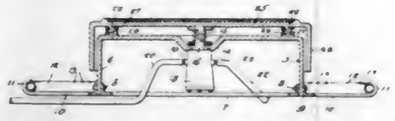
1. An apparatus for shearing strips of plastic material, which comprises means for advancing a strip of plastic material at a predetermined rate of speed, a pair of relatively movable rolls, means for driving the rolls to advance the strip from the strip advancing means at a rate of speed which is greater than the first-mentioned rate, means positioned between the rolls and the strip advancing means for reducing a portion of the strip to a membrane, and means for moving the rolls together and apart so that the strip is engaged tightly by both of the rolls when they are together and is engaged by only one of the rolls when they are moved apart, whereby the membrane is ruptured when the rolls are moved together.

2,456,700
DEVICE ADAPTED TO PRODUCE SAW-TOOTH OSCILLATIONS
Johan Haantjes, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 24, 1946, Serial No. 664,499
In the Netherlands November 20, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires November 20, 1962
3 Claims. (Cl. 250—36)



1. An arrangement for generating sawtooth oscillations having a predetermined periodicity, said arrangement comprising a condenser, a resistor, a source of constant potential connected across said condenser through said resistor, a gaseous discharge device having a control electrode, a first resistance-capacitance parallel network, a second resistance-capacitance parallel network, said device being connected in series with said first and second networks across said condenser, the discharge period of said first network being smaller than and the discharge period of said second network being greater than the oscillation period of the sawtooth oscillations to be generated, and means to apply the voltage developed across the series-connected first and second networks to said control electrode.

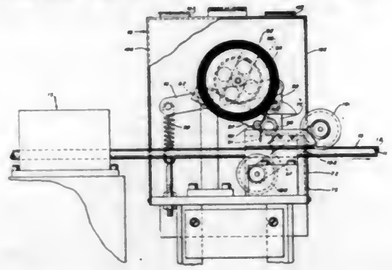
2,456,701
SPEED CONTROL MECHANISM FOR ELECTRIC MOTORS
William L. Hansen and Ira N. Hurst, Princeton, Ind., assignors to The Hansen Manufacturing Company, Inc., Princeton, Ind., a corporation of Indiana
Application July 18, 1945, Serial No. 605,776
7 Claims. (Cl. 172—36)



1. An electric motor comprising an armature and field member, said field member including a permanent magnet having a pole face adjacent the armature, a plurality of rods extending lengthwise of the armature, and a pair of oppositely disposed non-magnetic straps spanning said rods and adapted to supportably receive the permanent magnet between them.

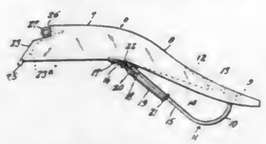
2,456,702
FILM DRIVING APPARATUS
Johannes Adrianus Haringx, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 29, 1946, Serial No. 665,667
In Belgium February 9, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires February 9, 1965
6 Claims. (Cl. 88—18.6)

1. A device for moving and guiding a thin band-shaped carrier having a thickness of the order of tens of microns, comprising a film handling member having a longitudinal axis and having a surface extending in the direction of said axis and about which said carrier is positioned, means to continuously maintain said carrier positioned on said handling member at an angle departing from the normal to said axis to thereby helicoidally arrange said carrier on said handling member at all times during the operation of this device, and a stop member positioned in displaced relationship from said handling member along the path of said carrier to said handling member and adjacent one edge of said carrier to limit lateral movement of the carrier along the said axis of the handling member.



2,456,703
AUTOMATIC BATH SHOWER
Andrew H. Hatchette, Cleveland, Ohio
Application January 16, 1946, Serial No. 641,497
1 Claim. (Cl. 4—145)

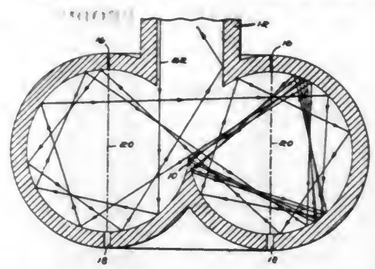
A portable shower bath comprising a circular base having vertical side walls and having an open bottom, arms extending an appreciable distance outwardly from the base, a spray ring having discharge openings fitted around the base, the outer ends of the arms being curved around the spray ring, securing the ring in position, a water supply pipe connected with the spray ring, a valve in the water supply pipe controlling the passage of water therethrough, a circular platform fitted over the vertical side walls of the base in spaced relation therewith, springs disposed between the platform and base, normally holding the platform elevated, and said valve being connected with the movable platform and operated to open the valve by the weight of a person standing on the platform.



2,456,704
APPARATUS FOR TESTING AND MARKING INSULATED CONDUCTORS
George E. Henning, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 30, 1945, Serial No. 596,797
6 Claims. (Cl. 175—183)

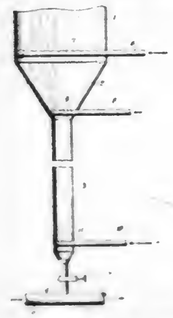
1. In an apparatus for testing and marking insulated conductors including a test set for locating defects in an insulated conductor being advanced therepast, a tape-applicator, which comprises means for holding a pad of adhesive tape, means for pressing against the insulated conductor an end of the adhesive tape, means for actuating the tape-pressing means, means for moving the tape-pressing means away from the

insulated conductor a predetermined period of time after the tape-pressing means is actuated, and means for severing the tape when the tape-pressing means is moved away from the insulated conductor.



2,456,705
SINGLE HOOK WEEDLESS FISHING PLUG
Earl A. Herring, Donaldson, Pa., assignor of fifty per cent to Alice Dinger Herring, Donaldson, Pa.
Application March 30, 1945, Serial No. 585,633
1 Claim. (Cl. 43—39)

A single hook weedless fishing plug comprising an elongated buoyant body forming a float, said body having a rearwardly tapered and downwardly slanting tail portion, said tail portion having a slot and said slot being inwardly of the rear end of said tail portion, said tail portion having a kerf in its top side communicating with said slot, and being further provided with a longitudinal groove in its bottom also in communication with said slot, a conventional fishing hook having its bight portion operating in said slot and having its bill portion arranged for coaction with said kerf, an anchoring loop on the bottom of said body, said hook including a shank operable in said groove and provided with an eye, said eye being pivotally mounted in said loop, and a spring, one end of said spring being attached to said loop and the opposite end of said spring being formed with a lateral eye which embraces and is slidably mounted on the shank of said hook.

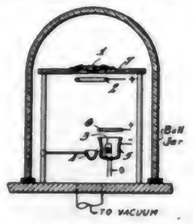


2,456,706
ACOUSTIC CHAMBER
Caperton B. Horsley, Stamford, Conn., assignor to Ultrasonic Corporation, Boston, Mass., a corporation of Massachusetts
Application February 2, 1946, Serial No. 645,224
7 Claims. (Cl. 259—1)

1. An acoustic chamber comprising walls forming a toroidal chamber, means for flowing material continuously through said chamber, an inlet located in the axis of the chamber for introducing compression waves therein, and a substantially conical projection disposed opposite said inlet

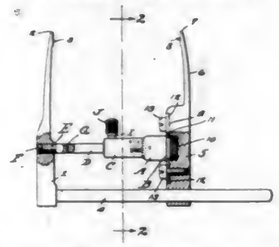
for reflecting compression waves from said inlet toward the sides of said chamber.

2,456,707
PROCESS FOR STRIPPING SPENT FLUID CATALYSTS
Percival C. Keith, Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y.
Application August 17, 1944, Serial No. 549,947
11 Claims. (Cl. 196—52)



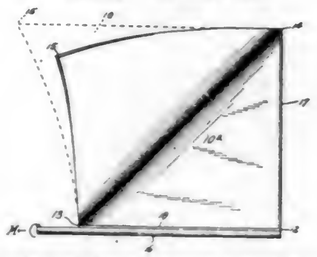
1. In hydrocarbon [illegible]version processes wherein hydrocarbons are [illegible]erted by passage through a fluidized mass of [illegible]inuted contact material and wherein said co[illegible]t material becomes fouled with carbonaceous [illegible]ter during the conversion and is subjected to [illegible]egeneration, the improvement of stripping hydrocarbons from fouled contact material through the fluidization of said fouled contact material with oxygen of not less than 95% purity.

2,456,708
APPARATUS FOR IMPROVING THE DURABILITY OF OPTICAL COATINGS
Edward W. Kellogg, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application May 1, 1944, Serial No. 533,554
5 Claims. (Cl. 91—12.2)



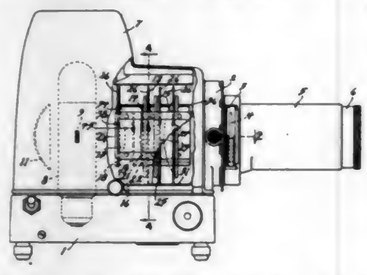
1. In apparatus for producing a thin durable layer upon an optical glass surface of a body, an evacuated chamber arranged to removably receive said body, means for evacuating said chamber, means for supporting said body in said chamber, means for vaporizing material within said chamber, a source of electrons within said chamber, said source comprising thermal responsive means located within said chamber and positioned from said vaporizing means, and means for generating an electrical field within said chamber, said field

being adjacent the path of the electrons for directing the stream of electrons from said source



to said coated surface, whereby said layer is hardened.

2,456,709
MICROMETER ATTACHMENT
Charles L. Kemp, Klamath Falls, Oreg.
Application April 26, 1946, Serial No. 665,248
2 Claims. (Cl. 33—167)

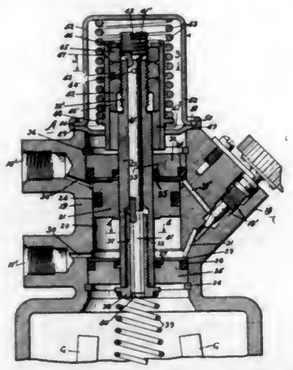


2. The combination with the thimble, sleeve and spindle of a micrometer, and means for holding the spindle adjustably to the sleeve, of opposed jaws, a guide rod extending from one of the jaws, the other jaw being slidably mounted on the rod and having a socket, the thimble of the micrometer being seated and rotatable within the socket, means detachably secured to the slidable jaw and cooperating with the thimble for retaining said thimble in the socket, an adjustable, detachable connection between the spindle and the other jaw, and extensions on the jaws projecting away from the rod, said extensions having inner working faces constituting means for engaging the outer surface of an object to be measured.

2,456,710
FAN BLADE
Andrew Kern, Orofino, Idaho
Application July 12, 1944, Serial No. 544,538
2 Claims. (Cl. 170—135)

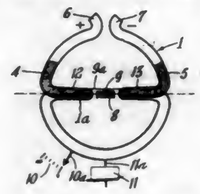
1. A rotating fan structure comprising a rotating drive shaft, a plurality of curved fan blades each secured longitudinally along said shaft; each blade having been formed from a blank of substantially quadrilateral shape and having two straight edges of equal length at right angles to each other, one of said edges being secured lengthways of the drive shaft and the other forming the leading edge projecting radially from the shaft; the angle formed at the apex between the remaining two sides being less than 90° and the said apex and associated portion of the blade having a curvature resulting in locating the said apex a linear distance from the angle opposite said apex substantially equal to the length of the diagonal formed by taking the square root of the sum of the squares of the said sides of equal length.

2,456,711
ADJUSTABLE CONDENSER LENS FOR PROJECTION SYSTEMS
Norman T. Knutson, Chicago, and Paul C. Foote, Lake Bluff, Ill., assignors to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application March 14, 1947, Serial No. 734,750
3 Claims. (Cl. 88—24)



1. In an adjustable condenser lens for a projection system involving interchangeable projection lenses of preselected different focal lengths, the combination of a condenser lens comprising three components of which the middle component is shiftable relative to the end components to vary the equivalent focal length of the condenser and of which the end components are fixed relative to a light source of the projection system, and positioning means for positioning said end components and selectively positioning said middle component in a plurality of predetermined positions to approximately match the light cone from the condenser lens with the acceptance cone of any of said interchangeable projection lenses and comprising three carrier plates upon which said components are respectively mounted and a plurality of mounts greater in number than that of said components and predeterminately spaced longitudinally of the condenser lens axis and on the end mounts of which the carrier plates of said end components are respectively mountable and on the intermediate mounts of which the carrier plate of said middle component is selectively mountable, each of said mounts comprising a pair of parallel slide elements spaced transversely of and disposed on opposite sides of the condenser lens axis and with which opposite edge portions of a carrier plate is slidably engageable, and a single latch means operative to releasably retain said components on said mounts.

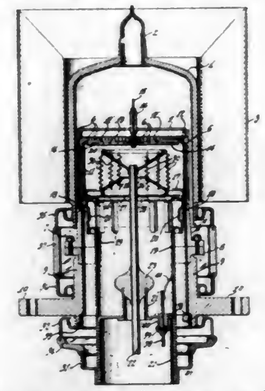
2,456,712
HYDRAULIC CONTROL MECHANISM
Arthur E. Kremiller, Glendale, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application March 13, 1945, Serial No. 582,460
5 Claims. (Cl. 60—54.6)



2. In a mechanism of the character referred to, in combination with a cylinder and piston

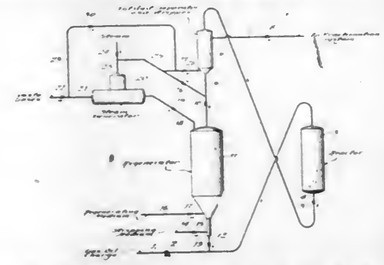
working therein, a piston rod extension from the opposite sides of said piston, one end of said piston rod being threaded and provided with a nut to function as a stop nut, a sleeve over the end of said piston rod and said stop nut and movable thereover, means interlocking the inside of said

sleeve and said stop nut against relative rotation, a spring over the outside of said sleeve and operable to automatically move said sleeve, said stop nut and said piston rod and piston to a predetermined position, and operating connections on the other end of said piston rod for engagement with the part to be moved.



2,456,713
PRESSURE MEASURING INSTRUMENT
Albin Laternser, Horgen, Switzerland, assignor to Landis & Gyr, A. G., a body corporate of Switzerland
Application May 14, 1946, Serial No. 669,691
In Switzerland June 27, 1945
5 Claims. (Cl. 73—405)

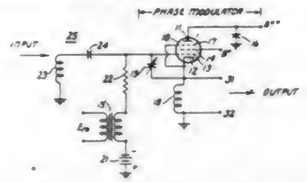
1. A ring balance for measurement of small pressure differences having a hollow annulus the ends of which are uppermost and connectible to the pressures to be measured, said hollow annulus communicating at either side of its vertical center with a horizontally extending loop.



2,456,714
THERMIONIC CATHODE AND HEATER
Russell R. Law, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 11, 1947, Serial No. 760,407
6 Claims. (Cl. 250—27.5)

1. A cathode assembly comprising a cathode cylinder having a thermionically active outer surface, a hollow metal cone coaxial with said cathode cylinder and having a base at one end of said cathode cylinder and an apex facing the other end thereof, a second hollow metal cone coaxial with the first cone having a base adjacent to the other end of the cathode cylinder and an apex adjacent the apex of the other cone and

a plurality of heater wires extending from the base of one cone to the base of the other cone and conductively connected thereto.

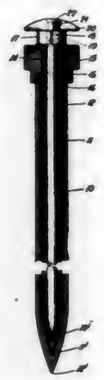


2,456,715
CONVERSION OF HYDROCARBONS
Frederick W. Leffer, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application December 15, 1945, Serial No. 635,325
11 Claims. (Cl. 196—52)

1. A catalytic conversion process which comprises introducing a suspension of solid catalyst particles in a fluid organic reactant into the upper portion of a reaction zone maintained at conversion conditions and containing a compact bed of said catalyst particles; passing said catalyst and reactant downwardly through said reaction zone and effecting conversion of said reactant therein; withdrawing the resultant reaction products together with contaminated catalyst from the lower portion of said reaction zone as a stream of catalyst suspended in said products; passing said stream, without addition thereto of any other transporting medium, to a separation zone disposed at a higher elevation than said reaction zone, the pressure in said reaction zone being maintained sufficiently high to effect the transfer of said stream to said separation zone; separating said contaminated catalyst from said reaction products in said separation zone; transferring separated contaminated catalyst by gravity flow from said separation zone to a regeneration zone disposed at substantially the same elevation as said reaction zone; passing an oxygen-containing gas upwardly through said contaminated catalyst in said regenerating zone to form a fluidized dense catalyst phase therein

and removing contaminants by combustion thereof; discharging hot regenerated catalyst from said regeneration zone into a stream of said fluid organic reactant to form said first-named suspension and passing the latter directly to said reaction zone.

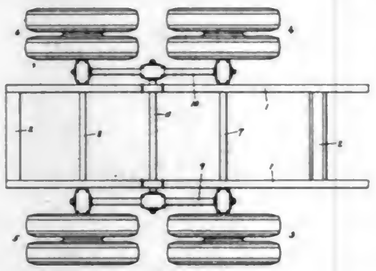
2,456,716
PHASE MODULATION SYSTEM
Sidney W. Lewinter, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 25, 1946, Serial No. 699,169
8 Claims. (Cl. 332—27)



1. In a phase-modulation system; a vacuum tube having cathode, plate and grid; a source of alternating input voltage of predetermined frequency connected between said grid and a point of reference potential; a source of direct-current plate voltage connected between said plate and said point; a first reactance, having substantial magnitude at the frequency of said input voltage, connected between said cathode and said point, said first reactance being common to the grid-cathode and plate-cathode circuits of said tube; a second reactance of opposite sign connected directly between said grid and said cathode, the magnitude of said second reactance at the frequency of said input voltage being substantially larger than that of said first reactance; modulating means connected in the grid-cathode circuit of said tube for varying the tube's mutual conductance at a frequency lower than the frequency of said input voltage; and means for deriving an output voltage between said cathode and said point.

2,456,717
IMPREGNATING COMPOSITION COMPRISING COUMARONE INDENE RESIN, CETYL ACETAMIDE, AND ETHYL CELLULOSE
William P. Lowden, Pitman, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application February 16, 1945, Serial No. 578,362
5 Claims. (Cl. 260—17)

1. An impregnating and coating composition having good electrical properties comprising about 65 per cent coumarone-indene resin, about 13 per cent of a penetrant selected from the group consisting of vegetable oils and hydrogenated methyl abietate, about 10 per cent of a plasticizer consisting of the ricinoleate of ethylene glycol ethyl ether, about 7 per cent of cetyl acetamide wax and about 5 per cent ethyl cellulose.



2,456,718
COMPOUND KNITTING NEEDLE
Davis Marinsky, Bronx, N. Y.; Louis H. Morin executor of the Estate of said Davis Marinsky, deceased
Application January 3, 1948, Serial No. 431
7 Claims. (Cl. 66—117)

1. A compound knitting needle of the character described comprising a plurality of telescoping needle members, means at one end of the needle members for maintaining all of the needle members in collapsed assembled relationship one with respect to the other, said means forming a head

for predetermined tubular needle members, the innermost needle member being in the form of a rod, and said innermost needle member having an independent head disposed beyond the first named head.

2,456,719
VEHICLE TANDEM AXLE RUNNING GEAR
William E. Martin, Kewanee, Ill.
Application April 20, 1946, Serial No. 663,654
1 Claim. (Cl. 280—104.5)

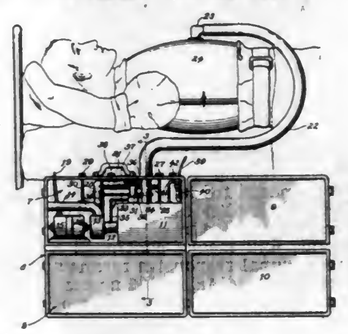
A structure of the character indicated comprising a quadrilateral frame of which the forward and rearward elements are axles upon which vehicle wheels are mounted, said axles having loops adjacent the wheels to receive the other elements of the frame, said other elements comprising lateral elements connecting the forward and rearward elements adjacent the wheels, spool-shaped rubber bushings connecting the frame elements at the corners of the quadrilateral frame, said bushings being under compression in the loops sufficient to prevent slipping between the rubber and the frame elements but allowing distortion of the frame in all directions, vehicle side frame members to which the quadrilateral frame is connected, the connecting means between the vehicle side frame members and the quadrilateral frame comprising loops, shaft-like means and rubber bushings connecting the loops and shaft-like means, the last mentioned bushings allowing distortion of the quadrilateral frame under stress and causing return of said frame to normal shape upon removal of said stress.

2,456,720
EASEL PICTURE FRAME
Carroll C. Miles, Leominster, Mass.
Application June 24, 1947, Serial No. 756,592
8 Claims. (Cl. 248—37)

2. A display frame adapted to be supported upright on either of two edges and comprising a backboard and a middle board, a rotary easel on the latter and the former having stop edges contacted by the easel to limit the rotary motion of the easel, the latter extending through the backboard between the stop edges.

2,456,721
CATALYST MANUFACTURE
Thomas H. Milliken, Jr., Moylan, Pa., and Irving H. Welinsky, Claymont, Del., assignors to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 2, 1945, Serial No. 619,896
11 Claims. (Cl. 252—259)

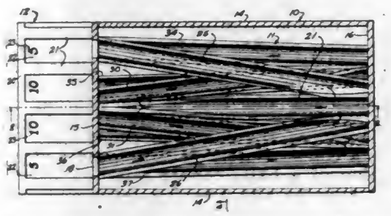
1. The process of preparing a catalyst which comprises forming an acid hydrogel of silica and zirconia in the pH range of 2.5 to about 6, subjecting the hydrogel to accelerated aging to a controlled extent in an atmosphere maintaining a moisture content of not less than 68% relative humidity under conditions including temperature in the range of 170–220° F., for a period within the range of about 45 minutes to three hours, then subjecting the hydrogel to rapid drying conditions effecting thereby moisture removal to abate further substantial aging, the recited rapid drying being continued until the hydrogel is brought to dried gel state.



2,456,722
SELECTIVE COPPER SOLVENT FOR DIOLEFIN EXTRACTION
Charles E. Morrell, Westfield, and Miller W. Swaney, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 29, 1945, Serial No. 638,518
5 Claims. (Cl. 260—681.5)

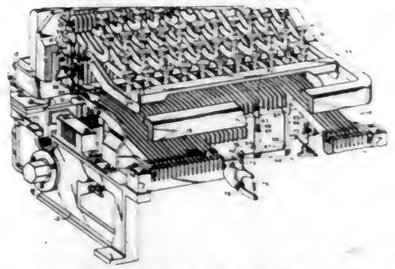
1. A process for separating a C_5 diolefin from a C_5 mono-olefin in a mixture thereof which comprises selectively absorbing the C_5 diolefin in an alkyl amine cuprous salt complex solution having a pH value above about 10, leaving the C_5 monoolefin undissolved by said solution freed of the absorbed C_5 diolefin.

2,456,723
SELECTIVE COPPER SOLVENT FOR DIOLIFIN EXTRACTION
Leland K. Beach, Mountainside, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 13, 1946, Serial No. 669,453
8 Claims. (Cl. 260—681.5)



1. Improvement in separating an unsaturated hydrocarbon from a mixture containing a relatively more saturated hydrocarbon which comprises absorbing the said unsaturated hydrocarbon in a solution of an alkyl amine cuprous acetate complex containing from 1.5 to 10 mols of water per liter and in which the alkyl amine has from 1–4 carbon atoms and the mol ratio of alkyl amine to anion varies from 2.0 to 3.5.

2,456,724
RESPIRATOR
Wilbur J. Mullikin, Washington, D. C.
Application May 6, 1946, Serial No. 667,594
4 Claims. (Cl. 128—30)



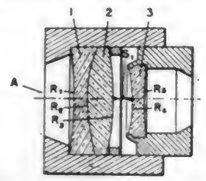
1. A respirator comprising a torso embracing jacket, an air pump having its vacuum end and its pressure end in communication with said jacket, valve means for alternately closing communication from said jacket to the vacuum end and the pressure end of said pump, and a vacuum motor in communication with the vacuum end of said pump to automatically operate said valve.

2,456,725
INCLINED RAIL BALL ROLLING CHANCE DEVICE
Charles N. Netherton, Gilman City, Mo.
Application January 16, 1948, Serial No. 2,728
5 Claims. (Cl. 273—120)

1. Game apparatus comprising sets of inclined grooved rails arranged in oppositely inclined directions so that the lower ends of the rails of one set communicate with the upper ends of the rails of the next lower set with the lower end of a single rail in simultaneous communication with the upper ends of a pair of rails disposed immediately below it, whereby a ball may be discharged from said single rail to either one of said pair of rails, and receptacle means having respective compartments communicating with the rails of the lowermost set of rails for receiving balls from said lowermost rails, said receptacle means providing scoring values for balls discharged from the various rails of said lowermost set.

2,456,726
TRANSLATING DEVICE
Robert G. Neuhaus, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application June 12, 1946, Serial No. 676,154
9 Claims. (Cl. 164—112)

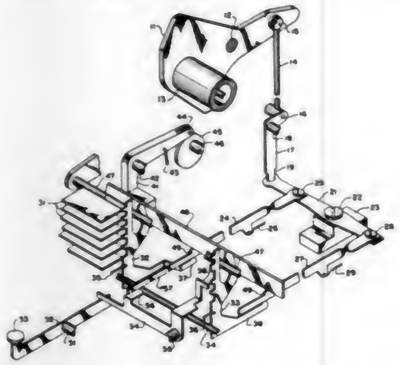
1. A telegraph signal code translator including a perforator having a special key lever, a signal responsive means for initiating operation of said key lever, a plurality of normally operating key levers each controlled by individual signal responsive means, and means controlled by said first mentioned signal responsive means and effective upon operation of one of said normally operating key levers for causing full operation of said special key lever.



2,456,727
COPPER FUNGICIDES AND PROCESS OF PRODUCING SAME
Alexander A. Nikitin, College Park, Ga., assignor to Tennessee Copper Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application November 12, 1947, Serial No. 785,535
4 Claims. (Cl. 260—414)

1. The process of manufacturing copper fungicides which comprises reacting an aqueous solution of copper and aluminum salts with an alkali and a fatty acid soap, said copper salt being selected from the group consisting of copper sulphate, copper chloride, copper nitrate, copper fluoride, copper fluosilicate and copper lactate, and said aluminum salts being selected from the group consisting of aluminum sulphate, aluminum chloride, sodium aluminate, and normal aluminum acetate, said reactants being in the proportions of 100 parts copper salt to 5–30 parts aluminum salt to 0.5–3.5 parts fatty acid soap, alkali being added until the solution becomes approximately neutral thereby precipitating a basic copper-alumina-soap compound.

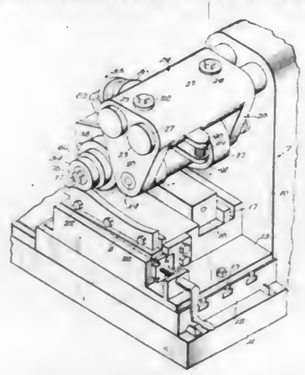
3. A copper fungicide containing a major proportion of a basic copper salt together with 1–10% alumina and 0.5–3.5% fatty acid soap, said basic copper salt being of the group consisting of basic copper sulphate, chloride, nitrite, fluoride, fluosilicate and lactate.



2,456,728
LENS SYSTEM WITH CHROMATIC ABERRATION AND WITHOUT NOTICEABLE MAGNIFICATION
Karl Yngve Öhman, Saltsjobaden, Sweden, assignor to Svenska Ackumulator Aktiebolaget Jungner, Stockholm, Sweden, a corporation of Sweden
Application August 30, 1944, Serial No. 551,878
In Sweden October 15, 1943
4 Claims. (Cl. 88—57)

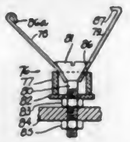
1. A shooting glass consisting of a lens system comprising at least one positive lens of high focal power and at least one negative lens with principally the same focal power as that of the positive lens or lenses for a certain wavelength of visible light and with about 1.25 dioptric less focal power as that of the positive lens for another

wavelength of visible light, said positive and negative lenses being placed at a distance from each other which is small compared with the focal length of any of the lenses.



2,456,729
MANUAL UNSHIFT MECHANISM
William M. O'Neil, Oak Park, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application October 16, 1947, Serial No. 780,222
5 Claims. (Cl. 178—27)

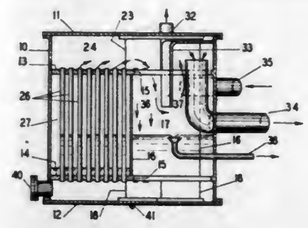
1. In a telegraph printer, a plurality of function performing means, each of said function performing means being responsive normally to a signal corresponding thereto to cause a corresponding function to be performed, a special key, a lever operable when said special key is depressed for normally engaging one of said function performing means to cause it to perform its specified function, and means on said lever for engaging a second function performing means when a signal corresponding to said function performing means has been received to prevent said lever from engaging said first function performing means.



2,456,730
MILLING MACHINE ATTACHMENT
James G. Patton, Fort Worth, Tex., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application August 6, 1945, Serial No. 609,279
8 Claims. (Cl. 90—13.2)

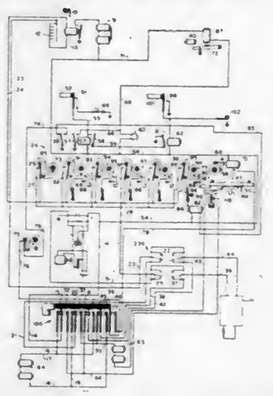
1. In combination with a milling machine embodying a horizontally slidable power fed bed plate provided with means for holding a work piece and having a contour guide plate in side by side relation with the holding means, and in addition a rotary power driven arbor positioned over the bed plate and extending transversely of the path of movement of said bed plate, an attachment adapted in conjunction with the guide plate to mill the work piece to a contour corresponding to that of the guide plate and comprising a frame pivoted on the power driven arbor to swing upwards and downwards, an auxiliary arbor disposed in parallel relation with said power driven arbor, mounted rotatably on the distal portion of

the frame and provided with a cutter for milling the work piece, a guide element associated with the frame and arranged and adapted in connection with feed of the bed plate to engage the guide plate and cause the auxiliary arbor to swing in conformity with the contour of the guide plate, and means for driving the auxiliary arbor from the power driven arbor.



2,456,731
BIRDPROOFING
Julius Stanley Peles, New York, N. Y.
Application December 4, 1943, Serial No. 512,951
1 Claim. (Cl. 20—1)

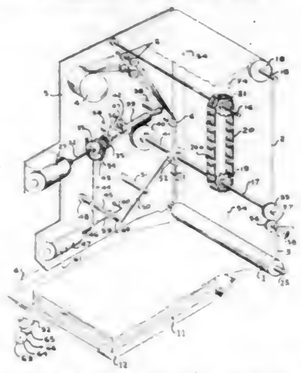
Birdproofing including a series of free ended wires of such height and spacing as to prevent birds from roosting therebetween, a tubular member, an axial bolt in the member affording a continuous annular space therebetween and having a conoidal head partly above the member, said wires being angularly spaced with their lower free ends extending into the member between the upper edge of the member and the conoidal head of the bolt to form an upwardly divergent group, and means for tensioning the bolt to secure the wires.



2,456,732
COMBINED EVAPORATOR AND BOILER
John E. Pottharst, Jr., New Orleans, La.
Application February 19, 1946, Serial No. 648,706
4 Claims. (Cl. 122—32)

3. A unitary evaporator structure comprising an outer enclosure, a bank of tubes in which a supply of the solution to be evaporated is maintained, a heating chamber through which said tubes extend, a second bank of tubes extending through said chamber and through which tubes hot gases are caused to travel, a baffle extending upwardly from the floor of the heating chamber and separating the lower portions of the two banks of tubes, means for maintaining a supply of liquid in the portion of the chamber walled

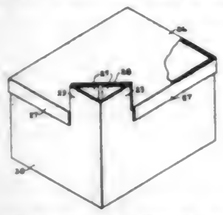
off by the baffle and surrounding the second bank of tubes, which liquid is boiled by the hot gases and the steam thus generated flows over the baffle and evolves vapors from the solution in the first bank of tubes, means for withdrawing from the evaporator the vapors thus evolved, and means for withdrawing from the chamber the condensate from the steam.



2,456,733
CIPHER CHECKING SYSTEM
Louis M. Potts, deceased, late of Evanston, Ill., by Martha W. C. Potts, executrix, Evanston, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application May 27, 1946, Serial No. 672,466
3 Claims. (Cl. 178—22)

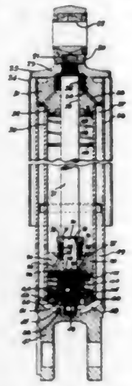
1. In a secret message transmission system, the combination of a first station, a second station, a communication channel associating said stations, means at said first station for selecting variable code combinations of impulses for transmission over said channel, ciphering means operating step by step in accordance with the operation of said selecting means to encipher said selected code combinations, means at said second station for receiving successive enciphered code combinations, deciphering means operative step by step in accordance with the operation of said receiving means to decipher said received code combinations, and means for checking whether the ciphering and deciphering means are in

phase comprising a transmitter at said second station inoperative during normal transmission and reception, means responsive to a special code combination transmitted by said first station, enciphered by said ciphering means, received at said second station, and deciphered by said deciphering means to condition said transmitter for operation, means operated by a subsequent enciphered code combination transmitted from said first station and deciphered at said second station for storing the deciphered code combination in the conditioned transmitter and for causing said transmitter to transmit the deciphered code combination enciphered by said deciphering means to said first station to be deciphered thereat by said ciphering means, whereby the proper reception of said code combination is indicative of the proper phase relationship between said ciphering and deciphering means, and means operative by another code combination to restore said transmitter to normal inoperative condition.



2,456,734
PAPER AND RIBBON FEEDING MECHANISM FOR MANIFOLDING MACHINES
Robert W. Ritzert, New York, N. Y., assignor to The Egry Register Company, Dayton, Ohio, a corporation of Ohio
Original application April 28, 1943, Serial No. 484,810. Divided and this application June 6, 1945, Serial No. 597,840
7 Claims. (Cl. 197—126)

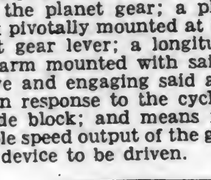
1. In a typing machine having a platen, first means shiftable to move paper to be typed over and across said platen, second means operable to move a ribbon transversely across said paper and axially along said platen, control means connected to effect movement of said first and second means in unison, said control means including an electric motor and a disengageable clutch, an electro-magnet for controlling said clutch, and a switch for controlling said electro-magnet, said switch being operable in accordance with the desired line spacing and sweep feeding operations.



2,456,735
CONTAINER
Walter A. Roselle, New York, N. Y.
Application November 19, 1945, Serial No. 629,372
3 Claims. (Cl. 229—7)

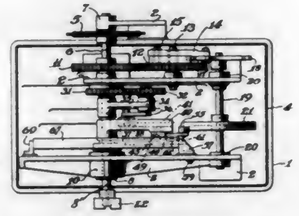
1. A container comprising a body of angular cross-section and a top plate secured to the upper edges of the body, said body having a portion at one corner extending above the level of the top plate forming a spout, said extending portion having flanges bent toward each other, said top plate having an upturned flange secured to the

flanges of the extending portion of the body to form a permanently projecting spout.



2,456,736
SHOCK ABSORBER
Edwin F. Rossman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 25, 1945, Serial No. 574,522
10 Claims. (Cl. 188—88)

1. An hydraulic shock absorber comprising in combination, a pressure cylinder; a piston slidably engaging the inner walls of said cylinder and comprising a solid body containing two sets of open ended passages, each set inclining from a large diameter circle on one side to a smaller diameter circle on the other side of said body, valves upon the sides mentioned of the body directly controlling the open ends of the passages at the smaller diameter circles, the open ends of the passages at the larger diameter circles being outside and always free of said valves; and a fluid metering groove of predetermined lesser fluid flow capacity than the passages in each end surface of said body, directly beneath each valve thereon so as to be covered by the valve, each groove interconnecting the open ends of the passages in each smaller diameter circle.

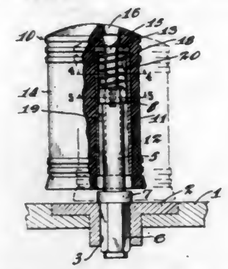


2,456,737
DISPLAY FIXTURE
Clemens Scheuer, Forest Hills, N. Y.
Application February 23, 1946, Serial No. 649,502
2 Claims. (Cl. 211—133)

1. A merchandise display fixture having the combination of a chain consisting of links hinged to each other, each of said links embodying an upright socket adapted for thereto securing the lower end portion of a post for carrying a merchandise display device, and said chain being capable of assuming a variety of convolutions so

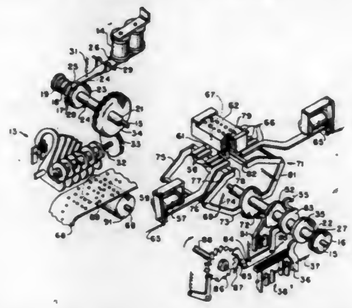
as to constitute a supporting base for one or a plurality of said posts.

2,456,738
VARIABLE-SPEED DEVICE
Edgar H. Schmidt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application August 22, 1947, Serial No. 770,093
7 Claims. (Cl. 74—394)



1. A variable speed driving device which comprises a planetary crank gear train having a rotatable drive shaft, a stationary sun gear, a planet gear meshing with the sun gear, a planet driving arm driven by the drive shaft, said driving arm carrying a stub shaft journaled therein and said stub shaft carrying said planet gear and a planet gear lever which are mounted on the stub shaft to turn integrally therewith, said planet gear lever having a radius greater than the pitch radius of the planet gear; a planet gear lever slide block pivotally mounted at the outer end of the planet gear lever; a longitudinally grooved rotatable arm mounted with said slide block in said groove and engaging said arm for rotating the arm in response to the cycloidal movement of the slide block; and means for transmitting the variable speed output of the grooved rotatable arm to a device to be driven.

2,456,739
ADJUSTABLE BIER PIN
Earl L. Schofield, Rockford, Ill., assignor to Superior Coach Corporation, Lima, Ohio, a corporation of Ohio
Application June 28, 1946, Serial No. 680,132
5 Claims. (Cl. 296—18)

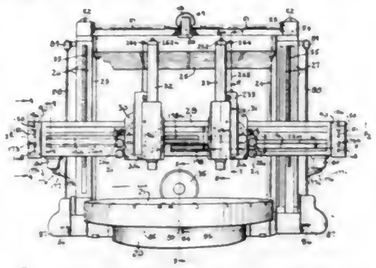


1. A bier pin comprising a cylindrical body member having therein an eccentric socket parallel with its axis, a spindle having one end mounted in said socket for limited longitudinal movement therein and having its other end projecting beyond the end of the body member and out-of-round for non-rotatable mounting, a portion of the spindle within the socket being out-of-round, a portion of the socket receiving said out-of-round portion for free rotation, and a longitudinally spaced portion of the socket being

shaped to engage said out-of-round portion in any

one of a plurality of relative axial positions and lock it in that position against rotation.

2,456,740
TAPE PERFORATOR
Reginald G. Schuler, Highland Park, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application June 22, 1946, Serial No. 678,572
6 Claims. (Cl. 178—92)



1. In combination, means to receive signal code combinations and a perforator including a tape to be perforated, a plurality of sets of punch instrumentalities successively conditionable by said means, a punch operator for each of said sets of punch instrumentalities, means for successively actuating said punch operators to successively punch rows of perforations in said tape, and means to periodically feed said tape a number of positions equivalent to the number of rows of perforations punched by said punch operators.

2,456,741
BORING MILL
Otto E. Schurr, Hamilton, Ohio, assignor, by mesne assignments, to Lima-Hamilton Corporation, Hamilton, Ohio, a corporation of Virginia
Application August 8, 1945, Serial No. 609,625
8 Claims. (Cl. 29—26)

1. In a vertical boring mill having a frame, a rotary work table on said frame, and a cross rail on said frame associated with said work table, a pair of tool carrying saddles movable in facing feed movements radially of the axis of said work table on spaced guide ways on said rail, hydraulic actuating means for moving said saddles in said facing feed movements comprising a pair of hydraulic cylinders rigidly mounted inside of said rail between said guide ways to form integral

strengthening members for said rail, pistons in said cylinders, piston rods, connected to said pistons, each extending along the side of the other

cylinder, and means connecting said piston rods to said saddles so that fluid pressure applied in said cylinders effects said facing feed movement of said saddles on said rail.

2,456,742

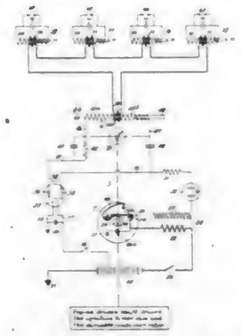
SEPARATION OF ISOMERS OF AMINO ACIDS

Anthony C. Shabica, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application January 10, 1947, Serial No. 721,451

11 Claims. (Cl. 260—534)

1. The process for the separation of dl-isoleucine in the form of the sodium salt from mixtures of dl-isoleucine and dl-allo-isoleucine, which comprises reacting said mixture with a hot solution of a substance selected from the group which consists of sodium and sodium hydroxide in a lower aliphatic alcohol, cooling the reaction mixture and removing the precipitated sodium salt of dl-isoleucine.



2,456,743

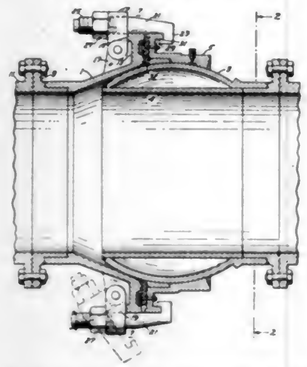
HIGH-FREQUENCY IGNITION SYSTEM

Brooks H. Short, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application July 23, 1945, Serial No. 606,645

19 Claims. (Cl. 315—210)

1. In an ignition system for an internal combustion engine having a spark-plug; a timer operated by the engine; an oscillator including a coil and a condenser; a resonator connected with the spark plug and inductively coupled with the oscillator coil; an oscillator control tube responsive to the application of a required voltage for causing operation of the oscillator; and means under control by the timer for effecting the application of the required voltage upon the control tube at the time when ignition is required.



2,456,744

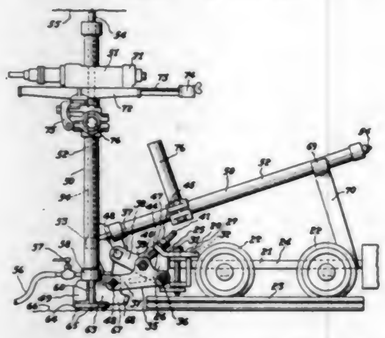
UNIVERSAL PIPE COUPLING

John G. Sjoberg, Oakland, Calif., assignor to Pacific Coast Engineering Company, Alameda, Calif., a corporation of California

Application January 11, 1947, Serial No. 721,640

5 Claims. (Cl. 285—94)

1. In a universal pipe coupling, a section; a plurality of bolts, each terminating at its head end in a hook and having its tail end threaded; a tightening nut threaded on each bolt; and means pivotally anchoring said bolts to said section at spaced peripheral locations, said means including a lug for each bolt pivotally secured to said section at its prescribed location, such lug having a passage therethrough for slidably receiving a bolt to permit arbitrary positioning of the same in such lug with its center of gravity to one side or the other of the center of said lug, preliminary to assembling said section in said coupling.



2,456,745

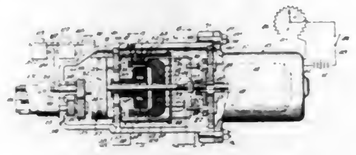
MOUNTING FOR ROCK DRILLS

Fred M. Slater, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey

Application January 19, 1946, Serial No. 642,291

1 Claim. (Cl. 255—51)

A mounting, comprising a bracket, a link, a pivot connecting one end of the link to the bracket to permit of swinging movement of the link in a vertical plane, a column base, a pivot to connect the other end of the link to the column base and being arranged in parallelism with the first mentioned pivot, a screw pivotally connected to the intermediate portion of the link and extending slidably through the bracket at a point above the first mentioned pivot, a nut on the screw bearing against the bracket for moving the link and the column base about the first mentioned pivot, and a stop member on the column base underlying the link for engagement therewith to limit movement of the column base in one direction about the second mentioned pivot.



2,456,746

SPEED GOVERNOR

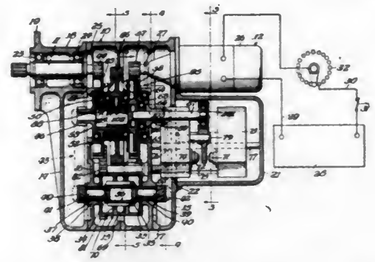
Ira J. Snader, Detroit, Mich., assignor to Avco Manufacturing Corporation, a corporation of Delaware

Application December 17, 1943, Serial No. 514,729

3 Claims. (Cl. 264—11)

1. A governor adapted to maintain an engine at a predetermined speed and comprising a rotary member provided with means for connecting it for drive by one of the operating parts of the engine, a second rotary member provided with means for driving it at a constant predetermined speed, a movably mounted speed control element, means automatically operative when the first mentioned member is driven at a speed different from the second mentioned member due to gradual acceleration or deceleration to move the element to a limited extent, and cam means operative automatically and substantially instantaneously when the first mentioned member is driven at a speed different from the second mentioned member due to abrupt acceleration or deceleration to move the element to a greater extent.

2,456,747



SPEED GOVERNOR

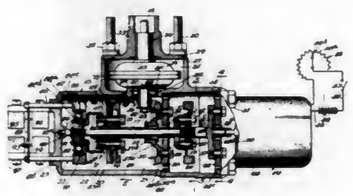
Ira J. Snader, Detroit, Mich., and Archibald Graham Forsyth, Cheam, England, assignors of one-half to Avco Manufacturing Corporation, a corporation of Delaware, and one-half to The Fairey Aviation Company, Ltd., Hayes, Middlesex, England

Application March 23, 1944, Serial No. 527,836

8 Claims. (Cl. 264—11)

1. A governor mechanism adapted to maintain an engine at a predetermined speed and comprising a rotary member provided with means whereby it may be connected for drive by one of the driven parts of the engine, a second rotary member provided with means for driving it at a predetermined speed, speed control means, means operative automatically when the first mentioned member is driven at a speed different from the second member due to gradual acceleration or deceleration of the engine from its predetermined speed gradually to actuate the speed control means, and means wholly separate from the fourth mentioned means, including a rotary part connected for drive by the first mentioned member, and operative automatically and substantially instantaneously when said first mentioned member is driven at a speed different from said

second member due to abrupt or sudden acceleration or deceleration of the engine from its predetermined speed abruptly to actuate said speed control means.



2,456,748

SPEED GOVERNOR

Ira J. Snader, Detroit, Mich., assignor to Avco Manufacturing Corporation, a corporation of Delaware

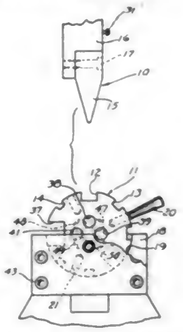
Application August 25, 1944, Serial No. 551,152

12 Claims. (Cl. 264—11)

12. A governor adapted for use with a prime mover and comprising a rotary member adapted to be driven by the prime mover, a second rotary member provided with means for driving it at a predetermined speed, a speed control element, means operative upon relative rotation of said rotary members to actuate said element, and an operating connection between the two members arranged and designed to limit relative rotation of said members and operative during drive of said members and in response to centrifugal action to urge the members to rotate conjointly.

2,456,749

BENDING MEANS



James P. Steibel, Racine, Wis.

Application January 12, 1945, Serial No. 572,459

9 Claims. (Cl. 153—21)

1. A sheet bending means comprising a base member having a seat therein at least in part circular in transverse cross section, a substantially cylindrical die member conforming to said seat and rotatably supported therein in imbedded relation, said die member having a plurality of longitudinal circumferentially-spaced slots, a punch member adapted to be brought into engagement with said longitudinal circumferentially spaced slots so as to bend a sheet of mate-

rial placed between said die and said punch, and

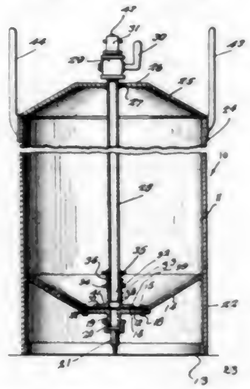
means to selectively position said slots in working position relative to said punch.

2,456,750

REACTION PRODUCTS OF PYRIDINE AND ALLERGENIC EXTRACTS OF PLANTS OF THE GENUS RHUS

Margaret B. Strauss, New York, N. Y.

No Drawing. Application March 31, 1945, Serial No. 586,026
13 Claims. (Cl. 260—236.5)



1. The process for preparing antigenic substances characterized by stability of physiological activity upon storage, that comprises directly treating parts of plants of the genus Rhus containing a non-proteinaceous physiologically active principle, with pyridine to form a reaction product of pyridine with said principle, treating the reaction product thus obtained with a substance selected from the class consisting of aqueous mineral acid solution and acidic aqueous alum solution to cause separation of a substantially insoluble allergenic product, and recovering said allergenic product.

2,456,751

GREASE GUN FILLER

Cole Strong, Estancia, N. Mex.

Application November 17, 1945, Serial No. 629,219
1 Claim. (Cl. 222—400)

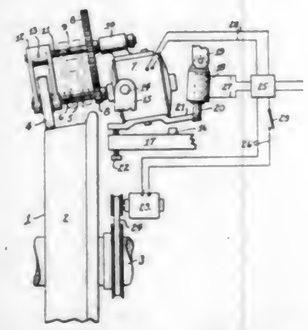
A lubricant dispenser comprising a fluid-tight container having an axial filling opening in one end and an axial dispensing opening in its opposite end, a dispensing tube entering the container through the dispensing opening and terminating near the filling opening, a control valve at the outer end of the dispensing tube, a cover plate closing the filling opening, said cover plate having an air inlet opening in axial alignment with the dispensing tube, an air inlet check valve closing said air inlet opening, a baffle plate slidably mounted on the inner end of the dispensing tube, means yieldingly to urge the baffle plate toward the cover plate and an annular row of radially spaced lugs projecting from the under side of the baffle plate whereby the baffle plate will be spaced from the coverplate to form an annular passage through which lubricant may enter the discharge tube.

2,456,752

RESOLUTION OF RACEMIC TARTARIC ACID

Joseph D. Surmatis, Nutley, N. J., assignor, by mesne assignments, to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application May 2, 1946, Serial No. 666,827
7 Claims. (Cl. 260—536)



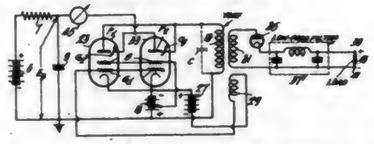
1. The method of separating racemic tartaric acid into its optically active isomers which comprises making a solution in hot water of racemic tartaric acid and 2-(d-gluco-d-gulo-hepto-hexahydroxy-hexyl)-benzimidazole, and removing heat from said solution while maintaining it with only its original constituents and thereby separating the resulting levo benzimidazole salt from the dextro salt.

2,456,753

CAR WHEEL GRINDER

Elmo E. Swanee, San Francisco, Calif., assignor of two-thirds to Monroe C. Kidder, Los Angeles, Calif.

Application May 12, 1945, Serial No. 593,431
6 Claims. (Cl. 51—254)



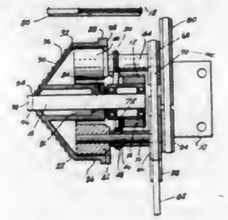
3. A machine for grinding the wheel of a railway car while in motion comprising a movable bracket, an abrasive grinding wheel rotatably carried by said bracket and positioned by the movement thereof in and out of contact with the tread of the car wheel, power transmitting means connecting the car wheel with the grinding wheel whereby said grinding wheel is driven by the rotation of said car wheel, and servo-motor means actuated by the car wheel and responsive to the speed thereof, said servo-motor means including a movable element connected with said bracket for moving the same.

2,456,754

ELECTRONIC SAW-TOOTH PULSE GENERATOR

George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application March 20, 1945, Serial No. 583,801
9 Claims. (Cl. 171—97)



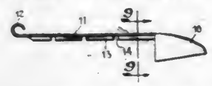
8. A high voltage unipotential system including a storage capacitor, a relatively low voltage unipotential source, means connecting said low voltage source to said capacitor to charge said capacitor, thermionic tube means comprising at least a cathode, a control electrode, a pair of secondary-electron-emissive anodes and a pair of secondary-electron-collector electrodes, each of said collector electrodes being responsive to secondary electrons derived substantially only from an adjacent one of said anodes, a transformer having primary and secondary windings, a discharge path for said capacitor including means connecting said capacitor to one of said anodes and to the one of said collectors adjacent to the other of said anodes for discharging said capacitor through said tube means and said transformer primary winding, a second discharge path for the capacitance of said transformer primary winding including means connecting said transformer primary winding to the other of said anodes and the other of said collectors adjacent said one of said anodes for discharging said transformer primary winding through said tube means and said capacitor, means including said transformer comprising a source of keying pulses, means for applying said keying pulses to said control electrode to effect alternate discharges of energy from said capacitor and said transformer, a rectifier responsive to high alternating potentials derived from said transformer, and means for deriving a high D. C. voltage for said rectifier.

2,456,755

HELICAL COIL BUTT GROUND WINDING MACHINE

Claude J. Terrell, Quincy, Ill.

Application January 31, 1947, Serial No. 725,626
3 Claims. (Cl. 153—64)



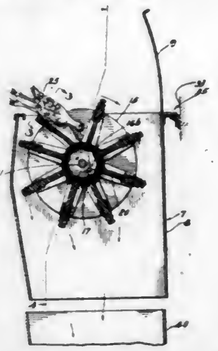
1. A device for forming helical ground coils, comprising a support, a rotary shaft journaled upon the support, a winding drum mounted upon the shaft for rotation therewith, the winding drum comprising a hub for engagement upon the shaft; an axial cylindrical portion spaced radially outwardly from the hub and including an inner annular flange having teeth formed thereon, a conically tapered portion arranged axially outwardly of the cylindrical portion and having an external spiral formation thereon, the outer end of the rotary shaft extending axially beyond the outer end of the conically tapered portion, an element mounted upon the support and engaging the teeth to prevent backward rotation of the winding drum, driving connecting means for rotating the winding drum, and manually operable means to control the rotation of the drum.

2,456,756

SHOE TREE

Chester Tietig, Park Hills, Ky.

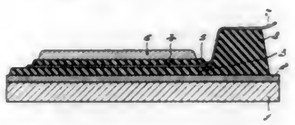
Application November 23, 1945, Serial No. 630,238
3 Claims. (Cl. 12—128.1)



1. A shoe tree comprising a hollow curved toe portion of bent thin material of high resilience and high strength in proportion to its weight, said toe portion being open at its bottom, a resilient shank extending rearwardly from the toe portion being integral therewith, and a channel interrputed by openings, extending along the shank substantially on the middle line thereof the stock from which said openings were formed in said channel being depressed and camming surfaces formed on the ends of said depressions, some of which surfaces bear against each other when the shank is depressed during use of the tree.

2,456,757

POULTRY PICKER

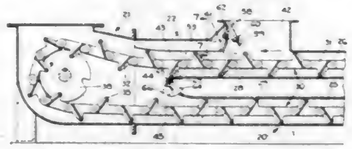


Frank C. Valenta, Burbank, Calif.

Application April 24, 1946, Serial No. 664,523
12 Claims. (Cl. 17—11.1)

1. In a poultry picker, a bobbin-shaped member, means whereon said member is mounted to rotate about its axis, a circumferentially spaced series of arcuate members mounted upon said bobbin-shaped member in which series the individual arcuate members have their opposite ends secured to the opposed flanges of said bobbin-shaped member with the concave side of the arcuate member directed outwardly, an elastic web carried by each said arcuate member and occupying the concave side thereof, said web when in an unstressed condition extending in a plane radial to the axis of said bobbin-shaped member, and a row of plucking fingers carried by the radially outward edge of said web.

2,456,758
BLOCKING-LAYER ELECTRODE SYSTEM
Willem Christiaan van Geel, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee
Application August 28, 1945, Serial No. 613,153
In the Netherlands April 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 21, 1961
9 Claims. (Cl. 175—366)

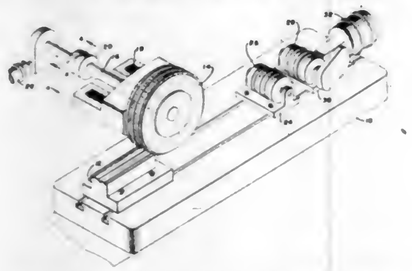


8. A blocking layer cell comprising a cathode electrode consisting of selenium, an anode electrode of which at least that surface portion facing the cathode consists of cuprous iodide, said cathode electrode having an electron emissive capacity not greater than the electron emissive capacity of said anode electrode, and a blocking layer between said electrodes, a selenium grid embedded in said blocking layer, said selenium grid having an electron emissive capacity not greater than the emissivity of said anode electrode, and said grid electrode also having an electron emissive capacity not greater than the emissivity of said cathode electrode.

2,456,759
ACETYLENE TETRAMETHACRYLATE AND POLYMERS THEREOF
Jesse O. White, Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 16, 1943, Serial No. 506,552
4 Claims. (Cl. 260—83)

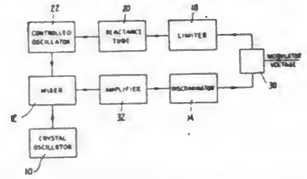
1. Acetylene tetramethacrylate.

2,456,760
ENDLESS CONVEYER, INCLUDING MOVABLE CUTOFF AND CULLING MEANS IN ITS FEED STRUCTURE
Paul V. Whitney, Columbus, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Original application March 11, 1943, Serial No. 478,781. Divided and this application January 27, 1944, Serial No. 519,834
1 Claim. (Cl. 241—200)



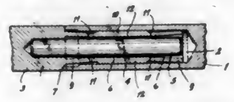
A conveyor including a casing having enclosing working and return runs, chain conveyor mechanism having flights which traverse substantially the entire cross-sectional area of said working and return runs, a feed hopper adjacent one end of the return run where material is fed thereto and conveyed reversely, a feed chamber rearwardly of said hopper adapted to receive said reversely fed material by way of a short feed section of the return run and feed it to the working run, said short feed section having a cross-sectional area greater than the normal cross-sectional area of the return and working runs, cut off and culling means movable under the influence of material to vary the effective size of the opening between the feed chamber and said working leg, said cut off and culling means including a swingable member pivoted adjacent its top, said swingable member having an arcuate bottom, a rearwardly projecting cutting and culling edge, means limiting its swinging movement in a rearward direction, and resilient means urging it rearwardly whereby some of the particles of material being conveyed from said feed chamber into said working leg will be culled out, other particles cut, and still others pressed between the flights of the chain conveyor mechanism upon entering said working leg.

2,456,761
RUGGED CATHODE
Paul D. Williams, Palo Alto, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application April 19, 1947, Serial No. 742,489
5 Claims. (Cl. 250—27.5)



1. A carburized thoriated tungsten cathode having a layer of tungsten carbide and a bonding agent cementing the crystalline structure together in said layer.

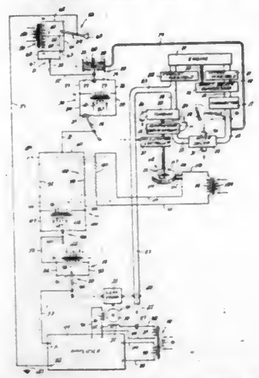
2,456,762
APPARATUS FOR CRUSH DRESSING GRINDING WHEELS
John C. Wilson, Springfield, Ohio, assignor to The Thompson Grinder Company, Springfield, Ohio, a corporation of Ohio
Application September 27, 1945, Serial No. 618,814
16 Claims. (Cl. 125—11)



1. In a grinding machine; a work table; a grinding wheel movable relative to said work table; a dressing roller on said table; intermediate roller means on said table adapted to be shaped by the application of pressure thereto; means for transferring the configuration of said dressing roller to said intermediate roller means by bringing the same together under pressure and then rotating the said rollers at the same surface speeds; and means for transferring the said configuration from said intermediate roller means to said grinding wheel by bringing the same together under pressure and then rotating them at the same surface speeds.

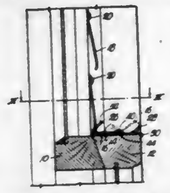
2,456,763
FREQUENCY STABILIZATION
Marc Ziegler, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 26, 1943, Serial No. 488,582
6 Claims. (Cl. 179—171.5)

3. In the method of controlling the frequency of a source of an adjustable oscillation, the steps comprising generating a control voltage having amplitude variations proportional to frequency variations of the difference frequency between said adjustable oscillation and a pilot oscillation, controlling the frequency of said source proportional to the amplitude of said generated voltage, and limiting the generated voltage to amplitude variations within a given range of amplitude values at which said source is limited to frequency variations about only one condition of stable equilibrium.



2,456,764
ELECTRICAL CONNECTOR
Peter J. Bach, Brentwood, and James H. Simpson, St. Louis, Mo., assignors to Mines Equipment Company, St. Louis, Mo., a corporation of Missouri
Application April 30, 1945, Serial No. 591,164
10 Claims. (Cl. 287—76)

1. A connector comprising a member having a cylindrical socket therein and a member having a hollow cylindrical plug adapted for endwise insertion in said cylindrical socket, said hollow cylindrical plug having a straight clylindrical portion of larger diameter than said cylindrical socket, said straight cylindrical portion of said cylindrical plug having a plurality of helical slits therein, whereby said straight cylindrical portion is adapted when compressed in the smaller diameter cylindrical socket to bear resiliently throughout its entire length against the wall thereof and thus frictionally resist endwise separation of said members.

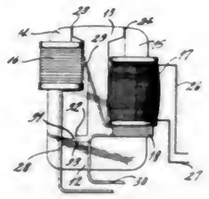


2,456,765
HOT-WIRE BRIDGE OVERSPEED CONTROLLER
George L. Borell, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 18, 1945, Serial No. 589,078
13 Claims. (Cl. 230—11)

1. An electrical control system for a variable velocity device, comprising in combination, a voltage responsive control means for said device for varying the velocity of said device, means including an electrical impedance means connected to said control means for varying the voltage applied to said control means in accordance with the impedance of said impedance means, thermally operated means responsive to an increase in velocity of said device above a predetermined maximum to vary the impedance of said impedance means at a rapid rate and apply to said control

means a voltage operative to cause said control means to reduce the velocity, said thermally operated means being thermally lagged to retard the rate at which the impedance value of said impedance means is returned to its normal value as said velocity diminishes.

2,456,766
SAFETY WINDOW LOCK
Harry E. Bundren and Victor A. Vicksell, Kansas City, Mo.
Application May 12, 1947, Serial No. 747,404
6 Claims. (Cl. 292—254)



1. A lock for rectilinearly reciprocable windows comprising a plate member adapted for attachment to a window to be locked; a cam element swingably secured to said plate member; and shiftable means disposed in the path of travel of said window and positioned to limit the extent of movement of the window in one direction, said cam element being movable to and from a position rendering said shiftable means inoperable as the window is moved in said one direction, said shiftable means comprising a resilient stop, said cam element being operable to depress the stop out of the path of travel of said window.

2,456,767
COMBINATION OF MAGNETIC TRANSDUCING AND ERASING HEADS
Marvin Camras, Chicago, Ill., assignor to Armour Research Foundation of Illinois Institute of Technology, Chicago, Ill., a corporation of Illinois
Application November 29, 1945, Serial No. 631,682
14 Claims. (Cl. 179—100.2)

12. An electromagnetic transducer head for transducing signal energy between a traveling magnetic record medium and an electric circuit

comprising a core plate of relatively thin paramagnetic material having a base portion of three upstanding legs all disposed in substantially the same plane, the center leg of the three having a T-shaped extremity and the other legs, one on either side of said center leg, being substantially straight, the extremities of said side legs being disposed in slightly spaced relationship with the ends of the T-shaped extremity of said center

leg to provide non-magnetic gaps therebetween, a magnetic erasing coil on one of said side legs, an electric signal coil and a high frequency component coil on the other of said side legs, said high frequency biasing coil being serially connected with said erase coil, said side leg on which said transducer coil and said high frequency biasing coil is mounted being substantially longer than said side leg upon which said erase coil is mounted.

2,456,768

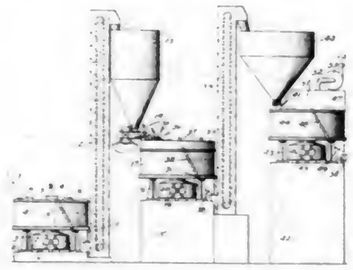
POLYFLUORINATED PROPIONITRILES

David W. Chaney, Nether Providence Township, Delaware County, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 28, 1946, Serial No. 680,055

5 Claims. (Cl. 260—465.7)

2. Nitriles of the formula $CF_2XCClXCN$ where X is selected from the group consisting of chlorine and fluorine.



2,456,769

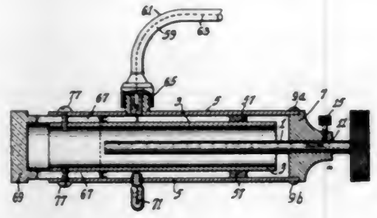
METHOD OF RECLAIMING FOUNDRY SAND

Alfred C. Christensen, Chicago, and Robert L. McIlvaine, Glencoe, Ill., assignors to Herbert S. Simpson, Evanston, Ill.

Application February 16, 1944, Serial No. 522,560

4 Claims. (Cl. 22—217)

1. In a method of conditioning used bonded foundry sand for re-use, the steps of first wet scrubbing and mulling the sand to break up the sand and to moisten the particles thereof so that the sand is thoroughly mulled in a paste-like form and thereafter while the sand is in said divided form with the grains thereof in a substantially free state transferring the sand to a heating station, and at said station contemporaneously heating and mulling the sand to loosen and substantially remove carbonaceous and combustible foreign material from the grains of sand.



2,456,770

IMPEDANCE MATCHING DEVICE

John B. Dearing, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware

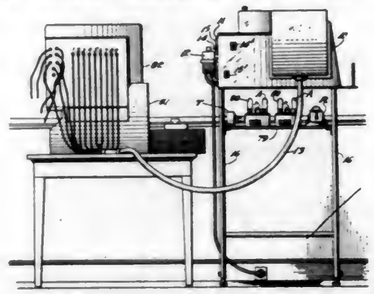
Application February 14, 1944, Serial No. 522,224

1 Claim. (Cl. 178—44)

Apparatus of the character described, comprising in combination a source of high frequency electrical energy, a concentric resonant line constituted by an outer hollow cylindrical conductor, a calibrated inner conductor contained within and concentric with said outer conductor and an intermediate hollow cylindrical conductor nested between and concentric with and radially spaced from said inner and outer conductors, said conductors being composed of material having a high resistance to high frequency currents, said line having an open end and a closed end, a conductive end member at said closed end having an aperture therein, said inner conductor being of equal diameter with and slidable within said aperture whereby to form an adjustable connection at said closed end between said inner and outer conductors, said intermediate conductor extending from said open end towards, but spaced from, said end member, a connection from said source to said line, and a slidable calibrated short-circuiting cylinder adapted to be inserted between said outer and intermediate conductors at said open end to form an adjustable connection between said outer and intermediate conductors.

2,456,771

ELECTROMECHANICAL MECHANISM FOR ACTUATING CALCULATING MACHINES



Michele Guglielmo de Simone, Stapleton, N. Y., assignor to A. Gifford Agnew, New York, N. Y.

Continuation of application Serial No. 438,890, April 14, 1942. This application June 14, 1947, Serial No. 754,751

8 Claims. (Cl. 235—61.6)

1. A record-controlled electro-mechanical mechanism for actuating a calculating machine having keys arranged in denominational columns and digital rows, means for feeding record cards having indicia differentially located in similarly arranged columns and rows, and indicia sensing device for each column, said record cards being fed past said sensing devices by said feeding means, an electrical circuit for each sensing device and closed thereby as an indicium is sensed, an electro-magnet in each circuit, a positioning bar for each column of keys and shifted in response to energization of a related electromagnet, a

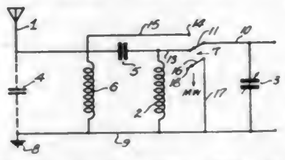
plurality of key-operating members arranged in operative relation with the calculating machine keys, movable setting members carried by said operating members, each of the setting members in a denominational column being operated when the related positioning bar is shifted, a plurality of trapping devices, one for each digital row of keys and adapted to trap operated setting members in operated position, operating magnets for

each of said trapping devices, a distributor operated in timed relation to the record-feeding means, and circuits including said distributor, said operating magnets and a portion of said first-mentioned circuits, whereby the trapping devices operate to trap in each denominational column only that one of the setting members having a digital value corresponding to the indicium sensed in the related record column.

2,456,772

COUPLED CIRCUITS FOR HIGH IMPEDANCE AERIALS

Charles William Eggleton, Walton-on-Thames, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain



Application January 5, 1946, Serial No. 639,275

In Great Britain September 6, 1944

Section 1, Public Law 690, August 8, 1946

Patent expires August 27, 1965

4 Claims. (Cl. 250—20)

1. In a multi-band receiver, first and second coils, a variable condenser, switch means for selectively connecting said condenser across each of said coils for tuning the receiver through different wavebands, a signal source, means for coupling said source to the first of said coils, and a capacity connected between the high potential sides of said coils, the arrangement being such that in one position of the band-switch means the variable condenser and the second coil constitute the tunable circuit of the receiver for one waveband and the first coil forms a parallel resonant circuit with a capacity which is constituted in whole or in part by stray capacity, said parallel resonant circuit being capacity coupled to the tunable circuit, and in another position of the band-switch means the variable condenser and the first coil constitute the tunable circuit of the receiver for another waveband and the second coil is short-circuited.

2,456,773

RESOLUTION OF NITROGEN BASE MIXTURES

Karl Henry Engel, Teaneck, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application November 29, 1943, Serial No. 512,241

5 Claims. (Cl. 260—290)

5. In a process for resolving into its components a mixture of 3-picoline, 4-picoline and 2,6-lutidine, the steps that comprise treating the mixture with approximately the stoichiometric amount of zinc chloride to react with the picolines substantially completely to form picoline-zinc chloride addition product, subjecting the resulting mixture to steam distillation to remove said 2,6-lutidine substantially completely as distillate, decomposing the residual picoline-zinc chloride addition product to liberate therefrom a picoline mixture substantially free from other nitrogen bases, and precipitating 3-picoline as phosphate from said picoline mixture.

2,456,774

ISOLATION OF QUINOLINE FROM A MIXTURE OF NITROGEN BASES

Karl H. Engel, Teaneck, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application June 27, 1945, Serial No. 601,937

4 Claims. (Cl. 260—283)

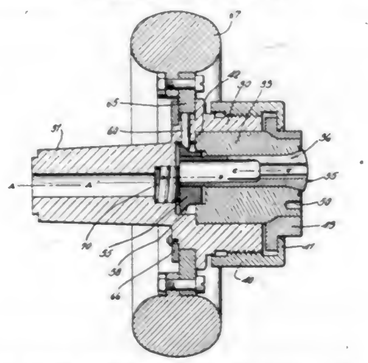
1. In a process for separating quinoline from a mixture thereof with closely-related, like-boiling nitrogen bases, in which mixture quinoline constitutes at least 70% by weight of the total bases present and in which quinaldine is present only in relatively small amounts, the step that comprises treating the mixture in the presence of water with a quantity of phosphoric acid sufficient to react with a substantial portion of the nitrogen bases to precipitate quinoline phosphate from an aqueous solution of the mixture, the amount of water present being sufficiently high to retain in solution substantially all the nitrogen bases except quinoline, and sufficiently low to cause substantial precipitation of quinoline phosphate.

2,456,775

HEAT EXCHANGER

Arthur J. Fausek and Irwing F. Fausek, Clayton, Mo.

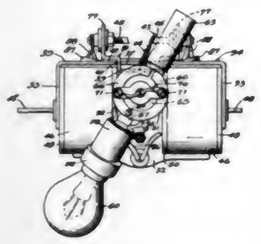
Application November 16, 1944, Serial No. 563,647



4 Claims. (Cl. 257—246)

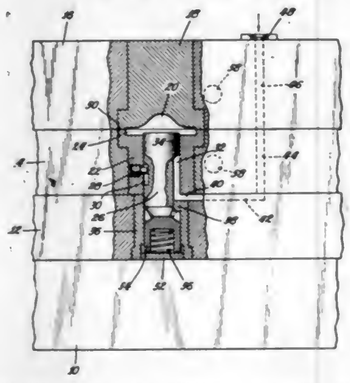
1. A heat exchanger comprising an elongated housing which is closed at its opposite ends, an inlet conductor and an outlet conductor leading to and from the interior of said housing respectively, an inner tubular member extended longitudinally through said housing with the wall of said inner tubular member spaced from the wall of said housing, inlet and outlet conductors leading to and from said inner tubular member respectively for passage through said inner tubular member of a medium, an intermediate spirally corrugated tubular member disposed in the space between the wall of said inner tubular member and the wall of said housing, said spirally corrugated intermediate tubular member having a

convex spirally extended corrugation portion which contacts with the inner face of the wall of said housing and a concave spirally extended corrugation portion which contacts with the outer face of the wall of said inner tubular member, whereby one spiral passageway is provided through the heat exchanger by a spiral of said intermediate tubular member and an adjacent spiral portion of the outer face of the wall of said inner tubular member, and a second spiral passageway is provided through the heat exchanger by a spiral portion of said intermediate member and an adjacent spiral portion of the inner face of the wall of said housing, said spiral passageway formed by a portion of said intermediate tubular member and a portion of the wall of said housing communicating directly with the interior of said housing for passage therethrough of medium which enters said housing, inlet and outlet conductors leading to and from the other of said spiral passageways respectively for passage through said other spiral passageway of another medium, and a spiral element arranged in one of said spiral passageways.



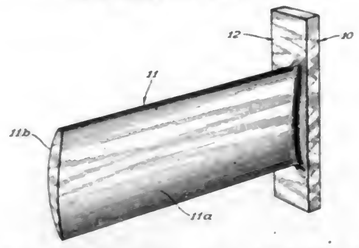
2,456,776
ECCENTRIC CHUCK
Rudolph E. Faust, Brooklyn, N. Y.
Application February 5, 1946, Serial No. 645,579
7 Claims. (Cl. 279—6)

1. A lathe chuck for turning eccentrics comprising an outer hollow body member having a bore parallel to but offset with respect to the axis about which the chuck as a whole rotates, a cylindrical inner block member adapted to fit within the bore of the outer member and having a bore parallel to but offset with respect to its cylindrical outer surface, a collet for grasping a lug on the article to be eccentrically turned slidably fitting within the bore of the inner member, and means including a clamping ring rotatively rigid and axially movable with respect to said outer body member for clamping said members together in adjusted position.



2,456,777
OSCILLATING MECHANISM FOR SWINGING MEMBERS
Jefferson C. Gibson, Chicago, Ill.
Application May 31, 1944, Serial No. 538,138
3 Claims. (Cl. 172—126)

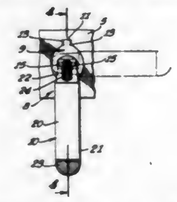
2. An oscillating mechanism for a swinging member comprising a stationary frame, a rotatable shaft journaled in said frame, a reciprocating shuttle armature, a pair of spaced solenoid coils carried by said frame in surrounding relation to opposite ends of said armature, an arm carried by said shaft, one end of said arm cooperating with said armature to convert the reciprocal longitudinal movement of said armature to a reciprocating rotary motion of said shaft, a spring member secured at one end to the opposite end of said arm, the opposite end of said spring member being secured to a pivoted switch ele-



ment, said switch element having a circuit connection with said coils and being adapted to be snapped past dead center position with each swing of said arm, a pair of contacts positioned to be alternately contacted by said switch element and circuit elements connecting the respective contacts each with one of said solenoid coils for alternately energizing the coils.

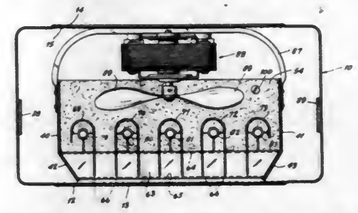
2,456,778
INJECTION MOLDING OF PLASTIC MATERIAL
John E. Gilchrist, Chicago, Ill.
Application March 13, 1946, Serial No. 654,068
4 Claims. (Cl. 18—42)

1. Equipment for forming molded articles without gates which comprises: mold means defining a cavity having the configuration of a finished article; said mold means including a slidable plug member; said plug member having a passage opening into said cavity upon movement of said plug member into said cavity, and means for closing said opening on movement of said plug member out of said cavity; the area of said plug member exposed to the pressure in said cavity being greater than the area of said valve passage; means for delivering plastic material under pressure to said valve passage; resilient biasing means for holding said plug projected into said cavity with said valve passage open; and means for heating and cooling said molds.



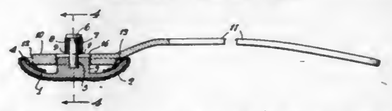
2,456,779
COMPOSITE MATERIAL AND SHAPED BODIES THEREFROM
Claus G. Goetzel, Yonkers, N. Y., assignor to American Electro Metal Corporation, Yonkers, N. Y.
Application July 8, 1948, Serial No. 37,617
In Great Britain January 27, 1947
13 Claims. (Cl. 75—22)

1. The method of making a composite shaped body, which comprises compacting powdered ferrous metal particles to form a shaped porous mass, contacting the mass with cuprous infiltrant associated with another metal selected from the group consisting of manganese, nickel, chromium, silicon and titanium, heating said contacted mass and infiltrant to melt the infiltrant and associated metal and infiltrate them into the mass, and further heating the infiltrated mass to temperatures above about 500° C. to alloy with said ferrous metal of the mass some of said cuprous infiltrant and associated metal thus carried into and distributed throughout said mass.



2. A composite metal article comprising a 70% to 90% sintered powdered ferrous metal matrix having intercommunicating pores, and a 30% to 10% cuprous metal infiltrant containing another metal selected from the group consisting of manganese, nickel, chromium, silicon and titanium filling said pores, and said matrix metal and infiltrant therein having been heat treated above about 5000 C. to alloy the said matrix metal with some of the infiltrant metal and other metal contained therewith in said matrix.

2,456,780
WINDOW LOCK
Frank C. Gorham, Los Angeles, Calif.
Application January 30, 1945, Serial No. 575,209
5 Claims. (Cl. 292—342)



1. A window sash lock comprising, in combination, a fixed member adapted to be attached to an upper window sash, a wedge shaped member adapted to depend from said fixed member and to extend out into the path of the lower window sash to limit the vertical movement thereof, supporting means projecting outwardly from the face of one of said members and having a greater extent in one direction than transversely to said one direction, and means on the other of said members adapted to pass over and receive said supporting means only when the wedge-shaped member is turned at an angle to its vertical position whereby when said wedge-shaped member is in vertical position it is restrained from horizontal movement and is permitted only limited vertical movement.

2,456,781
BLOWER TYPE RADIANT HEATER
Edwin F. Hardey, Kansas City, Mo., assignor to The Emerson Electric Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application October 5, 1945, Serial No. 620,542
6 Claims. (Cl. 219—39)

1. In a heater, a frame having four sides, a plurality of elongated heating coils extending between two sides and arranged in spaced relation across the frame, a plurality of substantially impervious elongated reflectors of heat conducting material having rounded backs and forwardly extending side walls shaped with respect to the heating elements to reflect heat from the elements forwardly through the front of the frame, one reflector being associated with each heating coil, said reflectors extending at least substantially the full length of the coils and opening forwardly of the frame, the side walls of adjacent reflectors being directed forwardly of the casing and spaced to provide air passages that can discharge forwardly toward the front opening, a fan support on the frame, a fan supported thereon behind the reflectors and positioned to direct air against the back walls of the reflectors and through the air passages, said frame and the foregoing parts being assembled as a unit, a casing having an opening, the assembled unit being insertable into the casing to discharge heat from the opening, and means to secure the assembled unit in the casing.

2,456,782
WASHCLOTH AND PAD HOLDER FOR THE BATH
Peter C. Hartman, Chicago, Ill.
Application December 6, 1944, Serial No. 566,794
2 Claims. (Cl. 15—231)

1. In a wash cloth and pad holder for the bath, a concavo-convex head for receiving a cloth about its convex and into its concave portion, a recessed riser disposed centrally of the concave portion of said head, a keeper freely received in said head for engagement with the cloth, said keeper formed with a perforation complementary to said riser to permit telescopic engagement therewith, said keeper when disengaged from said riser freeing the cloth for removal and replacement, a headed pin extending through the keeper perforation fixed into the recess in said riser, a flanged button pivotally arranged upon

said pin shaped complementary to said keeper perforation to permit telescopic engagement with said keeper in one position of said button relative thereto, the flanges of said button then extending beyond said keeper perforation, said button in non-telescoped relation with said keeper being adapted for disposal at an angle to said keeper perforation to retain said keeper upon said riser in binding engagement with the cloth, and a handle for said keeper.

2,456,783

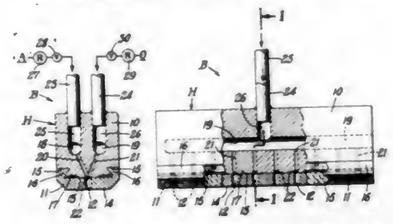
SILOXANE COPOLYMERS

James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York

No Drawing. Application November 27, 1942, Serial No. 467,146

8 Claims. (Cl. 260—46.5)

3. A copolymeric organo-siloxane comprising hydrocarbon-substituted silicon units which correspond to the formulae $RSi\equiv$ and $R'R''R'''Si-$, respectively, and which are interconnected by oxygen atoms through siloxane linkages, where R, R', R'' and R''' are monovalent hydrocarbon radicals which are attached to silicon through carbon silicon linkages, the silicon atoms of said units being the only silicon atoms in said organo-siloxane.



2,456,784

BLOWPIPE APPARATUS

Homer W. Jones, Westfield, N. J., assignor to Union Carbide and Carbon Corporation, a corporation of New York

Application March 9, 1944, Serial No. 525,658

8 Claims. (Cl. 158—27.4)

1. In a blowpipe nozzle, the combination with a body of the type adapted to produce a post-mixed oxy-fuel-gas flame, having an inclined fuel-gas passage and an inclined oxidizing-gas passage converging at a common orifice in a surface of the body, which flame is subject to undesirable diffused shape rendering it unsuitable for welding, of means for improving the shape of such flame for welding, said means comprising a tip operatively associated with said body, said tip having a mixed-gas passageway extending from said surface to the outer surface of the tip, the cross-sectional area of said passageway being equal at least to that of both said passages, and the length of said passageway being of the order of twice the diameter of said passageway.

2,456,785

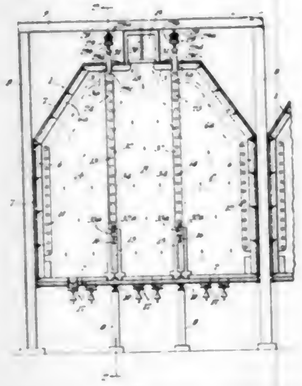
PRODUCTION OF AMIDES

John A. King, Albany, N. Y., assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application July 28, 1945, Serial No. 607,671

7 Claims. (Cl. 260—558)

1. A process for preparing carboxylic acid amides which comprises heating a ketone having the formula R—CO—R', where R is alkyl and R' is a member of the group consisting of alkyl and aralkyl, with aqueous ammonium polysulfide at 150–330° C.



2,456,786

HEATING OF HYDROCARBON FLUIDS

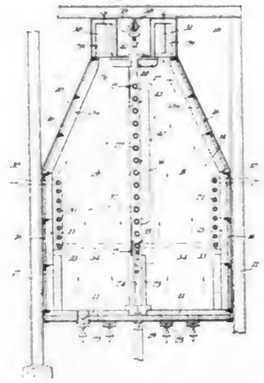
Ludwig Kniel, Scarsdale, and Pierre Lambert, Jackson Heights, N. Y., and Herbert R. Treat, Teaneck, N. J., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware

Application May 18, 1945, Serial No. 594,410

13 Claims. (Cl. 196—110)

1. The method of cracking a hydrocarbon fluid, comprising conducting combustion predominantly within lower regions of each of two side-by-side zones, passing said fluid in a confined stream progressively in one vertical direction along a serpentine course through an outer wall region within one of said zones and remote from the other zone, to preheat the fluid predominantly by radiant heat, passing said preheated fluid from said course progressively downward in a confined stream along a serpentine course leading from a point materially higher than said first course downwardly between said zones, equally exposing opposite sides of said downward course to radiant heat from both zones and, in said downward course, further heating the fluid to a cracking temperature by direct radiant heat from both of said zones, by reflection of radiant heat upon an upper portion of the course and by discharge of the products of combustion of one of said zones across an upper portion of the course.

2,456,787



PROCESS AND APPARATUS FOR HEATING HYDROCARBON FLUIDS

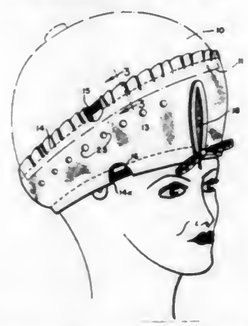
Ludwig Kniel, Scarsdale, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware

Application March 9, 1946, Serial No. 653,289

9 Claims. (Cl. 196—110)

1. The method of heating a hydrocarbon fluid, comprising conducting combustion within two side-by-side zones to effect a high degree of heating within regions of one end of the zones and progressively diminishing heating toward the opposite end of the zones, conducting said fluid in separate streams along confined courses within said highly heated regions and at the remote sides thereof and, within said courses, effecting preheating of the fluid predominantly by radiant heat, uniting said streams of the fluid thus preheated and conducting the preheated fluid along a relatively short confined course between said highly heated regions and in substantially equal exposure to radiant heat from said regions simultaneously and from the two regions together around substantially the entire cross section of the course, conducting the fluid from said relatively short course to a point between regions of the opposite end of the zones and thence along a longer confined course

between the zones and in substantially equal exposure to radiant heat from said zones simultaneously and from the two zones together around substantially the entire cross section of the course, and, in said longer course, advancing the fluid progressively toward said highly heated regions, and conducting combustion gases of at least one of said zones over said longer course to heat the fluid therein by convection also.



2,456,788

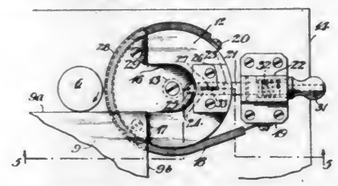
HAIR DRIER HELMET

Bernard Kritzer, Chicago, Ill.

Application February 28, 1947, Serial No. 731,651

3 Claims. (Cl. 34—90)

1. A helmet of the type described comprising a band adapted to encompass the hair of the wearer and including means at the upper and lower peripheries of the band for securing the helmet to the dryer hood and the customer's head respectively, said band having a hair-inspecting opening therethrough, and a closure for said opening hingedly secured along at least one edge thereof to said band.



2,456,789

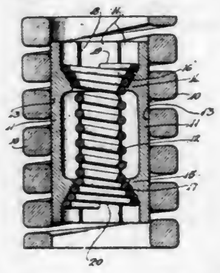
AUXILIARY ROLLER GUIDE FOR TEMPLATES

Emil F. Krohn, Centerville, Mich., assignor to Air Reduction Company, Incorporated, a corporation of New York

Application December 7, 1946, Serial No. 714,754

7 Claims. (Cl. 33—23)

3. The combination of a template follower having a roller and means to rotate the same, a template having edge faces in contact with which said roller is adapted to roll and having a sharp corner at the intersection of two of the edge faces, guiding means for directing the movement of the roller around the corner of the template so that the path followed by the roller axis will have a corner corresponding in sharpness and angularity to that of the template corner, said guiding means comprising a member pivoted to turn about an axis which extends in the same direction as the roller axis and which is located externally of said template corner equidistant from the planes of said intersecting edge faces and spaced from each of such planes a distance substantially equal to the radius of said roller, said member having a slot into which the roller can move when it rolls off the first of said intersecting edge faces of the template, one side of said slot being substantially flush with such edge face and forming in effect an extension thereof when said member is in roller-receiving position, means for turning said member about the axis of its pivot from its roller-receiving position in which said slot is in position to receive the roller to a roller-discharging position, the other side of said slot being substantially flush with the second of said intersecting edge faces of the template when said member is in its roller-discharging position, and a stop for limiting the turning movement of said member when it reaches its roller-discharging position.



2,456,790

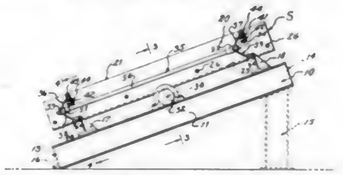
TRUCK BOLSTER SPRING

Charles P. Leese, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a corporation of New Jersey

Application March 4, 1944, Serial No. 525,021

8 Claims. (Cl. 267—9)

2. A friction bolster spring for a railway car truck comprising a load supporting helical spring,



a plurality of friction shoes, arcuate in cross section, and arranged within the load supporting spring to bear directly against the inner perimeter thereof; each shoe being provided on its inner face with a pair of wedge forming faces which converge toward the longitudinal center of the load supporting spring and are positioned in horizontal alignment with the corresponding wedge forming face of an adjacent shoe, means for forcing the shoes outwardly including outwardly flared wedge portions engaging the wedge-forming faces on said shoes, and a tension spring arranged within the space defined by said shoes and connected to said wedge portions for pressing the shoes outwardly against the load supporting spring.

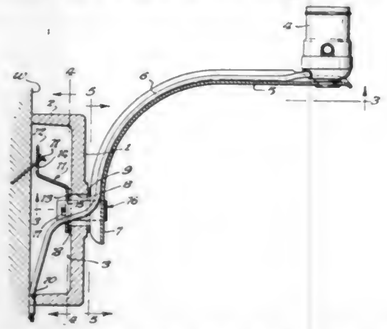
2,456,791

VIBRATING SCREEN

Arthur W. Lippmann, Milwaukee, Wis., assignor to Lippmann Engineering Works, Milwaukee, Wis.

Application September 10, 1945, Serial No. 615,252
1 Claim. (Cl. 209—326)

A vibrating screen comprising a base frame, a power driven eccentric shaft journaled on said base frame, a vibratory screen body supported substantially entirely upon said eccentric shaft and actuated thereby, and a stabilizing device for connecting the ends of the screen body with the ends of the base frame including a longitudinally extending floating bar, upstanding brackets secured to the base frame having supporting blocks, brackets secured to the screen body having supporting blocks, substantially V-shaped leaf springs having their opposite ends secured to the blocks and means clamping the bight portions of the springs to the terminals of the bar each of the bight portions extending toward the same end of the screen.



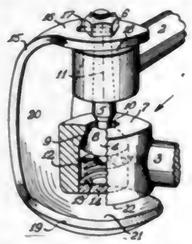
2,456,792

WALL BRACKET ELECTRIC LIGHT FIXTURE

Albert J. D. Ohm, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a corporation of New York

Application December 12, 1946, Serial No. 715,702
2 Claims. (Cl. 248—224)

1. A wall bracket electric light fixture of the "pin-up" type comprising a sconce of dish-shaped cross section having a wall engaging flange which provides a chamber, the body of the sconce having an opening which extends between its faces, an electric cord carrying arm for the support of an electric lamp socket, said arm having a vertical portion which adjoins the body of the sconce and extends across said opening, a hanger element enclosed within said chamber and having a part formed for supporting engagement with a wall carried nail or the like and also having an attachment part which adjoins the inner face of the body of the sconce adjacent said opening, said attachment part having an opening which registers with the opening in the sconce, a U-shaped clip extending through said openings and having a bow portion which projects beyond the sconce and is conformably engaged over the vertical part of said arm and also having parallel legs which project through said openings, means associated with the terminal portions of said legs and adjoining and cooperating with said attachment part to prevent relative displacement in an outward direction of said clip and said attachment part means within the chamber for



exerting pressure upon said attachment part whereby the hanger element, the sconce and the arm are connected as a unit and rigidly maintained in operative relationship, the electric cord passing through said openings into the chamber and thence through a recess in the flange of the sconce and having its portion which passes through said openings disposed between the legs of the clip.

2,456,793

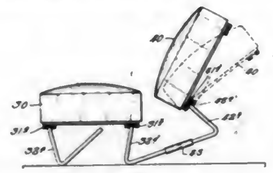
SAFETY RETAINING DEVICE FOR PIVOTAL JOINTS

George Frederick Reed and William Henry Gould, Johannesburg, Transvaal, Union of South Africa

Application October 20, 1944, Serial No. 559,632
In the Union of South Africa December 8, 1943
9 Claims. (Cl. 280—96.1)

8. The combination of a brake backing plate and a steering arm rigid with said plate and fitted with a ball and socket joint, and a bracket on the backing plate positioned beneath the socket of the ball joint and spaced therefrom by a distance commensurate with preventing the members of the joint from parting.

2,456,794



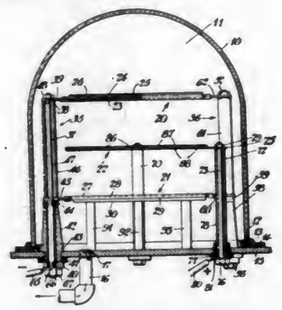
CONVERTIBLE FURNITURE UNIT

Ambrose M. Richardson, Chicago, Ill.

Application August 16, 1944, Serial No. 549,674
12 Claims. (Cl. 155—196)

11. A furniture unit, comprising, a supporting member having a rigid base portion having two sides, connector devices attached along the two

sides of said base portion, a plurality of rod-like legs each having an acute angle bend intermediate of its length and forming a knee-portion adapted to rest on the floor and an upper and lower section, each of said upper sections having



on its upper end a plate adapted to be detachably connected with one of said connector devices, and each of said lower sections forming an upwardly extending acute angle with the floor when the knee-portion rests thereon.

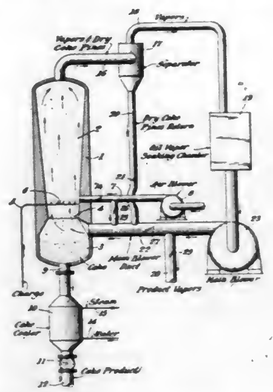
2,456,795

CATHODE SPUTTERING APPARATUS FOR COATING OSCILLATOR PLATES

Wallace H. E. Samuelson, Weehawken, N. J., assignor, by mesne assignments, to Reeves Hoffman Corporation, Carlisle, Pa., a corporation of Pennsylvania

Application October 6, 1945, Serial No. 620,721
5 Claims. (Cl. 204—298)

1. In apparatus for depositing films of metal on quartz oscillator plates and the like, means defining a chamber, a pair of vertically spaced cathodes in said chamber and of the metal to be deposited, an anodic support in said chamber for the plates having an upper plate supporting surface, said support horizontally disposed and located substantially midway between said cathodes, said support provided with a vertically extending hole of a size across which a plate may be disposed with the plate in contact with said upper surface of the support about said hole whereby that portion of the lower face of the plate exposed through the hole and the entire upper face of the plate will be covered with films of metal from said cathodes.



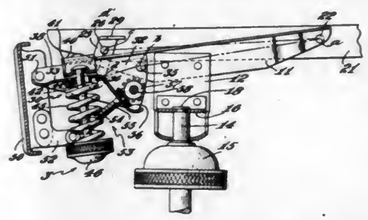
2,456,796

HYDROCARBON COKING

August Henry Schutte, Hastings on Hudson, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware

Application September 28, 1944, Serial No. 556,261
13 Claims. (Cl. 202—8)

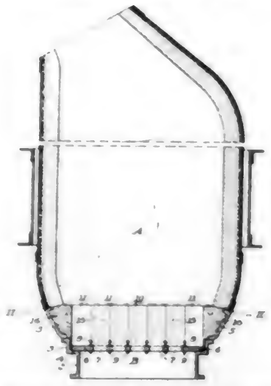
1. The method of coking heavy oil comprising, injecting particles of said oil into a generally upwardly moving current of heated gases and vapors in a confined space while supplying sufficient combustion air for partial combustion, burning part of the contents of said space for converting said oil particles into coke particles, and control-



ling the velocity of said contents of said space in such manner that coke particles above a predetermined size drop out of the contents of said space for collection as production coke while drawing off coke particles below a predetermined size from the upper portion of said space.

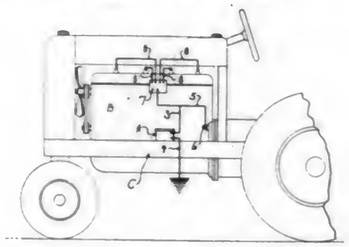
2,456,797

CHAIR IRON FOR TILTABLE SEATS AND BACKS



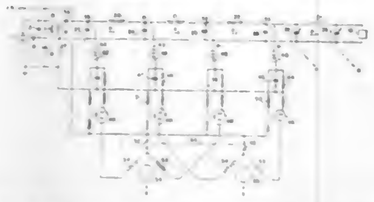
Henry W. Sheldrick, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a corporation of Massachusetts

Application May 25, 1945, Serial No. 595,684
2 Claims. (Cl. 155—77)



1. In a chair of the type having separate seat and back members, a chair iron for supporting the seat and back members for simultaneous tipping movement, comprising a fixed member, a seat-supporting member pivotally connected to said fixed member adjacent to one end, a back-supporting member pivotally connected to said fixed member adjacent to its opposite end, a link pivotally connected to said seat-supporting member and to said back-supporting member, the upper end of said link having a stop engageable with said fixed member for limiting the downward tipping movement of said seat-supporting member relative to said fixed member, and resilient means constructed and arranged to react against said fixed member and said back-supporting member so as to oppose downward tipping movement of the seat member with a greater force than the force opposing rearward tipping movement of said back member.

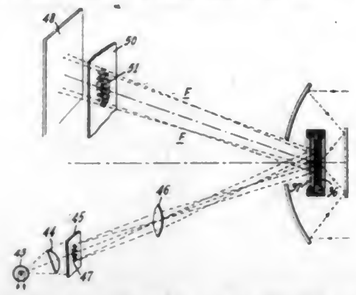
2,456,798
BOTTOM STRUCTURE FOR BESSEMER CONVERTERS
Edwin E. Slick, Pittsburgh, Pa.
Application October 6, 1944, Serial No. 557,516
15 Claims. (Cl. 266—35)



1. A converter bottom comprising a metal supporting plate having a plurality of rows of openings therein, a plurality of contiguous rows of bricks standing on end with their edges in contacting relation resting on the top of the plate, the bricks extending along and over the rows of openings, some of the bricks providing passageways through the brick work which register with the openings in the plate, and interfitting means on the top of the plate for holding the bricks on the plate, said interfitting means comprising rails whose flanged portions fit into grooves formed on the side edges of the smaller dimensions of the bricks.

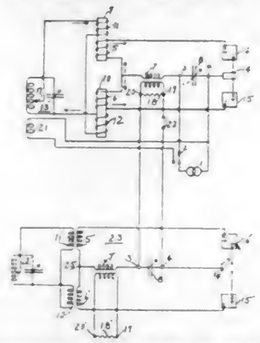
2,456,799
MAGNETO CUTOUT MERCURY SWITCH FOR TRACTORS
Melvin J. Smies, Sheboygan, Wis.
Application January 24, 1947, Serial No. 724,101
1 Claim. (Cl. 180—82)

In a tractor frame attachment for grounding the ignition circuit system of a tractor comprising a closed horizontally disposed housing secured to the tractor frame upon a horizontal plane, the same being provided with an obliquely disposed wall; a make and break switch comprising an upwardly inclined tube seated upon the obliquely disposed housing wall and interrupted by a restricted passage to form a lower chamber and an upper chamber, a volume of mercury normally filling the lower chamber, whereby it is confined against splashing, due to minor vibrations of the tractor, and a pair of electric conductors extending into the end of the upper tube chamber, in circuit with the ignition system, whereby said ignition system is grounded when the front end of the tractor reaches a sustained elevation of approximately 30°.



2,456,800
IMPEDANCE MATCHING ARRANGEMENT
Maurice K. Taylor and John Greenhalgh, Hollinwood, England, assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application August 3, 1945, Serial No. 608,686
In Great Britain December 1, 1944
14 Claims. (Cl. 178—44)

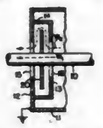
1. A wave-translating arrangement comprising, a guide for electromagnetic waves effective to establish current and voltage conditions along its length in accordance with its operating wave length and the magnitude and phase angle of a load impedance connected to said guide at a predetermined point, a first pair of pickup devices coupled to said guide for developing a first control effect determined by the ratio of predetermined ones of said current and voltage conditions at two selected points so spaced along said guide with respect to said predetermined point that said first control effect varies with the effective magnitude of said load impedance, a second pair of pickup devices including at least one device in addition to said first pair and coupled to said guide for developing a second control effect determined by the ratio of predetermined ones of said current and voltage conditions at two selected points so spaced along said guide with respect to said predetermined point that said second control effect varies with the effective phase angle of said load impedance, and means for utilizing said first and second control effects so to vary the effective magnitude and phase angle of said load impedance that said ratios approach predetermined values.



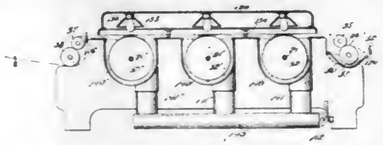
2,456,801
OPTICAL HEAT DETECTION SYSTEM
William A. Tolson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 14, 1944, Serial No. 522,346
7 Claims. (Cl. 250—83)

4. In a heat detecting system, a plurality of heat-responsitive cells forming a mosaic, each cell operating to transform heat waves into compression waves, a light-reflecting element, an optical system including a plate having apertures arranged in the same geometrical pattern as said cell mosaic for projecting beams of light on said element respectively opposite said cells, said plate being so located that circles of light on said mosaic due to said apertures are approximately the same dimension as the individual cells in the mosaic, means actuated by the compression waves in the respective cells for varying the contour of said element according to the amplitude variations of the respective waves thereby to deflect the light beams reflected from said element, a second plate having apertures respectively registering with the reflected light beams, said apertures being arranged in the same geometrical pattern as said cell mosaic, and a screen receiving

the respective modulated light beams from said second plate to produce visibly an image informative of the object from which said heat waves emanate.



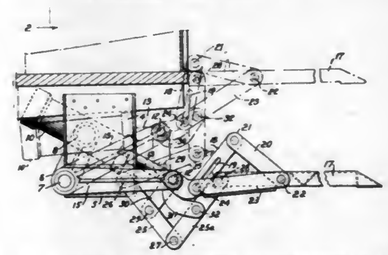
2,456,802
OSCILLATOR SYSTEM
Philip J. Walsh, San Francisco, Calif.
Application July 22, 1946, Serial No. 685,335
5 Claims. (Cl. 250—36)



1. In combination, a tuned circuit having two branches and a common branch, a source of direct current in each of said two branches, and means including a source of alternating current potential coupled to said common branch to alternately oppose the flow of current from one of said direct current sources while increasing the flow of current through the other direct current source during each cycle, and an output circuit coupled to said common branch.

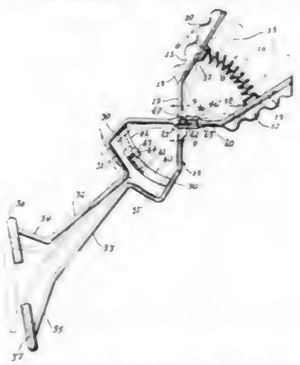
2,456,803
HIGH-FREQUENCY ENERGY LEAKAGE SUPPRESSOR
Harold A. Wheeler, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application March 15, 1946, Serial No. 654,566
11 Claims. (Cl. 178—44)

11. A by-pass arrangement comprising, a conductor of electrical currents a conductive shield structure having an aperture through which said conductor projects, and a transversely extending planar conductive electrode structure comprising a segmented disc having a radius approximately equal to an odd integral multiple of one-quarter wave length corresponding to a preselected signal frequency, said segmented disc comprising a pair of diametrically opposed and similar sectors connected to said conductor but spaced from said shield and providing with said shield and said conductor at least two parallel paths of such different lengths that signals of said frequency are transmitted therethrough in phase opposition, thereby effectively to suppress transmission of signals of said frequency through said aperture.



2,456,804
THREAD FINISHING MACHINE
Albert E. Winslow, Norwich, Conn., assignor, by mesne assignments, to Universal Winding Company, Cranston, R. I., a corporation of Massachusetts
Original application January 11, 1944, Serial No. 517,862. Divided and this application December 9, 1944, Serial No. 567,388
5 Claims. (Cl. 34—154)

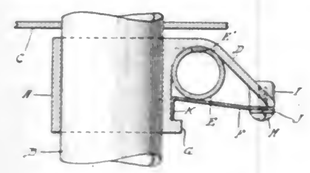
1. In a thread finishing apparatus, a heating unit through which sized threads pass comprising brushes positioned to engage the threads to distribute the size thereon, a heating chamber for drying said size on the threads positioned directly over said brushes and comprising top, side and end walls with an open bottom over the threads, means for feeding the threads through the chamber, means in the chamber to generate heat, a casing about said brushes opened at one end adjacent the path of the threads and having an opening in a wall opposite the opened end, said brushes drawing the heat downwardly through the threads and out through said opening to dry the threads.



2,456,805
SIDE GATE ELEVATOR FOR TRUCKS
Walter W. Wohlforth, San Francisco, Calif., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application March 1, 1947, Serial No. 731,753
6 Claims. (Cl. 214—77)

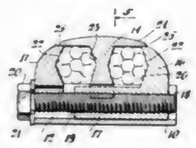
1. A platform as described comprising, a highway truck having a doorway formed in the side

thereof and a shallow recess formed in the side edge thereof the truck floor to coincide with the width of the door opening, an elevating platform operative as a closure for the said doorway, and platform operating means for said platform comprising supporting means depending from the truck body, an hydraulic cylinder associated with the supporting means for rotative movement on a horizontal axis, a horizontally disposed bar carried by the outer end of the hydraulic cylinder, a shaft rotatively mounted relative to the supporting means, and parallelly arranged relative to the horizontal bar, bearing members centered upon the axis of the said shaft and supporting said bar, a bell-crank shaped element projecting forwardly from one of said bearing members and having a slot formed longitudinally therein, a link pivotally attached to the outer end of said element at one end and to the platform at its other end, a link pivotally connected to said last mentioned end having slidable connection with the element and a parallel motion linkage connecting the supporting means with the rear edge of the platform.



2,456,806
VAGINAL GAUGE
Erwin B. Wolffe, Chicago, Ill.
Application January 14, 1947, Serial No. 722,001
4 Claims. (Cl. 33—174)

1. A vaginal gauge of the character described comprising, a pair of crossed lever members articulately secured intermediate their ends, each of said lever members provided with a terminal handle portion and an arcuate gauging portion secured to its other terminus, spring means confined between the handle portions of the said lever members normally urging the said handle portions and the gauging portions in spaced relationship, and equalizer fulcrum means comprising, a pivot secured to one of the said lever members, the other of said lever members being provided with a slotted portion slidably and articulately mounted on the said pivot, a pinion secured to the said pivot, and rack means on the said lever member in meshing engagement with the said pinion.

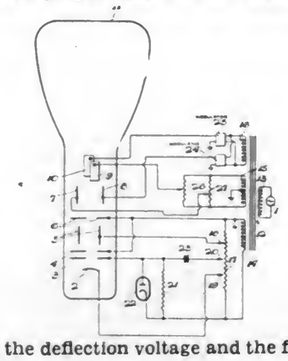


2,456,807
ANTIFREEZE DRAIN FITTING
John J. Yindrock and John Van Vulpen, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation, a corporation of Delaware
Application August 9, 1946, Serial No. 689,546
2 Claims. (Cl. 138—32)

2. An anti-freeze connection between a water drain conduit and a conduit containing heating medium, comprising a metallic element formed with a cylindrical sleeve adapted to fit over the outer surface of the drain conduit, an angular flange extending outwardly from the sleeve and cooperating therewith to embrace and engage a

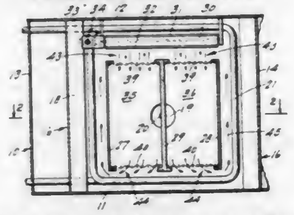
portion of the conduit for the heating medium, and means for clamping the device to the last mentioned conduit comprising a clamping plate of angular configuration reversibly secured to the said sleeve and said angular flange to accommodate conduits of different diameters.

2,456,808
LINE TAP CLAMP
Stephen P. Becker, Poughkeepsie, N. Y., assignor to Fargo Mfg. Company, Inc., Poughkeepsie, N. Y., a corporation of New York
Application October 23, 1947, Serial No. 781,562
5 Claims. (Cl. 24—81)



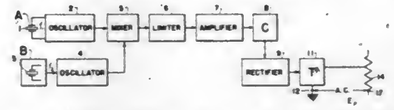
1. A clamp including a body, a jaw fixed with respect to said body and extending outwardly from one end of the same, a second jaw mounted for slidable movement towards and away from said first jaw, means supported by said body and cooperating with said second jaw for moving the same, a separator bar slidably supported by said body and interposed between the inner faces of said jaws, the upper edge of said separator bar extending into a plane beyond that in which the upper edges of said jaws extend and cable retaining means projecting from the extended portion of said bar in the direction of said jaws.

2,456,809
CATHODE-RAY TUBE
Leslie Herbert Bedford, London, and John Bell and Eric Miles Langham, Teddington, England, assignors to A. C. Cossor Limited, London, England, a British company
Original application November 30, 1943, Serial No. 512,402. Divided and this application July 26, 1946, Serial No. 686,476. In Great Britain November 30, 1942
14 Claims. (Cl. 315—14)



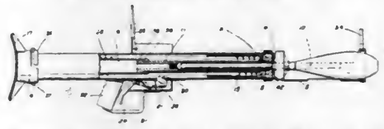
1. Apparatus comprising a cathode ray tube having a pair of deflector plates, means to excite the final anode of the gun and all other gun electrodes which substantially influence the focus with cophased alternating voltage relative to cathode, and means to apply between said deflector plates a cophased alternating voltage,

whereby the focus is maintained and a deflection is produced proportional to the relative ampli-



tudes of the deflection voltage and the final anode voltage.

2,456,810
FRENCH FRYING APPARATUS
Kenneth E. Bemis, Oakland, Calif.
Application December 23, 1946, Serial No. 717,878
6 Claims. (Cl. 99—406)

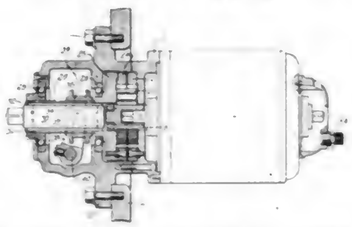


4. Deep-fat frying apparatus comprising; a receptacle for the fat and heating means and control means therefor for heating the fat to a frying temperature; foraminous containers for the material to be cooked; and combined circulating means and pulsating means in direct cooperative relation with the foraminous containers when the containers are lowered into the fat for circulating and pulsating the fat within the containers for dispersing the individual portions of materials to be fried and maintaining them in a dispersed condition for continuous frying of the superficial surfaces of the respective portions; said apparatus including two of said foraminous containers and a compartment for each container, said compartments having a common center wall and each having a side wall and being open at the forward and rearward ends and on the bottom, and with said combined circulating and pulsating means located in closely spaced and clearing relation to one of said ends, with the hot fat circulatory path being defined through each container forwardly through the front and bottom and thence about the side walls of the respective compartments; said combined circulating and pulsating means comprising a paddle wheel having a length equal to one horizontal dimension of the containers and having its axis parallel thereto and having blades in clearing relation to the walls of the containers with each blade operating to draw hot fat through one quadrant of its circuit, project the hot fat into and through the container through the second quadrant and partially withdraw fat from the container in its third quadrant and project fat for reheating in the fourth quadrant of its circuit, and driving means for said paddle wheel.

2,456,811
PIEZOELECTRIC TEMPERATURE MEASURING AND CONTROL SYSTEM
Richard K. Blackburn, East Hartford, Conn., assignor to Crystal Research Laboratories, Incorporated, Hartford, Conn., a corporation of Connecticut
Application October 23, 1945, Serial No. 623,933
2 Claims. (Cl. 250—27)

1. In a temperature control system a pair of piezoelectric crystals, one of said piezoelectric crystals being sensitive to changes in temperature for producing shifts in frequency and variable frequency oscillations corresponding thereto, the other of said piezoelectric crystals being temperature controlled for the production of constant frequency oscillations, means for combining the oscillations from each of said piezoelectric crystals, a resistive capacitive network interposed in a path common to the combined oscillations, a rectifier connected with said resistive capacitive network, an electron tube including input and output circuits, a connection between said input circuit, and the output of said rectifier, a load circuit and a power source connected with said output circuit, whereby, the power impressed upon said load circuit is controlled in accordance with the frequency difference between said piezoelectric crystals.

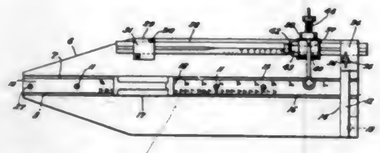
2,456,812
RECOILLESS GUN
Latham Valentine Stewart Blacker, Fittleworth, Pulborough, England
Application September 19, 1944, Serial No. 554,820
In Great Britain May 4, 1938
11 Claims. (Cl. 89—1.7)



1. In combination, a projectile and gun, the projectile being provided with an axial bore open at its rearward end, a propellant cartridge positioned in the bore in advance of said rearward end, said cartridge including an obturator portion movable along said bore and arranged to form a gas seal therein, the gun including a casing, a heavy dynamic mass including a forwardly extending firing pin, means for driving said mass toward the forward end of said casing, sear means for holding said mass against the action of said driving means, trigger means to operate said sear means to release position, means to support the projectile with its propellant cartridge in the path of movement of said firing pin, said firing pin having sufficient length to extend into the projectile recess and detonate the propellant cartridge when said mass is moved forward, whereby detonation of said cartridge will drive said obturator portion of the projectile propellant cartridge rearwardly in the projectile bore and in gas-sealing relation to the bore to thereby move said mass rearwardly with respect to said casing, said mass and driving means therefor being sufficiently heavy that the momentum of said mass will substantially absorb recoil resulting from discharge of the projectile cartridge.

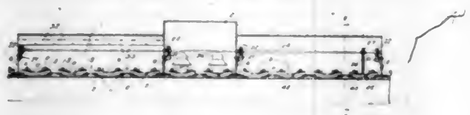
2,456,813
GOLF PUTTING DEVICE
Omar A. Cavins, Taft, Calif.
Application June 20, 1947, Serial No. 755,847
2 Claims. (Cl. 273—35)

1. A game device comprising an elongated channel member having a floor and sides, said channel member being composed of a plurality of detachable, longitudinally extending segments with the end of a first segment arranged to have its floor and sides telescope within the floor and sides of a second segment to which said first segment is joined, a floor covering on the exposed surfaces of the floor of each segment of a texture to simulate the putting surface of a golfing green, the thickness of the floor covering on said second segment being equal to the combined thickness of the floor covering on said first segment and the floor of said first segment to render the upper surfaces of the floor coverings flush with each other when the segments are joined, a plurality of depressions in the floor of said channel member near one end thereof, and means for supporting said end of said channel member at various elevations above the opposite end thereof.



2,456,814
POWER-OPERATED WRENCH
Albert E. Church, New Britain, Conn., assignor to Union Manufacturing Company, New Britain, Conn., a corporation of Connecticut
Application December 16, 1947, Serial No. 792,107
7 Claims. (Cl. 172—36)

1. A power wrench comprising in combination, a motor, a speed reduction unit connected thereto, a shaft rotated by said motor through said unit, a spline connection between said unit and shaft permitting axial movement of said shaft, a manually operated lever for moving said shaft axially, and switches on said lever for opening and closing circuits for rotating said motor in opposite directions, said switches being opened and closed by movement of said lever at right angles to the direction of movement thereof to axially move said shaft.

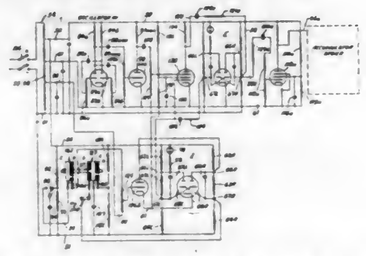


2,456,815
GRADUATING AND MEASURING DEVICE FOR SHOE LASTS
Henry G. Clausing, Portsmouth, Ohio, assignor to Vulcan Corporation, Portsmouth, Ohio
Application December 19, 1946, Serial No. 717,131
5 Claims. (Cl. 33—3)

4. In a device of the character described the combination of a base, an elongate rule secured to the base having observable calibrations thereon graduated to indicate last sizes, a fixed cross-head on the base having a vertical last contacting surface disposed across and at right angles to the rule and adapted to serve as a zero reference surface for said rule, a sliding cross-head mounted for rectilinear movement on the rule and having a vertical last contacting face lying in a plane parallel to the face of the fixed cross-head, a standard spaced transversely from the rule and mounted upon the base intermediate its length, a last center indicator bar mounted on the standard and the fixed cross-head for axial movement in a direction parallel to the rule, said bar having consecutive last size calibrations on its face disposed substantially centrally with reference to the calibrations on the

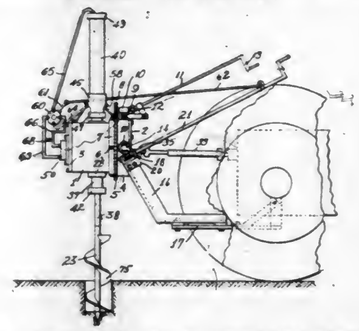
rule and each last size calibration on the bar graduated in equal linear divisions half the length of each linear division for the corresponding last size on the rule, means for locking the bar in a predetermined position on the base, a block slidably mounted on the bar, means for locking the block on the bar at a predetermined position relative to the rule, a marker arm pivotally mounted on the block for movement in a vertical plane parallel to and intermediate the contacting faces of the cross-heads, and a pointed end on the marker arm movable into a position directly above the rule upon pivotal movement of said arm.

2,456,816
APPARATUS FOR INSPECTION OF ARTICLES BY MEANS OF X-RAY PHOTOGRAPHS
Webster James Daly, Los Angeles, Calif.
Application January 23, 1945, Serial No. 574,090
5 Claims. (Cl. 250—52)



1. Apparatus for inspecting objects by X-ray photography in which the inspection station is remote from the photographing station, comprising a conveyor consisting of a chain of tables each of X-ray permeable material on which one or more objects to be inspected are laid, means beneath each table for removably holding a photographic film, there being successive positional areas along the line of travel of said conveyor through which said conveyor passes, constituting successively a film loading station, an exposure station, a developing station, and an inspection station, means for moving said conveyor step by step so as to present said tables successively with the objects to be inspected unmoved with respect to said tables, first to said film loading station, next to said exposure station where the image of the object is photographed, next to a developing station where the exposed film is removed, developed, and returned to said film holding means, and finally to said inspection station, at which stage the relative positions of the object and its photographed image on the film are the same as they were at said exposure station.

2,456,817
PORTABLE CHECKING COUNTER
James A. Davenport, Cincinnati, Ohio, assignor to The Kroger Grocery & Baking Company, Cincinnati, Ohio
Application February 2, 1946, Serial No. 645,149
4 Claims. (Cl. 280—36)



1. A mobile package container comprising a double X frame forming a carriage, wheels disposed at each end of the frame elements, a top member pivotally secured to one side of said frame and releasably engaged with the other side thereof, a single level package receiving compartment supported by said top member, said compartment comprising a pair of open-ended tray elements disposed in telescopic relationship, and a support element for preventing longitudinal upsetting of the carriage when the compartment is overloaded, said support element comprising a frame element extending transversely between the X frame elements exterior of one of the pairs of wheels and only slightly above the ground level, whereby upon tipping of the carriage the frame element will contact the ground and prevent over-turning.

2,456,818
ELECTRONIC TRIGGER CIRCUIT WITH PULSE OUTPUT ATTENUATING MEANS
Arthur H. Dickinson, Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Original application December 27, 1943, Serial No. 515,719. Divided and this application March 17, 1945, Serial No. 583,273
2 Claims. (Cl. 250—27)

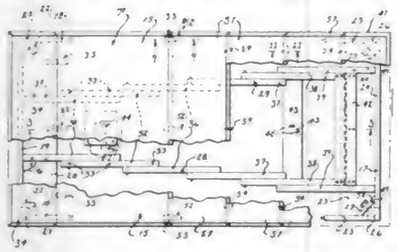
1. The combination with a controlled circuit capable of responding to positive and negative pulses of adequate amplitude; of an electronic trigger circuit having two alternative stable states and comprising a pair of parallel, resistive, voltage dividers adapted to be energized from a source of voltage, first and second electronic tubes corresponding to the first and second of said dividers respectively, each of said tubes having an anode and a cathode connected in parallel circuit relation with a portion of the corresponding divider and also having a grid, the anode of each tube being connected to a first intermediate point on the corresponding divider and the grid being connected to a second intermediate point on said portion of the other divider, and first and second condensers corresponding to said first and second dividers, respectively, each condenser being connected between the first and second points on the corresponding divider, the first tube being conductive and the second tube being non-conductive in one of said stable states of the trigger circuit with the conductive status of the tubes being reversed in the opposite stable state, whereby the grid of the first tube is at a higher voltage level in said one stable state than in said opposite stable state, said trigger circuit being switchable from either stable state to the other upon an application thereto of an unbalancing potential, whence upon the trigger circuit being switched to said one state a positive voltage pulse appears at the grid of the first tube and upon being switched to said opposite state a negative voltage pulse appears at that grid, the condenser connected between the first and second points on the second divider being charged while the second tube is non-conductive and thereafter discharged through the second tube and a part of said portion of the second divider when the second tube becomes conductive upon the trigger circuit being switched to said opposite state, to cause the negative pulse at the grid of the first tube to exceed the positive pulse in amplitude; and pulse-attenuating reactance means coupling the grid of the first tube to the controlled circuit for transmitting pulses appearing at said grid of the first tube to the controlled circuit while attenuating such pulses to an extent that the positive pulse is inadequate to operate the controlled circuit while the negative pulse of greater amplitude is adequate.

2,456,819
POSTHOLE AUGER
Richard H. Dobbs, Atlanta, Kans.
Application March 5, 1945. Serial No. 581,020
1 Claim. (Cl. 255—22)

In a post hole auger, a cylindrical shell, the longitudinal axis of which is horizontally disposed, said shell having removable heads for its ends to function as a container for oil, one head being the carrying means for a hydraulic pump and having a shaft journalled to extend therethrough and a bevel-gear secured to its end inward of the shell, said shaft being connected to drive the pump, a pair of nipples axially aligned

and extending inward toward each other on a diameter of the shell, the nipples being integrally joined to the shell to function as carrying means for ball bearings, said nipples being internally threaded a spaced distance inward from their outer ends, ball bearings engaging in the confronting ends of the nipples and being secured by lock nuts engaging with said internal threads of the nipples that terminate where they meet the bearings to secure the same against end thrust, said nipples having packing glands as oil-seal means for the shell, a tubular element having a ring gear integrally joined thereto, the ends of the tubular element fitting between the bearings, a cylindrical element extending through the tubular element and outward of the packing glands and below and above the cylindrical shell, said cylindrical element having an opening therethrough rectangular in cross section, a square stem slidably fitting said opening and extending beyond both ends of the cylindrical element, a coupling and means to carry the same rigidly to the cylindrical shell and through which the cylindrical element extends, gland means for the lower end of the coupling to engage on the cylindrical element, packing gland means for each end of the cylindrical element and through which the said stem slidably engages, a hydraulic cylinder secured to the coupling co-axial therewith and into which the stem extends, and a piston secured to the stem for reciprocal movement thereof, there being pipe means to connect the ends of the hydraulic cylinder with the pump, said other head of the cylindrical shell having a shaft axially aligned with the shaft of the first said head and having a pinion secured at its inner end meshing with the ring gear, and power means to turn the shaft.

2,456,820
SAFETY PIN
Masena E. Edwards, Denver, Colo.
Application January 12, 1946, Serial No. 640,761
4 Claims. (Cl. 24—161)

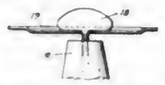


What I claim as new is:

1. A safety pin comprising, an elongated frame formed from a single piece of resilient wire, the two legs being connected by at least one complete loop, the legs crossing each other adjacent the loop, one end terminating in a sharp point and the other in a substantially U-shaped keeper, the legs being biased towards each other to normally hold the pointed end in engagement with the outer surface of the keeper, the latter having a depressed area for the reception of the pointed end, the keeper having a groove on its inside for the reception of the pointed end when the pin is in closed position, and means comprising a cam attached to the frame adjacent the loop for engagement with the leg having the pointed end and movable transversely of the frame, for moving the pointed leg to open position.

2,456,821
EXTENSION TABLE
Alvin M. Ellington, Watertown, Wis.
Application June 21, 1945, Serial No. 600,674
1 Claim. (Cl. 311—61)

In an extensible table of the drop leaf type, a main table top, and frames movable under the table top and beyond the table top, ground supports rigidly connected with the frames, sets of table slide sections, means rigidly securing companion section of the slide sets to the table top, means rigidly securing one end frame to companion slide sections carried by the said first companion slide sections, a hinged drop leaf carried by one edge of the main table top adapted to be supported by said end frame when the same is moved beyond the table top, a table leg rigidly secured to the main table top, means rigidly securing the other end frame to the companion

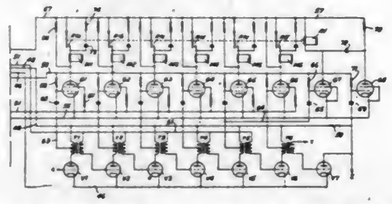


outer slide sections of the table slide sets, a brace board rigidly connecting the companion slide sections which are adjacent to the outermost slide sections, a supporting table leg secured to said brace board, a piano hinge having one leaf rigidly connecting the outer ends of the last mentioned companion slide sections together, whereby said hinge and said brace board form, in conjunction with said last mentioned companion slide sections, a rigid box-like frame, a drop leaf supported by said piano hinge whereby said last mentioned drop leaf is moveable relative to the main table top and the end frames.

2,456,822
SLIDER FOR SLIDING FASTENERS
Erich Engel, Tonteg, near Pontypridd, England, assignor to Aero Zipp Fasteners Limited, London, England, a British company
Application April 13, 1943, Serial No. 482,835
In Great Britain January 25, 1943
14 Claims. (Cl. 24—205.15)

1. A slider for a sliding fastener comprising two wings, each with inturned flanges, connected at a neck portion, and at least one substantially Y-shaped insert arranged adjacent the inner surface of one of said wings so as to lie between the inner surface of said wing and the fastener when the slider is attached to the fastener.

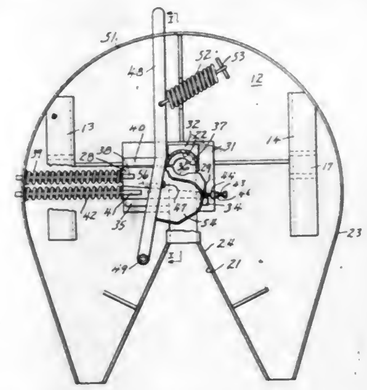
2,456,823
HEATING UNIT FASTENER
Morris A. Feinstein, Chicago, Ill.
Application November 6, 1946, Serial No. 708,161
4 Claims. (Cl. 24—221)



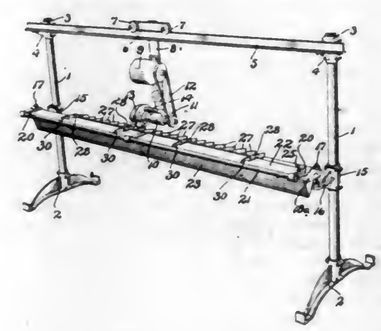
1. A structure for securing a plate in the hollow of a vessel comprising a support directed from the bottom of the vessel toward the plate, the latter having an elongated slot opposite the support, and means for retaining the plate to the support comprising a thumbscrew directed through the slot to thread into said support, the head of the thumbscrew engaging the plate from the outer side when turned away from the slot, and means to lock said head from rotation.

2,456,824
OIL-SOLUBLE DRIER METAL SALT COMPOSITIONS
Alfred Fischer, Bronx, N. Y., assignor to Nuodex Products Co., Inc., Elizabeth, N. J., a corporation of New York
No Drawing. Application July 10, 1946, Serial No. 682,586
6 Claims. (Cl. 106—310)

1. A composition of matter consisting essentially of an oil-soluble drier metal salt and a lesser amount of an alkyl acid phosphate wherein the alkyl group embodies not more than 8 carbon atoms.



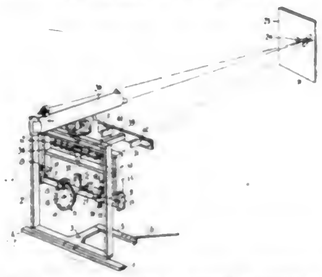
2,456,825
DISTRIBUTOR
Clyde J. Fitch, Endicott, and Robert N. Eichorn, Vestal, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 18, 1945, Serial No. 623,024
19 Claims. (Cl. 178—88)



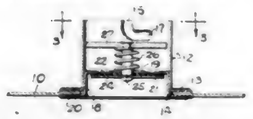
1. In a receiver for receiving combinational code signals, a set of gaseous trigger tubes, one for each code signal element, each tube having at least a first and a second grid, means normally impressing upon the first grids of all of said tubes a biasing potential sufficiently negative to prevent said tubes from being fired by high potentials applied to their second grids, means operating in response to the received signal for applying concurrently to the second grids of all of said tubes, high or low potentials, in dependence upon the marking or spacing character of the successive code signal elements, and means for lifting the potential on the first grids of the tubes in succession, each at the time of reception of the related signal element, whereby each tube will be fired in which the lifting of the potential on its first grid finds a high potential on its second grid, due to a marking signal element.

2,456,826
TRAILER COUPLER
John P. K. Fontaine and Arnoldus S. Brumby, Birmingham, Ala.; said Brumby assignor to said Fontaine
Application April 11, 1946, Serial No. 661,227
18 Claims. (Cl. 280—33.05)

1. In a trailer coupler, a fifth wheel comprising a plate having a radial opening terminating in a slot for receiving a king pin, a locking member movable across the slot to retain the king pin when coupled, a wedging member for limiting relative motion between the king pin and the locking member, and operating means on the fifth wheel disposed to engage the locking member and move it out of the path of the king pin and concomitantly therewith to move the wedging member out of wedging position.

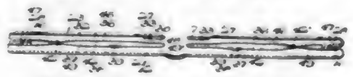


2,456,827
SICKLE BLADE GRINDER
Leo O. Greeley, Cadillac, Mich., assignor to General Sales Company of Cadillac, Cadillac, Mich., a limited partnership of Michigan
Application August 19, 1946, Serial No. 691,498
4 Claims. (Cl. 51—36)



1. A machine of the class described comprising, a frame, a horizontal upper track on said frame, a carriage mounted to traverse said track and to rock thereon on an axis parallel to the track, a depending support on said carriage, a grinding wheel rotatably mounted on the lower part of said depending support, means for rotating said grinding wheel, an elongated horizontal support mounted on said frame below said track, means for clamping a blade on the horizontal support and in the path of said grinding wheel, means for pivotally mounting said horizontal support to swing on an axis longitudinal thereof, means for manually swinging said support on its pivot during the grinding operation, and adjustable means to limit the swinging movement of said support in the direction which moves the blade toward the grinding wheel.

2,456,828
TARGET PRACTICE APPARATUS
Philip George Hawe, Weston, Ontario, Canada
Application December 2, 1944, Serial No. 566,335
16 Claims. (Cl. 35—25)

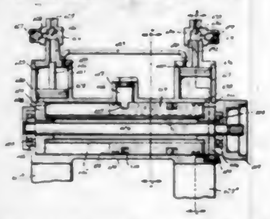


16. In a target aiming device, means for projecting a moving target, means for projecting an indication on the target, means for normally maintaining said indication projecting means in synchronism with the target projecting means, aiming means, and means controlled by the aiming means for causing the indication projecting means to momentarily synchronize with the aiming means.

2,456,829
VALVE
Roy Wilson Hays, Rockford, Ill.
Application November 29, 1946, Serial No. 712,765
2 Claims. (Cl. 284—14)

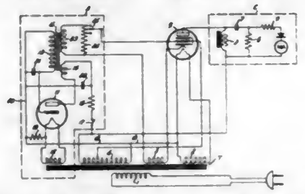
1. A valve of the character described, comprising a cylindrical shell having an outturned flange at one end, a cup having a valve hole in its closed end and an outturned flange around its open end cooperating with said first flange to form a clamp, the defining edge of said hole being depressed out of the plane of said cup and, the closed end portion of said cup being pressed into said shell to close said clamp, a disk within said cup axially spaced inwardly and cooperating with said pressed out edge to form a valve, a stem carrying said disk at one end and projecting slidably through the closed end of said cup, means on the other end of said shell forming one element of a detachable connection and adapted for engagement with a nozzle when the latter is telescoping with said shell, and means on said stem engageable with the nozzle and operable to hold said disk away from said hole while said connection is maintained.

2,456,830
COMBINATION WALLET
Henry M. Herbener, Thomasville, Ga.
Application June 7, 1945, Serial No. 598,038
6 Claims. (Cl. 150—38)



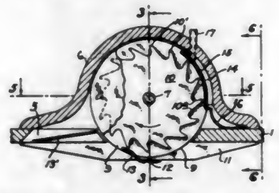
3. A combination wallet, comprising connected main sides foldable over each other, each main side having extensions at its longitudinal edges, a pocket unit for each main side, each pocket unit including inner and outer sides, the inner and outer sides of the pocket unit being stitched together near and inwardly of their marginal edges, forming a pocket inwardly of the stitching, one side of the pocket unit having an opening leading into the pocket, means connecting the adjacent ends of each pocket unit and main side, the extensions of each main side being foldable inwardly of such main side and inserted between the inner and outer sides of the pocket unit outwardly of the stitching and secured to one side of the pocket unit and outwardly of such stitching.

2,456,831
CRYSTAL SEED AND METHOD OF OBTAINING IT
Bengt R. F. Kjellgren, University Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application August 20, 1947, Serial No. 769,576
4 Claims. (Cl. 171—327)



4. The process of obtaining a seed plate of P-type crystalline material from a mother crystal having a flawed center portion comprising severing a plate from the said flawed center portion, the major faces of said plate being substantially perpendicular to the Z-axis of the crystalline material.

2,456,832
FLUID-DRIVEN PUMP
Fred A. Lane, Shelburn, Ind., assignor to Lane Motors, Inc., Terre Haute, Ind., a corporation of Indiana
Original application December 18, 1942, Serial No. 469,386. Divided and this application April 15, 1946, Serial No. 662,202
6 Claims. (Cl. 103—44)

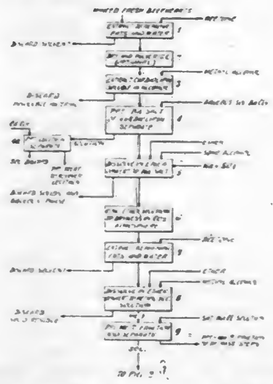


1. Pumping mechanism comprising a cylindrical housing, a shaft mounted for rotation with a portion thereof within said housing, a series of radially-disposed cylinders peripherally grouped about said housing and each communicating with the interior of said housing adjacent one end of the latter through a port, a valve disc fixed on said shaft within said housing in closing relation to said ports, said valve disc being formed with a notch in its peripheral surface providing, when in registry with one of said ports, communication between the associated cylinder and the interior of said housing, a second series of radially-disposed cylinders peripherally grouped about said housing and each communicating with the interior of said housing adjacent the opposite end of the latter through a port, a second valve disc fixed on said shaft within said housing in closing relation to said last-mentioned ports, said second valve disc being formed with a notch in its peripheral surface providing, when in registry with one of said last-mentioned ports, communication between the associated cylinder and the interior of said housing, a valved inlet and a valved outlet for each cylinder of each series, independent of said ports, a piston axially reciprocable in said housing between said discs, and means for converting rotation of said shaft into reciprocation of said piston.

2,456,833
MUTUAL CONDUCTANCE TESTER
Oliver James Morelock, Short Hills, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application October 31, 1945, Serial No. 625,761
13 Claims. (Cl. 315—370)

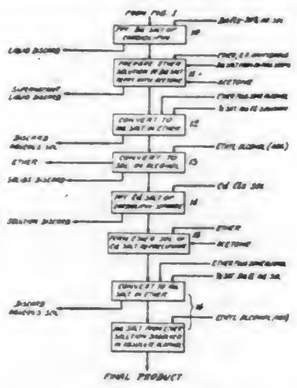
1. In apparatus for measuring the mutual conductance of a tube having a grid electrode and one or more other electrodes cooperating with a cathode, one of said electrodes being a plate; means for impressing alternating current voltages upon said electrodes to energize the tube, means for imposing an alternating current signal voltage of a different frequency upon said grid, and indicating means responsive only to the plate current component resulting from said applied signal voltage, said indicating means providing a direct indication of the mutual conductance of the tube.

2,456,834
PROPULSION MEANS FOR BOATS
John Napoli, Monterey, Calif.
Application January 31, 1945, Serial No. 575,446
2 Claims. (Cl. 170—104)



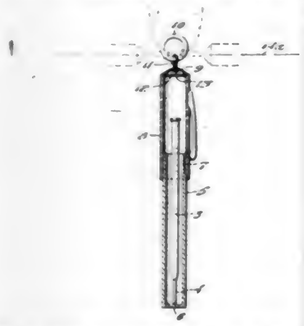
1. In a boat having a keel provided with an opening, a housing mounted on the keel and arranged above the opening, a shaft rotatably supported by the housing, a plurality of spaced circular rotors keyed to the shaft and having peripheral teeth, circular spacing discs interposed between the rotors, the discs being larger at their diameters than the rotors, whereby annular open channels are formed around the rotors, the said rotors and the discs being positioned with parts thereof projecting through the keel opening and below the keel, and means for directing water into the channels and against the teeth of the rotors as the boat is propelled forwardly, whereby the rotors are rotated to impart rotary motion to the shaft.

2,456,835
REFECTORY TABLE
John J. Nash, St. Louis, Mo., assignor to American Fixture & Manufacturing Co., St. Louis, Mo., a corporation of Missouri
Application July 31, 1944, Serial No. 547,457
2 Claims. (Cl. 311—56)



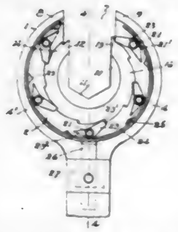
1. In a refectory table, a slide frame consisting of two identical L-shaped stampings each having a relatively long rectangular plate section and a relatively short flange section disposed at right angles to the plate section, said stampings being adapted to fit in end-for-end reversed relation with their plate sections in spaced parallel position and with the flange section of one stamping extending across and projecting laterally beyond the end of the plate section of the other stamping, said stampings being, in such relation, secured rigidly together, each of said stampings being provided with a pair of complementarily shaped track forming slots having lower portions substantially aligned horizontally with each other and then being inclined upwardly, one end of one slot extending above the adjacent end portion of the other slot and the other end of the latter-mentioned slot terminating in an upwardly and rearwardly extending return bend, and slide arms shiftably mounted on said stampings and having rollers for movement in said slots.

2,456,836
METHOD OF RECOVERING AND REFINING CARDIOLIPIN
Mary C. Pangborn, Albany, N. Y., assignor to the People of the State of New York
Application March 30, 1946, Serial No. 658,567
2 Claims. (Cl. 167—74)



1. The process of recovering and refining cardiolipin, which comprises the steps of removing fat and water from comminuted beef hearts containing cardiolipin by extracting such material with acetone and discarding the extracted material, extracting cardiolipin from the remaining solid material with methyl alcohol and discarding the solid residue, precipitating the cardiolipin from the alcohol extract solution as an insoluble salt by treating such solution with an aqueous solution of barium chloride and

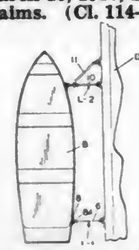
separating and discarding the admixed liquid, converting the precipitate thus formed to an alcohol-soluble sodium salt of cardiolipin in the presence of alcohol by dissolving it in ether and adding an aqueous solution of sodium sulphate, separating and discarding the resultant barium sulphate and the aqueous liquid, concentrating the liquid ether phase substantially to dryness in an atmosphere of carbon dioxide, removing remaining fats and water by extracting the resulting material with acetone in which the sodium salt of cardiolipin is substantially insoluble and discarding the acetone extract, dissolving the acetone-insoluble residue in ether and converting it to a solution in methyl alcohol by adding a predetermined volume of methyl alcohol and removing the ether by vacuum distillation, adding a concentrated aqueous solution of sodium chloride and maintaining the resultant materials at a temperature above but approaching the freezing point for a predetermined time to precipitate a portion thereof, separating this precipitated portion from the remaining liquid, precipitating from the remaining liquid an alcohol- and water-insoluble barium salt of cardiolipin by adding an aqueous solution of barium chloride and separating the resulting precipitate from the liquid, dissolving this precipitate in anhydrous ether and reprecipitating the same salt



therefrom by adding a substantal excess of acetone in which the barium salt of cardiolipin is insoluble, separating and discarding the liquid from this precipitate, reprecipitating the barium salt of cardiolipin a plurality of times by dissolving in ether and precipitating it therefrom by adding an excess of acetone, converting this reprecipitated barium salt of cardiolipin into a sodium salt thereof by dissolving the barium salt in ether, adding ethyl alcohol and an aqueous solution of sodium chloride and substantially removing the ether by distillation and preparing an alcohol solution of the sodium salt of cardiolipin, precipitating the cadmium salt of cardiolipin from this alcohol solution by adding an aqueous solution of cadmium chloride thereto and separating the resultant precipitate of the alcohol-insoluble cadmium salt of cardiolipin from the liquid, dissolving this precipitate in ether and reprecipitating it therefrom by adding a substantial amount of acetone in which the cadmium salt of cardiolipin is insoluble and separating and discarding the liquid, and dissolving the resultant purified cadmium salt in ether and converting it to the form of an alcohol-soluble sodium salt of cardiolipin in the presence of ethyl alcohol by adding such alcohol and an aqueous solution of sodium chloride, and preparing an alcohol solution of the sodium salt of cardiolipin as the final product.

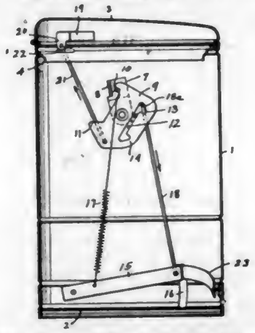
2,456,837
THERMOMETER CASE WITH ROTATING MEANS
Roy L. Papermaster, Los Angeles, Calif.
Application October 18, 1946, Serial No. 704,258
2 Claims. (Cl. 73—373)

1. In a thermometer case, a pair of case sections, a ring adapted to be held between the fingers of an operator, with a portion thereof projecting, and a short length of elastic material looped around said ring and secured to the end of one of said sections, said elastic material being stretchable to extend the distance between the ring and the end of the case when the case is swung in a generally circular path, and being adapted to slide back and forth in said projecting portion of the ring as it is thus swung.



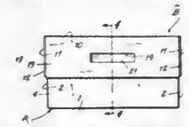
2,456,838
PIVOTED PAWL RATCHET WRENCH WITH RADIALLY SLOTTED HEAD AND SOCKET
Albert Peterson and Robert Peterson, St. Clements, Manitoba, Canada
Application May 30, 1945, Serial No. 596,608
1 Claim. (Cl. 81—61)

A wrench embodying a hollow head with an extending handle and having a permanent and a removable face plate, a socket rotatably mounted in the head and formed integral with a ratchet wheel, said head, wheel and socket being cross slotted to provide registrable passages for a nut to enter the socket, a plurality of spaced pivot pins permanently secured to the permanent plate and grouped concentric to the socket, a plurality of similar dogs pivotally mounted on the pins and engageable with the ratchet teeth, said dogs being provided with extending tail pieces, an arcuate spring surrounding and contacting with flat faces provided on the dogs, said flat faces and spring



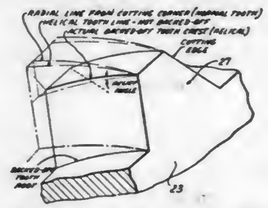
acting to hold the dogs normally engaged with the ratchet teeth, strikers secured to the spring and engageable with the tail pieces in the endwise shifting of the spring to simultaneously disengage the dogs, and manual means for end shifting the spring.

2,456,839
BOAT MOORING DEVICE
Joseph Weston Princell, Minneapolis, Minn.
Application March 10, 1947, Serial No. 733,508
4 Claims. (Cl. 114—230)



2. A boat mooring device comprising a link, a hook formed integrally with one end thereof and means on the other end thereof to pivotally attach said link to a fixed structure, said hook being of inverted U-shaped configuration, said U being so spaced between the legs thereof as to loosely engage an eye and of a size to be embraced by the hasp of a padlock between the sides of the U to thereby retain said eye and U in locked inter-engagement, and an abutment formed adjacent the juncture of the link and hook to hold the lock in eye-retaining position.

2,456,840
HOUSEHOLD TRASH CAN
John C. Rogers and Redding Sims, New Orleans, La.
Application January 19, 1946, Serial No. 642,330
6 Claims. (Cl. 220—36)

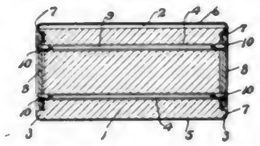


1. A utensil comprising, a container, a cover pivotally mounted on the container, a member mounted to rotate on the container and having eccentric seats, oscillatable means on the container accessible to an operator, a shiftable connector attached to said means and having means thereon engageable alternately with said seats, as the oscillatable means is successively operated to oscillate said member, a connector attached to the cover and eccentrically connected to said member and effective to move the cover to open and closed position as said member oscillates, and yieldable means connected to said member and arranged to impart the final cover-opening movement to said member.

2,456,841
CONTAINER
Fred L. Rushing, Tampa, Fla., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland
Application June 22, 1945, Serial No. 600,953
1 Claim. (Cl. 229—45)

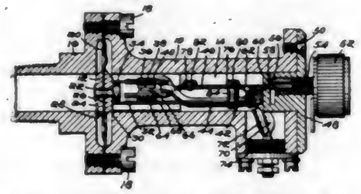
A shipping carton comprising an upwardly opening body and a removable and replaceable self-locking slip cover therefor, said body including upstanding end wall panels having hand hole openings therethrough and upper marginal flaps folded downwardly on the inner sides of said panels extending to the bottom thereof and covering said openings, said slip cover including depending rim panels having hand holes therethrough opposite said openings and lower marginal flaps folded upwardly on the inner sides of said rim panels over the hand holes therethrough, said lower marginal flaps having inverted U-shaped slits providing thereon opposite said hand holes upwardly and inwardly inclined locking tongues adapted when said cover is slipped over said body to snap into the openings in the wall panels thereof with their upper ends in abutting relation to the upper edges of said openings and adapted to be disengaged from said openings by inserting the fingers upwardly between said wall panels and said upwardly folded marginal flaps and pressing said tongues outwardly clear of said openings.

2,456,842
ROTARY CUTTER
Clarence C. Rutbell, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 13, 1943, Serial No. 506,073
10 Claims. (Cl. 29—105)



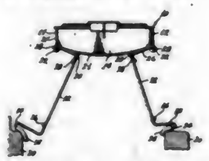
1. In a fly cutter, a cylindrical tool body with a cutting tooth, said tooth formed as a portion of a helical thread, the axis of generation of said helical thread being eccentric with respect to the axis of said tool body to back off the tooth surfaces enough to provide relief angles on all sides.

2,456,843
DOOR STOP
Leonard J. Semeyn, Lamont, Mich.
Application June 24, 1946, Serial No. 679,002
5 Claims. (Cl. 292—344)



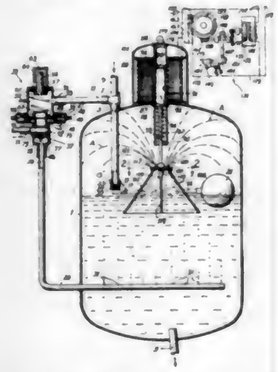
5. A door stop comprising, a block of rectangular parallelopiped form, a fabric covering around the sides of said block having end portions extending beyond each end thereof and located against said ends of the block, means for

clamping said end portions of the fabric against the ends of the block, said end portions of the cover extending beyond the end of the block partially covering each end of the block, said means for clamping said end portions of the



covering comprising, a clamping plate located against each end of the block at the outer side of each of said end portions of the covering, and means extending through the block for connecting said plates together and drawing them against the covering portions over which located.

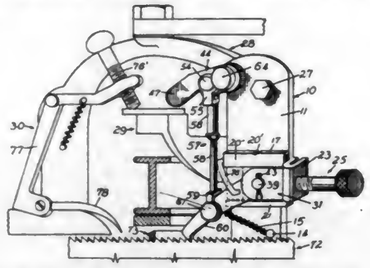
2,456,844
PRESSURE SWITCH
Norman J. Smith, Medfield, Mass., assignor to Smith Control and Instrument Corporation, Needham, Mass., a corporation of Massachusetts
Application April 12, 1946, Serial No. 661,500
14 Claims. (Cl. 200—83)



1. In a pressure switch, a housing, a pressure sensitive diaphragm, a resilient leaf spring mounted in said housing, a contact carried by the free end of said leaf spring, a contact adapted to be engaged by said first mentioned contact, a member having one end mounted on said diaphragm and means engaging the other end of said member with said leaf spring for causing a relative movement between said contacts by a variation in the pressure upon the diaphragm.

2,456,845
COMBINATION BATH AND DRESSING TABLE FOR INFANTS
Ivan E. Stine and Harry A. La Fayette, Los Angeles, Calif.
Application July 5, 1947, Serial No. 759,220
8 Claims. (Cl. 4—4)

1. A combination bath and dressing table for infants comprising a rigid tray having upstanding walls and a bottom, and a supporting means adapted to hold the tray comprising a leg member on each side rotatably secured to the tray at locations remote from the center of the bottom and adjacent the lower edges of the respective side wall, said leg members having angularly disposed portions greater in length than the height of the side walls and in erected relation extending under and in engagement with the bottom, and feet on the leg members adapted to support the table when in erected position, said table having a folded position wherein the leg members are adapted to fold over the side walls and the top of the tray.



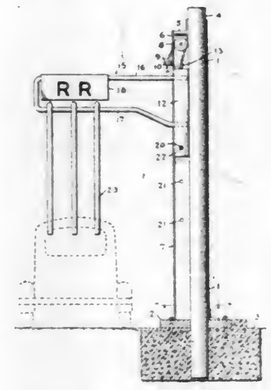
2,456,846
INTERMITTENTLY VIBRATING ELECTRIC MOTOR
Parke H. Thompson, Kirkwood, Mo., assignor to AMP Corporation, St. Louis, Mo., a corporation of Missouri
Original application March 2, 1946, Serial No. 651,647. Divided and this application December 26, 1946, Serial No. 718,562
6 Claims. (Cl. 318—120)

1. In apparatus of the character described, a plunger, a solenoid for operating said plunger, a circuit for connecting said solenoid to a source of electrical energy, relatively movable contacts in said circuit, means for periodically maintaining said contacts closed for a predetermined period and for maintaining said contacts open for a different period, a switch in said circuit, and means for continuously and rapidly opening and closing said switch, whereby, when said contacts are closed, said solenoid is rapidly energized and deenergized, thereby reciprocating said plunger.

2,456,847
SAW STABILIZER FOR SAW FILING MACHINES
Sylvester B. Underwood and Lulu Mae Underwood, Santa Cruz, Calif., assignors to Foley Manufacturing Company, Minneapolis, Minn., a corporation of Minnesota
Application June 3, 1946, Serial No. 673,936
7 Claims. (Cl. 76—77)

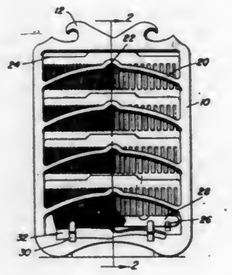
6. The combination with a saw filing machine comprising tooth filing means, means for supporting a saw relative to said filing means and whereby the saw may be advanced to present successive teeth for filing by said filing means, a normally retracted saw-advancing pawl, and means for actuating said pawl to cause it to intermittently engage the saw teeth and present successive teeth of the saw for filing by said filing means, of a saw stabilizing attachment comprising a locking pawl having its nose shaped to engage in the gullets between adjacent saw teeth to lock the saw against longitudinal movement in either direction during the operation of said filing means, a bracket secured to the machine frame and having a stirrup mounted for sliding movement therein in a direction substantially parallel to the saw teeth, said stirrup providing a pivotal support for said locking pawl, spring means constantly urging the locking pawl into locking engagement with the saw teeth, and a rocker pivotally suported on said bracket above

the locking pawl and having an operative connection with the locking pawl, one end of said rocker being positioned to be engaged by the actuating means for the saw-advancing pawl whereby the locking pawl is operated to release the saw each time the saw-advancing pawl is actuated to advance the saw.



2,456,848
NECKTIE ACCESSORY
James Martin Walsh, Los Angeles, Calif.
Application June 24, 1946, Serial No. 678,753
2 Claims. (Cl. 2—153)

1. A four-in-hand tie having incorporated in the small end thereof at the approximate location where the knot is normally positioned, a bendable stiffener extending longitudinally of the tie and formed of a material which when once bent to a given position will remain in that position until bent therefrom, said stiffener having an integral loop thereon forming a head which encircles the small end of the tie at a point spaced from the location of the knot.

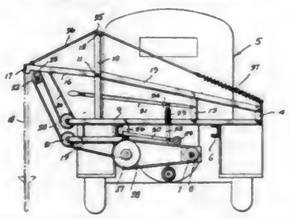


2,456,849
HIGHWAY SIGNAL
Jesse E. Waters, Pratt, Kans.
Application February 17, 1948, Serial No. 8,980
4 Claims. (Cl. 116—63)

1. In a highway signal, the combination of a metallic casing open at both ends, a pole extending down through and filling said casing, said casing provided with a pair of outwardly-extending parallel flanges, a pulley mounted between said flanges and positioned near their upper ends, said flanges having inwardly-extending lips producing a slot there between, a chain guide mounted upon said flanges, said chain guide provided with an eye, said chain guide positioned beneath said pulley, a sliding weight only between said parallel flanges, said weight provided on its upper end with an eye, a flexible lifting member

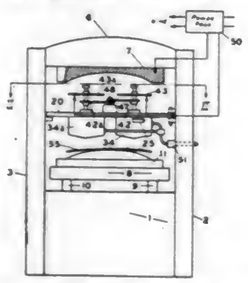
attached to said eye of the weight and passed partly around said pulley and threaded through said eye of said chain guide, said flanges provided with sets of registering apertures, said sliding weight provided with an aperture being adapted to register with either one of the sets of said apertures on said flanges, a pin in one of the sets of apertures on said flanges and in the aperture of said sliding weight, and a signal-carrying overhanging bracket secured to said weight.

2,456,850
ARTICLE RACK
Robert Lee Willis, Baltimore, Md.
Application August 25, 1947, Serial No. 770 503
5 Claims. (Cl. 211—133)



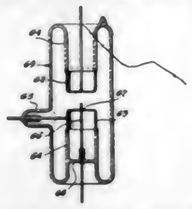
1. A utility rack comprising a panel, means for supporting said panel in an inclined position, and pairs of arcuate arms having their terminals rigidly secured to said panel, said arms being disposed at an inclined angle to said panel.

2,456,851
ALKYLNICOTINIUM ARYLSULFONATE PESTICIDE
Charles F. Woodward, Abington, Donald H. Saunders, Oreland, and Raymond C. Provost, Jr., Washington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application February 2, 1945, Serial No. 575,830
9 Claims. (Cl. 167—34)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



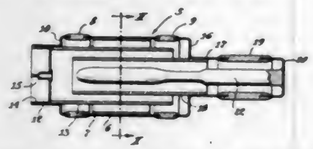
9. A pesticide comprising an alkylnicotinium arylsulfonate and a carrier therefor, said alkylnicotinium arylsulfonate having the general formula $B(RX)_n$, in which B represents nicotine, R represents a monvalent alkyl group, X represents the group aryl—SO_3—, and n is an integer not greater than 2, R and X of each RX grouping being linked to the same nitrogen atom of the nicotine nucleus.

2,456,852
POWER-OPERATED FENCE POST DRIVER
Clarence N. Anderson, Northwood, Iowa
Application January 11, 1946, Serial No. 640,520
5 Claims. (Cl. 254—128)



1. A post-driving apparatus comprising a support adapted for mounting on a power-operated vehicle having a power take-off, said support including a post, an arm pivotally mounted on said post, one end of the arm engaging a post to be driven in the ground, a winch operatively connected to the power take-off of the vehicle, and a cable connecting the arm to the winch for winding thereon to move the arm downwardly.

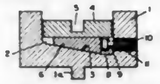
2,456,853
MOLD COATING METHOD AND APPARATUS
Thomas J. Arbron, Romeo, Mich.
Application June 19, 1946, Serial No. 677,832
10 Claims. (Cl. 18—1)



1. In a method of applying a coating to a molded article by applying a film of coating material to a surface of the mold prior to the insertion of a mold preform into the mold, the improvement comprising: while said mold is in open position interposing between said mold parts a means for sub-dividing and ionizing the coating material; creating in a zone adjacent to a mold face a plurality of relatively small ionized subdivisions of the coating material; creating around said zone an electrostatic field of which one terminal is the mold face upon which coating material is to be placed; permitting said sub-divisions of coating material to be deposited upon said mold face by electrostatic attraction in a selected quantity, removing said sub-dividing and ionization means.

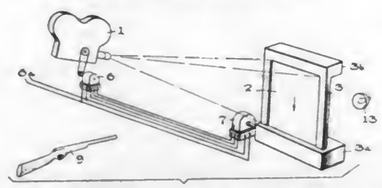
2,456,854
HIGH-PRESSURE MODULATOR TUBE
Edward G. F. Arnott, Upper Montclair, Charles M. Slack, Glen Ridge, and Clarence E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 19, 1943, Serial No. 491,496
4 Claims. (Cl. 250—27.5)

1. A high pressure, triggered, spark-gap device comprising an envelope provided with oppositely disposed reentrant stems, a pair of main electrodes disposed in said envelope and forming an hermetic sealed end-closure for said reentrant steams for supporting a high current arc discharge upon the application of several kilovolts therebetween, an ionizable medium in said envelope at a pressure ranging from one to five atmospheres, and a trigger electrode disposed closer to one of said main electrodes than to the other and operable upon the application of a potential between said trigger electrode and the adjacent main electrode to cause ionization of the ionizable medium and the initiation of the high current discharge between said main electrodes.



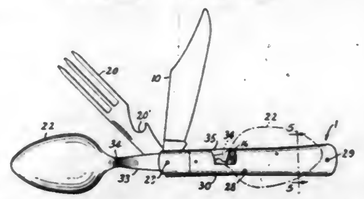
2,456,855
UNITARY MULTIPLE SPARK-GAP DEVICE
Edward G. F. Arnott, Upper Montclair, and Clarence E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 2, 1944, Serial No. 556,755
6 Claims. (Cl. 315—230)

1. A unitary high voltage spark-gap device for supporting a plurality of high voltage arc discharges in series relationship comprising a sealed envelope provided with an ionizable gas therein at relatively high pressure, and a plurality of concentrically disposed metallic electrodes in said envelope having their parallel adjacent surfaces



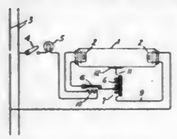
spaced equi-distant from each other throughout substantially their entire respective lengths to cause the arc initiating voltage between adjacent electrodes to remain uniform throughout the useful life of said device.

2,456,856
BOLSTER BLOCK
Cyril J. Bath, Cleveland, Ohio, assignor to The Cyril Bath Company, a corporation of Ohio
Application October 11, 1947, Serial No. 779,308
4 Claims. (Cl. 153—21)



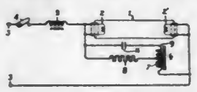
1. A bolster block adapted to be interposed between a die of a press brake and its associated leaf and comprising a body which is an elongated extruded metal section in substantially the cross-sectional shape in which extruded and which is predominately aluminum and which is of substantially uniform cross section and has a longitudinally extending channel opening in one of its faces, an elongated vertically movable die supporting member fitting in the channel so as to be constrained thereby from movement transversely relative to the body, a plurality of wedges interposed between and bearing against the underside of the member and the inside bottom wall of the channel and movable transversely of the body for adjusting the member vertically, said wedges being arranged in a row in substantially abutting relation with each other endwise of the row for substantially their full width transversely of the row and said row extending substantially the entire length of the die supporting member, screw means mounted in said body for movement transversely thereof and operatively connected to the wedges, respectively, for moving the wedges, respectively, transversely to different adjusted positions, and anchor means in the form of an integral elongated rib on the body adapted to interconnect the body and the associated leaf to constrain the body from movement transversely.

2,456,857
MOTION-PICTURE TARGET
Philip Bergh, Forest Hills, N. Y.
Application January 24, 1944, Serial No. 519,583
1 Claim. (Cl. 273—105.1)



In target apparatus wherein a motion picture image sequence of a moving target is projected upon a screen, the improvement which consists in a screen formed of an elongated strip of sheet material on which the field of projection of said projected pictures covers only a small linear portion thereof, said strip having a line marked thereon throughout its length, the position of said line in different linear portions of said strip coinciding with the aiming spot of the target image within the picture area in successive portions of the image sequence.

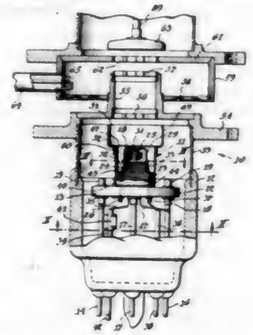
2,456,858
COMBINATION KNIFE, FORK, AND SPOON
William F. Bolling, Norton, Va.
Application July 29, 1946, Serial No. 686,819
3 Claims. (Cl. 30—143)



1. An article of the class described, comprising a handle having spaced plates each of which is provided with a plurality of longitudinally disposed slots formed therethrough, said slots having enlargements constituting eyes spaced from at least one of the ends of the slots, locking means comprising inwardly directed projections on said spaced plates adjacent the enlargements of said slots, second and third handles each having a plate provided with heads offset therefrom and adapted to pass through said eyes, said heads being connected to said last plates by means adapted to be received in said slots and slidable therein to carry the heads beyond said projections, and a blade carried by each of said handles.

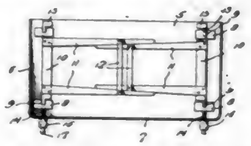
2,456,859
ELECTRIC DISCHARGE APPARATUS
John H. Campbell, Altamont, N. Y., assignor to General Electric Company, a corporation of New York
Application March 29, 1944, Serial No. 528,535
4 Claims. (Cl. 315—100)

1. In combination, an electric discharge device having spaced electrodes and an electrode preheating circuit connected in shunt therewith and including a time delay starting switch, means including a ballast impedance for connecting said device to be operated from a source of current supply, and a step-up transformer having its primary connected to be energized from said source and controlled by said switch and its secondary connected between one of said electrodes and a point of said device intermediate its electrodes.



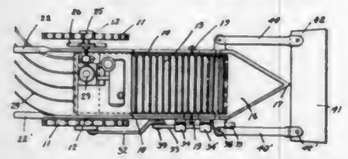
2,456,860
ELECTRIC DISCHARGE APPARATUS
John H. Campbell, Altamont, N. Y., assignor to General Electric Company, a corporation of New York
Application April 29, 1944, Serial No. 533,335
2 Claims. (Cl. 315—276)

1. In combination, an electric discharge device having spaced electrodes, a ballast imped-



ance, means connecting said device and impedance in series across a source of alternating current, and a step-up autotransformer having its primary connected in shunt with said device to be energized by current taken from said source, and a capacitor connected between only one of said electrodes and the free end of the secondary of said transformer.

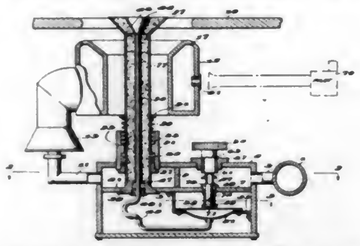
2,456,861
GENERATOR AND CATHODE CONSTRUCTION FOR ELECTRICITY OF ULTRA HIGH FREQUENCY
John M. Carter, Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 6, 1943, Serial No. 485,852
14 Claims. (Cl. 315—5)



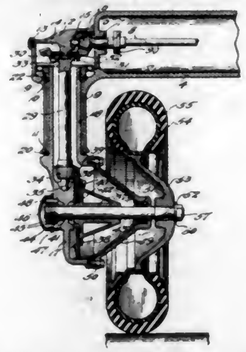
11. A generator for electricity of ultra-high frequency comprising a cathode mount, and insulator on which said mount is fixed, a cup-shaped vitreous envelope portion, lead-in conductors passing through said envelope portion and supporting said insulator, a hollow metal cylindrical portion with one end connected to the edge of said vitreous envelope portion, and a cavity resonator connected to the other end of said metal cylindrical portion completing the envelope.

2,456,862
FOLDABLE KITCHEN TABLE
Mary E. H. Chapman, Crane, Mo.
Application November 1, 1944, Serial No. 561,439
1 Claim. (Cl. 311—84)

A foldable table comprising a top, a pair of leg assemblies, means pivotally connecting said leg assemblies to said top, and means operative to lock said leg assemblies in extended position relative to said top, said top having an apertured, depending flange along the front edge thereof, each of said leg assemblies comprising a pair of tapered legs, a bridging member secured to the upper ends of said legs, a pintle extending outwardly from each end of said bridging member, one of said pintles being externally screw threaded, and a laterally-disposed lug on the other of said pintles adjacent the outer end thereof, said means pivotally connecting said leg assemblies to said top comprising a pair of blocks for each leg assembly said blocks being secured to the underside of said top and each block having an aperture receiving a corresponding pintle and a respective notch adapted to receive the adjacent end of said bridging member in one case and said lug in the other case to lock the corresponding leg assembly in extended position relative to said top, said leg assemblies being so connected to said top by said blocks that said screw-threaded pintles extend through respective apertures in said top flange, and said locking means comprising barrels threaded onto said screw-threaded pintles outside of said top flange to draw said lugs and bridging members into said block notches and releasably retain them in locked condition therein.



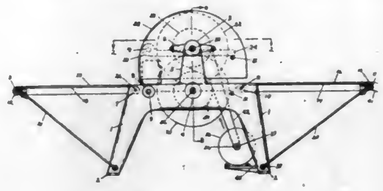
2,456,863
HARVESTING MACHINE FOR ONIONS
Joseph Chizek, Franksville, and Frank J. Gast, Racine, Wis.
Application March 2, 1945, Serial No. 580,602
4 Claims. (Cl. 55—9)



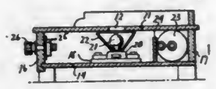
1. A device of the character described comprising a frame consisting of two vertical side members supported by cross braces, traction wheels mounted toward the rearward end of said frame, vertically adjustable wheels mounted forward on side members of said frame, an excavating point mounted at the front of said frame and extending outward therefrom, a conveyor chain journaled within said frame between said side members, said chain extending from said excavating point to the rearward end of said frame, actuating means mounted within said frame for operating said chain to convey the commodity from the excavating point rearward, a plurality of tines supported by and extending rearwardly from said frame to receive the commodity conveyed by said conveyor chain, means for employing the power from said actuating means to rotate said traction wheels, a topping blade pivotally attached to said side members and extending outward and forward from said excavating point at a slight distance above said excavating point and means for pivotally actuating said topping blade horizontally in a reciprocating manner when the traction wheels are brought into motion, said actuating means in the form of a gear and gear rack mounted to the side plates of said frame.

2,456,864
GAS FLAME REGULATOR
Frank Bruce Cole, Asheville, N. C.
Application July 24, 1945, Serial No. 606,798
2 Claims. (Cl. 126—52)

1. In a domestic gas burner, a perforated circular combustion chamber, a cooking pot supporting grid positioned in spaced relation above the said combustion chamber, a normally closed reciprocable valve controlling the flow of gas to said combustion chamber, said valve having a tubular stem passing through the circular combustion chamber and extending above the supporting grid whereby the stem and valve thereon are depressed and the valve opened when a pot is placed on the said grid, a second normally open valve arranged in spaced relation to the first mentioned valve and controlling the flow of gas to the first mentioned valve, a heat responsive expansive fluid containing chamber positioned to move the second mentioned valve toward closed position when the fluid therein increases in volume, and a flexible, expansible fluid filled tube communicating with the said expansive fluid containing chamber and extending throughout the length of the said tubular stem in such a manner that the upper end of said tube is subjected to radiant heat from the bottom of a cooking pot on the supporting grid.

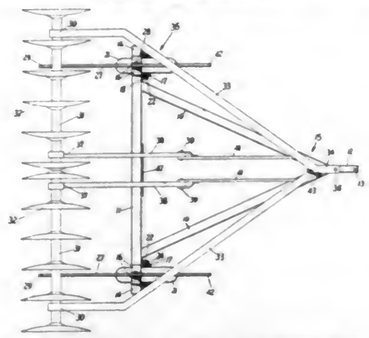


2,456,865
FLEXIBLE WHEEL DRIVE
Howard L. Cottingham, Racine, Wis.
Application October 9, 1946, Serial No. 702,175
4 Claims. (Cl. 180—43)



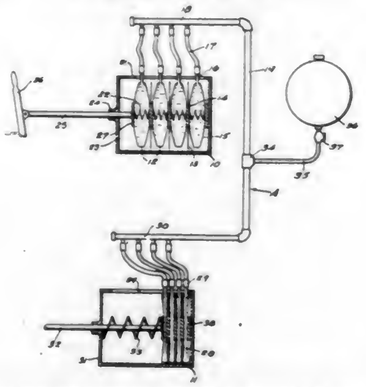
1. In combination with a vehicle, of a flexible wheel drive means therefor including a transversely disposed gear casing, a depending tubular gear casing supported on each end of said transverse gear casing, a combined cover plate and bearing member disposed on the upper end of each of said depending tubular gear casings, a drive shaft extending through each end of said transverse gear casing with the outer ends of each mounted for rotation in said cover plates and bearing members, a rotatable lower gear casing formed with a vertically extending tube extending through and supported by each of said depending tubular gear casings, a vertical driving shaft extending axially through each of said vertically extending tubes mounted for rotation between said combined cover plates and bearing members and said lower gear casings, bevel gears on the outer ends of said drive shafts, ring gears on the upper end of each vertical driving shaft intermeshed with said bevel gears, transverse wheel-supporting shafts rotatably mounted in each of said lower gear casings, wheels on the inner end of each of said wheel-supporting shafts, intermeshing bevel gears and ring gears mounted on the lower end of each of said vertical driving shafts and on said wheel-supporting shafts, respectively, and steering means disposed upon the upper ends of each of said vertically extending tubes.

2,456,866
BREAD SLICING MACHINE, INCLUDING GANGS OF ROTARY DISK KNIVES
Harry J. Criner, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa
Application September 11, 1944, Serial No. 553,619
10 Claims. (Cl. 146—98)



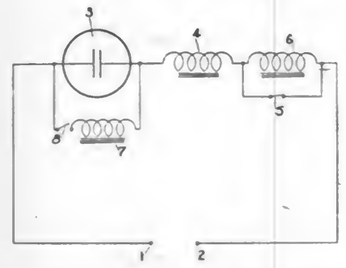
1. In a bread slicing machine, a supporting frame, a pair of spaced transverse shafts mounted on the frame, one substantially above the other, each shaft carrying a plurality of thin circular cutting blades and the blades on each shaft overlapping in axially spaced relation and alternating with the blades on the other shaft, and means for revolving the shafts simultaneously in opposite directions the radius of the overlapping portions of said blades being equal to or slightly longer than the height of the loaves of bread to be sliced thereby, in combination with slotted arms supported by the frame extending transversely from front to rear of the cutting blades at the upper and lower portions of their cutting courses to hold said blades against lateral bending or displacement at the front and rear edges thereof.

2,456,867
BED TABLE
Bartholomew da Costa, Long Island City, N. Y.
Application January 26, 1946, Serial No. 643,545
3 Claims. (Cl. 240—4)



1. A table having a table panel, said panel having an opening therethrough, a drawer slidably mounted in said table under said panel, a base mounted in said drawer and so positioned as to lie under said opening when the drawer is closed, said base having a lamp socket so positioned thereon as to lie under said opening when said drawer is closed, said socket being adapted to have a lamp bulb mounted therein, a reflector surrounding said socket to reflect the light from said bulb upward, the greatest diameter of said reflector being larger than the diameter of said opening, and means for energizing said bulb.

2,456,868
TRAILER FOR DISKING MACHINES
Frank M. Dominic, Duncombe, Iowa
Application September 25, 1946, Serial No. 699,121
4 Claims. (Cl. 214—77)

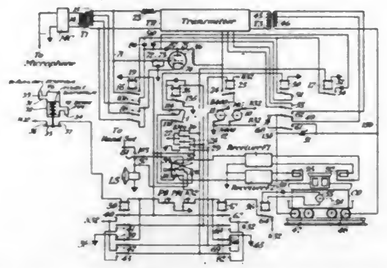


1. A trailer for a discing machine having a transverse disc supporting shaft and a frame extended forwardly therefrom, said trailer including a triangular frame structure connectible at its apex end with a tractor, ground wheels mounted at opposite ends of the base of said frame structure; a pair of transversely spaced longitudinally extended lifting levers pivotally supported intermediate their ends on the top of said base for up and down pivotal movement, and disc-shaft engaging and supporting members at the rear ends of said lifting levers, said lifting levers, on movement of said frame structure below said disc frame, being movable to positions such that said supporting members are below said disc shaft and the forward ends thereof are located below said disc frame, with said forward ends, on downward movement of the disc frame to a substantially superposed position on said frame structure, being engaged and moved by the disc frame to elevate said disc shaft, and means for holding said disc frame on said frame structure against upward movement.

2,456,869
HYDRAULIC PULSATOR SYSTEM
Clarence E. Fowler, Hollywood, Calif.
Application April 12, 1944, Serial No. 530,618
5 Claims. (Cl. 60—54.5)

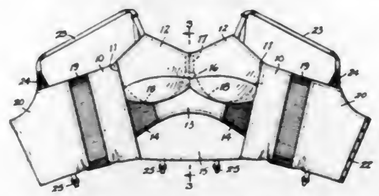
1. A mechanism of the kind described, comprising cylinders, a series of separate and independent expansible and contractible chambers having thin flexible metallic walls arranged interiorly of the cylinders, a transmission fluid in said chambers, external parallel outlet connections for each of one series of chambers, a common outlet conduit adapted to be connected to said outlet connections, external parallel inlet connections for each of the other series of chambers, a common inlet conduit adapted to be connected to said inlet connections, a common supply line connected to the ends of said inlet and outlet conduits whereby one series of chambers is normally contracted, and the other series of chambers are normally expanded, fluid exchange between the chambers on expansion and contraction thereof, means for contracting the normally expanded chambers, and means operated by the expansion of the normally contracted chambers.

2,456,870
CIRCUIT FOR ELECTRIC DISCHARGE DEVICES
Victor J. Francis, Aylesbury, and Evan H. Nelson, Harrow Weald, England, assignors to The General Electric Company, a corporation of New York
Application August 22, 1944, Serial No. 550,498
In Great Britain January 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 1, 1963
5 Claims. (Cl. 315—284)



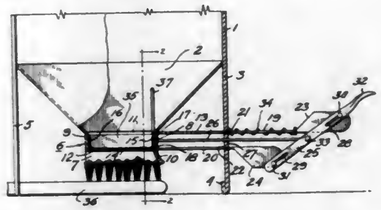
1. The method of regulating the operation of a high pressure metal vapor electric discharge device comprising a sealed envelope containing spaced electrodes, which method comprises operating an electric discharge at full power rating between said electrodes in series with a ballast impedance, and then connecting in shunt across only the discharge device, while it is operating, an inductance capable of materially reducing the power dissipated in the discharge and thus maintaining the device in condition to operate substantially instantaneously at full power rating upon disconnecting the said shunting inductance.

2,456,871
RAILWAY TRAIN EMERGENCY ALARM APPARATUS
Lars O. Grondahl, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application May 24, 1945, Serial No. 595,566
8 Claims. (Cl. 246—169)



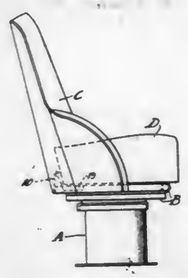
1. In combination, a railway train vehicle having mounted thereon transmitting apparatus operable to supply either a first or a second current of different preselected carrier frequencies, generating means operable to supply oscillations

of either a first or a second preselected tone frequency, said generating means connected to said transmitting apparatus to modulate the first and second carrier frequency current by said first and second tone frequencies respectively to supply a first and a second alarm current, control means having contacts to govern the condition-



ing of said transmitting apparatus and said generating means to alternately supply said first and second alarm currents in a cyclic manner, and means including a contact member connected to a given element of said vehicle to automatically govern said control means when a predetermined operating condition occurs.

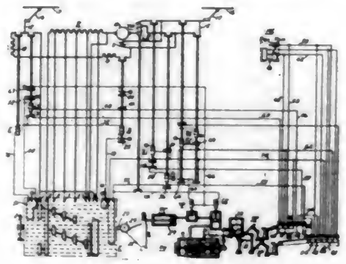
2,456,872
BRASSIÈRE
John V. Hollar, Bridgeport, Conn., assignor to The La Resista Corset Company, Bridgeport, Conn., a corporation of Connecticut
Application May 24, 1945, Serial No. 595,509
2 Claims. (Cl. 2—42)



1. A brassière comprising a body encircling band adapted to be detachably connected at its lower edge to a girdle having its upper marginal portion underlying said brassière, said body encircling band comprising a back section, side sections, and a front section, said front section comprising an upper bust pocket part, including a pair of bust pocket portions and a transverse band portion secured to the lower edges of said bust pocket portions having laterally yieldable insert means, and having its lower edge arched upwardly and secured at each end to the forward edges of said side sections in upwardly spaced relation to the lower edges of said side sections, a lower panel part secured at its side edges to the forward edges of said side sections having its upper portion overlapped by the band portion of said bust pocket part and having a central upwardly extending portion adapted to lie between the busts of the wearer and being relatively movable vertically with respect to said band portion, and having its lower edge in substantially lateral line with the lower edges of said side sections, shoulder straps connected between said bust pocket portions and said back section adapted to support the upper edges of said bust pocket portions in substantially fixed relation to the portion of the wearer's body engaged thereby, and a vertically elastic suspension member secured at its upper end to said relatively fixed upper edge of said bust pocket portions and secured at its lower end to the central upwardly extending portion of said lower panel part to yieldably support the latter.

2,456,873
DISPENSER FOR TOOTH POWDER AND THE LIKE
Richard W. Hopkins, Troy, N. Y.
Application June 24, 1946, Serial No. 678,857
4 Claims. (Cl. 222—126)

1. A dispensing container comprising a hopper provided with a measuring chamber at its bottom, open at upper and lower ends; upper and lower gates for the chamber slidable to open and closed positions; actuating means connected with the gates for moving the same in opposite directions to close the upper gate as the lower gate is opened and vice versa; and members carried by the gates for scraping the walls of the hopper and the chamber as the gates are moved.



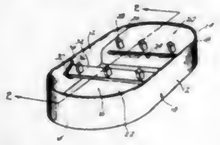
2,456,874
TILTING CUSHION STRUCTURE
Kenneth K. Horner, Chicago, and Laurence W. Hiltman, Palos Heights, Ill., assignors to S. Karpen & Bros., Chicago, Ill., a corporation of Illinois
Application January 19, 1946, Serial No. 642,308
2 Claims. (Cl. 155—120)

1. In a seat structure, a cushion carried thereby, a back equipped with a plate having a plurality of spaced recesses therein, said plate having an upper shoulder and lower shoulder, a bracket carried at the back of the cushion, a latch member pivotally mounted upon said bracket, a spring member normally urging said pivoted latch member toward said recesses, said latch member being provided with a recess adapted to be engaged by said spring to latch the same

in inoperative position when said latch member engages the upper shoulder of said plate and being released from engagement with said recess when said latch member engages the lower shoulder of said plate, and link means connecting said brackets and preventing movement of said cushion member beyond said upper position wherein said spring engages said latch member to lock it in inoperative position.

2,456,875
MOTOR CONTROL SYSTEM
William M. Hutchison, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 29, 1943, Serial No. 508,264
7 Claims. (Cl. 318—390)

7. In a control system for a motor, in combination, a resistor for controlling the motor current, a controller for shunting said resistor step-by-step, switching means controlled by said controller for controlling the operation of said motor, fluid-pressure means for actuating said controller, regulating means for varying the fluid pressure on said fluid-pressure means, a plurality of manually operable means individually operable to adjust said regulating means to control said fluid pressure, electrically-operated valve means for releasing the pressure fluid from said fluid-pressure means independently of said regulating means, control means actuated by any one of said manually operable means and co-operating with said switching means to control the operation of said valve means, and additional control means associated with said controller and cooperating with said control means to prevent the reapplication of pressure to said fluid-pressure means prior to the return of said controller to a predetermined position.

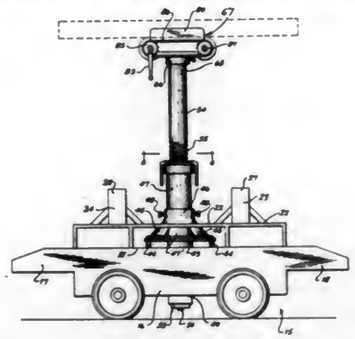


2,456,876
RAKE
William J. Keller and Nellie G. Keller, St. Louis, Mo.
Application October 27, 1944, Serial No. 560,630
2 Claims. (Cl. 56—400.17)

1. In a leaf rake, a semi-hexagonally shaped head defined by folded over bottom and top plates to provide a space therebetween and having a plurality of equally spaced openings at the fold edge, the bottom plate having opposed cutouts to provide upright side wings and an upright rear wing folded over corresponding marginal edge portions of the top plate to cover and conceal corresponding marginal edge portions of the top plate, and rake tines having their inner end portions passing through the aforesaid openings into the space between the bottom and top plates and occupying the entire space between the apertured folded edge and the upright rear wing, the rear ends of the tines contacting the upright wing and each tine being integrally secured to the bottom wall closely adjacent the upright

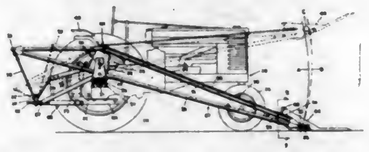
rear wing to become a unit therewith, the arrangement preventing the tines from becoming loose with relation to the bottom plate and displaced between the bottom and top plates.

2,456,877
SOAP DISH
John Kirkbride, Detroit, Mich.
Application January 18, 1946, Serial No. 642,052
1 Claim. (Cl. 45—28)



A device of the character described, comprising a soap dish having a bottom, straight side walls and curved end walls perpendicular to said bottom, a raised platform in said dish at one end thereof, the top surface of said platform being inclined downwardly toward the bottom of the dish from the upper end of one of the curved walls thereof relatively spaced upstanding square shaped lugs on said platform adjacent the forward end thereof for supporting one end of a cake of soap, a well formed in the dish forwardly of said raised platform, opposed parallel U-shaped supporting ledges formed on the side walls of said dish on the inner sides thereof above the well in inclined relation thereto and a removable bar at the other end thereof in said ledges having square shaped lugs formed thereon for supporting the opposite end of said soap.

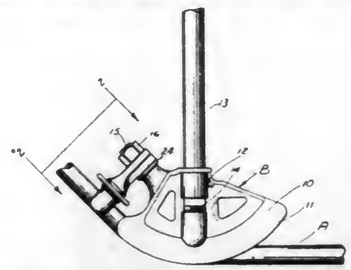
2,456,878
TIMBERMAN'S JACK
Helen G. Krupka and Joseph Jack Krupka, Fairmont, W. Va.
Application January 31, 1945, Serial No. 575,442
9 Claims. (Cl. 254—85)



1. A mine car, a pair of spaced-apart platforms thereon, a turn-table mounted on one platform and projecting through the other platform and a jack supported by the turn-table, said jack comprising telescopically connected tubes, one of

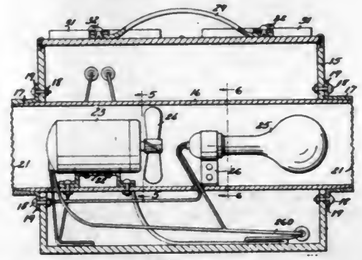
which is screw-threaded and a threaded collar seated upon the other tube for operating the threaded tube, levers connected to the collar by means of which it is turned, a trough head for

said threaded tube, rollers carried by said head for supporting a timber, means for turning said rollers, one of said rollers being spiked to bite into the timber.



2,456,879
LOADER MACHINE
Joseph B. Kucera, Traer, Iowa
Application January 11, 1946, Serial No. 640,545
5 Claims. (Cl. 214—140)

1. A loader attachment for a tractor having a rear axle, including a pair of pivoted lifting arms arranged at opposite sides of said tractor, a load carrying unit supported between the forward ends of said arms, upright members on said arms intermediate the ends thereof, a pair of upright supports oppositely arranged on said axle, means pivoting said upright members on said upright supports for up and down pivotal movement, means on said upright supports guidably engageable with said upright members to hold said arms against lateral movement at any pivotally moved position therefor, and power operated means adapted to act on the rear ends of said arms to pivotally move said arms to raise and lower said load carrying unit.

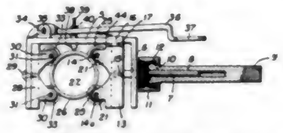


2,456,880
TUBE AND CONDUIT BENDING HAND TOOL
Burnham Lampert, Sacramento, Calif.
Application June 14, 1945, Serial No. 599,453
1 Claim. (Cl. 81—15)

In a pipe bending tool, the combination of a segmental-shaped anvil having a peripheral groove adapted to receive a pipe, a radial socket on said anvil, a handle secured in said socket, a pivot lug extending from said anvil in the plane thereof, swinging jaws pivoted on said lug for movement in a plane normal to the plane of said anvil, opposed gripping claws having a curvature substantially equal to that of said peripheral groove, said claws being formed on said jaws opposed to each other and movable in a common plane normal to the plane of said anvil for embracing the pipe, a coiled expansion spring attached to and interposed between said jaws for moving the same away from each other, a pin-and-slot means on said jaws for limiting relative

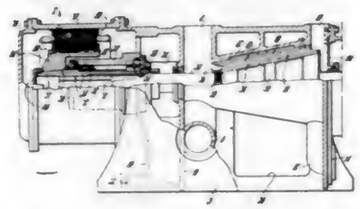
movement therebetween, means on said lug retaining thereon said swinging jaws, a locking collar slidably encircling the jaws for moving the same, and thereby the claws toward each other for frictionally locking the pipe therebetween.

2,456,881
PORTABLE HEATER AND DRIER
John H. Leather, Newton, N. J.
Application April 29, 1947, Serial No. 744,639
3 Claims. (Cl. 219—39)



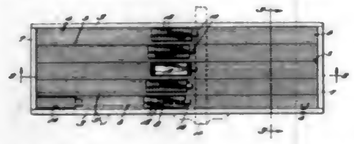
1. A portable heater comprising a casing, a central tube extending longitudinally through the casing, an electric fan mounted within the central tube, a heating element mounted in the central tube in advance of the electric fan, and said central tube extending beyond the ends of the casing, screens over the ends of the tube, ring elements surrounding the extended ends of the tube and connected to the casing, tubes fitted upon the ring elements at the end of the central tube, said tubes serving as an outlet passage for the heated air after it has passed over a concentrated area of a body surface, a flexible casing connected between the outlet and return tubes and adapted to be laced to the body being heated in such a manner as to prevent escape of the heated air from the opposite ends of the same and at the same time permit the circulation of air therethrough.

2,456,882
INSULATION CUTTING TOOL
George W. Mackey, St. Louis, Mo., assignor of fifty per cent to Sidney S. Hogan, St. Louis, Mo.
Application February 7, 1947, Serial No. 727,093
8 Claims. (Cl. 30—91)



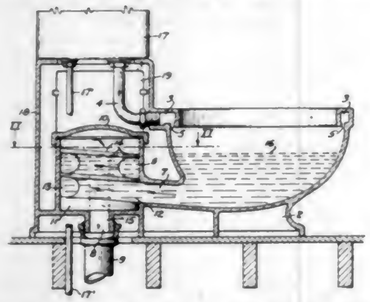
1. In a device of the class described, a channel member, a stationary frame removably secured

to the inner wall of one side thereof, a movable frame at the other side of said channel member, longitudinally extending shafts carried by each of the frames, a plurality of spacing sleeves on the shafts, a pair of cutting wheels loosely mounted on each of the shafts and adapted to form cir-



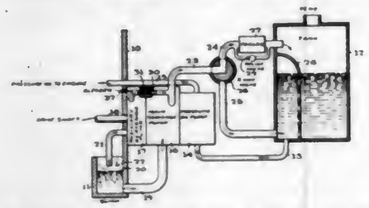
cumferential cuts in the insulating covering of a conductor positioned between the frames and parallel to the shafts, and means carried by the members and connected to the movable frame for advancing the movable frame toward the stationary frame.

2,456,883
JORDAN APPARATUS
William Messinger, Philadelphia, Pa., and Dwight E. Jones, Pittsfield, Mass., assignors to E. D. Jones & Sons Company, Pittsfield, Mass., a corporation of Massachusetts
Application September 27, 1945, Serial No. 618,912
3 Claims. (Cl. 92—27)



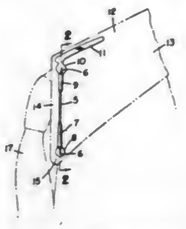
3. A unitary self-contained motor-driven Jordan apparatus comprising in combination, a supporting casing having forward rotatable bearing means and a conical bore in axial alignment therewith intermediate its forward and rear ends, a motor stator secured to the rear end of the casing and entirely supported thereby, a hollow rear bearing support secured to the rear end of the casing disposed concentrically of said motor stator spaced inwardly thereof and terminating intermediate the ends of said stator, a quill within said bearing having an outer end extending beyond the outer end of said bearing support and provided with an axial bore, separate bearing means adjacent said bearing support rotatably supporting said quill, a motor rotor around said bearing support within and operably related to said stator having a portion secured to the outer end of said quill, a single elongated main shaft having a tapering plug supporting portion intermediate forward and rear ends thereof, forward and rear ends of said shaft disposed in said forward bearing means and bore of said quill, said bore and rear end of said main shaft therein provided with complemental angularly disposed faces whereby said shaft and quill are relatively non-rotatable and the shaft may be withdrawn from said quill, cooperating blading carried by the conical bore of the casing and plug supporting portion of the main shaft, said shaft being entirely supported in the forward bearing means and quill, and means at the forward end of the casing adapted to move said main shaft axially.

2,456,884
SLIDING BLOCK GAME
George Mikula, Jr., Jersey City, N. J.
Application January 11, 1946, Serial No. 640,535
3 Claims. (Cl. 273—108)



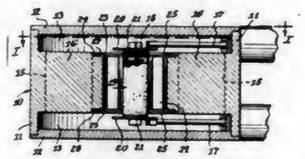
1. In a game including a board having a plurality of longitudinal channels and stop members at the ends of said channels, a marker block slidably mounted in one of said channels, a group of game pieces slidably mounted in the other of said channels, and resilient bumpers carried by each of said game pieces and said marker block for engaging the stop members and to rebound therefrom.

2,456,885
TOILET
James F. Molloy, Oakland, Calif.
Application August 26, 1948, Serial No. 46,337
4 Claims. (Cl. 4—69)



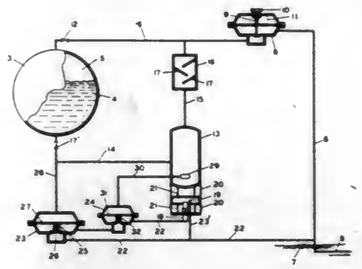
1. A toilet bowl with a water inlet and a tangential outlet and a trap chamber open to said outlet and having a sewer discharge outlet; and a block sealed in said trap chamber and having a helical groove in its perimeter and a central passage therethrough and connecting with the sewer discharge outlet of said chamber.

2,456,886
APPARATUS FOR DRY SUMP LUBRICATION OF ENGINES
Ernest A. Mori, Pittsburgh, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application October 12, 1945, Serial No. 621,886
5 Claims. (Cl. 184—6)



1. A dry sump lubrication system for engines comprising an oil supply tank separate from the engine and a pressure pump delivering oil therefrom to the engine, a main scavenge pump having an inlet which is submerged in oil retained in the engine sump, an auxiliary scavenge pump having an inlet which is normally above the level of oil in the sump, a common discharge pipe for both the main and auxiliary scavenge pumps leading to said supply tank, a valved connection between the discharge of said auxiliary scavenge pump and said common discharge pipe, and means for bleeding off air which is normally pumped by said auxiliary scavenge pump.

2,456,887
COLLAR SUPPORT
Grover C. Morrison, Huntington, W. Va.
Application January 8, 1947, Serial No. 720,750
4 Claims. (Cl. 2—132)

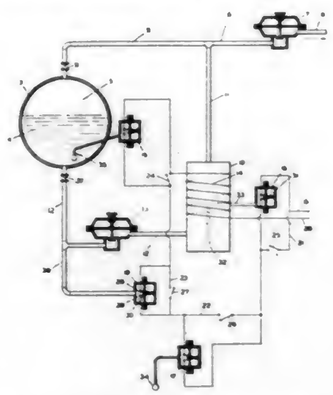


1. A collar support comprising an elongated substantially straight spring pointed at each end, a sleeve carried by each end of said spring, guards integrally formed with said sleeves and adapted to extend at one side of the pointed ends of said spring, and an arm extending rearwardly from one of said guards at an obtuse angle with said spring adapted to support the upper edge of a collar when the spring is positioned on the adjacent front edges of said collar.

2,456,888
MAGNETRON
Ernest C. Okress, Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 28, 1943, Serial No. 473,829
6 Claims. (Cl. 315—40)

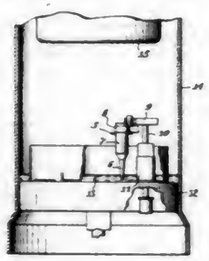
1. A strapped anode for a magnetron comprising an anode body providing a plurality of radiating partitions the longitudinal ends whereof are in common planes and form the end plane of the anode, said anode having a circular recess in the end thereof, said recess being stepped so as to be deeper next one periphery of the recess than the other, and a strap overlying the deeper part of said recess out of contact thereat from the anode, said strap having projections in the less deep part of the recess and in contact with and supported by selected ones of said partitions.

2,456,889
VAPORIZER
Andrew R. Olson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 9, 1945, Serial No. 598,609
7 Claims. (Cl. 62—1)



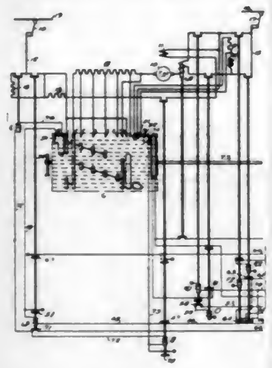
4. A storage and vaporizing system for liquefied gases comprising in combination a storage tank for the liquefied gas, said storage tank having a vapor outlet and a liquid outlet, a vapor supply conduit connected to said vapor outlet, a vaporizing tank, a liquid supply conduit connecting said liquid outlet and said vaporizing tank, said vaporizing tank having a vapor outlet, a connecting vapor conduit connecting the vapor outlet of said vaporizing tank with said vapor supply conduit, a vapor liquid separator in said connecting vapor conduit, means to heat said vaporizing tank comprising a main burner, a main burner supply conduit connecting said main burner and said vapor supply conduit, a pilot burner, a pilot burner supply conduit connecting said pilot burner and said main burner supply conduit, a fluid pressure actuated shut-off valve in said main burner supply conduit at a point between said pilot burner supply conduit and said main burner, and a fluid pressure supply conduit connecting said liquid outlet of said storage tank and said shut-off valve whereby a predetermined pressure in said storage tank actuates said shut-off valve.

2,456,890
VAPORIZER
Theodore A. St. Clair, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 9, 1945, Serial No. 598,610
12 Claims. (Cl. 62—1)



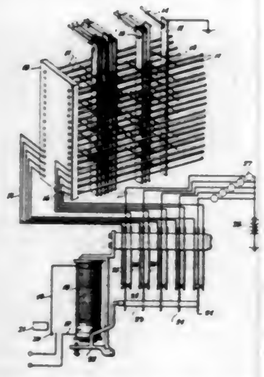
1. A storage and vaporizing system for liquefied gases comprising in combination a storage tank for the liquefied gas, said storage tank having a vapor outlet and a liquid outlet, a vapor supply conduit connected to said vapor outlet, a pressure regulating valve in said vapor supply conduit for limiting the vapor pressure in that portion of said vapor supply conduit on the other side of said regulating valve from said storage tank, a vaporizing tank, a liquid supply conduit connecting said liquid outlet and said vaporizing tank, a pressure regulating valve in said liquid supply conduit, said vaporizing tank having a vapor outlet, a connecting vapor conduit connecting the vapor outlet of said vaporizing tank with said vapor supply conduit at a point between said storage tank and said pressure regulating valve, means to heat said vaporizing tank comprising a main burner, a main burner supply conduit connecting said main burner and said vapor

supply conduit at a point on the other side of said pressure regulating valve from said storage tank, a pilot burner, a pilot burner supply conduit connecting said pilot burner and said main burner supply conduit, a first fluid pressure actuated shut-off valve in said main burner supply conduit at a point between said pilot burner supply conduit and said main burner, a fluid pressure supply conduit connecting said liquid outlet of said storage tank and said first shut-off



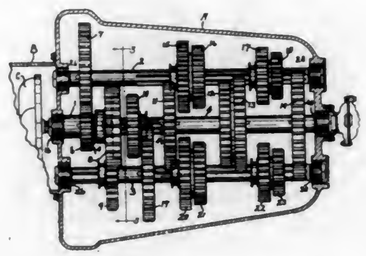
valve whereby a predetermined pressure in said storage tank closes said first shut-off valve, a second fluid pressure actuated valve in said main burner supply conduit at a point between said pilot burner supply conduit and said main burner, a thermal pressure fluid supply bulb disposed so as to be heated by said vaporizing tank, and a thermal pressure fluid conduit connecting said second shut-off valve and said supply bulb whereby a predetermined temperature in said vaporizing tank closes said second shut-off valve.

2,456,891
IGNITOR
William W. Rigrod, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 4, 1945, Serial No. 571,256
10 Claims. (Cl. 250—27.5)



1. An ignitor comprising ingredients of boron and carbon, and an additional ingredient of a metallic compound inclusion whereof gives to the composition a less negative and more positive temperature coefficient of resistance.

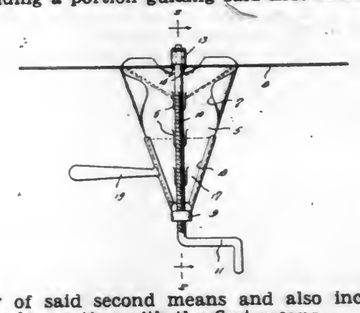
2,456,892
MOTOR CONTROL SYSTEM
Lynn G. Riley, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 29, 1943, Serial No. 508,265
4 Claims. (Cl. 318—259)



1. In a motor control system, in combination, switching means for connecting the motor to a power conductor to accelerate the vehicle, reversing switches for controlling the direction of operation of the motor, additional switching means cooperating with said reversing switches to establish dynamic braking connections for the motor, a controller for controlling the motor current during both acceleration and dynamic braking, and relay means responsive to the motor current for controlling the operation of said controller, the operating characteristics of said relay means being changed by the operation of said reversing switches.

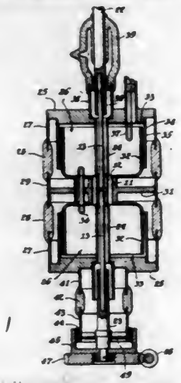
2,456,893
SWITCHING ARRANGEMENT FOR SELECTORS
Bert W. Roth, Riverdale, N. Y., assignor to Trans-Lux Corporation, New York, N. Y., a corporation of Delaware
Application April 11, 1946, Serial No. 661,272
4 Claims. (Cl. 177—353)

1. A controller including in combination a plurality of moveable actuating units, groups of elements arranged according to predetermined permutations, at least certain of said actuating units mounting a pair of said groups to extend in different directions, two assemblies of contact members arranged to be engaged by the individual elements of the different groups upon the actuating units mounting the same being moved to establish electrical contacts between such elements and members and shiftable switch means connected to all of said contact members and operable to complete and interrupt circuits through one and the other of said contact assemblies.



2,456,894
TRANSMISSION FOR MOTORIZED VEHICLES
Elwood A. Ryker, Spokane, Wash.
Application December 17, 1946, Serial No. 716,747
3 Claims. (Cl. 74—343)

1. In a transmission, a drive shaft, a main shaft aligned with the drive shaft and having one end rotatably engaged with the drive shaft, a low speed countershaft, a high speed countershaft intermeshing gears fixed to the low speed countershaft and the drive shaft, a large gear fixed to the drive shaft and disposed about the adjoining end portion of the main shaft and having inner and outer teeth, a gear slidable along the high speed countershaft into and out of mesh with the outer teeth of the large gear, a large gear fixed to the high speed countershaft, a small gear slidable along the main shaft from a position in mesh with the large gear of the high speed countershaft into a position to fit within and mesh with the internal teeth of the large gear of the drive shaft, a series of gears of different sizes fixed upon the main shaft, and gears smaller than the last mentioned gears on the main shaft and of different sizes slidable along the low speed countershaft and the high speed countershaft into and out of position for selective meshing with companion ones of the said last mentioned gears on the main shaft.

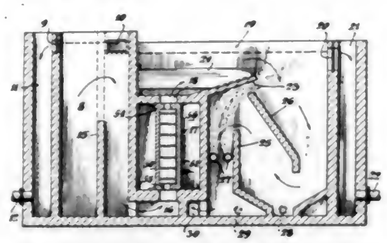


2,456,895
WIRE STRETCHER
Hugo Sattler, Doss, Tex.
Application April 10, 1944, Serial No. 530,382
2 Claims. (Cl. 24—71.1)

1. A wire stretcher comprising a rigid plate member having at opposite edges flanges spaced from the remaining part and disposed in substantial alignment, a plurality of hooks on the side of the plate facing said flanges and spaced from one another on a line intermediate the edges of said plate, a holder disposed against the other side of said plate and having at opposite edges guides engaging the edges of said plate, means for engaging a wire extending above the flanges, a second means cooperating with the holder and including a portion guiding said first means ax-

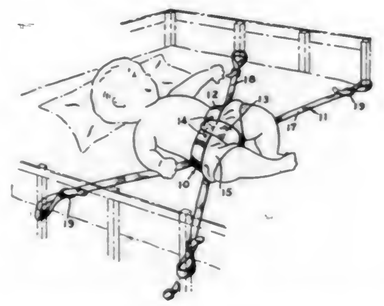
ially of said second means and also including threads coacting with the first means.

2,456,896
ULTRA HIGH FREQUENCY DEVICE
Charles M. Slack, Glen Ridge, Ilia E. Mouromtseff, Montclair, and George M. Dinnick, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 8, 1944, Serial No. 548,584
7 Claims. (Cl. 315—5)



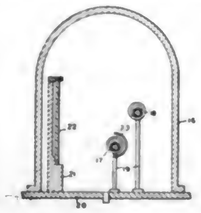
1. An ultra high frequency device comprising an anode and a grid in proximity thereto, and a pair of electrode members between which an arc is adapted to form and constitute the cathode, said members providing a gap therebetween within which said arc may form and from which said arc may expand laterally, said members being located on the opposite side of the grid from the anode in at least as close proximity to said gap as the proximity of the grid to said members and within range of expansion of the arc to said grid from said gap.

2,456,897
ELECTROLYTIC CLARIFICATION APPARATUS
Lloyd Dunn Smiley, Jackson Heights, and Edward S. Lansing, New York, N. Y., assignors, by direct and mesne assignments, of one-half to said Lansing and one-half to Howard B. Bishop, Summit, N. J.
Application May 19, 1942, Serial No. 443,596
2 Claims. (Cl. 204—232)



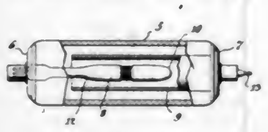
1. An apparatus for treating electrolytically liquids containing solids, comprising a relatively

deep tank of extended cross-sectional area, a substantially vertical conduit in said tank of smaller cross-sectional area than said tank, said conduit having an open top terminating below the top of said tank, an electrolytic cell in said conduit having pairs of horizontally spaced electrodes defining substantially vertical flow paths therebetween, means for supplying a liquid to be treated to the bottom of said conduit for flow



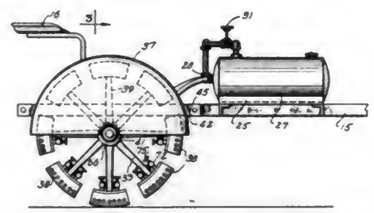
upwardly therethrough and discharge into said tank, a shelf extending laterally from adjacent the top of said conduit to form a relatively shallow pond above said conduit in which the velocity of liquid flow is sufficiently reduced to minimize agitation at flotation level, means beneath said shelf for directing a gas upwardly to aid in floating said solids, overflow means for discharging said floating solids continuously adjacent the top of said tank, and discharge means for said liquid below the first-mentioned discharge means.

2,456,898
BODY RESTRAINT FOR INFANTS
Harry I. Strandhagen, Fort Lauderdale, Fla., assignor, by mesne assignments, of one-half to Bassett Research Corporation, a corporation of Michigan
Application September 3, 1946, Serial No. 694,470
2 Claims. (Cl. 128—134)



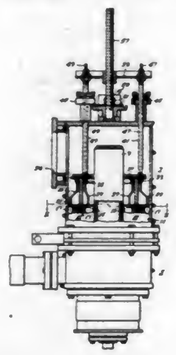
1. An infant harness comprising a garment having a waist-encircling portion and having a portion depending from the waist-encircling portion intermediate the ends of the latter and adapted to be looped between the legs of the infant for attachment to the free ends of the waist-encircling portion, relatively narrow straps extending transversely with respect to one another and diagonally with respect to the waist-encircling portion at the outer side of the garment, said straps being secured at the point of crossing to the garment intermediate the ends of the waist-encircling portion adjacent the juncture of the depending portion with the waist-encircling portion.

2,456,899
USE OF SILICON COMPOUNDS IN PRODUCING QUARTZ COATINGS IN A VACUUM
John Donovan Strong, Baltimore, Md., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 3, 1947, Serial No. 783,837
7 Claims. (Cl. 117—106)



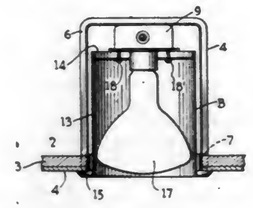
4. The method of coating a surface with quartz by evaporation technique within a vacuum, comprising heating quartz in contact with a material selected from the group consisting of silicon and silicon carbide reactive with the quartz to form silicon monoxide when heated on a heat radiating support body in a high vacuum to react the quartz to form silicon monoxide, continuing the application of heat to evaporate the silicon monoxide, depositing the silicon monoxide on a support surface, and oxidizing the deposit to form a quartz coating.

2,456,900
SPARK-GAP DEVICE AND ELECTRODE THEREFOR
Harold J. Sullivan, Cranford, and Edward G. F. Arnott, Upper Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 2, 1944, Serial No. 552,414
3 Claims. (Cl. 250—27.5)



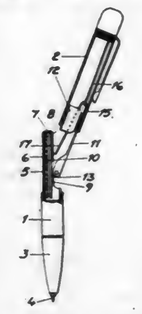
1. A spark-gap device comprising a vitreous envelope provided with metallic end closure members hermetically sealed thereto, a cathode supported by one of said closure members and an anode supported by the other of said closure members in telescopic relation with said cathode, an ionizable medium in said envelope for supporting a discharge between said electrodes upon the application of a potential thereto, said anode being provided with an end devoid of an abrupt change in radius of curvature at its inner extremity and having a similar surface of curvature adjacent the inner extremity of said cathode, said anode having a roughened surface to offset the effect of sputtered particles accumulated thereon from said surrounding cathode, and the pressure of said ionizable medium being higher than that normally employed for the same applied potential with an anode of smooth surface.

2,456,901
COTTON CHOPPER WITH BURNERS
Luther B. Swafford, England, Ark.
Application October 11, 1946, Serial No. 702,792
7 Claims. (Cl. 97—22)



1. A crop destroying agricultural implement comprising a main frame, a transversely extending axle structure on the frame, wheel-supporting devices comprising a hub portion journaled to the axle structure and containing a distributing fuel mixture arrangement, a plurality of circumferentially spaced radially extending spokes connected in fluid communication with the hub portion, heating box structures secured to the outer ends of the spokes, said spokes having passageway means for communicating the fluid to the outer ends of the spokes, and burners extending into the box structures and connected to the passageways of the spokes to receive fuel therefrom, said heating box structures adapted to be heated by the burner means whereby as the implement is drawn over the row crop, the plants will be destroyed from the heat communicated to them from the box structures, and fuel supply means for delivering fluid to the axle structure.

2,456,902
CONTACT AND SHORTING MECHANISM
Robert L. Treuthart, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 17, 1945, Serial No. 583,295
12 Claims. (Cl. 173—324)

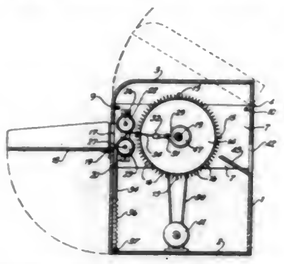


1. In combination with two spaced and facing surfaces of an electric circuit, an elongated hollow member expansible lengthwise and having an inlet and an outlet permitting a continuous supply of cooling fluid through the interior of said member under pressure to cool and expand it, said member being positioned lengthwise between said surfaces and forming when expanded an electrical interconnection therebetween for the conduction of current.

2,456,903
LIGHTING FIXTURE
Kurt Versen, Tenafly, N. J.
Application May 18, 1946, Serial No. 670,680
5 Claims. (Cl. 240—78)

1. A recessed lighting fixture comprising a fixture housing provided with a bottom flange extending outwardly therefrom, a supporting cage surrounding said housing and comprising a base frame, provided with a top flange extending outwardly therefrom and having secured thereto at least one overhead bridge, and a junction box including lamp socket, said housing and said cage being connected by interlocking means operative in a direction perpendicular to the lanes of said flanges, with an intervening space between said housing and said cage to allow for compensation of variations in thickness and surface of the mounting surface, said flanges being adapted to engage therebetween the mounting surface in a vise-like grip.

2,456,904
STAMP
Nils Harald Wahlström, Stockholm, Sweden
Application August 4, 1945, Serial No. 608,891
In Sweden December 21, 1944
3 Claims. (Cl. 101—333)

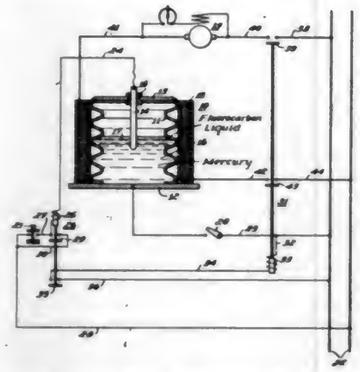


1. A stamping assembly comprising in combination a slotted sleeve, a stamp pad in said sleeve, a stamp plate adapted to be inserted through the slot of said sleeve for contact with said pad, and a telescopic handle pivotally attached to said stamp plate and adapted to telescope on said sleeve in closed position of the stamp plate and upon itself in operable position.

2,456,905
FIBER RENOVATING MACHINE
Elmer J. Wines, South Gate, Calif.
Application July 11, 1946, Serial No. 682,775
6 Claims. (Cl. 19—80)

1. A fiber renovating machine including a cabinet having opposite inlet and discharge apertures, a combined combing and blower cylinder

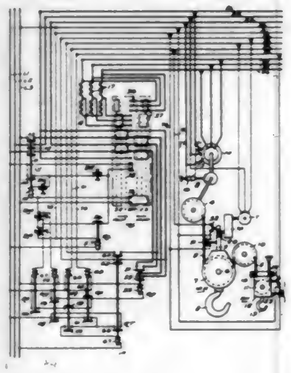
rotatably mounted in said cabinet, means for driving said cylinder, opposed eccentrics on the ends of said cylinder, cooperating feed rollers



mounted between said inlet apertures and said cylinder, and belts connected between said eccentrics and said rollers for alternately driving the opposite ends of said rollers.

2,456,906
SUPPORTING SURFACES FOR AIRCRAFT
Louis Béchereau, Paris, France; vested in the Attorney General of the United States
Application December 16, 1939, Serial No. 309,655
In Luxemburg December 19, 1938
6 Claims. (Cl. 244—42)

1. In a wing structure characterized by a relatively stationary main wing portion and a pivotable wing portion; a fixed air passage provided by a slot formed through said main wing portion, said slot inclining rearwardly from the undersurface of said main wing portion and terminating through the trailing edge surface of said main wing portion, said trailing edge surface being concave, and said leading edge of the pivotable wing portion being formed with mating parts convexed to conformably engage with concave parts of the trailing edge of said main wing portion and located above and below the rearward opening of said passage in a manner to substantially close said rearward opening of the passage while the pivotable wing portion is in coplanar relation to the main wing portion, and pivot means mounting said pivotable wing portion on said main wing portion in a manner enabling said pivotable wing portion to be swung away from said coplanar relation to a position wherein said mating parts are dislocated with respect to each other and the rearward opening of said passage is open for the passage of air rearwardly over said pivotable wing portion.

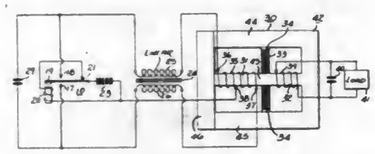


2,456,907
OVERLOAD RELAY
Leo J. Berberich, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 31, 1947, Serial No. 765,114
6 Claims. (Cl. 200—122)

1. In a switch, in combination, a container capable of expanding and contracting in response to changes in internal pressure, mercury in the container to be used as one of the electrodes of the switch, a second electrode disposed in the container to move into and out of the mercury as the container contracts and expands, respectively, with changes in internal pressure to perform switching operations, and a quantity of a

completely fluorinated hydrocarbon liquid floating on the mercury to maintain substantially constant vapor-pressure characteristics in the container and to protect the mercury from contamination during the operation of the switch to make and break circuits carrying electric current.

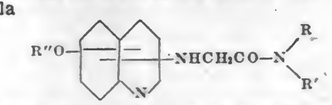
2,456,908
CRANE CONTROL
Remi Bollaert, Oakland, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 12, 1946, Serial No. 696,568
10 Claims. (Cl. 254—173)



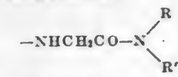
1. A control system for a hoist having a heavy main hook assembly, a light auxiliary hook assembly and a single cable from which said assemblies are suspended, and comprising in combination a hoist motor for operating said cable to selectively hoist and lower one of said assemblies, means for latching said main assembly in its top limit position, an electric device for releasing said latching means to permit lowering said main assembly from said position, limit switch means disposed to be actuated by said main assembly when the latter is in said top position, limit switch means disposed to be actuated by said auxiliary assembly when the latter is in top limit position, operator-actuable master control means connected to said motor for controlling its speed torque performance in hoisting and lowering direction, operator-actuable contact means for selecting of said assemblies for operation by said motor, and relay means connecting said selector contacts and said master controller with said limit switch means and said latch releasing device so as to permit releasing said latch means, for subsequent lowering of said main assembly from said top position, only when said auxiliary assembly is in its top position and said master control means in "off" condition and to permit selecting said auxiliary assembly, for subsequently lowering it from its top position, only when said main assembly is latched and said master control means is in "off" condition.

2,456,909
METHOD OF STERILIZING AND PRESERVING
Arno Brasch, Brooklyn, N. Y., assignor, by mesne assignments, to Electronized Chemicals Corporation, a corporation of Delaware
No Drawing. Application September 28, 1946, Serial No. 700,167
17 Claims. (Cl. 21—54)

1. Method of sterilizing a substance, such as a foodstuff or a drug, without developing harmful side effects by bombarding the same with high speed electrons of a velocity equivalent to more than one million volts during at least one very short time period lasting less than 10^{-4} of a second.



2,456,910
VIBRATOR REGULATING SYSTEM
Harold J. Brown, Indianapolis, Ind., assignor to Electronic Laboratories Incorporated, a corporation of Indiana
Application June 19, 1944, Serial No. 540,933
2 Claims. (Cl. 175—365)

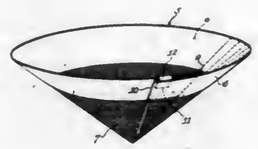


1. In a vibrating system having a vibrator with contact means energized by a direct current source and producing a pulsating current, the improvement of a regulating circuit energized by said pulsating current, said improvement comprising a leakage reactance transformer having a primary core portion with a continuous permeable circuit, a secondary core portion, and magnetic shunt means disposed between the primary and secondary core portions, primary winding means mounted on the primary core portion and energized by the pulsating current, secondary winding means mounted on the secondary core portion and adapted to supply an alternating current, inductance means for limiting the surge of primary current during the starting period of said vibrating system, said inductance means being connected between the contact means of the vibrator and the primary winding means, and capacitive means for producing substantially unity power factor operation of said transformer during steady-state conditions, whereby said inductance means thereafter has little regulating effect upon the system, said capacitive means being connected in parallel with the secondary winding means.

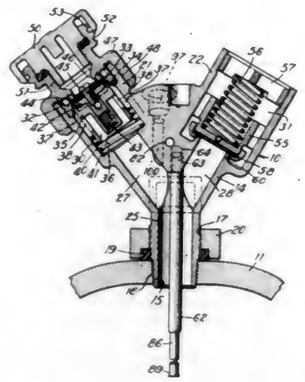
2,456,911
DISUBSTITUTED ACETAMIDYL DERIVATIVES OF AMINO QUINOLINES
William F. Bruce, Penfield, Upper Darby, Pa., assignor to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application May 4, 1945, Serial No. 592,062
7 Claims. (Cl. 260—287)

1. Substituted alkoxyquinolines of the general formula

where the R''O radical may be substituted in any of the 2–7 positions and the



radical may be substituted in any of the 2–8 positions in the quinoline ring and where R'' is a lower alkyl radical and

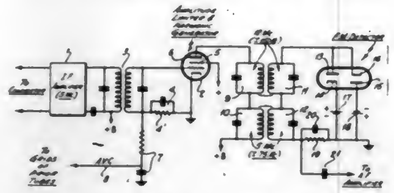


is a radical selected from the group consisting of a piperidyl radical and a radical where R represents a member of the group consisting of alkyl and cycloalkyl radicals and R' represents a member of the group consisting of alkyl, alkenyl and cycloalkyl radicals.

2,456,912
COLLAPSIBLE AND ADJUSTABLE FILTER AND STRAINER
Edwin N. Burrows, Detroit, Mich.
Application March 22, 1945, Serial No. 584,105
2 Claims. (Cl. 210—161)

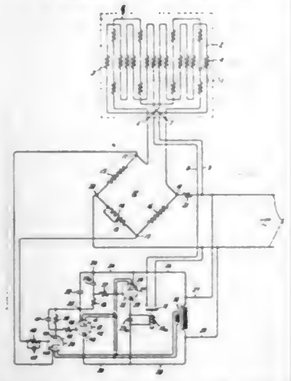
2. An adjustable filter and strainer for varying sizes of receptacles comprising a pair of superimposed annular frame members of flexible sheet material with a central aperture therethrough, said frame members being foldable into frustoconical form along fold lines determined by the size of the receptacle opening and providing reversely folded overlapping portions, a flexible filtering element secured between said superimposed frame members across said aperture and foldable along lines approximately co-extensive with the fold lines of said frame members, and an integral locking tab projecting radially outward from the periphery of said frame members and foldable thereover into interlocking engagement between folds of said reversely folded overlapping portion.

2,456,913
FITTING
William C. Buttner, Evanston, and Savin L. Surdstrom, Chicago, Ill., assignors to The Bastian-Blessing Company, Chicago, Ill., a corporation of Illinois
Application March 25, 1947, Serial No. 736,994
3 Claims. (Cl. 62—1)



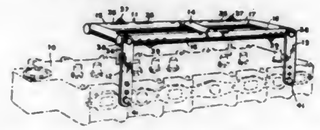
3. For use in a fitting, a filler valve comprising a cylindrical passage having a shoulder at one end and an inwardly facing conical seat at the other, a valve member substantially filling and disposed within said passage, means for urging said member toward said conical seat, an annular groove opening into said member from the end opposite said seat, a plurality of flutes on the sides of said member for supporting said member in said passage, a radial hole connecting each flute with said annular groove, a second valve seat coaxial with said conical seat, and a second valve member supported by said first member but movable independently therefrom for closing against said second seat.

2,456,914
CHUCK
John Edwin Ingliston Cairns, Chalfont-St.-Peter, and Charles Dickson Docherty, Hayes, England, assignors to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application January 31, 1947, Serial No. 725,698
In Great Britain November 23, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 23, 1964
4 Claims. (Cl. 279—2)



4. A chuck for resiliently engaging protrusions on the inside surface of a cylindrical glass part, comprising a cylindrical member, bearing members longitudinally disposed and peripherally spaced on said member, and projecting outwardly therefrom, a resilient band surrounding a periphery of said member and engaging said bearing members, said resilient band being responsive to said protrusions to engage a peripheral portion of said member intermediate said bearing members, whereby said chuck holds said glass part against rotation.

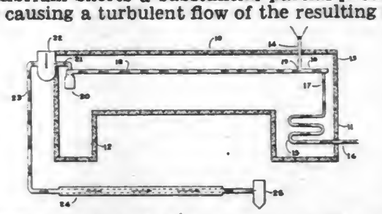
2,456,915
ANGLE MODULATED WAVE DETECTOR
Wendell L. Carlson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 22, 1945, Serial No. 595,209
14 Claims. (Cl. 250—27)



1. In a method of detecting angle modulated high frequency waves, deriving from the waves a fundamental and an harmonic angle modulated wave, combining said fundamental and harmonic waves to produce a resultant high frequency wave which has a wave form having a variable degree of asymmetry dependent on the angle modulation, and subjecting the resultant wave to symmetrical, non-linear detection to provide a voltage representative of the said variable asymmetry.

2,456,916
ELECTRIC BLANKET CONTROL
Harry W. A. Chalberg, Berne, N. Y., assignor to General Electric Company, a corporation of New York
Application January 9, 1946, Serial No. 639,993
3 Claims. (Cl. 219—46)

1. An electric blanket and the like comprising a blanket body, heating means for said body, means for controlling said heating means including a control circuit therefor controlling said heating means in accordance with the current in said circuit, a source of alternating current voltage, means for supplying half-wave unidirectional current to said control circuit comprising a controlling electric valve provided with an anode, a cathode and a control grid, and having its anode-cathode path included in a circuit with said source and said control circuit, means for supplying to said grid a voltage having a periodically varying component and a direct component comprising a capacitor having connections to said grid and cathode and a pair of reversely connected electric valves connected in circuit with said capacitor across said source, one of said reversely connected valves having an anode, a cathode and a control grid, and means for supplying to the grid and cathode of said reversely connected valve a voltage responsive to the temperature variations of the blanket body so as to supply a voltage to the grid of said controlling electric valve to control the current in said control circuit in order to hold a substantially constant temperature.



2,456,917
ENGINE HEAD LIFTING TOOL
Alvah R. Cheek, Thurman, Iowa
Application October 23, 1946, Serial No. 705,001
5 Claims. (Cl. 294—15)

5. A cylinder head lifting tool comprising a frame composed of an H-shaped central member and two U-shaped frame portions, one to each side of said H-shaped central member, said U-shaped frame portions being each telescopically adjustable relative to the parallel legs of said H-shaped central member so as to permit adjustment of the length of the frame symmetrically to said central member, slots in one of the two longitudinal sides of said frame extending through said longitudinal side in a plane perpendicular to the plane of said frame to permit the passage through said slots of stud-bolts extending out of the top of said cylinder head, two links attached in a tightenable manner to the other of said two longitudinal sides of said frame and extending in a plane perpendicular to the plane of said frame, and means provided at the free end of each link for the attachment of the latter to the side of the cylinder head, said links rigidly supporting said frame in a position parallel to the top surface of the cylinder head at a distance therefrom when these links are tightened on said longitudinal side of the frame and said side of the cylinder head, but being foldable upon said frame when the tool is removed from the cylinder head.

2,456,918
DISTILLATION OF VOLATILIZABLE METALS
Howard Church, Los Gatos, Calif., assignor to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
Application September 5, 1945, Serial No. 614,521
6 Claims. (Cl. 75—67)

1. In the method of refining a mixture of a volatilizable metal and less volatile solid impurity, wherein the mixture is heated to a temperature sufficient to vaporize the metal but insufficient to vaporize the impurity, and the metal vapor is separated from the unvaporized impurity, the improvement which comprises supplying at least the major portion of the heat of vaporization of the metal by means of a preheated inert gas by adding the said mixture of metal and impurity in finely divided form to the preheated gas in proportions such that a suspension of the solids in the gas is formed in which the metal at thermal equilibrium exerts a substantial partial pressure, and causing a turbulent flow of the resulting suspension thereby rapidly vaporizing the metal from the suspended solids by virtue of the heat transferred from the preheated gas to the solids suspended therein, and separating the suspended solid impurity from the gaseous mixture of inert gas and metal vapor.

2,456,919
METHOD FOR IMPROVING WATER-RESISTANT CHARACTERISTICS OF RESINS AND RESINOUS ARTICLES, AND RESINOUS PRODUCTS RESULTING THEREFROM
Loring Coes, Jr., Brookfield, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
No Drawing. Original application September 28, 1942, Serial No. 459,956. Divided and this application April 1, 1947, Serial No. 738,718
12 Claims. (Cl. 260—39)

5. A composition of matter capable of curing to a water resistant resin comprising aniline formaldehyde resin, a poly-glycol dichloride selected from the group consisting of di-, tri-, tetra- and penta-, poly-glycol dichlorides, and a metal selected from the group consisting of lead, iron, zinc and copper, the metal being capable of reacting with the HCl which, during subsequent heating of the composition, becomes bonded to the N atoms of the amino groups, the Cl being derived from the poly-glycol dichloride, to form metal chloride in well distributed minute quantities in said resin but chemically not a part thereof.

2,456,920
METHOD FOR IMPROVING WATER-RESISTANT CHARACTERISTICS OF RESINS AND RESINOUS ARTICLES, AND RESINOUS PRODUCTS RESULTING THEREFROM
Loring Coes, Jr., Brookfield, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
No Drawing. Original application September 28, 1942, Serial No. 459,956. Divided and this application April 1, 1947, Serial No. 738,719
12 Claims. (Cl. 260—39)

5. A composition of matter capable of curing to a water resistant resin comprising aniline formaldehyde resin, a poly-glycol dichloride selected from the group consisting of di-, tri-, tetra-, and penta, poly-glycol dichlorides, and a metal oxide selected from the group consisting of zinc, lead and cobalt oxides, the metal oxide being capable of reacting with the HCl which, during subsequent heating of the composition, becomes bonded to the N atoms of the amino groups, the Cl being derived from the poly-glycol dichloride, to form metal chloride and water in well-distributed quantities in said resin but chemically not a part thereof.

2,456,921

METHOD FOR IMPROVING WATER-RESISTANT CHARACTERISTICS OF RESINS AND RESINOUS ARTICLES, AND RESINOUS PRODUCTS RESULTING THEREFROM

Loring Coes, Jr., Brookfield, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

No Drawing. Original application September 28, 1942, Serial No. 459,956. Divided and this application April 1, 1947, Serial No. 738,720

9 Claims. (Cl. 260—39)

3. A composition of matter capable of curing to a water resistant resin comprising aniline formaldehyde resin, a poly-glycol dichloride selected from the group consisting of di-, tri-, tetra- and penta-, poly-glycol dichlorides and a salt of a weak acid selected from the group consisting of sodium silicate and zinc borate, the salt being capable of reacting with the HCl which, during subsequent heating of composition, becomes bonded to the N atoms of the amino groups, the Cl being derived from the poly-glycol dichloride, to form metal chloride and weak acid in well-distributed minute quantities in said resin but chemically not a part thereof.

2,456,922

FABRIC

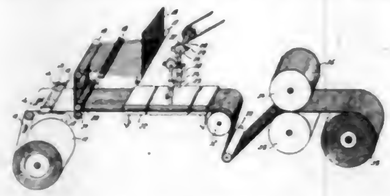
Edward J. Cogovan, Amsterdam, N. Y., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a corporation of New York

Application March 21, 1946, Serial No. 656,102

9 Claims. (Cl. 154—45.9)

1. A fabric which comprises a backing sheet, a thin film of adhesive on one surface of the sheet, and a plurality of loosely-twisted heavy yarns on the sheet, said yarns having flattened surfaces on opposite sides extending lengthwise of the yarns and of a width equal at least to half the width of the yarns, the yarns lying side by side with the flattened surface of each yarn lying in contact with like flattened surfaces of adjacent yarns, said yarns also having flattened surfaces of substantial width extending the full length of the yarns and lying in the plane of said film of adhesive and affixed to the sheet thereby along the entire length of the yarns, said film of adhesive forming the sole means for securing the yarns to said backing sheet, each yarn including a major proportion of fibres which are not potentially adhesive and a minor proportion of material distributed throughout it and binding the fibres which are not potentially adhesive.

2,456,923



METHOD OF MAKING FABRICS

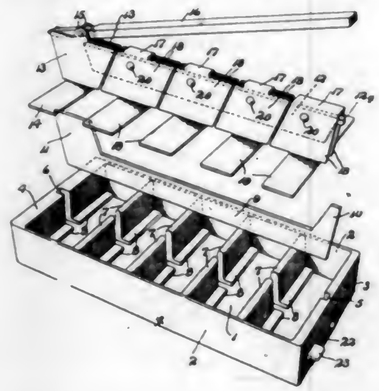
Edward J. Cogovan, Amsterdam, and Lewis R. Jones, Broadalbin, N. Y., assignors to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a corporation of New York

Application April 12, 1946, Serial No. 661,530

10 Claims. (Cl. 154—90)

1. A method of making a fabric, which comprises applying a thin film of adhesive to the surface of a backing sheet, laying a plurality of heavy yarns side by side and in lateral contact on the coated surface, and, while supporting the sheet, intermittently applying pressure simultaneously to all the yarns over substantial lengths thereof to increase the widths of their areas in

contact with the coated surface of the sheet and with one another.



2,456,924

ICE CUBE TRAY

Hugh Collister, Grand Rapids, Mich.

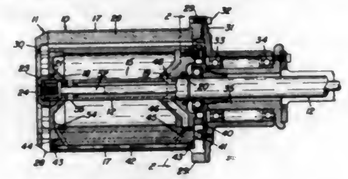
Application July 23, 1945, Serial No. 606,616

6 Claims. (Cl. 62—108.5)

5. An ice tray having a bottom, sides and ends, transverse partitions extending between said sides dividing said tray into compartments, a bar extending longitudinally of said tray and across said partitions and having a fulcrum near one of said ends, means for forcibly lifting the other end of the bar about said fulcrum, a lifting device in each compartment lying adjacent said bottom, and means for connecting said lifting devices to said bar each having a limited vertical movement relative to the bar whereby upon raising the bar about said fulcrum the lifting devices will be individually and successively raised.

2,456,925

THREAD DRYING APPARATUS



Lorin A. Corey, Cleveland Heights, and Thomas S. Mayner, Willoughby Township, Lake County, Ohio, assignors to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware

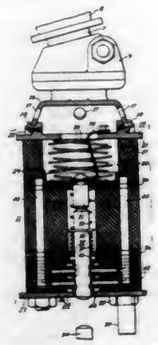
Application November 27, 1946, Serial No. 712,476

6 Claims. (Cl. 34—153)

1. An apparatus for drying thread or the like comprising a reel embodying two interdigitating sets of bar members forming a generally circular periphery over which the thread or the like is adapted to pass, means for actuating the bar members to advance the thread in a helical path, one of said sets of bar members being hollow and

serving as heating fluid conductors for the flow of a heating fluid therethrough, and a heating

fluid inlet and outlet means to said heating fluid bar member conductors.



2,456,926

CIRCUIT INTERRUPTER

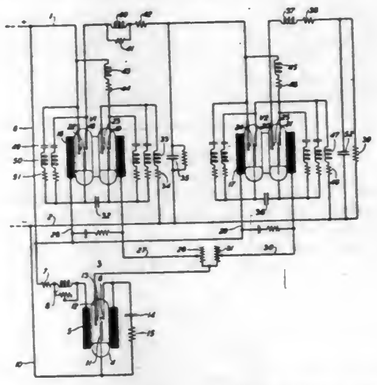
James M. Cumming, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application August 10, 1944, Serial No. 548,815

18 Claims. (Cl. 200—150)

1. In a circuit interrupter, a pressure-generating contact, an intermediate contact, a movable contact, a first biasing means biasing the intermediate contact to its open circuit position, and a second biasing means associated with the intermediate contact and acting following a predetermined opening travel of the intermediate contact in opposition to the first biasing means to obtain a hesitating opening travel of the intermediate contact.

2,456,927



DIRECT-CURRENT VOLTAGE MULTIPLIER

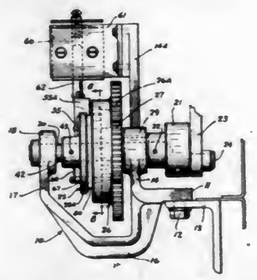
Austen M. Curtis, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application May 2, 1945, Serial No. 591,487

4 Claims. (Cl. 171—97)

4. In a voltage multiplier in combination, a source of direct current potential, a load circuit, a plurality of condensers including a storage condenser, a plurality of magnetic switching devices having mercury wetted front and back contacts and a reed armature adapted to vibrate therebetween, means for periodically vibrating the armature of said devices at a predetermined rate, means for limiting the flow of current through said contacts during the initial making and final breaking period thereof, said means comprising inductance in series with said contacts and series resistance and capacity in shunt thereto, said contacts being so connected that when the armatures of two of said devices close their respective front contacts a first one of said condensers will be connected to said source of potential and second and third condensers will be connected in a series circuit including said storage condenser and load circuit in parallel,

and when said armatures reverse their positions and close their respective back contacts, said first condenser will be connected in series with said potential source and in parallel with said second and third condensers.



2,456,928

LATCH OPERATED CLUTCH

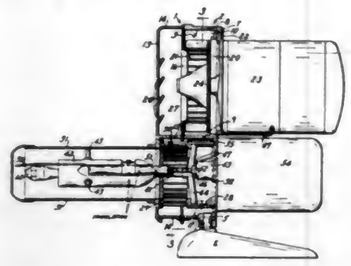
Franklin E. Curtis, Euclid, Ohio, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware

Application December 4, 1944, Serial No. 566,487

9 Claims. (Cl. 192—28)

1. In a quick-pickup clutch, a constantly rotating driving member, an annular element on said driving member having an annular series of internal clutch teeth formed thereon concentric with the rotative axis of said driving member, a driven member supported for rotation on an axis concentric with the rotative axis of said driving member, a pair of clutch dogs pivoted on said driven member on axes parallel to and disposed on opposite sides of the rotative axis of said driven member, said clutch dogs having teeth formed thereon adjacent to corresponding ends thereof for engagement with the teeth on said annular element of said driving member, a control member pivoted on said axis of rotation of said driven member between said clutch dogs and operatively associated with said clutch dogs for imparting clutch engaging and disengaging movement to said clutch dogs upon rocking

movement of said control member relative to said driven member, spring means acting between said control member and said driven member and tending to rock said control member in one direction with relation to said driven member to impart clutch engaging movement to said clutch dogs, and means on said control member projecting in a generally radial direction beyond said driven member and adapted for engagement to impart rocking movement to said control member in the other direction to thereby disengage said clutch dogs from said driving member.



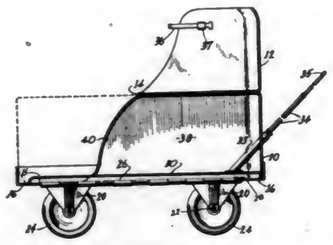
2,456,929
TRAY STRUCTURE
Herbert C. Dee, Kenilworth, Ill., assignor to Woodall Industries, Inc., Detroit, Mich., a corporation of Michigan
Application April 28, 1944, Serial No. 533,202
4 Claims. (Cl. 211—126)

1. A multidecked letter tray comprising a plurality of trays each having a base and four side walls interconnected by corner members, each corner member having a generally triangular cross section and two longitudinal grooves arranged at angles to each other, each groove adjacent one side having a projecting tongue portion adapted to cooperate with a complementary groove in the side wall, each groove of the corner member being closed adjacent its upper end, each side wall having adjacent each end a tongue and groove for complementary cooperation with a groove and tongue of said corner, each base being secured to its associated corner members by fastening means extending through the base from the bottom thereof into longitudinal bore portions in the corner members, and spacing members mounted between the top of the corner of the lower tray and the bottom of the upper tray, said spacing members each being provided with a longitudinal bore for receiving fastening means to retain said spacing member in position.

2,456,930
FAN HOUSING CONSTRUCTION
Warren H. De Lancey, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Original application January 20, 1945, Serial No. 573,697. Divided and this application July 8, 1946, Serial No. 681,846
1 Claim. (Cl. 230—133)

A fan housing construction, made up of two castings, each having a flat wall with a marginal flange along its top and sides, means for securing said castings together with their marginal flanges abutting to form an enclosure of which the flat walls form the front and back walls and the abutting pairs of marginal flanges the top and side walls of the housing, the front wall having upper and lower openings therethrough respectively forming an inlet and an outlet for the fan, an annular flange integral with the front wall and extending toward the rear wall the same distance as the marginal flange on the front wall and surrounding said outlet opening, a second flange integral with the back wall and extending toward the front wall for the same distance as the marginal flange on the back wall, said second flange forming a scroll chamber for the fan and a plenum chamber below the scroll chamber together with a passage connecting said chambers, a thin sheet metal plate clamped between said castings and having one face abutting the second flange and the other face abutting said annular

flange, said plate having upper and lower openings therethrough one for connecting said inlet opening to the scroll chamber and the other for connecting said plenum chamber to the space within said annular flange and to said outlet opening, and a tubular air director located within the plenum chamber and said space and extending in coaxial relation with the outlet opening from the front wall to the back wall with its ends engaged one with the front wall and one with the back wall.



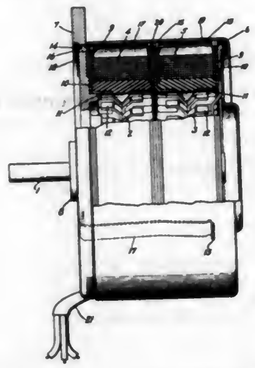
2,456,931
ANODIZING MAGNESIUM ALLOYS
Herbert K. De Long, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application December 26, 1946, Serial No. 718,590
3 Claims. (Cl. 204—56)

1. In a method of producing an anodic coating upon an article of a magnesium-base alloy wherein the article is subjected to electrolysis at a current density between 1 and 100 amperes per square foot and a potential not exceeding about 10 volts in a solution consisting of water, an alkali metal hydroxide in a concentration of at least 30 grams per liter of solution, and a water-soluble aliphatic hydroxyl compound selected from the group consisting of methanol, ethanol, ethylene glycol, propiyene glycol, glycerol, mannitol, diethylene glycol in a concentration between 50 and 500 milliliters per liter of solution, said solution being maintained at a temperature between 60° and 100° C., the steps which consist in soaking the article in the solution both before and after the electrolysis for a period of about 2 to 10 minutes, the article remaining immersed in the solution from the beginning to the end of the method.

2,456,932
FOLDING INFANT-CARRYING VEHICLE
Joseph B. Dostal, Kansas City, Mo.
Application November 23, 1945, Serial No. 630,278
1 Claim. (Cl. 280—37)

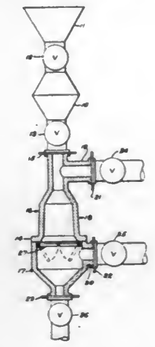
A foldable infant-carrying vehicle comprising, an oblong body member having collapsible wheel structures adapted to be retracted into inoperative position within said body member, one end

of said body member comprising a swinging seat portion movable into operative position on top of the remaining portion of the body member, and a swinging panel forming a partition between said



seat portion and remaining body portion and serving as a closure for the space within said remaining portion of said body member when said seat portion is in raised operative position.

2,456,933
BRAZING ALLOY
Wasil W. Dyrkacz, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application November 25, 1943, Serial No. 511,710
1 Claim. (Cl. 75—173)

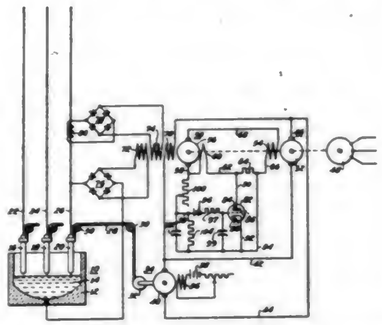


A brazing alloy for use in brazing copper to fernico alloys, said brazing alloy consisting of 86% silver, 13% copper and 1% phosphorus.

2,456,934
CASING AND FASTENING MEANS THEREFOR
Karl M. Feiertag, Lagrange, Ind., assignor to General Electric Company, a corporation of New York
Application August 28, 1947, Serial No. 771,019
6 Claims. (Cl. 172—36)

1. In combination, a casing for a device with a longitudinal groove formed in the outer periphery thereof, said casing having an opening formed in a wall thereof communicating with said groove, a cover for said casing having an opening formed therein in alignment with said groove, and a fastening member for securing said cover to said casing, said member being adapted to be inserted in said groove through said cover opening and having a lip formed at one end and a reverse lip formed at the other end thereof, said member being bowed in its longitudinal dimension whereby on insertion in said groove said reverse lip is forced into said casing opening and said first named lip maintains said cover securely in place.

2,456,935
REFINING OF VOLATILIZABLE METALS
Harmon F. Fisher, Sunnyvale, Calif., assignor to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
Application November 5, 1946, Serial No. 707,819
9 Claims. (Cl. 75—66)



1. In the method of refining a mixture of a volatilizable metal and less volatile solid impurity, wherein the mixture is heated to a temperature sufficient to vaporize the metal but insufficient to vaporize the impurity, and the metal vapor is separated from the unvaporized impurity, the improvement which comprises: supplying the heat of vaporization of the metal directly to a bed of agglomerates of said mixture by means of a preheated inert gas, by passing a stream of the hot preheated gas through said bed of the mixture at a temperature and at a rate such that the metal exerts a substantial vapor pressure, thereby vaporizing the metal from said mixture into said stream of hot inert gas at a substantial rate by virtue of the heat transferred from the hot preheated gas to the bed of the mixture; and separating the metal from the hot inert gas stream.

2,456,936
REGULATOR SYSTEM
Harold G. Frostick, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 16, 1947, Serial No. 741,726
6 Claims. (Cl. 314—75)

1. In a furnace-regulator system, a movable electrode, a regulator for governing the operation of said electrode and comprising an electrode motor, a main generator for supplying energy thereto in either of two polarities for operating the motor in either of two directions, a field winding having a resistor in circuit relation for the main generator, an exciter generator for controlling the energization of the main generator field winding, the exciter generator having a plurality of control field windings energized in accordance with the electrical conditions of the electrode circuit, the exciter generator having a polarity dependent upon the energization of the control field windings, and an electric discharge valve disposed to be rendered

conducting to shunt the resistor in circuit with the field winding of the main generator under

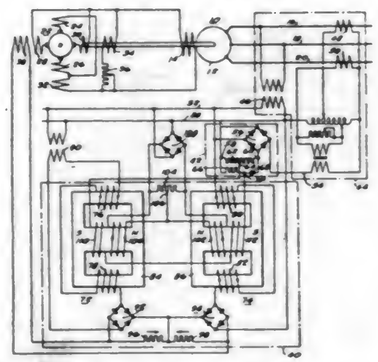
predetermined polarity and operating conditions of the exciter generator.

2,456,937

STABILIZED FAT COMPOSITIONS

Paul Gyorgy, Cleveland, and Martin B. Williamson and Eric T. Stiller, Chagrin Falls, Ohio, assignors to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application February 29, 1944, Serial No. 524,494
15 Claims. (Cl. 99—163)



15. An edible composition of matter comprising an edible substance containing a significant percentage of free fat and an antioxidant consisting substantially only of at least about 1% by weight of water and an organic sulfur compound selected from the group consisting of an organic sulfhydryl and a sulfur compound containing an unsubstituted amino group, said compound being capable of enolizing in the environment of the composition to furnish a sulfhydryl group.

2,456,938

REGULATING SYSTEM

Edwin L. Harder, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 7, 1946, Serial No. 714,823
3 Claims. (Cl. 322—28)

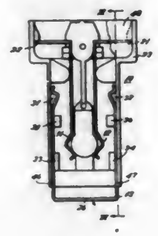
1. In a regulating system for maintaining a quantity of an alternating-current system substantially constant, in combination, an amplifying network disposed to be operated in accordance with variations of the quantity from a predetermined value, the network comprising a pair of saturable core amplifiers having alternating-current windings thereon connected to be supplied from a source of alternating current, a rectifier for each of the amplifiers connected to be supplied through the alternating-current windings of the associated saturable core amplifier, means for applying a fixed bias to each of the saturable core amplifiers to effect the operation thereof on the high amplification part of its characteristic curve, a direct-current control winding disposed on each of the saturable core amplifiers, means for providing a direct-current measure of the alternating-current quantity, a resistance bridge circuit including a non-linear resistance element connected to said direct-current measuring means for sensing the direction and magnitude of departure of the direct-current measure of the alternating-current quantity from a predetermined value and to provide a directional direct-current output therefrom dependent upon said direction and magnitude of departure, the direct-current control windings of the reactors being connected to be energized in accordance with the directional output of the bridge circuit, the direct-current control winding of each of the saturable core amplifiers being disposed thereon to cooperate with the associated fixed bias thereof to effect opposite changes in the saturation of the core amplifiers and thereby effect opposite changes in the output from the rectifiers associated therewith, and means connected in circuit relation with the rectifiers disposed to be energized in response to the output therefrom for regulating the quantity.

2,456,939

WHEELED CONCRETE BURIAL VAULT

Wilbert W. Haase, Forest Park, Ill., assignor to Wilbert Manufacturers Association, Forest Park, Ill., a corporation of Illinois

Application September 15, 1945, Serial No. 616,626
4 Claims. (Cl. 280—48)



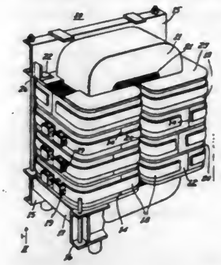
2. A vehicle of the character described, comprising, in combination, a concrete burial vault comprising a unitary concrete vault body including side walls, a front wall, a rear wall and a bottom wall having transversely extending bearing openings formed integrally in the concrete thereof, said transversely extending bearing openings extending inwardly in said bottom wall at substantially right angles to the said side walls of said vault body, the said bottom wall of said vault body having an additional and longitudinally extending bearing opening formed integrally therein and said additional and longitudinally extending bearing opening extending rearwardly in the said bottom wall of said vault body from the said front wall thereof along a line approximately midway between and substantially parallel to the side walls of said vault body, said additional and longitudinally extending bearing opening in the said bottom wall of said body opening at its front end upon the front surface of the front wall of said vault body, each of said transversely extending bearing openings having a wheel-bearing shaft removably journaled therein, said additional and longitudinally extending bearing opening having a supporting shaft removably journaled therein, said burial vault body having a pony wheel steering device mounted on said supporting shaft, said steering device including a plate member having a front end portion attached to said supporting shaft and projecting forwardly of the front wall of said vault body and having a pair of pony steering wheels swivelly mounted thereon, and said plate member including a portion projecting under the bottom wall of the said burial vault body.

2,456,940

LAMP HOLDER FOR FLUORESCENT LAMPS

Charles H. Hodgkins, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a corporation of Connecticut

Application February 9, 1945, Serial No. 576,952
9 Claims. (Cl. 173—328)



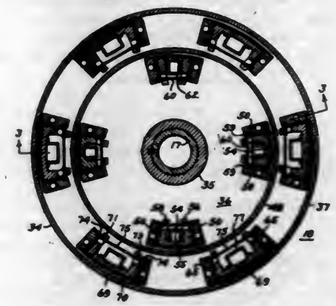
9. A lamp holder for use with tubular discharge lamps comprising, a shell-type housing having a slot in the face and one end thereof to receive the contact members of a lamp, said housing having a pair of transverse slots in one end thereof on opposite sides of the slot entrance, said housing also having a pair of oppositely disposed internal projections on the opposite side walls thereof intermediate the ends thereof, a pair of contact springs mounted within the housing in cooperative relation with the slot, a U-shaped locking member mounted on the housing for movement in and out of the housing with its leg portions extending into the housing through said transverse slots in sliding engagement with the internal side walls of the housing and its connecting portion disposed across the entrance portion of the slot, said leg portions of the locking member and the internal side walls of the housing being so shaped as to cause said locking member to swing back away from the slotted face of the housing when partially withdrawn from the housing into an unlocking position, thereby to reduce the amount of longitudinal movement of said member to a minimum to give sufficient clearance of the entrance portion of the slot for insertion of a lamp, said leg portions having hook shaped ends extending beyond the internal projections and disposed to engage said projections to limit the outward longitudinal movement of the locking member.

2,456,941

TRANSFORMER STRUCTURE

John K. Hodnette, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 29, 1944, Serial No. 520,221
1 Claim. (Cl. 175—356)



In a transformer structure, in combination, a plurality of supports capable of carrying the weight of the transformer disposed in spaced relation to provide a base, a wound core having a plurality of turns of electrical strip steel bonded to one another, the wound core being cut into a plurality of core sections, a preformed coil, a plurality of core sections fitted through the preformed coil and disposed between the supports, the turns of the core sections being on edge thus giving them strength when employed as beams, a plurality of other core sections fitted around the coil and meeting within the coil thus not bridging the supports, the core sections fitted around the coil cooperating to completely fill the window of the coil, the sections fitted through the preformed coil being disposed in close proximity to one another without an in-between support thereby to reduce losses from stray currents and to reduce the mean turn length of the turns of the preformed coils, the weight of the core and coils being carried by the on-edge sections bridging the space between the supports, and means for retaining the core sections and coils in position on the base.

2,456,942

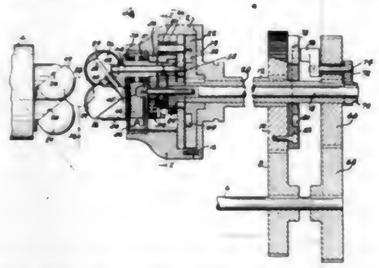
POWER TRANSMISSION FOR HELICOPTER ROTORS

John A. Holbrook, Worcester, Mass., assignor to Worcester Polytechnic Institute, Worcester, Mass., a corporation of Massachusetts

Application January 26, 1944, Serial No. 519,698
7 Claims. (Cl. 170—135.5)

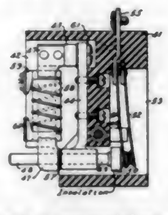
1. In combination, a helicopter lifting rotor, a rotatable driving element including a substan-

tially cylindrical drum, a rotatable driven element coaxial with the driving element and also including a substantially cylindrical drum, means connecting the driven element to the lifting rotor to revolve the same, a set of primary friction shoes revoluble with the driving element and movable outwardly by centrifugal force into engagement with the inner surface of the drum of the driven member, spring means restraining outward movement of the primary shoes to establish a primary engaging speed, a set of secondary friction shoes revoluble with the driven element and movable outwardly by centrifugal force into engagement with the inner surface of the drum of the driving member, and spring means restraining outward movement of the secondary shoes to establish a secondary engaging speed appreciably less than the said primary engaging speed.



2,456,943
PRINTING DEVICE
Carl J. Hueber, Euclid, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del., a corporation of Delaware
Application March 16, 1945, Serial No. 583,050
2 Claims. (Cl. 164—111)

1. A device to be marked by punching a hole in a selected position including a carrier having a plurality of openings formed therein adjacent an edge thereof, retaining means along said edge of the carrier and including a portion disposed to at least in part overlie the part of the carrier adjacent to such openings and arranged in spaced relation with such part of said carrier whereby a card or the like may be disposed beneath said portion to overlie said openings, said portion having guide elements formed therein that are respectively aligned with said openings and which are respectively open at one side so as to be effective to guide a perforating implement such as a stylus or a lead pencil through the card and into the opening aligned with the respective guide element to thereby produce a perforation in the card.

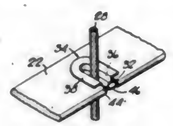


2,456,944
BALL WINDING MACHINE
Hiram N. Huse, Providence, R. I.
Application October 25, 1947, Serial No. 782,069
9 Claims. (Cl. 242—3)

1. In a ball winding machine, the combination of opposed rotatable winding heads, ball-driving rollers carried by said heads, means for normally rotating said rollers on their individual axes in a common direction, supports for said rollers carried by said heads, means for intermittently rotating said supports first in one direction and then in the opposite direction in parallel relation on their individual axes, and means for intermittently deviating the normal rotation of the ball-driving rollers to cause the rollers to rotate in-

tegrally with the roller supports during rotation of the latter in either direction.

2,456,945
RELAY
Ferdinand C. Iglehart, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 16, 1944, Serial No. 535,835
7 Claims. (Cl. 200—116)

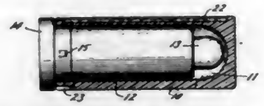


1. A thermal relay comprising a support, contact means mounted on said support, a plunger member movably arranged in said support for controlling said contact means and biased for motion in a given axial direction and having radially extending stop means, two bimetal strips arranged substantially in parallel to each other and straddling said member for engaging said means when cold in order to hold said member against its bias, said strips being mounted for moving in opposite directions radially away from said member when heated, and current responsive heating means mounted on said support separate from said strips and disposed between said strips for heating both strips substantially equally for causing them to release said member in response to an overload current, and an adjusting device disposed for varying the heat-responsive radial travel of said strips relative to said member in order to calibrate the relay for a given current rating and having a part displaceably mounted on said support so that the position of said part is indicative of said current rating said device being associated with both said strips so that said radial travel of both said strips is changed simultaneously by a positional change of said part.

2,456,946
VENETIAN BLIND
Frederick D. Irwin, Warsaw, Ind.
Application May 25, 1946, Serial No. 672,276
4 Claims. (Cl. 160—173)

1. In a Venetian blind, a slat having a transversely elongated cord-receiving opening therein, said openings being of substantially uniform width

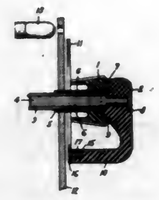
and open at one end, a member fitting in and lining said opening and terminating spaced from said open end, said member cooperating with the



walls of said opening to define a socket, and a retainer spanning said open end and including a portion fitting in said socket.

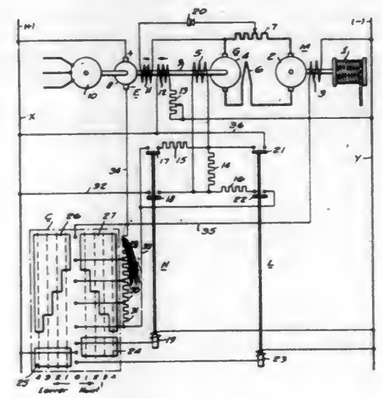
2,456,947
CORROSION RESISTANT COATING FOR METAL SURFACES
George W. Jernstedt, Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application December 21, 1944, Serial No. 569,274
11 Claims. (Cl. 148—6.15)

3. A stable aqueous solution for activating the surface of a metal selected from the group consisting of ferrous, zinc, cadmium metals and alloys in which they form the predominant constituent, for subsequent reaction with phosphate coating solutions consisting essentially of, in combination, at least 0.01% by weight of disodium phosphate combined with at least one water-soluble compound of a metal selected from the group of metals consisting of titanium, zirconium, tin and arsenic, at least 0.01% of a soap of a fatty acid and an amine and the balance being water.



2,456,948
LIPSTICK CASE
Harriette K. Kaye, Chicago, Ill.
Application May 16, 1947, Serial No. 748,543
3 Claims. (Cl. 132—79)

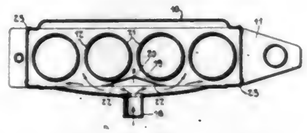
1. A lipstick container comprising a case having a longitudinal pocket of generally cylindrical shape to receive a lipstick holder and having its external cross section shaped to provide side faces, at least one of which is provided with a recess on one face thereof, a mirror fitting snugly within said recess with the lips of the recess extending above the face of the mirror and the case forming a backing for the mirror with the portion of the case between the longitudinal pocket and the recess being solid and arch-shaped in cross-section to provide a sturdy backing for the mirror.



2,456,949
CONTROL DEVICE INDICATOR
Donald B. Keim, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application September 30, 1947, Serial No. 776,884
2 Claims. (Cl. 116—124.2)

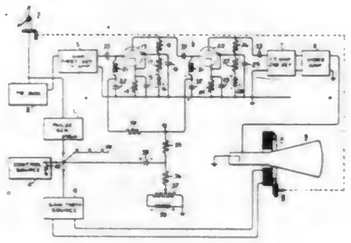
1. A control knob arrangement for a pair of coaxial shafts comprising a first knob adapted to engage the outer of said shafts, said first knob having a hole extending longitudinally thereof, the inner of said shafts extending through said hole, a second knob being attached to said inner shaft, said second knob having a depending portion extending substantially parallel with said second shaft and spaced from said second shaft

by a distance greater than the radius of said first knob, and an annular dial attached to said depending portion, said dial having a central aperture having a diameter greater than the diameter of said first knob, and said dial having indicia thereon for indicating the position of said second knob.



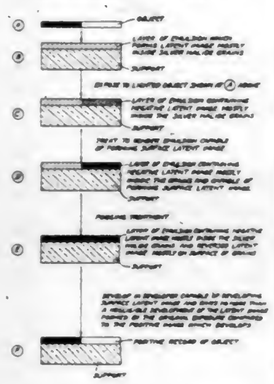
2,456,950
ELECTRIC HOIST CONTROL SYSTEM
George E. King, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 27, 1947, Serial No. 794,165
6 Claims. (Cl. 318—154)

6. A motor control system, comprising a direct-current hoist motor having an armature and field means, a main generator having an armature circuit connected with said motor armature to provide variable voltage therefor and having two mutually differential field windings for jointly controlling said voltage, an exciter having an armature connected to one of said generator field windings to provide excitation therefor and having a control field winding connected to said armature circuit for varying said excitation in dependence upon the current flowing in said armature circuit, current supply means of substantially constant voltage connected to said other generator field winding, said exciter armature and said current supply means being connected to said motor field



means in cumulative relation to each other relative to the resultant excitation of said motor field means.

2,456,951
COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Paul Klotsch, Cincinnati, Ohio, assignor to Crosley Motors, Inc., Cincinnati, Ohio, a corporation of Ohio
Application May 1, 1946, Serial No. 666,455
7 Claims. (Cl. 123—173)



6. A sheet metal water jacket which comprises a shell surrounding cylinders of an engine, said shell having a plurality of longitudinal ribs constructed and arranged longitudinally to strengthen the water jacket and to permit expansion of the water jacket, a water inlet pipe associated with one of said ribs, and a baffle in spaced relationship with the water inlet, said baffle having an orifice adapted to channel part of the cooling water about the cylinders in front of the baffle, and said baffle having a pair of wings adapted to channel the rest of the cooling water into the rib associated with the water inlet to flow about the rest of the cylinders of the engine.

2,456,952
SENSITIVITY TIME CONTROL
Edward C. Kluender, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 3, 1946, Serial No. 666,897
3 Claims. (Cl. 179—171)

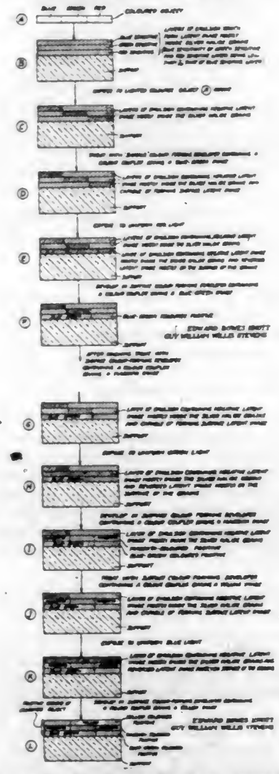
2. In combination, an electron discharge device having cathode, anode, and control electrodes, a pulse generating source, two capacitors in series connection across said source, means connecting the cathode-control electrode space path of said device across one of said capacitors so that said control electrode becomes positive with respect to said cathode when a positive pulse is applied from said source, means for applying a negative potential to said control electrode at the termination of said pulse, thus causing said control electrode to have a negative potential relative to said cathode, and means for discharging said capacitors to remove said negative potential at a predetermined rate.

2,456,953
PHOTOGRAPHIC REVERSAL PROCESSES
Edward Bowes Knott and Guy William Willis Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 1, 1947, Serial No. 765,632
In Great Britain February 9, 1942
15 Claims. (Cl. 95—5)

1. The method of producing a reversed photographic image, which comprises exposing to a lighted object or image, a layer of a light-sensitive silver halide emulsion, a test layer of which coated on a transparent support and the layer exposed to a light intensity scale for a fixed time between $^1/_{100}$ and 1 second, and development for 3 minutes at 20° C. in the following developer (IIa):

Hydroquinone	grams	15
N-methyl-p-aminophenol sulphate	do	15
Sodium sulphite, anhydrous	do	50
Potassium bromide	do	10
Sodium hydroxide	do	25
Sodium thiosulphate, crystals	do	20
Water to	ccs	1000

gives a transmitted density at any point along the $\log_{10}E$ axis, over a density range of 3.0 starting from the threshold of the characteristic curve beginning at a density of 0.1 above fog, at least 5 times the transmitted density obtained when an identical test layer of the emulsion is developed for 4 minutes at 20° C. in the following developer (I):



p-Hydroxyphenylglycine	grams	10
Sodium carbonate, crystals	do	100
Water to	ccs	1000

the measurements of density being made at the same points on the $\log_{10}E$ axis, treating the exposed emulsion layer to render it capable of forming latent image developable by the following developer (III):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Water to	ccs	1000

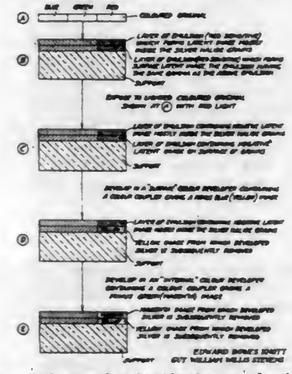
uniformly fogging the emulsion layer to produce latent image some of which is developable by the aforesaid developer III, and then developing the emulsion layer in a developer which develops the latent image which is developable by said developer (III) and gives no more than a negligible development of the negative latent image formed by the original exposure compared with the positive image which is developed.

2,456,954
PHOTOGRAPHIC REVERSAL PROCESSES
Edward Bowes Knott and Guy William Willis Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 1, 1947, Serial No. 765,633
8 Claims. (Cl. 95—5)

1. The method of producing reversed photographic images comprising exposing to a lighted object or image a photographic material comprising inseparably combined and extending over the same area on a single support a plurality of photographic silver halide emulsions a test layer of any one of which emulsions coated on a transparent glass support upon exposure to a light intensity scale for a fixed time between 1/100th and 1 second and development for 3 minutes at 20° C. in the following developer (IIa):

Hydroquinone	grams	15
N-methyl-p-aminophenol sulphate	do	15
Sodium sulphite, anhydrous	do	50
Potassium bromide	do	10
Sodium hydroxide	do	25
Sodium thiosulphate, crystals	do	20
Water to	ccs	1000

gives a transmitted density at any point along the $\log_{10}E$ axis, over a range of 3.0 starting from the threshold of the characteristic curve beginning at a density of 0.1 above fog, at least 5 times the transmitted density obtained when an identical test layer of the emulsion is developed for 4 minutes at 20° C. in the following developer (I):



p-Hydroxyphenylglycine	grams	10
Sodium carbonate, crystals	do	100
Water to	ccs	1000

the measurements of density being made at the same points on the $\log_{10}E$ axis, then without developing up the latent images so formed in said emulsions to visible images treating an exposed emulsion to render it capable of forming latent image developable by the following developer (III):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Water to	ccs	1000

uniformly exposing to light the so-treated emulsion to produce latent image some of which is developable by the aforesaid developer (III), developing the uniformly fogged emulsion in a developer which develops the latent image which is developable by developer (III) and gives no more than a negligible development of the negative latent image formed by the original exposure compared with the positive image which is developed, then uniformly exposing to light another of said exposed emulsions which has also been treated to render it capable of forming latent image developable by the aforesaid developer III to produce latent image some of which is developable by the aforesaid developer (III), and developing the second uniformly fogged emulsion in a developer which develops the latent image which is developable by developer (III) and gives no more than a negligible development of the negative latent image formed by the original exposure compared with the positive image which is developed in said second emulsion.

2,456,955
PHOTOGRAPHIC PROCESSES AND LIGHT-SENSITIVE ELEMENTS THEREFOR
Edward Bowes Knott and Guy William Willis Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 1, 1947, Serial No. 765,634
In Great Britain June 2, 1944
12 Claims. (Cl. 95—5)

1. The method of selectively producing photographic images in a photographic material containing, inseparably combined and extending over the same area on a single support, two photographic emulsions having the same gamma, one

of said emulsions being a light-sensitive silver salt photographic emulsion (I) a test layer of which coated on a transparent glass support upon exposure to a light intensity scale for a fixed time between 1/100 and 1 second and development for 3 minutes at 20° C. in the following developer (IIa):

Hydroquinone	grams	15
N-methyl-p-aminophenol sulphate	do	15
Sodium sulphite, anhydrous	do	10
Potassium bromide	do	10
Sodium hydroxide	do	25
Sodium thiosulphate, crystals	do	20
Water to	ccs	1000

gives a transmitted density at any point along the $\log_{10}E$ axis, over a range of 1.0 starting from the threshold of the characteristic curve beginning at a density of 0.1 above fog, at least 5 times the transmitted density obtained when an identical test layer of the emulsion is developed for 4 minutes at 20° C. in the following developer (I):

p-Hydroxyphenylglycine	grams	10
Sodium carbonate, crystals	do	100
Water to	ccs	1000

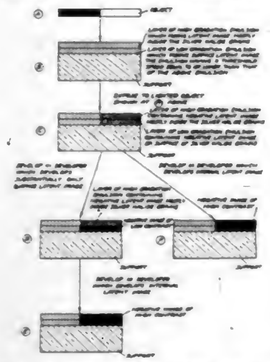
the measurements of density being made at the same points on the $\log_{10}E$ axis, and the other of said emulsions being a light-sensitive silver salt photographic emulsion (II) a test layer of which coated on a transparent glass support upon exposure to a light intensity scale for a fixed time between 1/100 and 1 second and development for 4 minutes at 20° C. in the following developer (IIb):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Sodium thiosulphate, crystals	do	20
Water to	ccs	1000

gives a transmitted density at any point along the $\log_{10}E$ axis of the curve between the range of 0 to 2.0 which does not exceed the transmitted density obtained when an identical test layer of the emulsion (II) is developed for 4 minutes at 20° C. in the following developer (III):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate	do	150
Water to	ccs	1000

the measurements of density being made at the same points on the $\log_{10}E$ axis of the curve, comprising simultaneously exposing the aforesaid emulsions to a lighted object or image, then treating the whole material with a developer which develops substantially only the latent image which is developable by developer (III) and then developing the whole material in a developer which develops the latent image which is developable by developer (IIa).



2,456,956

PHOTOGRAPHIC PROCESSES AND LIGHT-SENSITIVE ELEMENTS THEREFOR

Edward Bowes Knott and Guy William Willis Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application August 1, 1947, Serial No. 765,636
In Great Britain February 9, 1942
11 Claims. (Cl. 95—2)

1. A method of selectively producing photographic images in a photographic element containing, inseparably combined and extending over the same area on a single support, a light-sensitive silver salt photographic emulsion (I) a test layer of which coated on a transparent support

and the layer exposed to a light intensity scale for a fixed time between 1/100 and 1 second and development for 3 minutes at 20° C. in the following developer (IIa):

Hydroquinone	grams	15
N-methyl-p-aminophenol sulphate	do	15
Sodium sulphite, anhydrous	do	50
Potassium bromide	do	10
Sodium hydroxide	do	25
Sodium thiosulphate, crystals	do	20
Water to	ccs	1000

gives a transmitted density at any point along the $\log_{10}E$ axis over a density range of 3.0 starting from the threshold of the characteristic curve beginning at a density of 0.1 above fog, at least 5 times the transmitted density obtained when an identical test layer of the emulsion is developed for 4 minutes at 20° C. in the following developer (I):

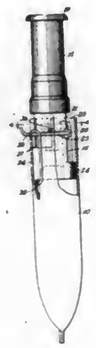
p-hydroxyphenylglycine	grams	10
Sodium carbonate, crystals	do	100
Water to	ccs	1000

the measurements of density being made at the same points on the $\log_{10}E$ axis, and another light sensitive silver salt photographic emulsion (II) a test layer of which coated on a transparent support and the layer exposed to a light intensity scale for a fixed time between 1/100 and 1 second and development for 4 minutes at 20° C. in the following developer (IIb):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Sodium thiosulphate, crystals	do	20
Water to	ccs	1000

gives a transmitted density between the range of 0 to 2.0 which does not exceed the transmitted density obtained when an identical test layer of the emulsion (II) is developed for 4 minutes at 20° C. in the following developer (III):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Water to	ccs	1000



comprising exposing each emulsion to light, then treating the whole element with a developer which develops substantially only the latent image which is developable by developer (III) and then developing the whole element in a developer which develops the latent image which is developable in developer (IIa).

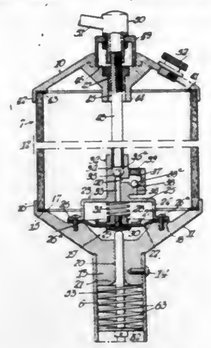
2,456,957

GUN TRAP

Harold B. Koch and John U. Lehn, Lititz, Pa., assignors to Animal Trap Company of America, Lititz, Pa., a corporation of Pennsylvania

Application September 28, 1945, Serial No. 619,122
7 Claims. (Cl. 43—84)

1. In a gun trap, the combination with a socket member, a hollow cylinder longitudinally movable in said socket member, a cartridge holder movable with said hollow cylinder, and a spring-pressed firing pin movable within said hollow cylinder to contact and to fire a cartridge in said holder of a resilient catch adapted to engage said firing pin and normally urged by its resilience into engagement with said firing pin to hold the firing pin in cocked position, means movable independently of the aforesaid elements for positively camming said catch out against its resiliency to release said firing pin when said holder is moved vertically in one direction, and means for restricting the movement of said holder in the opposite direction to prevent release of the catch by such movement.



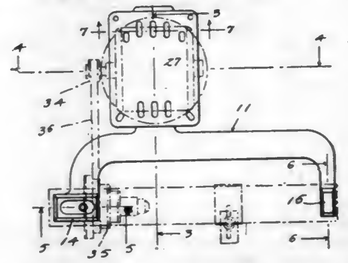
2,456,958

LIQUID DISPENSER

Frederick H. Kretschmer and Chester G. Filter, Dubuque, Iowa, assignors to Midland Laboratories, Dubuque, Iowa, a corporation of Iowa

Application November 18, 1944, Serial No. 564,040
3 Claims. (Cl. 222—179)

1. In a liquid dispenser, a bottom functioning as part of a reservoir and constituting a support for the remainder of the reservoir, said bottom being provided with a radial seat and a cavity inside of and below said seat, the periphery of said seat being spaced inwardly from the periphery of said bottom, a flexible diaphragm having its margin engaged upon said seat, a dome-like member having a marginal flange coextensive with and engaged upon the margin of said diaphragm and coacting therewith in forming a pump chamber, means for removably securing said flange and the margin of said diaphragm in a sealed position on said seat so that the dome-like member is removable and replaceable as a unit, means providing a valved intake side for said pump chamber and which is in communication with said reservoir, means providing a valved discharge side for said chamber arranged coaxially of the reservoir, liquid discharge means leading upwardly from the valved discharge side of said chamber to a point exteriorly of said reservoir, and means operable in said cavity for flexing the diaphragm.



2,456,959

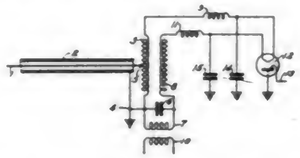
LATHE AND MOTOR BASE FOR WATCHMAKERS' LATHES

Elbert M. La Mont and Bruce M. Fry, Leavenworth, Kans.

Application December 15, 1947, Serial No. 791,792
3 Claims. (Cl. 248—23)

1. A combined watchmakers' lathe and motor mounting comprising a U-shaped base member, said member being formed with a relatively long bight and relatively short legs, rubber foot members carried by the forward ends of said legs, an upstanding lathe bed supporting lug carried by the forward ends of said legs, means engaging at least one lug for securing the lathe bed on said lugs, an arm extending rearwardly from said bight, a rubber foot carried by said arm, a motor supporting plate, and means securing said plate on said arm.

2,456,960



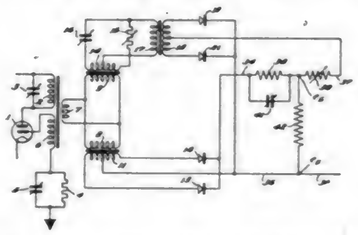
PULSE SHAPING CONTROL SYSTEM

Reuben Lee, Linthicum Heights, and Philip A. Duffy, Jr., Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 27, 1945, Serial No. 607,434
2 Claims. (Cl. 250—27)

2. In combination with a source of substantially rectangular voltage pulses, a transformer winding having one end terminal and an intermediate terminal impressed with said pulses, a second transformer winding having an end connected

to said one end by a channel offering substantially zero impedance to the frequencies embodied in said voltage pulses, a magnetron having its anode grounded and having a cathode with two connections, a pair of capacitors connecting the ends of said cathode to ground, two inductors respectively connected between said pair of connections and



the free ends of said windings, and an interconnection between said one end and ground, the square root of the ratio of the total inductance in henries of the circuit connected to said pair of connections to its effective capacitance in farads lying between the limits of 0 25 and 3.0 times.

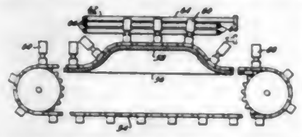
2,456,961

SAW-TOOTH WAVE GENERATOR

Reuben Lee, Linthicum Heights, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 12, 1946, Serial No. 696,574
5 Claims. (Cl. 178—44)

5. In combination a first full-wave rectifier, having input and output terminals, a second full-wave rectifier, having input and output terminals, means for impressing sinusoidal oscillations of substantially the same wave form on said input terminals of both said rectifiers, means for displacing the outputs of said rectifiers in phase, means for combining the outputs of said rectifiers so displaced in phase in such manner that one output is subtracted from the other output and means for so distorting one of said outputs that the combined output has a wave form the negative slope branch of which is substantially linear.



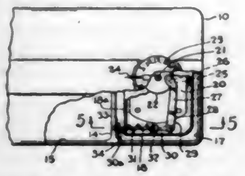
2,456,962

INDUCTION HEATING APPARATUS WITH WORK CONVEYER

Reuben Lee, Linthicum Heights, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 19, 1947, Serial No. 742,677
1 Claim. (Cl. 219—47)

An induction heating system of a type described comprising, in combination, a table having a raised section with a substantially straight top and sloping portions at each end thereof, a flexible conveyor movable along said table and arranged to ride up a first of said sloped end-portions, along said substantially straight top, and then down the other of said sloped end-portions, and a multi-turn inductor coil arranged near said raised section, each turn of said inductor coil having spaced elongated substantially straight side-conductors, each side-conductor being longer than said substantially straight top-portion and extending beyond said top-portion at both ends thereof, said conveyor having means for receiving



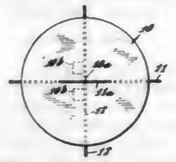
material to be inductively heat-treated, and carrying such material along therewith as it rides on said raised section of said table, with the material moving lengthwise of and between said side-conductors for inductive heat treatment, the material entering said inductor coil as it rides up a first of said sloped end-portions and leaving said inductor coil as it rides down the other of said sloped end-portions.

2,456,963

CIGARETTE OR LIKE DISPENSING CASE

Ward D. Leatherman, Akron, Ohio

Application May 15, 1946, Serial No. 669,966
3 Claims. (Cl. 70—273)



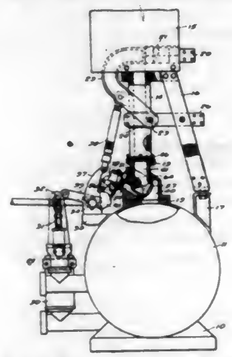
1. A cigarette or light dispenser, comprising relatively shiftable members forming a container adapted to be opened and closed, one of said members having a compartment for containing cigarettes or like articles, a clockwork mounted in one of said members, a cam rotatable by said clockwork, a pivoted lever having a cam-engaging portion on the free end thereof, spring means for yieldingly urging said lever into operative engagement of said portion thereof with said cam, said cam having a deviation operable in a predetermined position of rotation of the cam to pivot said lever against the action of said spring means and the deviation including a stop shoulder engageable by said cam-engaging portion to stop rotation of the cam, a locking device including an element shiftably mounted in said one member and a catch on the other member engageable by the element to lock the members in closed position of said container, said element having a connection to said lever to be urged out of locking engagement with said catch in said predetermined position of rotation of the cam, and indexing means for selectively setting said cam in a position of rotation thereof with said deviation away from said cam-engaging portion of the lever, whereby the cam is rotated for a given period of time during which said locking device is locked and at the end of which period engagement of said cam-engaging portion with said deviation pivots said lever to unlock the locking device and permit opening the container for removal of articles therefrom.

2,456,964

SEPARABLE HAT REST OR THE LIKE

Jacques E. Ledure, New York, N. Y., assignor to Eleanor O. Ledure, New York, N. Y.

Application December 4, 1944, Serial No. 566,573
3 Claims. (Cl. 211—148)



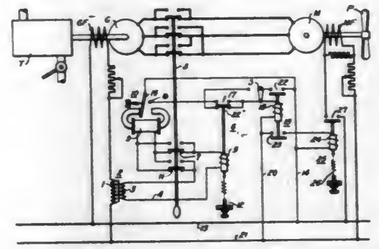
1. In a device of the class described comprising a plurality of intersecting and interlocking standard members, each having a base portion, a table support hinged to the top of one of said standard members, whereby said table support may be hingedly moved to a vertical or horizontal position thereupon, a slot approximately centrally located on said table support through which the upper portion of a second standard interlocking member is projected, a pair of shoulders on said second standard member upon which said table support is caused to rest upon the projection of said second standard member through said slot on the table support aforesaid.

2,456,965

VALVE

Raymond H. Leitzel, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 5, 1944, Serial No. 566,725
5 Claims. (Cl. 200—148)



1. In a circuit breaker of the gas blast type having an operating mechanism including a rotary member movable during contact opening and contact closing operations of the circuit breaker, a blast valve assemblage therefor comprising a casing structure having fluid inlet and discharge passages, normally closed valve means operatively mounted in said casing structure for controlling communication from said inlet passage to said discharge passage, a cam member adjustably mounted on said rotary member, a bell crank lever journalled on said casing structure and having one end operatively associated with said valve means, adjusting means associated with said valve means and said bell-crank lever for determining the amount of opening movement of said valve means, a pawl member operatively connected to the other end of said bell crank for engagement by said adjustable cam member, said pawl member being interlocked with said bell crank for actuating said valve means in response to movement of said cam member during a normal opening operation of the circuit breaker, yieldable means permitting movement of said pawl to a non-operative position relative to said bell crank during normal closing operation of the circuit breaker, and auxiliary operating means carried by said adjustable cam member for limited operative engagement with said pawl member prior to return thereof from said non-operative position, whereby repeated operation of said valve means is insured in the event of sudden reopening operation of the circuit breaker from a partially closed position, and means for adjusting said adjustable cam and said auxiliary operating means relative to said rotary member to determine the time the valve will open during a normal opening operation and also during a reopening operation.

2,456,966

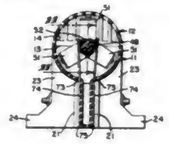
MOTOR SYNCHRONIZING SCHEMES

Simon L. Lindbeck, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 13, 1947, Serial No. 734,356
8 Claims. (Cl. 318—148)

1. A starting control for a synchronous motor, in combination, an alternator driven at a selected speed by a suitable prime mover, a source of direct current, a field winding for the alternator connected to said source of direct current, a synchronous motor of a size to constitute the main load for the alternator connected to the alternator, a field winding for the synchronous motor, electromagnetic switching means for connecting the motor field windings to said source of direct current, and means responsive to the frequency and phase position of the alternating-current component in the alternator field winding for controlling the operation of said electromagnetic switching means.

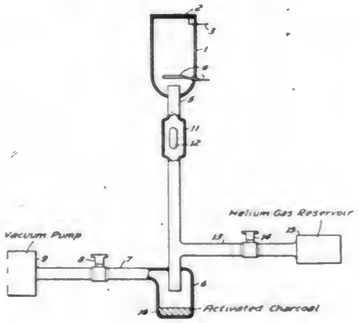
2,456,967



ELECTRIC MOTOR

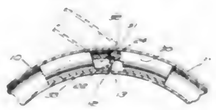
Carlos B. Livers, North Hollywood, Calif., assignor to Variety Development and Engineering Company, Los Angeles, Calif., a copartnership consisting of Carlos B. Livers and Ralph E. Middleton

Application December 17, 1946, Serial No. 716,853
14 Claims. (Cl. 172—36)



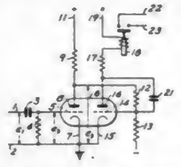
1. In an electric motor, a rotor assembly comprising: a shaft, an armature winding carried by said shaft, a round commutator core of insulating material on said shaft having circumferentially spaced axially extending ribs on its surface and axially extending grooves in its surface between

the ribs, segmental members extending between said ribs secured to said core, and conductors connecting said segmental members with said wind-



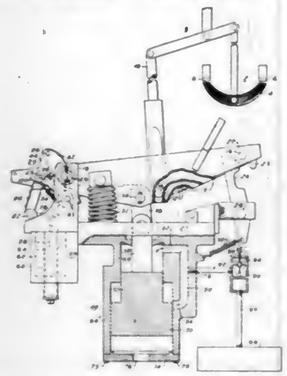
ing, each of said conductors having an end portion disposed in one of said grooves in contact with the associated segmental member.

2,456,968
PROCESS FOR OUTGASSING PHOTOCELLS CONTAINING ANTIMONY
Richard L. Longini, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 18, 1947, Serial No. 792,545
18 Claims. (Cl. 316—24)



1. The process of outgassing a high vacuum container which comprises exhausting it to a high vacuum, filling the container with an atmosphere of helium, heating the container to a temperature sufficient to outgas it, exhausting any gases evolved from the walls of said container at said temperature by means of an absorption trap, and then removing said helium atmosphere.

2,456,969
BRACELET HINGE
Everett H. Lundsten, Attleboro, Mass., assignor to J. & L. Tool & Findings Co., Attleboro, Mass., a copartnership
Application May 17, 1945, Serial No. 594,292
2 Claims. (Cl. 63—7)

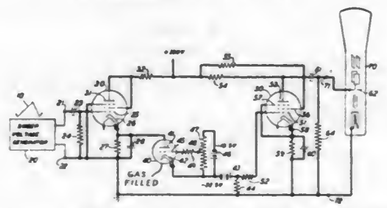


1. In a bracelet, a pair of arcuate sections each having a substantially round tubular end portion in end to end adjacency and having inner and outer walls, a hinge connecting said sections comprising a pair of members, one member held in one section and the other member held in the other section, a tongue fixed on one member at substantially the edge of the inner wall of one arcuate section and extending across the joint between the sections and pivotally connected to the other member at substantially the edge of the outer wall of the other arcuate section whereby the section in which the tongue is fixed is moved outwardly upon initial swinging about the hinge connection to cause its end to clear the end of the other section in which the pivot is located.

2,456,970
CONTROL CIRCUIT
Angus A. Macdonald, Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 19, 1945, Serial No. 589,253
6 Claims. (Cl. 250—27)

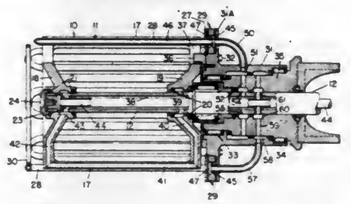
2. In combination with an input circuit for impressing voltage pulses which are short compared with the time periods separating them, a first pair of principal electrodes and a control electrode associated with them, means for impressing said voltage pulses through a capacitor in series with a resistor on said control electrode, a resistor fed through said principal electrodes from a source of substantially constant voltage, means for impressing fluctuations in voltage between said principal electrodes on a second control electrode, a second pair of principal electrodes associated with said second control electrode, a load circuit connecting a second source of substantially constant voltage to said second pair of principal electrodes and a capacitor connected between said second control electrode and a point on said load circuit.

2,456,971
CIRCUIT BREAKER
John B. MacNeill, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 25, 1944, Serial No. 560,222
7 Claims. (Cl. 200—82)



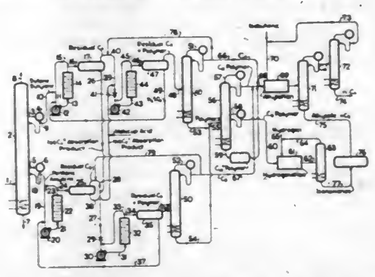
2. A circuit breaker comprising, separable contact means at least one of which is movable into and out of engagement with the other, fluid motor means for at least actuating said movable contact means in a direction to engage the other of said contact means, actuating mechanism connecting said motor means and movable contact for transmitting movement of said motor means to said contact means to close the breaker, said motor means comprising a cylinder and piston one of which is movable and operatively connected with said actuating mechanism, said piston and cylinder having corresponding stepped portions differing in cross section area, means for admitting fluid under pressure to the cylinder portion of small cross section area to initiate circuit closing movement of said movable contact, and means responsive to circuit closing operation of said motor means an amount sufficient to actuate said movable contact means from its open circuit position spaced away from the other of said contact means to a position in proximity to but still spaced from said other contact means for automatically admitting said fluid under pressure to the cylinder portion of larger cross section to thereby increase the closing force transmitted to said contact means during the latter part of contact closing movement, and the last mentioned means including a fluid inlet for said large cylinder portion which is separate and independent of the fluid inlet for the small cylinder portion.

2,456,972
CONTAINER CLOSURE
Henry G. Maeder, Jr., Belmont, and Morgan R. Day, North Scituate, Mass., assignors to Dewey and Almy Chemical Company, North Cambridge, Mass., a corporation of Massachusetts
Application August 24, 1945, Serial No. 612,420
8 Claims. (Cl. 215—40)



1. A container closure including a closure element and a self-adherent solid, pit-free vulcanized sealing element, the latter being the reaction product of a vulcanizable elastomeric polymer, a vulcanizing agent, and a rubber peptizer in the presence of a plasticizer, the peptizer being in proportion sufficient to have liquefied the polymer at a temperature above 68° F.

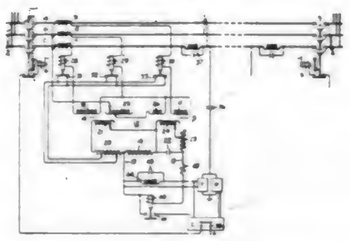
2,456,973
TRACE BLANKING CIRCUIT FOR CATHODE-RAY OSCILLOSCOPES
Yu-Yueh A. Mao, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 10, 1945, Serial No. 621,579
6 Claims. (Cl. 315—22)



1. In an electrical circuit including a cathode ray oscilloscope provided with a screen on which an electron spot moves in accordance with a repetitive voltage, said spot varying in intensity in accordance with a control voltage, means responsive to the repetitive voltage for varying the control voltage to extinguish the spot during an interval of the repetitive voltage and means for controlling the responsive means to define the interval.

2,456,974
THREAD DRYING APPARATUS
Thomas S. Mayner, Willoughby Township, Lake County, and E. Paul Hurayt, Cleveland, Ohio, assignors to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
Application November 27, 1946, Serial No. 712,477
8 Claims. (Cl. 34—153)

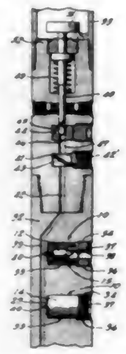
1. An apparatus for drying thread or the like comprising a reel embodying two interdigitating sets of hollow heating medium conducting thread-bearing members, said thread-bearing members serving as conduits for a heating medium adapted to flow therethrough, and a heating medium supplying and exhausting means for said hollow heating medium conducting thread bearing members.



2,456,975
PRODUCTION OF MOTOR FUEL COMPONENTS
Sumner H. McAllister, Lafayette, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application November 18, 1944, Serial No. 564,114
2 Claims. (Cl. 260—683.15)

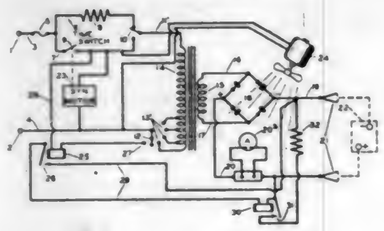
1. In a process for producing high yields of hydrocarbons of high power output from hydrocarbon cracking products by fractionating said cracking products to separate a fraction consisting of butanes, isobutylene and normal butylenes and another fraction consisting of pentanes, tertiary amylenes and normal amylenes, wherein isobutylene is selectively extracted from said butane-butylene fraction with aqueous sulfuric acid and tertiary amylene is selectively extracted from the pentane-amylene fraction, isononylenes are produced by separately reacting the isbutylene-containing extract with the residual hydrocarbon

from said tertiary amylene extraction to effect interpolymerization of absorbed isobutylene with n-amylenes and reacting the tertiary amylene-containing extract with residual hydrocarbon from said isobutylene extraction to effect interpolymerization of absorbed tertiary amylene with normal butylene, the hydrocarbon products of said interpolymerizations are separated from the acid present during said interpolymerizations, and the nonylenes produced are hydrogenated, the improvement which comprises feeding the acid separated from the hydrocarbon products of said isobutylene-n-amylenes interpolymerization to said tertiary amylene absorption and feeding the acid separated from the hydrocarbon products of said tertiary amylene-normal butylene interpolymerization to said isobutylene absorption.



2,456,976
PHASE RESPONSIVE PROTECTIVE RELAYING SYSTEM
Andrew J. McConnell, Albany, N. Y., assignor to General Electric Company, a corporation of New York
Application May 25, 1945, Serial No. 595,722
12 Claims. (Cl. 175—294)

2. In a protective arrangement for a polyphase circuit, means for deriving from said circuit a single phase voltage the magnitude of which depends solely upon the magnitude of the negative phase sequence component of the circuit current, and means responsive to a fault involving all of the conductors of said circuit for rendering said first mentioned means operative to derive a single phase voltage the magnitude of which depends upon the positive phase sequence component of the circuit current.

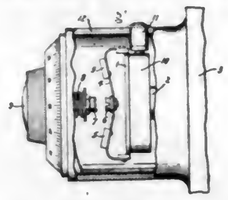


2,456,977
WELL CASING PERFORATING GUN AND CARTRIDGE
Ira J. McCullough, Los Angeles, Calif., assignor to McCullough Tool Company, Los Angeles, Calif., a corporation of Nevada
Application November 1, 1941, Serial No. 417,418
4 Claims. (Cl. 89—1)

1. In a well casing perforating gun of the character described: a gun body having a chamber for a primary firing charge, means to ignite the firing charge, a duct leading away from said firing charge chamber, and a cartridge chamber connected to said duct so as to receive fluid pressure resulting from the burning of said firing charge; a removable wall closing the front end of said cartridge chamber and having a bore therein for passage of a projectile to the exterior; and a cartridge in said cartridge chamber, said cartridge comprising a shell having a wall movable relatively to the remaining walls of the cartridge by externally applied fluid pressure, an opening with a projectile therein aligned with said bore, a powder chamber with a propelling powder charge therein and means acting in response to move-

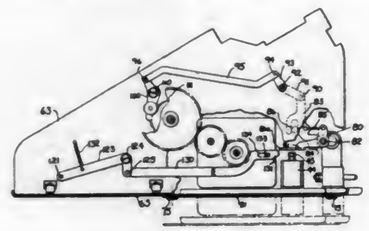
ment of said movable wall by said fluid pressure to ignite said powder charge.

2,456,978
BATTERY CHARGER
Lewis Abbott Medlar, Oreland, Pa., assignor to Fox Products Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 28, 1948, Serial No. 4,778
9 Claims. (Cl. 320—14)



1. A battery charger comprising a transformer having primary and secondary windings, a pair of power leads, a resistor, a time-controlled switch, means connecting said leads to said primary winding to constitute an input circuit and comprising manual means for selectively including either said resistor or time-controlled switch in said input circuit as desired, an electric powered motor for actuating said switch, said motor being connected with said power leads but energized only when said switch is closed, and means for supplying rectified current from the secondary of said transformer to the battery to be charged.

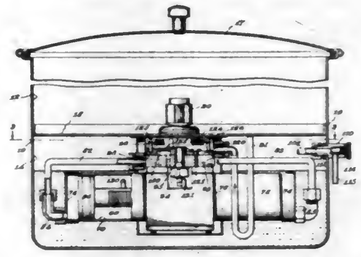
2,456,979
SPEED GOVERNOR
Frank W. Merrill, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application January 19, 1945, Serial No. 573,552
4 Claims. (Cl. 200—80)



1. An electric motor speed regulator of the centrifugally actuated center contact type comprising a fixed center contact having a tapered contact surface, and axially vibratory rotating contact having at least one slot formed therein, centrifugal means for opening and closing said con-

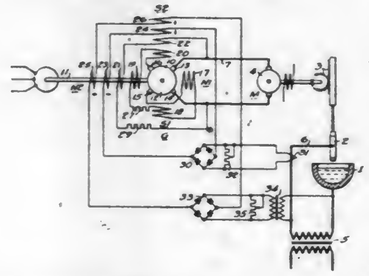
tacts responsive to the speed of said motor, said contacts co-acting to interrupt the electric circuit through the regulator contacts at least once

for each revolution of said regulator in addition to the opening and closing of said contacts responsive to the said centrifugal means.



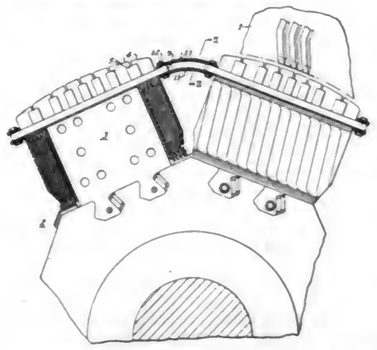
2,456,980
MOTOR AND CLUTCH CONTROL MECHANISM
John L. Moody, Oakland, Calif., assignor to Friden Calculating Machine Co., Inc., a corporation of California
Original application July 30, 1945, Serial No. 607,825. Divided and this application June 10, 1946, Serial No. 675,565
4 Claims. (Cl. 192—.02)

1. In an electrically-driven calculating machine, drive mechanism adapted to be driven by an electric motor, a clutch in said drive mechanism, a control for said clutch, a plurality of machine operation keys, means actuated by depression of any of said keys to operate said clutch control, a motor switch having a control element movable from a normal position to an operated position to render said switch effective, means actuated by said clutch control including a member resiliently urged to move said switch control element from its said normal position to its said operated position, and means actuated to by one of said keys to restrain said member and prevent it from moving said control element to its said operated position until release of said one key, whereby said motor switch is closed only after depression and release of said one key and is closed immediately upon depression of another of said keys.



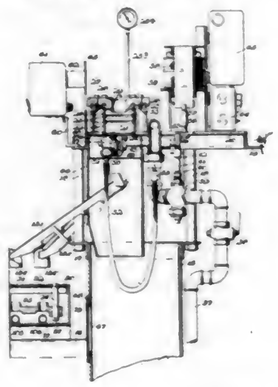
2,456,981
SELF-STIRRING COOKING UTENSIL
Paul E. Monath, Hewlett, N. Y.
Application April 18, 1945, Serial No. 589,013
13 Claims. (Cl. 257—74)

1. In a cooking utensil, the combination with a cooking vessel, of heating and stirring mechanism comprising a steam pressure generating chamber in heat transferring relation to but out of communication with said vessel, a stirring element in said vessel mounted for rotative movement about an axis, and steam operated driving mechanism for said stirring element positioned within said steam generating chamber including



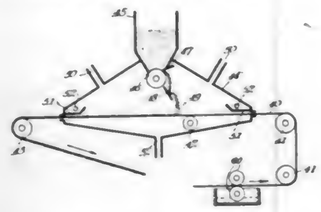
a piston and cylinder, and means to translate the reciprocating movement of said piston into rotary movement and drive said stirring element.

2,456,982
MOTOR CONTROL
Raymond W. Moore, Edgewood, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 27, 1945, Serial No. 579,920
8 Claims. (Cl. 318—143)



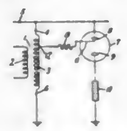
1. A control system for regulating load adjusting means of an electric load circuit, comprising a direct-current adjusting motor; a generator having a field structure with four poles of alternately different polarities and a four-circuit armature having a commutator with two main brushes and two regulator brushes, said main brushes being connected to said motor to energize it by controlled output voltage, two adjacent poles of said structure being provided with main field windings respectively for controlling said voltage, said two other poles being each provided with a feed-back field winding, a stabilizing field winding, a current-responsive field winding and a voltage-responsive field winding, said feed-back field winding being connected with said main field windings across said regulator brushes and having a resistance characteristic approximately coincident with the no-load magnetization characteristic of said other poles, said stabilizing field winding being connected across said main brushes, said current-responsive field winding and said voltage-responsive field winding being differential and balanceable relative to each other; circuit means connected to said current-responsive field winding for exciting it in dependence upon the current of the load-circuit; and circuit means connected to said voltage-responsive field winding for exciting it in dependence upon the voltage of the load-circuit.

2,456,983
DAMPER-WINDING FLEXIBLE CONNECTIONS
William H. Morse, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 7, 1947, Serial No. 778,380
2 Claims. (Cl. 172—120)



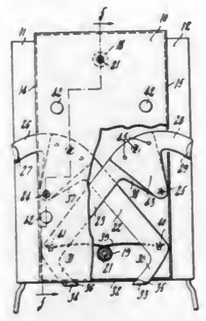
1. A dynamo-electric machine having a salient-pole rotor, damping bars in the pole-face portions of the salient poles, a damper-segment at each end of each salient pole, each damper-segment being secured to the undersides of the extending ends of its damping bars, and separate flexible connectors between the adjacent ends of the several segments at each end of the machine, each separate connector comprising an arched stack of thin conductor-straps having the respective ends of said stack bolted to an end of a damper-segment with one or more radially extending bolts.

2,456,984
APPARATUS FOR QUENCHING METALLIC ARTICLES
Frank H. Mueller, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a corporation of Illinois
Application December 8, 1942, Serial No. 468,280
15 Claims. (Cl. 134—57)



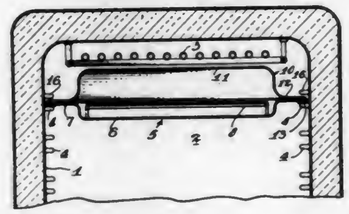
1. Quenching apparatus comprising a quenching chamber having a charging opening and a bottom opening, a support movable to and from a fixed position under said bottom opening wherein it is adapted to support an article immovably in said chamber, means for moving said support to supporting position and for holding the same against relative movement in said position, means activated by an article which is being passed into said charging opening for initiating operation of said moving means, and means for removing the support to a non-supporting position after a predetermined period to release the article.

2,456,985
APPARATUS FOR THE MANUFACTURE OF ABRASIVE WEBS
Nicholas E. Oglesby, Troy, N. Y., assignor to Behr-Manning Corporation, Troy, N. Y., a corporation of Massachusetts
Original application March 3, 1933, Serial No. 659,565. Divided and this application August 25, 1943, Serial No. 499,984
20 Claims. (Cl. 91—18)



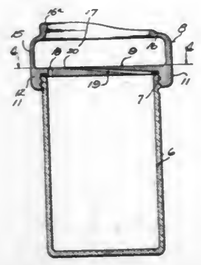
1. Apparatus for the manufacture of granular coated webs comprising means for applying liquid adhesive to a web, means whereby the partial pressure of a solvent in the atmosphere in a chamber may be controlled to prevent drying, grain applying means for applying granular particles to said adhesive coated web, and means for passing said adhesive coated web through said chamber and past said grain applying means whereby the granular material is applied to the web while the adhesive is in condition for receiving said granular material.

2,456,986
PROTECTIVE ARRANGEMENT FOR ELECTRICAL WINDINGS
Konstantin K. Paluev, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application February 12, 1945, Serial No. 577,543
13 Claims. (Cl. 175—294)



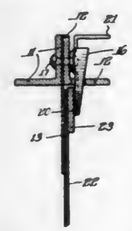
1. An electrical protective system comprising, in combination, an electrical apparatus having an essential winding which is subject to different voltage-stress distributions for different types of voltages impressed across its terminals, a unitary overvoltage-discharge device having a pair of main discharge electrodes and an auxiliary electrode for controlling the discharge characteristics of said main electrodes for various types of voltages, electrical connections for applying to said discharge electrodes voltages to which said apparatus becomes subjected and certain of which it may become desirable to discharge, and an electrical connection between said auxiliary electrode and a point on said winding other than said terminals which is subject to substantial changes in voltage with respect to one of said terminals for varying types of voltages impressed across the terminals of said winding for causing said auxiliary electrode to initiate selective discharge between said main electrodes at lower levels of those terminal voltages which give rise to objectional voltage stresses within said apparatus.

2,456,987
FLATIRON HOLDER BRACKET
Ralph E. Perkins, Ashland, Mass.
Application March 17, 1947, Serial No. 735,123
10 Claims. (Cl. 248—117.1)



1. A flatiron holder comprising a base adapted to be mounted on a wall structure, and clamping means in articulated connection with said base; said clamping means including side clamps and a bottom clamp interconnected so that downward movement of the bottom clamp from a raised position causes the side clamps to be moved toward one another.

2,456,988
BROILER PAN GUARD
Charles A. Pierson, Maumee, Ohio, assignor to Associated Products, Inc., Toledo, Ohio, a corporation of Ohio
Application December 5, 1945, Serial No. 632,902
7 Claims. (Cl. 99—446)



6. The combination with a substantially rectangular broiler pan having opposing laterally projecting side flanges, of a spatter guard for the pan having three side walls, with one side open, adapted to rest on the pan adjacent to its respective side and rear end edges and extending upwardly and inwardly from said edges, said walls forming a top opening over the major portion of the pan for the admission of a broiling heat, said open side permitting an interior view of the pan and guard during broiling and said walls deflecting and directing any side spatter of grease upwardly through said top opening, the base edge portions of opposing side walls of said spatter guard extending outwardly substantially parallel to and resting on the respective side flanges of the pan in interengaged longitudinal sliding engagement therewith.

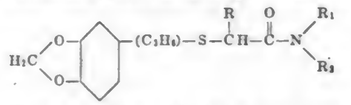
2,456,989
TUMBLER
Bernard H. Polcyn, Milwaukee, Wis.
Application May 25, 1944, Serial No. 537,259
5 Claims. (Cl. 65—13)

1. A cup-like extension for a drinking receptacle having a bottom for capping the receptacle said bottom being provided with a restricted aperture near one margin through which liquid may be slowly poured from the receptacle, said bottom also being obliquely perforated to form a vent leading from its upper surface near said aperture downwardly and across the bottom to a point in its under surface near its opposite side, and said extension having side walls inturned at their upper margins to retain liquid escaping through the aperture when the receptacle and its extension is tilted at right angles to the normal upright position, and said side walls having portions arcuately extended horizontally.

2,456,990
DISPLAY APPLIANCE
James Thomas Powers, Jr., Chicago Heights, Ill., assignor to Funk Forging Company, Chicago Heights, Ill., a corporation of Illinois
Application February 11, 1948, Serial No. 7,670
6 Claims. (Cl. 24—66)

1. In a display holder, the novel combination of an angle-bar having an aperture through one flange, a cam-member, means rockingly mounting said cam-member on the adjacent face of the other flange of the bar and adapted to project through said aperture, a fixedly mounted backing-sheet depending from said angle-bar, and a clamp-member, said cam-member being adapted to be rocked manually through said aperture and engage said clamp-member to secure a dis-

play-sheet between said clamp-member and said backing-sheet by reason of the action of the cam-surface of said cam-member bearing on a wall of said aperture.



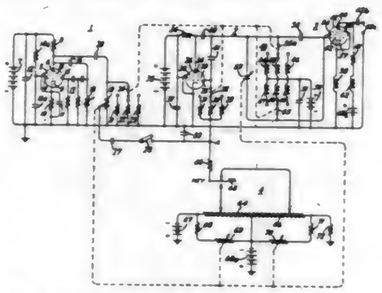
2,456,991

3,4-METHYLENEDIOXYPHENYL-PROPYLENE COMPOUND

Edward A. Prill, Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc., a corporation of New York

No Drawing. Application January 16, 1946, Serial No. 641,631
4 Claims. (Cl. 260—338)

1. A compound represented by the formula:



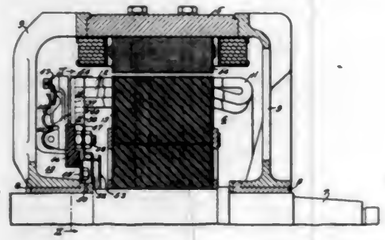
where R is a member of the group consisting of hydrogen, methyl, and ethyl; R_1 and R_2 taken together comprise at least one member of the group consisting of hydrogen, alkyl, alkenyl, cycloalkyl, divalent polymethylene and divalent polymethylene interrupted by ethereal oxygen; not more than one of the R_1 and R_2 groups being hydrogen.

2,456,992

FREQUENCY SHIFT KEYING PLUS PHASE MODULATION

Donald W. Pugsley, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Application December 26, 1947, Serial No. 794,029
2 Claims. (Cl. 178—66)



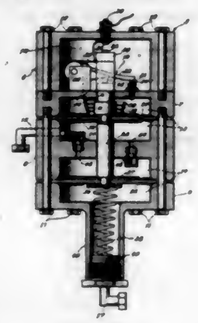
1. In a wave signaling system of the carrier-shift type, a source of radio frequency signals, a source of audio frequency signals, a reactance tube circuit and a keying circuit, means including said reactance tube circuit for modulating the frequency of said radio frequency signals with said audio frequency signals, further means including said reactance tube circuit for causing the mean frequency of said frequency modulated radio frequency signals to shift a predetermined amount on either side of said mean frequency in response to mark and space signals from said keying circuit, means for changing the frequency of said radio frequency signals throughout a wide range of frequencies, means for varying the amplitude of said audio frequency signals, means for varying the apparent reactance of said reactance tube circuit, means for varying the amplitude of said mark and space signals, mechanical means coupling said changing and varying means for unicontrol operation for maintaining a substantially fixed predetermined frequency variation of said carrier wave signal as said carrier wave frequency is changed throughout said wide range of frequency.

2,456,993

RADIAL COMMUTATOR ASSEMBLY

Rawdon E. Rambo, Pittsburgh, and Charles F. Jenkins, Laughlintown, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 24, 1945, Serial No. 624,287
3 Claims. (Cl. 172—321)



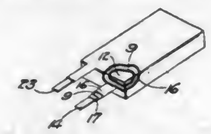
1. A dynamo-electric machine having a commutator-type rotor-member, a shaft for the rotor-member, a radial commutator disposed at one end of the rotor-member in spaced relation to the shaft, a single brushholder-supporting ring disposed approximately in the space between the shaft and the inner periphery of the radial commutator, in spaced relation to the latter, and a plurality of radially disposed brushholders supported on said brushholder-supporting ring in position to carry brushes bearing on said commutator.

2,456,994

FLUID PRESSURE SWITCH

William M. Robison, Mount Holly, N. J.

Application January 4, 1946, Serial No. 639,108
4 Claims. (Cl. 200—81.5)



1. An oil supply indicator for internal combustion engines comprising, a casing composed of a plurality of rimmed sections defining therebetween a plurality of chambers, a diaphragm spanning each of two adjacent chambers, a switch within a third chamber adapted to be electrically connected with an ignition circuit to provide an electrical connection between such circuit and the casing, said switch embodying a spring normally holding it closed, a push rod for the switch connected to one of said diaphragms, a second switch push rod in alignment with the first push rod and connected to the other of said diaphragms, a spring acting directly on the first diaphragm to urge it in a direction away from the switch, a spring acting directly on the second diaphragm to urge it in the direction of the switch, the first mentioned diaphragm and push rod being arranged to exert pressure directly on the switch against the force of its spring in response to pressure conditions in the oil lubricating system, and the second mentioned push rod and diaphragm being in alinement with the first push rod and diaphragm to exert pressure on the switch through the first mentioned push rod in response to conditions of vacuum in the intake manifold, of an internal combustion engine; said casing being adapted to be connected in direct communication with the oil lubricating system and intake manifold of an internal combustion engine.

2,456,995

PIEZOELECTRIC CRYSTAL WITH MOISTUREPROOF COATINGS

Arthur M. Robinson, Boston, Mass., assignor, by mesne assignments, to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio

Application April 18, 1946, Serial No. 663,239
8 Claims. (Cl. 171—327)

1. A piezo-electric salt crystal having a moisture-proof continuous coating comprising a waterproof inner layer and outer layer of metal plating.

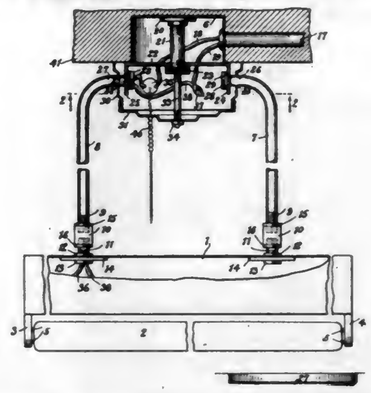
2,456,996

DEHYDRATION OF HYDROXYLATED OILS

John B. Rust, East Hanover, N. J., assignor, by direct and mesne assignments, of one-half to Montclair Research Corporation, a corporation of New Jersey, and one-half to Ellis-Foster Company, a corporation of New Jersey

No Drawing. Application August 31, 1946, Serial No. 694,411
4 Claims. (Cl. 260—405.5)

3. The process which comprises reacting, at between about 200° C. and 300° C., castor oil with from 0.2 to 10% of a mixture of boric and phosphoric acids in proportions to form boron phosphate whereby the oil is dehydrated and converted to a low-viscosity drying oil.



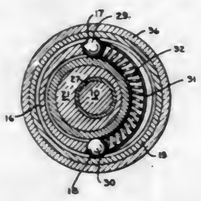
2,456,997

ELECTRIC FIXTURE

Morris Sachs, New York, N. Y.

Application February 12, 1947, Serial No. 727,995
6 Claims. Cl. 248—343)

1. An electric fixture mounting comprising, an outlet box having a stud, a bar mounted on the stud and provided with downwardly-bent ends, a canopy surrounding the downwardly-bent ends, an electric fixture having a pair of upwardly-extending tubular supports, the upper ends of said supports being bent substantially horizontally and extended through and swingingly mounted in the downwardly-bent ends of the bar, means on the ends of the supports for maintaining the same in

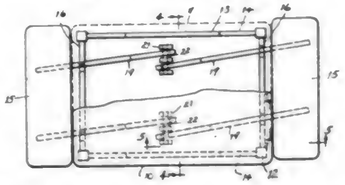


the bar, and a cover plate removably fitted over the lower end of the canopy.

2,456,998

CONTROL DEVICE

Victor N. Schubel, Dearborn, Mich.

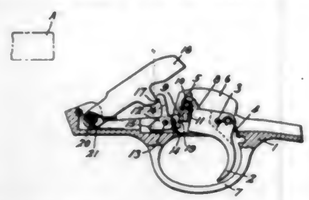


Application November 9, 1946, Serial No. 709,074
3 Claims. (Cl. 192—8)

1. In combination, a stationary circular guide bearing race and a circular driven bearing race mounted eccentrically one within the other to provide an eccentric space therebetween, said driven bearing race being mounted for eccentric rotation about the center of said guide bearing race, two movable riders seated in contact with said two races and spaced apart within said eccentric space to partition said eccentric space essentially into an oversized and undersized portion relative to said riders, a tubular spring housing disposed between said riders within the oversized portion of said eccentric space and secured to said driven bearing race and opening adjacent each of said riders, resilient means protruding from the openings of said tubular spring housing to urge each of said riders toward its seat and the undersized portion of said eccentric space, said driven bearing race being adapted by eccentric rotation in either direction to rotate against one of said riders and to immobilize that rider by friction contact with said stationary guide bearing race and thereby to prevent further rotation of said driven bearing race, drive means rotatable concentrically about the center of said stationary guide bearing race, driving lugs provided by said drive means and positioned within the undersized portion of said eccentric space adjacent each of said riders to drive one or the other of said riders along said stationary guide bearing race upon rotation of said drive means

in either direction, motion of either of said riders against said adjacent tubular spring housing being communicated thereto to rotate said driven bearing race.

2,456,999
EXTENSION TABLE
Irving Segal, New York, N. Y.
Application June 15, 1945, Serial No. 599,633
5 Claims. (Cl. 311—55)



4. In an extension table, a supporting frame, a table top rigidly affixed to said supporting frame, an auxiliary leaf movable from a position beneath the top to an extended position at one side thereof, a pair of spaced slide bars secured at their outer ends to the under side of said leaf and extending beneath the table top diagonally with reference to the longitudinal edges thereof, said top and supporting frame having guides in which the bars are longitudinally slidable in angular relation to the edges of the top to thereby dispose the leaf in extended relation with the ends thereof offset out of alignment with opposite edges of the table top and said bars being provided with shoulders extending inwardly in corresponding side faces thereof adapted to overlie and seat upon the upper edge of the frame adjacent said guides therein for supporting the leaf upon said frame in longitudinal alignment with the top.

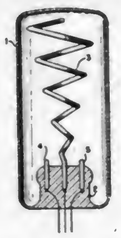
2,457,000
BUCKLE
Clifford L. Sevin, Houston, Tex.
Application May 11, 1945, Serial No. 593,264
2 Claims. (Cl. 24—73)

1. A device of the character described comprising a frame having a lower end bearing, a plate on the frame having a lower end bearing arranged to register with the frame bearing, means for clamping the upper end of the plate to the frame, a pin through said bearings, a strap hanger having links one of which is provided with an oblong slot and the other of which is provided with a J-slot, said pin extending also through said slots and means on the plate for the connection of a suspender thereto.

2,457,001
TRIGGER ACTION FOR AUTOMATIC FIREARMS
Wilfred I. Smith, Chicopee Falls, Mass., assignor to Savage Arms Corporation, Utica, N. Y., a corporation of Delaware
Application October 4, 1945, Serial No. 620,361
1 Claim. (Cl. 89—144)

Trigger mechanism for firearms comprising in combination, a longitudinally extending trigger plate having a spring actuated rocking hammer pivoted on the forward end thereof, a spring actuated sear pivoted thereon rearwardly of said hammer and a spring actuated trigger pivoted thereon rearwardly of said sear, said hammer being provided with a hammer notch, said sear comprising a vertically disposed hook arm to engage said hammer notch, a forwardly extending arm for abutting said plate as a stop for limiting forward rocking of said sear, and a rearwardly extending arm with a rear vertical face having a sear notch therein, said trigger having an upper horizontal extension projecting forwardly of its pivot with a front vertical face in juxtaposition to the rear vertical face of said sear, a pivoted trigger pawl vertically hung from the front end of said trigger extension in position between said faces, and a pawl spring pressing said pawl against the sear notch face of said sear, with the face of said trigger extension serving as a back stop for said pawl, said parts being so constructed and arranged that said trigger pawl will engage in and drive said sear notch on the first part of a trigger pull movement and will slide out of said sear notch in the latter part of a trigger pull movement, and at all times said pawl will be confined between said sear rear face and the front face of said trigger extension.

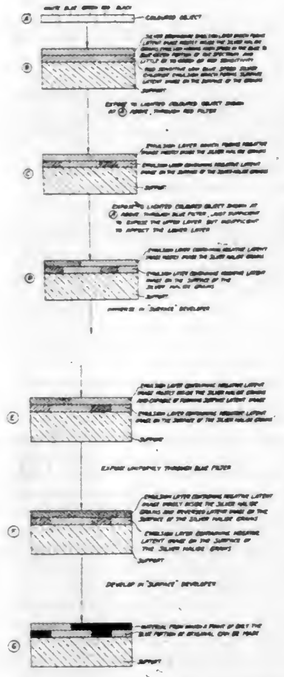
2,457,002
INSULATING HOUSING FOR ELECTRICAL APPARATUS
Benjamin E. Spiro, Philadelphia, Pa., assignor to General Electric Company, a corporation of New York
Application December 20, 1944, Serial No. 568,984
4 Claims. (Cl. 217—69)



1. An insulating housing for protecting electrical apparatus, said housing including a plurality of insulating side panels maintained juxtaposed in predetermined angular relationship, means for conjoining together certain adjacent edges of said panels comprising a junction strip of resilient insulating material which integrally includes a pair of outer flanges angularly disposed relative to one another and an inner L-

sectioned member spaced therefrom to define therebetween a pair of longitudinal recesses in said strip into which said certain adjacent panel edges are received, the included angle between the flanges of said flexible strip when free of said panels being less than that maintained between said adjacent panels so that said flanges press effectively upon the panel surfaces to form a gas seal thereat, and means for locking said certain panel edges in said recesses including cooperatingly matching projections and indentations for said panel edges and said junction strip.

2,457,003
FRICTION ELEMENT
Ray E. Spokes, Ann Arbor, Mich., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
No Drawing. Application July 31, 1944, Serial No. 547,523
2 Claims. (Cl. 260—3)



1. A friction element for use upon vehicular brakes and comprised of a mass of friction material, inert filler, and friction modifying agents bonded with the heat-reaction product of a mixture of vulcanizable hydrocarbon selected from the group consisting of natural rubber, reclaimed rubber and synthetic vulcanizable butadiene copolymers and mixtures thereof, a vulcanizing agent, a heat-reactive phenolic-aldehyde resin, and polymerized cashew nut shell liquid which has been polymerized until it is highly viscous and of a rubbery consistency and contains not substantially more than twenty-two per cent of its weight of benzol-extractable unpolymerized material, the heat-reactive phenolic-aldehyde resin component and the vulcanizable hydrocarbon component of the bond being incorporated therein in a ratio of not substantially less than two parts of the heat-reactive phenolic-aldehyde resin to one part of the vulcanizable hydrocarbon, by weight, the polymerized cashew nut shell liquid component and the vulcanizable hydrocarbon component of the bond being incorporated therein in a ratio of not substantially more nor substantially less than 4.0 parts of the polymerized cashew nut shell liquid to 2.75 parts of vulcanizable hydrocarbon, by weight.

2,457,004
TUNING INDICATOR IN RADIO RECEIVERS
Jörgen Christian Stannow, Lidingo, Sweden, assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application May 23, 1945, Serial No. 595,291
In Sweden June 14, 1944
5 Claims. (Cl. 250—27.5)

1. A cathode-glow-discharge type of incremental-voltage indicator comprising, a gas-enclosing envelope, a cathode of conical spiral configuration supported within said envelope and having a pitch between its turns comparable to the diameter of the mean turn thereof, and a control electrode supported to extend within said envelope only at the region of the apex of said cathode and at a distance therefrom not substantially greater than the value of said pitch.

2,457,005
PHOTOGRAPHIC PROCESS
Guy William Willis Stevens, Harrow, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 1, 1947, Serial No. 765,635
In Great Britain January 31, 1945
6 Claims. (Cl. 95—5)

1. The method of selectively producing images in a photographic material comprising, inseparably combined and extending over the same area on a single support, two photographic emulsions, one of said emulsions being a light-sensitive silver salt emulsion (I) a test layer of which coated upon a transparent glass support upon exposure to a light intensity scale for a fixed time between $^1/_{100}$ and 1 second and development for 3 minutes at 20° C. in the following developer (IIa):

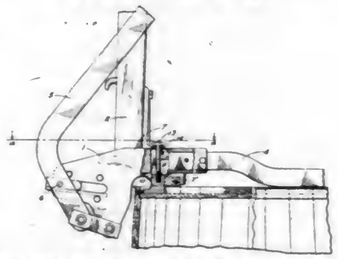
Hydroquinone	grams	15
N-methyl-p-aminophenol sulphate	do	15
Sodium sulphite, anhydrous	do	10
Potassium bromide	do	10
Sodium hydroxide	do	25
Sodium thiosulphate, crystals	do	20
Water to	cc	1,000

gives a transmitted density at any point along the $\log_{10}E$ axis, over a range of 1.0 starting from the threshold of the characteristic curve beginning at a density of 0.1 above fog, at least 5 times the transmitted density obtained when an identical

test layer of the emulsion is developed for 4 minutes at 20° C. in the following developer (I):

p-Hydroxyphenylglycine	grams	10
Sodium carbonate, crystals	do	100
Water to	cc	1,000

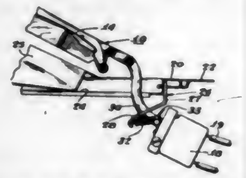
the measurements of density being made at the same points on the $\log_{10}E$ axis, and the other of said emulsions being a light-sensitive silver salt emulsion (II) a test layer of which coated on a transparent glass support upon exposure to a light intensity scale for a fixed time between $^1/_{100}$ and 1 second and development for 4 minutes at 20° C. in the following developer (IIb):



Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Sodium thiosulphate, crystals	do	20
Water to	cc	1,000

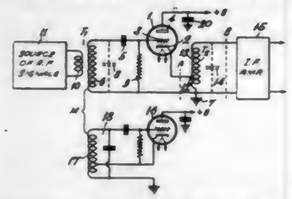
gives a transmitted density at any point along the $\log_{10}E$ axis of the curve between the range of 0 to 2.0 which does not exceed the transmitted density obtained when an identical test layer of the emulsion (II) is developed for 4 minutes at 20° C. in the following developer (III):

Hydroquinone	grams	12
N-methyl-p-aminophenol sulphate	do	3
Sodium sulphite, crystals	do	90
Potassium bromide	do	4
Sodium carbonate, crystals	do	150
Water to	cc	1,000



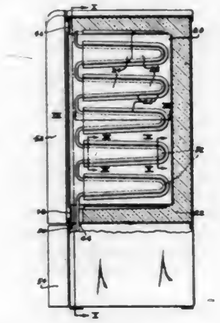
the measurements of density being made at the same points on the $\log_{10}E$ axis of the curve, comprising selectively exposing both emulsions to a lighted object or image to form latent image in both emulsions, treating the photographic material to render the emulsion (I) capable of forming latent image developable by the aforesaid developer (III), then uniformly exposing to light the photographic material to produce latent image in emulsion (I) some of which is developable by the aforesaid developer (III), said uniform exposure to light being insufficient to have any practical effect on said emulsion (II), then developing the photographic material in a developer which develops the latent image developable by said developer (III) and gives no more than a negligible development of the negative latent image formed by the original exposure in emulsion (I) compared with the positive image which is developed in said emulsion (I).

2,457,006
STAPLING MACHINE
Clarence C. Stuewe, Cleveland, Ohio
Application August 23, 1945, Serial No. 612,172
6 Claims. (Cl. 1—49)



1. In a stapling machine having a stapling head adapted to drive staples extending to one side of a barrel and provided with a pair of spaced parallel side walls extending over the barrel head, a shoe for supporting said machine from said barrel head comprising a body member having grooves for receiving said side walls, fastening means extending into said shoe body and between said side walls, said shoe having portions extending laterally from said side walls, the ends of said shoe being provided with feet, said shoes and feet being provided with interlocking tongues and grooves and screw means extending through said feet into said body for adjustably holding said feet to said body.

2,457,007
ELECTRIC RANGE SURFACE UNIT
Ernest E. Sutherland, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 2, 1946, Serial No. 713,516
2 Claims. (Cl. 219—37)



1. An electric surface heating unit comprising a sheathed resistance heater disposed substantially in a horizontal plane and having its terminal portions disposed below said plane and adjacent each other, an annular ring supporting said sheathed heater, an inverted T-shaped member fastened to said annular ring, said T-shaped member having its vertical portion disposed between two terminal portions of said sheathed heater and having its crossbar extending beneath and adjacent said terminal portions, said crossbar being longer than the space between said two adjacent terminal portions and adapted to engage said terminal portions and act as a support and fulcrum therefor upon upward arcuate movement of said sheathed heater relative to said annular ring.

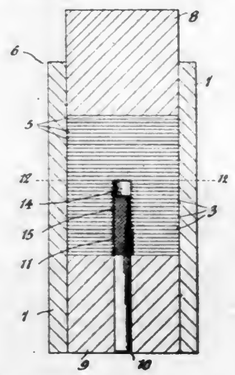
2,457,008
FREQUENCY CONVERTER CIRCUIT
George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 21, 1944, Serial No. 569,228
5 Claims. (Cl. 250—20)

1. The combination, in a superheterodyne receiver, of an electron discharge converter having a cathode, a control grid and an anode, a circuit tuned to the frequency of signal oscillations connected between the control grid and ground, a source of local oscillations coupled to said tuned circuit, and an output circuit for deriving the resultant intermediate frequency having one end connected to ground and an intermediate point connected to the cathode of the converter.

2,457,009
REFRIGERATION APPARATUS
Elo C. Tanner, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 13, 1946, Serial No. 690,156
6 Claims. (Cl. 257—21)

1. Refrigerating apparatus comprising an insulating cabinet including a metal inner liner, metallic means secured to said liner in heat-transfer relationship therewith, said means forming a plurality of pockets on said liner, said pockets being tapered in breadth, and a metal tube bent into a plurality of loops, each of said loops being wedged into one of said pockets, said tube being adapted to conduct a refrigerant liquid.

2,457,010
PORTABLE BOAT
John H. Thedick, Oakland, Calif.
Application February 28, 1947, Serial No. 731,537
2 Claims. (Cl. 9—2)

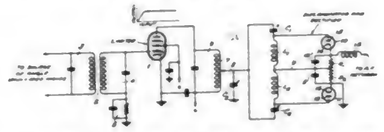


1. For a knockdown boat having a plurality of separable hull sections including a bow section, a stern section, and intermediate sections, means for holding said sections in abutting relation under uniform pressure comprising a plurality of flexible cables each having one end thereof secured to the bow section, means carried by the stern section for anchoring the opposite ends of said cables against movement toward the bow section, an elongated recess in a hull section adjacently underlying of the cables, a sheave rotatably mounted within each recess having its peripheral edge substantially conterminous with the mouth of the recess and adapted to be engaged by the adjacent cable, a first class lever eccentrically mounted for pivotal action at the mouth of each recess, a rotatable sheave mounted on the working arm of said lever, and overlying the cable, said latter sheave being effective upon a pivotal movement of the lever in one direction to travel on the cable and enter the recess to laterally displace a portion of the cable from its unstressed position and force said portion within the recess to place the cable under tension.

2,457,011
ELECTRIC CIRCUIT FOR ELECTROMAGNETS
Lester G. Tubbs, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1945, Serial No. 597,206
4 Claims. (Cl. 175—320)

1. The combination of an alternating-current voltage relay having a magnet structure provided with two cumulative windings, one of said windings having high inductance, said other winding having low inductance, a parallel circuit connected across said high-inductance winding and including a resistor and a capacitor in series-arrangement with said low-inductance winding so that said circuit has high impedance at normal frequency and low impedance at harmonic frequencies, whereby said relay is caused to have approximately constant voltage sensitivity over an increased range of different frequencies.

2,457,012
ABRASIVE ARTICLE AND METHOD OF MAKING
Frederick A. Upper, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application June 27, 1944, Serial No. 542,323
5 Claims. (Cl. 51—193)



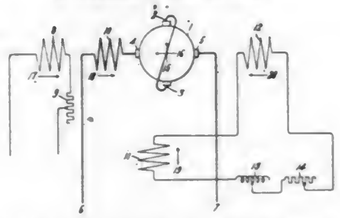
1. The method of making abrasive articles of manufacture which comprises forming an abrasive body having a re-entrant part adapted for reception of a mounting spindle by assembling a plurality of layers of felted fibrous, abrasive-containing sheet material of the desired size and shape in superimposed relation, compressing said assembly of sheet material to roughly form the desired abrasive body, applying a coating of adhesive to the re-entrant surfaces so provided in said abrasive body and drying the adhesive to limit penetration of the adhesive into the abrasive body, roughening the surface of the spindle to be inserted into the said abrasive body, coating said roughened surface with an adhesive and drying, inserting the spindle into the re-entrant part of the abrasive body, and subjecting the assembly to heat and pressure to firmly secure the spindle to the abrasive body and form the abrasive shape.

2,457,013

ANGLE MODULATED WAVE DISCRIMINATOR

George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application July 28, 1944, Serial No. 546,959
1 Claim. (Cl. 250—27)



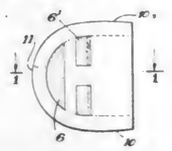
In combination with a source of angle modulated carrier waves, a resonant circuit tuned to a predetermined reference frequency coupled to said source, a pair of series-resonant circuits tuned to respective peak frequencies equidistantly located on opposite sides of said reference frequency, said pair of series resonant circuits being connected in parallel relation, a relatively low impedance coupling connection from a relatively low potential point on said resonant circuit to a common connection point of said pair of circuits, a pair of opposed rectifiers, each of said rectifiers comprising an anode and a cathode, each series resonant circuit consisting of a condenser and an inductance, said common connection point being the common connection between the condensers of said series resonant circuits, said low impedance coupling connection consisting of a reactive impedance connected between said common connection point and the cathodes of said rectifiers, a connection from the anode of each respective rectifier to the junction of the condenser and inductance of a respective one of said series resonant circuits, and a common connection from the cathodes of said rectifiers to the common connection of said inductances whereby there is applied to each respective one of said rectifiers the voltages developed across the respective inductances of said series-resonant circuits.

2,457,014

DYNAMOELECTRIC MACHINE

André Valentin, Belfort, France, assignor to General Electric Company, a corporation of New York

Application April 9, 1947, Serial No. 740,410
In France April 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 12, 1963
5 Claims. (Cl. 322—19)



1. In a dynamoelectric machine of the armature reaction type, an armature provided with a commutator and a winding attached thereto, a set of primary brushes for providing a primary circuit through said armature winding, a set of secondary brushes for providing a secondary circuit through said armature winding, a control field winding arranged to provide a component of magnetic excitation along the axis of said secondary brushes, means for varying the energization of said control field winding, a compensating winding arranged to provide a component of magnetic excitation along the axis of said secondary brushes, a third field winding, said third winding being arranged to have induced therein a momentary electromotive force in response to sudden change in the energization of said control field winding, a fourth field winding, said fourth field winding being arranged to provide a component of magnetic excitation along said secondary brush axis, means for electrically interconnecting said third field winding and said fourth field winding so that a transient electromotive force induced in said third winding will cause in said fourth winding ampere turns which produce a momentary component of magnetic excitation substantially opposing change in control field energization, and means for modifying the amount and phase relationship of the transient current in said fourth winding with respect to the transient electromotive force induced in said third winding whereby an adjustable damping action is provided to prevent oscillations and hunting of said machine.

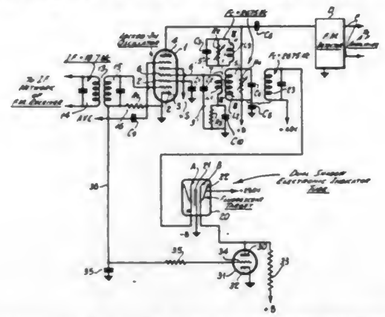
2,457,015

RUBBER HEEL

Tiemen van der Veen, Amsterdam, Netherlands

Application May 22, 1946, Serial No. 671,514
In the Netherlands November 27, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires November 27, 1960
4 Claims. (Cl. 36—70)

4. A rubber heel comprising in combination a rubber heel body having a flat bottom face, a front face and a rear face; a flat cavity arranged within said rubber heel body parallel to said flat bottom face and extending from said front face almost to said rear face; a hole arranged near said rear face of said rubber heel body and connecting said cavity within said rubber heel body with said bottom face thereof; at least one additional hole arranged in said bottom face of said rubber heel body at substantially equal distance from said rear face and said front face thereof and connecting said flat cavity within said rubber heel body with said bottom face thereof; and a water-absorbent sponge member arranged within said flat cavity and said holes and extending to said front face and said bottom face of said rubber heel body.



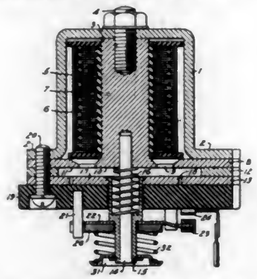
2,457,016

FREQUENCY MODULATION RECEIVER TUNING AID

Benjamin S. Vilkomerson, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application October 26, 1945, Serial No. 624,785
9 Claims. (Cl. 250—40)

1. In combination with the locked-in oscillator of a frequency modulation receiver, said oscillator continuously producing oscillations of a predetermined center frequency in the absence of received signals, an electronic indicator tube of the dual shadow type, means responsive to variations in center frequency of the lock-in oscillations for controlling one of the shadow areas of said indicator tube, and means responsive to the magnitude of received signals for controlling the second shadow area of said indicator tube.



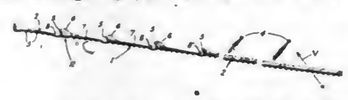
2,457,017

ELECTROMAGNETIC CONTROL DEVICE

Omar C. Walley, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 8, 1945, Serial No. 621,078
5 Claims. (Cl. 175—336)

1. An electromagnetic control device, comprising a field structure having a centrally located core and magnetizing coil means disposed on said core, said structure having magnetic pole faces of different magnetic polarity, an armature movable between a closed position in which it bridges said pole faces and an open position axially away from said pole faces, spring means for biasing said armature toward said open position, and magnetic means forming an extension of said frame structure which projects beyond said pole faces toward said armature when the latter is in said open position so as to include said armature in a magnetic pick-up circuit extending through said frame structure, said extension and said armature in said open position of the latter, said magnetic means having a portion extending substantially in the plane of said armature in its open position and another portion extending substantially in the plane of said armature in its closed position.



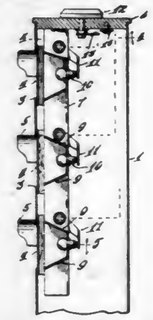
2,457,018

DEWATERING SCREEN

Joseph W. Wantling, Allwood, N. J., assignor, by mesne assignments, to Hewitt-Robins Incorporated, a corporation of New York

Application December 16, 1944, Serial No. 568,432
8 Claims. (Cl. 209—267)

1. A screen deck comprising a series of closely spaced, straight bars running lengthwise of the deck to provide a washing section followed by a de-watering section, said bars having, at intervals throughout the length of the de-watering section only, transversely aligned short lengths thereof downwardly depressed to form spaced shallow troughs extending transversely across the deck, the depressed portions of certain of the bars being laterally and oppositely deformed to bring certain of the trough portions of the bars closer together into groups, the groups thereby also being more widely spaced from each other than the adjacent straight portions of the bars, a transverse baffle plate upstanding from the deck at the entrance side of each trough and canted forwardly, with respect to the direction of movement of the material being screened, to overhang its adjacent trough, one of said troughs and baffles being located near the discharge end of the screen, and a supplementary, similar trough located immediately ahead of said last-mentioned baffle.



2,457,019

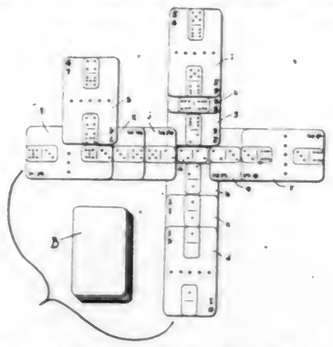
SIGNAL LAMP

Earl E. Weber, Greene Township, Hamilton County, Ohio

Application August 20, 1945, Serial No. 611,499
2 Claims. (Cl. 177—337)

1. An electric signal lamp, comprising a casing having a plurality of window openings in spaced alignment longitudinally thereof, a closure cap for one end of the casing, and an electric light bulb sustaining and reflector fixture consisting of a sheet metal strip of channel form in cross-section having sections of the web at intervals longitudinally thereof bent laterally inward of the channel in opposing divergent pairs, each pair, with a portion of each of the side walls of the channel therebetween providing a reflector in registration with a relative window opening in the casing for an electric light bulb socketed in an aperture of the web intervening and from which a pair of sections of the web diverge, said fixture having an end thereof fixed to said cap to dependingly sustain the same within the casing.

2,457,020



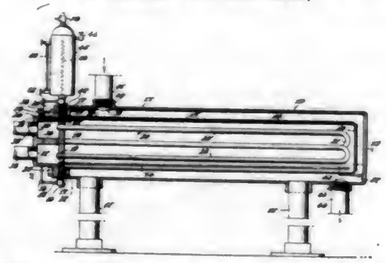
PLAYING CARDS

Clarence G. Whitney, Camden, N. J.

Application August 23, 1946, Serial No. 692,587
3 Claims. (Cl. 273—152)

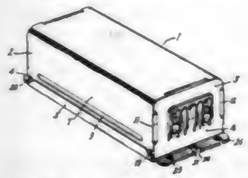
1. A deck of playing cards corresponding to a set of dominoes, each card bearing a pair of

replicas of a single domino, said replicas being disposed adjacent the ends of the cards, the replicas of different-half dominoes being ar-



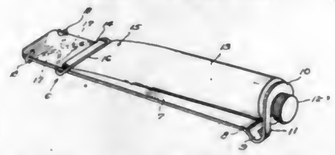
ranged so that opposite halves are outermost at the ends of each card, the replicas of double-dominoes being distinguished one from the other on each double-domino card.

2,457,021
PALLADIUM PLATING
Edmund Merriman Wise, Westfield, N. J., and Raymond Francis Vines, Queens Village, N. Y., assignors to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Original application June 25, 1940, Serial No. 342,286, now Patent No. 2,335,821, dated November 30, 1943. Divided and this application September 23, 1943, Serial No. 503,530. In Canada May 20, 1940
4 Claims. (Cl. 204—47)



1. A process for electrodepositing thick, ductile coatings of palladium which comprises establishing an aqueous bath containing about 10 to about 175 grams per liter of palladium principally as palladium chloride and about 50 cc. to 700 cc. per per liter of concentrated hydrochloric acid, said bath having a pH not greater than about pH 2.0, immersing a palladium anode and a cathode in said bath, said anode consisting of substantially pure palladium melted under non-reducing conditions, and passing electric current through said bath whereby ductile deposits of palladium up to about 0.025 inch thick are obtained.

2,457,022
PREHEATING APPARATUS
Henry F. Yula, New York, N. Y.
Application November 1, 1945, Serial No. 626,035
2 Claims. (Cl. 257—239)

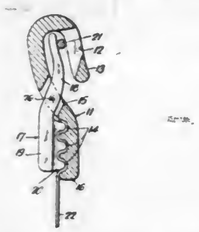


1. In an apparatus for preheating fuel oil for rendering the same relatively fluid when fed to a fuel oil burner, an outer casing, a container located within said casing in spaced relation to the walls thereof, a head secured to said casing in closing relation with one end of said container and formed with a plurality of apertures opening through the opposite faces thereof, a plurality of U shaped coils disposed within said container having open ends secured in said apertures in said head, an outer head secured upon said first named head and having ribs providing a plurality of recesses between said inner and outer heads, said outer head having an inlet opening into one of said recesses and an outlet opening into another of said recesses, at least one of said coils having an open end opening through said inner head into said recess having the inlet opening and at least one of said coils having an open end opening through said inner head into said recess having the outlet opening and at least two of the remaining coils each having an open end opening through said inner head into the remaining recesses for admitting fuel to said coils for circulating the same therethrough and through said recesses, an expansion tank, said first named head mounting said expansion tank and having means establishing communication between said expansion tank and said container for venting said container through said expansion tank, said container and expansion tank being adapted to contain a fluid for circulation about the coils, said casing having inlet and outlet openings adapted to be connected with a source of heated fluid for circulation thereof between said casing and said container for heating the fluid in said container and a conduit connected with the container at the top and bottom thereof for permitting of the circulation of the fluid in the container for heating the fuel oil in the coils.

2,457,023
ENCASING ASSEMBLY
Elmer J. Zelt, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application June 11, 1948, Serial No. 32,352
3 Claims. (Cl. 174—50)

1. An encasing assembly comprising a hollow casing member having at least one open end and an open side, said casing member having inwardly projecting extensions from said open end, at least two of said extensions lying in a common plane different from that of the other of said extensions, said casing member having at least two notches originating at said open end, an end member for closing said open end, said end member having a shape similar to that of the interior outline of said casing member and fitting therein so as to fill substantially the volume described by said casing member and said planes of said extensions, a bracket member having a body and a turned up edge extending therefrom, said bracket member being disposed so that said edge is in contact with the interior surface of said end member and cooperates with said extensions of said casing member for securing said end member in position, said edge having extensions which cooperate with said notches of said casing member for securing said bracket member and said end member to said casing member, a baseplate member communicating with said ends of said casing member and closing said open side, and means for securing said baseplate to said bracket.

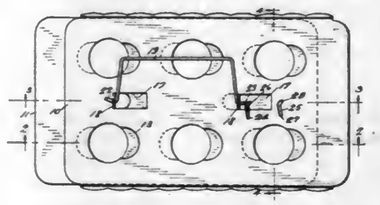
2,457,024
COLLAPSIBLE TUBE HOLDER
Claus Arp, San Francisco, Calif.
Application February 13, 1945, Serial No. 577,603
2 Claims. (Cl. 248—108)



1. As a new article of manufacture and as a component part of a collapsible tube holder of the class described, an elongated flat plate forming a collapsible tube accommodating and supporting base, said plate being fashioned and formed at one end into a transverse, curvilineal bend, said bend including a bight portion projecting laterally from and disposed on a plane below the underside of the plate and a limb portion of the bend terminating in a laterally directed portion apertured and forming a horseshoe-shaped tube neck adapter, said adapter being at right angles to the plate to accommodate and permit passage of said neck equipped end and the opposite end portion of said plate being rectilinearly straight, longitudinally viewed, and transversely flat in order to accommodate a slidably mounted manually shiftable tube anchoring clip.

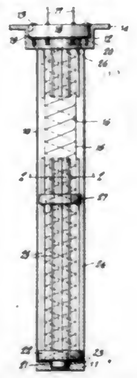
2,457,025
FUNGUS-PROOFING COMPOSITION
Paul George Benignus, Belleville, Ill., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application August 11, 1944, Serial No. 549,139
11 Claims. (Cl. 260—22)

4. A fungus-proofing and water-proofing composition for the treatment of cellulosic substances comprising (1) a water-in-oil emulsion in which the ratio of water phase to oil phase is in the range of 1:4 to 4:1, said emulsion having an oil phase comprising ½–5% of a halogenated 8-hydroxyquinoline derivative selected from the group consisting of 5,7-dibromo-8-hydroxyquinoline, 5,7-dichloro-8-hydroxyquinoline and the copper salts thereof, 2–10% of a modified alkyd resin made from a polyhydroxy alcohol and a modifying substance selected from the group consisting of fatty oil and fatty oil acids, said resin containing 20–40% of phthalic radical calculated as phthalic anhydride, said resin being soluble in mineral spirits, 3–25% of a chlorinated diphenyl mixture containing 20–68% of chlorine and mineral spirits and (2) a resinous hydrocarbon-soluble condensation product selected from the group consisting of dimethylol urea resins, dimethylol urea ether resins, tetramethylol melamine resins and tetramethylol melamine ether resins.



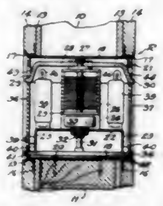
2,457,026
CLOTHESPIN
Joseph F. Bergantino, San Francisco, Calif.
Application February 7, 1947, Serial No. 727,267
1 Claim. (Cl. 24—137)

A clothespin comprising a combination hook and gripping jaw element; the hook having an elongated slot therein and said element having a transverse opening therethrough at the approximate longitudinal center thereof, a combination lever and gripping jaw element extending through said transverse opening of said first named element approximately at its longitudinal center with the gripping jaws of the elements aligned in opposed relationship; the lever of said



second named element passing through the slot of the hook upon the opening of the clothespin, and a pivot pin piercing both said elements at their approximate longitudinal center to connect the elements for pivotal movement; said pivot pin serving as a fulcrum when the clothespin is suspended from a clothesline forcibly to urge the gripping elements toward one another.

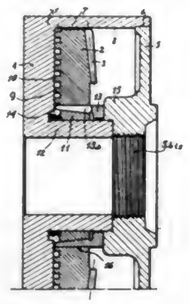
2,457,027
BOTTLE HOLDER AND CARRIER
William A. Bertram, Chicago, Ill.
Application June 29, 1945, Serial No. 602,349
16 Claims. (Cl. 224—45)



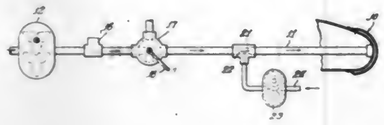
8. A bottle carrier comprising a body portion for supporting bottles by their necks or rims, the body portion including apertured upper and lower members of sheet material slidably adjustable one relative to the other into bottle-receiving and bottle-carrying positions, the upper member having other openings therein, lugs on the lower member projecting through said openings, and a handle pivoted to said lugs outside the upper member and extending outwardly therefrom into carrying position and foldable down alongside the member out of carrying position, said handle having its hand-gripping portion overlying one of the bottle-openings in the members when in folded position and an extension beyond one of its pivots over the face of the upper member and engaging the same when the members are in bottle-receiving position and the handle is slightly raised toward the carrying position by a bottle extending through said opening, whereby the descent of the body on the necks of the bottles is limited in loading, said upper member having an opening to receive said extension when the members are slid into carrying position to thereby unlock the handle so that it may be swung into carrying position, said extension and opening simultaneously locking the members in carrying position.

2,457,028
IMMERSION HEATER
Zolton J. Bors, Tonawanda, N. Y.
Application November 24, 1944, Serial No. 564,947
3 Claims. (Cl. 219—41)

1. An electrical immersion heater unit, comprising a metallic tube-like body provided at one end with a plug and at its other end with an attaching ring, and a heating element removably arranged in said body and including a core extending substantially from end to end thereof in annular spaced relation thereto to provide an air chamber and provided at its outer end with a terminal-bearing head, a heating coil disposed about said core and having its ends connected to the terminals of said head, longitudinal retaining strips disposed in spaced relation about said coil, and retaining rings spaced lengthwise of the core about said strips.



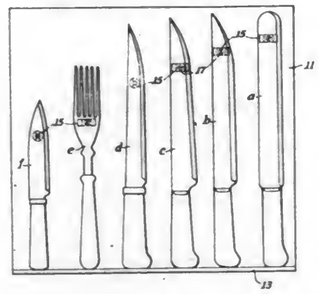
2,457,029
WALL RADIO
Wilhelm W. Brockway, Los Angeles, Calif.
Application September 13, 1946, Serial No. 696,726
12 Claims. (Cl. 250—16)



1. In a radio receiver apparatus, in combination with a partition wall separating two rooms of a building, said wall having a through opening, means framing said opening at each side of said wall, and a radio receiver mounted in said opening and having controls that are accessible from both of said rooms.

2,457,030
CHUCK
Ettore Bugatti, Paris, France
Application September 11, 1945, Serial No. 615,634
In France May 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 16, 1964
8 Claims. (Cl. 279—116)

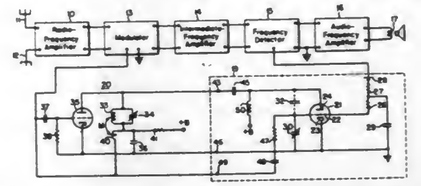
5. In a chuck of the type described, the combination of a chuck body having a hub with a stationary abutment thereon; a ring on said hub, on one side of said abutment, having a close fit with said hub; a split ring with a cylindrical outer periphery and an inner conical periphery, on the first ring; a jaw control ring revolubly borne on the split ring; resilient means operatively interposed between one of the first two rings and the stationary abutment, for urging said ring in one axial direction; and means adjustably secured on said hub, providing an adjustable abutment for the other of said first two rings.



2,457,031
AIRCRAFT ANTI-ICING ARRANGEMENT
John D. Campbell, Lakewood, and Jay M. Roth, Euclid, Ohio, assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application December 5, 1942, Serial No. 467,958
1 Claim. (Cl. 244—134)

In an aircraft anti-icing or de-icing arrangement, means defining a porous leading surface subject to the formation of ice thereon under low temperature flying conditions, means effective to form and deliver a mixture of air and anti-icing or de-icing fluid to the back side of said leading surface for continuous passage therethrough, said means including a conduit leading to the area adjacent the back side of said leading surface, means for moving air through said conduit to the back side of said leading surface comprising a rotary dry air pump, means providing a supply of anti-icing or de-icing fluid, means for introducing said fluid into said conduit at a point therein, in the travel of said air from the outlet of said dry air pump to the back side of said leading surface, said introducing means comprising means defining a Venturi-like restriction or throat in said conduit, a discharge nozzle extending through the wall of said conduit with the discharge terminal portion thereof disposed centrally of said restricted Venturi portion of said conduit, and means for supplying said fluid to said nozzle including a gear metering pump.

2,457,032
CUTLERY DISPLAY BOARD
Emerson E. Case, Perry, N. Y., assignor to Robeson Cutlery Company, Inc., Perry, N. Y., a corporation of New York
Application February 17, 1947, Serial No. 729,099
5 Claims. (Cl. 211—89)



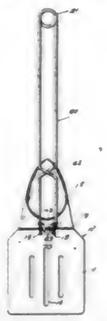
1. A cutlery display device comprising a non-magnetic board adapted to be mounted in an approximately vertical position, a support projecting outwardly from the face of said board and adapted to have a handle of a cutlery article rest on said support, and a magnet mounted on said board and associated with said support and having an outer face adapted to lie against one face of a blade of the cutlery article whose handle rests on said support, to hold said blade against tilting, said face of said magnet being offset outwardly from the face of said board through a distance equal approximately to one half the thickness of the handle of the cutlery article less one half the thickness of the blade thereof, so that said blade, when engaged with said face of said magnet will lie approximately parallel to the face of said board.

2,457,033
TREATMENT OF WOOL TO IMPART SHRINKAGE RESISTANCE THERETO
Harry F. Clapham, Wilmington, Del., and Milton Harris, Bethesda, and Arthur L. Smith, Suitland, Md.; said Harris and said Smith assignors to Harris Research Laboratories, a partnership
No Drawing. Application January 31, 1946, Serial No. 644,664
13 Claims. (Cl. 8—128)

1. A process for imparting shrinkage resistance to wool and to fabrics comprising wool, said process comprising: treating said material with a hypochlorite solution and a buffer system comprising borax, said solution having a hydrogen ion concentration of between pH 8.0 and pH 9.0.

2,457,034
ARRANGEMENT FOR SIMULATING A REACTIVE IMPEDANCE
Leslie F. Curtis, Great Neck, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application June 21, 1946, Serial No. 678,263
11 Claims. (Cl. 178—44)

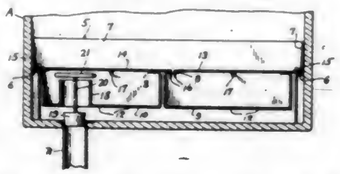
1. An arrangement for simulating, over a selected range of frequencies, a controllable substantially pure reactive impedance comprising: an electron tube having control electrode and cathode input electrodes and having anode and cathode output electrodes between which said controllable reactive impedance is developed; means for applying to said output electrodes a first high-frequency alternating potential having a frequency within said range; and a phase-shifting network having at least one phase-shifting resistive impedance and having phase-shifting reactive impedances comprised only by capacitance between said input electrodes and between said anode and said control electrode so that said reactive impedances have values varying in the same sense with frequency, said network including means for applying through said resistive impedance to the junction of said reactive impedances at said control electrode a second high-frequency alternating potential having the same frequency but opposite polarity to that of said first alternating potential, the values of said impedances being so selected that said network is responsive to said first and to said second alternating potentials to apply to said input electrodes a resultant alternating potential of a phase to cause said tube to provide at said output electrodes a space current which is substantially in phase-quadrature relation to said first alternating potential over said selected range of frequencies.



2,457,035
HEAT STABILIZED POLYVINYL CHLORIDE COMPOSITIONS
Joseph Raymond Darby, Richmond Heights, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application August 11, 1947, Serial No. 768,081
15 Claims. (Cl. 260—31.8)

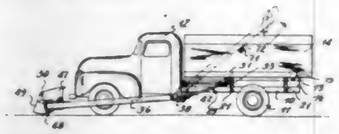
1. A composition comprising a polymerized vinyl resin containing predominantly combined vinyl chloride, a minor amount of a basic lead salt and from 0.1 to 3% by weight of finished composition of an ester selected from the group consisting of monoalkyl fumarates and monoalkyl maleates wherein the alkyl substituents contain at least 1 and not more than 12 carbon atoms.

2,457,036
COFFEE CONCENTRATE AND THE PROCESS OF PRODUCING IT
Albert A. Epstein, New York, N. Y.
No Drawing. Application April 10, 1946, Serial No. 661,077
7 Claims. (Cl. 99—71)



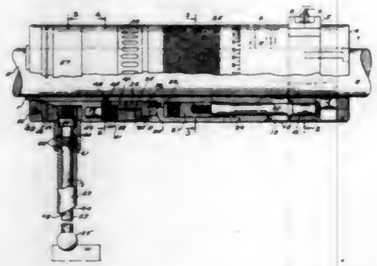
1. A water soluble coffee concentrate in the form of a vitrified non-hygroscopic mass comprising extractives derived from coffee beans and a carbohydrate base which vitrifies upon cooling from the molten state, said coffee extract being homogeneously fused into the said vitrified carbohydrate to seal-in the volatile aromatic and flavor components and potency factor thereof, said carbohydrate base having a melting point under 100° C. whereby the coffee extractives are taken up by the fused base without charring or loss of volatile components and whereby the solubility of the concentrate is enhanced by melting thereof.

2,457,037
COMPOUND CULINARY IMPLEMENT
Herbert John Fadeley, Jr., North Wales, Pa.
Application August 17, 1944, Serial No. 549,933
1 Claim. (Cl. 7—16)



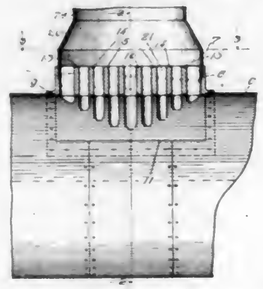
In a compound culinary instrument the combination with a reversible sheet metal member having a spatula at one end thereof and a spoon at its opposite end, said spatula and spoon being disposed at an obtuse angle with respect to one another, a pair of spaced ears struck from the member at the junction of the spatula and spoon, each ear having an aperture the axis of which extends parallel to the junction of the spatula and spoon and a groove extending from the aperture adjacent and parallel to the spatula, and each ear also having a groove extending from the aperture adjacent and parallel to the spoon, of a handle comprising a spring loop, yieldable legs extending tangentially from the loop said legs being crossed intermediate their ends and inturned lugs at the free ends of the legs, said lugs being adapted to enter the apertures in the ears pivotally to connect the member and the handle in such manner that when the spatula or the spoon is in operative position portions of the legs will lie in the grooves whereby accidental movement of the member about the lugs will be avoided.

2,457,038
SANITARY SINK STRAINER
Tom A. Garonis, Santa Barbara, Calif.
Application June 25, 1945, Serial No. 601,394
2 Claims. (Cl. 4—190)



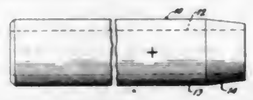
1. The combination with a sink, a drain tray supporting unit resting on the bottom of the sink, a ledge formed around the tray supporting unit in spaced relation to the bottom of the sink, a flange formed on the ledge and having its free edge bearing against the inner side walls of the sink, drain trays having apertured bottoms suspended from the aforesaid ledge of the tray supporting unit, an inwardly extending neck formed on the bottom of one of the drain trays in register with the drain of the sink, a stopper of lesser diameter than the neck seated over the sink drain, an elongated stem on the stopper, a knob of greater diameter than the neck formed on the stem and disposed over the upper end thereof, apertured cover plates hinged at opposite ends of the tray supporting unit, one of which extending over the opposed walls of the drain trays and the other of which having its free end opposed to the free end of the first mentioned drain tray and remote to the space between the opposed walls of the drain trays, and hand grips formed on the trays.

2,457,039
SELF-LOADING TRUCK
Michael Graves and Anatoly Lankovski, Los Angeles, Calif., assignors to Matthew B. Butler, Los Angeles, Calif.
Application December 29, 1945, Serial No. 637,872
16 Claims. (Cl. 214—78)



1. A truck having frames pivotally mounted upon the sides thereof, arms pivotally mounted upon said frames, a scoop or shovel mounted upon the arms adapted to be positioned thereby forwardly of the truck or swung upwardly over the truck to dump into its body, fluid pressure operated means mounted upon said frames and operatively connected to the arms to swing the arms, and means for supplying said fluid pressure operated means with fluid pressure.

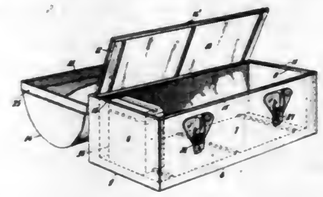
2,457,040
BORING HEAD
William Penn-Gaskell Hall, Berwyn, Pa.
Application January 10, 1945, Serial No. 572,121
9 Claims. (Cl. 77—57)



1. A self-contained boring head adapted to be slid longitudinally over the end of and along a boring bar to a predetermined position thereon and comprising a hollow generally cylindrical body affording an uninterrupted passage for receiving the bar, means operable to removably secure the body to the bar in said position, a slide movable radially of the body having spaced legs extending on opposite sides of the bar when the head is seated thereon, cutter holding means adjacent one end of the slide, camming means on the inner faces of the legs of the slide, a cam block housed in the body and slidable longitudinally thereof having camming means cooperative with those on the slide, an internally threaded sleeve rotatably mounted on the body, an element having threads cooperative with those on the sleeve arranged for longitudinal movement in the body, and means connecting said element with the block whereby rotation of the sleeve is operative to move the element and block longitudinally and through the interaction of the respective camming means on the block and slide to move the latter radially of the body.

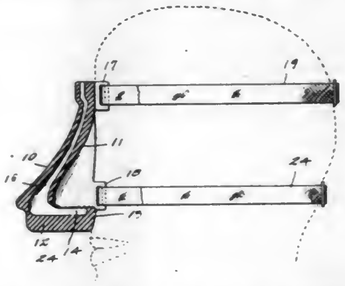
2,457,041
PIPE T
Leroy F. Harza, Highland Park, Ill.
Application September 6, 1944, Serial No. 552,921
4 Claims. (Cl. 285—105)

1. A pipe T comprising a main pipe and a branch pipe at an angle thereto, the main pipe having an opening in its wall for the branch pipe, a saddle fitting extending around and secured to the edge of the opening, the fitting having a plurality of ribs extending across the opening and conforming in curvature to the inside radius of the main pipe to carry the wall strength of the main pipe across the opening, the ribs varying in length from the center to the edges of the opening.



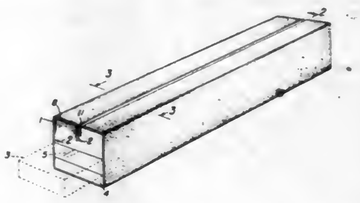
2,457,042
ELECTRODE FOR ARC LIGHTS
Robert W. Hickman, Chicago, Ill., assignor to Frederick B. Hinrichs, Chicago, Ill.
Application October 24, 1945, Serial No. 624,135
4 Claims. (Cl. 176—121)

1. In an electric arc lamp, the combination of a pair of electrodes having a substantially oval cross section and having a cross sectional area just sufficient to carry the arc current for producing a substantially oval and steady arc crater.



2,457,043
LUNCH BOX
Albert Ralph Histand, Croyden, Pa.
Application June 14, 1947, Serial No. 754,720
1 Claim. (Cl. 206—4)

In a temporary storage carrier or lunch box of the type described including the closure and a removable ice container means for selectively-locating and positionally-holding the ice-container within the said carrier or box comprising opposingly-related ribs across the inner bottom face of said container and correspondingly across the under face of the inner closure; and grooves in the outer bottom face of the container



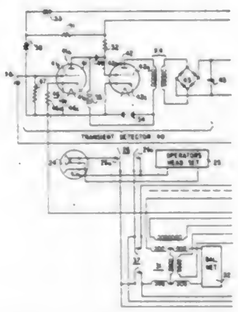
and complementally sectioned grooves in the outer upper face of its cover for selective coaction with a pair of the opposing ribs aforesaid.

2,457,044
BREATH DIVERTER FACE MASK
Frank L. Hower, Rawson, Ohio
Application April 3, 1946, Serial No. 659,303
1 Claim. (Cl. 128—148)

A face mask of the character described comprising a substantially thick nose conforming guard provided with a head encircling means for holding the guard snugly against the nasal portion of the face, said guard being of resilient material and formed with a depression on the top of its bottom portion and ducts extending from said depression upwardly through the guard to open through the top portion thereof, said ducts being of downwardly increasing cross-sectional area to the point where they meet the said depression.

2,457,045
SANDING BLOCK
Jesse C. Kitterman, Corydon, Ind., assignor of one-half to Maurice W. Dyer, Corydon, Ind.
Application October 10, 1947, Serial No. 779,019
2 Claims. (Cl. 51—187)

1. A sanding block comprising a top block member formed with a longitudinally extending slot



in its upper surface, an inverted V-shape clamping strip disposable therein, a pair of wedge-shaped block members supported below said top member, the intermediate or upper wedge-shaped block member being longitudinally slotted and movable with respect to said top block member, securing screws extending through the lower wedge-shaped block member and through the slot in said intermediate block member into said top block member, and a sheet of sand paper disposed about said block members having its opposite edges secured in the slot in the top of said top block member by means of said inverted V-shape clamping strip.

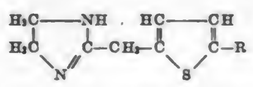
2,457,046

TELEPHONE SIGNALING APPARATUS

Barney J. Kucera, Cleveland, Ohio, assignor to Automatic Electric Laboratories, Inc., a corporation of Delaware

Application July 15, 1942, Serial No. 450,987
23 Claims. (Cl. 179—175.2)

1. In a telephone system which includes subscriber controlled automatic switching apparatus for setting up connections between the substations thereof, an observation point, means controllable from said observation point for selecting any desired one of said substations, means at said observation point for controlling said switching apparatus to force completed connections involving said one substation to be set up over a route which includes said observation point, and means at said observation point for monitoring connections set up over said route.



2,457,047

2-(2'-THENYL)-4,5-DIHYDROIMIDAZOLES AND PROCESS FOR MAKING THE SAME

Lucas P. Kyrides, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

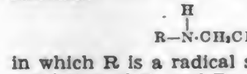
No Drawing. Application February 13, 1946, Serial No. 647,430
9 Claims. (Cl. 260—309.6)

1. Compounds having a structural formula of the type:

in which R represents a radical selected from the group consisting of hydrogen and methyl, and acid salts thereof.

2,457,048

PROCESS OF MAKING TERTIARY AMINES



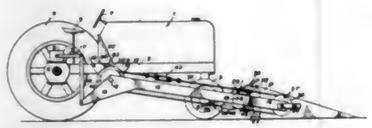
Lucas P. Kyrides and Ferdinand B. Zienty, St. Louis, Mo., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application October 4, 1946, Serial No. 701,078
10 Claims. (Cl. 260—329)

1. In the process of making a tertiary amine of the formula:

in which R_1 is a radical selected from the group consisting of aryl-methyl and thienyl-methyl radicals and R_2 is a radical selected from the group consisting of aryl, alkyl, cycloalkyl, aryl-methyl and thienyl-methyl radicals, the step comprising reacting in an organic solvent a mixture of a monobasic salt of a secondary amine of the formula:

in which R is a radical selected from the group consisting of R_1 and R_2 radicals as hereinbefore defined with an organic halide of the formula:



in which R' is a radical selected from the group consisting of R_1 radicals as hereinbefore defined.

2,457,049

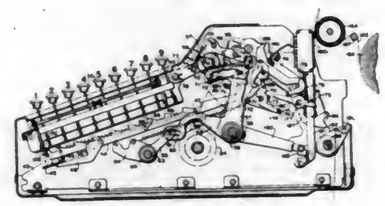
TRACTOR-MOUNTED SCOOP CONTROL

Edward H. Lacey, Sioux Falls, S. Dak.

Application April 18, 1947, Serial No. 742,334
6 Claims. (Cl. 214—140)

1. In combination with a tractor, spaced parallel bell crank arms pivoted thereto, a scoop pivotally supported between the forward ends of said arms, pulleys supported for movement with said arms and scoop, an operating cable disposed about said pulleys, a latch for said scoop, a leveling drum secured to one of said pulleys being formed with a plurality of peripheral locking notches, and an operating lever having a pivoted dog thereon engageable with said locking notches for holding said leveling drum stationary to cause the cable to hold said scoop level as it is raised by said bellcrank arms operating said latch.

2,457,050



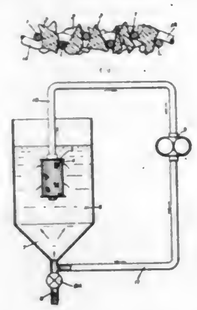
PRINTING MECHANISM FOR ADDING MACHINES

Harry L. Lambert, East Rochester, N. Y., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Original application April 3, 1945, Serial No. 586,361. Divided and this application May 10, 1946, Serial No. 668,749
7 Claims. (Cl. 101—93)

1. In a machine of the class described, the combination of a differentially positionable type supporting means; two groups of type carriers mounted on the supporting means; two printing

hammers, one hammer, being normally effective and located in relation to the groups of type carriers whereby the hammer strikes a type carrier of one group for making a record, the other hammer being normally ineffective and located in relation to the groups of type carriers whereby the hammer strikes a type carrier of the other group for making a record; a bank of keys for controlling the adjustment of the supporting



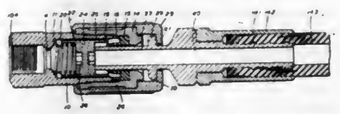
means to position a type carrier of each group at the printing line; a second bank of keys; and means rendered effective when one of the keys of said second bank is depressed for causing said one hammer to be rendered ineffective and said other hammer to be rendered effective so as to cause a record to be made from said other group of type carriers rather than from said one group of type carriers.

2,457,051

METHOD OF MAKING REINFORCED POROUS METAL MEMBERS

Camille Clare Sprankling Le Clair, Acton, London, England, assignor to Tecalemit Limited, Brentford, England, a corporation of Great Britain

Application May 25, 1945, Serial No. 595,714
In Great Britain August 18, 1944
4 Claims. (Cl. 29—148)



1. The method of constructing a porous member having a support consisting of a perforated member or the like, comprising the steps of suspending metal or metal alloy particles in a flowing stream of fluid, at least a portion of said particles being of such size as not readily to pass through the interstices of the support causing said stream to flow under pressure, positioning the support in the path of said stream flowing under pressure so that at least a portion of the particles suspended in said stream become evenly distributed in and firmly wedged into the interstices of the support, and finally sintering the particles so that they adhere to the support.

2,457,052

COUPLING FOR USE IN FLUID SUPPLY SYSTEMS

Camille Clare Sprankling Le Clair, Acton, London, England, assignor to Tecalemit Limited, Brentford, England, a corporation of Great Britain

Application January 24, 1947, Serial No. 723,923
In Great Britain January 30, 1946
12 Claims. (Cl. 284—19)

1. A coupling for use in fluid systems comprising two coupling members each formed with a duct for the passage of fluid therethrough and means for coupling said members together in a fluid-tight manner with the fluid duct in one member in communication with the fluid duct in the other member, one of said coupling members comprising a body part and a tubular ferrule part extending therefrom, and the other of said coupling members comprising a body-part, a valve having a tubular portion provided with an annular valve face, and a resilient element mounted in said body part, said resilient element comprising an annular section, one face of which forms a seat for said valve, and a tubular section projecting from said annular section inside said tubular portion of said valve, the arrangement being such that when the coupling members are coupled together the ferrule part on the first member passes through the resilient element in the second member, the tubular section of the resilient element forming a fluid-tight seal with the outer surface of the ferrule part and being adapted to be urged into contact with said surface by fluid pressure within the coupling member, whereafter the ferrule part engages said valve and moves it off its seat, thereby allowing fluid to flow from one coupling member to the other through said ferrule part.

2,457,053

CIGARETTE LIGHTER

Frederick Daniel Lewis, Jr., Miami, Fla.

Application September 11, 1945, Serial No. 615,659
1 Claim. (Cl. 67—4.1)

A self-standing table-type pyrophoric lighter of the class described comprising a primary unit embodying a base and an integral, vertically elongated shell, said base being flat and weighted and adapted to sit in a position to prevent tilting of the shell under normal handling conditions, said shell being hollow and open at its top and provided at said top with a reduced cylindrical neck, an insert unit, the latter including a hollow shell protruding into said first-named shell

and constituting a receptacle for lighter fluid, the upper portion of said insert projecting beyond said neck and having an outstanding annular bead resting on the adjacent end of the neck, that portion beyond said bead constituting an adapter sleeve for a separate, removable and insertable pyrophoric lighter unit, and a lighter unit fitted telescopically into said neck, said lighter unit including a casing, said casing being open at its bottom and containing the usual absorbent filler wad and wick, said wad being adapted to be doused with lighter fluid from said receptacle whenever necessary or desired, pyrophoric lighting means on said lighter unit, said casing having an outstanding bead, said bead resting on an adjacent end of said adapter sleeve, and a removable cap enclosing the adjacent portion of said lighter unit and fitted on said adapter sleeve, said first-named bead constituting a stop for the adjacent end of the cap.

2,457,054

LUMINESCENT MATERIALS FOR ELECTRIC DISCHARGE DEVICES

Humboldt W. Leverenz, South Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware

No Drawing. Application December 31, 1941, Serial No. 425,023

6 Claims. (Cl. 252—301.4)

1. A crystalline luminescent multi-metal oxygen compound consisting of an oxide of a first member selected from the group consisting of silicon, and germanium and mixtures thereof, an oxide of a second member selected from the group consisting of beryllium, magnesium, zinc, and cadmium, and mixtures thereof, and an oxide of a third member selected from the group consisting of tin, and lead and mixtures thereof, said oxides being co-crystallized, and a manganese activator in said co-crystallized oxides in activator proportions, the molal ratio of said second member to said third member being 1:20 to 50:1 and the molal ratio of said second member to said first member being from 3:1 to 1:6, said compound constituting a single crystal structure.

6. The method of making silicate and germanate phosphor compounds which consists in heating together a member of the group consisting of oxides of silicon, and germanium and mixtures thereof, a member of the group consisting of oxides of zinc, beryllium, calcium, cadmium, magnesium, strontium, and barium, and mixtures thereof, a member of the group consisting of the oxides of tin and lead and mixtures thereof, the said ingredients being in the proportions necessary to form the desired phosphor compounds and a manganese activator in activator proportions, said heating being at a temperature between 600° C. and 1600° C. in a current of live steam containing entrapped ammonia.

2,457,055

PRODUCTION OF STAINLESS STEEL

Donald L. Loveless, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio

No Drawing. Application May 21, 1945, Serial No. 595,063

5 Claims. (Cl. 75—12)

1. In the production of stainless steel of low carbon and low sulphur contents, the art which includes, melting in an electric arc furnace having a chromite lining a charge including high-sulphur stainless steel scrap and high-carbon ferrochrome thereby forming a bath of high-sulphur metal; maintaining said bath under an oxidizing slag blanket at a high temperature to remove carbon from the bath, this action being accompanied by a loss of chromium into the slag; adding an excess of silicon-containing reducing agent to the slag whereby chromium contained in the slag is precipitated into the underlying bath; removing the residual slag from the surface of said bath; building up on the bath a sulphur-reactive lining finishing slag comprising substantial amounts of burnt lime and ilmenite; and then rabbling the slag and bath to effect removal of sulphur from the bath while minimizing contamination with chromite.

2,457,056

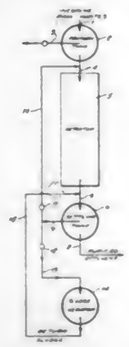
ROOF TRUSS

Stanley Macomber, North Canton, Ohio

Application December 16, 1946, Serial No. 716,636

13 Claims. (Cl. 108—23)

1. A fabricated truss including a top chord, a pair of vertically spaced bottom chords, struts connected at their upper ends to the top chord and connected at their lower ends to the uppermost of the bottom chords, and load bearing plates extending between and connected to the uppermost and lowermost bottom chords beneath the points of connection of the struts to the uppermost of the bottom chords.



2,457,057

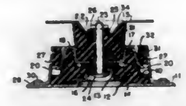
WASTE PURIFICATION PROCESS AND APPARATUS

Edward B. Maliory, Tenafly, N. J.

Application June 30, 1945, Serial No. 602,546

2 Claims. (Cl. 210—8)

1. A waste purification process of the character described which includes passing wastes to be purified successively through an aerator and clarifier, settling sludge in said clarifier, withdrawing settled sludge from said clarifier, aerating sludge which has been so withdrawn, returning thus aerated sludge to the aforesaid clarifier to settle and contract the size of the sludge particles in admixture with the wastes in said clarifier, and then returning thus aerated and contracted sludge back into admixture with wastes under treatment in said aerator.



2,457,058

SUPPORTING ARRANGEMENT

Jesse Markowitz, Forest Hills, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application September 5, 1945, Serial No. 614,542

13 Claims. (Cl. 248—24)

1. An arrangement for yieldably supporting a first object with reference to a second object comprising, a first resilient member to be supported at one end on the second of said objects, a second resilient member in partially nested relation with respect to the opposite end of said first resilient member and having a free end for receiving the first of said objects, a separator disposed between said first and second resilient members, a pin projecting through said resilient members and said separator for aligning said resilient members having retaining means at one end for engaging said first resilient member in the vicinity of said one end thereof and having retaining means at the other end for engaging said first object, and stop means for limiting the motion of said separator in a direction away from said second object.

12. An arrangement for yieldably supporting a first object with reference to a second object comprising, a first resilient member to be supported at one end on the second of said objects, a second resilient member in partially nested relation with respect to the opposite end of said first resilient member and having a free end for receiving the first of said objects, a separator disposed between said first and second resilient members, means for engaging said first resilient member in the vicinity of said one end thereof and for engaging said first object, and stop means for limiting the motion of said separator in a direction away from said second object.

2,457,059

METHOD FOR BONDING A NICKEL ELECTRODEPOSIT TO A NICKEL SURFACE

Ralph Crysler McQuire, Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application February 26, 1946, Serial No. 650,389. In Canada December 3, 1945

10 Claims. (Cl. 204—32)

1. A method for obtaining improved bonding of a nickel electro-deposit to a nickel surface which comprises immersing a nickel starting sheet for about 5 minutes without the application of electric current from an external source in an aqueous bath containing about 100 grams per liter of sulfuric acid, about 50 grams per liter of sodium chloride and about 5 grams per liter of copper in the form of copper sulfate and the balance essentially water, maintaining said copper in the cupric state by passing air through said bath, removing said nickel starting sheet from said aqueous bath, rinsing said starting sheet with water, immersing said starting sheet in a nickel electro-plating bath and electro-depositing nickel on said nickel starting sheet.

2,457,060

METHOD FOR BONDING A NICKEL ELECTRODEPOSIT TO A NICKEL SURFACE

Ralph Crysler McQuire, Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application December 18, 1945, Serial No. 635,775. In Canada October 25, 1945

13 Claims. (Cl. 204—32)

1. A method for obtaining improved bonding of a nickel electro-deposit to an article having a nickel surface which comprises anodically treating said article having said nickel surface for about 5 minutes in an aqueous chloride-bearing bath consisting of about 50 to about 200 grams per liter of sulfuric acid, about 50 to about 60 grams per liter of sodium chloride, copper sulfate in an amount to provide a cupric ion concentration of about 5 grams per liter of cupric ion, and the balance essentially water at a current density of about 15 amperes per square foot; removing said article from said bath; rinsing said article; transferring said article to a nickel electroplating bath; and electro-depositing nickel on the anodically treated nickel surface of said article whereby an improved bonding of a nickel electrodeposit to said treated nickel surface of said article is obtained.

2,457,061

METHOD FOR BONDING A NICKEL ELECTRODEPOSIT TO A NICKEL SURFACE

Ralph Crysler McQuire, Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

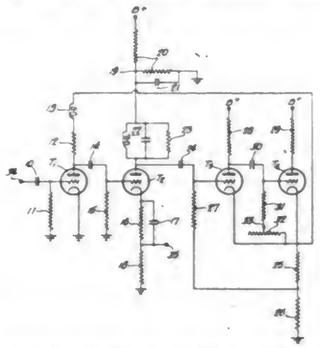
No Drawing. Application December 18, 1945, Serial No. 635,774. In Canada October 25, 1945

7 Claims. (Cl. 204—32)

1. A method for obtaining improved bonding of a nickel electro-deposit to an article having a nickel surface which comprises anodically treating said article having said nickel surface for about 2 to about 5 minutes in an aqueous acid bath consisting of about 10 to about 200 grams per liter of sulfuric acid, copper sulfate in an amount to provide about 0.5 to about 30 grams per liter of cupric ion in said bath and the balance essentially water at current densities of about 10 to about 25 amperes per square foot; and electro-depositing nickel on said anodically treated nickel surface of said article whereby an improved bonding of a nickel electro-deposit to said nickel surface of said article is obtained.

2,457,062

QUENCHED AMPLIFIER SYSTEM



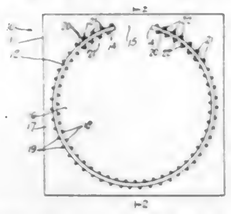
Robert C. Moore, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application August 2, 1944, Serial No. 547,720

7 Claims. (Cl. 250—27)

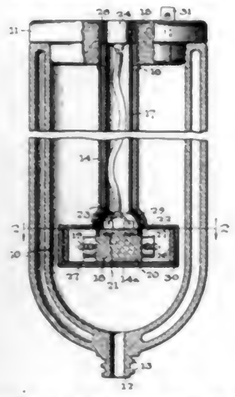
5. In combination, a pulse-responsive amplifier including an input tube having an anode and a cathode loaded output tube, a normally-inoperative electron tube device adapted to operate for a predetermined period in response to a triggering potential applied thereto, means operable by said amplifier in response to a pulse signal for trigger-

ing said device, and means responsive to operation of said device for reducing the anode potential of said input tube and for simultaneously biasing said



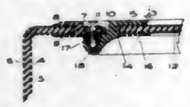
output tube below cut-off, so as to render said amplifier substantially inoperable during the operation of said device.

2,457,063
DEHYDRATED MEAT SCRAPPLE AND METHOD OF MAKING THE SAME
Agnes Fay Morgan, Berkeley, Calif., and Betty M. Watts, Pullman, Wash., assignors to the United States of America as represented by the Secretary of War
No Drawing. Application December 5, 1944, Serial No. 566,774
9 Claims. (Cl. 99—208)



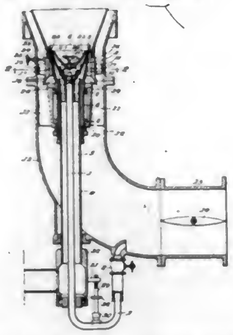
1. A scrapple food product comprising a dehydrated mixture of comminuted meat normally subject to oxidative change, cereal meal capable of passing through a sieve having openings of 2 mm. diameter and incapable of passing through a sieve having openings of 0.5 mm. diameter, and in an amount less than said cereal meal an antioxidative substance substantially uniformly distributed through said mixture, said substance being selected from soybean flour, ascorbic acid and tocopherol, whereby a non-crumbly rehydratable, dehydrated, rancidity-inhibited scrapple food product is provided.

2,457,064
HAND KNITTING DEVICE
Anthony Parisi, Brooklyn, N. Y.
Application March 18, 1947, Serial No. 735,337
8 Claims. (Cl. 66—4)



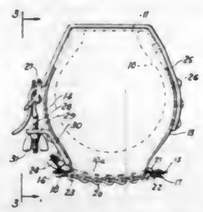
1. A device for the knitting of a fabric including a one-piece plate-like member having a narrow slot opening extending along a generally curved path whose ends are spaced from each other to define a neck integrally interconnecting the plate portion within the slot with the plate portion beyond the slot, and a series of equally spaced pin-like elements on each section closely adjacent to said opening, the spacing between the elements of one section being approximately equal to those of the other section, and said spacing being such that the fabric is knitted by looping yarn around the elements for stitch forming to produce a fabric passing through said opening.

2,457,065
ELECTRICAL HEATING UNIT
Harry M. Parmley, Harrisburg, Pa.
Application December 20, 1945, Serial No. 636,221
5 Claims. (Cl. 219—41)



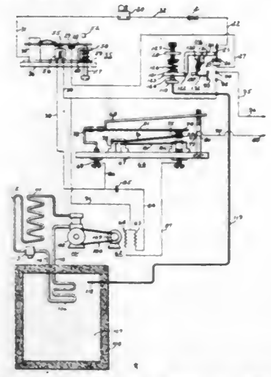
1. An electrical heating unit adapted to be removably positioned in a liquid container, said unit comprising spaced, concentric inner and outer tubular members mounted at their upper ends in a closure for said container, said inner member being formed of electrical insulating material and said outer member being of metal, spacer members having air passages therein interposed between said inner and outer members, an electrical heating unit supported at the lower end of the inner member, lead wires extending through the inner member from said resistance element to the upper end of the inner tubular member, and a cylindrical metal casing for said resistance unit mounted on the lower end of said outer member.

2,457,066
ACCESS DOOR FOR LIQUID CONTAINERS
Francis J. Pepersack, Towson, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application August 25, 1943, Serial No. 499,897
5 Claims. (Cl. 150—3)



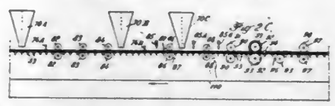
5. In a tank for liquids, a wall of flexible, rubber-like material having an access opening, a perforated rigid ring assembly secured to the tank in liquid sealing relation to said opening, a door of similar flexible material for said opening having a peripheral portion provided with an outer surface to engage the inner surface of the rigid ring assembly about the said opening, a perforated rigid ring embedded in said peripheral portion of said door, and means including screw-threaded members disposed in aligned perforations of said ring and said ring assembly for pressing the said inner and outer surfaces together with liquid-sealing contact.

2,457,067
ATOMIZING OIL BURNER
Attilio Perretti, Milan, Italy
Application April 21, 1939, Serial No. 269,159
In Italy April 26, 1938
2 Claims. (Cl. 158—77)



1. A burner for crude oil comprising a main air pipe, a secondary air pipe within said main air pipe and an oil pipe within said main air pipe and surrounding said secondary air pipe; conical bell shaped cups at the discharge ends of said pipes, the cups at the ends of said secondary air pipe and said oil pipe having portions of their conical surfaces substantially parallel to one another and forming an annular conical passage for the oil discharged from said oil pipe, the cup at the end of said oil pipe being rotatably connected thereto and provided with a turbine wheel with blades protruding into said main air pipe, means to shift the cup at the end of said secondary air pipe longitudinally relatively to the cup at the end of said oil pipe, to vary the cross sectional area of said annular conical passage.

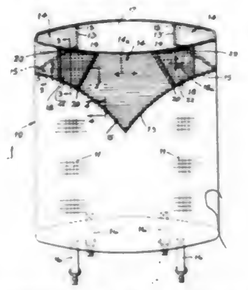
2,457,068
ANTISKID CHAIN
Alfred Peterson, Wheaton, Ill.
Application April 16, 1947, Serial No. 741,843
4 Claims. (Cl. 152—237)



2. An anti-skid device for a wheel-mounted vehicle tire comprising a pair of side plates shaped to conform to opposed side walls of a tire section, cross chains secured to the plates and adapted to extend from plate to plate across the tread of the tire, a chain attached to the outer peripheral edge portion of each plate for contact with the roadway upon each rotation of the tire on which the device is mounted, and co-operating members each carried by one of the plates for securing the device to a wheel-mounted tire.

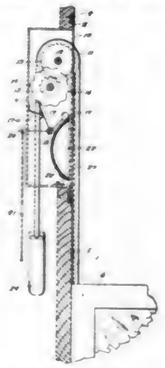
2,457,069
ALARM SYSTEM FOR HEAT EXCHANGE DEVICES
Herbert H. Rauh, Columbus, Ohio, assignor to Ranco Incorporated, Columbus, Ohio, a corporation of Ohio
Application February 5, 1945, Serial No. 576,290
6 Claims. (Cl. 177—311)

1. In a control system for a heat exchange device of the character described including a storage compartment and power operated means for circulating a fluid refrigerant to provide for cooling the compartment, in combination, a main circuit supplying power to said power operated means, a main switch in said circuit for controlling the flow of power therein, an electrically responsive means energized when said switch is closed, a signal circuit including a switch actuated by said means, said signal circuit including a third switch, means operable in response to temperature changes at the upper and lower limits of a predetermined temperature range within the storage compartment to actuate the main switch, and said means also operably constructed to respond to temperature changes above and below the upper and lower limits respectively of said predetermined temperature range and close the signal circuit through said third switch in response thereto.



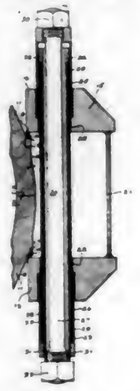
2,457,070
APPARATUS FOR MAKING BUILDING UNITS
John A. Scharwath, Montclair, N. J., assignor of one-third to Herman J. Scharwath, Union, N. J.
Application July 13, 1944, Serial No. 544,796
2 Claims. (Cl. 91—14)

1. In an apparatus for making building units, means for moving a plurality of separated prefabricated slabs in a plane in one general direction, means for passing the separated slabs through a liquid and drying said slabs, means for moving the slabs in the same general direction into abutting relation, and a plurality of longitudinally spaced instrumentalities positioned for successively acting upon the abutted moving slabs, said instrumentalities comprising means for depositing material on the upper surface of the slabs, means for compacting and shaping said material on the slabs, means for



severing the deposited material on the lines of abutment between adjacent slabs, means for breaking the covered slabs apart at the lines of severance, and means for accelerating the movement of the slabs to separate the slabs from one another.

2,457,071
WAISTLINE CONTROL GARMENT
Louis Shulman, New York, N. Y.
Application July 10, 1946, Serial No. 682,565
2 Claims. (Cl. 2—43)

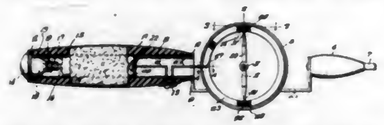


1. In an improved waistline control garment, a body engaging section having a top edge portion, garters mounted on the bottom of said body engaging section, a waistband proper of one way stretch elastic material stretchable horizontally and set into said top edge portion and stitched thereto along adjacent edges except at restricted areas located vertically above said garters, elastic pieces of one way stretch elastic material stretchable vertically and having top and bottom and side edges and being positioned upon said waistband proper at areas located vertically above said garters, said elastic pieces having their top and side edges stitched to the material of said waistband proper, and said elastic pieces having their bottom edges stitched to said restricted areas of the top edge portion of said body engaging section.

2,457,072
BURGLAR ALARM
Bernard W. Smith, Hartford, Conn.
Application October 25, 1946, Serial No. 705,746
5 Claims. (Cl. 116—90)

1. A burglar alarm for a window having a frame, a sash slidable in said frame, a cord running along the side of said frame and having an end secured to said sash; the said alarm comprising a casing secured to the side of and within said frame, a pulley rotatable in said casing and adapted to receive said cord, weighted means within the frame providing frictional engagement between said cord and pulley for rotation of said pulley upon movement of the sash, a cam wheel rotatable by said pulley, a bell, and a hammer operable upon rotation of said cam wheel for striking said bell to render an audible signal.

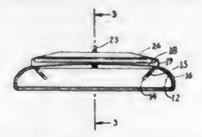
2,457,073
TURBINE CYLINDER JOINT
Kenneth R. Stearns, Springfield, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 7, 1946, Serial No. 708,334
3 Claims. (Cl. 189—36)



1. In a cylinder structure, a cylinder including halves having joint faces, such halves having oppositely-facing lugs at opposite sides of the joint, and clamping means bearing against the lugs causing the joint faces to engage under pressure; said clamping means comprising a plurality of clamps and each clamp including a pair of jaws having lug-engaging inner ends, a strut connecting the outer end portions of the jaws, said jaws having aligned openings between the strut and the inner ends thereof, first and second tension members extending through the aligned openings, said members each having one end thereof acting compressively on the respective jaws, a compression member extending through the openings and compressively engaging the other end of the second tension member, and a nut carried by the other end of the first tension member and compressively engaging the compression member.

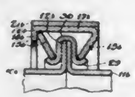
2,457,074
PROPENYL ETHACOL
Oliver J. Weinkauff, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 6, 1945, Serial No. 597,951
1 Claim. (Cl. 260—613)

1-propenyl-2-hydroxy-3-ethoxy benzene.



2,457,075
FISHING POLE
Thomas J. Williams, Gas City, Ind.
Application September 19, 1946, Serial No. 697,977
3 Claims. (Cl. 43—17)

1. The combination with a fishing pole having a handle, of a reel on the pole, a lens in the rear end of the handle, and means operative under control of said reel to intermittently illuminate said lens from within said handle when the reel is revolving, said means comprising an electric light in said handle, a contact ring fixed to the fishing pole and electrically connected to one side



of the electric light with a battery in the line of connection, said ring having circumferentially spaced insulation inserts therein, and a conductive member revolved by said reel in wiping engagement with said ring and electrically connected to the other side of the electric light.

2,457,076
ABRASIVE TOOL
Merlyn G. Williams, Jr., Downers Grove, and Arthur Dahl, Chicago, Ill.
Application October 11, 1946, Serial No. 702,636
2 Claims. (Cl. 51—187)

2. An abrasive tool comprising a pad of rectangular plan having a flat bottom face, transverse end faces rising upwardly therefrom, and a top face substantially parallel to said bottom face, transverse slots intersecting the top face in proximity to said transverse end faces, a strip of abrasive encircling said bottom face and transverse end faces and having its end portions disposed in said slots, and means adapted to exert downward [redacted] portions of said abrasive strip immediately outside said slots to hold said strip taut including a clamping member having a bottom face overlapping said portions of the abrasive strip immediately outside said slots, said bottom face of the clamping member being concave throughout the area thereof intermediate portions engaged with the abrasive strip, and a central upright spindle connecting said pad and clamping member about which said pad may be horizontally turned toward and away from a position in engagement with said abrasive strip.

2,457,077
TUBE CLAMP
Theodore Alan Woolsey, Inglewood, Calif., assignor to Marman Products Co., Inc., a corporation of California
Application December 10, 1946, Serial No. 715,249
7 Claims. (Cl. 285—129)

1. Means for clamping together the abutting ends of tubular members, comprising a retainer ring including a rim portion and a shoulder projecting radially inwardly from at least one side thereof, a pair of frusto-conical compression rings extending inwardly and toward each other from the respective sides of said retainer ring, at least one of said compression rings floating between the retainer ring and a respective tubular member, the rim portion and shoulder of said retainer ring defining a corner in which the periphery of said floating compression ring is confined against movement relative to the retainer ring and adapted to tilt in response to compressive action thereagainst by the retainer ring, said compression rings functioning to resolve inwardly directed compressive forces into axial pressures applied to said tubular members so as to urge them toward each other, said tubular members having outwardly extending radial flanges and sealing ring having a channel portion receiving and embracing said flanges and axially projecting shoulder portions at the inner extremities of said channel portion, in which the inner peripheries of said compression rings are seated, the side walls of said channel portion being adapted to be pressed into sealing engagement with the outer surfaces of said two flanges by the axial pressures exerted thereagainst, and to thereby press said flanges into face to face engagement, whereby to effect a double seal.

2,457,078
METHOD FOR BROMINATING HETEROCYCLIC COMPOUNDS
Ferdinand B. Zienty, St. Louis, and Lucas P. Kyrides, Webster Groves, Mo., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 29, 1944, Serial No. 547,276
11 Claims. (Cl. 260—298)

1. The process of substituting bromine for hydrogen on an olefinic carbon atom in the ring structure of a 5-membered amino-substituted heterocyclic compound which contains in the ring structure at least 1 nitrogen atom, at least 1 atom of an element selected from the group consisting of sulfur and selenium, and a formation in the ring represented by

and which compound is stable in acidic aqueous solutions, comprising, heating said compound in water in the presence of an acid substantially to the boiling point of the mixture, adding bromine slowly to the mixture and recovering the brominated product from the reaction mixture.

2,457,079
STABILIZATION OF 2-THENYL CHLORIDE
Ferdinand B. Zienty, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application October 18, 1946, Serial No. 704,287
16 Claims. (Cl. 260—329)

1. A stable composition consisting of 2-thenyl chloride and a small portion of an amine of the formula type:

in which R represents a radical selected from the group consisting of hydrogen, alkyl, cycloalkyl, and aralkyl radicals, R_1 and R_2 each represent a radical selected from the group consisting of alkyl radicals containing at least 8 carbon atoms, cycloalkyl radicals containing at least 5 carbon atoms in their ring structure and aralkyl radicals.

2,457,080

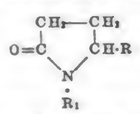
STABILIZATION OF 2-THENYL CHLORIDE

Ferdinand B. Zienty, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application October 18, 1946, Serial No. 704,288
16 Claims. (Cl. 260—329)

1. A stable composition consisting of 2-thenyl chloride and a small portion of an amine selected from the group consisting of morpholinyl and piperidyl derivatives of the formula type:

in which A is a divalent residue selected from the group consisting of —O— and —CH_2— radicals, and R is a radical selected from the group consisting of alkyl radicals containing at least 12 carbon atoms, cycloalkyl radicals containing at least 5 carbon atoms and aralkyl radicals.



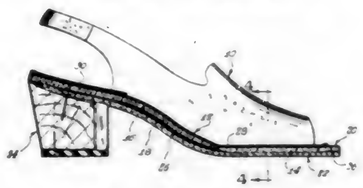
2,457,081

STABILIZATION OF 2-THENYL CHLORIDE

Ferdinand B. Zienty, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application October 18, 1946, Serial No. 704,289
16 Claims. (Cl. 260—329)

1. A stable composition consisting of 2-thenyl chloride and a small portion of an amine selected from the group consisting of pyrrolidones of the formula type:



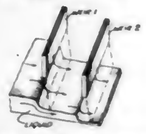
in which R represents a radical selected from the group consisting of hydrogen and alkyl radicals containing from 1 to 3 carbon atoms, and R_1 represents a radical selected from the group consisting of alkyl radicals containing at least 12 carbon atoms, cycloalkyl radicals containing at least 5 carbon atoms, and aralkyl radicals.

2,457,082

PLATFORM SHOE

William Michael Fennessy, Carlisle, Pa., assignor to Carlisle Shoe Company, Carlisle, Pa., a corporation of Pennsylvania

Application October 1, 1946, Serial No. 700,432
3 Claims. (Cl. 36—19.5)



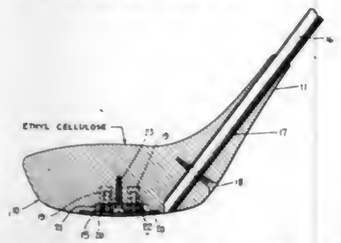
1. In a shoe having an upper, an insole, and a platform cover stitched together, a middle sole secured in position and encased by said platform cover, the latter having a top marginal edge portion positioned at the top of said middle sole and having a lower marginal edge portion folded inwardly over said middle sole at the bottom thereof, said upper having a marginal edge portion underlying the marginal edge portion of said insole, said marginal edge portion of the upper, said top edge portion of said platform cover and said stitching being disposed inwardly of the crease line of the shoe and lying substantially flatly against the upper surface of said middle sole and said middle sole having its upper surface abutting the under side of said insole, an outer sole, and means for securing said outer sole in position including a line of stitching through said platform cover, middle sole and outer sole at the outerside of the crease line of the shoe.

2,457,083

PROCESS FOR CONTROLLING THE FLOW OF METALLURGICAL LIQUIDS

James Fernando Jordan, Huntington Park, Calif.

Application June 27, 1947, Serial No. 757,580
6 Claims. (Cl. 75—93)



1. In the process of conducting a metallurgical liquid along a refractory trough, the method of controlling the rate of flow of said liquid along said trough, which comprises: jetting down into said flowing liquid, from an orifice that is positioned above the free surface of said liquid, a barrier of gas that forms an indentation in and across the flowing liquid stream, and thereby blocks the free flow of said liquid stream; and controlling the rate of flow of said liquid stream by regulating the pressure exerted by said barrier on said liquid stream in the range between zero and that pressure at which a boiling action ensues at the liquid-gas interface, by regulating the pressure at which the gas is supplied to said orifice.

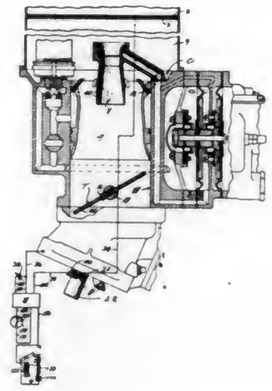
2,457,084

GOLF CLUB HEAD

Edward P. Kearsley, Springfield, and Emil J. Marciniak, Easthampton, Mass., assignors to A. G. Spalding & Bros. Inc., Chicopee, Mass., a corporation of Delaware

Application December 20, 1944, Serial No. 568,954
4 Claims. (Cl. 273—77)

1. In a golf club of the "wood" type, a head of molded ethyl cellulose.



2,457,085

CARBURETOR ICE RESPONSIVE DEVICE

Waldo H. Kliever, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application August 23, 1943, Serial No. 499,653
4 Claims. (Cl. 177—311)

1. In a device of the class described, in combination, a carburetor having a metallic wall and a metallic venturi subject to the formation of ice, dielectric means spacing said venturi and said wall to comprise an electrical condenser whose

capacitance is varied by the presence and thickness of said ice, and means for making electrical connection to said condenser.

2,457,086

FLOOR

Pullan Mitchell, Linthorpe, and Uttley Ranson Mitchell, Guiseley, England

Application July 31, 1944, Serial No. 547,347
In Great Britain July 15, 1943
3 Claims. (Cl. 189—34)

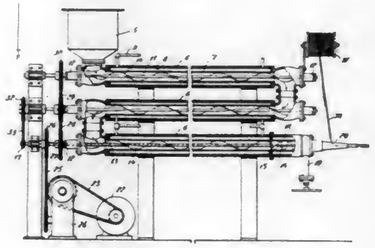
1. A floor beam formed of unitary sheet material having a top flange, a bottom flange, a primary web connecting the top flange at one end to the bottom flange, a secondary web at the other end of said top flange, said primary web and said secondary web being joggled with a lower portion offset in relation to the upper portion, the joggle of said primary web adapted to interfit with the joggle of the secondary web of an adjoining beam of the same shape, loops provided in the primary and secondary webs below the joggles with their axes vertical, the loop on the primary web adapted to interfit the loop on the secondary web of an adjoining beam of the same shape, and the top flange having an opening above one of the loops whereby a cotter can be inserted vertically from above to engage a loop to secure adjoining webs together.

2,457,087

SEALING COMPOUNDS

John D. Morgan, South Orange, and Russell E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania

No Drawing. Application March 30, 1945, Serial No. 585,822
14 Claims. (Cl. 260—30.6)



6. A compound for sealing mechanical joints comprising a gel of from about 4 to 16⅔ per cent of a substantially fully polymerized, thermosetting, reaction product of phenol-formaldehyde condensation dispersed in from about 96 to 83⅓ per cent of an oily liquid of low vapor pressure chosen from the group consisting of tri-o-cresyl phosphate, tri-octyl phosphate, and di-butyl phthalate; and a filler uniformly mixed with said gel.

2,457,088

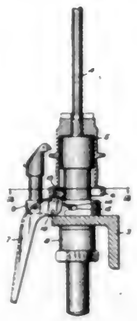
METHOD FOR THE PRODUCTION OF CANDLES

Ernest F. Pinney, Glen Cove, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application September 26, 1945, Serial No. 618,767
2 Claims. (Cl. 18—55)

1. That method for the production of candles which comprises flowing a liquid candle stock melt into a chiller and advancing it therethrough while chilling it to a plastic condition, mixing and extruding the chilled plastic stock from said chiller through a candle rod forming die, disposing a wick in said stock prior to extrustion so that it will extend axially of the candle rod formed by extrusion, passing the candle rod through a first controlled cooling at a temperature of from about 15° F. to about 40° F. below the melting point of the stock, said first cooling step being of a duration of from about ½ to 1½ minutes and sufficient to permit adjustment of its internal structure to a substantially non-oriented crystal arrangement and then through a second cooling step to harden it to a point where it will withstand mechanical handling, and severing the continuously extruded rod into desired lengths.

2,457,089



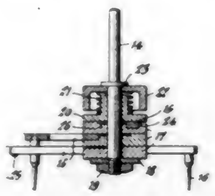
SPINDLE BRAKE MECHANISM

Lester W. Pray, Saco, Maine, assignor to Saco-Lowell Shops, Boston, Mass., a corporation of Maine

Application February 1, 1946, Serial No. 644,965
2 Claims. (Cl. 57—88)

1. In a spindle structure, the combination with a spindle blade, a whirl secured fast thereon and a base in which said blade is mounted for rotation, said whirl being provided with a downwardly

extending circular skirt of a lever fulcrumed on said base at the forward side of the spindle, said lever having an end portion positioned inside the



skirt of said whirl, and a brake shoe releasably interlocked with the end portion of said lever and positioned for engagement with the inner surface of said skirt to stop rotation of the spindle.

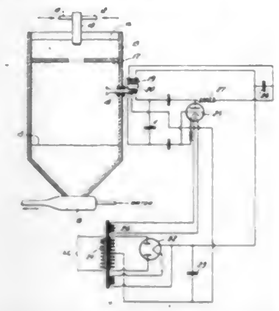
2,457,090

ATTACHMENT FOR DENTAL SURVEYING INSTRUMENTS

Charles J. Ringle and Roy W. Smith, Buffalo, N. Y., assignors to Williams Gold Refining Company, Inc., a corporation of New York

Application November 2, 1945, Serial No. 626,328
2 Claims. (Cl. 32—67)

1. In a dental instrument of the character described, a spindle, upper and lower abutments mounted in spaced relation on said spindle, a plurality of disks rotatably supported in juxtaposed relation on the spindle between said upper and lower abutments, a spring in bearing relation against one of said abutments and the opposing disk to maintain said several disks in frictional facial relation, and contact point bearing arms disposed between said disks for frictional longitudinal adjustment therebetween.



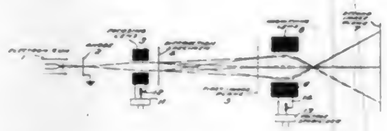
2,457,091

GELATION PROCESS INVOLVING SUPERSONIC TREATMENT

Carleton H. Schlesman, Allentown, Pa., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application April 9, 1947, Serial No. 740,297
5 Claims. (Cl. 252—317)

1. In a process of forming inorganic oxide hydrogels from inorganic oxide hydrosols capable of setting to hydrogels by forming a hydrosol and injecting said hydrosol into a water immiscible liquid as a plurality of globules, the improvement



which comprises subjecting said liquid to supersonic vibrations during gelation of said hydrosol.

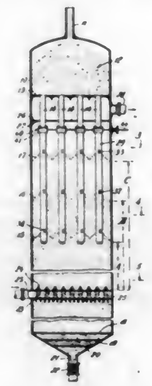
2,457,092

METHOD AND APPARATUS FOR PRODUCING ELECTRON DIFFRACTION SPECTRA

Gerald L. Simard, Stamford, and Charles R. Stryker, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

Application April 17, 1945, Serial No. 588,738
6 Claims. (Cl. 250—49.5)

1. A process of producing images of electron diffraction spectra form which crystal interplanar spacings can be measured which comprises producing an electron beam of predetermined convergent, divergent or parallel characteristics and of suitable wave length for diffraction spectral work, causing said beam to impinge on a sample, the electron diffraction spectrum of which is to be measured, subjecting the undiffracted beam and the divergent diffracted rays to electron optical magnification not exceeding 20 diameters and through a field stop sufficiently large to pass a large portion of an electron diffraction pattern to produce a magnified image of the diffracted rays on a predetermined plane.



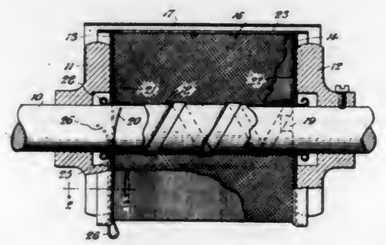
2,457,093

APPARATUS FOR CONVERSION OF HYDROCARBONS

Thomas P. Simpson and Louis P. Evans, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application August 3, 1943, Serial No. 497,178
5 Claims. (Cl. 23—288)

1. In a reactor for converting fluid reactants in the presence of a moving particle-form solid contact mass material, means defining a vertical reaction chamber, means to introduce fluid reactants thereinto located near one end thereof, means to remove reaction products located near the opposite end of the reaction chamber, a contact mass feed hopper located above said reaction chamber, at least one fixed contact mass feed pipe extending from said feed hopper into said reaction chamber, a plurality of orifices distributed along the length of said feed pipe and at different levels in said reaction chamber, orifice selecting means whereby orifices at one level may be held open while orifices at other levels are held closed to permit discharge of the con-



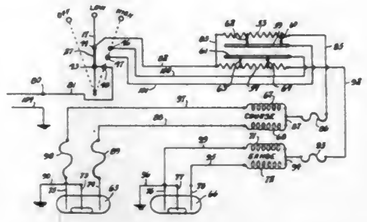
tact mass into the reaction chamber at any selected level, means to remove contact mass from the bottom or the reaction chamber, and control means thereover which may be adjusted in relation to the rate of contact mass feed to maintain the reaction chamber substantially filled with contact mass up to the selected level of contact mass feed.

2,457,094

METHOD OF PACKAGING WIRE

John H. Smith, Upper Darby, Pa., assignor to General Cable Corporation, New York, N. Y., a corporation of New Jersey

Application February 24, 1945, Serial No. 579,654
15 Claims. (Cl. 29—148)



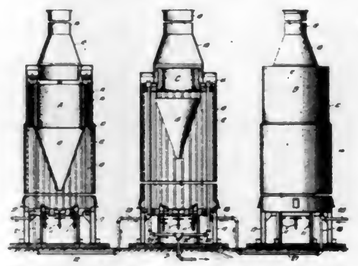
9. The method of packaging wire, which method comprises helically wrapping a lining material on a mandrel between end discs, connecting an end portion of a wire to the outer end of the helically wound lining, winding the wire over the lining to form a coil, continuing the winding of the coil until it acquires a predetermined diameter, applying a shell around the coil, connecting the shell to the end discs to complete the package and then removing the mandrel to leave the leading end of the helically wound lining accessible for pulling the lining and wire end out of the package when the wire is to be used.

2,457,095

RHEOSTAT WITH RECTILINEAR SLIDE

Fred P. Strother, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application December 26, 1944, Serial No. 569,693
7 Claims. (Cl. 201—48)



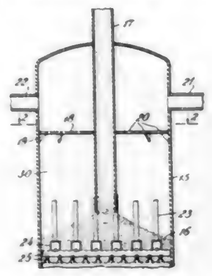
1. In a control: a resistance winding; a shorting bar; a plurality of contact members slidably mounted on said shorting bar for making movable connection with said winding; a multi-position switch; an input connection; an output connection; means connecting one end of said winding to said output connection; means, including said switch in one of its positions, for connecting said input connection to the other end of said winding; and means, including said switch in another of its said positions, for connecting said input connection to said shorting bar.

2,457,096

METHOD OF HEATING FLUIDS

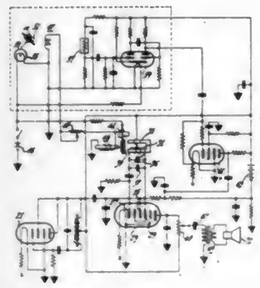
Harry R. Swanson, Katonah, N. Y., assignor, by mesne assignments, to Petro-Chem Process Company Incorporated, New York, N. Y., a corporation of Delaware

Application March 20, 1943, Serial No. 479,923
2 Claims. (Cl. 196—66)



1. In the conversion of light hydrocarbons, the steps of heating a light oil in a first zone to a predetermined outlet temperature, heating separately in a second zone a normally gaseous fluid to a temperature different from that to which the fluid is heated in said first zone, then passing streams from said first and second zones separately into a third zone where the temperatures of the two streams are increased by a common heat source, combining said streams in the third zone and regulating the discharge temperature from said third zone by independently controlling the temperatures of the fluids passing from said first and second zones into said third zone.

2,457,097
POLYMERIC COMPOSITION AND METHOD OF MAKING SAME
Theodore A. Te Grotenhuis, Olmsted Falls, Ohio
No Drawing. Application October 21, 1944, Serial No. 559,848
14 Claims. (Cl. 260—29.7)

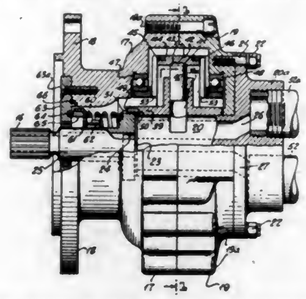


1. A latex comprising an aqueous dispersion of an unmasticated polymerization-cross-linked polymerization product of a liquid comprising butadiene and styrene as main polymerizable constituents and of a polymerization product having relatively few cross links and of a liquid comprising butadiene and styrene as main polymerizable ingredients, said polymerization-cross-linked product being relatively tough and having a high resistance to plastic flow compared to said polymerization product having relatively few cross links, the mass of said polymerization-cross-linked polymerization product being at least equal to the mass of said product having relatively few cross links, a substantial proportion of said product having relatively few cross links being relatively free of a continuous phase of relatively tough product, whereby upon mastication of the dried coagulum from said latex the polymerization product having relatively few cross links being more plastic than the cross-linked product coalesces into a matrix having particles of the relatively tough polymerization - cross - linked product distributed therethrough, said dried coagulum being vulcanizable to the resilient state generally characteristic of vulcanized soft rubber.

2,457,098
APPARATUS FOR CONDUCTING REACTIONS IN THE PRESENCE OF A CONTACT MASS
Ernest Utterback, Upper Darby, and Edward L. Sinclair, Philadelphia, Pa., and John A. Crowley, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application July 29, 1943, Serial No. 496,648
6 Claims. (Cl. 23—288)

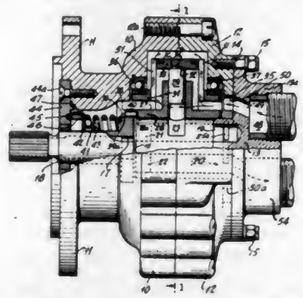
1. In a reactor wherein gasiform hydrocarbons are contacted with a downwardly moving column of particle-form solid contact mass material, a substantially vertical reactor vessel having a substantially constant horizontal cross-sectional area along a major portion of its vertical length, conduit means adapted for substantially continuous introduction of contact material into said reactor extending downwardly into said reactor and extending vertically within said reactor a substantial distance within said major portion of the reactor length wherein the horizontal cross-sectional area is substantially constant, thereby providing within the upper section of said reactor above the lower extremity of said conduit means a substantially vertical straight gas disengaging space having a cross-sectional area for gas flow along its entire length substantially equal to the total cross-sectional area of that portion of said reactor which is below the lower extremity of said conduit means and which is occupied by a substantially compact column of said contact material, an outlet for hydrocarbons spaced substantially above the lower extremity of said conduit means, and between the level of said outlet and said disengaging space baffle means across said reactor defining the upper extremity of said disengaging space and adapted to provide a plurality of apertures substantially uniformly distributed with respect to the cross-sectional area of the reactor, said apertures having a total gas passage area sufficiently restricted to cause a substantial pressure differential between said disengaging space and said outlet.

2,457,099
ELECTRONIC READING AID FOR THE BLIND
Vladimir K. Zworykin and Leslie E. Flory, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application June 8, 1946, Serial No. 675,506
7 Claims. (Cl. 250—41.5)



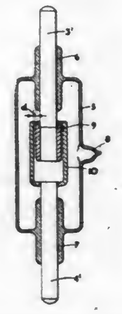
1. In a reading aid having a variable frequency oscillator and a light source for scanning a line of printed matter, the combination of an intermittent contact vibrator having a vibratable armature, a reactance element which controls the frequency of operation of said oscillator, means including said armature for varying the reactance of said element in accordance with the movement of said armature to thereby modulate the frequency of said oscillator, and means controlled by said vibrator for moving a beam of light from said source so as to scan said line of printed matter in synchronism with the modulation of the frequency of said oscillator.

2,457,100
HYDRAULIC MOTOR WITH ROTATING RADIAL CYLINDER BLOCK AND RECIPROCATING PISTONS REACTING AGAINST OUTSIDE ANNULAR GROOVED CAM
Roger F. Horton, Hempstead, N. Y.
Application November 11, 1944, Serial No. 562,947
24 Claims. (Cl. 121—61)



3. In a radial power converter, a rotatable cylinder block having a number of radial cylinders and pistons in said cylinders respectively, and a rotatable track ring engaged by said pistons, the heads of said pistons being spherical with the outermost extremities thereof removed to provide a spherical segment and said track ring having a circumferential groove in which said pistons travel and adapted to contact the spherical surfaces of said spherical segments.

4. In a radial motor, a casing, a pintle mounted centrally in the casing and having a port to receive low pressure propulsion fluid for discharge

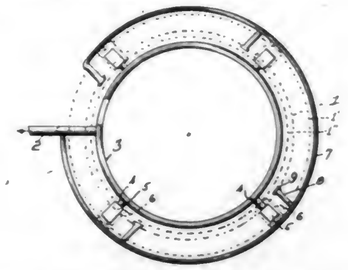


from the motor, and a conduit extending through the casing wall and communicating between the interior of the casing and said port.

2,457,101
HYDRAULIC PUMP
Roger F. Horton, Hempstead, N. Y.
Application February 28, 1945, Serial No. 580,142
8 Claims. (Cl. 103—161)

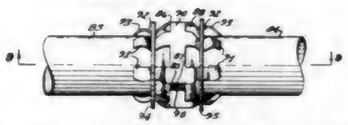
1. In a radial pump, a casing, a pintle mounted centrally in the casing, and a rotor assembly rotatable in said casing around said pintle including a radial cylinder block, a track ring, means for supporting the track ring comprising members positioned on opposite sides of the rotor each having an annular, radially extending disk-like portion and a hub portion, said casing having bearings to receive said hubs respectively, said disk-like portions having their outer peripheries in interengagement with the sides of the track ring respectively, said pintle having two axially extending bores and two circumferentially spaced ports communicating between said bores respectively and the interior of said cylinder block, and having a third port communicating with one of said bores, and spaced axially of the pintle from said other ports, a conduit extending through the casing wall and communicating between the interior of the casing and said third port, means for delivering low pressure fluid into said casing, means for acting on the fluid within the casing to increase its rate of flow from within the casing to the interior of the cylinder block, said means comprising cut outs in said disk-like portions extending radially of said portions and open at the outer periphery of said portions forming slots adapted to be filled with fluid within the casing and to discharge it under centrifugal force, and conduit means adapted to register with one of the said pintle bores to receive high pressure fluid from the pump.

2,457,102
SPARK GAP
Frank Llewellyn Jones, Millbank, London, England, assignor to Minister of Supply in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England
Application March 27, 1945, Serial No. 585,165
In Great Britain February 17, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 4, 1962
2 Claims. (Cl. 315—56)



1. A spark gap device comprising electrodes, arranged in parallel spaced relationship such that a substantially uniform electric field is creatable between them, made of materials having thermionic work functions greater than 4.0 electron volts, at least one electrode surface having deposited thereon an oxide of the material of the electrode to enable the gap to operate at a high sparking rate, the electrodes being rigidly mounted and spaced apart a distance greater than approximately 0.2 mm. within a sealed envelope filled with nitrogen at a pressure of between 50 and 100 cm. mercury at 15° C.

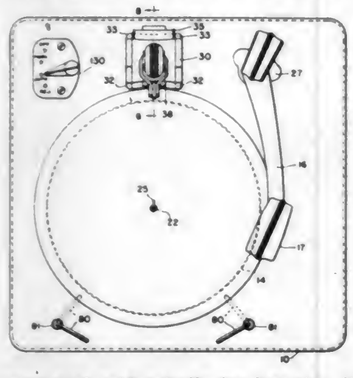
2,457,103
FIRE HAZARD AND SAFETY DEVICE FOR AIRPLANES
Nazaire Lacrotte, Paris, France; Le Directeur des Domaines, temporary (provisional) executor or administrator of the estate of said Lacrotte, deceased
Application April 25, 1938, Serial No. 204,097
In Luxemburg April 26, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires April 26, 1957
6 Claims. (Cl. 244—1)



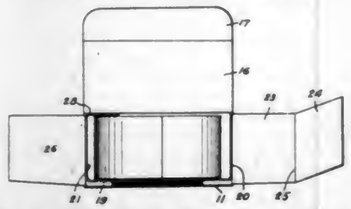
1. A safety device for aeroplanes, comprising in combination with an aeroplane body; a movable cockpit, means pivotally connecting said cockpit with the aeroplane body, a seat means connected with said seat and said cockpit for suspending said seat from the roof of said cockpit, a telescopic buffer connected with said aeroplane body and the second-mentioned means, another telescopic buffer situated at the front of the aeroplane body, and means connecting the second-mentioned buffer with said seat.

2,457,104
SUCTION APPARATUS FOR KNITTING MACHINES
David Pelton Moore, Roslyn, N. Y., assignor to Godfrey Bloch, Incorporated, a corporation of Delaware
Application June 22, 1946, Serial No. 678,588
5 Claims. (Cl. 66—9)

1. The combination with a rotary cylinder knitting machine, and a fiber feeding machine having a needle feeding brush for wiping short loose fibers into the needles in transit, of air suction means for carrying away any flying fibers from the rotary brush of the fiber feeding machine, and suction means for drawing the free ends of the needle held fibers to the outer sides of the shanks of the needles.



2,457,105
COUPLING
Charles E. Patterson, Los Angeles, Calif.
Application December 20, 1944, Serial No. 569,007
8 Claims. (Cl. 285—163)

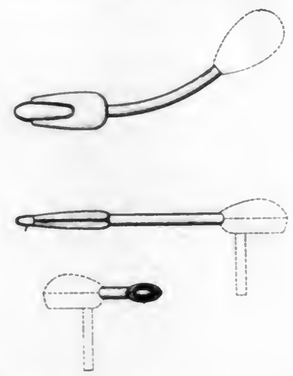


1. In connecting means, telescoping, tubular conduit elements; a resilient, deformable ring between the elements, the elements being dimensioned to frictionally engage the ring means as the elements are slid together, deforming the ring means during such sliding connection to place the ring under compression, a band around overlapping parts of the elements and inter-engaging with the elements and holding same together, the band having resilient fingers projecting in opposite directions and providing recesses peripherally and rigid ring means surrounding the band and disposed in the recesses and clamping the band in its element engaging position.

2,457,106
PHONOGRAPH APPARATUS
Jackson H. Pressley, Marion, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application January 24, 1944, Serial No. 519,430
16 Claims. (Cl. 274—10)

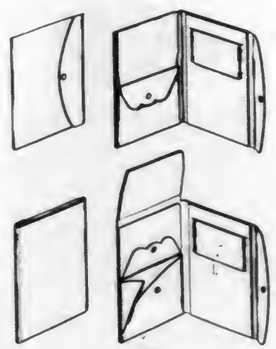
1. An automatic phonograph comprising a turntable, a spindle centered with respect to said turntable and including a shoulder adapted to engage the lowermost record of a record stack adjacent its centering aperture, a first peripheral record-supporting means including shelves movable for engaging the peripheral edge portions of either a small or a large record in said stack, a second peripheral record-supporting means disposed adjacent said turntable and opposite said first peripheral record-supporting means and pivotally mounted for movement under or away from the peripheral edge of said lowermost record, means for driving said phonograph, cam means operatively associated with said driving means and said spindle for elevating it, cam means operatively associated with said driving means and said second peripheral record-supporting means for rotating it into supporting relation with said lowermost record after said spindle is elevated, cam means operatively associated with said driving means and said spindle for lowering it after said second peripheral record-supporting means is operated, record-moving means operatively associated with said driving means and said movable shelves for moving them toward or away from said spindle to move a record to such a position that its centering aperture is in alignment with said spindle and to release a record and cam means operatively associated with said driving means for returning said second peripheral record-supporting means to its original position simultaneously with movement of said shelves away from said spindle to drop said record to the turntable.

2,457,107
DISPENSING CONTAINER
Stanley Verner, Montreal, Quebec, Canada
Application February 24, 1945, Serial No. 579,585
In Canada November 30, 1944
2 Claims. (Cl. 229—27)



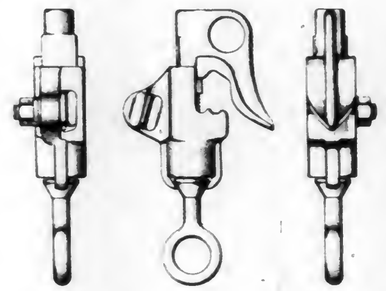
1. In a container of the character described for housing a supply of gummed paper and formed from a single sheet of material, the combination of integral front, back, side, and bottom walls, a pocket in said container, said pocket comprising an auxiliary wall integral with the bottom edge of said front wall, and connected thereto by a folded edge and slightly spaced inwardly therefrom, a pair of opposite auxiliary flaps extending from said auxiliary wall, said auxiliary flaps overlying the inner surfaces of said side walls.

DESIGNS



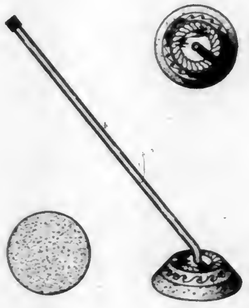
DECEMBER 21, 1948

152,133
DESIGN FOR A TONE ARM
Lloyd J. Andres, Itasca, Ill., assignor to Fidelitone Incorporated, Chicago, Ill., a corporation of Illinois
Application April 23, 1947, Serial No. 138,569
Term of patent 14 years
(Cl. D26—14)



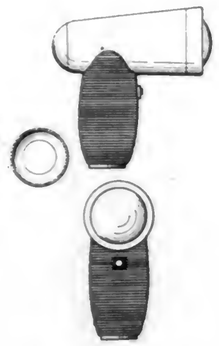
The ornamental design for a tone arm, substantially as shown and described.

152,134
DESIGN FOR A COMBINED BILLFOLD, PURSE, AND MEMORANDUM PAD HOLDER
Howard A. Bauman, West Bend, Wis., assignor to Enger-Kress Company, West Bend, Wis., a corporation of Wisconsin
Application September 20, 1947, Serial No. 141,506
Term of patent 3½ years
(Cl. D87—3)



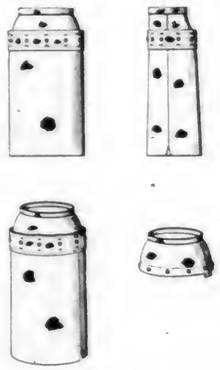
The ornamental design for a combined billfold, purse, and memorandum pad holder, as shown.

152,135
DESIGN FOR A HOT LINE TAP
Stephen P. Becker, Poughkeepsie, N. Y.
Application March 23, 1946, Serial No. 127,881
Term of patent 7 years
(Cl. D26—1)



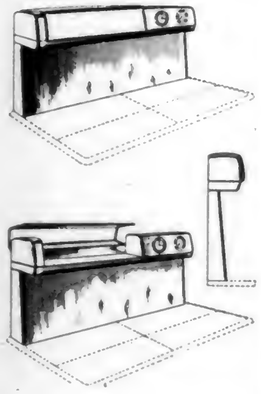
The ornamental design for a hot line tap, as shown.

152,136
DESIGN FOR A WASHING DEVICE OR SIMILAR ARTICLE
James D. Berry, Los Angeles, Calif.
Application June 7, 1948, Serial No. 146,799
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a washing device or similar article, substantially as shown.

152,137
DESIGN FOR A FLASHLIGHT OR SIMILAR ARTICLE
Sidney Bersudsky, Sidney, Nova Scotia, Canada
Application June 3, 1947, Serial No. 139,425
Term of patent 7 years
(Cl. D48—25)



The ornamental design for a flash light or similar article, substantially as shown.

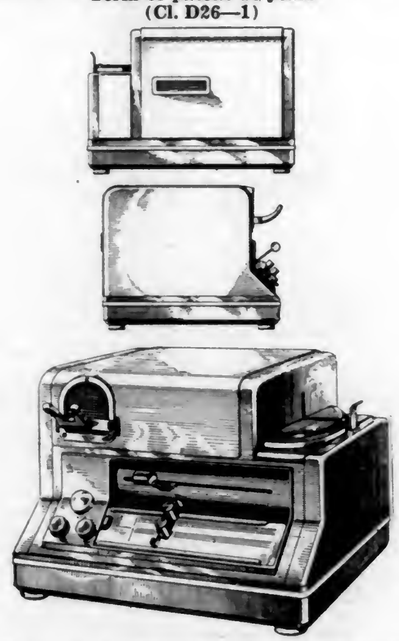
152,138
DESIGN FOR A SKIRT ENSEMBLE OR SIMILAR ARTICLE OF WEARING APPAREL
Oscar H. Cohen, Brighton, Mass., assignor to Century Sportswear Co., Inc., Boston, Mass., a corporation of Massachusetts
Application May 12, 1948, Serial No. 146,326
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a skirt ensemble or similar article of wearing apparel, substantially as shown and described.

152,139
DESIGN FOR A COMBINED TOP, BACK GUARD PANEL, TIMER, AND UTILITY COMPARTMENT FOR A COOKING RANGE
Laird F. Covey, Stamford, Conn., assignor to Boston Stove Foundry Company, Reading, Mass., a corporation of Massachusetts
Application February 6, 1948, Serial No. 144,335
Term of patent 14 years
(Cl. D81—25)

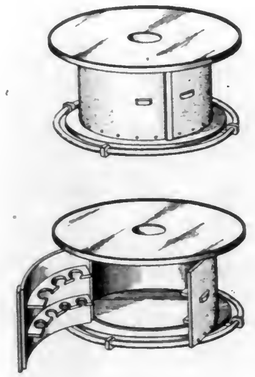
The ornamental design for a combined top, back guard panel, timer, and utility compartment for a cooking range, as shown and described.

152,140
DESIGN FOR A CARGO CONTAINER
Marion B. Crawford, Western Springs, and Edwin C. Mitchell, Oak Park, Ill., assignors to United Air Lines, Inc., Chicago, Ill., a corporation of Delaware
Application March 20, 1946, Serial No. 127,714
Term of patent 7 years
(Cl. D58—4)



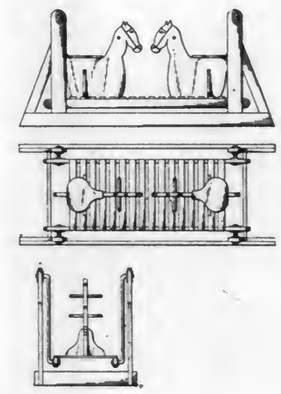
The ornamental design for a cargo container, substantially as shown.

152,141
DESIGN FOR A CARGO CONTAINER
Marion B. Crawford, Western Springs, and Edwin C. Mitchell, Oak Park, Ill., assignors to United Air Lines, Inc., Chicago, Ill., a corporation of Delaware
Application March 20, 1946, Serial No. 127,715
Term of patent 7 years
(Cl. D58—4)



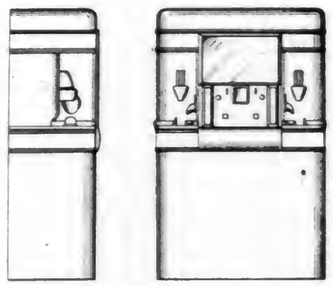
The ornamental design for a cargo container, substantially as shown.

152,142
DESIGN FOR A DICTATING MACHINE
Charles W. Dann, Malden, Mass., and Gustav F. Braun, Elizabeth, and Richard M. Somers, West Orange, N. J., assignors to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application November 18, 1947, Serial No. 142,616
Term of patent 14 years
(Cl. D26—1)



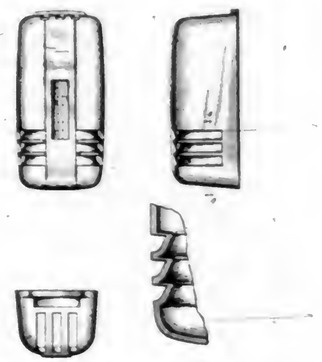
The ornamental design for a dictating machine, substantially as shown.

152,143
DESIGN FOR A COMBINATION COFFEE TABLE AND BAR
Gordon Douglas, Los Angeles, Calif.
Application June 29, 1946, Serial No. 131,160
Term of patent 14 years
(Cl. D33—19)



The ornamental design for a combination coffee table and bar, as shown.

152,144
DESIGN FOR A GLIDER SWING
Matthew L. Drewniak, Buffalo, N. Y.
Application April 15, 1946, Serial No. 128,611
Term of patent 7 years
(Cl. D15—11)

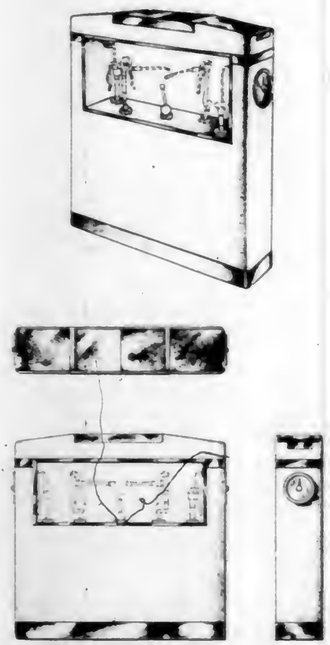


The ornamental design for a glider swing, substantially as shown.

152,145
DESIGN FOR A DRINK VENDING MACHINE
William J. During, Fayetteville, and John J. Punke, Dewitt, N. Y., assignors to C. C. Bradley & Son, Inc., Syracuse, N. Y., a corporation of New York
Application November 15, 1946, Serial No. 134,810
Term of patent 14 years
(Cl. D52—3)

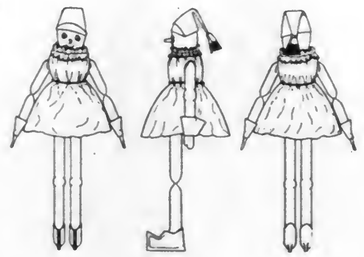
The ornamental design for a drink vending machine, substantially as shown.

152,146
DESIGN FOR A THERMOSTAT COVER
Joseph G. Eldridge, Spring Valley, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application March 13, 1947, Serial No. 137,588
Term of patent 7 years
(Cl. D52—7)



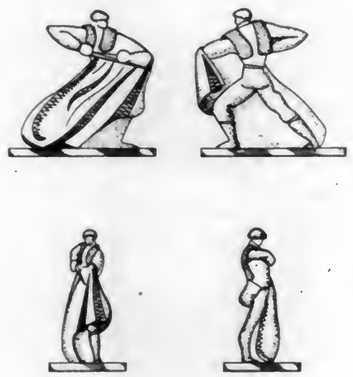
The ornamental design for a thermostat cover, substantially as shown and described.

152,147
DESIGN FOR A WATCH BAND CLIP
George M. Ellesson, Bridal Veil, Oreg., assignor to G. M. Ellesson Company, Chicago, Ill., a corporation of Illinois
Application March 17, 1948, Serial No. 145,179
Term of patent 14 years
(Cl. D45—4)



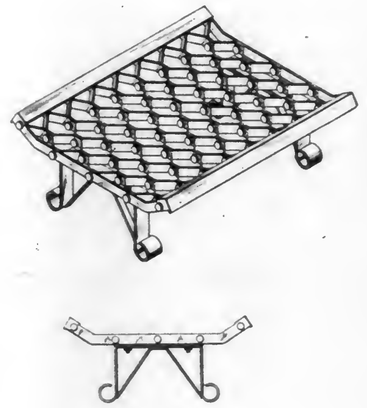
The ornamental design for a watch band clip, substantially as shown.

152,148
DESIGN FOR A CABINET FOR LUBRICATING EQUIPMENT
Richard P. Field, Cincinnati, Ohio, assignor to Balcrank, Inc., Disney, near Marburg, Cincinnati, Ohio, a corporation of Ohio
Application January 14, 1947, Serial No. 136,143
Term of patent 7 years
(Cl. D52—2)



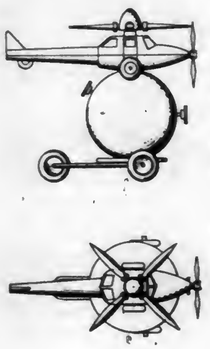
The ornamental design for a cabinet for lubricating equipment, substantially as shown and described.

152,149
DESIGN FOR A DOLL
Alex Fine, St. Paul, Minn., assignor to Stuart Inc., St. Paul, Minn., a corporation of Minnesota
Application February 6, 1947, Serial No. 136,730
Term of patent 14 years
(Cl. D34—4)



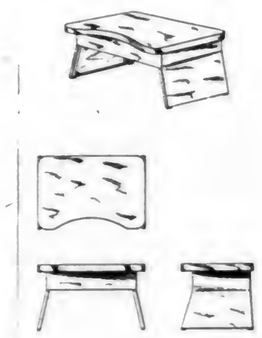
The ornamental design for a doll, as shown.

152,150
DESIGN FOR A TOY FIGURE
Marvin Glass, Chicago, Ill.
Application August 1, 1946, Serial No. 132,166
Term of patent 3½ years
(Cl. D34—15)



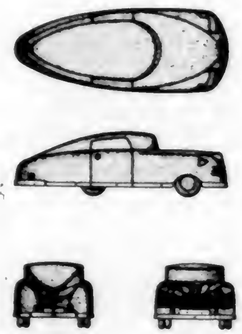
The ornamental design for a toy figure, as shown.

152,151
DESIGN FOR A FIRE GRATE
Fred W. Goodwin, Berkeley, Calif.
Application December 31, 1946, Serial No. 135,857
Term of patent 14 years
(Cl. D81—18)



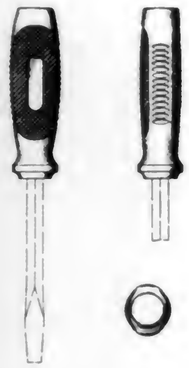
The design for a fire grate, substantially as shown.

152,152
DESIGN FOR AN AIRPLANE TOY
Andrew Halvas, Astoria, N. Y.
Application August 2, 1946, Serial No. 132,243
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for an airplane toy, as shown.

152,153
DESIGN FOR A STEP
Norman J. Harvey, Bellevue, Nebr.
Application May 1, 1946, Serial No. 129,169
Term of patent 14 years
(Cl. D15—8)

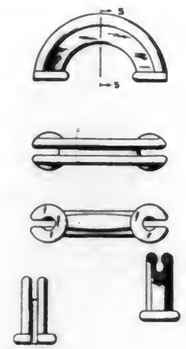


The ornamental design for a step, as shown.

152,154
DESIGN FOR A TOY AUTOMOBILE
William Edward Hoffmann, St. Louis, Mo., assignor to Timely Toys, Inc., St. Louis, Mo., a corporation of Missouri
Application October 28, 1946, Serial No. 134,350
Term of patent 14 years
(Cl. D34—15)

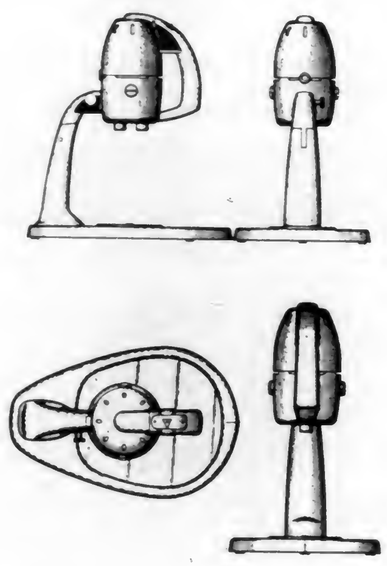
The ornamental design for a toy automobile, substantially as shown.

152,155
DESIGN FOR A SCREW DRIVER
Sydney Jacoff, Kew Gardens, N. Y.
Application August 14, 1947, Serial No. 140,862
Term of patent 14 years
(Cl. D93—4)



The ornamental design for a screw driver, as shown and described.

152,156
DESIGN FOR A RADIO RECEIVER CABINET
Albert L. Jenks, Dixon, Ill., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application August 23, 1947, Serial No. 141,026
Term of patent 7 years
(Cl. D56—4)

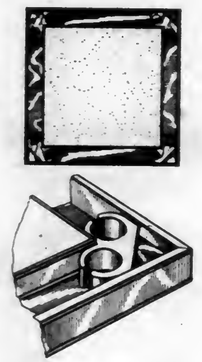


The ornamental design for a radio receiver cabinet, substantially as shown and described.

152,157
DESIGN FOR A HAND PROTECTING GRIP
Llewellyn T. Jones, Akron, Ohio
Application November 6, 1946, Serial No. 134,547
Term of patent 3½ years
(Cl. D17—5)

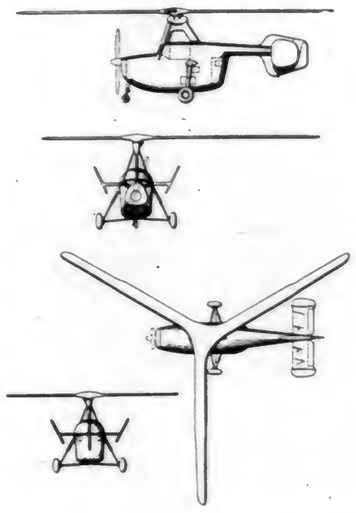
The ornamental design for a hand protecting grip, as shown.

152,158
DESIGN FOR A FOOD MIXER
Clarence Karstadt, Glen Ellyn, Ill.
Application January 11, 1947, Serial No. 136,095
Term of patent 14 years
(Cl. D44—1)



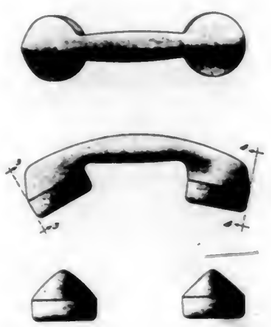
The ornamental design for a food mixer, as shown.

152,159
DESIGN FOR A PITCHER
Robert J. Kemper, San Carlos, Calif.
Application November 12, 1946, Serial No. 134,724
Term of patent 14 years
(Cl. D44—21)



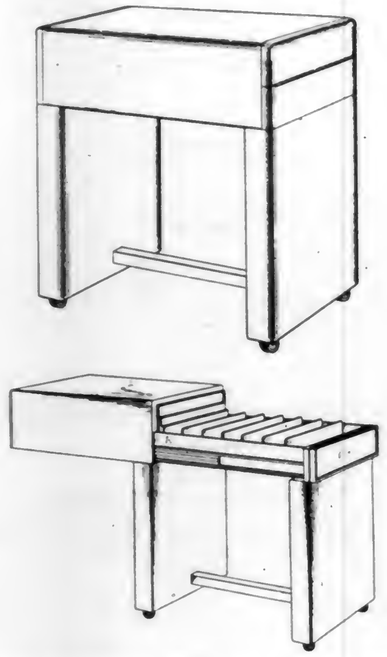
The ornamental design for a pitcher, as shown.

152,160
DESIGN FOR A GAME TABLE TOP
Joseph Klotz, Chicago, Ill., assignor to Mason-Williams Company, Chicago, Ill., a corporation of Illinois
Application June 21, 1947, Serial No. 139,858
Term of patent 14 years
(Cl. D33—14)



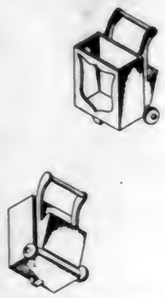
The ornamental design for a game table top, as shown.

152,161
DESIGN FOR A ROTARY WINGED AIRCRAFT
Frederick J. Knack, New York, N. Y., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 25, 1946, Serial No. 130,063
Term of patent 14 years
(Cl. D71—1)



The ornamental design for a rotary winged aircraft, as shown and described.

152,162
DESIGN FOR A TELEPHONE HAND SET
Louis Kniep, Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 24, 1947, Serial No. 137,830
Term of patent 14 years
(Cl. D26—14)



The ornamental design for a telephone hand set, substantially as shown.

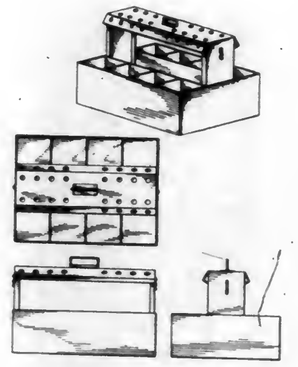
152,163
DESIGN FOR A RECORD FILE
George H. Kress, Johnson City, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application January 31, 1947, Serial No. 136,605
Term of patent 14 years
(Cl. D33—19)

The ornamental design for a record file, as shown and described.

152,164
DESIGN FOR A COMBINATION CIGARETTE AND MATCH CONTAINER
Henry E. Larsen, Hollywood, Calif.
Application September 29, 1947, Serial No. 141,639
Term of patent 14 years
(Cl. D85—2)

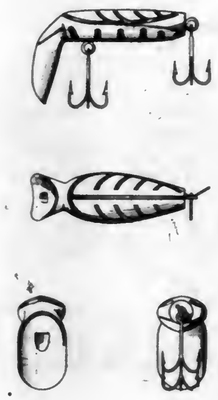
The ornamental design for a combination cigarette and match container, substantially as shown.

152,165
DESIGN FOR A WHIRLING TOY
John Merrico, Amelia, Ohio
Application January 21, 1947, Serial No. 136,268
Term of patent 14 years
(Cl. D34—15)



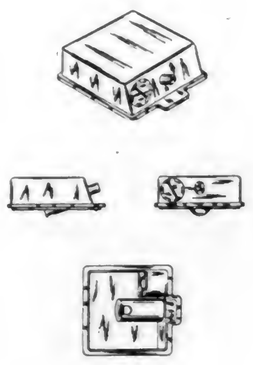
The ornamental design for a whirling toy, as shown and described.

152,166
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Robert E. Minger, Manhattan Beach, Calif., assignor to Mabs, Inc., Los Angeles, Calif., a corporation of California
Application November 6, 1947, Serial No. 142,341
Term of patent 3½ years
(Cl. D92—1)



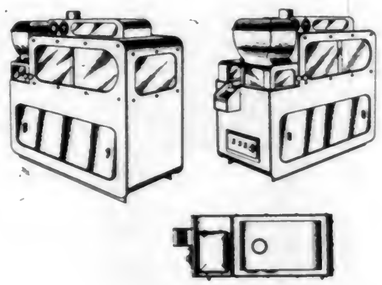
The ornamental design for a textile fabric or similar article, substantially as shown and described.

152,167
DESIGN FOR A PARTS BOX
Gerald C. Montague, Urbana, Ohio
Application June 24, 1946, Serial No. 130,969
Term of patent 14 years
(Cl. D58—13)



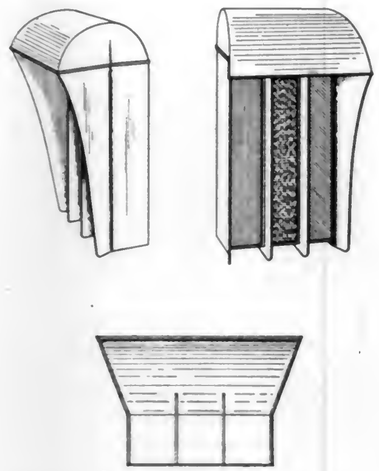
The ornamental design for a parts box, substantially as shown.

152,168
DESIGN FOR A FISH LURE
Berlee M. Potter, El Dorado, Kans.
Application June 6, 1946, Serial No. 130,471
Term of patent 14 years
(Cl. D31—4)



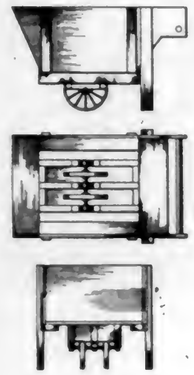
The ornamental design for a fish lure, as shown.

152,169
DESIGN FOR A STORAGE BATTERY COVER
Robert M. Raney, Euclid, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application September 25, 1946, Serial No. 133,566
Term of patent 14 years
(Cl. D26—6)



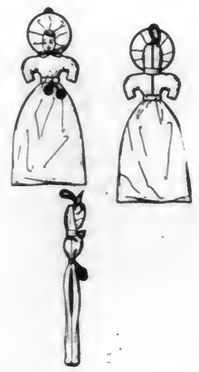
The ornamental design for a storage battery cover, substantially as shown.

152,170
DESIGN FOR AN AUTOMATIC DOUGHNUT MACHINE
Ernest J. Roth, Rockleigh, N. J., assignor to Joe Lowe Corporation, New York, N. Y., a corporation of Delaware
Application June 10, 1947, Serial No. 139,558
Term of patent 14 years
(Cl. D81—10)



The ornamental design for an automatic doughnut machine, as shown and described.

152,171
DESIGN FOR A TRAFFIC SIGNAL OR SIMILAR ARTICLE
Peyton R. Russell, Beaver, Pa.
Application September 4, 1946, Serial No. 133,054
Term of patent 14 years
(Cl. D72—1)

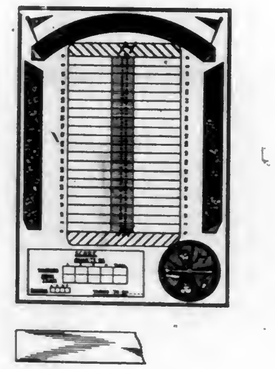


The ornamental design for a traffic signal or similar article, as shown.

152,172
DESIGN FOR A WHEELBARROW
Lee H. Ryder, Dover, N. H.
Application September 9, 1947, Serial No. 141,280
Term of patent 7 years
(Cl. D14—3)

The ornamental design for a wheelbarrow, as shown.

152,173
DESIGN FOR A LAUNDRY BAG OR THE LIKE
William Seidler, New York, N. Y.
Application November 10, 1947, Serial No. 142,422
Term of patent 3½ years
(Cl. D58—2)

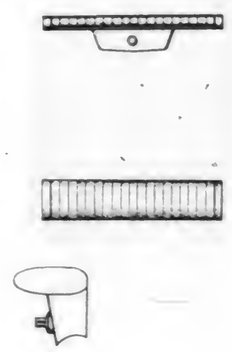


The ornamental design for a laundry bag or the like, as shown.

152,174
DESIGN FOR A GAME BOARD
Max H. Silverman, New York, N. Y.
Application February 27, 1947, Serial No. 137,199
Term of patent 3½ years
(Cl. D34—5)

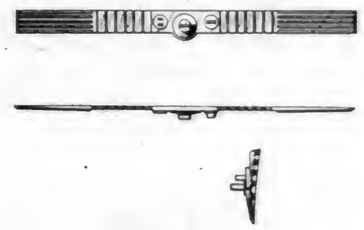
The ornamental design for a game board, as shown and described.

152,175
DESIGN FOR A GAME BOARD
Max H. Silverman, New York, N. Y.
Application February 27, 1947, Serial No. 137,200
Term of patent 3½ years
(Cl. D34—5)



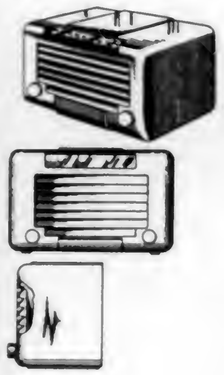
The ornamental design for a game board, as shown and described.

152,176
DESIGN FOR A FISH LURE
Alexander Sisco, Bronson, Mich., assignor to Shurebite Inc., Bronson, Mich., a corporation of Michigan
Application May 31, 1946, Serial No. 130,298
Term of patent 14 years
(Cl. D31—4)



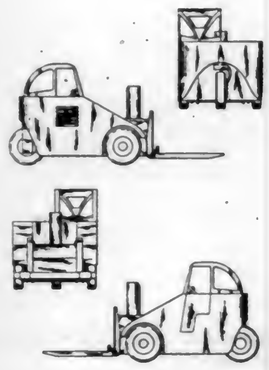
The ornamental design for a fish lure, as shown.

152,177
DESIGN FOR AN ACCESSORY LAMP FOR A COOK STOVE
Bertrand N. Trombley, Birmingham, Mich., assignor to The Murray Corporation of America, Detroit, Mich., a corporation of Delaware
Application March 28, 1946, Serial No. 128,030
Term of patent 7 years
(Cl. D81—25)



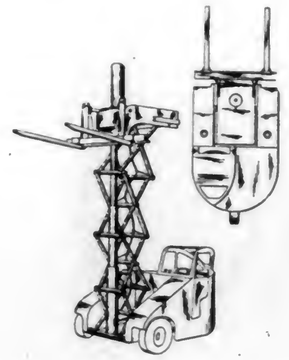
The ornamental design for an accessory lamp for a cook stove, substantially as shown.

152,178
DESIGN FOR A SPLASH BACK TRIM FOR A STOVE
Bertrand N. Trombley, Birmingham, Mich., assignor to The Murray Corporation of America, Detroit, Mich., a corporation of Delaware
Application March 28, 1946, Serial No. 128,031
Term of patent 7 years
(Cl. D81—25)



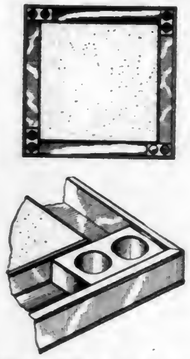
The ornamental design for a splash back trim for a stove, substantially as shown.

152,179
DESIGN FOR A RADIO CABINET
Earl M. Valley, Englewood, Ohio
Application May 3, 1946, Serial No. 129,289
Term of patent 3½ years
(Cl. D56—4)



The ornamental design for a radio cabinet, substantially as shown.

152,180
DESIGN FOR A LIFT TRUCK
Elmer A. Wagner, Portland, Oreg.
Application June 21, 1947, Serial No. 139,865
Term of patent 14 years
(Cl. D14—3)



152,180—Continued

The ornamental design for a lift truck, substantially as shown.

152,181
DESIGN FOR A GAME TABLE TOP
Michael M. Warner, Winnetka, Ill., assignor to Mason-Williams Company, Chicago, Ill., a corporation of Illinois
Application June 28, 1947, Serial No. 139,988
Term of patent 14 years
(Cl. D33—14)

The ornamental design fora game table top, as shown.

Condition of Applications Under Examination at Close of Business Dec. 10, 1948

Total number of patent applications awaiting action, 153,961. Date of oldest new application, December 3, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	6-26-47	5-15-47	2835
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-19-47	11-19-46	2930
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	3-23-48	3-12-48	1261
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	4-11-47	3-12-47	4124
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	7-5-47	1-4-47	1670
6. SURLE, H., Carbon Chemistry (part)	2-11-48	11-12-47	1898
7. HANLIN, GEORGE, Optics; Photographic Apparatus	3-12-48	12-16-47	1669
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	4-16-47	1-17-47	4484
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-10-47	2-24-47	2463
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	3-22-48	1-27-48	1546
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	1-3-48	3-29-48	813
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	12-30-47 12-3-46	10-5-46 12-18-46	2242 2424
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	2-16-48	12-3-47	1343
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	8-4-47	6-12-47	2018
15. HENKIN, B. Plastics; Plastic Block and Earthenware Apparatus; Glass	3-16-48	8-28-47	1610
16. LOVEWELL, N. N., Television; Telephony	5-28-47	11-8-46	2130
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	8-27-47	12-19-46	2102
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	12-29-47	3-17-47	1859
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	4-25-47	3-12-47	2068
20. BROWN, L. M., Miscellaneous Hardware; Closure Fastners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	12-20-47	10-22-47	1246
21. MADER, R. C., Textiles	1-23-47	4-17-47	1727
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	1-7-48	12-21-46	1172
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	11-14-47	10-10-47	2804
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	3-12-48	4-18-47	1753
25 BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	7-12-47	3-7-47	1298
26. YOUNG, R. R., Electricity—Generation, Motive Power, Transmission to Vehicles; Elevators	7-31-47	2-7-47	3677
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	11-25-47	11-24-47	931
28. BRAUNER, R. H., (Acting), Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Vehicle Fenders.	4-7-47	4-17-47	3199
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	2-20-48	1-5-48	1109
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	4-2-48	4-1-48	2092
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	5-14-47	11-5-46	3205
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	4-10-47	1-9-47	3637
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	8-11-47	1-17-47	1414
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	7-21-47	12-31-46	3459
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	1-3-47	11-13-46	2021
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	3-8-48	5-16-47	1379
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	9-9-47	7-15-47	1661
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	8-11-47	10-2-46	3096
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	2-6-48	3-3-47	3279
40. DRUMMOND, E. J., Receptacles (part); Packages	2-2-48	11-15-46	2289
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	4-23-48	3-17-48	1185
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	3-20-48	1-21-48	1206
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	12-19-46	10-15-46	1025
44. HARVEY, L. P., Refrigeration; Preserving	6-25-47	11-22-46	2549
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	8-7-47	1-9-47	1866
46. MUSHAKE, W. L., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.			

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 153,961. Date of oldest new application, December 3, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended

Pharmaceutical preparation. U. S. Standard Products Co. 434,432, Nov. 18, 1947. Republished Dec. 28.
Plasticizers. Pan American Refining Corporation. 505,296, Dec. 28; Serial No. 548,681, published Sept. 21, 1948.
Poison, Rat, mouse, mole, and gopher, etc. W. R. Sweeney, Mfgr. 505,274, Dec. 28; Serial No. 544,478, published Sept. 21, 1948.
Powders of trisodium phosphate base, Water-softening. Rex Products & Mfg. Company. 220,486, renewed Nov. 9, 1946. O. G. Dec. 28.
Preparation containing fungicidal, germicidal, and deodorant properties. Ridd Laboratories, Incorporated. 505,183, Dec. 28; Serial No. 528,378, published Sept. 21, 1948.
Preparation for deodorizing and treating athlete's foot. Sweet Feet, Incorporated. 343,025, Feb. 9, 1937. Republished Dec. 28.
Preparation for the relief of chapped lips, cold sores and fever sores. S. Pfeiffer Mfg. Co. 505,247, Dec. 28; Serial No. 537,730, published Sept. 7, 1948.
Preparation to relieve gastro-intestinal disorders. Nestle's Milk Products, Inc. 505,305, Dec. 28; Serial No. 550,724, published Sept. 21, 1948.
Preparation useful in the treatment of urinary infection of the colon bacillus origin. Wm. P. Poythress & Co., Inc. 312,053, Apr. 17, 1934. Republished Dec. 28.
Remedies for headache, dyspepsia, stomach catarrah, etc. Mother's Remedies Co. 71,172, re-renewed Nov. 3, 1948. O. G. Dec. 28.
Remedy for foot ailments. A. P. Foose. 99,387, Aug. 25, 1914. Republished Dec. 28.
Salt, Water softener, meat curing salt, ice cream salt, etc. Carey Salt Company. 505,246, Dec. 28; Serial No. 537,148, published Aug. 31, 1948.
Salve. Coast Laboratories. 505,301, Dec. 28; Serial No. 549,617, published Sept. 21, 1948.
Salve for drawing and healing and for treatment of boils. R. T. Dunn. 505,263, Dec. 28; Serial No. 541,748, published Sept. 21, 1948.
Salves. E. C. De Witt & Co. 45,039, Aug. 1, 1905. Republished Dec. 28.
Shampoo. Valentine Laboratories, Inc. 393,169, Jan. 27, 1942. Republished Dec. 28.
Stabilizers. Baker Castor Oil Company. 505,264, Dec. 28; Serial No. 541,910, published July 20, 1948.
Sulfonamide preparation. Smith, Kline & French Laboratories. 505,304, Dec. 28; Serial No. 550,623, published Sept. 21, 1948.
Surgical lubricant. Rutlee Chemical Company, Inc. 441,710, Dec. 28; Serial No. 515,794, published Aug. 24, 1948.
Tablet, Anti-pain. Walgreen Co. 355,102, Mar. 8, 1938. Republished Dec. 28.
Tablets. Walgreen Co. 274,643, Sept. 2, 1930. Republished Dec. 28.
Thermoplastic wax. M. E. Wallis. 441,691, Dec. 28; Serial No. 505,373, published Sept. 7, 1948.
Toilet preparations. D. Gray. 254,056, renewed Mar. 12, 1949. O. G. Dec. 28.
Vaginal dry douche. A. S. McCarthy. 505,237, Dec. 28; Serial No. 534,797, published Aug. 31, 1948.
Vegetable oil product, Processed. Pierce Oil Products Corp. 399,506, Jan. 19, 1943. Republished Dec. 28.
Vitamin preparation. Valentine Laboratories, Inc. 408,195, July 25, 1944. Republished Dec. 28.
Vitamin preparation for internal use. Olafsen Vitamins, Inc. 413,258, Apr. 17, 1945. Republished Dec. 28.
Vitamin preparation in tablet form. R. I. Guy. 505,156, Dec. 28; Serial No. 520,101, published Sept. 14, 1948.
Vitamin preparations. Distillation Products, Inc. 505,229, Dec. 28; Serial No. 534,005, published Sept. 7, 1948.

CLASS 7

Rope, cord, lines, and twine. American Manufacturing Company. 115,269, Feb. 6, 1917. Republished Dec. 28.

CLASS 8

Lighters, Pyrophoric cigar and cigarette. Match King, Inc. 323,757, Apr. 30, 1935. Republished Dec. 28.

CLASS 9

Bomb attached to the spark plugs, Whistling auto. E. H. Robertson. 505,290, Dec. 28; Serial No. 547,284, published Sept. 21, 1948.
Cartridges, Specially constructed. Hercules Powder Company. 505,288, Dec. 28; Serial No. 546,904, published Sept. 21, 1948.
Pistol holsters. H. & D. Folsom Arms Co., Inc. 505,297, Dec. 28; Serial No. 548,736, published Sept. 21, 1948.
Screw machine products. U. S. Automatic Corporation. 441,674, Dec. 28; Serial No. 486,011, published Sept. 21, 1948.
Shot shells and rifle cartridges. Olin Industries, Inc. 505,178, Dec. 28; Serial No. 527,902, published Aug. 31, 1948.

CLASS 10

Fertilizers. Central Chemical Corporation of Maryland. 353,017, Dec. 21, 1937. Republished Dec. 28.
Fertilizers. Central Chemical Corporation of Maryland. 374,186, Jan. 2, 1940. Republished Dec. 28.

CLASS 11

Carbon discs. Autographic Register Company. 505,176, Dec. 28; Serial No. 527,567, published Sept. 21, 1948.
Carbon paper, typewriter ribbons, and duplicator inks. Red Feather Products Ltd. 441,700, Dec. 28; Serial No. 512,143, published Sept. 21, 1948.

CLASS 12

Fire brick. Harbison-Walker Refractories Company. 330,697, Dec. 10, 1935. Republished Dec. 28.
Floor resurfacing material, Semi-liquid. C. M. Shelton. 441,682, Dec. 28; Serial No. 498,259, published May 6, 1947.
Flooring materials, Rubber composition, or rubber tiling. R. C. A. Rubber Company. 345,612, May 4, 1937. Republished Dec. 28.
Insulating paper, Thermal. Mosinee Paper Mills Company. 283,238, May 19, 1931. Republished Dec. 28.
Plywood, unfinished and finished lumber. Lehwood Corporation. 505,258, Dec. 28; Serial No. 540,543, published Aug. 31, 1948.
Tiling in sheet or block form, Rubber. R. C. A. Rubber Company. 345,613, May 4, 1937. Republished Dec. 28.
Windows, Storm, and storm doors. Alsco, Inc. 427,307, Feb. 4, 1947. Republished Dec. 28.

CLASS 13

Bolts. Lewis Bolt & Nut Company. 505,221, Dec. 28; Serial No. 533,034, published Sept. 21, 1948.
Chain and chains for general use, and parts thereof and attachments therefor. Union Chain and Manufacturing Company. 505,197, Dec. 28; Serial No. 529,727, published Sept. 21, 1948.
Chains, General purpose. Columbus McKinnon Chain Corporation. 441,697, Dec. 28; Serial No. 510,425, published Sept. 14, 1948.
Chains, Tire, and metal industrial chains. McKay Company. 441,677, Dec. 28; Serial No. 491,580, published Sept. 21, 1948.
Coffee pots and coffee makers, Non-electric, double boilers, sauce pans, etc. Nicro Steel Products, Incorporated. 441,695, Dec. 28; Serial No. 508,544, published Sept. 14, 1948.
Couplings, Separable hose, and hose menders. W. D. Allen Manufacturing Co. 505,151, Dec. 28; Serial No. 517,447, published Sept. 14, 1948.
Fasteners, Slide. Allen Innovations, Inc. 505,180, Dec. 28; Serial No. 528,155, published Sept. 21, 1948.
Fastening devices. Ackerman-Johnson Co. 505,175, Dec. 28; Serial No. 527,543, published Sept. 21, 1948.

Hangers or brackets. Bin-Hay Corporation. 505,219, Dec. 28; Serial No. 532,799, published Sept. 21, 1948.
Hangers, Picture. Franklin Picture Frame Co. 441,709, Dec. 28; Serial No. 515,418, published Sept. 21, 1948.
Hollow ware, Base metal cooking and table. Club Aluminum Products Co. 441,679, Dec. 28; Serial No. 495,270, published Feb. 10, 1948.
Knives, forks, spoons, ladies, tongs, tea balls, tea strainers, sifters, etc. Rogers, Lunt & Bowlen Company. 145,191, July 26, 1921. Republished Dec. 28.
Knives, forks, spoons, napkin rings, napkin markers, cups, bowls, etc. Franklin Silver Plate Company. 151,482, Feb. 7, 1922. Republished Dec. 28.
Knives, forks, spoons, tongs, ladies, sifters, pins, etc., Sterling silver. Rogers, Lunt & Bowlen Company. 88,364, Sept. 10, 1912. Republished Dec. 28.
Nuts, Safety. Société "Sécurit's" E. D. L. C. 441,689, Dec. 28; Serial No. 502,851, published Sept. 21, 1948.
Pressure cookers and canners. Lakeside Aluminum Company. 505,150, Dec. 28; Serial No. 516,703, published Sept. 21, 1948.
Screening. Wm. Richman Supply Corp. 441,739, Dec. 28; Serial No. 526,293, published Sept. 21, 1948.
Screws, bolts, nuts, metal washers, lock washers, and coil springs. Accurate Parts Manufacturing Company. 296,766, Aug. 23, 1932. Republished Dec. 28.
Skewers. J. J. Jacobson. 441,685, Dec. 28; Serial No. 499,237, published Sept. 21, 1948.
Tableware, Babies' and children's. Rogers, Lunt & Bowlen Company. 161,601, Nov. 14, 1922. Republished Dec. 28.
Tubes, Air vent. Scully Signal Company. 505,253, Dec. 28; Serial No. 539,762, published Sept. 21, 1948.
Valve stem operating mechanism for fluid control valves. Edward Valves, Inc. 505,155, Dec. 28; Serial No. 519,383, published Sept. 14, 1948.
Wire fencing. Colorado Fuel and Iron Corporation. 441,729, Dec. 28; Serial No. 523,649, published Sept. 14, 1948.

CLASS 14

Anodes, Electroplating. Hanson-Van Winkle-Munning Company. 432,438, Sept. 2, 1947. Republished Dec. 28.
Castings, Ferrous. Lakeside Malleable Castings Company. 505,139, Dec. 28; Serial No. 510,258, published Sept. 7, 1948.
Castings, Precision. Crucible Steel Company of America. 505,289, Dec. 28; Serial No. 547,236, published Sept. 7, 1948.
Drill-rods and drawn wire, Polished. Globe Wire Company, Ltd. 67,461, Feb. 4, 1908. Republished Dec. 28.
Leads, slugs, and rules cast in type metal. American Type Founders, Inc. 374,254, Jan. 2, 1940. Republished Dec. 28.
Railroad ties and rails, etc., Steel and metal. West Virginia Rail Company. 254,302, renewed Mar. 19, 1949. O. G. Dec. 28.
Solder. W. L. Ulmer. 441,702, Dec. 28; Serial No. 512,874, published Sept. 7, 1948.
Steel, Bar tool. Delaware Tool Steel Corporation. 505,295, Dec. 28; Serial No. 547,976, published Sept. 7, 1948.
Steel bars, Cold finished, aircraft strip steel, cold rolled strip steel, etc. General Steel Warehouse Co., Inc. 505,131, Dec. 28; Serial No. 491,474, published Aug. 31, 1948.
Steel castings, Special alloy. Union Steel Casting Company. 279,268, Jan. 13, 1931. Republished Dec. 28.
Steel, Drill and tool. Ziv Steel & Wire Co. 505,267–8, Dec. 28; Serial No. 542,386, published Aug. 24, 1948.
Steel in the form of wire, strips, bars, etc. Carpenter Steel Company. 441,733, Dec. 28; Serial No. 524,776, published Aug. 31, 1948.
Strip steel, Plain cold-rolled; zinc-coated strip steel, nickel-coated strip steel, etc. Thomas Steel Company. 505,255, Dec. 28; Serial No. 539,814, published Sept. 7, 1948.
Welding rods, Flux-coated metallic. Air Reduction Sales Company. 505,291, Dec. 28; Serial No. 547,304, published Sept. 7, 1948.
Welding rods, Metallic, and arc welding electrodes. Ampco Metal, Inc. 426,798, Jan. 14, 1947. Corrected. O. G. Dec. 28.

CLASS 15

Gasoline, crude oil, illuminating oil, etc. H. F. Wilcox Oil & Gas Company. 248,772, renewed Oct. 30, 1948. O. G. Dec. 28.
Greases, Lubricating, and lubricating oils. New York Lubricating Oil Company. 253,425, Feb. 26, 1929. Republished Dec. 28.
Lubricant, Liquid. White & Bagley Company. 330,647, Dec. 10, 1935. Republished Dec. 28.
Lubricant oils. White & Bagley Company. 304,246, June 27, 1933. Republished Dec. 28.
Oil, Lubricating. Pure Oil Company. 389,465, Aug. 5, 1941. Republished Dec. 28.
Oil, Vapor, coal spray oil, fuel oil, and burner oil. Standard Oil Company. 422,658, Aug. 6, 1946. Republished Dec. 28.
Oils and greases, Lubricating. White & Bagley Company. 302,872, May 2, 1933. Republished Dec. 28.
Penetrants and lubricants. White & Bagley Company. 292,045, Mar. 1, 1932. Republished Dec. 28.

Paint and paint enamels and varnish, Ready mixed. Jewel Paint and Varnish Co. 325,591, July 2, 1935. Republished Dec. 28.

CLASS 16

Paint enamel finish, lacquer, and varnish. Arto Manufacturing Co. 441,707, Dec. 28; Serial No. 515,063, published Aug. 10, 1948.
Paint, Ready mixed, varnish stain, oil stain, iron paint, flat paint, etc. Jewel Paint & Varnish Co. 276,711, Oct. 28, 1930. Republished Dec. 28.
Paint, Semi-gloss enamel finish. Wadsworth-Howland Company. 229,066, June 21, 1927. Republished Dec. 28.
Paint, varnish, enamel, Mixed, etc. Wadsworth-Howland Company. 146,396, Sept. 6, 1921. Republished Dec. 28.
Paints, paint enamels, lacquers, varnishes, stains, and paint fillers. Sherwin-Williams Company. 312,965, May 15, 1934. Republished Dec. 28.
Paints, Ready-mixed and paste, varnishes, and paint enamels. Sundure Paint Corporation. 441,686, Dec. 28; Serial No. 499,444, published Jan. 7, 1947.
Paints, Ready mixed and paste, varnishes, paint enamels. Jewel Paint & Varnish Co. 388,270, June 17, 1941. Republished Dec. 28.
Preparation for the removal of paints, finishes, enamels, etc. Sherwin-Williams Company. 151,233, Jan. 24, 1922. Republished Dec. 28.
Remover, Paint and varnish. Jewel Paint & Varnish Co. 334,098, Apr. 21, 1936. Republished Dec. 28.
Wax polish for floors and other surfaces, Liquid. Seidlitz Paint & Varnish Co. 505,319, Dec. 28; Serial No. 536,161.
Wax preparation and polish. Colorglo Products. 324,756, May 28, 1935. Republished Dec. 28.

CLASS 17

Cigars. Wolf Brothers & Co. 286,948, Sept. 8, 1931. Republished Dec. 28.

CLASS 19

Accessories, replacement parts, and supplies for automotive vehicles. Economy Auto Stores, Inc. 395,756, June 9, 1942. Republished Dec. 28.
Heaters. Tropic-Aire, Incorporated. 237,236, Jan. 3, 1928. Republished Dec. 28.
Trucks, Metal. Market Forge Company. 104,622, June 8, 1915. Republished Dec. 28.

CLASS 21

Bar type machine. Electrically heated and operated. Doughboy Industries, Inc. 432,855, Sept. 16, 1947. Republished Dec. 28.
Battery chargers. Advance Electric and Relay Co. 505,277, Dec. 28; Serial No. 544,679, published Sept. 21, 1948.
Battery chargers. Marquette Manufacturing Co. Inc. 505,250, Dec. 28; Serial No. 538,939, published Sept. 21, 1948.
Brushes, Commutator. Henrite Products Co., Inc. 230,874, Aug. 9, 1927. Republished Dec. 28.
Buffet service sets consisting of electrical appliances. Chicago Flexible Shaft Company. 441,675, Dec. 28; Serial No. 488,196, published Sept. 21, 1948.
Casings for the electrical equipment of motors and similar power apparatus. Breeze Corporations, Inc. 441,673, Dec. 28; Serial No. 483,167, published Sept. 21, 1948.
Diesel electric plants. Winpower Mfg. Company. 505,213, Dec. 28; Serial No. 531,408, published Sept. 21, 1948.
Drives, Electro-mechanical, electric transmitters, electric lighting fixtures, etc. Singer Manufacturing Company. 441,680, Dec. 28; Serial No. 498,089, published Sept. 21, 1948.
Dry batteries. Burgess Battery Company. 505,177, Dec. 28; Serial No. 527,755, published Sept. 21, 1948.
Dry batteries and electric hand lamps, etc. Burgess Battery Company. 505,275, Dec. 28; Serial No. 544,520, published Sept. 21, 1948.
Electric fans. Robbins & Myers, Inc. 505,227, Dec. 28; Serial No. 533,778, published Sept. 21, 1948.
Electric lamps. Minuet Lamp Industries, Inc. 505,269, Dec. 28; Serial No. 542,627, published Sept. 21, 1948.
Electric ranges. Avco Manufacturing Corporation. 505,244, Dec. 28; Serial No. 536,989, published Sept. 21, 1948.
Electric switches. Arrow-Hart & Hegeman Electric Company. 505,220, Dec. 28; Serial No. 532,993, published Sept. 21, 1948.
Electrical appliances. Burroughs Adding Machine Company. 505,160, Dec. 28; Serial No. 523,146, published Sept. 21, 1948.
Electrical appliances. Burroughs Adding Machine Company. 505,174, Dec. 28; Serial No. 527,356, published Sept. 21, 1948.
Electrical fuses. Economy Fuse and Manufacturing Company. 180,677, Mar. 4, 1924. Corrected. O. G. Dec. 28.
Equipment and parts therefor, Electrical. J. H. Cannon. 418,856, Jan. 15, 1940. Republished Dec. 28.
Equipment and parts thereof, Electrical. J. H. Cannon. 425,506, Nov. 26, 1946. Republished Dec. 28.

Equipment and parts therefor, Electric. J. H. Cannon. 505,146, Dec. 28; Serial No. 516,460, published Sept. 21, 1948.
Fixtures, Electrical. W. P. Herman. 353,114, Dec. 28, 1938. Republished Dec. 28.
Generators, Electric, spark plugs, radio receiving sets, etc. Economy Auto Stores, Inc. 396,142, June 30, 1942. Republished Dec. 28.
Luminaires, Electric, and electric lighting fixtures. F. W. Wakefield Brass Company. 505,193, Dec. 28; Serial No. 529,510, published Sept. 21, 1948.
Metal-working apparatus, Electric. Thomson Electric Welding Company. 130,018, Mar. 23, 1920. Republished Dec. 28.
Motors, Electric. Farmco, Inc. 423,515, Sept. 3, 1946. Republished Dec. 28.
Neon sign equipment. Rafi Manufacturing Company. 505,186, Dec. 28; Serial No. 528,643, published Sept. 21, 1948.
Radio apparatus, supplies, and equipment. Bud Radio, Inc. 303,469, May 23, 1933. Republished Dec. 28.
Radio receivers, transmitters, electrical sound recording apparatus, etc. Airadio, Incorporated. 505,238, Dec. 28; Serial No. 534,859, published Sept. 21, 1948.
Radio receiving sets. H. G. Sherry. 441,725, Dec. 28; Serial No. 522,216, published Sept. 21, 1948.
Radio receiving sets, radio transmitting sets, etc. Aircraft and Mechanical Productions Limited. 437,901, Apr. 6, 1948. Corrected. O. G. Dec. 28.
Radio receiving sets, television receiving sets and electrical phonographs. Sonora Radio & Television Corporation. 505,165, Dec. 28; Serial No. 526,696, published Sept. 21, 1948.
Ranges, Electric, coal electric ranges, and gas electric ranges. Malleable Iron Range Company. 238,982, Feb. 21, 1928. Republished Dec. 28.
Storage batteries and parts thereof, Electric. Auto-Lite Battery Corporation. 505,272, Dec. 28; Serial No. 544,025, published Sept. 21, 1941.
Storage heaters, Displacement type automatic electric hot water. Losee Products Company. 505,189, Dec. 28; Serial No. 529,071, published Sept. 21, 1948.
Transmitters, Broadcast, quartz crystals, condenser microphones, modulation reactors, etc. Radio Corporation of America. 253,286, renewed Feb. 26, 1949. O. G. Dec. 28.
Wire strands equipped with terminals thereof, Insulated electric. Faraday Electric Corporation. 441,671, Dec. 28; Serial No. 476,605, published Feb. 3, 1948.

CLASS 22

Baits, Artificial. Creek Chub Bait Co. 242,113, May 15, 1928. Republished Dec. 28.
Ball rolling games having a board and balls. Bally Manufacturing Co. 505,218, Dec. 28; Serial No. 532,200, published Sept. 14, 1948.
Baseball bats and miniature baseball bats. Hillerich & Bradsby Co. 505,257, Dec. 28; Serial No. 540,072, published Sept. 14, 1948.
Board game played with marbles. T. R. Keith. 505,216, Dec. 28; Serial No. 531,917, published Sept. 7, 1948.
Boxes, Fishing-tackle. C. G. Conn Ltd. 505,194, Dec. 28; Serial No. 529,529, published Sept. 7, 1948.
Cribbage boards. Crib-Derby Co., The. 505,153, Dec. 28; Serial No. 517,836, published Sept. 7, 1948.
Dolls. Reister, Aline Margaret. 441,736, Dec. 28; Serial No. 525,679, published Sept. 7, 1948.
Equipment for exercising for health and beauty culture. M. MacGregor. 379,212, July 9, 1940. Republished Dec. 28.
Fish hooks and artificial fish lures. Wright & McGill Co. 505,204, Dec. 28; Serial No. 531,071, published Sept. 7, 1948.
Fishing lines. B. F. Gladding & Co. Inc. 505,171, Dec. 28; Serial No. 527,069, published Sept. 7, 1948.
Fishing rods. James Heddon's Sons. 505,230, Dec. 28; Serial No. 534,121, published Sept. 14, 1948.
Fishing rods and poles, fishing reels, etc. Horrocks-Ibbotson Company. 441,705, Dec. 28; Serial No. 513,418, published Sept. 7, 1948.

Krenz, Harry.
Acker, John T., Queens Village, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Insulating coating compositions and making. 2,457,515, Dec. 28.
Acme Tool and Manufacturing Company, assignee: *See*—
Shea, Robert P., and Furer.
Aeres, Paul, New York, N. Y. Thermostatic electrically heated comb. 2,457,621, Dec. 28.
Aeroil Product Company, assignee: *See*—
Kittel, George P., and Wollner.
Aeroquip Corporation, assignee: *See*—
Main, Benjamin A., Jr.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Jansen, Eugene F., and Lineweaver.
Maclay, William D., Shepherd, McCready, and Graham.
Milleville, Howard P.
Swern, Daniel, and Ault.
Swern, Daniel, and Billen.
Tucker, Irwin W., and Balls.
Ahrndt, Arthur H., assignor to U. S. Slicing Machine Company, La Porte, Ind. Meat tendering machine. 2,457,622, Dec. 28.
Air Reduction Company, Incorporated, assignee: *See*—
Yoch, August H., and Rice, Jr.
Air Supply Packs Proprietary Limited, assignee: *See*—
Campbell, Edward R., Frewin, Lennox, and Morris.
Aktiebolaget Elektrolux, assignee: *See*—
Widell, Nils E.
Aktiengesellschaft Brown, Boveri & Cie., assignee: *See*—
Uhlig, Edward.
Albino, George, Waterbury, Conn. Shoe tree. 2,457,623, Dec. 28.
Alden, Milton, Brockton, Mass. Scanning unit. 2,457,113, Dec. 28.
Aleks, Vytant, Rockford, Ill., assignor to The Washburn Company, Worcester, Mass. Bicycle basket. 2,457,624, Dec. 28.
Aller, Willis F., assignor to The Sheffield Corporation, Dayton, Ohio. Fluid meter. 2,457,297, Dec. 28.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Rockwood, Charles H., and Sikorra.
Allison Company, The, assignee: *See*—
Allison, Hugh V.
Allison, Hugh V., Fairfield, assignor to The Allison Company, Bridgeport, Conn. Making abrasive cutoff wheels. 2,457,516, Dec. 28.
Aluminum Industries, Incorporated, assignee: *See*—
Beckmann, Melbourne A.
Amenta, Sam, Chicago, Ill. Forming dentures from polymerizable acrylic materials. 2,457,114, Dec. 28.
Americaine, Inc., assignee: *See*—
Stone, Raymond.
American Car and Foundry Company, assignee: *See*—
Bogard, Fred J.
Shields, Robert A.
American Cyanamid Company, assignee: *See*—
Boothe, James H.
Hutchings, Brian L.
Mowat, John H.
American Hardware Corporation, The, assignee: *See*—
Dyson, Louis M.
American Linen Supply Co., assignee: *See*—
Birr, Rudolph G.
American Machine & Foundry Company, assignee: *See*—
Dehuff, Walter F.
Thiel, Louis F.
American Machine and Metals, Inc., assignee: *See*—
Sidell, Philip A.
American-Marietta Company, Adhesive, Resin and Chemical Division, assignee: *See*—
Redfern, Donald V.
American Seal-Kap Corporation, assignee: *See*—
Vore, Herbert G.
American Seal-Kap Corporation of Delaware, assignee: *See*—
Butterfield, George P., and Thorne.
Rodman, Francis C., and Engel.
American Sterilizer Company, assignee: *See*—
Owens, Neal, and Jewell.
American Viscose Corporation, assignee: *See*—
Copson, Ernest D., and Taylor.
Amiot, Felix, Neuilly-sur-Seine, France. Controlling means, especially for doors. 2,457,625, Dec. 28.
Anderson, Alva E., Spring Lake, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Microwave oscillator. 2,457,194, Dec. 28.
Argyris, Stefanos, New York, N. Y. Electric bicycle. 2,457,430, Dec. 28.
Arma Corporation, assignee: *See*—
Cunningham, Frederick W.
Toner, John P.
Armour Research Foundation of Illinois Institute of Technology, assignee: *See*—
Herbert, William S., and Francis.
Rifenbergh, Clare M.
Armstrong Cork Company, assignee: *See*—
Biemesderfer, George K., Jr.
Powers, Paul O.
Wilson, Gardiner C.
Arvin, James A., Homewood, and W. B. Gitchel, Chicago, Ill., assignors to The Sherwin-Williams Company, Cleveland, Ohio. Styrene-oil soluble natural resin-drying oil interpolymer. 2,457,768, Dec. 28.
Arvin, James A., Homewood, and W. B. Gitchel, Chicago, Ill., assignors to The Sherwin-Williams Company, Cleveland, Ohio. Resinous esters of polyhydric alcohols with polymers of styrene and resin acids and preparation thereof. 2,457,769, Dec. 28.
Ashby, Guy S. M., assignee: *See*—
Higginson, George S.
Ashford, James L., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electric switch. 2,457,115, Dec. 28.
Atlantic Refining Company, The, assignee: *See*—
McGrogan, John F.
Atlee, Zed J., Elmhurst, assignor to General X-Ray Corporation, Chicago, Ill. Grid construction. 2,457,626, Dec. 28.
Attapulgus Clay Company, assignee: *See*—
Heinemann, Heinz, and Krieger.
Attorney General of the United States, Vested in the: *See*—
Schlumberger, Marcel.
Ault, Waldo C.: *See*—

Johnson, Roy W., and Zarwell.
Avco Manufacturing Corporation, assignee: *See*—
Kidd, Robert S.
Bade, Alfred G., Wauwatosa, assignor to The Falk Corporation, Milwaukee, Wis. Variable-speed transmission. 2,457,431, Dec. 28.
Baer, John M., Chicago, Ill., assignor, by mesne assignments, to Guardite Corporation, Wilmington, Del. Vacuum drying. 2,457,116, Dec. 28.
Bagnall, Joseph C., Jr., Attleboro, Mass., assignor to Swank, Inc. Extension key chain. 2,457,195, Dec. 28.
Bailey, Emmett C., Washington, D. C. Swinging seesaw. 2,457,627, Dec. 28.
Bailey Meter Company, assignee: *See*—
Hornfeck, Anthony J.
Baker, Chester L., Narberth, and R. H. Sams, Upper Darby, assignors to Philadelphia Quartz Company, Philadelphia, Pa. Adhesive and making. 2,457,108, Dec. 28.
Baker Oil Tools, Inc., assignee: *See*—
Baker, Reuben C.
Baker, Reuben C., Coalinga, assignor to Baker Oil Tools, Inc., Vernon, Calif. Underreamer. 2,457,628, Dec. 28.
Ball, David L., San Luis Obispo, Calif. Rotary axial vane compressor. 2,457,298, Dec. 28.
Ballard, Dana R., Madera, Calif. Poultry feeder. 2,457,432, Dec. 28.
Balls, Arnold K.: *See*—
Tucker, Irwin W., and Balls.
Barber-Colman Company, assignee: *See*—
Drake, Russell P.
Barbour Stockwell Company, assignee: *See*—
Coffey, Roger T.
Barrett, William, International Falls, assignor to Minnesota and Ontario Paper Company, Minneapolis, Minn. Apparatus for coating paper. 2,457,433, Dec. 28.
Barron, Milford: *See*—
Brown, Harry M., and Barron.
Bartelink, Everhard H. B., Bronxville, assignor to General Telephone Corporation, New York, N. Y. Signaling system for two-way dialing over radio and carrier telephone circuits. 2,457,434, Dec. 28.
Bates, Harold S., Philadelphia, and S. A. Robinson, Upper Darby, assignors to Philco Corporation, Philadelphia, Pa. Crystal mounting. 2,457,338, Dec. 28.

Batten, Percy H., assignee: *See*—
Lysholm, Alf.

Baumann, Frederick W., Schenectady, N. Y., assignor to General Electric Company. Alternating current commutator machine. 2,457,517, Dec. 28.

Baxter Laboratories, Inc., assignee: *See*—
Brandon, Wayne D.

Baysinger, Royal D., Rockford, and L. W. Fulton, South Beloit, assignors to George D. Roper Corporation, Rockford, Ill. Core making machine. 2,457,196, Dec. 28.

Bear, Fred B., Detroit, Mich. Takedown bow. 2,457,793, Dec. 28.

Beckman, Joseph R., Stockton, Calif. Fiddle. 2,457,629, Dec. 28.

Beckman, Lawrence R., Erhard, Minn. Automobile chain snap. 2,457,435, Dec. 28.

Beckmann, Melbourne A., assignor to Aluminum Industries, Incorporated, Cincinnati, Ohio. Packaging articles. 2,457,197, Dec. 28.

Beetson, Geoffrey H., Hudcar Mills, Bury, assignor to The Bury Felt Manufacturing Company, Bury, England. Manufacturing fulled or hardened felt articles such as felt boots or footwear. 2,457,630, Dec. 28.

Bell Aircraft Corporation, assignee: *See*—
Young, Arthur M.

Bell, James A., Leatherhead, England, assignor to Shell Development Company, San Francisco, Calif. Waterproofing plastic compositions. 2,457,518, Dec. 28.

Bell, John G., Chicago, Ill., assignor to Morbell Products Corporation. Container and blank therefor. 2,457,198, Dec. 28.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Acker, John T.
Anderson, Alva E.
Bowen, Arnold E.
Bruce, Edmond.
Ferrell, Enoch B.
Goldsmith, Elsworth H., Terry, and Schaefer.
Haworth, Francis E.
Huber, George H.
Karleen, Edward H.
Miller, Victor F.
Ring, Douglas H.
Townes, Charles H.

Bemel, Nathan, Rochester, Minn. Portable battery stripping device. 2,457,519, Dec. 28.

Benander, George B., Oaklawn, R. I., assignor to Monowatt Incorporated. Plug connector. 2,457,520, Dec. 28.

Benander, George B., Oaklawn, assignor, by mesne assignments, to Monowatt Incorporated, Providence, R. I. Electric-light fixture. 2,457,521, Dec. 28.

Bendix Aviation Corporation, assignee: *See*—
Dickens, Richard G.
Jones, Burr W.
Lum, George P.
Mock, Frank C.
Price, Harold W.
Ringer, Evue J.
Sherrill, Eugene A.
Thomas, Thomas H.
Winkler, Albert H.

Benner, Raymond C.: *See*—
Melton, Romie L., and Benner, and Kirchner.

Bennett, Charles E., Ridgewood, assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. High-tension electric cable. 2,457,436, Dec. 28.

Bennett, Charles E., Ridgewood, assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Joint for pipe lines. 2,457,438, Dec. 28.

Bennett, Charles E., Ridgewood, and P. V. White, Rochelle Park, assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Terminal bushing for power cables. 2,457,437, Dec. 28.

Bennett, William O., Jr., Lancaster Township, Lancaster County, assignor to Hamilton Watch Company, Lancaster, Pa. Cylindrical hairspring form. 2,457,631, Dec. 28.

Bernardi, Dominic J., Bronx County, N. Y., assignor to Interchemical Corporation. Manufacture of amino acids. 2,457,117, Dec. 28.

Berry, Philip E., assignor to The Bristol Aeroplane Company Limited, Bristol, England. Mounting for vibratory bodies. 2,457,340, Dec. 28.

Bertea, Alex, Pasadena, Calif. Wobble plate pump. 2,457,339, Dec. 28.

Best, Frank E., Indianapolis, Ind. Proximity and direction indicator. 2,457,199, Dec. 28.

Biagi, Leon J., Rumford, R. I., assignor to Swank, Inc. Cravat holder. 2,457,341, Dec. 28.

Bias, Frank J., Scotia, and H. W. Lord, Schenectady, N. Y., assignors to General Electric Company. Electronic sawtooth wave generator. 2,457,522, Dec. 28.

Biemesderfer, George K., Jr., assignor to Armstrong Cork Company, Lancaster, Pa. Surface covered structure and surface covering therefor. 2,457,299, Dec. 28.

Bikoff, Jonas, Brooklyn, N. Y. Foldable bracelet catch. 2,457,200, Dec. 28.

Bilhuber, E., Inc., assignee: *See*—
Givens, Horace T. F., and Herbst.

Billen, Geraldine N., assignee: *See*—
Swern, Daniel, and Billen.

Bird, Stanley P., Varona, assignor to Breeze Corporation, Inc., Newark, N. J. Quick disconnect joint. 2,457,523, Dec. 28.

Birr, Rudolph G., Lombard, Ill., assignor, by mesne assignments, to American Linen Supply Co., Carson City, Nev. Dispensing apparatus for sheet material. 2,457,439, Dec. 28.

Birtman Electric Company, assignee: *See*—
French, Edward A.
Sparklin, Charles H.

Bittner, Alvie W.: *See*—
Carlson, Carl A., and Bittner.

Blake, William P., assignor to K & B Manufacturing Co., Fairmont, Okla. Belt driven roller mill with adjustably and yieldably mounted roller. 2,457,632, Dec. 28.

Boardman, Harry C., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Spheroidal pressure vessel. 2,457,118, Dec. 28.

Boccafogli, Edward C., assignee: *See*—
Ugazio, Walter, and Boccafogli.

Boese, Albert B., Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation. Lower polymer of glycidyl sorbate and making it. 2,457,300, Dec. 28.

Bogard, Fred J., Huntington, W. Va., assignor to American Car and Foundry Company, New York, N. Y. Lubricating device. 2,457,770, Dec. 28.

Bonard, Claude, administrator: *See*—
Dreyfus, Henry.

Bond, Donald C., Northbrook, and M. Savoy, assignors to The Pure Oil Company, Chicago, Ill. Breaking emulsions. 2,457,634, Dec. 28.

Bond, Donald C., Northbrook, and M. Savoy, assignors to The Pure Oil Company, Chicago, Ill. Regenerating aqueous alkali solution used to extract weakly acidic sulfur compounds from hydrocarbon fluids. 2,457,635, Dec. 28.

Booth, Herbert L., Staten Island, N. Y. Producing tufted plastic combs. 2,457,440, Dec. 28.

Boothe, James H., Pearl River, assignor, by mesne assignments to American Cyanamid Company, New York, N. Y. Preparing 2-amino-4-hydroxy-6-methylpyrimido 4,5-b pyrazine. 2,457,109, Dec. 28.

Borg, George W., Corporation, The, assignee: *See*—
McCaslin, James F., and Fink.

Borg, Gustav A., Naugatuck, Conn. Sealing device. 2,457,633, Dec. 28.

Bouchard, George H., Ipswich, assignor to Sylvania Electric Products Inc., Salem, Mass. Crater lamp. 2,457,771, Dec. 28.

Bouget, Yves A., West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Material serving apparatus. 2,457,636, Dec. 28.

Bour, Paul L., Paris, France, assignor to International Standard Electric Corporation, New York, N. Y. Electrical connector. 2,457,119, Dec. 28.

Bowen, Arnold E., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave guide repeater. 2,457,524, Dec. 28.

Boyd, William H., Drexel Hill, assignor to General Refractories Company, Philadelphia, Pa. Furnace arch and wall structure. 2,457,201, Dec. 28.

Braden, Rene A., Princeton, N. J., assignor to Radio Corporation of America. Phase splitting coupling for coaxial transmission lines. 2,457,638, Dec. 28.

Brady, George W., Upper Montclair, N. J., assignor to Curtis-Wright Corporation. Making internally reinforced hollow propeller blades. 2,457,202, Dec. 28.

Brailsford, Harrison D., Harrison, N. Y. Electrical motor. 2,457,637, Dec. 28.

Branchfield, Frank B., Sr., Canton, Ill. Cheese pusher. 2,457,441, Dec. 28.

Brand, William T., Beemer, Nebr. Machine for removing the wax caps from honeycombs. 2,457,301, Dec. 28.

Brandon, Wayne D., Skokie, assignor to Baxter Laboratories, Inc., Glenview, Ill. Container and using same. 2,457,120, Dec. 28.

Brasch, Arno, Brooklyn, N. Y., assignor, by mesne assignments, to Electronized Chemicals Corporation. Making scenting essential oils from plants. 2,457,203, Dec. 28.

Braselton, Chester H., New York, N. Y. Lipstick. 2,457,342, Dec. 28.

Braunschweiger, Paul G., assignor to The Troy Sunshade Company, Troy, Ohio. Securing webbing strips to furniture frames. 2,457,343, Dec. 28.

Brearley, Charles S., Jr.: *See*—
Grote, Henry W., Swoope, and Brearley.

Breeze Corporation, Inc., assignee: *See*—
Bird, Stanley P.

Brent, George F., Pittsburgh, Pa., assignor to Brent Industries, Inc. Ladder tape. 2,457,442, Dec. 28.

Brent Industries, Inc., assignee: *See*—
Brent, George F.

Brettingham-Moore, Edward A.: *See*—
Abercrombie, David J., Brettingham-Moore, and Muscio.

Brian, Joseph M., Westmount, Quebec, Canada, assignor to Radio Corporation of America. Capacity brush holder. 2,457,325, Dec. 28.

Bristol Aeroplane Company Limited, The, assignee: *See*—
Berry, Philip E.

Brooks, Harry G., Byhalia, Miss. Mounting for rear-vision mirrors. 2,457,639, Dec. 28.

Brooks, Richard E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of esters. 2,457,204, Dec. 28.

Brown, Andrew, and T. A. Marshall, assignors, by mesne assignments, to Standard Telephones and Cables Limited, London, England. Electric signaling system. 2,457,121, Dec. 28.

Brown, Daniel, Burlington, N. J. Fire hose nozzle. 2,457,526, Dec. 28.

Brown, Harry M., Indianapolis, and M. Barron, Anderson; I. Brown, administratrix of said H. M. Brown, deceased, assignor to I. P. Brown, Indianapolis, Ind. Surgical instrument for skin grafting. 2,457,772, Dec. 28.

Brown Instrument Company, The, assignee: *See*—
Clarke, Herbert A.
Wild, Rudolf F.
Wild, Rudolf F., and Cherry.
Wild, Rudolf F., and Curran.

Brown, Irene, administratrix: *See*—
Brown, Harry M., and Barron.

Brown, Irene P., assignee: *See*—
Brown, Harry M., and Barron.

Bruce, Edmond, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic device. 2,457,527, Dec. 28.

Bruson, Herman A., Rydal, and W. D. Niederhauser, assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa. Hydroxycarboxylic acid. 2,457,640, Dec. 28.

Buckeye Steel Castings Company, The, assignee: *See*—
Schrock, Eugene B.

Budd Company, The, assignee: *See*—
Temple, Robert B.

Bull, Cabot S., Hillington, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England. Electric transforming arrangement. 2,457,528, Dec. 28.

Bunn, Fred H., Westfield, N. J., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Wax treatment of uncured rubber goods. 2,457,641, Dec. 28.

Burbank, Henry R., New York, and B. J. Zenlea, Ozone Park, Long Island, assignors to Rockwood & Co., Brooklyn, N. Y. Chocolate coated edibles. 2,457,110, Dec. 28.

Burch Corporation, The, assignee: *See*—
Leicy, Walter K.

Burdick Corporation, The, assignee: *See*—
Sturm, Ralph E.

Burley, George D., Cleveland, Ohio, assignor, by mesne assignments, to Fram Corporation, East Providence, R. I. Cell type filter element. 2,457,122, Dec. 28.

Burndy Engineering Company, Inc., assignee: *See*—
Dupre, Henry P.

Burroughs, Eugene W., Sr., Norfolk, W. J. Byrd, Suffolk, and M. P. Seawell, Norfolk, Va. Trolley for electric cranes. 2,457,443, Dec. 28.

Bury Manufacturing Company, The, assignee: *See*—
Beetson, Geoffrey H.

Busby, Luther W., Manhattan Beach, Calif. Denture stress reliever. 2,457,529, Dec. 28.

Busignies, Henri G., Forest Hills, T. H. Clark, New York, and A. G. Everhart, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Coupling arrangement. 2,457,123, Dec. 28.

Butler, Henry J., Sutton Coldfield, assignor to Dunlop Rubber Company Limited, County of London, England. Fluid pressure brake apparatus. 2,457,344, Dec. 28.

Butterfield, George P., Des Plaines, and L. A. Thorne, Chicago, Ill., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del. Treating lactalbumin. 2,457,642, Dec. 28.

Byrd, William J.: *See*—
Burroughs, Eugene, Jr., Byrd, and Seawell.

Campbell, Edward R., Ivanhoe, K. M. Frewin, Elsternwick, F. W. Lennox, Toorak, and R. P. Morris, North Brighton, assignors to Air Supply Packs Proprietary Limited, Melbourne, Victoria, Australia. Container suitable for dropping from aircraft and the like. 2,457,205, Dec. 28.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Boese, Albert Ba Jr.
Fife, Harvey R., and Toussaint.

Carborundum Company, The, assignee: *See*—
Melton, Romie L., Benner, and Kirchner.

Carline, John G., London, England. Device for dispensing articles. 2,457,345, Dec. 28.

Carlson, Bert G., Cleveland, Ohio. Rotary valve for internal-combustion engines. 2,457,206, Dec. 28.

Carlson, Carl A., and A. W. Bittner, Fort Dodge, Iowa. Loading and stacking machine. 2,457,346, Dec. 28.

Carlson, Wendell L., Princeton, N. J., assignor to Radio Corporation of America. Angle modulated carrier receiver. 2,457,207, Dec. 28.

Carlton, Clinton A.: *See*—
Williams, Ira, and Carlton.

Carpenter, Glen F., Des Moines, Iowa. Traction device for vehicle wheels. 2,457,208, Dec. 28.

Caserta, Michele, Detroit, Mich. Rotary pump and packing therefor. 2,457,643, Dec. 28.

Casler, Leslie R., and L. F. Milner, Indianapolis, Ind. Electrical outlet structure. 2,457,347, Dec. 28.

Cave, Donald E., Griffin, Ind. Tie rod end installation. 2,457,444, Dec. 28.

Cawein, Madison, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Deflecting coil. 2,457,773, Dec. 28.

Cawein, Madison, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Inductively coupled band-pass filter. 2,457,774, Dec. 28.

Celanese Corporation of America, assignee: *See*—
Dreyfus, Henry.

Chadwick, Vincent, Chelsea, and O. I. E. Hallberg, Boston, Mass. Water rheostat control. 2,457,124, Dec. 28.

Chain Belt Company, assignee: *See*—
Schiro, Raymond M. G.

Chambers, Paul A., assignor of one-half to L. E. Harris, Santa Monica, Calif. Combined signal light and rear-view mirror. 2,457,348, Dec. 28.

Chatterjea, Prafulla K., and L. W. Houghton, assignors, by mesne assignments, to Standard Telephones and Cables Limited, London W. C. 2, England. Circuit arrangement for producing electrical pulses. 2,457,125, Dec. 28.

Cherry, Lloyd B.: *See*—
Wild, Rudolf F., and Cherry.

Cherry Rivet Company, assignee: *See*—
Trautmann, Herbert L.

Chesus, Frank O., Jackson Heights, and F. G. Thomas, Islip, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Antenna system. 2,457,126, Dec. 28.

Chesus, Frank O., Jackson Heights, and F. G. Thomas, Islip, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Antenna system. 2,457,127, Dec. 28.

Chicago Bridge & Iron Company, assignee: *See*—
Boardman, Harry C.
Jackson, Robert A.

Christensen, Harold E., Wilmette, Ill., J. J. Stein, Cleveland, Ohio, and A. S. Kester, Chicago, Ill. Display device for foodstuffs. 2,457,302, Dec. 28.

Chrysler Corporation, assignee: *See*—
La Brie, Ludger E.

Churnell, Frank J., Bloomfield, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Water barrier. 2,457,128, Dec. 28.

Clair, Verne, Rye, N. Y. Combination shoe tree and shoe-shine bracket. 2,457,445, Dec. 28.

Clark, George T.: *See*—
Fowler, Chester C., and Clark.

Clark, Joseph F., Paterson, N. J., assignor to Durex Products, Inc., New York, N. Y. Manufacture of pessaries. 2,457,349, Dec. 28.

Clark, Trevor H.: *See*—
Busignies, Henri G., Clark, and Everhart.
Richardson, Avery G., and Clark.

Clark, William B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Resinous compositions. 2,457,209, Dec. 28.

Clarke, Herbert A., Merion, assignor to The Brown Instrument Company, Philadelphia, Pa. Failure indicating control apparatus. 2,457,794, Dec. 28.

Cloyd, Harold S., assignor to National Organ Supply Company, Erie, Pa. Push comb. 2,457,446, Dec. 28.

Coffey, Roger T., Marblehead, assignor to Barbour Stockwell Company, Cambridge, Mass. Clutch. 2,457,210, Dec. 28.

Coggeshall, Norman D., Verona, and N. F. Kerr, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Electron gun for mass spectrometers. 2,457,530, Dec. 28.

Cohn, Irwin, Leominster, Mass. Carrousel toy for children. 2,457,447, Dec. 28.

Cole, Rex, assignee: *See*—
Harshbarger, Walter J., and Putt.

Collings, John K., Englewood, assignor to The Metal Lumber Corporation of New Jersey, Hoboken, N. J. Hatch cover. 2,457,129, Dec. 28.

Collins Radio Company, assignee: *See*—
Doelz, Melvin L.

Columbia Records Inc., assignee: *See*—
Hunter, James H.

Compagnie de Produits Chimiques et Electrometallurgiques Alias, Froges et Camargue, assignee: *See*—
Fréjacques, Jean L. M.

Consolidated Engineering Corporation, assignee: *See*—
Langmuir, Robert V.
McNamee, Bernard F.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Hartman, Milton V.

Continental Can Company, Inc., assignee: *See*—
Kronquest, Alfred L.
Neuman, Wilbur K., and Slosberg.

Continental Carbon, Inc., assignee: *See*—
Jira, Joseph W.

Control Corporation, assignee: *See*—
Seymour, Charles E.

Copson, Ernest D., and R. J. Taylor, Claymont, assignors to American Viscose Corporation, Wilmington, Del. Method and apparatus for spinning artificial filamentous products. 2,457,350, Dec. 28.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Costakos, Theodore M., Minneapolis, Minn. Measuring valve. 2,457,531, Dec. 28.

Crane, Carl J., and G. V. Holloman, Dayton, C. W. Muller, Osborn, and R. K. Stout, Dayton, Ohio. Blind flying and blind landing system for aviation flight trainers. 2,457,130, Dec. 28.

Crane Packing Company, assignee: *See*—
Solari, Archie J.

Cread Engineering and Research Company, assignee: *See*—
Grosser, Christian E.

Cresco Manufacturing Company, assignee: *See*—
Enck, Charles E.

Cross, Donald O., Evansville, Ind. Hair curl pin. 2,457,303, Dec. 28.

Crossman, Fred, and E. A. Southam, Cleveland,, and G. J. Ruhl, Shaker Heights, assignors to The Lindsay Wire Weaving Company, Cleveland, Ohio. Needle grinder. 2,457,644, Dec. 28.

Crowe, John M., Covington, Ky. Atomizing fuel burner with cooling jacket. 2,457,304, Dec. 28.

Crowe, Orley J.: *See*—
Hall, William J., and Crowe.

Crowley, Robert, North Quincy, Mass. Golf training and recording apparatus. 2,457,351, Dec. 28.

Cudahy Packing Company, assignee: *See*—
Shipner, John R.

Cummings, William W., Bradford, Vt. Fruit sectionizer. 2,457,645, Dec. 28.

Cunningham, Frederick W., Stamford, Conn., assignor to Arma Corporation, Brooklyn, N. Y. Gun control compensating mechanism. 2,457,532, Dec. 28.

Curran, Fred J.: *See*—
Wild, Rudolf F., and Curran.

Curtis, Richard C., Short Hills, N. J., assignor to Faximile, Inc., New York, N. Y. Facsimile overload control with non-linear resistance in output. 2,457,131, Dec. 28.

Curtiss-Wright Corporation, assignee: *See*—
Brady, George W.
Klein, Mathias.
Schoenbaum, Joseph R.

Cuthbert, Lowell R., assignee: *See*—
Hilliman, Lloyd A.

Cutler-Hammer, Inc., assignee: *See*—
Randall, Cyril E.

Dalby, Delbert G., assignor to Roberts Paper Company, Amarillo, Tex. Manifolding device. 2,457,448, Dec. 28.

Dale, Frank L., New York, N. Y. Artificial hand. 2,457,305, Dec. 28.

Dalferes, Anthony W., Lafayette, La. Lifting tongs. 2,457,646, Dec. 28.

Davidson, William D., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif. Brake drum assembly. 2,457,352, Dec. 28.

Davis, John V., and J. S. Hoffman, assignors to The Udylite Corporation, Detroit, Mich. Filter. 2,457,449, Dec. 28.

Davis, Raymond R., assignor to Paragon Revolute Corporation, Rochester, N. Y. Quartz lamp assembly. 2,457,353, Dec. 28.

Deere & Company, assignee: *See*—
Johnson, Eric J.

Dehuff, Walter F., Glen Rock, Pa., assignor to American Machine & Foundry Company. Vertical mixer. 2,457,533, Dec. 28.

Delters, August M., assignor to Southern Wood Preserving Company, Atlanta, Ga. Grapple. 2,457,135, Dec. 28.

Delaney, Harry W., Chicago, Ill., assignor, by mesne assignments, to Republic Drill & Tool Company. Manufacturing twist drills. 2,457,132, Dec. 28.

Deloraine, Edmond M., assignor to International Standard Electric Corporation, New York, N. Y. Fragmentary character printer. 2,457,133, Dec. 28.

De Luca, Roberta: *See*—
Roberts, David S., and De Luca.

De Marco, Joseph A., Brooklyn, N. Y. Button blank feeding attachment. 2,457,534, Dec. 28.

Dennis, Paul A.: *See*—
Van Dyke, William D., and Dennis.

De Smet, Edgard C., and J. W. Dickason, assignors to Willys-Overland Motors, Inc., Toledo, Ohio. Motor vehicle lighting. 2,457,211, Dec. 28.

Dewas, Raymond, Amiens, France. Yarn tensioning device. 2,457,450, Dec. 28.

Dial, James M., Dayton, Ohio. Subcaliber attachment for guns. 2,457,354, Dec. 28.

Dickason, John W.: *See*—
De Smet, Edgard C., and Dickason.

Dickens, Richard G., Elmira Heights, N. Y., assignor to Bendix Aviation Corporation. Engine starter gearing. 2,457,213, Dec. 28.

Diethert, Russell S., Chicago, Ill., assignor to Northwest Plastics, Inc., St. Paul, Minn. Electrical terminal bushing. 2,457,535, Dec. 28.

Di Toro, Michael J., Brooklyn, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Time-delay network. 2,457,212, Dec. 28.

Dittmar, William W., Williamsport, Pa. Merry-go-round. 2,457,355, Dec. 28.

Dodge, Howard M., Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio. Making rubber articulated joints. 2,457,647, Dec. 28.

Doelz, Melvin L., Cedar Rapids, Iowa, assignor to Collins Radio Company. Radio system for transmission and reception on the same frequency. 2,457,134, Dec. 28.

Doggett, David L., Mount Kisco, and W. Schier, Forest Hills, assignors to Hofstatter's Sons, Inc., Long Island City, N. Y. Convertible refreshment bar and partitioning screen. 2,457,536, Dec. 28.

Doll, Henri-Georges, and G. K. Miller, assignors to Schlumberger Well Surveying Corporation, Houston, Tex. Recording device. 2,457,214, Dec. 28.

Domack, Lawrence C., Elmwood Park, Ill. Making internal wrenching tools. 2,457,451, Dec. 28.

Donner, Verne P., Palatine, assignor to Mid-Continent Metal Products Co., Chicago, Ill. Pipe coupling. 2,457,648, Dec. 28.

Douglas Aircraft Company, Inc., assignee: *See*—
Van Dyke, William D., and Dennis.

Douglas, H. A., Mfg. Co., assignee: *See*—
Penfold, Charles S.

Douglass, Porter D., Oakland, Calif. Motor vehicle front wheel lubrication device. 2,457,537, Dec. 28.

Dow Chemical Company, The, assignee: *See*—
Graham, Joseph P., and Hearns.

Drake, Russell P., Caledonia, assignor to Barber-Colman Company, Rockford, Ill. Machine for operating on heddles. 2,457,649, Dec. 28.

Dreyfus, Henry, London, England; C. Bonard, administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America. Synthetic polymers of hexadiue-1,5. 2,457,306, Dec. 28.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Puckette, Charles M., Jr.

Dunlap, Henry L., Dearborn, Mich. Softball kit. 2,457,454, Dec. 28.

Dunlop Rubber Company Limited, assignee: *See*—
Butler, Henry J.

Dunn, Martin G., Washington, D. C. Lithographic plate graining machine. 2,457,452, Dec. 28.

Dunn, Martin G., Washington, D. C. Multiple clamp for lithographic plate graining machines. 2,457,453, Dec. 28.

Dunn, Roland H.: *See*—
McWhirter, Eric M. S., and Dunn.

Dunsford, Ernest G.: *See*—
Osborne, Ronald R., and Dunsford.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Brooks, Richard E.
Clark, William B.
Gresham, William F.
Gresham, William F., and Grigsby.
Gribbins, Myers F.
Hanford, William E., and Roland.
Hoffman, Raymond A.
Koch, Daniel O.
Moore, Maryalice C.
Pinkney, Paul S.
Salzberg, Paul L., and Signaigo.
Scott, Samuel L.
Trepagnier, Joseph H.

Dupre, Henry P., New York, N. Y., assignor to Burndy Engineering Company, Inc. Crimping tool. 2,457,538, Dec. 28.

Durakool, Inc., assignee: *See*—
Keating, John P., and Weimer.

Durex Products, Inc., assignee: *See*—
Clark, Joseph F.

Dyson, Louis M., assignor to The American Hardware Corporation, New Britain, Conn. Lock. 2,457,650, Dec. 28.

Earp, Charles W., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Arrangement for frequency measurements. 2,457,136, Dec. 28.

Earp, Charles W., and C. E. Strong, London, W. C. 2, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Ultra high frequency system. 2,457,137, Dec. 28.

Eash, John T., Westfield, N. J., assignor to The International Nickel Company, Inc., New York, N. Y. Gas welding rod. 2,457,215, Dec. 28.

Eaton, Lewis B., and R. W. Vergobbi, assignors to Pneumatic Scale Corporation, Limited, Quincy, Mass. Producing infusion bags with nontangling handles. 2,457,216, Dec. 28.

Eaves, Hubert, San Mateo, and P. D. Williams, Palo Alto, assignors to Eitel-McCullough, Inc., San Bruno, Calif. Electron tube and making the same. 2,457,651, Dec. 28.

Ebaugh, Paul, Cambridge, Mass., assignor to Owens-Corning Fiberglas Corporation. Manufacture of glass fibers. 2,457,775, Dec. 28.

Eclipse Fuel Engineering Co., assignee: *See*—
Solem, Robert H.

Eisele, Logan, Nashville, Tenn. Clinical thermometer. 2,457,455, Dec. 28.

Eitel-McCullough, Inc., assignee: *See*—
Eaves, Hubert, and Williams.

Electric & Musical Industries Limited, assignee: *See*—
Bull, Cabot S.

Electronized Chemicals Corporation, assignee: *See*—
Brasch, Arno.

Elliott, John R.: *See*—
Krieble, Robert H., and Elliott.

Elliott, John R., and R. H. Krieble, Schenectady, N. Y., assignors to General Electric Company. Treatment of chloromethyl-substituted polysiloxanes. 2,457,539, Dec. 28.

Empire Box Corporation, assignee: *See*—
Hall, Maynard G., and Hurban.

Emsco Derrick & Equipment Company, assignee: *See*—
Davidson, William D.

Enck, Charles E., assignor to Cresco Manufacturing Company, Ashland, Ohio. Jacket with biswing gusset in front and in back. 2,457,356, Dec. 28.

Engel, James E.: *See*—
Rodman, Francis C., and Engel.

Ernst, Max, Wiesendangen, Switzerland. Dual fountain pen. 2,457,217, Dec. 28.

Escoffery, Charles A., and W. H. Hawk, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Rectifier. 2,457,138, Dec. 28.

Everhart, Arbor G.: *See*—
Busignies, Henri G., Clark, and Everhart.

Ex-Cell-O Corporation, assignee: *See*—
Taylor, Milton C.

Fageol Company, R. D., assignee: *See*—
Leibing, William E.

Fairey Aviation Company Limited, The, assignee: *See*—
Smith-Pert, George J., and Forsyth.

Falk Corporation, The, assignee: *See*—
Bade, Alfred G.
Nolde, Arthur H.

Fanal Licht A.-G., assignee: *See*—
Reichinstein, David.

Farnsworth Research Corporation, assignee: *See*—
Cawein, Madison.
Stagnaro, John A.

Fasoldt, Dudley F., Prospect Heights, Rensselaer, N. Y. Device for slitting the sheath of a cable. 2,457,540, Dec. 28.

Faximile, Inc., assignee: *See*—
Curtis, Richard C.

Federal Telecommunication Laboratories, Inc., assignee: *See*—
Parker, Louis W.

Federal Telephone and Radio Corporation, assignee: *See*—
Busignies, Henri G., Clark and Everhart.
Chesus, Frank O.
Chesus, Frank O., and Thomas.
Churnell, Frank J.
Escoffery, Charles A., and Hawk.
Frankel, Sidney.
Goodale, Lynn C.
Miller, Arthur J., and Fleisher.
Newitt, John H.
Preisman, Albert.
Richardson, Avery G., and Clark.
Stateman, Murray J.

Fenn, James E., Baldwin, N. Y. Novel adhesive product and making same. 2,457,357, Dec. 28.

Ferrell, Enoch B., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Manufacturing sealed contact devices. 2,457,218, Dec. 28.

Fife, Harvey R., Mount Lebanon, Pa., and W. J. Tousaint, South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Esters of polyoxyalkylene diols. 2,457,139, Dec. 28.

Fink, Jean: *See*—
McCaslin, James F., and Fink.

Fischer, Albert C., Chicago, Ill. Sponge rubber garment product. 2,457,219, Dec. 28.

Fisher, James B., assignor to Waukesha Motor Company, Waukesha, Wis. Internal-combustion engine. 2,457,652, Dec. 28.

Flaugher, John H., Tiffin, Ohio. Sinker for deep-sea and beach fishing. 2,457,358, Dec. 28.

Fleisher, Julius W.: *See*—
Miller, Arthur J., and Fleisher.

Flexitallic Gasket Company, assignee: *See*—
Lippincott, Stanley S.

Flint & Walling Manufacturing Co., Inc., assignee: *See*—
Lung, Kenneth R.

Floeter, Frederick S., assignor to Wickes Bros., Saginaw, Mich. Portable pin grinding machine. 2,457,359, Dec. 28.

Flora, Laurence H., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Fastening construction. 2,457,360, Dec. 28.

Flora, Russell T.: *See*—
Hobart, Edward A., and Flora.

Flory, Leslie E., Princeton, N. J., assignor to Radio Corporation of America. Reading aid for the blind. 2,457,456, Dec. 28.

Ford Motor Company, assignee: *See*—
Roberts, Albert O., and Wharam.

Forsyth, Archibald G.: *See*—
Smith-Pert, George J., and Forsyth.

Foulds, Neil M.: *See*—
Wolf, Cecil, and Foulds.

Fowler, Chester C., Evanston, and G. T. Clark, Chicago, Ill., assignors to Lanteen Medical Laboratories, Inc. Tablet counting apparatus. 2,457,220, Dec. 28.

Fox, Charles W.: *See*—
Larson, Albert H., and Fox.

Fram Corporation, assignee: *See*—
Burley, George E.

Francis, Howard T.: *See*—
Herbert, William S., and Francis.

Frankel, Sidney, Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Voltage control circuit. 2,457,140, Dec. 28.

Frantz Manufacturing Company, assignee: *See*—
Wolf, Cecil, and Foulds.

Freeman, Joel G., Mount Vernon, assignor to Pharmaceutical Organics Inc., New York, N. Y. Preparing double salts of ascorbosalicylate. 2,457,141, Dec. 28.

Fréjacques, Jean L. M., assignor to Compagnie de Produits Chimiques et Electrometallurgiques Alais, Froges et Camargue, Paris, France. Treating bituminous shales. 2,457,457, Dec. 28.

French, Edward A., Chicago, Ill., assignor to Birtman Electric Company. Fan for suction cleaners. 2,457,142, Dec. 28.

Frewin, Kenneth M.: *See*—
Campbell, Edward R., Frewin, Lennox, and Morris.

Froelich, George E., Two Rivers, Wis. Knockapart toy. 2,457,653, Dec. 28.

Fruit Growers Express Company, assignee: *See*—
Thompson, Clifford J.

Fulton, Lyle W.: *See*—
Baysinger, Royal D., and Fulton.

Furer, Edward: *See*—
Shea, Robert P.

Furkert, Ernst A., Chicago, Ill. Flame hardening apparatus. 2,457,654, Dec. 28.

Gadwa, Truman A., Mount Vernon, assignor to The Luminus Company, New York, N. Y. Styrene distillation. 2,457,361, Dec. 28.

Garner, Herman H., assignee: *See*—
Russell, Kenneth F.

Geigy, A. G., J. R., assignee: *See*—
Hirt, Rudolf, Gysin, and Martin.

General Aniline & Film Corporation, assignee: *See*—
Grosser, Frederick.
Sweet, Monroe H.
Trump, Frederick O.

General Electric Company, assignee: *See*—
Baumann, Frederick W.
Bias, Frank J.
Elliott, John R., and Krieble.
Krieble, Robert H., and Elliott.
Mayer, Harry F.
Walle, Ludwig S.

General Motors Corporation, assignee: *See*—
Martin, Edward J., and Sargeant.
Stevens, Clarence C.

General Railway Signal Company, The, assignee: *See*—
Merkel, Joseph F.
Taylor, Herbert.

General Refractories Company, assignee: *See*—
Boyd, William H.

General Telephone Corporation, assignee: *See*—
Bartelink, Everhard H. B.

General Tire & Rubber Company, The, assignee: *See*—
Dodge, Howard M.
Neher, Eldon P.
Thiry, Leon F.

General X-Ray Corporation, assignee: *See*—
Atlee, Zed J.

Germain, Joseph F. L. M.: *See*—
Morrison, George O., Lossing, Heatley, and Germain.

Gifford, Robert A., Memphis, Tenn. Hydraulic scale mechanism. 2,457,655, Dec. 28.

Giglio, Antonio J., Providence, R. I., assignor to Premier Thread Company. Apparatus for cooling sewing-machine needles. 2,457,362, Dec. 28.

Gilcrest, Leo J., Cyrus, Minn. Ice-cream packer. 2,457,541, Dec. 28.

Gill, Emerson C.: *See*—
Goodhue, William V., and Gill.

Gilliver, Gilbert, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electric soldering iron. 2,457,143, Dec. 28.

Girard, Edmond P., Geneva, Switzerland. Rotary compressor sealing means. 2,457,221, Dec. 28.

Girod, Clyde A., Winona, Minn. Speed device. 2,457,458, Dec. 28.

Gitchel, Wayne B.: *See*—
Arvin, James A., and Gitchel.

Givens, Horace T. F., East Orange, and R. M. Herbst, Short Hills, assignors to E. Bilhuber, Inc., Orange, N. J. Aliphatic amino alcohols and medicinal preparations thereof. 2,457,656, Dec. 28.

Gjertsen, Ole K., New York, N. Y. Sock support. 2,457,363, Dec. 28.

Glick, Sanford E., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Polymerizable composition. 2,457,657, Dec. 28.

Globe American Corporation, assignee: *See*—
Tolley, Donald B.

Gloor, Karl, Zurich, Switzerland. Press for the covering of electrode rods. 2,457,459, Dec. 28.

Gluckman, Maxfield, Jackson Heights, N. Y. Desk tray. 2,457,364, Dec. 28.

Golden, Victor, Chatham, N. J., assignor to The Patent and Licensing Corporation, New York, N. Y. Thickening latex. 2,457,542, Dec. 28.

Goldlust, Harry, New York, N. Y. Garment hanger. 2,457,776, Dec. 28.

Goldsmith, Elsworth H., New York, N. Y., R. V. Terry, Maplewood, N. J., and J. W. Schaefer, Philadelphia, Pa., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Optical sighting device having reflector means for tracking movable objects. 2,457,543, Dec. 28.

Goodale, Harold R., Bristol, Conn. Toys, more particularly toy merry-go-round. 2,457,460, Dec. 28.

Goodale, Lynn C., Newark, N. J., assignor to Federal Telephone and Radio Corporation. Sealing metal glass. 2,457,144, Dec. 28.

Goodhue, William V., East Greenwich, R. I., and E. C. Gill, Saugus, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Safety device for breech loading guns. 2,457,222, Dec. 28.

Goodman Manufacturing Company, assignee: *See*—
Sloane, William W.
Graae, Johan E. A., assignor to The Lummus Company, New York, N. Y. Catalyst feeder. 2,457,461, Dec. 28.
Graham, David P., Westbury, assignor to Peabody Engineering Corporation, New York, N. Y. Gas and liquid contact apparatus. 2,457,658, Dec. 28.
Graham, Joseph P., and H. L. Hearns, assignors to The Dow Chemical Company, Midland, Mich. Apparatus for high-speed welding of thermoplastic films. 2,457,659, Dec. 28.
Graham, Robert P.: *See*—
Maclay, William D., Shepherd, McCready, and Graham.
Granite City Steel Company, Inc., assignee: *See*—
Veeder, Nicholas P.
Gray, Frank, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Mounting for piezoelectric crystals. 2,457,145, Dec. 28.
Gray, Mex, New York, N. Y. Trousers. 2,457,462, Dec. 28.
Great Lakes Steel Corporation, assignee: *See*—
Hall, William J.
Hall, William J., and Crowe.
Green, Clyde H., Macedonia, Ohio. Pivoted outer-jaw pipe wrench. 2,457,223, Dec. 28.
Greenan, Wirt G., Revere, Mass. Making safety shoes. 2,457,463, Dec. 28.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Succinic ester synthesis. 2,457,111, Dec. 28.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of polydioxolane. 2,457,224, Dec. 28.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of acrylates. 2,457,225, Dec. 28.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of choline chloride. 2,457,226, Dec. 28.
Gresham, William F., Lindamere, and W. E. Grigsby, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. N-tertiary alkyl amides and preparing same. 2,457,660, Dec. 28.
Gribbins, Myers F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilization of fats and oils. 2,457,227, Dec. 28.
Griebat, Herman, Lodi, Calif. Vehicle wheel. 2,457,365, Dec. 28.
Grigsby, William E.: *See*—
Gresham, William F., and Grigsby.
Grose, Joseph, assignee: *See*—
Grose, Leo L.
Grose, Leo L., Attica, assignor of twenty-five per cent to J. Grose, Niagara Falls, N. Y. Surgical instrument. 2,457,464, Dec. 28.
Grosser, Christian E., Warwick, assignor, by mesne assignments, to Cread Engineering and Research Company, Cranston, R. I. Variable displacement gear pump. 2,457,465, Dec. 28.
Grosser, Frederick, Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y. Polymerizing vinyl alkyl ethers. 2,457,661, Dec. 28.
Grote, Henry W., Downers Grove, R. L. Swoope, Berwyn, and C. S. Brearley, Jr., Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Producing high boiling polymers. 2,457,146, Dec. 28.
Guardlite Corporation, assignee: *See*—
Baer, John M.
Guerin, Paul R., East Cleveland, assignor to Towmotor Corporation, Cleveland, Ohio. Industrial truck. 2,457,366, Dec. 28.
Gulf Research & Development Company, assignee: *See*—
Coggeshall, Norman D., and Kerr.
McCarthy, Paul R.
Gysin, Hans: *See*—
Hirt, Rudolf, Gysin, and Martin.
Haase, Wilbert W., assignor to Wilbert Manufacturers Association, Forest Park, Ill. Burial apparatus. 2,457,671, Dec. 28.
Hale, Ralph F., Claremont, N. H., assignor to Joy Manufacturing Company. Axially engaging friction clutch. 2,457,367, Dec. 28.
Hall, Maynard G., Rutherford, and T. Hurban, Jr., Hasbrouck Heights, assignors to Empire Box Corporation, Garfield, N. J. Bottle carrier. 2,457,307, Dec. 28.
Hall, Maynard G., Rutherford, and T. Hurban, Jr., Hasbrouck Heights, assignors to Empire Box Corporation, Garfield, N. J. Bottle carrier. 2,457,308, Dec. 28.
Hall, William J., assignor, by mesne assignments, to Great Lakes Steel Corporation, Detroit, Mich. Beam. 2,457,147, Dec. 28.
Hall, William J., and O. J. Crowe, Detroit, Mich., assignors to Great Lakes Steel Corporation. Structural beam. 2,457,148, Dec. 28.
Hallberg, Olaf I. E.: *See*—
Chadwick, Vincent.
Hamilton, Joe W., West Los Angeles, Calif. Bookmarker. 2,457,662, Dec. 28.
Hamilton Watch Company, assignee: *See*—
Bennett, William O., Jr.
Hanchett, George D., Jr., Millburn, N. J., assignor to Radio Corporation of America. Protective system. 2,457,663, Dec. 28.
Handwerk, Erwin C.: *See*—
Mahler, George T., and Handwerk.
Handwerk, Erwin C., G. T. Mahler, and H. C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Condensing zinc vapor. 2,457,544, Dec. 28.
Handwerk, Erwin C., G. T. Mahler, and H. C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Condensing zinc vapor. 2,457,545, Dec. 28.
Handwerk, Erwin C., G. T. Mahler, and H. C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Condensing zinc vapor. 2,457,546, Dec. 28.
Handwerk, Erwin C., G. T. Mahler, and H. C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Internally cooled zinc condenser. 2,457,547, Dec. 28.
Handwerk, Erwin C., and G. T. Mahler, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Condensing zinc vapor. 2,457,548, Dec. 28.
Handwerk, Erwin C., and G. T. Mahler, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Apparatus for condensing zinc vapor. 2,457,549, Dec. 28.
Handwerk, Erwin C., and G. T. Mahler, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Vertical retort process for zinc smelting. 2,457,552, Dec. 28.
Handwerk, Erwin C., G. T. Mahler, and H. C. Haupt, Palmerton, N. J., assignors to The New Jersey Zinc Company, New York, N. Y. Melting zinc dust. 2,457,553, Dec. 28.
Hanford, William E., Easton, Pa., and J. R. Roland, assignors to E. I. du Pont de Nemours Company, Wilmington, Del. High molecular weight products of ethylene. 2,457,229, Dec. 28.
Hanna, Atto N., Atlantic Highlands, N. J. Hand-operated abrader. 2,457,466, Dec. 28.
Hanna, Clinton R., Pittsburgh, and L. B. Lynn, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Leveling and training mechanism. 2,457,228, Dec. 28.
Hanson, Newell B., Lake Lillian, Minn. Concrete block machine. 2,457,368, Dec. 28.
Harbison-Walker Refractories Company, assignee: *See*—
Young, Clair I.
Harding, Harry C., Trucksville, Pa. Helmet. 2,457,554, Dec. 28.
Harjes, Albert C., Flushing, N. Y. Trick electrical lamp with secret operation. 2,457,665, Dec. 28.
Harjes, Albert C., Flushing, N. Y. Trick electrical lamp with secret operation. 2,457,666, Dec. 28.
Harjes, Albert C., Flushing, N. Y. Trick electrical lamp with secret operation. 2,457,667, Dec. 28.
Harman, Bernice, Flushing, N. Y. Brassière. 2,457,369, Dec. 28.
Harmon, Robert R., Charlottesville, Va., assignor to Peabody Engineering Corporation, New York, N. Y. Gas scrubber. 2,457,667, Dec. 28.
Harnischfeger Corporation, assignee: *See*—
Perrier, Charles F.
Harris, Loyal E., assignee: *See*—
Chambers, Paul A.
Harrison, Raymond B., Arlington, Mass. Safety shoe. 2,457,664, Dec. 28.
Harshaw Chemical Company, assignee: *See*—
Pine, Paul R., and Ray.
Harshbarger, Walter J., New York, N. Y., and D. R. Putt, Jersey City, N. J., assignors to R. Cole, New York, N. Y. Automatic electronic aircraft flight control or pilot. 2,457,230, Dec. 28.
Hart, Carl R., New Haven, Ind. Automatic phonograph. 2,457,668, Dec. 28.
Hart, Raymond S., Brooklyn, N. Y. Static suppressor for moisture meters. 2,457,669, Dec. 28.
Hartford National Bank and Trust Company, The, assignee: *See*—
Van der Ven, Adrianus J. H.
Hartman, Milton V., Chicago, Ill., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Electrically and hydraulically operated extensible strut. 2,457,467, Dec. 28.
Harvey, Leaman S., Waterbury, Conn. Golf ball tee. 2,457,670, Dec. 28.
Haupt, Harry C.: *See*—
Handwerk, Erwin C., Mahler, and Haupt.
Hawk, Walter H.: *See*—
Escoffery, Charles A., and Hawk.
Hawkinson, Paul E., assignor to Paul E. Hawkinson Company, Minneapolis, Minn. Mold construction. 2,457,370, Dec. 28.
Hawkinson, Paul E., Company, assignee: *See*—
Hawkinson, Paul E.
Haworth, Francis E., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Apparatus for orienting quartz crystals by X-rays. 2,457,555, Dec. 28.
Hazeltine Research, Inc., assignee: *See*—
Di Toro, Michael J.
Hurst, William M.
Hearns, Harold L.: *See*—
Graham, Joseph P., and Hearns.
Heatley, Albert H.: *See*—
Morrison, George O., Lossing, Heatley, and Germain.
Heinemann, Heinz: *See*—
Krieger, Knut A., and Heinemann.

Heinemann, Heinz, Upper Darby, and K. A. Krieger, assignors to Attapulgus Clay Company, Philadelphia, Pa. Regeneration of synthetic metal silicate adsorbents by oxidation. 2,457,556, Dec. 28.
Henderson, William F., Colfax, Wash. Wrecking bar. 2,457,231, Dec. 28.
Hengstebeck, Robert J., assignor to Standard Oil Company, Chicago, Ill. Catalytic conversion system. 2,457,232, Dec. 28.
Henshaw, Charles N., Plattsburg, assignor, by mesne assignments, to Pal Blade Co. Inc., New York, N. Y. Blade wrapping machine. 2,457,233, Dec. 28.
Herbert, William S., Madison, Wis., and H. T. Francis, Chicago, Ill., assignors to Armour Research Foundation of Illinois Institute of Technology. Apparatus for electrolytically determining the thickness of metal coatings. 2,457,234, Dec. 28.
Herbst, John A., Pompton Lakes, N. J., assignor to International Standard Electric Corporation, New York, N. Y. Selective signaling circuit. 2,457,149, Dec. 28.
Herbst, Robert M.: *See*—
Givens, Horace T. F., and Herbst.
Hercik, Lad L., Lakewood, Ohio. Method of and apparatus for correcting deviations in crossrails of machine tools. 2,457,468, Dec. 28.
Herman, Arthur, Brooklyn, N. Y. Earring. 2,457,672, Dec. 28.
Herondelle, Guy L. H., Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Gyroscope system. 2,457,150, Dec. 28.
Hershberger, William D., Princeton, N. J., assignor to Radio Corporation of America. Microwave gas analysis. 2,457,673, Dec. 28.
Hester, Levi C., Jacksonville, Fla. Disk plow. 2,457,151, Dec. 28.
Heuberger, John W., Newark, Del., assignor to Röhm & Haas Company, Philadelphia, Pa. Fungicidal compositions. 2,457,674, Dec. 28.
Higginson, George S., Ilford, assignor of one-half to G. S. M. Ashby, Hermitage, England. Projector for liquid and pulverulent or small material. 2,457,557, Dec. 28.
Hillman, Lloyd A., Bay City, assignor of one-half to L. R. Cuthbert, Essexville, Mich. Chip breaker. 2,457,469, Dec. 28.
Hinds, Robert L., Toledo, Ohio. Electrode control. 2,457,675, Dec. 28.
Hirt, Rudolf, Riehen, H. Gysin, and H. Martin, assignors to J. R. Geigy A. G., Basel, Switzerland. Acylated p-aminobenzene sulfonamides. 2,457,371, Dec. 28.
Hlavin, William S.: *See*—
Sigmund, Frank J., and Hlavin.
Hobart Brothers Company, The, assignee: *See*—
Hobart, Edward A., and Flora.
Hobart, Edward A., and R. T. Flora, assignors to The Hobart Brothers Company, Troy, Ohio. Alternating current vertical welder. 2,457,372, Dec. 28.
Hoehn, Karl, Canton, Ohio. Connector for electric receptacles. 2,457,235, Dec. 28.
Hoffman, John S.: *See*—
Davis, John V., and Hoffman.
Hoffman, Raymond A., Euclid, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Electrodepositing composition and bath. 2,457,152, Dec. 28.
Hofstatter's Sons, Inc., assignee: *See*—
Doggett, David L., and Schler.
Hokett, William G., Phoenix, Ariz. Vehicular motion-picture camera. 2,457,236, Dec. 28.
Holley, Earl, assignee: *See*—
Orr, Andrew W., Jr.
Holley, George M., assignee: *See*—
Orr, Andrew W., Jr.
Holloman, George V.: *See*—
Crane, Carl J., Holloman, Mueller, and Stout.
Holmes, Ralph S., Princeton, N. J., assignor to Radio Corporation of America. Frequency measuring circuit. 2,457,676, Dec. 28.
Holtschulte, William F., Newark, and S. D. Phillpps, Granville, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio. Apparatus for guiding and threading fibers. 2,457,777, Dec. 28.
Hornfeck, Anthony J., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Measuring and control system. 2,457,558, Dec. 28.
Houdaille-Hershey Corporation, assignee: *See*—
Johnson, Bernard C.
Houghton, Leslie W.: *See*—
Chatterjea, Prafulla, Kumar, and Houghton.
Howard, Stanley R., Milton, assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass. Apparatus for producing filled bags. 2,457,237, Dec. 28.
Howle, Ernest O., Chicago, Ill. Insulated chimney. 2,457,470, Dec. 28.
Howle, Ernest O., Chicago, Ill. Chimney construction. 2,457,471, Dec. 28.
Hubbell, Harvey, Long Hill, Conn. Sealed switch. 2,457,153, Dec. 28.
Huber, George H., Manhasset, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Repeater for pulse communication system. 2,457,559, Dec. 28.
Huber, J. M., Corporation, assignee: *See*—
Williams, Ira. and Carlton.
Hufferd, George H., and G. O. R. Lindgren, assignors to The Weatherhead Company, Cleveland, Ohio. Packless globe valve. 2,457,472, Dec. 28.
Hummel & Downing Company, assignee: *See*—
Wenzel, Frederick W.
Hunt, Robert A.: *See*—
Tollefsen, Reidar A., and Hunt.
Hunter, Charles H. S., Trona, Calif. Removable bracket. 2,457,373, Dec. 28.
Hunter, Edward, and R. B. Richards, Northwich, England, assignors to Imperial Chemical Industries Limited. Fractionation of polymeric ethylene. 2,457,238, Dec. 28.
Hunter, James H., Bridgeport, Conn., assignor to Columbia Records Inc. Phonograph record. 2,457,154, Dec. 28.
Hurban, Thomas, Jr.: *See*—
Hall, Maynard G., and Hurban, Jr.
Hurst, William M., Douglaston, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill. Tuning control mechanism. 2,457,374, Dec. 28.
Hutchings, Brian L., Montvale, N. J., assignor to American Cyanamid Company, New York, N. Y. Purification of pteroic acid amides. 2,457,375, Dec. 28.
Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Organo-siloxanes and making them. 2,457,677, Dec. 28.
Imperial Chemical Industries Limited, assignee: *See*—
Hunter, Edward, and Richards.
Incampo, Giuseppe, West Point, N. Y. Water absorber for clarinets and the like. 2,457,473, Dec. 28.
Interchemical Corporation, assignee: *See*—
Bernardi, Dominic J.
International Detrola Corporation, assignee: *See*—
Johnson, Fleming W.
International Nickel Company, Inc., The, assignee: *See*—
Eash, John T.
International Standard Electric Corporation, assignee: *See*—
Abercrombie, David J., Brettingham-Moore, and Muscio.
Ashford, James L.
Bour, Paul L.
Deloraine, Edmond M.
Earp, Charles W.
Earp, Charles W., and Strong.
Gilliver, Gilbert.
Gray, Frank.
Herbst, John A.
Herondelle, Guy L. H.
McWhirter, Eric M. S., and Dunn.
Taylor, Frank H.
Isacco, Vittorio, London, England. Aircraft with rotatable sustaining blades. 2,457,376, Dec. 28.
Jackson, Robert A., Tulsa, Okla., assignor to Chicago Bridge & Iron Company. Vent, overflow, and ladder unit, for storage tanks. 2,457,155, Dec. 28.
Jameson, William L., and F. L. Rogers, San Jose, Calif. Locking means for dividers. 2,457,474, Dec. 28.
Jansen, Eugene F., and Hans Lineweaver, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture. Pectic enzyme preparations fortified with pectinesterase. 2,457,560, Dec. 28.
Jeffrey Manufacturing Company, The, assignee: *See*—
Lee, Arthur L.
Jensen, Bergitte A.: *See*—
Peacock, Arnold L., and Jensen.
Jenson, Kenneth S., assignor to Prentiss Wabers Products Co., Wisconsin Rapids, Wis. Space heater and control means therefor. 2,457,377, Dec. 28.
Jewell, Raymond L.: *See*—
Owens, Neal, and Jewell.
Jira, Joseph W., Newburgh Heights, Ohio, assignor to Continental Carbon, Inc. Resistor and making. 2,457,678, Dec. 28.
Johnson, Bernard C., Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich. Evaporator unit. 2,457,561, Dec. 28.
Johnson, Eric J., assignor to Deere & Company, Moline, Ill. Thresher concave with rubber threshing bars. 2,457,680, Dec. 28.
Johnson, Fleming W., assignor to International Detrola Corporation, Detroit, Mich. Method of and device for wrapping wire on terminals. 2,457,475, Dec. 28.
Johnson & Johnson, assignee: *See*—
Ross, Samuel L.
Johnson, Roy W., and C. E. Zarwell, assignors to Automatic Products Company, Milwaukee, Wis. Gas control valve. 2,457,378, Dec. 28.
Johnson, S. C., & Son, Inc., assignee: *See*—
Bunn, Fred H.
Jones, Burr W., Rochester, assignor to Bendix Aviation Corporation, Elmira Heights, N. Y. Engine starter gearing. 2,457,239, Dec. 28.
Jones, John J., Collingdale, Pa. Sliding focal plane shutter for cameras. 2,457,679, Dec. 28.
Jones, John P., Toronto, Ontario, Canada. Manufacturing diamond studded tools. 2,457,156, Dec. 28.
Jørgensen, Axel. Aalborg, Denmark. Commodity delivery device for coin-freed apparatus. 2,457,778, Dec. 28.
Jorgensen, Jacob C., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shield for gun mounts. 2,457,240, Dec. 28.

Joy Manufacturing Company, assignee: *See*—
Hale, Ralph F.
Joyce, Atha-Lane, Washington, D. C. Changeable decorative fabric. 2,457,309, Dec. 28.
Judelshon, David N., Park Ridge, N. J. Cutting machine. 2,457,310, Dec. 28.
Justrite Manufacturing Company, assignee: *See*—
Olsen, Marvin R.
K & B Manufacturing Co., assignee: *See*—
Blake, William P.
Kaiser-Frazer Corporation, assignee: *See*—
McCaslin, Henry C.
Kallenbach, Irene, Dayton, Ohio, assignor to V. J. Kallenbach, Erie, Pa. Incision needle. 2,457,379, Dec. 28.
Kallenbach, Vern J., assignee: *See*—
Kallenbach, Irene.
Kaplan, William, assignor to Wilbe Research Corporation, Brooklyn, N. Y. Steam sizing machine. 2,457,476, Dec. 28.
Karleen, Edward H., Morris Plains, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Antenna drive mechanism. 2,457,562, Dec. 28.
Keating, John P., Elkhart, and G. L. Welmer, South Bend, assignors to Durakool, Inc., Elkhart, Ind. Time-delay plunger for relays. 2,457,681, Dec. 28.
Kelberer, Raymond J., Wolf Point, Mont. Retractable step and ramp appliance for vehicles. 2,457,380, Dec. 28.
Keller, Dan W., Chicago, Ill. Crystal mounting. 2,457,563, Dec. 28.
Kerr, Nathan F.: *See*—
Coggeshall, Norman D., and Kerr.
Kester, Arthur S.: *See*—
Christensen, Harold E., Stein, and Kester.
Kidd, Robert S., Williamsport, Pa., assignor to Avco Manufacturing Corporation. Starting and generator-driving mechanism for engines. 2,457,311, Dec. 28.
Kilholm, John B. R., Koping, Sweden. Impulse transmitting apparatus. 2,457,381, Dec. 28.
Kincaid, William S., assignor to The Roberts Brass Manufacturing Company, Detroit, Mich. Gas cock. 2,457,779, Dec. 28.
King, Alexander S., Jr., Prospect Park, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Turbine apparatus. 2,457,157, Dec. 28.
Kirchner, Henry P.: *See*—
Melton, Romie L., Benner, and Kirchner.
Kiser, Ross, North Tazewell, Va. Trolley wire tap. 2,457,682, Dec. 28.
Kittel, George P., West New York, and P. Wollner, Weehawken, assignors, by mesne assignments, to Aeroil Product Company, Inc., West New York, N. J. Portable burner apparatus for generating and burning hydrocarbon vapor fuel. 2,457,683, Dec. 28.
Klein, Mathias, Hawthorne, N. J., assignor to Curtiss-Wright Corporation. Coaster brake. 2,457,241, Dec. 28.
Klemp, Norman A., Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y. Manufacture of sponge polychloroprene rubber. 2,457,684, Dec. 28.
Klepp, Edwin C., London, England, assignor to S. Smith & Sons (England) Limited. Moving-coil electric instrument. 2,457,685, Dec. 28.
Knlel, Ludwig, Jackson Heights, assignor to The Lummus Company, New York, N. Y. Prefractionation of hydrocarbon alkylate to eliminate propane. 2,457,564, Dec. 28.
Knowlton, Cutler D., Rockport, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gun turret. 2,457,242, Dec. 28.
Koch, Daniel O., Rahway, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vitreous bonding compositions. 2,457,158, Dec. 28.
Koch, William H., Minneapolis, Minn. Fence repair tool. 2,457,382, Dec. 28.
Kofford, Reed S., Van Nuys, Calif. Water dispenser for poultry. 2,457,159, Dec. 28.
Kopita, Robert, Bound Brook, N. J., assignor to Peabody Engineering Corporation, New York, N. Y. Gas and liquid contact apparatus. 2,457,686, Dec. 28.
Kopitke, William H., West Hartford, assignor to Plax Corporation, Hartford, Conn. Apparatus for forming hollow articles of organic plastic material. 2,457,687, Dec. 28.
Kopp, George: *See*—
Stokes, Rupert O., and Kopp.
Kott, Leo F., Detroit, Mich. Power tool. 2,457,565, Dec. 28.
Koury, Frederic: *See*—
Metten, Herbert, and Koury.
Krafft, Frederich G., assignor to The Thompson Grinder Company, Springfield, Ohio. Apparatus for grinding. 2,457,383, Dec. 28.
Kramer, Clarence F., Birmingham, Mich. Weatherstrip molding. 2,457,312, Dec. 28.
Kreitner, Johann: *See*—
Nettel, Frederick, and Kreitner.
Krenz, Harry, Somers Point, assignor to Ace Glass Incorporated, Vineland, N. J. Clamp for spherical joints. 2,457,384, Dec. 28.
Krieble, Robert H.: *See*—
Elliott, John R., and Krieble.
Krieble, Robert H., and J. R. Elliott, Schenectady, N. Y., assignors to General Electric Company. Methyl siloxane gums and elastomers. 2,457,688, Dec. 28.
Krieg, Eldon L., South Whitley, Ind. Holder for fasteners. 2,457,689, Dec. 28.
Krieger, Knut A.: *See*—
Heinemann, Heinz, and Krieger.
Krieger, Knut A., Philadelphia, and H. Heinemann, Upper Darby, assignors to Porocel Corporation, Philadelphia, Pa. Regeneration of alumina adsorbents by oxidation. 2,457,566, Dec. 28.
Kronquest, Alfred L., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Container controlled vacuumizing apparatus. 2,457,690, Dec. 28.
Kubic, Raymond R., and C. H. Nylander, McKeesport, Pa., assignors to National Tube Company. Assembling metal articles. 2,457,691, Dec. 28.
Kucera, Joseph B., Traer, Iowa. Vehicle spring. 2,457,243, Dec. 28.
Kuns, Ray F., Cincinnati, Ohio. Boat trailer. 2,457,567, Dec. 28.
Kurtz, Stewart S., Jr., Merion, and J. S. Sweely, Swarthmore, assignors to Sun Oil Company, Philadelphia, Pa. Phenol-aldehyde sealing agent and making the same. 2,457,160, Dec. 28.
La Brie, Ludger E., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Hydrodynamic transmission. 2,457,692, Dec. 28.
Laidlaw, William C., Pasadena, Calif. Tire deflation switch. 2,457,161, Dec. 28.
Lamson, Otis F., Seattle, Wash. Medical appliance for control of enemata. 2,457,244, Dec. 28.
Langmuir, Robert V., Schnectady, N. Y., assignor to Consolidated Engineering Corporation, Pasadena, Calif. Mass spectrometry. 2,457,162, Dec. 28.
Lansing, Warren S., Loveland, Colo. Plow attachment for tractors. 2,457,163, Dec. 28.
Lanteen Medical Laboratories, Inc., assignee: *See*—
Fowler, Chester C., and Clark.
La Rizza, Anthony, Revere, Mass. Fuse attachment for electric plugs. 2,457,477, Dec. 28.
Larson, Albert H., and C. W. Fox, El Dorado, Ark. Tension indicator for threads on sewing machines. 2,457,245, Dec. 28.
Larson, Arthur G., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus for plural motor propulsion systems. 2,457,568, Dec. 28.
Lawrence, John G., Des Moines, Iowa. Breaking lead halter for cattle. 2,457,246, Dec. 28.
Lawshe, Walter D., assignor, by mesne assignments, to Monsanto Chemical Company, Seattle, Wash. Viscosimeter. 2,457,247, Dec. 28.
Lear, Incorporated, assignee: *See*—
Marsen, Richard A.
Lee, Arthur L., Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Shuttle car. 2,457,569, Dec. 28.
Leibing, William E., assignor, by mesne assignments, to R. D. Fageol Co., Detroit, Mich. Carburetor. 2,457,570, Dec. 28.
Leibing, William E., assignor, by mesne assignments, to R. D. Fageol Co., Detroit, Mich. Fuel pump. 2,457,571, Dec. 28.
Leicy, Walter K., assignor to The Burch Corporation, Crestline, Ohio. Mower attachment for tractors. 2,457,693, Dec. 28.
Lemke, George J., Rugby, N. Dak. Cabinet having pivotaly mounted bins. 2,457,248, Dec. 28.
Lennox, Frank W.: *See*—
Campbell, Edward R., Frewin, Lennox, and Morris.
Leonard, Joseph B., Detroit, Mich. Washing machine. 2,457,572, Dec. 28.
Letvin, Abe, assignor of one-half to H. Moore, Detroit, Mich. Service coupling. 2,457,478, Dec. 28.
Levenson, Solomon, Marblehead, assignor to Sylvania Electric Products Inc., Salem, Mass. Socket for gaseous discharge lamps. 2,457,780, Dec. 28.
Levin, David E., Brooklyn, assignor to I. Miller & Sons, Inc., Long Island City, N. Y. Shoe with sheath form of upper. 2,457,573, Dec. 28.
Lewis, Earle B., Southington, Conn. Blackening copper alloys. 2,457,480, Dec. 28.
Lewis, Fred G., Charleston, W. Va. Awning. 2,457,574, Dec. 28.
Lewit, Joseph, Washington, D. C. Universal reduction gear transmission. 2,457,385, Dec. 28.
Liebscher, Arthur, Philadelphia, Pa., assignor to Radio Corporation of America. Voltage indicator. 2,457,575, Dec. 28.
Lindae, Eola, assignee: *See*—
Lindae, William H., and Strachan.
Lindae, William H., St. Louis, Mo., and B. W. Strachan, New York, N. Y.; said Lindae assignor of one-fourth to E. Lindae and one-fourth to J. P. Pohrer. Antenna disconnecting switch. 2,457,386, Dec. 28.
Lindgren, George O. R.: *See*—
Hufferd, George H., and Lindgren.
Lindsay Wire Weaving Company, The, assignee: *See*—
Crossman, Fred, Southam, and Ruhl.
Lineweaver, Hans: *See*—
Jansen, Eugene F., and Lineweaver.
Lippincott, Stanley S., Palmyra, assignor to Flexitallic Gasket Company, Camden, N. J. Spiral wound gasket. 2,457,694, Dec. 28.
Lipschitz, Sidney K., New York, N. Y. Toy. 2,457,249, Dec. 28.

Lipuma, Charles E., Chicago, Ill., assignor to Zenith Radio Corporation. Sunshade mounting. 2,457,479, Dec. 28.
Liskow, Charles L., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Ultra high frequency apparatus for inspection of sheet and other materials. 2,457,695, Dec. 28.
Littrell, John G., San Antonio, Tex. Airplane propeller and means for adjusting same. 2,457,576, Dec. 28.
Locker, James R., Warrington, England. Conveyance of fluent materials. 2,457,387, Dec. 28.
Lockhart, Marshall L., Rutherford, N. J. Hypodermic syringe. 2,457,313, Dec. 28.
Lord, Harold W.: *See*—
Blas, Frank J., and Lord.
Lord Manufacturing Company, assignee: *See*—
Strachovsky, Nikita B.
Lossing, Frederick P.: *See*—
Morrison, George O., Lossing, Heatley, and Germain.
Lukes, George E., and R. C. Swann, Skokie, assignors to The Pure Oil Company, Chicago, Ill. Synthesis of unsaturated ketones. 2,457,696, Dec. 28.
Lum, George P., assignor to Bendix Aviation Corporation, South Bend, Ind. Screw locking means. 2,457,697, Dec. 28.
Lummus Company, The, assignee: *See*—
Gadwa, Truman A.
Graae, Johan E. A.
Kniel, Ludwig.
Lung, Kenneth R., assignor to Flint & Walling Manufacturing Co. Inc., Kendallville, Ind. Injector-impeller pump. 2,457,388, Dec. 28.
Lutz, Frederick G., Moorestown, N. J., and C. P. O'Rourke, Sharon Hill, Pa. Clip for attaching decorations and medals. 2,457,164, Dec. 28.
Lynn, Lawrence B.: *See*—
Hanna, Clinton R., and Lynn.
Lysholm, Alf, Stockholm, Sweden, assignor, by mesne assignments, to J. C. Marble, New York, N. Y., L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis., as trustees. Rotary screw wheel device. 2,457,314, Dec. 28.
MacArthur, John S., Scottsville, N. Y. Arch supporting device. 2,457,481, Dec. 28.
Maclay, William A., Windsor, Ontario, Canada. Top cylinder oiler for internal-combustion engines. 2,457,389, Dec. 28.
Maclay, William D., Berkeley, and A. D. Shepherd, El Cerrito, and R. M. McCready, Berkeley, and R. P. Graham, Albany, Calif., assignors to United States of America as represented by the Secretary of Agriculture. Production of low-methoxyl pectinic acids from aluminum-pectin compositions. 2,457,577, Dec. 28.
Macomber, Stanley, North Canton, Ohio. Tubular section structural member. 2,457,250, Dec. 28.
Mahler, George T.: *See*—
Handwerk, Erwin C., and Mahler.
Handwerk, Erwin C., Mahler, and Haupt.
Mahler, George T., Palmerton, and E. C. Handwerk, Lehighton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Condensing zinc vapor. 2,457,550, Dec. 28.
Main, Benjamin A., Jr., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich. Quick connect self-sealing coupling. 2,457,251, Dec. 28.
Maliphant, Charles W., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Choke fitting. 2,457,578, Dec. 28.
Mann, Julius W.: *See*—
Russell, George F., and Mann.
Marble, Jarvis C., trustee, assignee: *See*—
Lysholm, Alf.
Marean, Kostandean, Dayton, Ohio. Artificial leg. 2,457,482, Dec. 28.
Mariash, Carl, Brooklyn, N. Y. Suspender window support for washing windows. 2,457,698, Dec. 28.
Markussen, Halfdan A., Hempstead, N. Y. Baseball game apparatus. 2,457,390, Dec. 28.
Marsen, Richard A., New York, N. Y., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Magnetic recorder with friction drive device incorporated within the magazine. 2,457,699, Dec. 28.
Marshall, Thomas A.: *See*—
Brown, Andrew, and Marshall.
Martin, Clifford W., Denver, Colo. Reflecting optical objective system. 2,457,253, Dec. 28.
Martin, Edward J., Pleasant Ridge, and W. E. Sargeant, Ferndale, assignors to General Motors Corporation, Detroit, Mich. Torque meter. 2,457,700, Dec. 28.
Martin, Henry: *See*—
Hirt, Rudolf, Gysin, and Martin.
Martin, James, Higher Denham, near Uxbridge, England. Body protecting device for aircraft personnel. 2,457,252, Dec. 28.
Martin, Royal E., Mansfield, Ohio. Stretch-forming apparatus, including a segmental die connected at opposite ends to shiftable vises. 2,457,483, Dec. 28.
Maurer, Theodore H., Richmond Hill, N. Y. Adjustable coat and two pants hanger. 2,457,579, Dec. 28.
Mayer, Harry F., Schenectady, N. Y., assignor to General Electric Company. Radio locating equipment. 2,457,580, Dec. 28.
McCain, Byrl N., San Jose, Calif. Trailer. 2,457,581, Dec. 28.
McCaleb, Albert G., assignee: *See*—
Wheeler, Harold B.
McCarthy, Paul R., Allison Park, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Grease composition. 2,457,582, Dec. 28.
McCaslin, Henry C., Dexter, assignor, by mesne assignments, to Kaiser-Frazer Corporation, Willow Run, Mich. Vehicle torsion bar individual wheel suspension. 2,457,583, Dec. 28.
McCaslin, James F., Cleveland, Ohio, and J. Fink; said Fink assignor to The George W. Borg Corporation, Delavan, Wis. Delay arming device for fuses. 2,457,254, Dec. 28.
McCleary, Charles D., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Emulsion-polymerization of butadiene-1,3 hydrocarbons. 2,457,701, Dec. 28.
McClure, Glenn T., McKeesport, and J. W. Rush, Wilkinsburg, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Control valve apparatus. 2,457,584, Dec. 28.
McCormack, Robert B., Milltown, N. J., assignor to E. R. Squibb & Sons, New York, N. Y. Producing penicillins. 2,457,585, Dec. 28.
McCready, Rolland M.: *See*—
Maclay, William D., Shepherd, McCready, and Graham.
McElherne, Paul F., assignor to Standard Oil Company, Chicago, Ill. Stripping of spent catalyst in a hydrocarbon conversion process. 2,457,255, Dec. 28.
McGary, Charles E.: *See*—
McGary, Francis L., and C. E.
McGary, Francis L., and C. E. McGary, Hardinsburg, Ky. Shipping container. 2,457,702, Dec. 28.
McGraw Electric Company, assignee: *See*—
Osterheld, Clark M.
McGrogan, John F., assignor to The Atlantic Refining Company, Philadelphia, Pa. Grease composition. 2,457,586, Dec. 28.
McIlvaine, Robert L., Glencoe, assignor to H. S. Simpson, Evanston, Ill. Material reclamation system. 2,457,587, Dec. 28.
McNamee, Bernard F., Altadena, assignor to Consolidated Engineering Corporation, Pasadena, Calif. Electrical bridge. 2,457,165, Dec. 28.
McWhirter, Eric M. S., and R. H. Dunn, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Polyphase oscillation generator. 2,457,166, Dec. 28.
Melton, Romie L., R. C. Benner, and H. P. Kirchner, assignors to The Carborundum Company, Niagara Falls, N. Y. Apparatus for manufacture of coated webs. 2,457,256, Dec. 28.
Merck & Co., Inc., assignee: *See*—
Mozingo, Ralph.
Merkel, Joseph F., assignor to General Railway Signal Company, Rochester, N. Y. Pingboard arrangements. 2,457,703, Dec. 28.
Merrill, Leslie M., assignee: *See*—
Lysholm, Alf.
Merz Engineering Co., assignee: *See*—
Rupley, Frederick L.
Metal Lumber Corporation, The, assignee: *See*—
Collings, John K.
Metten, Herbert, Boston, and F. Koury, Somerville, assignors to Sylvania Electric Products Inc., Salem, Mass. Ray counter. 2,457,781, Dec. 28.
Metzner, William: *See*—
Wade, Francis A., and Metzner.
Meyer, Maximilian C., Brooklyn, N. Y. Baseball game. 2,457,167, Dec. 28.
Meyer, Maximilian C., Brooklyn, N. Y. Baseball game. 2,457,168, Dec. 28.
Michael, Vesta F., and S. W. Walker, assignors to Stanolind Oil and Gas Company, Tulsa, Okla. Separation of oxygenated compound with bisulfite adducts. 2,457,257, Dec. 28.
Michiana Products Corporation, assignee: *See*—
Nygren, Carl.
Mid-Continent Metal Products Co., assignee: *See*—
Donner, Verne P.
Miller, Arthur J., Oak Ridge, Tenn., and J. W. Fleisher, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Manufacturing of rectifier elements. 2,457,169, Dec. 28.
Miller, Gerald K.: *See*—
Doll, Henri-Georges, and Miller.
Miller, I., & Sons, Inc., assignee: *See*—
Levin, David E.
Miller, Victor F., Queens Village, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Split ring cord guide for step-by-step switches. 2,457,588, Dec. 28.
Miller, Victor F., Queens Village, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wiper assembly for step-by-step switches. 2,457,589, Dec. 28.
Milleville, Howard P., Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture. Volatile flavor recovery process. 2,457,315, Dec. 28.
Mills Industries, Incorporated, assignee: *See*—
Steiner, Louis.
Mills, William L., Waco, Tex. Safety razor. 2,457,590, Dec. 28.
Milner, Leslie F.: *See*—
Casler, Leslie R., and Milner.

Minnesota and Ontario Paper Company, assignee: *See*—
Barrett, William.
Mitchell, Bruce, San Diego, Calif. Airplane train. 2,457,391, Dec. 28.
Mitchell, Donald H., Cranford, and E. C. Moss, Westfield, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Material supporting and cooling apparatus for welding machines. 2,457,704, Dec. 28.
Mitchell, Gordon P., Merrill, Wis. Pulling implement for detaching insulators. 2,457,258, Dec. 28.
Mitchell, Kenneth, assignor, by mesne assignments, to Standard Telephones and Cables Limited, London, England. Optical projection apparatus. 2,457,170, Dec. 28.
Mock, Frank C., assignor to Bendix Aviation Corporation, South Bend, Ind. Charge forming device. 2,457,171, Dec. 28.
Moll, Fred M., West Bend, Wis. Disappearing tooth bars for concaves. 2,457,259, Dec. 28.
Monowatt Incorporated, assignee: *See*—
Benander, George B.
Monsanto Chemical Company, assignee: *See*—
Glick, Sanford E.
Lawshe, Walter D.
Scott, Milton J.
Mooney, Fred L., Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Leveling machine. 2,457,172, Dec. 28.
Moore, Harry, assignee: *See*—
Letvin, Abe.
Moore, Maryalice C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydrophilic-organophilic pigments and producing same. 2,457,591, Dec. 28.
Moran, Francis D., Downers Grove, Ill. Wire curling apparatus and method. 2,457,705, Dec. 28.
Morbell Products Corporation, assignee: *See*—
Bell, John G.
Morris, Rowland P.: *See*—
Campbell, Edward R., Frewin, Lennox, and Morris.
Morris, William P., Hobbs, N. Mex. Undergarment. 2,457,260, Dec. 28.
Morrison, George O., F. P. Lossing, A. H. Heatley, and J. F. L. M. Germain, Shawinigan Falls, assignors to Shawinigan Chemicals Limited, Montreal, Quebec, Canada. Polyvinyl acetal resins. 2,457,261, Dec. 28.
Moss, Earl C.: *See*—
Mitchell, Donald H., and Moss.
Mowat, John H., Pearl River, assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Substituted pyridine compound. 2,457,484, Dec. 28.
Mozingo, Ralph, Elizabeth, assignor to Merck & Co., Inc., Rahway, N. J. Hydrogenolysis of thiol esters. 2,457,392, Dec. 28.
Muffly, Glenn, Springfield, Ohio. Apparatus for causation and prevention of collisions. 2,457,393, Dec. 28.
Muller, Carl W.: *See*—
Crane, Carl J., and Holloman, Muller, and Stout.
Muller, George W., Miami Beach, Fla. Rail retaining and spike fastening means. 2,457,592, Dec. 28.
Musico, Winston T.: *See*—
Abercrombie, David J., Brettingham-Moore, and Musico.
Nadon, Eugene O., assignor to Vermont Hosiery and Machinery Co., Northfield, Vt. Hosiery knitting machine. 2,457,782, Dec. 28.
Nagy, Michael J.: *See*—
Northrop, John K., and Nagy.
National Fitch Corporation, assignee: *See*—
Norbom, Ragnar A.
National Organ Supply Company, assignee: *See*—
Cloyd, Harold S.
National Tube Company, assignee: *See*—
Kubic, Raymond R., and Nylander.
Neher, Eldon P., North Manchester, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio. Resilient mounting. 2,457,706, Dec. 28.
Nelson, John W., Wickliffe, Ohio. Detachable connection for electric cables. 2,457,593, Dec. 28.
Nettel, Frederick, Manhasset, and J. Kreitner, New York, N. Y. Turbine compressor plant. 2,457,594, Dec. 28.
Neuman, Wilbur K., Skokie, Ill., and H. M. Slosberg, Ames, Iowa, assignors to Continental Can Company, Inc., New York, N. Y. Gas sampling device. 2,457,707, Dec. 28.
Newitt, John H., Montclair, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electronic switching system. 2,457,173, Dec. 28.
New Jersey Zinc Company, The, assignee: *See*—
Handwerk, Erwin C., and Mahler.
Handwerk, Erwin C., Mahler, and Haupt.
Robson, Stanley.
Newton, Bertie F., Chelmsford, England, assignor to Norma Hoffmann Bearings Corporation, Stamford, Conn. Cage for roller bearings. 2,457,485, Dec. 28.
Newton Brothers (Derby) Limited, England: *See*—
Newton, Frederick.
Newton, Frederick, Sudbury, assignor to Newton Brothers (Derby) Limited, Derby, England. Hydraulic damper. 2,457,708, Dec. 28.
Niederhauser, Warren D.: *See*—
Bruson, Herman A., and Niederhauser.
Nolde, Arthur H., assignor to The Falk Corporation, Wauwatosa, Wis. Jig bushing. 2,457,709, Dec. 28.
Norbom, Ragnar A., New York, N. Y., assignor to National Fitch Corporation. Fluid meter construction. 2,457,710, Dec. 28.
Norma Hoffmann Bearings Corporation, assignee: *See*—
Newton, Bertie F.
Norquist, Glenn H., Jamestown, N. Y. Shipping assembly. 2,457,262, Dec. 28.
Norquist, Glenn H., Jamestown, N. Y. Soldering stand assembly. 2,457,263, Dec. 28.
Northrop Aircraft, Inc., assignee: *See*—
Northrop, John K., and Nagy.
Northrop, John K., Los Angeles, and M. J. Nagy, Inglewood, assignors to Northrop Aircraft, Inc., Hawthorne, Calif. Prosthetic wrist. 2,457,316, Dec. 28.
Northwest Plastics, Inc., assignee: *See*—
Diethert, Russell S.
Novak, George A., Broadview, assignor to Union Asbestos & Rubber Company, Chicago, Ill. Grip for kitchen utensils. 2,457,394, Dec. 28.
Nygren, Carl, assignor to Michiana Products Corporation, Michigan City, Ind. High-temperature fan. 2,457,264, Dec. 28.
Nygren, Carl, assignor to Michiana Products Corporation, Michigan City, Ind. High-temperature fan. 2,457,265, Dec. 28.
Nygren, Carl, assignor to Michiana Products Corporation, Michigan City, Ind. High-temperature fan. 2,457,711, Dec. 28.
Nylander, Carl H.: *See*—
Kubic, Raymond R., and Nylander.
O'Grady, Kathleen R., Chicago, Ill. Garment hanger. 2,457,486, Dec. 28.
Ohio Crankshaft Company, The, assignee: *See*—
Warnick, Alan.
Okonite-Callender Cable Company, Incorporated, The, assignee: *See*—
Bennett, Charles E.
Bennett, Charles E., and White.
Oliver, John R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gun primer mechanism. 2,457,266, Dec. 28.
Olsen, Marvin R., Glen Ellyn, assignor to Justrite Manufacturing Company, Chicago, Ill. Window clamp. 2,457,317, Dec. 28.
Olson, Harry F., Princeton, and J. Preston, Hopewell, N. J., assignors to Radio Corporation of America. Method and apparatus for noise control of reproduced sound. 2,457,712, Dec. 28.
O'Neil, William, assignee: *See*—
Roberts, Gerald G.
O'Rourke, Charles P.: *See*—
Lutz, Frederick G.
Orr, Andrew W., Jr., Detroit, Mich., assignor to G. M. and E. Holley. Gas turbine control. 2,457,595, Dec. 28.
Osborne, Ronald R., and E. G. Dunsford, Farnborough, England, assignors to the Minister of Supply, in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England. Apparatus for testing the operation of oxygen supply equipment for aircraft. 2,457,713, Dec. 28.
Osterheld, Clark M., Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill. Water heater. 2,457,596, Dec. 28.
Osterheld, Clark M., Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill. Water heater. 2,457,597, Dec. 28.
Osterheld, Clark M., Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill. Electric air heater. 2,457,598, Dec. 28.
Owens-Corning Fiberglas Corporation, assignee: *See*—
Ebaugh, Paul.
Holtschulte, William F., and Philipps.
Slayter, Games.
Slayter, Games, and Snow.
Owens, Ivan L., Detroit, Mich. Boat trailer. 2,457,395, Dec. 28.
Owens, Neal, New Orleans, La., and R. L. Jewell, assignors to American Sterilizer Company, Erie, Pa. Burn bath table. 2,457,174, Dec. 28.
Oxhandler, Samuel: *See*—
Voight, Henry G., and Oxhandler.
Packhner & Koller, Inc., assignee: *See*—
Sharps, George J.
Pal Blade Co., Inc., assignee: *See*—
Henshaw, Charles N.
Pancoast, William R., Evanston, Ill. Knife sharpener. 2,457,714, Dec. 28.
Paragon Revolute Corporation, assignee: *See*—
Davis, Raymond R.
Parker, Louis W., Little Neck, assignor to Federal Telecommunication Laboratories, Inc., New York, N. Y. Projection cathode-ray tube. 2,457,175, Dec. 28.
Patent and Licensing Corporation, The, assignee: *See*—
Golden, Victor.
Pazzano, Frederick F., Waltham, Mass. Bait-holding casting bob. 2,457,715, Dec. 28.
Peabody Engineering Corporation, assignee: *See*—
Graham, David P.
Harmon, Robert R.
Kopita, Robert.
Peacock, Arnold L., Danvers, and B. A. Jensen, Boston, assignors to Sylvania Electric Products Inc., Salem, Mass. Glow relay. 2,457,487, Dec. 28.
Peale, Rembrandt, Jr., assignee, trustee: *See*—
Peale, Richard and R., Jr.
Peale, Richard, Clearfield, Pa., and R. Peale, Jr., Greenwich, Conn., assignors to themselves as trustees. Coal loading and conveying mechanism. 2,457,267, Dec. 28.

Penfold, Charles S., assignor to H. A. Douglas Mfg. Co., Bronson, Mich. Lamp socket and resistor. 2,457,488, Dec. 28.
Perkins, Ronald R., Dallas, Tex. Butter slicer. 2,457,716, Dec. 28.
Pervier, Charles F., Port Washington, assignor to Harnischfeger Corporation, Milwaukee, Wis. Engine cooling, cylinder, jacket, and head construction. 2,457,717, Dec. 28.
Pessel, Leopold, Philadelphia, Pa., assignor to Radio Corporation of America. Closing tube ends by dipping in molten solder. 2,457,599, Dec. 28.
Peterson, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Signaling. 2,457,268, Dec. 28.
Pfrehm, Harry J., Houston, Tex. Recessing tool. 2,457,269, Dec. 28.
Pharmaceutical Organics Inc., assignee: *See*—
Freeman, Joel G.
Phelps, Clyde H., Springfield, Ill., assignor, by mesne assignments, to Weaver Engineering Co. Balance-testing machine rotor suspension system. 2,457,718, Dec. 28.
Philadelphia Quartz Company, assignee: *See*—
Baker, Chester L., and Sams.
Philco Corporation, assignee: *See*—
Bates, Harold S., and Robinson.
Philipps, Samuel D.: *See*—
Holtschulte, William F., and Philipps.
Phillips, Towner H., Portland, Oreg. Animated toy. 2,457,270, Dec. 28.
Pickney, Paul S., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Modification of preformed monoolefin/carbon monoxide polymers. 2,457,271, Dec. 28.
Pierce, Eugene H., assignor to Swift & Company, Chicago, Ill. Device for assisting in a hand-labeling operation. 2,457,489, Dec. 28.
Pine, Paul R., Berea, and E. C. Ray, Cleveland, assignors to The Harshaw Chemical Company, Elyria, Ohio. Preparation of extruded iron oxide catalysts. 2,457,719, Dec. 28.
Plawker, Samuel, Newark, N. J. Shoe sole pressure device. 2,457,720, Dec. 28.
Plax Corporation, assignee: *See*—
Kipitke, William H.
Pneumatic Scale Corporation, Limited, assignee: *See*—
Eaton, Lewis B., and Vergobbi.
Howard, Stanley R.
Pohrer, Joseph P., assignee: *See*—
Lindae, William H., and Strachan.
Polk, Louis F., assignor to The Sheffield Corporation, Dayton, Ohio. Grinding machine with automatic crush dressing mechanism. 2,457,318, Dec. 28.
Pollard, Philip E., assignor to Minister of Supply in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England. Radio locating apparatus. 2,457,396, Dec. 28.
Porocel Corporation, assignee: *See*—
Krieger, Knut A., and Heinemann.
Powers, Paul O., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Linoleum surface covering. 2,457,600, Dec. 28.
Preisman, Albert, Flushing, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Wave generating system. 2,457,176, Dec. 28.
Premier Thread Company, assignee: *See*—
Giglio, Antonio J.
Prentiss Wabers Products Co., assignee: *See*—
Jenson, Kenneth S.
Press, Ray A., Lancaster, Calif. Reel for grain harvesters. 2,457,490, Dec. 28.
Preston, John: *See*—
Olson, Harry F., and Preston.
Price, Harold W., assignor to Bendix Aviation Corporation, South Bend, Ind. Pressure fluid follow-up servomotor. 2,457,721, Dec. 28.
Pritchard, Ralph W., Jr., Chicago, Ill. Locking clip. 2,457,272, Dec. 28.
Puckette, Charles M., Jr., Ridgewood, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Connector for coaxial cable. 2,457,722, Dec. 28.
Pura, Andrew R., Toronto, Ontario, Canada. Adjustable glider for furniture legs. 2,457,723, Dec. 28.
Pure Oil Company, The, assignee: *See*—
Bond, Donald C., and Savoy.
Lukes, George E., and Swann.
Savoy, Michael.
Putt, Donald R.: *See*—
Harshbarger, Walter J., and Putt.
Rackett, Gerald F., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Cinematographic dye printing. 2,457,319, Dec. 28.
Radio Corporation of America, assignee: *See*—
Braden, Rene A.
Brian, Joseph M.
Carlson, Wendell L.
Flory, Leslie E.
Hanchett, George D., Jr.
Hershberger, William D.
Holmes, Ralph S.
Liebscher, Arthur.
Olson, Harry F., and Preston.
Pessel, Leopold.
Peterson, Harold O.
Sziklai, George C.
Usselman, George L.
Ramsey, De Witt, Miami, Fla. Sliding door mounting. 2,457,491, Dec. 28.
Randall, Cyril E., Bedford, England, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric relay for use with alternating current of variable frequency and voltage. 2,457,724, Dec. 28.
Rapids-Standard Company, Inc., The, assignee: *See*—
Sebastian, James R.
Wolf, Cecil, and Foulds.
Ray, Earl C.: *See*—
Pine, Paul R., and Ray.
Raybould, Frank J., Lakewood, assignor to The Weatherhead Company, Cleveland, Ohio. Valve. 2,457,492, Dec. 28.
Reach, Milton B., Springfield, Mass. Golf club. 2,457,177, Dec. 28.
Redfern, Donald V., assignor to American-Marietta Company, Adhesive, Resin and Chemical Division, Seattle, Wash. Art of making phenol-aldehyde reaction products and the product thereof. 2,457,493, Dec. 28.
Reichinstein, David, Zurich, assignor to Fanal Licht A.-G., Lucerne, Switzerland. Transformer and connection for starting arc lamps. 2,457,494, Dec. 28.
Renfroe, Joseph C., Jacksonville, Fla. Spindle adapter. 2,457,273, Dec. 28.
Republic Drill & Tool Company, assignee: *See*—
Delaney, Harry W.
Republic Flow Meters Company, assignee: *See*—
Rosenberger, Albert J.
Rhowmine, Lavinia B., Grand Rapids, Mich. Bib and tray cover. 2,457,725, Dec. 28.
Rice, William W., Jr.: *See*—
Yoch, August H., and Rice, Jr.
Richards, Grover E., Youngstown, Ohio. Resilient suspension for farm wagons. 2,457,397, Dec. 28.
Richards, Harper, Chicago, Ill. Toilet seat. 2,457,726, Dec. 28.
Richards, Raymond B.: *See*—
Hunter, Edward, and Richards.
Richardson, Avery G., Boonton, N. J., and T. H. Clark, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Resistance sine wave generator. 2,457,178, Dec. 28.
Rifenbergh, Clare M., Grosse Pointe, Mich., assignor to Armour Research Foundation of Illinois Institute of Technology, Chicago, Ill. Electrical measuring system. 2,457,727, Dec. 28.
Rifken, Louis L., Elgin, Ill. Towel or cloth holder. 2,457,274, Dec. 28.
Ring, Douglas H., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translating apparatus. 2,457,601, Dec. 28.
Ringer, Evue J., assignor to Bendix Aviation Corporation, South Bend, Ind. Power steering mechanism and follow-up control valve therefor. 2,457,728, Dec. 28.
Ritter, Saul, New York, N. Y. Tubular link construction. 2,457,275, Dec. 28.
Roberts, Albert O., and J. J. Wharam, assignors to Ford Motor Company, Dearborn, Mich. Automatic brake control. 2,457,729, Dec. 28.
Roberts Brass Manufacturing Company, The, assignee: *See*—
Kincaid, William S.
Roberts, David S., Brighton, and R. A. DeLuca, South Boston, Mass., said DeLuca assignor to said Roberts. Bubble cap. 2,457,398, Dec. 28.
Roberts, Gerald G., assignor to W. O'Neil, Akron, Ohio. Relay control system. 2,457,730, Dec. 28.
Roberts Paper Company, assignee: *See*—
Dalby, Delbert G.
Robinson, Samuel A.: *See*—
Bates, Harold S., and Robinson.
Robson, Stanley, Bristol, England, assignor to The New Jersey Zinc Company, New York, N. Y. Condensing zinc vapor. 2,457,551, Dec. 28.
Roby, Horace H., Wichita, Kans. Two position pitch-changing mechanism. 2,457,731, Dec. 28.
Rochester Manufacturing Company, assignee: *See*—
Tollefsen, Reidar A., and Hunt.
Rochester, Nathaniel, South Hamilton, assignor to Sylvania Electric Products Inc., Salem, Mass. Ultra high frequency tube. 2,457,495, Dec. 28.
Rockwell, Edward A., Cleveland, Ohio. Hydraulic latch control mechanism. 2,457,732, Dec. 28.
Rockwood, Charles H., West Allis, and D. J. Sikorra, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Resistance grid and assembling. 2,457,399, Dec. 28.
Rockwood & Co., assignee: *See*—
Burbank, H. Russell, and Zenlea.
Rodgers, Reginald W., Winnipeg, Manitoba, Canada. Headlock wedge. 2,457,602, Dec. 28.
Rodman, Francis C., Garden City, and J. E. Engel, Tottenville, Staten Island, N. Y., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del. Glue dispenser. 2,457,733, Dec. 28.
Roetting, Arthur J., assignor to Wire Machinery Corporation of America, Inc., New Haven, Conn. Wire-stranding machine. 2,457,402, Dec. 28.
Rogers, Frank L.: *See*—
Jameson, William L., and Rogers.
Rohlm Manufacturing Company, Inc., assignee: *See*—
Sarver, Emmett F.

Röhm & Haas Company, assignee: *See*—
Bruson, Herman A., and Niederhauser.
Heuberger, John W.

Roland, John R.: *See*—
Hanford, William E., and Roland.

Ronay, Bela, Annapolis, Md. Coreless induction heater and making same. 2,457,179, Dec. 28.

Roos, Delmar G., assignor to Willys-Overland Motors, Inc., Toledo, Ohio. Automotive vehicle. 2,457,400, Dec. 28.

Roper, George D., Corporation, assignee: *See*—
Baysinger, Royal D., and Fulton.

Rosenberger, Albert J., assignor to Republic Flow Meters Company, Chicago, Ill. Fluid seal. 2,457,320, Dec. 28.

Ross, Harold E., Kettle Falls, Wash. Triple sealed icebox door. 2,457,496, Dec. 28.

Ross, Samuel L., New Brunswick, N. J., assignor to Johnson & Johnson. Strand testing. 2,457,276, Dec. 28.

Rowe, Raymond N., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch. 2,457,497, Dec. 28.

Ruhl, George J.: *See*—
Crossman, Fred, Southam, and Ruhl.

Rupley, Frederick L., Cincinnati, Ohio, assignor to Merz Engineering Co., Indianapolis, Ind. Pneumatic gauging apparatus. 2,457,401, Dec. 28.

Rush, John W.: *See*—
McClure, Glenn T., and Rush.

Rushing, Herschel L., Nashville, Tenn. Rail track fastening. 2,457,180, Dec. 28.

Russell, George F., and J. W. Mann, Tacoma, Wash. Radio-frequency parallel bonding. 2,457,498, Dec. 28.

Russell, Kenneth F., assignor to H. H. Garner, Claremont, Calif. Air cleaner. 2,457,321, Dec. 28.

Rutledge, John W., Early, Iowa. Device for hoisting bales. 2,457,181, Dec. 28.

Salzberg, Paul L., and F. K. Signaigo, Brandywine Hundred, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyvinyl boronates and producing same. 2,457,603, Dec. 28.

Sams, Robert H.: *See*—
Baker, Chester L., and Sams.

Sandusky, Julius, Toronto Township, Peel County, Ontario, Canada. Electrolyte level control device for storage batteries. 2,457,322, Dec. 28.

Santole, Joseph P., Waterbury, Conn. Fire alarm trip mechanism. 2,457,499, Dec. 28.

Sargeant, Walter E.: *See*—
Martin, Edward J., and Sargeant.

Sargent & Company, assignee: *See*—
Voight, Henry G., and Oxhandler.

Sargent, Theodore C., Swampscott, assignor to Sylvania Electric Products Inc., Salem, Mass. Resistor for electric discharge devices. 2,457,734, Dec. 28.

Sarver, Emmett F., Lenexa, Kans., assignor to Rohlm Manufacturing Company, Inc., Erie, Pa. Position indicator for magnetic actuators. 2,457,403, Dec. 28.

Savoy, Michael: *See*—
Bond, Donald C., and Savoy.

Savoy, Michael, assignor to The Pure Oil Company, Chicago, Ill. Breaking water-in-oil emulsions. 2,457,735, Dec. 28.

Scandura, John J., Roslindale, Mass. Sterilizer. 2,457,500, Dec. 28.

Schaefer, Jacob W.: *See*—
Goldsmith, Elsworth H., Terry, and Schaefer.

Schler, Wallace: *See*—
Doggett, David L., and Schler.

Schiro, Raymond M. G., assignor to Chain Belt Company, Milwaukee, Wis. Material distributing apparatus. 2,457,604, Dec. 28.

Schlumberger, Marcel, Paris, France; vested in the Attorney General of the United States. Well conditioning apparatus. 2,457,277, Dec. 28.

Schlumberger Well Surveying Corporation, assignee: *See*—
Doll, Henri-Georges, and Miller.

Schmidt, Bearnard O., Caroline, Wis. Wire clothespin. 2,457,736, Dec. 28.

Schoenbaum, Joseph R., Roseland, N. J., assignor to Curtiss-Wright Corporation. Frequency responsive system. 2,457,278, Dec. 28.

Scholl, William M., Chicago, Ill. Making arch supports. 2,457,737, Dec. 28.

Schrock, Eugene B., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Railway car truck. 2,457,182, Dec. 28.

Scott, Milton J., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Nitroparaffin modified aminoplasts. 2,457,404, Dec. 28.

Scott, Milton J., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Halo nitroparaffin modified aminoplasts. 2,457,405, Dec. 28.

Scott, Milton J., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Halo nitroalcohol modified aminoplasts. 2,457,406, Dec. 28.

Scott, Milton J., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Thermoplastic aminoplasts. 2,457,738, Dec. 28.

Scott, Samuel L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Modification of preformed monoolefin/carbon monoxide polymers by reaction with basic compounds. 2,457,279, Dec. 28.

Seaman, Harold E., Cleveland Heights, Ohio. Projection apparatus for chance selected indicia. 2,457,280, Dec. 28.

Seawell, Miles P.: *See*—
Burroughs, Eugene, Jr., Byrd, and Seawell.

Sebald, Joseph F., Bloomfield, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Feed water heater. 2,457,605, Dec. 28.

Sebastian, James R., assignor to The Rapids-Standard Company, Inc., Grand Rapids, Mich. Roller support for conveyer belts. 2,457,407, Dec. 28.

Sebastian, James R., assignor to The Rapids-Standard Company, Inc., Grand Rapids, Mich. Conveyer switch. 2,457,408, Dec. 28.

Senn, Charles, Detroit, Mich. Welding gun. 2,457,606, Dec. 28.

Seymour, Charles E., Baraboo, Wis., assignor to Control Corporation, Minneapolis, Minn. Remote control system. 2,457,607, Dec. 28.

Shafter, Adolph F., assignor to U. S. Manufacturing Corporation, Decatur, Ill. Electric heating element. 2,457,608, Dec. 28.

Shannon, John K., Kenosha, Wis. Control mechanism for model airplanes. 2,457,281, Dec. 28.

Sharps, George J., assignor to Pachner & Koller, Inc., Chicago, Ill. Fishing reel. 2,457,323, Dec. 28.

Shawinigan Chemicals Limited, assignee: *See*—
Morrison, George O., Lossing, Heatley, and Germain.

Shea, Robert P., North Hollywood, assignor to E. Furer, Burbank, Calif., doing business as Acme Tool and Manufacturing Company. Intermittent film advancing mechanism. 2,457,409, Dec. 28.

Sheffield Corporation, The, assignee: *See*—
Aller, Willis F.
Polk, Louis F.

Shell Development Company, assignee: *See*—
Bell, James A.

Shene, Francis E., Vermontville, N. Y. Animal trap. 2,457,501, Dec. 28.

Shepherd, Allan D.: *See*—
Maclay, William D., Shepherd, McCready, and Graham.

Shepherd, Judson O'D., Atlanta, Ga. Signal system employing polarized light. 2,457,502, Dec. 28.

Sherman, Thomas L., assignor to The Steel Products Engineering Co., Springfield, Ohio. Cooling jacket and cylinder construction. 2,457,183, Dec. 28.

Sherman, William J., Sr., New Albany, Ind. Rotary locking screw plug. 2,457,184, Dec. 28.

Sherrill, Eugene A., assignor to Bendix Aviation Corporation, South Bend, Ind. Oil dilution and primer system for internal-combustion engines. 2,457,739, Dec. 28.

Sherwin-Williams Company, The, assignee: *See*—
Arvin, James A., and Gitchel.

Shields, Robert A., Bloomsburg, Pa., assignor to American Car and Foundry Company, New York, N. Y. Lateral shifting caster truck. 2,457,783, Dec. 28.

Shipner, John R., South Omaha, Nebr., assignor to The Cudahy Packing Company, Chicago, Ill. Stabilization of fatty material. 2,457,741, Dec. 28.

Shock, Escu W., Rogue River, Oreg. Egg cleaning machine. 2,457,324, Dec. 28.

Sidell, Philip A., Rock Island, assignor to American Machine and Metals, Inc., East Moline, Ill. Axial flow fan. 2,457,325, Dec. 28.

Sigmund Corporation, assignee: *See*—
Sigmund, Frank J., and Hlavin.

Sigmund, Frank J., and W. S. Hlavin, Cleveland, Ohio, assignors to Sigmund Corporation. Fluidproof winding element. 2,457,740, Dec. 28.

Signaigo, Frank K.: *See*—
Salzberg, Paul L., and Signaigo.

Sikorra, Daniel J.: *See*—
Rockwood, Charles H., and Sikorra.

Simmons Company, assignee: *See*—
Travis, Don C.

Simmons, Oscar R., Topeka, Kans. Matrix drying and roasting machine. 2,457,282, Dec. 28.

Simpson, Herbert S., assignee: *See*—
McIlvaine, Robert L.

Singer, Grover C., Brownsville, Tex. Reflecting vapor lamp. 2,457,503, Dec. 28.

Slater, Frank P., Kansas City, Mo. Tungsten carbide tool grinder. 2,457,283, Dec. 28.

Slayter, Games, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation. Apparatus for felting fibrous glass. 2,457,784, Dec. 28.

Slayter, Games, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation. Apparatus for winding strands. 2,457,786, Dec. 28.

Slayter, Games, and H. Snow, Newark, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio. Apparatus for making glass film. 2,457,785, Dec. 28.

Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Trolley glider. 2,457,326, Dec. 28.

Slosberg, Harry M.: *See*—
Neuman, Wilbur K., and Slosberg.

Smith, S., & Sons (England), Limited, assignee: *See*—
Klepp, Edwin C.

Smith, Wallace A., Speed, Ind. Bender. 2,457,410, Dec. 28.

Smith-Pert, George J., and A. G. Forsyth, Cheam, assignors to The Fairey Aviation Company Limited, Hayes, England. Pitch changing mechanism. 2,457,609, Dec. 28.

Snoke, John J., Goshen, Ind. Method and apparatus for forming wood veneer plywood tubes. 2,457,504, Dec. 28.

Snow, Henry: *See*—
Slayter, Games, and Snow.

Soha, George, New York, N. Y. Pushcart assembly. 2,457,742, Dec. 28.

Solari, Archie J., assignor to Crane Packing Company, Chicago, Ill. Adjustable fluid seal. 2,457,284, Dec. 28.

Solem, Robert H., Rockford, Ill., assignor to Eclipse Fuel Engineering Co. Gaseous fuel burner. 2,457,505, Dec. 28.

Sorensen, Steffen H., New York, N. Y. Safety prod. 2,457,506, Dec. 28.

Southam, Earl A.: *See*—
Crossman, Fred, Southam, and Ruhl.

Southern Wood Preserving Company, assignee: *See*—
Delters, August M.

Sparklin, Charles H., Chicago, Ill., assignor to Birtman Electric Company. Heat regulating iron. 2,457,185, Dec. 28.

Squibb, E. R., & Sons, assignee: *See*—
McCormack, Robert B.

Stagnaro, John A., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Potential divider. 2,457,787, Dec. 28.

Standard Oil Company, assignee: *See*—
Hengstebeck, Robert J.
McElherne, Paul F.

Standard Telephones and Cables Limited, assignee: *See*—
Brown, Andrew, and Marshall.
Chatterjea, Prafulla K., and Houghton.
Mitchell, Kenneth.

Stanolind Oil and Gas Company, assignee: *See*—
Michael, Vesta F., and Walker.

Stateman, Murray J., Brooklyn, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electroforming rectifier elements. 2,457,186, Dec. 28.

Steel Products Engineering Co., The, assignee: *See*—
Sherman, Thomas L.

Stein, John J.: *See*—
Christensen, Harold E., Stein, and Kester.

Steinberger, Laurel E., San Fernando, Calif. Set of knockdown furniture. 2,457,411, Dec. 28.

Steiner, Louis, Rockaway Park, N. Y., assignor to Mills Industries, Incorporated. Dispensing device. 2,457,187, Dec. 28.

Stepner, Harvey A., Richmond Hill, N. Y. Tray. 2,457,285, Dec. 28.

Stevens, Clarence C., Forestville, Conn., assignor to General Motors Corporation, Detroit, Mich. Internal grinding machine. 2,457,743, Dec. 28.

Stevens, Roy R., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus for prime movers. 2,457,610, Dec. 28.

Stevenson, Philip H., Cincinati, Ohio. Turbine wheel. 2,457,327, Dec. 28.

Stewart-Warner Corporation, assignee: *See*—
Williams, Lynn A., Jr.

Stokes, Rupert O., London, England. Valve control mechanism for hydraulic classifiers. 2,457,412, Dec. 28.

Stokes, Rupert O., and G. Kopp, London, England. Vibrator. 2,457,413, Dec. 28.

Stone, Raymond, assignor to Americaine, Inc., Chicago, Ill. Benzocaine solution. 2,457,188, Dec. 28.

Stout, Raymond K.: *See*—
Crane, Carl J., Holloman, Mueller, and Stout.

Strachan, Ben W.: *See*—
Lindae, William H., and Strachan.

Strachovsky, Nikita B., assignor to Lord Manufacturing Company, Erie, Pa. Shaft coupling. 2,457,507, Dec. 28.

Strong, Charles E.: *See*—
Earp, Charles W., and Strong.

Sturm, Ralph E., assignor to The Burdick Corporation, Milton, Wis. Instrument useful in the analysis of vibrations in organized living tissue. 2,457,744, Dec. 28.

Sness, Julius J., West Allis, Wis. Convertible vehicle drawbar. 2,457,745, Dec. 28.

Sulzer Frères, Société Anonyme, assignee: *See*—
Wiesendanger, Fritz.

Sun Oil Company, assignee: *See*—
Kurtz, Stewart S., Jr., and Sweely.

Supply, His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, Minister of, assignee: *See*—
Osborne, Ronald R., and Dunsford.
Pollard, Philip E.

Susi, Frank, Bronx, N. Y. Hair curling device. 2,457,414, Dec. 28.

Swank, Inc., assignee: *See*—
Bagnall, Joseph C., Jr.
Blagi, Leon J.

Swann, Ralph C.: *See*—
Lukes, George E., and Swann.

Sweely, James S.: *See*—
Kurtz, Stewart S., Jr., and Sweely.

Sweet, Monroe H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Sensitometer employing repeating wedge modulator. 2,457,746, Dec. 28.

Sweet, Monroe H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Electron multiplier tube circuits. 2,457,747, Dec. 28.

Swern, Daniel, and G. N. Billen, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. 1,2-epoxides and their preparation. 2,457,328, Dec. 28.

Swern, Daniel, and G. N. Billen, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Polymers of 9,10-epoxyoctadecanol and their preparation. 2,457,329, Dec. 28.

Swern, Daniel, and W. C. Ault, Philadelphia, Pa., assignors to United States of America as represented by the Secretary of Agriculture. Preparation of monoethenoic acids and their esters. 2,457,611, Dec. 28.

Swift & Company, assignee: *See*—
Pierce, Eugene H.

Swoope, Robert L.: *See*—
Grote, Henry W., Swoope, and Brearley, Jr.

Sylvania Electric Products Inc., assignee: *See*—
Bouchard, George H.
Levenson, Solomon.
Liskow, Charles L.
Metten, Herbert, and Koury.
Peacock, Arnold L., and Jensen.
Rochester, Nathaniel.
Sargent, Theodore C.
Von Scheven, Waldemar H.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Color television. 2,457,415, Dec. 28.

Taylor, Frank H., assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Ultra high frequency oscillation generators. 2,457,189, Dec. 28.

Taylor, Herbert B., assignor to General Railway Signal Company, Rochester, N. Y. Speed governor for railway vehicles. 2,457,748, Dec. 28.

Taylor, Milton C., Chicago, Ill., assignor, by mesne assignments, to Ex-Cell-O Corporation, Detroit, Mich. Chip breaking attachment for drilling machines. 2,457,795, Dec. 28.

Taylor, Robert J.: *See*—
Copson, Ernest D., and Taylor.

Technicolor Motion Picture Corporation, assignee: *See*—
Rackett, Gerald F.

Temple, Robert B., Grosse Pointe, Mich., assignor to The Budd Company, Philadelphia, Pa. Wheel and brake drum organization. 2,457,416, Dec. 28.

Terry, Roy V.: *See*—
Goldsmith, Elsworth H., Terry, and Schaefer.

Thiel, Louis F., Springfield Gardens, N. Y., assignor to American Machine & Foundry Company. Mixing machine gearing. 2,457,612, Dec. 28.

Thiry, Leon F., Belgium, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio. Energy dissipating antivibration device. 2,457,749, Dec. 28.

Thomas, Frank G.: *See*—
Chesus, Frank O., and Thomas.

Thomas, Thomas H., assignor to Bendix Aviation Corporation, South Bend, Ind. Power steering mechanism. 2,457,750, Dec. 28.

Thomas, William, Keddie, Calif. Combination bevel. 2,457,613, Dec. 28.

Thompson, Clifford J., Davenport, Fla., assignor to Fruit Growers Express Company. Temperature measuring apparatus. 2,457,751, Dec. 28.

Thompson Grinder Company, The, assignee: *See*—
Krafft, Frederich G.

Thorne, Lois A.: *See*—
Butterfield, George P., and Thorne.

Tinnerman Products, Inc., assignee: *See*—
Flora, Laurence H.

Todd, Edgar B., Billings, Mont. Aircraft control system for control surfaces and wheel brakes. 2,457,508, Dec. 28.

Tollefsen, Reidar A., Brighton, and R. A. Hunt, Greece, assignors to Rochester Manufacturing Company, Rochester, N. Y. Maximum demand indicator. 2,457,286, Dec. 28.

Tolley, Donald B., Macomb, Ill., assignor to Globe American Corporation, Kokomo, Ind. Burner for brooder stoves. 2,457,614, Dec. 28.

Toner, John P., Woodhaven, assignor to Arma Corporation, Brooklyn, N. Y. Electric antihunt servo system. 2,457,330, Dec. 28.

Toussaint, Walter J.: *See*—
Fife, Harvey R., and Toussaint.

Towmotor Corporation, assignee: *See*—
Guerin, Paul R.

Townes, Charles H., Delray Beach, Fla., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Air-speed indicating system. 2,457,287, Dec. 28.

Trautmann, Herbert L., assignor to Cherry Rivet Company, Los Angeles, Calif. Cutting tool. 2,457,417, Dec. 28.

Travis, Don C., Kenosha, Wis., assignor to Simmons Company, New York, N. Y. Adjustable lamp for tiltable beds. 2,457,752, Dec. 28.

Trepagnier, Joseph H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vulcanization of isobutylene rubber. 2,457,331, Dec. 28.

Troy Sunshade Company, The, assignee: *See*—
Braunschweiger, Paul G.

Trumbull Electric Manufacturing Company, The, assignee: *See*—
Rowe, Raymond N.

Trump, Frederick O., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Conveying means for dry printing machines. 2,457,753, Dec. 28.

Tucker, Irwin W., and A. K. Balls, Washington, D. C., assignors to the United States of America, as represented by the Secretary of Agriculture. Extracting diastase. 2,457,754, Dec. 28.

Turpin, John R.: *See*—
Turpin, William C., and Turpin.

Turpin, William C. and J. R., Newport News, Va. Cleanout Y. 2,457,418, Dec. 28.

Udylite Corporation, assignee: *See*—
Davis, John V., and Hoffman.

Ugazio, Walter, and E. C. Boccafogli, Clifton, N. J. Finger protector for trigger hands. 2,457,755, Dec. 28.

Uhlig, Edward, Wettingen, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. High-voltage bushing. 2,457,419, Dec. 28.

Union Asbestos & Rubber Company, assignee: *See*—
Novak, George A.

United Shoe Machinery Corporation, assignee: *See*—
Goodhue, William V., and Gill.
Jorgensen, Jacob C.
Knowlton, Cutler D.
Mooney, Fred L.
Oliver, John R.

U. S. Manufacturing Corporation, assignee: *See*—
Shafter, Adolph F.

U. S. Slicing Machine Company, assignee: *See*—
Ahrndt, Arthur H.

United States Rubber Company, assignee: *See*—
Klemp, Norman A.
McCleary, Charles D.

Universal Oil Products Company, assignee: *See*—
Grote, Henry W., Swoope, and Brearley, Jr.

Usselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Frequency shift keying. 2,457,288, Dec. 28.

Vacanti, Anthony C., assignee: *See*—
Vacanti, Anthony C., and James.

Vacanti, Anthony C. and J., Dunkirk, N. Y.; said James Vacanti assignor to said A. C. Vacanti. Dressing machine for bowling pins. 2,457,509, Dec. 28.

Vacanti, James: *See*—
Vacanti, Anthony C. and James.

Van den Akker, Johannes A., Appleton, Wis., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Film extensibility testing method and apparatus. 2,457,788, Dec. 28.

Van der Ven, Adrianus J. H., Bournemouth, Hants, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Voltage stabilizing circuits. 2,457,615, Dec. 28.

Van Dyke, William D., Tarzana, and P. A. Dennis, Manhattan Beach, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Metal foil type strain gauge and making same. 2,457,616, Dec. 28.

Van Ornum, Delbert G., Great Falls, Mont. Electroplating apparatus. 2,457,510, Dec. 28.

Veeder, Nicholas P., Clayton, Mo., assignor to Granite City Steel Company, Inc., Granite City, Ill. Making corrugated galvanized steel sheets. 2,457,420, Dec. 28.

Vergobbi, Robert W.: *See*—
Eaton, Lewis B., and Vergobbi.

Vermont Hosiery and Machinery Co., assignee: *See*—
Nadon, Eugene O.

Vest, Joe R., Phoenix, Ariz. Vacuum apparatus for investment of patterns. 2,457,756, Dec. 28.

Voight, Henry G., Hamden, Conn., and S. Oxhandler, Flushing, N. Y., assignors to Sargent & Company, New Haven, Conn. Lock. 2,457,757, Dec. 28.

Von Scheven, Waldemar H., Andover, assignor to Sylvania Electric Products Inc., Salem Mass. Lamp base. 2,457,789, Dec. 28.

Vore, Herbert G., Forest Hills, N. Y., assignor to American Seal-Kap Corporation, Wilmington, Del. Capping machine for feeding caps through a high-frequency heating coil. 2,457,758, Dec. 28.

Wade, Francis A., and W. Metzner, Philadelphia, Pa. Educational apparatus. 2,457,332, Dec. 28.

Wales, George F., Kenmore, N. Y. Golf cup. 2,457,759, Dec. 28.

Walker, Scott W.: *See*—
Michael, Vesta F., and Walker.

Walle, Ludwig S., Lansdowne, Pa., assignor to General Electric Company. Time element electromagnetic device. 2,457,617, Dec. 28.

Wamsley, William G., Detroit, Mich. Electrical control system. 2,457,333, Dec. 28.

War, United States of America as represented by the Secretary of, assignee: *See*—
Van den Akker, Johannes A.

Ware, Kenneth R., Mound Valley, Kans. Power operated tractor mounted tree felling saw. 2,457,511, Dec. 28.

Warner, Clyde J., McKeesport, Pa. Collapsible lunch or shopping bag. 2,457,422, Dec. 28.

Warnick, Alan, Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Phototube control-temperature indicating apparatus for furnaces. 2,457,289, Dec. 28.

Warren, Charles W., Burbank, Calif. Magnetic retainer. 2,457,421, Dec. 28.

Washburn Company, The, assignee: *See*—
Aleks, Vytant.

Waukesha Motor Company, assignee: *See*—
Fisher, James B.

Weatherhead Company, The, assignee: *See*—
Hufferd, George H., and Lindgren.
Raybould, Frank J.

Weaver Engineering Co., assignee: *See*—
Phelps, Clyde H.

Welmer, Glen L.: *See*—
Keating, John P., and Welmer.

Weissman, Carl, Bronx, N. Y. Combined display and service tray device. 2,457,760, Dec. 28.

Welsh, William H., Detroit, Mich. Paint bucket bracket. 2,457,290, Dec. 28.

Wenzel, Frederick W., assignor to Hummel & Downing Company, Milwaukee, Wis. Carton and display stand. 2,457,291, Dec. 28.

Werner, Le Roy L., Washington, D. C. Portable shower unit. 2,457,190, Dec. 28.

Wesner, Wilton W., Rancocas, N. J. Irradiation of liquids using ultraviolet light. 2,457,761, Dec. 28.

Western Electric Company, Incorporated, assignee: *See*—
Bouget, Yves A.
Mitchell, Donald H., and Moss.

Westinghouse Air Brake Company, The, assignee: *See*—
Larson, Arthur G.
Maliphant, Charles W.
McClure, Glenn T., and Rush.
Stevens, Roy R.

Westinghouse Electric Corporation, assignee: *See*—
Hanna, Clinton R., and Lynn.
King, Alexander S., Jr.

Wharam, John J.: *See*—
Roberts, Albert O., and Wharam.

Wheeler, Harold B., Berwyn, assignor of one-half to A. G. McCaleb, Evanston, Ill. Highway warning signal. 2,457,512, Dec. 28.

White, Emory O., Albertville, Ala. Furnace stoker. 2,457,423, Dec. 28.

White, Jesse M., Philadelphia, Pa. Forming and assembling connecting sleeves. 2,457,796, Dec. 28.

White, Paul V.: *See*—
Bennett, Charles E., and White.

Wickes Bros., assignee: *See*—
Floeter, Frederick S.

Widell, Nils E., assignor to Aktiebolaget Elektrolux, Stockholm, Sweden. Corrosion inhibitors in refrigeration system. 2,457,334, Dec. 28.

Wiesendanger, Fritz, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Temperature regulated cooling circuit. 2,457,618, Dec. 28.

Wiggins, John H., Chicago, Ill. Balancer or leveling mechanism for gasholders. 2,457,762, Dec. 28.

Wiggins, John H., Chicago, Ill. Condensate drainage mechanism for fluid storage apparatus. 2,457,763, Dec. 28.

Wigton, Paul L., Denver, Colo. Sedimentation apparatus. 2,457,191, Dec. 28.

Wilbe Research Corporation, assignee: *See*—
Kaplan, William.

Wilbert Manufacturers Association, assignee: *See*—
Haase, Wilbert W.

Wild, Rudolf F., assignor to The Brown Instrument Company, Philadelphia, Pa. Safe failure measuring and controlling apparatus. 2,457,791, Dec. 28.

Wild, Rudolf F., and F. J. Curran, assignors to The Brown Instrument Company, Philadelphia, Pa. Apparatus for sequentially keying and connecting a plurality of oscillators to a common output circuit. 2,457,790, Dec. 28.

Wild, Rudolf F., Philadelphia, Pa., and L. B. Cherry, Abilene, Tex., assignors to The Brown Instrument Company, Philadelphia, Pa. Antihunting motor control circuit. 2,457,792, Dec. 28.

Williams, Ira, and C. A. Carlton, Borger, Tex., assignors to J. M. Huber Corporation, New York, N. Y. Increasing tackiness of rubber-like materials. 2,457,335, Dec. 12.

Williams, Keith, Buffalo, N. Y. Hand brake. 2,457,764, Dec. 28.

Williams, Lynn A., Jr., Northfield, assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion hot-air heater. 2,457,513, Dec. 28.

Williams, Paul D.: *See*—
Eaves, Hubert, and Williams.

Williams, Roger F., Des Moines, Iowa. Smoke and soot eliminator. 2,457,292, Dec. 28.

Williams, William J., Wilmette, Ill. Governor with switch control. 2,457,192, Dec. 28.

Willys-Overland Motors, Inc., assignee: *See*—
DeSmet, Edgard C., and Dickason.
Roos, Delmar G.

Wilson, Gardiner C., assignor to Armstrong Cork Company, Lancaster, Pa. Injection mold. 2,457,336, Dec. 28.

Winkler, Albert H., assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,457,765, Dec. 28.

Winzer, Godfrey K. R., Seattle, Wash. Towel paper moistener and dispenser. 2,457,293, Dec. 28.

Wire Machinery Corporation of America, Inc., assignee: *See*—
Roetting, Arthur J.

Wolf, Cecil, Rock Falls, and N. M. Foulds, Sterling, Ill., assignors of one-half to The Rapids-Standard Company, Inc., Grand Rapids, Mich., and one-half to Frantz Manufacturing Company, Sterling, Ill. Roller wheel. 2,457,424, Dec. 28.

Wolfard, Merl R., Cambridge, Mass. Stabilizing devices for resilient structures. 2,457,425, Dec. 28.

Wolfard, Merl R., Cambridge, Mass. Devices for arresting undulations in bridging structures. 2,457,426, Dec. 12.

Wolfard, Merl R., Cambridge, Mass. Spring means for minimizing undulations in suspension bridges. 2,457,427, Dec. 12.

Wollner, Paul: *See*—
Kittel, George P., and Wollner.

Wood, Daniel B., Bowling Green, Ky. Air power windmill. 2,457,514, Dec. 28.

Wood, Halbert M., Madison, Wis. High chair construction. 2,457,294, Dec. 28.

Woodhead, John A., Swarthmore, Pa. Duck decoy. 2,457,295, Dec. 28.

Worden, R. B., Granger, Wash. Fishing hook and fly. 2,457,428, Dec. 28.

Worthington Pump and Machinery Corporation, assignee: *See*—
Sebald, Joseph F.

Wynn, Arthur R., Long Beach, Calif. Electrode holder. 2,457,193, Dec. 28.

Yawman Metal Products, Inc., assignee: *See*—
Yawman, Victor G.

Yawman, Victor G., assignor to Yawman Metal Products, Inc., Rochester, N. Y. Trigger for firearms. 2,457,296, Dec. 28.

Yoch, August H., Melrose, Pa., and W. W. Rice, Jr., Jackson Heights, N. Y., assignors to Air Reduction Company, Incorporated. Billet nicking machine. 2,457,337, Dec. 28.

Yocum, Reuben J., Omaha, Nebr. Ice skating ring. 2,457,619, Dec. 28.

Young, Arthur M., assignor to Bell Aircraft Corporation, Buffalo, N. Y. Rotary wing aircraft. 2,457,429, Dec. 28.

Young, Clair I., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa. Apparatus for applying metal cases to bricks. 2,457,766, Dec. 28.

Zampino, John A., Brooklyn, N. Y. Combined sewing case and pincushion. 2,457,767, Dec. 28.

Zarwell, Cedric E.: *See*—
Johnson, Roy W., and Zarwell.

Zenith Radio Corporation, assignee: *See*—
Lipuma, Charles E.

Zenlea, Benjamin J.: *See*—
Burbank, H. Russell, and Zenlea.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Pump. E. K. Baker. Re. 23,067, Dec. 28.

LIST OF PLANT INVENTIONS

Avocado tree. C. H. Hamburg. 816, Dec. 28.

Japanese holly plant. J. F. Styer. 817, Dec. 28.

LIST OF DESIGN INVENTIONS

Ash tray. W. Forthman. 152,194, Dec. 28.
Ash tray and cigarette snuffer, Combination. G. B. Weldon. 152,231, Dec. 28.
Ash tray and desk unit, Combination. G. B. Wisecarver. 152,234, Dec. 28.
Ash tray or similar article. C. Potts. 152,212–14, Dec. 28.
Blowtorch, Hand. B. F. Burnham. 152,187, Dec. 28.
Bottle. J. B. Platt. 152,211, Dec. 28.
Brooch and lipstick holder, Combined. J. J. Quethera. 152,216, Dec. 28.
Button or similar article. W. Drell. 152,192, Dec. 28.
Camera. D. C. Whitaker. 152,232, Dec. 28.
Camera or similar article, Photographic. W. D. Teague, R. H. Ensign, H. R. Beal, and M. N. Fairbank. 152,229, Dec. 28.
Candleholder. R. W. Meldrum. 152,204, Dec. 28.
Cap, Container. L. Baron. 152,184, Dec. 28.
Casing, Vacuum cleaner. H. S. Barnhart. 152,183, Dec. 28.
Cigarette pack and match holder, Combined. J. L. Mack, Sr. 152,201, Dec. 28.
Crane, Bridge. F. M. Gustafson and J. M. Little. 152,197, Dec. 28.
Dial and hands for a clock, Combined. W. C. Jenkins. 152,199, Dec. 28.
Dispenser cabinet for paper cups or the like. A. A. Perelman. 152,210, Dec. 28.
Display case, Cutlery. H. M. Schick. 152,219, Dec. 28.
Frame, Eyeglass. G. D. Smart. 152,222–3, Dec. 28.
Golf tee. L. Reifman. 152,218, Dec. 28.
Hairbrush. J. W. Mayer. 152,203, Dec. 28.
Key holder and bottle opener, Combination. A. R. Glidden. 152,196, Dec. 28.
Lathe. C. B. Stevens. 152,228, Dec. 28.
Lens rim material for spectacle frames. M. J. O'Dea. 152,208, Dec. 28.
Lighter, Semiautomatic table. P. W. Buchhart. 152,186, Dec. 28.
Lounge chair, Adjustable. F. J. Luketa. 152,200, Dec. 28.
Lunchroom, Roadside. G. Dilts. 152,191, Dec. 28.
Peeler, Orange. A. Miller. 152,205, Dec. 28.
Projector. C. R. Diedrich. 152,190, Dec. 28.
Projector. O. R. Nemeth. 152,207, Dec. 28.
Pull for doors and the like. D. C. Hay. 152,198, Dec. 28.
Reel, Hose. W. H. C. Rehm. 152,217, Dec. 28.
Rest, Knife. W. R. Vermillion. 152,230, Dec. 28.
Sandal, Shower. W. D. Wilson. 152,233, Dec. 28.
Saw, Band. C. B. Stevens. 152,225, Dec 28.
Saw, Circular. C. B. Stevens. 152,227, Dec. 28.
Saw, Scroll. C. B. Stevens. 152,226, Dec. 28.
Scale, Postal. N. Shewitz, P. L. Sloane, and A. Valksnoras, Jr. 152,221, Dec. 28.
Scriber. C. A. Duda. 152,193, Dec. 28.
Sled. J. L. Shaller. 152,220, Dec. 28.
Slipper. W. M. Page. 152,209, Dec. 28.
Stand, Flower. F. F. Solak. 152,224, Dec. 28.
Statuette or similar article, Display. G. Price. 152,215, Dec. 28.
Tip for a mechanical pencil. L. J. Most. 152,206, Dec. 28.
Toy sink, water dispenser, and receiver, Combined. H. Barr. 152,185, Dec. 28.
Turn signal, extremity marker, and rearview mirror, Combined. T. L. Dalton. 152,188, Dec. 28.
Vacuum cleaner. H. S. Barnhart. 152,182, Dec. 28.
Viewer, Picture. G. M. Mast. 152,202, Dec. 28.
Viewer, Twin vision transparence. R. P. Fuller. 152,195, Dec. 28.
Watch and strap therefor, Combined wrist. G. B. Desouches. 152,189, Dec. 28.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrader, Hand-operated. A. N. Hanna. 2,457,466, Dec. 28.
Absorber for clarinets and the like, Water. G. Incampo. 2,457,473, Dec. 28.
Acoustic device. E. Bruce. 2,457,527, Dec. 28.
Acylated p-aminobenzene sulfonamides. R. Hirt, H. Gysin, and H. Martin. 2,457,371, Dec. 28.
Acrylates, Preparation of. W. F. Gresham. 2,457,225, Dec. 28.
Adhesive and making. C. L. Baker and R. H. Sams. 2,457,108, Dec. 28.
Adhesive product and making same, Novel. J. E. Fenn. 2,457,357, Dec. 28.
Adjustable coat and two pants hanger. T. H. Maurer. 2,457,579, Dec. 28.
Air cleaner. K. F. Russell. 2,457,321, Dec. 28.
Aircraft flight control or pilot, Automatic electronic. W. J. Harshbarger and D. R. Putt. 2,457,230, Dec. 28.
Aircraft, Rotary wing. A. M. Young. 2,457,429, Dec. 28.
Aircraft with rotatable sustaining blades. V. Isacco. 2,457,376, Dec. 28.
Airplane train. B. Mitchell. 2,457,391, Dec. 28.
Aliphatic amino alcohols and medicinal preparations thereof. H. T. F. Givens and R. M. Herbst. 2,457,656, Dec. 28.
Alloys, Blackening copper. E. B. Lewis. 2,457,480, Dec. 28.
Amino acids, Manufacture of. D. J. Bernardi. 2,457,117, Dec. 28.
Aminoplasts, Thermoplastic. M. J. Scott. 2,457,738, Dec. 28.
Animal trap. F. E. Shene. 2,457,501, Dec. 28.
Antenna disconnecting switch. W. H. Lindae and B. W. Strachan. 2,457,386, Dec. 28.
Antenna system. F. O. Chesus and F. G. Thomas. 2,457,126–7, Dec. 28.
Antihunting motor control circuit. R. F. Wild and L. B. Cherry. 2,457,792, Dec. 28.
Apparatus for applying metal cases to bricks. C. I. Young. 2,457,766, Dec. 28.
Apparatus for causation and prevention of collisions. G. Muffly. 2,457,393, Dec. 28.
Apparatus for coating paper. W. Barrett. 2,457,433, Dec. 28.
Apparatus for condensing zinc vapor. E. C. Handwerk and G. T. Mahler. 2,457,549, Dec. 28.
Apparatus for cooling sewing-machine needles. A. J. Giglio. 2,457,362, Dec. 28.
Apparatus for electrolytically determining the thickness of metal coatings. W. S. Herbert and H. T. Francis. 2,457,234, Dec. 28.
Apparatus for felting fibrous glass. G. Slayter. 2,457,784, Dec. 28.
Apparatus for forming hollow articles of organic plastic material. W. H. Kopitke. 2,457,687, Dec. 28.
Apparatus for grinding. F. G. Krafft. 2,457,383, Dec. 28.
Apparatus for guiding and threading fibers. W. F. Holtschulte and S. D. Philipps. 2,457,777, Dec. 28.
Apparatus for high-speed welding of thermoplastic films. J. F. Graham and H. L. Hearns. 2,457,659, Dec. 28.
Apparatus for inspection of sheet and other materials. Ultra high frequency. C. L. Liskow. 2,457,695, Dec. 28.
Apparatus for making glass film. G. Slayter and H. Snow. 2,457,785, Dec. 28.
Apparatus for manufacture of coated webs. R. L. Melton, R. C. Benner, and H. P. Kirchner. 2,457,256, Dec. 28.
Apparatus for orienting quartz crystals by X-rays. F. E. Haworth. 2,457,555, Dec. 28.
Apparatus for producing filled bags. S. R. Howard. 2,457,237, Dec. 28.
Apparatus for sequentially keying and connecting a plurality of oscillators to a common output circuit. R. F. Wild and F. J. Curran. 2,457,790, Dec. 28.
Apparatus for testing the operation of oxygen supply equipment for aircraft. R. R. Osborne and E. G. Dunsford. 2,457,713, Dec. 28.
Apparatus for welding machines, Material supporting and cooling. D. H. Mitchell and E. C. Moss. 2,457,704, Dec. 28.
Apparatus for winding strands. G. Slayter. 2,457,786, Dec. 28.
Appliance for control of enemata, Medical. O. F. Lamson. 2,457,244, Dec. 28.
Aqueous alkali solution used to extract weakly acidic sulfur compounds from hydrocarbon fluids, Regenerating. D. C. Bond and M. Savoy. 2,457,635, Dec. 28.
Arch supporting device. J. S. MacArthur. 2,457,481, Dec. 28.
Arch supports, Making. W. M. Scholl. 2,457,737, Dec. 28.
Arming device for fuses, Delay. J. F. McCaslin and J. Fink. 2,457,254, Dec. 28.
Arrangement for frequency measurements. C. W. Earp. 2,457,136, Dec. 28.
Artificial hand. F. L. Dale. 2,457,305, Dec. 28.
Artificial leg. K. Marean. 2,457,482, Dec. 28.
Attachment for electric plugs, Fuse. A. La Rizza. 2,457,477, Dec. 28.
Attachment for guns, Subcaliber. J. M. Dial. 2,457,354, Dec. 28.
Automotive vehicle. D. G. Roos. 2,457,400, Dec. 28.
Awning. F. G. Lewis. 2,457,574, Dec. 28.
Axially engaging friction clutch. R. F. Hale. 2,457,367, Dec. 28.
Bag: *See*—
Collapsible lunch or shopping bag.
Bags with nontangling handles, Producing infusion. L. B. Eaton and R. W. Vergobbi. 2,457,216, Dec. 28.
Bait-holding casting bob. F. F. Pazzano. 2,457,715, Dec. 28.
Balancer or leveling mechanism for gasholders. J. H. Wiggins. 2,457,762, Dec. 28.
Bar: *See*—
Wrecking bar.
Bars for concaves, Disappearing tooth. F. M. Moll. 2,457,259, Dec. 28.
Base, Lamp. W. H. von Scheven. 2,457,789, Dec. 28.
Basket, Bicycle. V. Aleks. 2,457,624, Dec. 28.
Battery stripping device, Portable. N. Bemel. 2,457,519, Dec. 28.
Beam. W. J. Hall. 2,457,147, Dec. 28.
Beam, Structural. W. J. Hall and O. J. Crowe. 2,457,148, Dec. 28.
Bender. W. A. Smith. 2,457,410, Dec. 28.
Benzocaine solution. R. Stone. 2,457,188, Dec. 28.
Bevel, Combination. W. Thomas. 2,457,613, Dec. 28.
Bib and tray cover. L. B. Rhowmine. 2,457,725, Dec. 28.
Bicycle, Electric. S. Argyris. 2,457,430, Dec. 28.
Blind flying and blind landing system for aviation flight trainers. C. J. Crane, G. V. Holloman, C. W. Muller, and R. K. Stout. 2,457,130, Dec. 28.
Bonding compositions, Vitreous. D. O. Koch. 2,457,158, Dec. 28.
Bookmarker. J. W. Hamilton. 2,457,662, Dec. 28.
Bottle carrier. M. G. Hall and T. Hurban, Jr. 2,457,307–8, Dec. 28.
Bracelet catch, Foldable. J. Bikoff. 2,457,200, Dec. 28.
Bracket: *See*—
Paint bucket bracket. Removable bracket.
Brake: *See*—
Coaster brake. Hand brake.
Brake apparatus, Fluid pressure. H. J. Butler. 2,457,344, Dec. 28.
Brake control, Automatic. A. O. Roberts and J. J. Wharam. 2,457,729, Dec. 28.
Brake drum assembly. W. D. Davidson. 2,457,852, Dec. 28.
Brassière. B. Harman. 2,457,369, Dec. 28.
Breaker, Chip. L. A. Hillman. 2,457,469, Dec. 28.
Breaking water-in-oil emulsions. M. Savoy. 2,457,735, Dec. 28.
Bridge, Electrical. B. F. McNamee. 2,457,165, Dec. 28.
Bubble cap. D. S. Roberts and R. A. DeLuca. 2,457,398, Dec. 28.
Burial apparatus. W. W. Haase. 2,457,671, Dec. 28.
Burn bath table. N. Owens and R. L. Jewell. 2,457,174, Dec. 28.
Burner: *See*—
Gaseous fuel burner.
Burner apparatus for generating and burning hydrocarbon vapor fuel, Portable. G. P. Kittel and P. Wollner. 2,457,683, Dec. 28.
Burner for brooder stoves. D. B. Tolley. 2,457,614, Dec. 28.
Burner with cooling jacket, Atomizing fuel. J. M. Crowe. 2,457,304, Dec. 28.
Bushing for power cables, Terminal. C. E. Bennett and P. V. White. 2,457,437, Dec. 28.
Bushing, High-voltage. E. Uhlig. 2,457,419, Dec. 28.
Bushing, Jig. A. H. Nolde. 2,457,709, Dec. 28.
Cabinet having pivotally mounted bins. G. J. Lemke. 2,457,248, Dec. 28.
Cable: *See*—
Device for slitting the sheath of a cable. High-tension electric cable.
Cage for roller bearings. B. F. Newton. 2,457,485, Dec. 28.
Camera, Vehicular motion-picture. W. G. Hokett. 2,457,236, Dec. 28.
Cap: *See*—
Bubble cap.
Capacity brush holder. J. M. Brian. 2,457,525, Dec. 28.

Car: *See*—
Shuttle car.
Carburetor. W. E. Leibing. 2,457,570, Dec. 28.
Carburetor. A. H. Winkler. 2,457,765, Dec. 28.
Carrier: *See*—
Bottle carrier.
Carton and display stand. F. W. Wenzel. 2,457,291, Dec. 28.
Catalyst feeder. J. E. A. Graae. 2,457,461, Dec. 28.
Catalytic conversion system. R. J. Hengstebeck. 2,457,232, Dec. 28.
Chain: *See*—
Extension key chain.
Chain snap, Automobile. L. R. Beckman. 2,457,435, Dec. 28.
Chair construction, High. H. M. Wood. 2,457,294, Dec. 28.
Changeable decorative fabric. A. L. Joyce. 2,457,309, Dec. 28.
Cheese pusher. F. B. Branchfield, Sr. 2,457,441, Dec. 28.
Chimney construction. E. O. Howle. 2,457,471, Dec. 28.
Chimney, Insulated. E. O. Howle. 2,457,470, Dec. 28.
Chip breaking attachment for drilling machines. M. C. Taylor. 2,457,795, Dec. 28.
Choke fitting. C. W. Maliphant. 2,457,578, Dec. 28.
Choline chloride, Preparation of. W. F. Gresham. 2,457,226, Dec. 28.
Circuit: *See*—
Antihunting motor control circuit.
Frequency measuring circuit.
Selective signaling circuit.
Temperature regulated cooling circuit.
Voltage control circuit.
Circuit arrangement for producing electrical pulses. P. K. Chatterjea and L. W. Houghton. 2,457,125, Dec. 28.
Circuits, Electron multiplier tube. M. H. Sweet. 2,457,747, Dec. 28.
Circuits, Voltage stabilizing. A. J. H. van der Ven. 2,457,615, Dec. 28.
Clamp: *See*—
Lithographic plate graining machine clamp.
Window clamp.
Clamp for lithographic plate graining machines, Multiple. M. G. Dunn. 2,457,453, Dec. 28.
Clamp for spherical joints. H. Krenz. 2,457,384, Dec. 28.
Capping machine for feeding caps through a high-frequency heating coil. H. G. Vore. 2,457,758, Dec. 28.
Cleanout Y. W. C. and J. R. Turpin. 2,457,418, Dec. 28.
Cleaner: *See*—
Air cleaner.
Cleaning machine, Egg. E. W. Shock. 2,457,324, Dec. 28.
Clip: *See*—
Locking clip.
Clip for attaching decorations and medals. F. G. Lutz and C. P. O'Rourke. 2,457,164, Dec. 28.
Closing tube ends by dipping in molten solder. L. Pessel. 2,457,599, Dec. 28.
Clothespin, Wire. B. O. Schmidt. 2,457,736, Dec. 28.
Clutch: *See*—
Axially engaging friction clutch.
Clutch. R. T. Coffey. 2,457,210, Dec. 28.
Coaster brake. M. Klein. 2,457,241, Dec. 28.
Coated edibles, Chocolate. H. R. Burbank and B. J. Zenlea. 2,457,110, Dec. 28.
Coating compositions and making, Insulating. J. T. Acker, 2,457,515, Dec. 28.
Cock, Gas. W. S. Kincaid. 2,457,779, Dec. 28.
Coil, Deflecting. M. Cawein. 2,457,773, Dec. 28.
Collapsible lunch or shopping bag. C. J. Warner. 2,457,422, Dec. 28.
Comb, Push. H. S. Cloyd. 2,457,446, Dec. 28.
Comb, Thermostatic electrically heated. P. Aeres. 2,457,621, Dec. 28.
Combs, Producing tufted plastic. H. L. Booth. 2,457,440, Dec. 28.
Compositions, Waterproofing plastic. J. A. Bell. 2,457,518, Dec. 28.
Compressor, Rotary axial vane. D. L. Ball. 2,457,298, Dec. 28.
Compressor sealing means, Rotary. E. P. Girard. 2,457,221, Dec. 28.
Concrete block machine. N. B. Hanson. 2,457,368, Dec. 28.
Condenser: *See*—
Internally cooled zinc condenser.
Connection for electric cables, Detachable. J. W. Nelson. 2,457,593, Dec. 28.
Connector: *See*—
Electrical connector.
Plug connector.
Connector for coaxial cable. C. M. Puckette, Jr. 2,457,722, Dec. 28.
Connector for electric receptacles. K. Hoehn. 2,457,235, Dec. 28.
Contact apparatus, Gas and liquid. D. P. Graham. 2,457,658, Dec. 28.
Contact apparatus, Gas and liquid. R. Kopita. 2,457,686, Dec. 28.
Contact devices, Manufacturing sealed. E. B. Ferrell. 2,457,218, Dec. 28.
Container: *See*—
Shipping container.
Container and blank therefor. J. G. Bell. 2,457,198, Dec. 28.
Container and using same. W. D. Brandon. 2,457,120, Dec. 28.
Container suitable for dropping from aircraft and the like. E. R. Campbell, K. M. Frewin, F. W. Lennox, and R. P. Morris. 2,457,205, Dec. 28.
Control apparatus, Failure indicating. H. A. Clarke. 2,457,794, Dec. 28.
Control apparatus for plural motor propulsion systems. A. G. Larson. 2,457,568, Dec. 28.
Control apparatus for prime movers. R. R. Stevens. 2,457,610, Dec. 28.
Control device for storage batteries, Electrolyte level. J. Sandusky. 2,457,322, Dec. 28.
Control mechanism for hydraulic classifiers, Valve. R. O. Stokes. 2,457,412, Dec. 28.
Control mechanism for model airplanes. J. K. Shannon. 2,457,281, Dec. 28.
Control mechanism, Tuning. W. M. Hurst. 2,457,374, Dec. 28.
Control system, Electrical. W. G. Wamsley. 2,457,333, Dec. 28.
Control system for control surfaces and wheel brakes, Aircraft. E. B. Todd. 2,457,508, Dec. 28.
Control system, Relay. G. G. Roberts. 2,457,730, Dec. 28.
Control valve apparatus. G. T. McClure and J. W. Rush. 2,457,584, Dec. 28.
Controlling means, especially for doors. F. Amiot. 2,457,625, Dec. 28.
Conveyance of fluent materials. J. R. Locker. 2,457,387, Dec. 28.
Conveyer switch. J. R. Sebastian. 2,457,408, Dec. 28.
Conveying means for dry printing machines. F. O. Trump. 2,457,753, Dec. 28.
Cooling jacket and cylinder construction. T. L. Sherman. 2,457,183, Dec. 28.
Core making machine. R. D. Baysinger and L. W. Fulton. 2,457,196, Dec. 28.
Correcting deviations in crossrails of machine tools, Method of and apparatus for. L. L. Hercik. 2,457,468, Dec. 28
Corrosion inhibitors in refrigeration system. N. E. Widell. 2,457,334, Dec. 28.
Counter, Ray. H. Metten and F. Koury. 2,457,781, Dec. 28.
Counting apparatus, Tablet. C. C. Fowler and G. T. Clark. 2,457,220, Dec. 28.
Coupling: *See*—
Pipe coupling.
Quick connect self-sealing coupling.
Service coupling.
Shaft coupling.
Coupling arrangement. H. G. Busignies, T. H. Clark, and A. G. Everhart. 2,457,123, Dec. 28.
Coupling for coaxial transmission lines, Phase splitting. R. A. Braden. 2,457,638, Dec. 28.
Cover: *See*—
Bib and tray cover.
Hatch cover.
Covering, Linoleum surface. P. O. Powers. 2,457,600, Dec. 28.
Crater lamp. G. H. Bouchard. 2,457,771, Dec. 28.
Cravat holder. L. J. Biagi. 2,457,341, Dec. 28.
Crimping tool. H. P. Dupre. 2,457,538, Dec. 28.
Crystal mounting. H. S. Bates and S. A. Robinson. 2,457,338, Dec. 28.
Crystal mounting. D. W. Keller. 2,457,563, Dec. 28.
Current commutator machine, Alternating. F. W. Baumann. 2,457,517, Dec. 28.
Cutting machine. D. N. Judelshon. 2,457,310, Dec. 28.
Cutting tool. H. L. Trautmann. 2,457,417, Dec. 28.
Damper, Hydraulic. F. Newton. 2,457,708, Dec. 28.
Denture stress reliever. L. W. Busby. 2,457,529, Dec. 28.
Device for assisting in a hand-labeling operation. E. H. Pierce. 2,457,489, Dec. 28.
Device for coin-freed apparatus, Commodity delivery. A. Jørgensen. 2,457,778, Dec. 28.
Device for dispensing articles. J. G. Carline. 2,457,345, Dec. 28.
Device for hoisting bales. J. W. Rutledge. 2,457,181, Dec. 28.
Device for slitting the sheath of a cable. D. F. Fasoldt. 2,457,540, Dec. 28.
Devices for arresting undulations in bridging structures. M. R. Wolfard. 2,457,426, Dec. 28.
Dispenser: *See*—
Glue dispenser.
Dispenser for poultry, Water. R. S. Kofford. 2,457,159, Dec. 28.
Dispensing apparatus for sheet material. R. G. Birr. 2,457,489, Dec. 28.
Dispensing device. L. Steiner. 2,457,187, Dec. 28.
Display and service tray device, Combined. C. Weissman. 2,457,760, Dec. 28.
Display device for foodstuffs. H. E. Christensen, J. J. Stein, and A. S. Kester. 2,457,302, Dec. 28.
Distributing apparatus, Material. R. M. G. Schiro. 2,457,604, Dec. 28.
Divider, Potential. J. A. Stagnaro. 2,457,787, Dec. 28.
Door: *See* —
Triple sealed icebox door.
Drainage mechanism for fluid storage apparatus, Condensate. J. H. Wiggins. 2,457,763, Dec. 28.
Drawbar, Convertible vehicle. J. J. Suess. 2,457,745, Dec. 28.
Dressing machine for bowling pins. A. C. and J. Vacanti. 2,457,509, Dec. 28.

Drills, Manufacturing twist. H. W. Delaney. 2,457,132, Dec. 28.
Drive mechanism, Antenna. E. H. Karleen. 2,457,562, Dec. 28.
Drying and roasting machine, Matrix. O. R. Simmons. 2,457,282, Dec. 28.
Duck decoy. J. A. Woodhead. 2,457,295, Dec. 28.
Dye printing, Cinematographic. G. F. Rackett. 2,457,319, Dec. 28.
Earring. A. Herman. 2,457,672, Dec. 28.
Educational apparatus. F. A. Wade and W. Metzner. 2,457,332, Dec. 28.
Electric air heater. C. M. Osterheld. 2,457,598, Dec. 28.
Electric soldering iron. G. Gilliver. 2,457,143, Dec. 28.
Electric switch. J. L. Ashford. 2,457,115, Dec. 28.
Electric switch. R. N. Rowe. 2,457,497, Dec. 28.
Electrical connector. P. L. Bour. 2,457,119, Dec. 28.
Electrical motor. H. D. Brailsford. 2,457,637, Dec. 28.
Electrode control. R. L. Hinds. 2,457,675, Dec. 28.
Electrode holder. A. R. Wynn. 2,457,193, Dec. 28.
Electrodepositing composition and bath. R. A. Hoffman. 2,457,152, Dec. 28.
Electromagnetic device, Time element. L. S. Walle. 2,457,617, Dec. 28.
Electron gun for mass spectrometers. N. D. Coggeshall and N. F. Kerr. 2,457,530, Dec. 28.
Electronic saw-tooth wave generator. F. J. Bias and H. W. Lord. 2,457,522, Dec. 28.
Electroplating apparatus. D. G. Van Ornum. 2,457,510, Dec. 28.
Eliminator, Smoke and soot. R. F. Williams. 2,457,292, Dec. 28.
Emulsion-polymerization of butadiene-1,3 hydrocarbons. C. D. McCleary. 2,457,701, Dec. 28.
Emulsions, Breaking. D. C. Bond and M. Savoy. 2,457,634, Dec. 28.
Energy dissipating antivibration device. L. F. Thiry. 2,457,749, Dec. 28.
Engine: *See*—
Internal-combustion engine.
Engine cooling, cylinder, jacket, and head construction. C. F. Pervier. 2,457,717, Dec. 28.
Esters of polyoxyalkylene diols. H. R. Fife and W. J. Toussaint. 2,457,139, Dec. 28.
Evaporator unit. B. C. Johnson. 2,457,561, Dec. 28.
Extension key chain. J. C. Bagnall, Jr. 2,457,195, Dec. 28.
Extracting diastase. I. W. Tucker and A. K. Balls. 2,457,754, Dec. 28.
Fabric: *See*—
Changeable decorative fabric.
Fan, Axial flow. P. A. Sidell. 2,457,325, Dec. 28.
Fan for suction cleaners. E. A. French. 2,457,142, Dec. 28.
Fan, High-temperature. C. Nygren. 2,457,264–5, Dec. 28.
Fan, High-temperature. C. Nygren. 2,457,711, Dec. 28.
Fastening construction. L. H. Flora. 2,457,360, Dec. 28.
Fats and oils, Stabilization of. M. F. Gribbins. 2,457,227, Dec. 28.
Fatty material, Stabilization of. J. R. Shipner. 2,457,741, Dec. 28.
Feed-water heater. J. F. Sebald. 2,457,605, Dec. 28.
Feeder: *See*—
Catalyst feeder.
Poultry feeder.
Feeding attachment, Button blank. J. A. De Marco. 2,457,534, Dec. 28.
Felt articles such as felt boots or footwear, Manufacturing fulled or hardened. G. H. Beetson. 2,457,630, Dec. 28.
Fence repair tool. W. H. Koch. 2,457,382, Dec. 28.
Fiddle. J. R. Beckman. 2,457,629, Dec. 28.
Film advancing mechanism, Intermittent. R. P. Shea. 2,457,409, Dec. 28.
Film extensibility testing method and apparatus. J. A. Van den Akker. 2,457,788, Dec. 28.
Filter: *See*—
Inductively coupled band pass filter.
Filter. J. V. Davis and J. S. Hoffman. 2,457,449, Dec. 28.
Filter element, Cell type. G. D. Burley. 2,457,122, Dec. 28.
Fire alarm trip mechanism. J. P. Santole. 2,457,499, Dec. 28.
Fishing hook and fly. R. B. Worden. 2,457,428, Dec. 28.
Fishing reel. G. J. Sharps. 2,457,323, Dec. 28.
Fixture, Electric-light. G. B. Benander. 2,457,521, Dec. 27.
Flame hardening apparatus. E. A. Furkert. 2,457,654, Dec. 28.
Flavor recovery process, Volatile. H. P. Milleville. 2,457,315, Dec. 28.
Fluid meter. W. F. Aller. 2,457,297, Dec. 28.
Form, Cylindrical hairspring. W. O. Bennett, Jr. 2,457,631, Dec. 28.
Forming and assembling connecting sleeves. J. M. White. 2,457,796, Dec. 28.
Forming dentures from polymerizable acrylic materials. S. Amenta. 2,457,114, Dec. 28.
Forming device, Charge. F. C. Mock. 2,457,171, Dec. 28.
Frequency measuring circuit. R. S. Holmes. 2,457,676, Dec. 28.
Frequency responsive system. J. R. Schoenbaum. 2,457,278, Dec. 28.
Frequency shift keying. G. L. Usselman. 2,457,288, Dec. 28.
Fuel pump. W. E. Leibing. 2,457,571, Dec. 28.
Fungicidal compositions. J. W. Heuberger. 2,457,674, Dec. 28.
Furnace arch and wall structure. W. H. Boyd. 2,457,201, Dec. 28.
Game apparatus, Baseball. H. A. Markussen. 2,457,390, Dec. 28.
Game, Baseball. M. C. Meyer. 2,457,168, Dec. 28.
Garment hanger. H. Goldlust. 2,457,776, Dec. 28.
Garment hanger. K. R. O'Grady. 2,457,486, Dec. 28.
Gas analysis, Microwave. W. D. Hershberger. 2,457,673, Dec. 28.
Gas control valve. R. W. Johnson and C. E. Zarwell. 2,457,378, Dec. 28.
Gas sampling device. W. K. Neuman and H. M. Slosberg. 2,457,707, Dec. 28.
Gas welding rod. J. T. Eash. 2,457,215, Dec. 28.
Gaseous fuel burner. R. H. Solem. 2,457,505, Dec. 28.
Gasket, Spiral wound. S. S. Lippincott. 2,457,694, Dec. 28.
Gauge and making same, Metal foil type strain. W. D. Van Dyke and P. A. Dennis. 2,457,616, Dec. 28.
Gauging apparatus, Pneumatic. F. L. Rupley. 2,457,401, Dec. 28.
Gearing, Engine starter. R. G. Dickens. 2,457,213, Dec. 28.
Gearing, Engine starter. B. W. Jones. 2,457,239, Dec. 28.
Gearing, Mixing machine. L. F. Thiel. 2,457,612, Dec. 28.
Generator: *See*—
Electronic saw-tooth wave generator.
Polyphase oscillation generator.
Resistance sine wave generator.
Glass fibers, Manufacture of. P. Ebaugh. 2,457,775, Dec. 28.
Glider for furniture legs, Adjustable. A. R. Pura. 2,457,723, Dec. 28.
Glue dispenser. F. C. Rodman and J. E. Engel. 2,457,733, Dec. 28.

Nicking machine, Billet. A. H. Yoch and W. W. Rice, Jr. 2,457,337, Dec. 28.
Nitroparaffin modified aminoplasts. M. J. Scott. 2,457,404, Dec. 28.
Noise control or reproduced sound, Method and apparatus for. H. F. Olson and J. Preston. 2,457,712, Dec. 28.
Nozzle, Fire hose. D. Brown. 2,457,526, Dec. 28.
Oil dilution and primer system for internal-combustion engines. E. A. Sherrill. 2,457,739, Dec. 28.
Oiler for internal-combustion engines, Top cylinder. W. A. Maclay. 2,457,389, Dec. 28.
Oils from plants, Making scenting essential. A. Brasch. 2,457,203, Dec. 28.
1,2-expoxides and their preparation. D. Swern and G. N. Billen. 2,457,328, Dec. 28.
Optical objective system, Reflecting. C. W. Martin. 2,457,253, Dec. 28.
Optical sighting device having reflector means for tracking movable objects. E. H. Goldsmith, R. V. Terry, and J. W. Schaefer. 2,457,543, Dec. 28.
Organo-siloxanes and making them. J. F. Hyde. 2,457,677, Dec. 28.
Oscillation generators, Ultra high frequency. F. H. Taylor. 2,457,189, Dec. 28.
Oscillator, Microwave. A. E. Anderson. 2,457,194, Dec. 28.
Overload control with nonlinear resistance in output, Facsimile. R. C. Curtis. 2,457,131, Dec. 28.
Oxygenated compound with bisulfite adducts, Separation of. V. F. Michael and S. W. Walker. 2,457,257, Dec. 28.
Packaging articles. M. A. Beckmann. 2,457,197, Dec. 28.
Packless globe valve. G. H. Hufferd and G. O. R. Lindgren. 2,457,472, Dec. 28.
Paint bucket bracket. W. H. Welsh. 2,457,290, Dec. 28.
Pectic enzyme preparations fortified with pectinesterase. E. F. Jansen and H. Lineweaver. 2,457,560, Dec. 28.

Pen, Dual fountain. M. Ernst. 2,457,217, Dec. 28.
Penicillins, Producing. R. B. McCormack. 2,457,585, Dec. 28.
Pessaries, Manufacture of. J. F. Clark. 2,457,349, Dec. 28.
Phenol-aldehyde reaction products and the product thereof, Making. D. V. Redfern. 2,457,493, Dec. 28.
Phenol-aldehyde sealing agent and making the same. S. S. Kurtz, Jr., and J. S. Sweely. 2,457,160, Dec. 28.
Phonograph, Automatic. C. R. Hart. 2,457,668, Dec. 28.
Phonograph record. J. H. Hunter. 2,457,154, Dec. 28.
Pin: *See*—
Hair curl pin.
Pipe coupling. V. P. Donner. 2,457,648, Dec. 28.
Pitch changing mechanism. G. J. Smith-Pert and A. G. Forsyth. 2,457,609, Dec. 28.
Pivoted outer-jaw pipe wrench. C. H. Green. 2,457,223, Dec. 28.
Plant, Turbine compressor. F. Nettel and J. Kreitner. 2,457,594, Dec. 28.
Plow attachment for tractors. W. S. Lansing. 2,457,163, Dec. 28.
Plow, Disk. L. C. Hester. 2,457,151, Dec. 28.
Plug: *See*—
Rotary locking screw plug.
Plugboard arrangements. J. F. Merkel. 2,457,703, Dec. 28.
Plug connector. G. B. Benander. 2,457,520, Dec. 28.
Plunger for relays, Time-delay. J. P. Keating and G. L. Welmer. 2,457,681, Dec. 28.
Polydioxolane, Preparation of. W. F. Gresham. 2,457,224, Dec. 28.
Polymeric ethylene, Fractionation of. E. Hunter and R. B. Richards. 2,457,238, Dec. 28.
Polymerizable composition. S. E. Glick. 2,457,657, Dec. 28.
Polymers of hexadiene-1,5, Synthetic. H. Dreyfus and C. Bonard. 2,457,306, Dec. 28.
Polymers of 9,10-epoxyoctadecanol and their preparation. D. Swern and G. N. Billen. 2,457,329, Dec. 28.
Polymers, Producing high boiling. H. W. Grote, R. L. Swoope, and C. S. Brearley, Jr. 2,457,146, Dec. 28.
Polyphase oscillation generator. E. M. S. McWhirter and R. H. Dunn. 2,457,166, Dec. 28.
Polyvinyl acetal resins. G. O. Morrison, F. P. Lossing, A. H. Heatley, and J. F. L. M. Germain. 2,457,261, Dec. 28.
Polyvinyl boronates and producing same. P. L. Salzberg and F. K. Signaigo. 2,457,603, Dec. 28.
Poultry feeder. D. R. Ballard. 2,457,432, Dec. 28.
Power tool. L. F. Kott. 2,457,565, Dec. 28.
Prefractionation of hydrocarbon alkylate to eliminate propane. L. Kniel. 2,457,564, Dec. 28.
Press for the covering of electrode rods. K. Gloor. 2,457,459, Dec. 28.
Pressure device, Shoe sole. S. Plawker. 2,457,720, Dec. 28.
Printer, Fragmentary character. E. M. Deloraine. 2,457,133, Dec. 28.
Prod, Safety. S. H. Sorensen. 2,457,506, Dec. 28.
Projection apparatus for chance selected indicia. H. E. Seaman. 2,457,280, Dec. 28.
Projection apparatus, Optical. K. Mitchell. 2,457,170, Dec. 28.
Projection cathode-ray tube. L. W. Parker. 2,457,175, Dec. 28.
Projector for liquid and pulverulent or small material. G. S. Higginson. 2,457,557, Dec. 28.
Propeller, Airplane, and adjusting same. J. G. Littrell. 2,457,576, Dec. 28.
Propeller blades, Making internally reinforced hollow. G. W. Brady. 2,457,202, Dec. 28.
Prosthetic wrist. J. K. Northrop and M. J. Nagy. 2,457,316, Dec. 28.
Protecting device for aircraft personnel, Body. J. Martin. 2,457,252, Dec. 28.
Protective system. G. D. Hanchett, Jr. 2,457,663, Dec. 28.
Protector for trigger hands, Finger. W. Ugazio and E. C. Boccafogli. 2,457,755, Dec. 28.
Proximity and direction indicator. F. E. Best. 2,457,199, Dec. 28.
Pteroic acid amides, Purification of. B. L. Hutchings. 2,457,375, Dec. 28.
Pump: *See*—
Fuel pump. Wobble plate pump.
Injector-impeller pump.
Variable displacement gear pump.
Pump and packing therefor, Rotary. M. Caserta. 2,457,643, Dec. 28.
Pusheart assembly. G. Soha. 2,457,742, Dec. 28.
Pyridine compound, Substituted. J. H. Mowat. 2,457,484, Dec. 28.
Quartz lamp assembly. R. R. Davis. 2,457,353, Dec. 28.
Quick connect self-sealing coupling. B. A. Main, Jr. 2,457,251, Dec. 28.
Quick disconnect joint. S. P. Bird. 2,457,523, Dec. 28.
Radio-frequency parallel bonding. G. F. Russell and J. W. Mann. 2,457,498, Dec. 28.
Radio locating equipment. H. F. Mayer. 2,457,580, Dec. 28.
Radio system for transmission and reception on the same frequency. M. L. Doelz. 2,457,134, Dec. 28.
Rail retaining and spike fastening means. G. W. Muller. 2,457,592, Dec. 28.
Rail track fastening. H. L. Rushing. 2,457,180, Dec. 28.
Razor, Safety. W. L. Mills. 2,457,590, Dec. 28.
Reading aid for the blind. L. E. Flory. 2,457,456, Dec. 28.
Receiver, Angle modulated carrier. W. L. Carlson. 2,457,207, Dec. 28.
Recessing tool. H. J. Pfrehm. 2,457,269, Dec. 28.
Reclamation system, Material. R. L. McIlvaine. 2,457,587, Dec. 28.
Recorder with friction drive device incorporated within the magazine, Magnetic. R. A. Marsen. 2,457,690, Dec. 28.
Recording device. H.-G. Doll and G. K. Miller. 2,457,214, Dec. 28.
Rectifier. C. A. Escoffery and W. H. Hawk. 2,457,138, Dec. 28.
Rectifier elements, Electroforming. M. J. Stateman. 2,457,186, Dec. 28.
Rectifier elements, Manufacturing of. A. J. Miller and J. W. Fleisher. 2,457,169, Dec. 28.
Reel: *See*—
Fishing reel.
Reel for grain harvesters. R. A. Press. 2,457,499, Dec. 28.
Reflecting vapor lamp. G. C. Singer. 2,457,503, Dec. 28.
Refreshment bar and partitioning screen, Convertible. D. L. Doggett and W. Schier. 2,457,536, Dec. 28.
Regeneration of alumina adsorbents by oxidation. K. A. Krieger and H. Heinemann. 2,457,566, Dec. 28.
Regeneration of synthetic metal silicate adsorbents by oxidation. H. Heinemann and K. A. Krieger. 2,457,556, Dec. 28.
Relay for use with alternating current of variable frequency and voltage, Electric. C. E. Randall. 2,457,724, Dec. 28.
Relay, Glow. A. L. Peacock and B. A. Jensen. 2,457,487, Dec. 28.
Remote control system. C. E. Seymour. 2,457,607, Dec. 28.
Removable bracket. C. H. S. Hunter. 2,457,373, Dec. 28.
Repeater for pulse communication system. G. H. Huber. 2,457,559, Dec. 28.
Resilient mounting. E. P. Neher. 2,457,706, Dec. 28.
Resinous compositions. W. B. Clark. 2,457,209, Dec. 28.
Resinous esters of polyhydric alcohols with polymers of styrene and resin acids and preparation thereof. J. A. Arvin and W. B. Gitchel. 2,457,769, Dec. 28.
Resistance grid and assembling. C. H. Rockwood and D. J. Sikorra. 2,457,399, Dec. 28.
Resistance sine wave generator. A. G. Richardson and T. H. Clark. 2,457,178, Dec. 28.
Resistor and making. J. W. Jira. 2,457,678, Dec. 28.
Resistor for electric discharge devices. T. C. Sargent. 2,457,734, Dec. 28.
Retainer, Magnetic. C. W. Warren. 2,457,421, Dec. 28.
Rheostat control, Water. V. Chadwick and O. I. E. Hallberg. 2,457,124, Dec. 28.
Rink, Ice skating. R. J. Yocum. 2,457,619, Dec. 28.
Rod: *See*—
Gas welding rod.
Roller mill with adjustably and yieldably mounted roller, Belt driven. W. P. Blake. 2,457,632, Dec. 28.
Roller wheel. C. Wolf and N. M. Foulds. 2,457,424, Dec. 28.
Rotary locking screw plug. W. J. Sherman, Sr. 2,457,184, Dec. 28.
Safe failure measuring and controlling apparatus. R. F. Wild. 2,457,791, Dec. 28.
Safety device for breech loading guns. W. V. Goodhue and E. C. Gill. 2,457,222, Dec. 28.
Safety shoes, Making. W. G. Greenan. 2,457,463, Dec. 28.
Salts of ascorbosalicylate, Preparing double. J. G. Freeman. 2,457,141, Dec. 28.
Saw, Power operated tractor mounted tree felling. K. R. Ware. 2,457,511, Dec. 28.
Scale mechanism, Hydraulic. R. A. Gifford. 2,457,655, Dec. 28.
Scanning unit. M. Alden. 2,457,113, Dec. 28.
Scrubber, Gas. R. R. Harmon. 2,457,667, Dec. 28.
Seal, Adjustable fluid. A. J. Solari. 2,457,284, Dec. 28.
Seal, Fluid. A. J. Rosenberger. 2,457,320, Dec. 28.
Sealed switch. H. Hubbell. 2,457,153, Dec. 28.
Sealing device. G. A. Borg. 2,457,633, Dec. 28.
Sealing metal to glass. L. C. Goodale. 2,457,144, Dec. 28.
Seat: *See*—
Toilet seat.
Sectionizer, Fruit. W. W. Cummings. 2,457,645, Dec. 28.
Securing webbing strips to furniture frames, Means of. P. G. Braunschweiger. 2,457,343, Dec. 28.
Sedimentation apparatus. P. L. Wigton. 2,457,191, Dec. 28.
Seesaw, Swinging. E. C. Bailey. 2,457,627, Dec. 28.
Selective signaling circuit. J. A. Herbst. 2,457,149, Dec. 28.
Sensitometer employing repeating wedge modulator. M. H. Sweet. 2,457,746, Dec. 28.
Service coupling. A. Letvin. 2,457,478, Dec. 28.
Serving apparatus, Material. Y. A. Bouget. 2,457,636, Dec. 28.
Servomotor, Pressure fluid follow-up. H. W. Price. 2,457,721, Dec. 28.
Servo system, Electric antihunt. J. P. Toner. 2,457,330, Dec. 28.

Set of knockdown furniture. L. E. Steinberger. 2,457,411, Dec. 28.
Sewing case and pincushion, Combined. J. A. Zampino. 2,457,767, Dec. 28.
Shaft coupling. N. B. Strachovsky. 2,457,507, Dec. 28.
Sharpener, Knife. W. R. Pancoast. 2,457,714, Dec. 28.
Shield for gun mounts. J. C. Jorgensen. 2,457,240, Dec. 28.
Shipping assembly. G. H. Norquist. 2,457,262, Dec. 28.
Shipping container. F. L. and C. E. McGary. 2,457,702, Dec. 28.
Shoe, Safety. R. B. Harrison. 2,457,664, Dec. 28.
Shoe tree. G. Albino. 2,457,623, Dec. 28.
Shoe tree and shoeshine bracket, Combination. V. Clair. 2,457,445, Dec. 28.
Shoe with sheath form of upper. D. E. Levin. 2,457,573, Dec. 28.
Shower unit, Portable. L. L. Werner. 2,457,190, Dec. 28.
Shutter for cameras, Sliding focal plane. J. J. Jones. 2,457,679, Dec. 28.
Shuttle car. A. L. Lee. 2,457,569, Dec. 28.
Signal: *See*—
Highway warning signal.
Signal system employing polarized light. J. O'D. Shepherd. 2,457,502, Dec. 28.
Signaling. H. O. Peterson. 2,457,268, Dec. 28.
Signaling system, Electric. A. Brown and T. A. Marshall. 2,457,121, Dec. 28.
Signaling system for two-way dialing over radio and carrier telephone circuits. E. H. B. Bartelink. 2,457,434, Dec. 28.
Sinker for deep-sea and beach fishing. J. H. Flaugher. 2,457,358, Dec. 28.
Sizing machine, Steam. W. Kaplan. 2,457,476, Dec. 28.
Slicer, Butter. R. R. Perkins. 2,457,716, Dec. 28.
Sliding door mounting. D. Ramsey. 2,457,491, Dec. 28.
Sock support. O. K. Gjertsen. 2,457,363, Dec. 28.
Socket for gaseous discharge lamps. S. Levenson. 2,457,780, Dec. 28.
Soldering stand assembly. G. H. Norquist. 2,457,263, Dec. 28.
Speed device. C. A. Girod. 2,457,458, Dec. 28.
Spindle adapter. J. C. Renfroe. 2,457,273, Dec. 28.
Spinning artificial filamentous products, Method and apparatus for. E. D. Copson and R. J. Taylor. 2,457,350, Dec. 28.
Sponge polychloroprene rubber, Manufacture of. N. A. Klemp. 2,457,684, Dec. 28.
Sponge rubber garment product. A. C. Fischer. 2,457,219, Dec. 28.
Spring: *See*—
Vehicle spring.
Spring means for minimizing undulations in suspension bridges. M. R. Wolfard. 2,457,427, Dec. 28.
Stabilizing devices for resilient structures. M. R. Wolfard. 2,457,425, Dec. 28.
Stand: *See*—
Carton and display stand.
Starting and generator-driving mechanism for engines. R. S. Kidd. 2,457,311, Dec. 28.
Steel sheets, Making corrugated galvanized. N. P. Veeder. 2,457,420, Dec. 28.
Steering mechanism and follow-up control valve therefor, Power. E. J. Ringer. 2,457,728, Dec. 28.
Steering mechainsm, Power. T. H. Thomas. 2,457,750, Dec. 28.
Step and ramp appliance for vehicles, Retractable. R. J. Kelberer. 2,457,380, Dec. 28.
Sterilizer. J. J. Scandura. 2,457,500, Dec. 28.
Stoker, Furnace. E. O. White. 2,457,423, Dec. 28.
Strand testing. S. L. Ross. 2,457,276, Dec. 28.
Stretch-forming apparatus, including a segmental die connected at opposite ends to shiftable vises. R. E. Martin. 2,457,483, Dec. 28.
Stripping of spent catalyst in a hydrocarbon conversion process. P. F. McElherne. 2,457,255, Dec. 28.
Structural member, Tubular section. S. Macomber. 2,457,250, Dec. 28.
Structure and surface covering therefor, Surface covered. G. K. Blemesderfer, Jr. 2,457,299, Dec. 28.
Structure, Electrical outlet. L. R. Casler and L. F. Milner. 2,457,347, Dec. 28.
Strut, Electrically and hydraulically operated extensible. M. V. Hartman. 2,457,467, Dec. 28.
Styrene distillation. T. A. Gadwa. 2,457,361, Dec. 28.
Styrene-oil soluble natural resin-drying oil interpolymer. J. A. Arvin and W. B. Gitchel. 2,457,768, Dec. 28.
Succinic ester synthesis. W. F. Gresham. 2,457,111, Dec. 28.
Sunshade mounting. C. E. Lipuma. 2,457,479, Dec. 28.
Support: *See*—
Sock support.
Support for conveyor belts, Roller. J. R. Sebastian. 2,457,407, Dec. 28.
Support for washing windows, Suspender window. C. Mariash. 2,457,698, Dec. 28.
Suppressor for moisture meters, Static. R. S. Hart. 2,457,669, Dec. 28.
Surgical instrument. L. L. Grose. 2,457,464, Dec. 28.
Suspension for farm wagons, Resilient. G. E. Richards. 2,457,397, Dec. 28.
Suspension system, Balance-testing machine rotor. C. H. Phelps. 2,457,718, Dec. 28.
Switch: *See*—
Antenna disconnecting switch.
Conveyer switch.
Electric switch.
Sealed switch.
Tire deflation switch.
Switch operating system, Time-delay. D. J. Abercrombie, E. A. Brettingham-Moore, and W. T. Muscio. 2,457,112, Dec. 28.
Switching system, Electronic. J. H. Newitt. 2,457,173, Dec. 28.
Synthesis of esters. R. E. Brooks. 2,457,204, Dec. 28.
Synthesis of unsaturated ketones. G. E. Lukes and R. C. Swann. 2,457,696, Dec. 28.
Syringe, Hypodermic. M. L. Lockhart. 2,457,313, Dec. 28.
Table: *See*—
Burn bath table.
Takedown bow. F. B. Bear. 2,457,793, Dec. 28.
Tape, Ladder. G. F. Brent. 2,457,442, Dec. 28.

Roller wheel.
Turbine wheel.
Vehicle wheel.
Wheel and brake drum organization. R. B. Temple. 2,457,416, Dec. 28.
Wheel device, Rotary screw. A. Lysholm. 2,457,314, Dec. 28.
Wheel suspension, Vehicle torsion bar individual. H. C. McCaslin. 2,457,583, Dec. 28.
Wheels, Making abrasive cutoff. H. V. Allison. 2,457,516, Dec. 28.
Windmill, Air power. D. B. Wood. 2,457,514, Dec. 28.
Winding element, Fluidproof. F. J. Sigmund and W. S. Hlavin. 2,457,740, Dec. 28.
Window clamp. M. R. Olsen. 2,457,317, Dec. 28.
Wiper assembly for step-by-step switches. V. F. Miller. 2,457,589, Dec. 28.
Wire curling apparatus and method. F. D. Moran. 2,457,705, Dec. 28.
Wire-stranding machine. A. J. Roetting. 2,457,402, Dec. 28.
Wobble plate pump. A. Bertea. 2,457,339, Dec. 28.
Wrapping machine, Blade. C. N. Henshaw. 2,457,233, Dec. 28.
Wrapping wire on terminals, Method of and device for. F. W. Johnson. 2,457,475, Dec. 28.
Wrecking bar. W. F. Henderson. 2,457,231, Dec. 28.
Wrench: *See*—
Pivoted outer-jaw pipe wrench.
Zinc vapor, Condensing. E. C. Handwerk and G. T. Mahler. 2,457,548, Dec. 28.
Zinc dust, Melting. E. C. Handwerk, G. T. Mahler, and H. C. Haupt. 2,457,553, Dec. 28.
Zinc smelting, Vertical retort process for. E. C. Handwerk and G. T. Mahler. 2,457,552, Dec. 28.
Zinc vapor, Condensing. E. C. Handwerk, G. T. Mahler, and H. C. Haupt. 2,457,544, Dec. 28.
Zinc Vapor, Condensing. E. C. Handwerk, G. T. Mahler, and H. C. Haupt. 2,457,545, Dec. 28.
Zinc vapor, Condensing. E. C. Handwerk, G. T. Mahler, and H. C. Haupt. 2,457,546, Dec. 28.
Zinc vapor, Condensing. G. T. Mahler and E. C. Handwerk. 2,457,550, Dec. 28.
Zinc vapor, Condensing. S. Robson. 2,457,551, Dec. 28.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 28, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

TETER *v.* KEARBY

No. 5439. Decided June 1, 1948. Petition for rehearing denied September 30, 1948

[169 F.2d 808; 79 USPQ 65]

1. APPLICATION—CONTINUING—EFFECTIVE DATE OF DISCLOSED BUT UNCLAIMED MATTER.

Held that a continuing application by the same inventor is entitled to the date of an earlier filed application if the subject matter is continued before the Patent Office, and it is immaterial that the subject matter in the last continuing case is claimed for the first time and that no previous claim was made of the subject matter in the earlier filed case.

2. SAME—SAME—SAME.

Where one invention which is clearly disclosed in an application is not there claimed, but is subsequently claimed in a co-pending application by the same applicant, the first filing will be deemed a constructive reduction to practice and the later application will be given the filing date of the earlier one.

3. APPLICATION—JOINT CONVERTED TO SOLE—SOLE ENTITLED TO FILING DATE OF JOINT.

Where appellee and another jointly filed three applications with identical disclosures, the third being a division of the first, and subsequently, after the issuance of patents on the first two applications, the third application was converted to a sole application of appellee, *Held* that since appellee acted in good faith and with diligence to convert the joint application to a sole application, under the doctrine of *In re Roberts*, 49 App. D. C. 250, the sole application is entitled to the benefit of the date of that joint application, and since that application is clearly entitled to the filing date of the first joint application, the sole application of appellee is entitled to that earliest filing date.

4. INTERFERENCE—TESTIMONY.

It is fundamental that neither party is compelled to take testimony in an interference proceeding, and it is just as fundamental that after the junior party has made his record in chief that if the senior party upon an examination thereof is of opinion that the record made by the junior party is not sufficient to establish priority, there is no compulsion upon the senior party to present any evidence whatever, and he can properly rely upon his filing date.

5. SAME—SAME—CORROBORATION.

Where in support of appellant's testimony concerning his tests and the results thereof, reports and notebook pages of two chemists were placed in evidence, but the chemists making the reports were not called as witnesses and there is nothing in the record to indicate that their attendance has been sought, *Held* that, while the reports supported the testimony of appellants, they are not sufficient of themselves to prove the composition of the gels used in the tests nor the process of preparing the catalysts said to be used in the cracking runs discussed in the testimony.

6. SAME—SAME—SAME.

Where appellant contends that the laboratory notebooks intended to support the testimony of appellant are admissible as evidence of performance of the acts recorded therein under the provisions of U. S. C., title 28, sec. 695, *Held* that the code provision was never intended to embrace such records as are here before us, and that, while it may be true that in the research department of appellant's company it may be a matter of ordinary business to file such reports, nevertheless the contents thereof cannot be considered legally sufficient even though they are routine with respect to their contents.

7. SAME—DILIGENCE.

Where it was admitted by an attorney in the patent department of appellant's assignee, that appellant's application was laid aside from December 10, 1940, until March 15, 1941, in favor of another invention said to have been of greater importance, *Held* that appellant is chargeable with his attorney's lack of diligence and the neglect of this application in favor of another is not consistent with the exercise of reasonable diligence.

8. SAME—PROCESS FOR CRACKING PETROLEUM OIL.

Held that the decision of the Board of Interference Examiners awarding priority of invention of the subject matter of all of the counts to appellee is affirmed.

APPEAL from the Patent Office. Interference No. 81,282.

AFFIRMED.

Pennie, Edmonds, Morton & Barrows (*Louis D. Forward* and *Clarence M. Fisher* of counsel) for Teter.

George J. Silvavy (*J. G. McKean, Edward J. Mahler*, and *W. F. Weigester* of counsel) for Kearby.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the subject matter of all of the counts, four in number, to appellee.

The interference involves an application of appellee, Serial No. 512,778, filed December 3, 1943, and a patent of appellant, No. 2,330,640, dated September 28, 1943, on an application, Serial No. 389,415, filed April 19, 1941. The involved counts were copied by appellee from the patent of appellant and read as follows:

1. Process for cracking petroleum oil to produce motor fuel having high anti-knock properties comprising intimately contacting the oil to be cracked while at a cracking temperature with a metal oxide catalyst in the form of an aerogel.

2. Process for cracking petroleum oil to produce motor fuel having high anti-knock properties comprising intimately contacting the oil to be cracked while at a cracking temperature with a catalyst composed of SiO_2 and Al_2O_3 in the form of an aerogel.

Vol. 617 • No. 4 Tuesday, December 28, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

3. Process for cracking petroleum oil to produce motor fuel having high anti-knock properties comprising heating the oil to be cracked to a cracking temperature while having intimately dispersed therein a metal oxide catalyst in the form of an aerogel.

4. In the method of producing motor fuel having high anti-knock properties by cracking petroleum oil wherein a metal oxide catalyst at least a substantial part of which has been regenerated is dispersed through the oil, the oil-catalyst mixture subjected to cracking treatment and the used catalyst separated from the oil regenerated and returned to the cracking treatment, the improvement comprising dispersing the metal oxide catalyst in the oil in the form of an aerogel.

As indicated by the above quoted counts, the subject matter of the interference relates to a process for cracking petroleum oil in the presence of a metal oxide catalyst "in the form of an aerogel" for the purpose of producing gasoline possessing high anti-knock properties.

On December 30, 1939, appellee and a party named Reeves filed a joint application, Serial No. 311,936, disclosing the subject matter involved herein. That application subsequently matured into Patent No. 2,317,803, dated April 27, 1943. Prior to the issuance of that patent Reeves and Kearby filed a division thereof, Serial No. 451,220, dated July 16, 1942. That divisional application matured into Patent No. 2,348,647 on May 9, 1944. Prior to the issuance of the second patent, to wit on November 5, 1943, but after the case was closed to further prosecution before the Examiner, Kearby and Reeves copied the involved claims from the Teter patent seeking by amendment to add those claims to their second application for the purpose of bringing on an interference with the patent of appellant. The examiner refused to enter the amendment for the stated reason that it was directed to subject matter divisible from that already allowed in the second joint application.

The joint applicants were then advised by the Examiner that their remedy was to file a divisional application containing the claims of appellant's patent. Accordingly on December 3, 1943, and prior to the issuance of their second application as a patent, Reeves and Kearby filed a third joint application, Serial No. 512,778, containing the copied patent claims which constitute the counts herein. The present interference between the third joint application and the patent of appellant was declared on December 30, 1943. All three of the joint applications are identical in their disclosures and verbatim copies, each of the other, except for the claims.

On January 29, 1944, the parties stipulated that the time for filing preliminary statements, which had been set for January 31, 1944, be extended for a period of thirty days. Accordingly the Examiner of Interferences extended the time until March 2, 1944. On February 29, 1944, another stipulation was filed requesting a further extension of thirty days after March 2, 1944. In that stipulation it was stated that from a preliminary inspection of the records of Reeves and Kearby it was discovered that the invention as defined in the counts was the sole invention of appellee Kearby rather than a joint invention, and that, therefore, it would be necessary to convert the joint application, Serial No. 512,778, into the sole application of appellee Kearby. It is stated in the stipulation that the extension of time was for the purpose of filing the necessary papers for converting the joint application into a sole application prior to the filing of preliminary statements. The Examiner of Interferences on March 3, 1944, extended the time within which preliminary statements might be filed to April 3, 1944.

On March 2, 1944, counsel for the joint applicants moved that the interference be suspended and that the application be remanded to the Primary Examiner for the purpose of converting the joint application into a sole application of Kearby and that the interference be reformed accordingly. In the motion it was stated that the necessary documents for such change were being filed on the date of the motion. On March 8, 1944, the Examiner of Interferences granted the motion and remanded the case to the Primary Examiner for the purpose of considering the question of converting the joint application to a sole application and reforming the interference. The Examiner of Interferences suspended the proceeding.

It appears from a letter of the Examiner of Interferences, dated June 2, 1944, that the motion period expired July 3, 1944; that testimony in chief for appellant was to close September 5, 1944; that testimony of appellee Kearby was to close October 5, 1944; that rebuttal testimony of appellant was to close October 20, 1944; and that final hearing would take place on January 5, 1945.

On March 1, 1944, the joint applicant Reeves filed an affidavit in which he stated that since the filing of the joint application, Serial No. 512,778, he had discovered that he was not a joint inventor of the subject matter claimed in that application, and, therefore, he disclaimed that he was such inventor with appellee Kearby, and that he filed that application as a joint inventor through mistake and without fraudulent intent. On the same date appellee Kearby filed an affidavit stating that he had been a party to filing that application as a joint inventor through mistake, inadvertence, and without fraudulent intent, and that since filing that application he discovered that he was the sole inventor of the invention claimed in the application. Appellee Kearby also filed a new oath stating that his sole application, Serial No. 512,778, was a division of the joint application, Serial No. 451,220, which in turn was a division of joint application, Serial No. 311,936.

In view of those affidavits, the involved application was converted to the sole application of appellee Kearby. The interference was then reformed, the counts remaining the same. By reason of the proceedings hereinbefore set out, Kearby was the senior party.

On June 29, 1944, counsel for appellant filed a motion praying that the burden of proof be shifted to make him the senior party, and a motion to dissolve the interference. On July 21, 1944, appellee filed a motion to add counts to the interference. All three motions were denied in a decision of the Primary Examiner, dated October 14, 1944.

On October 25, 1944, counsel for appellant petitioned the Commissioner of Patents in the exercise of his supervisory authority to review the decision denying his motions. On November 3, 1944, the Commissioner of Patents dismissed the petition of appellant stating that the questions raised in the petition were reviewable in the interference proceeding.

In his motion to shift the burden of proof, appellant contended that the sole application of Kearby was not entitled to the filing date of the first joint application of Reeves and Kearby. Substantially the same contention was made in appellant's motion to dissolve. It is obvious that, unless appellee is awarded the filing date of the original joint application, Serial No. 311,936, he can not prevail.

Appellant, in addition to his contention that appellee was not entitled to the filing date of the first joint application, took testimony. Appellee took no testimony and was held to be entitled to no date earlier than the date of the earliest joint application of Reeves and Kearby, December 30, 1939.

The Board of Interference Examiners held that appellant had conceived the invention defined in all of the counts prior to December 30, 1939, but that he did not prove reduction of the invention to practice prior to his filing date, and also that appellant did not prove exercise of reasonable diligence in reducing the invention to practice during the critical period—from just prior to December 30, 1939, to his filing date. The Board, as did the Primary Examiner, held that appellee was entitled to rely upon the date of December 30, 1939, as a constructive reduction to practice of the invention defined by the involved counts.

Counsel for appellant in their brief before us state that there are two important issues involved and also a number of subsidiary issues. It is vigorously contended that appellee is not entitled to the filing date of the first Reeves and Kearby application for a constructive reduction to practice. It is also strongly contended that the record on behalf of appellant adequately establishes actual reduction to practice of the subject matter of the broad counts 1 and 2 prior to appellee's earliest available date. It is argued as a subsidiary issue that if the latter question be answered in the affirmative, then the question arises as to whether or not experimental operations relied upon by appellant as a reduction to practice of the subject matter of counts 1 and 2 also comply with the terms of count 3, and, therefore, are sufficient to establish a reduction to practice of that count as well as counts 1 and 2. A further subsidiary question is posed by appellant as to whether certain operations described by one of the witnesses as having been performed prior to the fall of 1940 resulted in a reduction to practice of the subject matter of count 4 as well as count 3, and whether appellant had been diligent in completing his reduction to practice.

While appellant appears to agree with the doctrine with respect to converting joint to sole applications as laid down in the case of *In re Roberts*, 49 App. D. C. 250, he contends that the conditions set forth therein with respect to such conversion are not satisfied by the action of appellee, and that, therefore, the sole application of appellee is not entitled to the benefit of the filing date of December 30, 1939.

It is admitted that the doctrine in *In re Roberts*, supra, is applicable where under certain circumstances a sole inventor may properly secure the benefit of the date of an earlier filed joint application.

It is clear that the second application of Reeves and Kearby is a true division of their original application, and as such is entitled to the benefit of the date of the first application. It is also obvious that the involved application, when it was filed as the joint application of Reeves and Kearby, was likewise a true division of the second joint application. Seemingly appellant raises no question concerning the relationship of the three joint applications. His contention is that when the involved application was converted from a joint to a sole application that in some manner—which has not been explained and which we can not understand—the involved application lost its character as a divisional application.

[1] It is well settled law that a continuing application by the same inventor is entitled to the date of an earlier filed application if the subject matter is continued before the Patent Office. It is immaterial that the subject matter in the last continuing case is claimed for the first time and that no previous claim was made of the subject matter in the earlier filed case. *Benedict* v. *Menninger*, 20 CCPA (Patents) 1138, 64 F.2d 1001, 17 USPQ 499, 434 O. G. 525, and *Harold D. Arnold* v. *Irving Langmuir*, 17 CCPA (Patents) 756, 36 F.2d 834, 4 USPQ 114, 393 O. G. 785.

Appellant appears to contend that the holdings in those cases must be disregarded if we affirm the decision of the Board, holding that appellee is entitled to the filing date of the earliest joint application. We can not agree with such contention. We can see no reason why under the facts in this case appellee may not be porperly awarded as his earliest date for constructive reduction to practice, December 30, 1939. No case has been cited to us nor have we been able to find any that would sustain such contention. It has been held by the Board of Appeals that a sole application can be a division of a joint application if the latter contained an invention which was solely that of one of the joint applicants. *Ex parte Whitfield*, 58 USPQ 425.

[2] Where one invention which is clearly disclosed in an application is not there claimed, but is subsequently claimed in a co-pending application by the same applicant, the first filing will be deemed a constructive reduction to practice and the later application will be given the filing date of the earlier one. *Chapman et al.* v. *Wintroath*, 252 U. S. 126, 272 O. G. 913. Such right of benefit from a disclosure of an earlier application was asserted in the case of *Benedict* v. *Menninger*, supra.

In the case of *In re Perrin*, 31 CCPA (Patents) 1041, 142 F.2d 277, 61 USPQ 418, 565 O. G. 151, we affirmed the doctrine of the case of *In re Roberts*, supra, that a sole application disclosing and claiming the subject matter of an earlier joint application may be entitled to the benefit of the date of the joint application.

When the joint applicants filed the present application, they were jointly claiming the subject matter thereof. Subsequently when the joint application was converted to the sole application of Kearby, he as an individual was claiming the same subject matter as was claimed in the joint application. We think such conversion and the claiming of the same subject matter of the joint application completely satisfies one of the conditions set out in the case of *In re Roberts*, supra. The last joint application was in fact a division of the second joint application which in turn was a true division of the original joint application. It must be remembered that the divisional applications disclosed and claimed distinct and separate inventions from those claimed in the first joint application although all those inventions were sufficiently disclosed therein. It was not necessary in the filing of either of the first two joint applications to assert claims to the claimed subject matter of the third joint application. In fact since division was required, it could not be done.

As far as we are informed by the cited cases it would seem to be immaterial when the sole invention was first claimed in the Patent Office. *In re Roberts*, supra.

In the case of *Godfrey* v. *Eames*, 1 Wall. 317, cited in the *In re Roberts* case, supra, it was held that, "where an applicant for a patent elects to withdraw his application for the purpose of filing a new application, the two applications are to be considered as parts of the same transaction, constituting one continuous application." Similarly in the situation before us, we can not see why the three joint applications of Reeves and Kearby should not be considered as parts of the same transaction making one continuous application. Since the first joint divisional application was made in due time prior to the issuance of a patent on the original application, and the second joint divisional application was made during the permitted time prior to the issuance of the patent on the first divisional application, it is immaterial that the first two joint applications matured into patents.

It is true that one of the conditions under which a sole application can properly have the benefit of the date of the earlier filed joint application is that the sole applicant must have acted with reasonable diligence in order to correct his mistake. *In re Roberts*, supra; *Manny* v. *Garlick et al.*, 30 CCPA (Patents) 1008, 135 F.2d 757, 57 USPQ 377, 553 O. G. 370; *Manny* v. *Garlick et al.*, 75 USPQ 215. In the latter cited case appears a very complete analysis of cited cases with respect to diligence in converting joint to sole applications.

In our opinion appellee acted with reasonable diligence to correct his mistake. The affidavit of Reeves and that of Kearby were filed March 1, 1944. The joint application of Reeves and Kearby, Serial No. 512,778, was filed December 3, 1943. The interference was declared December 30, 1943. The time for filing preliminary statements was set to expire March 2, 1944, and on February 29, 1944, the parties by stipulation asked for an extension of time within which to file preliminary statements for the reason it had been discovered that the joint application was filed through a mistake.

It will be noted that as early as March 1, 1944, which was prior to the time fixed for filing preliminary statements, Reeves and Kearby properly took steps to rectify their error. There is nothing in the record from which we can infer that the joint applicants knew of any mistake before the time set for filing preliminary statements. The preparation for filing such statements involves an examination of proper facts and procurable evidence relating to the acts of the parties and to dates available in establishing priority of invention. If mistakes had been made, it seems to us that during such examination they would in all probability be then discovered. The chronology herinbefore set out convinces us that the joint applicants acted promptly to correct their error, and we hold, as was held below, that reasonable diligence was exercised.

A final condition set out in the case of *In re Roberts*, supra, is that one who seeks to convert from a joint to a sole application "must assume the burden of establishing his good faith." The good faith of the joint applicants in filing their joint applications does not appear to be questioned by appellant. The affidavit of appellee and that of Reeves both state that the joint filing was made through mistake and without fraudulent intent. We find nothing in the record to indicate that appellee did not act in good faith.

[3] For the reason that in our opinion appellee acted in good faith and with diligence to convert the joint application of Reeves and Kearby to the sole application of Kearby containing the same disclosure and claims as that joint application, under the doctrine of *In re Roberts*, supra, the sole application is entitled to the benefit of the date of that joint application, and since that application is clearly entitled to the filing date of the first joint application, the sole application of appellee is entitled to that earliest filing date.

[4] It is argued by appellant that because appellee did not take testimony, his failure to do so indicates, in some way or another not set out, a lack of good faith. It is fundamental that neither party is compelled to take testimony in an interference proceeding, and it is just as fundamental that after the junior party has made his record in chief that if the senior party upon an examination thereof is of opinion that the record made by the junior party is not sufficient to establish priority, there is no compulsion upon the senior party to present any evidence whatever. He can properly rely upon his filing date.

With respect to the motion of appellant to dissolve the interference for the alleged reason that the appellee had not filed a proper oath, an examination of the oath discloses that appellee states that his present application is a division of the prior joint application, Serial No. 311,936, and that there was no publication, public use, or sale of his invention prior to his discovery or invention thereof for more than two years prior to the filing of said application, Serial No. 311,936. The contention of appellant is that appellee can not rely upon the filing date of the earliest filed joint application because it is not a division thereof. For the same reasons given with respect to our holding on appellant's motion to shift the burden of proof, we agree with the tribunals of the Patent Office that the motion to dissolve was properly denied.

It is agreed that with the exception of the limitation "in the form of an aerogel" each of the claims defines an old and long known principle used in cracking petroleum oil to produce a motor fuel possessing desirable anti-knock properties.

The broadest counts are 1 and 2, count 2 being more specific than count 1 in that it specifies the composition of the catalyst.

Count 3 is specific to the process of having a metal oxide catalyst intimately dispersed in the oil to be heated to a cracking temperature.

Count 4 is similar to count 3 with the addition that it contains the limitation that the catalyst after use and separation from the oil is regenerated and returned to the cracking treatment.

Counts 1 and 2 apparently include the cracking process of the other two counts, and also the method in which a fixed-bed form of catalyst is employed. Counts 3 and 4 do not include the use of the latter form of catalyst.

It appears that metal oxide catalysts, particularly those consisting of the oxide of silica, SiO_2, and the oxide of aluminum, Al_2O_3, have long been known in the art of cracking petroleum oil for the production of anti-knock motor fuel. Such material is found in nature as in fuller's earth, but similar catalysts were made in the form of synthetically prepared gels known to the art as "aquagels." The synthetic aquagels were known to be more effective as catalysts in the involved art than those occurring in nature.

The type of catalyst mentioned in the counts and known as "aerogel" is prepared in the same method as that employed in producing "aquagel," except for the manner in which liquid is removed from the gel as initially formed. In the synthesis it appears that synthetic silica and alumina in proper proportions for the desired product are mixed in aqueous solution. The mixture is then held at a low temperature until it sets as a gel. It is then washed with water to remove, as far as possible, impurities such as free sodium and chlorine ions. After washing, the gel contains a great quantity of water, and if the water is removed by evaporation, the gel shrinks to about one fifth its original volume so that the eventual calcined product, which is known as aquagel, will be relatively dense. If instead of evaporating the water, the gel is thoroughly washed with a volatile liquid, such as methyl alcohol or acetone, the water content is displaced by the more volatile liquid. The gel is then heated in a pressure vessel at such a high temperature that the volatile liquid is almost instantaneously converted into gas. When the gas passes off, a dry gel remains which has shrunk to only about 80 percent of the volume of the water filled gel, so that the final calcine product has a lower density and a higher degree of porosity than the aquagel. After having been dried and broken into pieces, the aerogel may be placed in a chamber forming a "catalyst bed" through which the petroleum to be cracked is passed at a cracking temperature, or the substance may be finely ground and mixed with the oil to be cracked in order to form a slurry which may then be passed through a heating zone in which the mixture is heated to the cracking temperature.

Appellant is a chemist employed by the Sinclair Refining Company, assignee of his involved patent. He had worked for the company for over ten years, starting as a research chemist, and during the time pertinent to his activities with respect to his work on aerogels, he occupied a supervisory capacity and had not actually done laboratory work. He, as well as several other employees of the company, testified, and there was offered in evidence several reports of experiments, data sheets, and correspondence pertaining to oil cracking with the use of metal oxide catalysts.

In his preliminary statement, appellant alleged conception of the invention defined by all of the counts as of February 15, 1939, and disclosure to others on the same date. He alleged reduction to practice of the process defined in counts 1, 2, and 3 as of March 1, 1939, together with a contemporaneous record of such reduction on the same date. With respect to count 4, appellant alleged that the invention defined therein was described in writing on November 29, 1939, and reduced to practice on May 22, 1940.

The Board of Interference Examiners properly held that appellant conceived the invention as defined in all of the counts by at least December 27, 1939. Therefore, it will not be necessary to discuss the record with respect to conception.

[5] It appears from the testimony of appellant that he conceived the idea of employing aerogels as cracking catalysts before March 1939, and that he instructed two chemists in the employ of the Sinclair Company to make such catalysts, which were said to have been prepared with an aerogel of 90 mol percent silica and 10 mol percent alumina. The work was said to have been started on February 8, 1939, and completed March 1 of that year.

In support of appellant's testimony concerning his tests and results thereof, in which the aerogels were used, reports and notebook pages of the two chemists were placed in evidence. The chemists making the reports were not called as witnesses, and there is nothing in the record to indicate that their

attendance had been sought. While the reports supported the testimony of appellant, they are not sufficient of themselves to prove the composition of the gels used in the tests nor the process of preparing the catalysts said to be used in the cracking runs discussed in the testimony.

Counsel for appellant has directed our attention to the testimony of a particular witness, which he states is sufficient to establish corroboration of appellant's testimony. The witness, who was the supervisor of the experimental cracking units for appellant's assignee, testified that the aerogel catalysts made by the two chemists were used in fixed-bed cracking tests, and several exhibits, said to be original data sheets recording details of runs, disclose that such runs started on March 1, March 2, and March 27, 1939, respectively. Those sheets and others containing distillation data for those runs were discussed by the witness. One run was said to have been made with a silica aerogel and another with an alumina silica aquagel for comparative purposes. While the witness testified that he had supervised the cracking runs and had inspected the work of the catalyst preparation in the laboratory, the catalyst preparation does not appear to have been under his supervision. His work apparently included the direction of getting the products of the runs to the laboratory for tests and following up to see that the tests were carried out and reported. The witness, while he had made some calculations for a report on the various runs and prepared a summary of the conditions of the runs and analyses of their products, stated that he had assistants at the time who did that kind of work. He did not testify that he had direct knowledge of the things from which calculations were made, nor did he testify that he had made all of the calculations. Therefore, part of those calculations may have been the work of others. His testimony together with other testimony was sufficient to corroborate evidence of conception, but was clearly not enough to corroborate appellant's testimony for reduction to practice.

The record of appellant has not sufficiently established the identity of the catalyst used in the runs which are shown in the written exhibits. As far as the testimony of the supervisor is concerned, it is general in character and did not give direct information concerning the catalyst.

We do not find in the record that there is adequate evidence to prove that the type of fuel called for by the counts was produced. The tests necessary to show such production were not adequately proved. While there are data sheets in evidence bearing the signatures of those who conducted the tests, they were not called to testify; and we are unable to hold that there is any reasonable and certain testimony to establish that the process in issue here was carried out. The data sheets of themselves, not having been properly proved as to the accuracy of their contents, can not be held to be evidence of such contents.

We do not deem it necessary to go into further detail with respect to the evidence. To do so would unduly lengthen this opinion. It suffices to say that there is not sufficient corroboration of the testimony of appellant to sustain his burden of proving actual reduction of the processes defined by the counts to practice.

[6] It is contended by appellant that the laboratory notebooks intended to support the testimony of appellant are admissible as evidence of performance of the acts recorded therein under the express provisions of the U. S. Code, title 28, sec. 695. In this connection, appellant cites in his brief the cases of *Landay* v. *United States*, 108 F.2d 698, and *Johnson et al.* v. *United States*, 89 F.2d 913. The same contention was made before the Board. In its decision, the Board observed it had not overlooked that even in criminal cases original entries made in the regular course of business in the books of corporations may be properly admitted when identified by the one who superintended the making of the entries. The Board then stated: "In the present case, however, observation of physical phenomena involving the acts and judgment of the observer are the matter reported upon and the only definite check on the accuracy of these observations would be the observations of another observer."

We are of opinion that the code provision cited by appellant was never intended to embrace such records as are here before us. While it may be true that in the research department of appellant's company it may be a matter of ordinary business to file such reports, nevertheless the contents thereof can not be considered legally sufficient even though they are routine with respect to their contents. We do not think that the facts or operations related in those reports can be properly held to prove themselves merely by identification by those who made the reports. That contention of appellant is frequently urged here. In connection therewith, we invite attention to our comments upon this matter appearing in the case of *Senkus* v. *Johnston*, 35 CCPA (Patents) 1008, 166 F.2d 597, 600, 77 USPQ 113, 611 O. G. 759.

It is our opinion that appellant has not established diligence since shortly before the critical date, December 30, 1939, until the date when he filed his application. Diligence must be affirmatively shown. *Hull* v. *Davenport*, 24 CCPA (Patents) 1194, 90 F.2d 103, 33 USPQ 506, 485 O. G. 13.

[7] There is no showing of activity on the part of appellant between February 27, 1940, and July 18, 1940. Furthermore, it is admitted by an attorney in the patent department of appellant's assignee, that appellant's application was laid aside from December 10, 1940, until March 15, 1941, in favor of another invention said to have been of greater importance. Appellant is chargeable with his attorney's lack of diligence, and the neglect of this application in favor of another is not consistent with the exercise of reasonable diligence. *Brown, Jr.* v. *Barton*, 26 CCPA (Patents) 889, 102 F.2d 193, 41 USPQ 99, 505 O. G. 5.

[8] In our opinion appellant has failed to establish actual reduction to practice as of a date prior to December 30, 1939, and has also failed to establish diligence between that date and the date of filing of his application, April 19, 1941.

We are convinced that no error was committed by the Board of Interference Examiners, and the decision appealed from is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,777,945, F. H. Untiedt, Process of treating rubber latex; 1,852,447, W. H. Chapman, et al., Method of producing rubber articles; 1,994,503, same, Composition of rubber-like material and method of making goods therefrom, filed Nov. 24, 1948, D. C., W. D. N. Y., Doc. 3924, *Dunlop Tire & Rubber Corp. et al.* v. *Marmax Associates, Inc.*

NOTICES

Errata

In the notice of publication under the Trade-Mark Act of 1946 of applications Serial Numbers 527,729, 528,005, and 528,029, appearing in the OFFICIAL GAZETTE of December 7, 1948, page 32, the words "Concurrent Use Mark" should be cancelled.

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 345,937, registered May 11, 1937, Class 19, by The Cleveland Welding Company, a corporation of Ohio, appearing in the OFFICIAL GAZETTE of July 6, 1948, page 94, was inadvertent and is vacated.

Adjudicated Patents

(D. C. N. Y.) Scheinman and Mandel patent, No. 2,012,857, for reinforced drawer construction, claims 12, 13, 15, 16, and 18 *Held* invalid. *Zalkind* v. *Scheinman*, 80 F. Supp. 299; 77 USPQ 349.

(D. C. N. Y.) Scheinman and Mandel patent, No. 2,110,556, for a reinforced collapsible file casing, claims 2, 3, and 5 to 10 *Held* invalid and not infringed. *Id.*

(D. C. N. Y.) Zalkind patent, No. 2,118,011, for a container, claims 1, 5 to 7, 10, 11, 15, and 16 *Held* invalid and not infringed. *Id.*

(D. C. N. Y.) Zalkind patent, No. 2,233,906, for a container and part therefor, claims 8 to 10 *Held* invalid and not infringed. *Id.*

(D. C. N. Y.) Zalkind patent, No. 2,245,026, for an interlocking for containers, claims 1 to 5 and 9 to 11, *Held* invalid and not infringed. *Id.*

(D. C. N. Y.) Scheinman patent, No. 2,277,155, for a stacking device for storage files, claims 11, 14, and 17 *Held* invalid and not infringed. *Id.*

Interference Notice

William Henry Dean, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Patent No. 2,438,777, granted March 30, 1948, to William Henry Dean, 18, Cleveland Ave., Darlington, County Durham, England, and the application for patent of Joseph J. Mohr, Route 1, Encinitas, Calif., and a notice of such declaration sent by registered mail to said Dean at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Dean, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

December 9, 1948.

Cancellation Notice

Les Parfums Marly, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Wolf Drug Company, 21 West Park St., Newark, N. J., to effect the cancellation of trademark registration of Les Parfums Marly, Inc., 610 Fifth Ave., New York, N. Y., No. 315,639, dated August 7, 1934. Regent Laboratories, Inc., New York, N. Y., has been joined as a respondent party to defend the right of registration evidenced thereby. The notice of this proceeding sent by registered mail to the said Les Parfums Marly, Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Les Parfums Marly, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

December 8, 1948.

Classification Order No. 37

October, 28, 1948

The following changes in the classification of inventions are hereby directed to take effect immediately:

IN THE MANUAL OF CLASSIFICATION:

ABOLISH SUBCLASSES

In *class 47, Plant Husbandry* (Division 1)

48 **Subsoil irrigators and weed killers**
49 Tools

In *class 170, Motors, Fluid Current* (Division 9)

Impellers
135.5 With motor and/or drive mechanism
135.6 Adjustable impeller
Screw
Projected blades
160 Adjustable
161 Flexible
162 Radially pivoted
163 Distance controlled
164 Transversely pivoted

In *class 192, Clutches and Power-Stop Control* (Division 12)

.01 **Motor control and clutch**
.02 Electric motor

In *class 244, Aeronautics* (Division 22)

Aircraft heavier than air
17 Helicopter sustained
18 Auto rotating wing sustained

CHANGE SUBCLASS TITLES

In *class 42, Firearms* (Division 22) change the title of subclass 69 to read:

69 **Locks, i. e., firing mechanism**

In *class 134, Cleaning and Liquid Contact with Solids* (Division 27) change the title of subclass 36 to read:

Processes
With treating fluid motion
36 Plural separately fed and either simultaneously applied or admixed treating fluids

ESTABLISH SUBCLASSES

In *class 47, Plant Husbandry* (Division 1)

RICHARD A. WAHL, *Classifier*

48.5 **Plant irrigators and/or fertilizers**

In *class 74, Machine Elements and Mechanisms* (Division 12)

T. W. SHEAR, *Classifier*

Gyroscopes
5.1 With caging or parking means
5.12 Rotor spin and cage release type
5.14 And resetting means
5.2 With gimbal lock-preventing means
5.22 Combined
5.34 Multiple gyroscopes
5.37 With rotor drives
5.4 Gyroscope control
5.41 Erecting
5.42 By plural diverse forces
5.43 By jet
5.44 By weight
5.45 By friction
5.46 By magnetic field
5.47 By motor torque
5.5 Damping
5.6 With pickoff
5.7 With rotor drive
5.8 Vertical gyroscopes
5.9 Horizontal gyroscopes

In *class 111, Planting* (Division 1)

RICHARD A. WAHL, *Classifier*

Liquid or gas
7.1 Hand manipulated (to follow subclass 7)
7.2 Implement carried supply
7.3 Work operated valve
7.4 Non gravity fluid feed

In *class 170, Motors, Fluid Current* (Division 9)

CHARLES F. GAREAU, *Classifier*

1.5 **Magnus rotor, i. e., lateral thrust resulting from rotary skin friction**

Impellers
135.2 Plural having relative movement and/or different axes
135.21 Intermounted
135.22 Divergent axes
135.23 Auto-rotating impeller type
135.24 Differential and/or independent adjustment
135.25 Coaxial
135.26 Tiltable and/or cyclically adjustable
135.27 Concurrent impeller adjustment
135.28 Oppositely rotating
135.29 Automatic, e. g., synchronizing
135.4 With fluid intake or discharge means on impeller, e. g., jet motor drives and boundary layer excitation
135.7 With drive motor or drive mechanism
135.71 Motor exhaust supplied to jet reaction device
135.72 Blade adjustment responsive to motor or drive condition
135.73 Controls of both drive mechanism and impeller
135.74 Interrelated motor control and blade adjusting control
135.75 Clutch, brake or gearing
Screw
Projected blades
160.1 Adjustable
160.11 Diameter
160.12 Foldable
160.13 Automatic control
160.14 By two or more conditions
160.15 Translational speed responsive
160.16 Rotational speed responsive
160.17 Reference speed control
160.18 Power derived from impeller shaft
160.19 Motor actuated adjustment
160.2 Motor carried by impeller, hub and/or shaft
160.21 Speed responsive means also carried by impeller hub and/or shaft
160.22 With indicator
160.23 Combined
160.24 With positive impeller positioning means
160.25 Cyclic
160.26 Tiltable support
160.27 Tiltable support
160.28 Power derived from impeller drive
160.29 By brake actuation
160.3 Motor bodily rotatable with impeller, hub and/or drive shaft
160.31 Fluid motor
160.32 Coaxial with drive shaft
160.33 Blade mounted or housed
160.34 Power or manual actuator on non-rotatable part
160.35 Planetary gearing connecting rotatable and non-rotatable parts
160.36 Axially movable impeller or impeller hub
160.37 With motor
160.38 With lock means
160.39 Dual connection to impeller
160.4 Front push rod
160.41 Coaxial screw
160.42 Adjustment rod through entire drive shaft
160.43 Reciprocating sleeve, collar, or rod on or in the impeller drive shaft
160.44 With rotary means
160.45 Geared connection to impeller
160.46 Link connection to impeller blade
160.47 Pin-slot, cam-slot or cam connection to impeller blade
160.48 Rotary sleeve, collar or rod on or in impeller drive shaft
160.49 Axially displaceable hub or blade carrier
160.5 Flexible impeller blade material
160.51 Resiliently biased impeller
160.52 Transverse pivot
160.53 Connection of impeller blade to hub
160.54 Connection of impeller hub to shaft
160.55 Impeller movement damping or flap limiting means
160.56 Plural articulation
160.57 Articulation axis inclined to impeller blade axis
160.58 Impeller blade connection
160.59 Spring biased detent
160.6 Impeller releasably clamped in supporting means
160.61 Split impeller hub
160.62 Thimble or sleeve fixed on impeller blade

In *class 192, Clutches and Power-Stop Control* (Division 12)

DON A. WAITE, *Classifier*

Interrelated power delivery controls (Having motor and clutch controls)
.02 Electric motor control and clutch
.03 Automatic control
.032 By speed and/or torque
.033 By speed only
.034 By torque only
.04 Motor, clutch and gearing controls operate other control
.042 Motor, clutch and brake controls operate other control
.044 Motor, gearing and brake controls operate clutch control
.046 Clutch, gearing and brake controls operate motor control
.048 Motor and clutch controls operate other control
.049 Other control is brake control
.052 Motor and gearing controls operate clutch control
.055 Motor and brake controls operate clutch control
.058 Clutch and brake controls operate motor control
.062 Clutch and gearing controls operate motor control
.07 Motor control operates clutch control
.072 And brake control
.073 And gearing control
.075 With regulated clutch engagement
.076 Speed responsive
.077 Inertia responsive
.08 Gearing control operates clutch and motor controls
.082 Brake control operates clutch and motor controls
.084 Clutch control operates motor control
.09 Of motor, clutch, gearing and brake controls
.092 Of motor, clutch and gearing controls
.094 Of motor, clutch and brake controls
.096 Of motor and clutch controls
.098 Multiple motor and/or multiple clutch

In *class 244, Aeronautics* (Division 22)

CHARLES F. GAREAU, *Classifier*

Aircraft heavier than air

17.11	Helicopter or auto-rotating wing sustained, i. e., gyroplanes (to follow subclass 16)
17.13	Automatic or condition responsive control
17.15	With safety lowering device
17.17	With landing, mooring, or non-aerial propelling or steering gear
17.19	With auxiliary propulsion, counter-torque or steering device
17.21	Auxiliary rotor
17.23	Having plural lifting rotors
17.25	Lifting rotor having lift direction varying means
17.27	Lifting rotor supports, e. g., pylons

In *class 280, Land Vehicles* (Division 47)

P. ARNOLD, *Classifier*

Articulated

33.02	Collapsible to superposed relation

MISCELLANEOUS CHANGES

On page 37–1, in subclass 103, change "shove" to *shovel*.

On page 121–1, in subclass 77, change "actuatted" *actuated*.

On page 139–2, subclass 368 should be moved one step to the left to be coordinate with subclass 360.

On page 293–1, subclass 95 should be moved one step to the left to be coordinate with subclass 91.

IN THE DEFINITIONS

30, Cutlery

in the class definition, under "Notes" in (17) add the following paragraph:

> Where a base or work support has means for locating and/or guiding a hand manipulable instrument, the combination has been construed to be a machine. If it is not the type of machine classified in this class (30) (see paragraph 2 of this class definition) it will be found in the appropriate machine class.

and under (37) cancel "and", first occurrence, and add before the period: *and subclass 20*

and cancel (52),

at the end of the class definition, add the following:

Miscellaneous notes and index to all notes to the class definition:

Search Class—

7—COMPOUND TOOLS, see notes 1 and 10.
10—BOLT, NAIL, NUT, RIVET, AND SCREW MAKING, see note 7.

294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, see note 14.
300—BRUSH, BROOM, AND MOP MAKING, see note 3.
D22—CUTLERY, see note 64.
D54—METAL WORKING, see note 64.

33, Geometrical Instruments

in subclass 226, under "Search classes" in the reference to class 74, change "5" to: *5+*.

35, Education

in the class definition, add:

(10) Note.—For signals and indicators, which may be used for educational purposes, search Class 116, SIGNALS AND INDICATORS. Note especially subclass 130+ for hand set indicators which indicate some fact or information.

40, Card, Picture, and Sign Exhibiting

in subclass 54, under "Search Class" in the reference to class 192, change ".01+" to: *.02 to .098*.

46, Amusement Devices, Toys

in subclass 75, cancel Notes "(1)" and "(2)" and add:

Search Class—

170—MOTORS, FLUID CURRENT, subclass 160.1+, particularly 160.25+ and 160.27 for helicopter or "Autogiro" rotors per se.
244—AERONAUTICS, subclass 17.11+, for helicopters or "Autogiros", i. e., gyroplanes.

47, Plant Husbandry

abolish the definition and notes to subclass 48,

establish the following subclass definition:

48.5. Apparatus and devices of container or cartridge form usually inserted or buried permanently in the ground near growing plants and adapted to contain water or other material to encourage the growth of plants.

(1) Note.—The water or other material usually may be discharged into the soil by means of some special feature of the device, such as perforations in the container.

Search this class, subclass—

1—for installed irrigating systems having means to supply fertilizer to the irrigating water.
58—for processes of irrigating or enriching the soil.

Search Class—

61—HYDRAULIC AND EARTH ENGINEERING, subclass 12+, for installed irrigation devices or systems functioning to conduct the flow of water in channels.
111—PLANTING, subclass 6+, for implements and machines having earth working means and means for directing liquid, gas or vapor into contact with or beneath the surface of the soil.

abolish the definition and note to subclass 49,

in subclass 57.5, cancel "(2) Note" and substitute:

(2) Note.—See this class, subclass 48.5, for devices designed to be buried in the soil for applying water, fertilizer, or the like.

and add the following note:

(5) Note.—See class 111, subclass 6+, for devices for impregnating the soil with liquid or gas, the devices having earthworking means.

59, Chain, Staple, and Horseshoe Making

in subclass 95, under "Search Classes" add:

287—ROD JOINTS OR COUPLINGS, subclass 91, for swiveled rod couplings.

60, Power Plants

in subclass 35.5, under "Search Class" in the reference to class 170, change "135.5+" to: *135.71*.

61, Hydraulic and Earth Engineering

in subclass 12, cancel the note and add:

Search Class—

47—PLANT HUSBANDRY, subclass 1, for installed irrigating systems having means to supply fertilizer to the irrigating water; subclass 48.5, for devices or apparatus of container or cartridge form to be inserted or buried in the ground, adapted to contain water or the like, which may be applied to or allowed to diffuse into the soil through some special feature of the device, such as perforations in the container; and subclass 58, for processes of enriching or otherwise treating the soil.
111—PLANTING, subclass 6+, for implements or machines having earthworking means and means for directing liquid, gas, or vapor into contact with or beneath the surface of the soil.
138—PIPES AND TUBULAR CONDUITS, for pipes or tubes of general application.

71, Chemistry, Fertilizers

in subclass 64, under "(1) Note," after "plant husbandry" (second occurrence), insert:

, and fertilizing cartridges adapted to be buried in the earth.

73, Measuring and Testing

in the class definition in "(4) Note" under "Search Class" in the reference to class 74, change "5" to: *5+* and in "(5) Note", insert in numerical order:

200—ELECTRICITY, CIRCUIT MAKERS AND BREAKERS, for the combination of a measuring instrument and a circuit controller when specific structure of the circuit controller is claimed. Class 73 takes the combination of a class 73 measuring instrument and a circuit controller when the circuit controller is claimed broadly. In connection with class 200, the definitions of the subclasses of class 73 which provide for measuring instruments combined with other structure are modified by this note.

74, Machine Elements and Mechanisms

cancel the definition and notes to subclass 5 and substitute:

5. This is the generic locus for gyroscopes.

(1) Note.—A conventional gyroscope is a mechanism comprising a rotor journaled to spin about one axis, the journals of the rotor being mounted in an inner gimbal or ring, the inner gimbal being journaled for oscillation in an outer gimbal which in turn is journaled for oscillation relative to a support. The outer gimbal or ring is mounted so as to pivot about an axis in its own plane determined by the support. Hence the outer gimbal possesses one degree of rotational freedom and its axis possesses none. The inner gimbal is mounted in the outer gimbal so as to pivot about an axis in its own plane which axis is always normal to the pivotal axis of the outer gimbal. Hence the inner gimbal possesses two degrees of rotational freedom and its axis possesses one. The rotor is journaled to spin about an axis which is always normal to the axis of the inner gimbal. Hence the rotor possesses three degrees of rotational freedom and its axis possesses two. The center of gravity of the rotor is thus in a fixed position. The rotor simultaneously spins about one axis and is capable of oscillating about the two other axes, and thus except for its inherent resistance due to rotor spin, it is free to turn in any direction about the fixed point.

Some gyroscopes have mechanical equivalents substituted for one or more of the elements, e. g., the spinning rotor may be suspended in a fluid, instead of being pivotally mounted in gimbals. In some special cases, the outer gimbal (or its equivalent) may be omitted so that the rotor has only two degrees of freedom. In other cases, the center of gravity of the rotor may be offset from the axis of oscillation, and thus the center of gravity of the rotor and the center of suspension of the rotor may not coincide.

(2) Note.—Every rotating body has gyroscopic action, but such devices are not placed here unless at least one axis of oscillation is present.

(3) Note.—For combinations of gyroscopes with other devices see indented subclass 5.22 and the notes thereto appended.

Search this class, subclass—

5.22—and the notes thereto and see (2) Note, supra.
572+—for rotors per se.

Search Class—

46—AMUSEMENT DEVICES, TOYS, subclass 50, for gyroscopic toys, including gyroscopic tops.
248—SUPPORTS, subclass 182 for gimbals, per se.

establish the following subclass definitions:

5.1. Gyroscopes under subclass 5 combined with mechanism to hold the rotor axis fixed, when the rotor is not spinning, or if spinning, when it is desired to take the gyroscope out of useful operation.

(1) Note.—The rotor axis may be positively held with respect to the gyroscope support, or it may be heavily weighted to hold the rotor axis fixed with respect to the earth.

Search this class, subclass—

5.44—where the force of gravitation, acting upon a weight, and reacting against the rotor axis erects an operative gyroscope.

5.12. Devices under subclass 5.1 having a mechanism to impart spin to a rotor and a further means to release the holding means after the rotor is up to speed.

Search this class, subclass—

5.7—for rotor drives.

5.14. Devices under subclass 5.1 wherein further means is provided to adjust or vary the position held. This may be done by having the means which holds the rotor axis adjustable to vary the position held, or by having the first means restrain movement in one plane and a second means to position the rotor axis in that plane.

5.2. Gyroscopes under subclass 5 wherein means is provided to prevent alignment of the rotor axis with a gimbal axis.

5.22. Gyroscopes under subclass 5 combined with structure other than the gyroscope, except means to control and/or drive the mechanism.

(1) Note.—The large majority of patents found here are of the stabilizing type and recite the device stabilized by name only. Where structure of the device over and above that necessary to mount the device is claimed, or where a particular relationship to the device is claimed, the patents have been classified with the device.

Search this class, subclass—

5.4+—for gyroscope control.
5.37—for drives for plural gyroscopes.
5.7—for drives for single gyroscopes.
64—for inertia or centrifugally controlled rotary transmitters.
259—for gyroscopically controlled planetary gearing.

Search Class—
33—GEOMETRICAL INSTRUMENTS, subclass 49, for gyroscopic control devices in conjunction with gun sight mechanism; subclass 204, for gyroscopic controlled direction indicators; and subclass 226, for gyroscopic controlled compasses.
46—AMUSEMENT DEVICES, TOYS, subclass 50, for gyroscopic toys, and subclass 208, for inertia operated driving means for wheeled toys.
95—PHOTOGRAPHY, subclass 12.5, for gyroscopically controlled aerial cameras.
105—RAILWAY ROLLING STOCK, subclass 141+, for monorail type railway rolling stock combined with gyroscopes and subclass 150+, for suspended monorail type rolling stock combined with gyroscopes.
114—SHIPS, subclasses 21 and 24, for gyroscopically controlled torpedo steering mechanism; subclass 122, for gyroscopic anti-rolling stabilizers combined with ships; and subclass 144, for gyroscopic controlled steering.
180—MOTOR VEHICLES, subclass 1, for motor vehicles combined with gyroscopes.
244—AERONAUTICS, subclass 79, for gyroscope actuated automatic aircraft control.
264—SPEED-RESPONSIVE DEVICES, appropriate subclasses, for gyroscopes combined with speed responsive device, and particularly subclass 1 for rate of change of speed (i. e., acceleration) devices.

5.34 Gyroscopes under subclass 5 comprising two or more gyroscopes.

5.37. Devices under subclass 5.34 having means for driving the gyroscopes.

Search this class, subclass—
5.7—for drives for single gyroscopes.

5.4 Gyroscopes under subclass 5 having means to apply one or more forces to the rotor axis to control the movement of the rotor axis about its center of suspension.

5.41. Devices under subclass 5.4 wherein one or more forces act to move the rotor axis to a given position, usually to a vertical position.

(1) Note.—Where the force of the surrounding atmosphere against a plurality of vanes is used for erection, the patent will be found in this subclass.

5.42. Devices under subclass 5.41 where at least two diverse forces are used for erection.

(1) Note.—Pendulous gyroscopes having an additional means to erect them are here when both means are claimed, and cross-referenced to the subclasses indented hereunder for the separate means.

5.43. Devices under subclass 5.41 wherein the force of a fluid jet is used for erection.

5.44. Devices under subclass 5.41 wherein the gravitational force upon a weight is utilized for erection.

(1) Note.—Pendulous gyroscopes with no other erecting controls are here.

Search this class, subclass—
5.1—for weight actuated parking or caging devices.
5.42—for pendulous gyroscopes having an additional force utilized for erection.

5.45. Devices under subclass 5.41 wherein the application of a frictional force is utilized for erection.

(1) Note.—Where the force of the surrounding atmosphere against a plurality of vanes is used for erection, the patents will be found in subclass 5.41.

5.46. Devices under subclass 5.41 wherein the force of a magnetic field is utilized for erection.

5.47. Devices under subclass 5.41 where the torque of a prime mover constitutes the force used for erection.

5.5. Devices under subclass 5.4 having means to dampen the oscillation of the gimbals, or of the rotor axis.

5.6. Gyroscopes under subclass 5 having a means to sense the relative position or change of position of the rotor axis, and/or its gimbals.

(1) Note.—The sensing means normally actuates or controls a signal, indicator or a control for another device.

5.7. Gyroscopes under subclass 5 having means to drive the rotor.

Search this class, subclass—
5.12—for rotor spin mechanism combined with cage release mechanisms.

5.8 Gyroscopes under subclass 5 peculiarly constructed for operating with the spin axis in a vertical position only.

5.9 Gyroscopes under subclass 5 peculiarly constructed for operating with the spin axis in a horizontal position only.

in subclass 189, add:

(4) Note.—This subclass includes gearing combined with a propeller or with plural propellers which are recited merely as a load.

Search Class—
170—MOTORS, FLUID CURRENT, subclasses 135.2+, for gearing combined significantly with plural impellers which have relative movement and/or different axes, and 135.75, for gearing combined with single impellers or plural impellers having no relative movement and/or different axes.

in subclass 472, in the note, change ".01" to: *.02 to .098.*

82, Turning

in subclass 31, add:

Search this class, subclass—
33—for centers to be secured in the tail stock to rotatably support the work.

110, Furnaces

in subclass 18, add:

Search Class—
126—STOVES AND FURNACES, subclass 224, for trash burners structurally related to cooking or heating stoves.

111, Planting

in subclass 6, cancel the definition and notes and substitute:

6. Apparatus and devices under the class definition for directing liquid, gas, or vapor into contact with or beneath the top surface of the soil.

Search this class, subclass—
2+—for implements having means to hold or guide plants into the ground.

Search Class—
47—PLANT HUSBANDRY, subclass 48.5, for soil treating devices of cartridge or container form to be buried in and to remain in the ground, usually discharging their irrigating or fertilizing contents over a period of time; and subclass 58, for all methods of enriching or treating the soil with liquid or gas.
61—HYDRAULIC AND EARTH ENGINEERING, subclass 12+, for irrigating systems involving the conduction of liquids in channels or the like.

in subclass 7, cancel the definition and note and substitute:

7. Instruments or machines under subclass 6 having furrow opening means.

establish the following subclass definitions:

7.1. Devices under subclass 6 where the earth working means are hand operated.

7.2. Devices under subclass 7.1 having material supply means integral with the implement or directly supported by and carried with the implement.

7.3. Devices under subclass 7.2 having a fluid control valve operated solely by contact of the implement with the ground.

7.4. Devices under subclass 7.2 wherein the fluid is ejected by means of a force pump or other discharge assistant.

in subclass 99, cancel "(2) Note", and substitute:

(2) Note.—For tools for forming similar cavities in the earth and introducing liquid, vapor, or gas into contact with or beneath the surface of the soil, see this class, subclass 6+.

114, Ships

in subclass 24, under "Search Class" change "5" to: *5+.*

115, Marine Propulsion

in subclass 35, in the note, change "160" to: *160.1.*

116, Signals and Indicators

in subclass 34, under "Search Class" add in numerical order:

73—MEASURING AND TESTING, subclass 390, for fluid pressure gauges combined with a vehicle tire or valve installation.

in subclass 130, under "Search Class" insert:

35—EDUCATION, for hand set indicators which serve an educational purpose.

126, Stoves and Furnaces

in subclass 224, under "(2) Search Class" cancel the period and add:

and subclass 18, for trash burners not structurally related to cooking or heating stoves.

134, Cleaning and Liquid Contact with Solids

in the class definition, under "Notes" under "(5) Index to preceding notes and . . ." in the reference to class 47, cancel "and 48+, involving irrigating and weed killing", and substitute: *and 48.5, for plant irrigators.* and insert:

111—PLANTING, subclass 6+, for devices having earth working implements and adapted to deliver liquid or gas for contact with the soil.

139, Textiles, Weaving

cancel the definition of subclass 368 and substitute:
368. Limited to the structure of the detector per se.

146, Vegetable and Meat Cutters and Comminutors

in subclass 2, cancel Notes "(1)" and "(2)", and substitute:

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 3.10+, for egg washers.
65—KITCHEN AND TABLE ARTICLES, appropriate subclasses, for egg cutters in combination with and attached to a table cup.

160, Closures, Partitions and Panels, Flexible and Portable

in subclass 383 in "(5) Note" cancel the reference to class 234, and substitute:

346—RECORDERS, appropriate subclasses.

170, Motors, Fluid Current

in the class definition, fourth paragraph, first sentence, cancel "move themselves therethrough" and substitute: *produce a reactive force on themselves*
cancel the third and fourth sentences,
in the sixth paragraph, after "per se" insert: *or with its drive means*
establish the following subclass definition:

1.5. Fluid current motors or impellers under the class definition, which utilize the unbalanced or asymmetrical distribution of fluid pressures about the circumference of a cylindrical rotary body that result from a layer of fluid which is more or less adherent to the surface of the rotor, moving at one side of the rotor in a direction contrary to that of the fluid current and at the opposite side of the rotor in the same direction as the fluid current.

Search Class—
244—AERONAUTICS, subclasses 10 and 21, for cylindrical rotor sustaining means combined with aircraft.

in subclass 135, first sentence, cancel "move themselves therethrough" and substitute: *produce a reactive force on themselves*
cancel the second sentence,
insert in numerical order:

(1.5) Note.—The impellers of this subclass and indented subclasses may be provided with a driving means or motor or the impeller may be adjusted in some manner. In either case, sufficient structure of the device or vehicle upon which the impeller or the impeller and motor are mounted may be included to provide a mounting for the impeller. Any additional recitation of structure of the device or vehicle will require classification in the proper vehicle class. See class 244, AERONAUTICS, subclass 17.40, (3) Note, for a statement of the line.

(1.75) Note.—In those instances where the impeller is recited in combination with a driving means or a motor, this subclass and indented subclasses require that a significant recitation of the impeller be made. Accordingly, a recitation of plural impellers or an adjustable impeller combined with a motor is such a significant recitation as would require placement in this or indented subclass. However, a recitation of an impeller by name only and a motor in such a manner that the impeller is set forth merely as a load is classified in the appropriate motor class.

and under "(2) Search Classes" add in numerical order:

123—INTERNAL-COMBUSTION ENGINES, see (1.75) Note above.
198—CONVEYORS, POWER DRIVEN, subclass 213+, for screw impellers for conveyors.

abolish the definitions of subclasses 135.5 and 135.6,

establish the following subclass definitions:

135.2. Impellers under subclass 135 which comprise two or more fluid current impelling devices which are movable relative to each other and/or which rotate about different axes.

(1) Note.—Movement of one impeller relative to another may consist in (1) relative rotation, i. e., rotation in opposite direction, in the same direction at variable speeds, or positive drive of one and free rotation or non-rotation of another, (2) relative pitch adjustment, or (3) moving one impeller closer to or away from another impeller by means other than mere adjustment of securing means for the impellers.

(2) Note.—The structural association of the two or more impellers frequently consists of the mounting of one impeller upon or closely adjacent another impeller without requiring the interposition of a common stationary support, such as a vehicle frame. See subclasses 135.21 and 135.25 for such devices.

(3) Note.—For combinations of two or more impellers with significant vehicle structure, see the appropriate vehicle classes. The vehicle is considered as significantly claimed when more structure than is necessary to mount the impeller and its drive mechanism is claimed.

(4) Note.—Synchronizing means for a plurality of motors driving individual impellers are in class 172, ELECTRICITY-MOTIVE POWER, subclass 293, if the motors are electrical, and in class 60, POWER PLANTS, subclasses 6+ and 97+, if the motors are non-electrical.

Search this class, subclass—
3, 13, 36+ and **57**—for windmills having two or more windwheels.
83, 87, 105, 115 and **129**—for water motors having two or more water wheels.
165—for plural impellers which are axially spaced on the same shaft and which are not relatively movable.
166—for plural impellers which are radially spaced and which are not relatively movable.

Search Class—
60—POWER PLANTS, subclass 97, for synchronizing of plural motors, and see (4) Note above.
74—MACHINE ELEMENTS AND MECHANISMS, subclass 189+, for gearing with impellers recited by name only, and subclass 389+, for gear mechanisms for driving a plurality of propellers from a single driving means. See (4) Note above.
115—MARINE PROPULSION, subclass 37+, for ships having multiple screw propellers.
172—ELECTRICITY-MOTIVE POWER, subclass 293 for synchronizing of plural electric motors and see (4) Note above.
244—AERONAUTICS, subclass 17.23, for plural gyroplane rotors combined with significant vehicle structure; subclass 55, for the arrangement of two or more power plants on an aircraft where more structure than that necessary to mount the power plants is claimed; and subclass 65, for two or more impellers mounted on an aircraft where more structure than that necessary to mount the impellers is claimed.

135.21. Impellers under subclass 135.2 in which one impeller is mounted on another.

Search this class, subclass—
135.4—for a jet reaction motor mounted on an impeller.

135.22. Impellers under subclass 135.2 in which the impellers rotate about axes which are angular to each other, i. e., diverge from each other.

(1) Note.—This subclass includes impellers with divergent axes which are differentially or independently adjusted for steering purposes, such as an adjustable propulsive or anti-torque impeller combined with a lifting rotor.

Search this class, subclass—
135.24—for plural impellers whose axes are not divergent and which are differentially or independently adjusted.

Search Class—
244—AERONAUTICS, subclass 17.11, and particularly subclass 17.21, for plural impellers having divergent axes and combined with significant aircraft structure.

135.23. Impellers under subclass 135.22 in which the plural impellers comprise an impeller for forward propulsion and an auto-rotating wing or impeller.

(1) Note.—This subclass includes those devices which provide a clutch between the propulsive propeller and the auto-rotating impeller to cause a positive torque to be applied to the auto-rotating impeller during the take-off period.

Search this class, subclass—
135.75—for impellers, including auto-rotating impellers, combined with a clutch.

135.24. Impellers under subclass 135.2 in which one impeller is adjusted unequally and/or independently with respect to another to effect lateral control or other variation in thrust.

(1) Note.—This subclass includes impellers, whose relative adjustment is for the purpose of steering the vehicle.

Search this class, subclass—
135.22+—for plural impellers with divergent axes which are differentially adjustable.
135.27—for coaxial impellers which are concurrently adjustable.
135.29—for adjustment to effect synchronization.

135.25. Plural impellers under subclass 135.2 which rotate about a common axis.

(1) Note.—Coaxial impellers comprise impellers rotatable about a common axis including concentric impellers and those having a motor interposed between them.

Search Class—
244—AERONAUTICS, subclass 17.23, for plural lifting rotors combined with significant aircraft structure.

135.26. Impellers under subclass 135.25 which are tiltable as a unit about an axis and/or impellers in which the adjustment is cyclic or occurs periodically during each revolution of the impeller.

Search this class, subclass—
160.25—for a single impeller which is cyclically adjustable.
160.26—for a single impeller which may be tilted and cyclically adjusted.
160.27—for a single tiltable impeller.

135.27. Plural impellers under subclass 135.25 in which the blades or impelling surfaces of at least two of the impellers are arranged to be adjusted simultaneously.

Search this class, subclass—
135.24—for coaxial impellers with differential adjustment.
135.25—for oppositely rotating free blade impellers in which the adjustment caused by aerodynamic forces may or may not be simultaneous.

135.28. Plural impellers under subclass 135.25 in which the direction of rotation of one impeller is contrary to the direction of rotation of another impeller.

(1) Note.—This subclass includes two oppositely rotating impellers adjustable only by the dynamic blade forces thereon, e. g., free blade type.

Search this class, subclass—
135.24—for impellers having differential and/or independent adjustment.
135.27—for oppositely rotating impellers whose pitch is concurrently adjusted.

135.29. Impellers under subclass 135.2 in which means is provided for adjustment of the impellers automatically in response to a predetermined condition or conditions.

(1) Note.—This subclass includes the synchronizing of impellers in which the adjustment of one or more impellers is in response to the condition of another impeller (known as the master) or in response to a master control unit.

Search this class, subclass—
135.72—for a single impeller automatically adjusted by a motor or drive condition.
160.17—for a single impeller automatically adjusted by a reference speed device.

Search Class—
60—POWER PLANTS, subclass 97, for synchronizing of plural motors and see (4) Note in this class, subclass 135.2.
172—ELECTRICITY, MOTIVE POWER, subclass 293, for synchronizing plural electric motors and see (4) Note in this class, subclass 135.2.

135.4. Impellers under subclass 135 including means carried by and rotatable with the impeller for receiving fluid from or delivering fluid to the fluid medium adjacent the impeller.

(1) Note.—Impellers which are rotated by one or more jet reaction motors mounted for rotation with the impeller are here included.
(2) Note.—Impellers having means for modifying the aerodynamic action of the blades thereof by giving motion to the layer of fluid in contact with the blades by an intake or discharge of fluid adjacent the layer (i. e., boundary layer excitation) are here classified.

Search this class, subclass—
135.21—for intermounted impellers.

Search Class—
60—POWER PLANTS, subclass 35.5+, for jet reaction motors not significantly combined with an impeller.
244—AERONAUTICS, subclass 73, for aircraft propelled by a jet motor.

135.7. Impellers under subclass 135 combined with means for driving the impellers.

(1) Note.—This subclass and indented subclasses include the combination of a motor with plural impellers which have no relative movement and/or different axes.
(2) Note.—Gear mechanism for driving an impeller or plural impellers as set forth in (1) Note, even though the impeller and/or drive motor is included by name without significant details thereof, is classified in class 74, MACHINE ELEMENTS AND MECHANISMS, subclass 189+.
(3) Note.—Combinations of impellers with drive motors where the impeller is claimed broadly as a load for the motor are classified with the motor. Such features as tiltable axes, pitch control or a mere plurality of impellers are regarded as significant impeller structure and will cause classification in class 170, even though a specific motor is claimed.

Search this class, subclass—
160.1+—for adjustable impellers per se.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, appropriate subclasses, and see (1) Note above.
115—MARINE PROPULSION, appropriate subclasses, but particularly subclass 34+, for screw propeller drive mechanisms in which the ship or vessel propelled thereby is significantly combined therewith; and subclass 17+, for motor propeller combinations adapted to be readily detached as a unit from the ship or vessel and commonly known as "outboard motors".
123—INTERNAL-COMBUSTION ENGINES, subclass 171, and see (3) Note above.
230—GAS PUMPS AND FANS, subclass 258+, for combinations of fans driven by motors.
244—AERONAUTICS, subclasses 60 and 62+, for propeller drive mechanisms in which the aircraft propeller thereby is significantly combined therewith.
290—PRIME-MOVER DYNAMO PLANTS, appropriate subclass, for electric motor devices with impellers recited by name only and combined with a prime mover or prime mover control. See (3) Note above.
318—ELECTRICITY, MOTIVE POWER SYSTEMS, appropriate subclass, for electric motor devices combined with impellers recited by drive and its control, which control includes generator control. See subclass 105+ for plural electric motors having plural sources of supply, such as electric generators. See (3) Note above.

135.71. Impellers under subclass 135.7 in which the drive mechanism is a motor which exhausts a fluid into a jet reaction motor.

(1) Note.—The motor usually is an internal combustion engine or turbine.
(2) Note.—The motor may be mounted in the jet blast or nozzle.

Search Class—
60—POWER PLANTS, subclass 35.5+, for jet reaction motors, and see (3) Note, subclass 135.7.

135.72. Impellers under subclass 135.7 in which the blades of the impeller are adjustable by mechanism positioned in accordance with an operational characteristic of the motor which drives the impeller.

(1) Note.—This subclass includes impellers which are adjustable by means responsive to motor torque. See this class, subclass 160.1+, for impellers in which the engine torque is one of the dynamic forces acting upon the impeller itself when rotating.

Search this class, subclass—
135.73+—for impellers in which the blades are adjustable simultaneously with the adjustment of a control for the drive mechanism.
160.13—for impellers adjustable by a theremostat which is not significantly related to the motor driving the impeller.

135.73. Impellers under subclass 135.7 in which the adjustment of the impeller is caused to be made concurrently or in conformity with an adjustment of the mechanism which drives the impeller.

Search this class, subclass—
135.75—for control of the drive mechanism such as a clutch or gearing without concurrent control of impeller.
160.1+—for adjustment of the impeller per se.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclass 471+, for lever and linkage systems in which a plurality of devices are actuated from a single control element.

135.74. Impellers under subclass 135.73 in which the adjustment for the mechanism driving the impeller comprises a control of the driving motor.

(1) Note.—The driving motor is frequently an internal combustion engine and the control is a throttle valve or other means to modify the fuel supply to the engine.

Search Class—
123—INTERNAL-COMBUSTION ENGINES, subclass 97+, for speed regulators for internal combustion engines, and subclass 119, for devices which modify the supercharging of the engine.

192—CLUTCHES AND POWER-STOP CONTROL, subclass .01+, and 1+, for devices for concurrent control of a motor and either a clutch or brake.

135.75. Impellers under subclass 135.7 in which the impeller is significantly combined with one or more of the following: (1) a clutch which automatically or at will frees the impeller of all or a portion of its driving connection with a prime mover or other driving means, (2) a brake which retards or stops rotary motion of the impeller, or (3) gear mechanism for driving the impeller in which the gear mechanism transmits the rotary motion of one shaft to another shaft by rolling contacts.

Search this class, subclass—
135.73—for an interrelated control for the impeller and drive mechanism.
160.1+—for adjustable impellers per se.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclass 189+, for gearing per se and for the combination of gearing with an impeller which is recited by name only.
188—BRAKES, appropriate subclasses, for the brake per se.
192—CLUTCHES AND POWER-STOP CONTROL, subclass 30+, for clutches per se.

abolish the definitions of subclasses 160, 161, 162, 163, and 164,

establish the following subclass definitions:

160.1. Impellers under subclass 159 which are adjustable.

(1) Note.—The term impeller connotes the entire assembly or the fluid reaction elements or blades. An adjustable impeller, within the meaning of this subclass and indented subclasses, is one which is movable in whole or in part in any manner. For example, the diameter, pitch or chord length may be varied. Further, the impeller may be movable in its plane of rotation or it may be slidable along or tilted with respect to the drive shaft. The various types of adjustable impellers are defined in the subsequent subclasses.
(2) Note.—Since an impeller is ordinarily associated with a vehicle, such as an aircraft or ship, the recitation of the impeller and the vehicle will not exclude the patent from this or indented subclasses provided that no more vehicle structure is claimed than is necessary to mount the impeller and its control means. However, a recitation of significant vehicle structure requires placement in the appropriate vehicle class.

Search this class, subclass—
135.2+—for plural impellers which are relatively movable and/or have different axes.
135.7+—for adjustable impellers combined with a motor or drive mechanism.

Search Class—
98—VENTILATION, appropriate subclasses, for impellers for ventilators.
103—PUMPS, subclass 11+, for pumps with adjurtable blades.
198—CONVEYORS, POWER DRIVEN, subclass 213, for screw conveyors.
230—GAS PUMPS AND FANS, subclass 114, for compressors having adjustable impellers.
253—MOTORS, FLUID, appropriate subclass, for adjustable impellers for turbines.

160.11. Impellers under subclass 160.1 in which the blades are adjusted, either automatically or by a manual or motor means, to change the diameter of the disklike area swept by the blade.

160.12. Impellers under subclass 160.1 which are collapsible or foldable when not used as an impelling device.

(1) Note.—The devices in this subclass may relate to gyroplane, e. g., "Autogiro" or helicopter, rotors which are foldable adjacent to the fuselage, usually when the machine is also usable as a road vehicle.

Search Class—
244—AERONAUTICS, subclass 2, for vehicles convertible from an aircraft to a land or water vehicle in which the flight mechanism is disabled during travel on land or water, and subclass 17.11 for collapsible impellers combined significantly with the aircraft.

160.13. Devices under subclass 160.1 which are actuated or controlled by a condition responsive means.

(1) Note.—The condition responsive means in this and indented subclasses relates to separate and distinct blade actuating or controlling means and does not refer to those blades positioned by dynamic blade forces of the blade itself, i. e., free blade.

Search this class, subclass—
19, 20+, 31+; 58, 59+, and **75**—for windmills with adjustable blades.
91+, 117, 118, and **123**—for water motors with adjustable blades.
135.72—for adjustable impellers combined with a motor and responsive to motor conditions, such as motor temperature.
160.24+—for non-automatic adjustments of the impeller.
160.1 and **160.49–160.57**, inclusive—for blades positioned by dynamic blade forces due to particular axis distribution, blade weight distribution or additional weights or other devices attached to the blade and which form an integral part and are movable therewith during the adjustment period.

160.14. Devices under subclass 160.13 in which the impeller adjustment is actuated or controlled by (1) a plurality of condition responsive means, or (2) a condition responsive means which modifies or controls another condition responsive means.

(1) Note.—A mere manual control in parallel relationship to a condition responsive means or a manual modifying means to a condition responsive means is not considered as itself being a condition responsive means, and such devices are classified on the basis of the automatic control by a single condition.

160.15. Devices under subclass 160.13 which are responsive to a condition proportional to the translational speed of the impeller.

(1) Note.—Impellers responsive to vehicle speed as determined by a Pitot tube or other pressure sensitive means are classified in this subclass.
(2) Note.—For the distinction between automatic and non-automatic control by translation of the aircraft, see (1) Note of this class, subclass 160.14, and (2) Note, class 244, AERONAUTICS, subclass 17.13.

160.16. Devices under subclass 160.13 which are responsive to a condition proportional to rotational speed of the blade or shaft.

(1) Note.—Manual controls in parallel relationship to a speed responsive means or a manual means modifying a speed responsive means are included in this and the indented subclasses. See (1) Note of this class, subclass 160.14.

Search this class, subclass—
160.51+—for resiliently biased impellers which have no speed responsive means other than the impeller itself, i. e., free blade type.

Search Class—
264—SPEED-RESPONSIVE DEVICES, appropriate subclasses, for speed responsive means per se.

160.17. Devices under subclass 160.16 in which the blade rotational speed is compared with a constant speed device or motor to effect the blade adjustment.

Search this class, subclass—
135.29—for synchronization of plural impellers.

Search Class—
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 355, for speed control by comparison with an electrical constant speed device.

160.18. Impellers under subclass 160.16 in which the impeller adjustment is effected by means of power derived from the drive shaft.

Search this class, subclass—
160.28—for similar impellers which are not automatically controlled.

160.19. Devices under subclass 160.16 in which the adjustment of the blade is effected by a motor which is actuated by means responsive to the blade or shaft rotational speed.

Search this class, subclass—
160.3+—for non-automatic adjustment of the impeller by a motor carried by the impeller.
160.34+—for non-automatic adjustment of the impeller by a motor on a stationary part of the device mounting the impeller.

Search Class—
121—MOTORS, EXPANSIBLE-CHAMBER TYPE, appropriate subclasses, for the fluid motor not combined with impeller adjustment means.

160.2. Devices under subclass 160.19 in which the motor is carried by and rotates with the blade, hub and/or shaft.

160.21. Devices under subclass 160.2 in which the speed responsive means as well as the blade adjustment motor is carried by the blade, hub and/or shaft.

160.22. Impellers under subclass 160.1, having an indicator, recorder or gauge for indicating the position of the impeller or the impeller adjusting means.

(1) Note.—Specific impeller adjusting mechanisms are cross-referenced in subsequent subclasses.

160.23. Impellers under subclass 160.1 in combination with features other than the structure producing the impeller adjustment.

(1) Note.—The following structures are included herein:

a. The lubrication of the impeller adjustment mechanism.
b. Sealing means for the impeller hub.
c. Means to lift the impeller when disassembling the impeller from the craft.
d. Shields or protective coverings for the adjustment mechanism.

160.24. Devices under subclass 160.1 in which the impeller adjustment is positively produced by a motor or manual means.

(1) Note.—The impeller adjustment may be produced when the blade is being driven or is stationary.

Search this class, subclass—
160.13+—for impellers which are automatically adjustable, and 160.49+, for impeller adjustments which are the result of dynamic forces on the impeller itself or on a device forming an integral part thereof, i. e., free blade type impellers.

160.25. Impellers under subclass 160.24 in which the impeller adjustment is cyclic or recurs periodically during each revolution of the impeller.

(1) Note.—This subclass includes helicopter rotors per se in which cyclic pitch adjustment of the impeller produces a thrust force in such a direction as to cause the craft to be steered. The mere recitation of steering is not considered as reciting significant craft structure.

(2) Note.—Many of the patents of this subclass provide for an adjustment of the so-called mean pitch of the impellers as well as the cyclic pitch variation. See subclasses 160.28–160.48 for the adjustment of the mean pitch of an impeller by a positive control of the impeller.

Search this class, subclass—
135.26—for plural coaxial impellers adjusted cyclically.
135.4—for impeller control by discharge of air from the blade, i. e., boundary layer excitation, and see (2) Note of the definition.
160.28–160.48—for positive control of mean pitch adjustments. (See (2) Note above.)

Search Class—
244—AERONAUTICS, subclass 17.25, for similar devices significantly combined with an aircraft.

160.26. Impellers under subclass 160.25 in which the impeller is further adjusted by tilting the impeller supporting hub, as a unit, about an axis.

(1) Note.—See (1) Note under subclasses 160.25 and 160.27 for distinctions relating to steering and significant vehicle structure.

Search this class, subclass—
160.27—for tiltable axis propellers without cyclic pitch control, and see the notes thereto.

160.27. Impellers under subclass 160.24 in which the impeller with its supporting hub is shiftable as a unit to change the direction of thrust.

(1) Note.—This subclass includes helicopter rotors which are shiftable to a position in which the thrust or lift has a horizontal component producing a steering action on the craft. The mere recitation of craft steering is not considered such a significant vehicle recitation as to exclude these patents from this subclass.

(2) Note.—Many of the patents in this subclass provide for plural articulation of the impeller blade to the hub in addition to the positive tilting of the hub.

Search this class, subclass—
135.26—for plural coaxial tiltable rotors.
135.7+—for the tiltable rotor combined with a drive means therefor.
160.56—for plural articulation of the impeller blade per se and see (2) Note above.

Search Class—
244—AERONAUTICS, subclass 17.25, for tiltable rotors significantly combined with an aircraft.

160.28. Impellers under subclass 160.24 in which the impeller adjustment is effected by means of power from the drive shaft.

(1) Note.—The usual structure of this subclass is directed to a clutch device between the impeller adjustment means and the drive shaft enabling the adjustment of the impeller when the clutch is engaged.

Search this class, subclass—
135.75—for clutches interposed between the drive shaft and the impeller.
160.18—for adjustable impellers of this type which are automatically controlled.

160.29. Impellers under subclass 16.28 in which an element of the impeller adjusting mechanism is braked to cause a relative rotation between the element and the drive shaft to effect the impeller adjustment.

(1) Note.—Those adjustable impellers provided with a differential means between the impeller adjusting means and the drive shaft and which are provided with a brake to cause relative rotation of the differential means are included in this subclass.

Search this class, subclass—
135.75—for brakes on the drive shaft or impeller to prevent rotation.

160.3. Impellers under subclass 160.24 in which the adjustment is effected by a motor mounted on and rotatable with the impeller, hub, and/or drive shaft of the impeller.

(1) Note.—The patents in this subclass are primarily directed to impellers which are adjustable by an electric motor.

Search this class, subclass—
160.13+—for similar devices which are responsive to a condition, such as translational or rotational speed.
160.34+—and particularly 160.37, for a motor actuated impeller adjustment when the motor means is not mounted on the impeller.

160.31. Impellers under subclass 160.3 in which the motor is a fluid motor.

Search Class—
121—MOTORS, EXPANSIBLE-CHAMBER TYPE, appropriate subclasses, for fluid motors per se.

160.32. Impellers under subclass 160.31 in which the fluid motor is coaxial with the drive shaft axis.

160.33. Impellers under subclass 160.31 in which the fluid motor is mounted on or wholly within the impeller blade.

160.34. Impellers under subclass 160.24 in which the impeller adjustment is effected by a power or manual actuator mounted on a stationary part.

(1) Note.—This subclass includes impellers adjusted by an axial movement of the drive shaft.

Search this class, subclass—
160.13+—for similar devices which are automatically controlled.
160.36—for impellers adjusted by an axial movement of the hub on the drive shaft.
160.58+—for impeller mountings which enable the impeller to be adjusted.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclass 96 and indented subclasses, for devices which transmit an oscillating movement of an element to an oscillating movement of another element, and subclass 99+, for devices which convert a reciprocating movement of one element to an oscillating movement of another element.
287—ROD JOINTS OR COUPLINGS, subclass 3, for joints between an element on a stationary part and an element on a rotary part whereby one element may slide with respect to the other.

160.35. Devices under subclass 160.34 which include a planetary gearing between (1) an element rotatable with the impeller which adjusts the impeller and (2) a non-rotatable element which controls the adjustment.

160.36. Devices under subclass 160.34 in which the power or manual actuator effects an axial movement of the impeller or the impeller hub on its drive shaft to produce an impeller adjustment.

Search this class, subclass—
160.34—for those devices in which the drive shaft as well as the impeller and the impeller hub is axially movable for impeller adjustment.
160.49—for impellers which are axially movable under the influence of aerodynamic forces on the impeller.

160.37. Impellers under subclass 160.34 in which the impeller adjustment is effected by a motor.

Search this class, subclass—
160.13+—for similar devices which are automatically controlled.
160.24+—especially subclass 160.3+, for those devices in which the motor producing the impeller adjustment is rotatable with the impeller.

160.38. Impellers under subclass 160.34 provided with a means to adjust the impeller combined with a locking device for holding the impeller in a specified adjusted position.

(1) Note.—This device is in addition to a mere static condition of the adjustment means. Detents of the rack and dog type on pivoted hand levers are excluded.

160.39. Impellers under subclass 160.34 in which the impeller is adjusted by one actuating means but in which the actuating means is connected to the impeller through a dual connection designed to relieve the strain on the blade or its immediate operating connection.

(1) Note.—The dual connection may be any means of imparting motion to the impeller, such as dual links, cams, cam-slots, pin-slots, etc.

160.4. Impellers under subclass 160.34 in which an axially movable or rotatable rod, adapted to adjust the impeller, enters the impeller hub from the outer side, i. e., the forward end of the impeller hub.

160.41. Impellers under subclass 160.34 in which the adjustment is effected by a rod or sleeve actuated by a screw which is coaxial with the impeller drive shaft.

Search this class, subclass—
160.43+—for impellers adjusted by a sleeve actuated by a screw having an axis parallel to the impeller drive shaft axis.

160.42. Impellers under subclass 160.34 in which a rod which adjusts the impeller extends through the entire length of the impeller drive shaft.

(1) Note.—Many of the patents of this subclass are directed to automobile cooling fans which have adjustable blades and which are driven by a fan pulley.

Search this class, subclass—
135.72—for adjustable impellers combined with a drive motor and responsive to a condition of the drive motor.
160.13+—for automatically adjustable impellers per se.
160.43+—for similar devices in which the adjusting rod is on the drive shaft or projects through a portion of the drive shaft.

160.43. Impellers under subclass 160.34 in which a sleeve, collar or rod on or in the impeller drive shaft is reciprocated relative thereto for impeller adjustment.

160.44. Impellers under subclass 160.43 in which a rotary means is provided between the reciprocating sleeve, collar or rod and the impeller for impeller adjustment.

(1) Note.—Partial rotation, as by a cam slot, is included, but where the rotary element is the blade itself or a member rigidly connected to the blade, classification is in subclass 160.47 below.

Search this class, subclass—
160.47—for impeller positioning means in which a reciprocating sleeve, collar or rod imparts a rotary motion to the blade by means of a pin or cam and slot connection between the reciprocating element and the blade. See (1) Note above.

160.45. Impellers under subclass 160.44 in which the connection from the rotary means to the impeller includes a geared connection to the impeller blade.

Search this class, subclass—
160.43—for impellers having a geared connection thereto from the reciprocating sleeve, collar or rod without an intermediary rotary means.

160.46. Impellers under subclass 160.43 in which the connection from the sleeve, collar or rod includes a link connection to the blades.

Search this class, subclass—
160.39—for similar devices having plural links extending to the same blade.

160.47. Impellers under subclass 160.43 in which the connection from the sleeve, collar or rod includes a pin-slot, cam-slot or cam connection to the impeller blades.

160.48. Impellers under subclass 160.34 in which a sleeve, collar or rod is rotated on or in the impeller drive shaft for impeller adjustment.

Search this class, subclass—
160.43+—for sleeves, rods or collars which have both rotary and reciprocating motion.

160.49. Impellers under subclass 160.1 in which the impeller hub or carrier is axially movable on the impeller drive shaft, usually under the influence of forces on the impeller.

Search this class, subclass—
160.36—for power or manually axially displaceable hub or blade carrier.

160.5. Impellers under subclass 160.1 in which impeller blades are composed of flexible material.

Search this class, subclass—
160.56—for blades having plural articulations.
160.6+—for blades other than flexible blades which are releasably clamped in their supporting means.

160.51. Impellers under subclass 160.1 in which the impeller is biased by a resilient element which may be a mounting element tending to restore the impeller to its original or predetermined position.

Search this class, subclass—
160.1—for adjustable impellers having no spring biasing means.
160.16—for automatically adjustable impellers which are controlled by a governor to an adjusted position, the governor being biased by a resilient device.
160.5—for impellers having flexible blade material.
160.59—for impellers having a detent means for mounting the impeller on the hub which detent is spring biased.

160.52. Impellers under subclass 160.51 in which the impeller pivots on an axis transverse to the blade longitudinal axis.

Search this class, subclass—
160.56 and **160.57**—and indented subclass, for articulated blades which are not spring biased.

160.53. Impellers under subclass 160.51 in which the resilient biasing means is interposed between the blade and the blade mounting means, e. g., the hub.

160.54. Impellers under subclass 160.51 in which the resilient biasing means is interposed between the impeller hub and its drive shaft.

Search Class—
64—MACHINE ELEMENTS, SHAFTING AND FLEXIBLE SHAFT COUPLINGS, subclass 6 and indented subclasses, for resilient shaft couplings in which the impeller is recited by name only.

160.55. Impellers under subclass 160.1 in which (1) the impeller adjustment is influenced by a damping device, or (2) in which limit means is provided for the impeller flapping pivot to limit impeller movement.

(1) Note.—A damping device is one which merely retards or resists the movement of the impeller. The usual type of damping device found in this subclass is the friction type, such as contacting friction material or a fluid dashpot.

Search this class, subclass—
160.51+—for any device which, in addition to retarding or resisting the impeller movement, tends to restore the impeller to its original or to a predetermined position.

160.56. Impellers under subclass 160.1 in which the impeller is pivotally supported by plural pivots or articulations.

(1) Note.—These pivots or articulations remain free during operation of the impeller. Provision for motion about the axis of the blade in a free blade mounting is not considered a pivot within the meaning of this subclass.

(2) Note.—Impellers having a ball and socket mounting enabling the impeller to pivot about any axis of the mounting are included in this subclass.

Search this class, subclass—
160.1—for free blade mountings which provide motion around the blade axis. See (1) Note.
160.51—and indented subclasses, for impellers having plural articulations and biased by a resilient means.

160.57. Impellers under subclass 160.1 in which the impeller is supported by a single articulation or pivot which is inclined or at an angle to the longitudinal axis of the impeller blade.

(1) Note.—The pivot or articulation remains free during operation of the impeller.

Search this class, subclass—
160.52—for impellers articulated about an axis transverse to the impeller longitudinal axis and biased by a resilient means.
160.56+—for impeller connections which must be loosened to permit adjustment.

160.58. Impellers under subclass 160.1 in which the impeller blade connection to its mounting means is such as to enable the impeller blade to be adjusted.

(1) Note.—This subclass and indented subclasses do not include any structure for adjusting the blade other than the mere blade mounting. For such structure, see subclass 160.24+ above.

Search this class, subclass—
160.51+—for resiliently mounted impellers.
173—for means for mounting an impeller to a hub or shaft in a permanently fixed manner.

160.59. Impellers under subclass 160.58 which consist of a spring biased detent between the impeller blade and its hub.

Search this class, subclass—
160.51+—for spring biased impellers.

160.6 Impellers under subclass 160.58 in which the impeller or impeller blade is releasably clamped on its support means.

(1) Note.—The patents in this subclass are characterized by an impeller supporting means in which the impeller blade is clamped but which may be manually loosened, enabling the impeller blade to be adjusted and then clamped in its adjusted position.

(2) Note.—Some of the patents of this and indented subclass provide for some part of the impeller clamping means, such as washers or bolts, to aid in the dynamic and static balance of the impeller.

Search this class, subclass—
159—for balancing of impellers.
160.5—for flexible blades having an adjustment consisting in manually loosening the blade support means, adjusting the flexible blade and clamping the flexible blade in its adjusted position.

160.61. Impellers under subclass 160.6 in which the support means comprises a two part hub within which the impeller is releasably clamped.

160.62. Impellers under subclass 160.58 in which a sleeve or thimble is connected or fixed to the impeller blade.

(1) Note.—The sleeve fixed to the impeller blade is frequently a part of the larger combination found in subclass 160.58+, particularly in those cases where the impeller blade is non-metallic.

in subclass 165, add:

Search this class, subclass—
135.2—for plural impellers having relative movement and/or different axes of rotation.

in subclass 166, add:

Search this class, subclass—
135.2—for plural impellers having relative movement and/or different axes of rotation.

179, Telephony

abolish the definition and notes of subclass 171.5.

192, Clutches and Power-Stop Control

abolish the definitions of subclasses .01 and .02,

establish the following subclass definitions:

Interrelated Power Delivery Controls (having motor and clutch controls).

It has been determined that it is desirable to collect the patents directed to Interrelated Power Delivery Controls as defined in the next paragraph. These patents are now widely scattered, and the following subclasses include only a small portion of those thus defined. The scope of the present subclasses is detailed in (1) Note, below; and the search notes appended hereto, and to the indented subclasses, indicate the known related art, much of which will eventually be here included.

These subclasses are the broad generic locus for the output control of power delivery through a transmitting line comprising one or more clutches and/or gearing and/or brakes, with a prime mover at one end and a load at the other. At least two or more of the elements of the transmission line, or at least one element and the prime mover must each have controls which are interrelated in some manner, e. g., one control having a lost motion connection with the other control which, when taken up, operates the second control.

(1) Note.—At the present time, the art now classified in these subclasses is limited to transmitting lines delivering rotary power having both a prime mover driving the line and a clutch in the line, and the controllers of both must be involved. Where prime movers of the electric type are involved, the art is found in subclass .02. The related art not including both motor and clutch control is referred to in the search notes appended hereto, and to the subclasses indented hereunder.

(2) Note.—For combined brake and gearing control of motors, see this class, subclasses 1+ and 4; class 74, MACHINE ELEMENTS AND MECHANISMS, subclass 472; and class 318, ELECTRICITY, MOTIVE POWER SYSTEMS, subclasses 8, 9+ and 362+.

(3) Note.—For combined motor and gearing control, see class 74, MACHINE ELEMENTS AND MECHANISMS, subclass 472, and class 318, ELECTRICITY, MOTIVE POWER SYSTEMS, subclasses 8, 9+ and 362+.

(4) Note.—For combined clutch and gearing control, see this class, subclass 3.5, 4+ and 51, and class 74, MACHINE ELEMENTS AND MECHANISMS, subclass 333.

(5) Note.—For combined motor and brake control, see this class, subclass 1+, and class 318, ELECTRICITY, MOTIVE POWER SYSTEMS, subclasses 8, 9+ and 362+.

Search this class, subclass—
.02—for similar devices where the motor is electric (see (1) Note, supra).
1+—for combined control of motor and brake or of motor, brake and gearing (see (2) Note, supra).
3.2—for combined fluid impact couplings and clutches.
3.5—for combined control of clutch and gearing (see (4) Note, supra).
4—for combined control of clutch, brake and gearing or brake and gearing (see (2) Note and (4) Note, supra).
12+—for combined control of clutch and brake.
30+—for combined clutches and gears.
51—for multiple reversing clutches often involving gearing (see (4) Note, supra).

Search Class—
60—POWER PLANTS, subclass 97, for multiple motor power plants and controls therefor.
74—MACHINE ELEMENTS AND MECHANISMS, subclass 189.5 for combinations of gearing with either fluid couplings or torque converters, subclass 333 for combined clutches and gearing, and subclass 472 for combined control of motor and gearing or of brake and gearing (see (2) Note, (3) Note, and (4) Note, supra).
172—ELECTRICITY, MOTIVE POWER, subclass 284 for combined electromagnetic clutch devices (with or without their controls) combined with electric motors (with or without their controls) and with or without brake means.
180—MOTOR VEHICLES, subclass 82 for devices for preventing accidents and injuries in the use of motor vehicles which may include interrelated power delivery controls.
318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclasses 8 and 9+, for combinations of electric motors and gearing, and subclasses 8, 9+ and 362+ for combination of electric motors and brakes with or without electromagnetic clutches (see (3) Note and (5) Note, supra).

.02. Interrelated power delivery controls for the joint control of an electric motor and clutch.

(1) Note.—This subclass includes the motor where it is conventional or is broadly claimed.

(2) Note.—Patents showing this combination even though including other controlled devices are placed in this subclass and cross-referenced into other subclasses found below in this class.

Search this class, subclass—
.03–.098—for similar devices having non-electric motors.

Search Class—
318—ELECTRICITY, MOTIVE POWER SYSTEMS, subclass 9+, for the combination of electric motor and power or motion transmitting mechanism driven thereby.

.03. Interrelated power delivery controls which operate by entirely automatic means, that is, by means responsive to change in some condition other than by manual operation of a control by an operator.

(1) Note.—Class 192, subclass 91, contains patents disclosing a fluid pressure actuator (usually a vacuum operator) for a clutch, controlled by a valve which is automatically controlled, the control of said valve being dependent upon the degree of vacuum in the intake manifold. Such patents are therein classified even if they claim an accelerator and throttle valve, or if the degree of vacuum in the intake manifold is responsive to opening or closing of the throttle valve.

Search this class, subclass—
31+ and **103+**—for automatic clutches.
91—and see (1) Note, supra.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclasses 190.5, 336+ and 337 for automatic gearing.
188—BRAKES, subclass 110+, for automatic brakes.

.032. Devices under subclass .03 wherein the automatic means is responsive to speed and/or torque conditions.

Search this class, subclass—
.076 and **.077**—for interrelated power delivery controls having speed and torque regulation of clutch engagement when such engagement is manually initiated by the motor control.

.033. Devices under subclass .032 wherein the automatic means is responsive only to speed conditions.

Search this class, subclass—
.076—for interrelated power delivery controls having speed regulation of clutch engagement when such engagement is manually initiated by the motor control.
103+—for speed responsive clutches.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclass 336+, for speed responsive gearing.
188—BRAKES, subclasses 126, 150 and 180+, for speed responsive brakes.

.034. Devices under subclass .032 wherein the automatic means is responsive only to torque conditions.

Search this class, subclass—
.077—for interrelated power delivery controls having torque regulation of clutch engagement when such engagement is manually initiated by the motor control.
54+—for torque responsive clutches.

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclass 337 for torque responsive gearing.

.04. Interrelated power delivery controls wherein the motor, clutch and gearing controls, either alternately or together operate a control for one or more devices, e. g., a brake.

.042. Interrelated power delivery controls wherein the motor, clutch and brake controls, either alternately or together operate a control for one or more devices, e. g., a gearing.

.044. Interrelated power delivery controls wherein the motor, gearing and brake controls, either alternately or together operate a clutch control alone or with one or more other controls.

.046. Interrelated power delivery controls wherein the clutch, gearing and brake controls, either alternately or together operate a motor control alone or with one or more other controls.

.048. Interrelated power delivery controls wherein the motor and clutch controls, either alternately or together operate one or more other controls.

.049. Devices under subclass .048 wherein one of the operated controls is for a brake.

.052. Interrelated power delivery controls wherein the motor and gearing controls, either alternately or together operate a clutch control alone, or with one or more other controls.

.055. Interrelated power delivery controls wherein the motor and brake controls, either alternately or together operate a clutch control alone, or with one or more other controls.

.058. Interrelated power delivery controls wherein the clutch and brake controls, either alternately or together operate a motor control alone, or with one or more other controls.

.062. Interrelated power delivery controls wherein the clutch and gearing controls, either alternately or together operate a motor control alone, or with one or more other controls.

.07. Interrelated power delivery controls wherein the motor control operates a clutch control alone, or with one or more other controls.

(1) Note.—Class 192, subclass 91 contains patents disclosing a fluid pressure actuator (usually a vacuum operator) for a clutch, controlled by a valve which is automatically controlled, the control of said valve being dependent upon the degree of vacuum in the intake manifold. Such patents are therein classified even if they claim an accelerator and throttle valve, or if the degree of vacuum in the intake manifold is responsive to opening or closing of the throttle valve.

Search this class, subclass—
91—and see (1) Note, supra.

.072. Devices under subclass .07 wherein one of the operated controls is for a brake.

.073. Devices under subclass .07 wherein one of the operated controls is for gearing.

.075. Devices under subclass .07 wherein the clutch control has means for regulating the mode of clutch engagement after manual operation of the motor control has initiated the clutch engaging movement.

Search this class, subclass—
.03+—for similar devices where no manual initiation is involved.

.076. Devices under subclass .075 wherein the clutch engagement control constitutes a speed responsive means.

Search this class, subclass—
.032 and **.033**—for similar devices where no manual initiation is involved.

.077. Devices under subclass .075 wherein the clutch engagement control constitutes an inertia responsive means.

Search this class, subclass—
.03—for similar devices where no manual initiation is involved.

.08. Interrelated power delivery controls wherein the gearing control operates both the clutch and motor controls alone, or with one or more other controls.

.082. Interrelated power delivery controls wherein the brake control operates both the clutch and motor controls alone, or with one or more other controls.

.084. Interrelated power delivery controls wherein the clutch control operates the motor control alone, or with one or more other controls.

.09. Interrelated power delivery controls for the combined control of motor, clutch, brake and gearing by themselves, or with one or more additional controls.

(1) Note.—Such combinations may include a single controller for all the controls, or the control may be serially, that is, the first controlling the second, the second controlling the third, the third controlling the fourth, etc.

.092. Interrelated power delivery controls for the combined control of motor, clutch and gearing by themselves, or with one or more additional controls.

(1) Note.—Such combinations may include a single controller for all the controls, or the control may be serially, that is, the first controlling the second, the second controlling the third, etc.

.094. Interrelated power delivery controls for the combined control of motor, clutch and brake by themselves, or with one or more additional controls.

(1) Note.—Such combinations may include a single controller for all the controls, or the control may be serially, that is, the first controlling the second, the second controlling the third, etc.

.096. Interrelated power delivery controls for the combined control of motor and clutch by themselves, or with one or more additional controls.

(1) Note.—Such combinations may include a single controller for the remaining controls, or the control may be serially, that is, the first controlling the second, etc.

.098. Devices under subclass .096 wherein there are two or more controlled motors and/or two or more controlled clutches.

Search this class, subclass—
48—for multiple clutches and controls therefor.

Search Class—
60—POWER PLANTS, subclass 97 for multiple motor power plants and controls therefor.

200, Electricity, Circuit Makers and Breakers

in subclass 56, under "Search Class" cancel the reference to class 73, and substitute:

73—MEASURING AND TESTING, for most measuring instruments (see the notes to that class for other measuring instrument classes) and for the combination of a class 73 measuring instrument and a circuit controller wherein the circuit controller is claimed broadly (class 200, subclass 56 provides for the combination when specific structure of the circuit controller is claimed).

214, Material or Article Handling

in subclass 65, under "Search Class" in the reference to class 280, before "subclass 49+" insert:

subclass 33.02, for articulated vehicles so constructed that one section thereof is movable to a position upon another section for transportation thereby, and

222, Dispensing

in the class definition, under (19), under "Search Class" in the reference to class 47, cancel "subclasses 48+, for subsoil irrigators and weed killers," and substitute:

subclass 48.5, for irrigators or fertilizers of container or cartridge form which are buried in the earth, usually discharging their contents over a period of time,

244, Aeronautics

in the class definition, cancel (8) Note and substitute:

(8) Note.—For impellers such as traction propellers, pusher propellers, helicopter and "Autogiro" rotors as well as these impellers combined with their driving means, whether recited per se or in combination with such aircraft structure as is necessary to mount the impellers, see class 170, MOTORS, FLUID CURRENT, subclass 135+.

in subclass 2, cancel the final period and insert: *during its use as a land or water vehicle.*

abolish the definitions of subclasses 17 and 18,

establish the following subclass definitions:

17.11. Aircraft under subclass 4 which are sustained in the air by a thrust produced by one or more wings or blades rotating about a substantially vertical axis.

(1) Note.—This type of aircraft is technically called a gyroplane and includes (1) helicopters, wherein the wings or blades are normally mechanically driven, and (2) the auto-rotating wing type, e. g., "Autogiro", wherein the wings or blades rotate because of the aerodynamic forces acting on them due to the forward speed of the aircraft, the forward motion being caused by a tractor impeller, jet or other propulsion means.

(2) Note.—The rotary wing may be provided with modifying means whereby the thrust is varied in intensity or direction.

(3) Note.—This subclass and indented subclasses provide for a rotary wing which is significantly combined with the aircraft, i. e., when more structure of the aircraft is recited than is necessary to mount the propulsion or steering means. In the following instances, the aircraft is considered to be significantly recited:

a. Mounting or attachment of a motor or power plant to the frame or body in a particular relation or location with respect to the body.
b. The impeller drive gearing or shaft is located in a specific relation to the aircraft.
c. A recitation locating the impeller with respect to the center of gravity of the aircraft.

Search this class, subclass—
6, 7, and 8—for aircraft having a fixed wing in addition to the rotating wing for sustentation.

Search Class—
46—AMUSEMENT DEVICES, TOYS, subclass 75, for toy "Autogiros" or helicopters.
170—MOTORS, FLUID CURRENT, subclass 135.2+, for plural rotary impellers which are relatively movable and/or have different axes; subclass 135.7, for the rotary impeller with drive means therefor; and subclass 156+ for the rotary impeller per se, especially subclasses 160.1+ for adjustable impellers (see (2) Note above), 165 for axially spaced coaxial impellers having no relative movement and 166 for radially spaced coaxial impellers having no relative movement.

17.13. Gyroplanes under subclass 17.11 in which means responsive to a condition of the aircraft controls the rotary wing system.

(1) Note.—The condition responsive means of this subclass comprises separate and distinct controlling means and does not include those rotary wings which are automatically controlled by a condition of the rotary wing itself, e. g., free blade type.

(2) Note.—The mere forward motion of the aircraft is not significant aircraft structure as set forth in (3) Note, subclass 17.11, this class.

Search this class, subclass—
76+—for automatic control of aircraft.

Search Class—
170—MOTORS, FLUID CURRENT, subclass 160.13+, for automatic controls for impellers where no aircraft combination is claimed, especially subclass 160.15 for rotary impellers which are adjusted as a function of aircraft speed or forward motion, and 160.49–160.54, inclusive, for free blade type impellers. See (2) Note above.

17.15. Gyroplanes under subclass 17.11 having means other than the rotor to allow lowering of the aircraft or in which the rotor is adjustable to allow the aircraft to be safely lowered.

Search this class, subclass—
17.13—for safety lowering devices in which the rotor is automatically adjusted by condition responsive means.
138+—for safety lowering devices for airplanes.

17.17. Gyroplanes under subclass 17.11 combined with (1) landing gear, (2) aircraft mooring devices, (3) non-aerial propelling devices, and (4) non-aerial steering means.

(1) Note.—The non-aerial propelling and/or steering means of this subclass is directed to devices auxiliary to or other than the aircraft rotor to effect propulsion and/or steering while on land or water.

Search this class, subclass—
2—for vehicles convertible from an aircraft to a land or water vehicle in which the flight mechanism is disabled during travel on land or water.
50—for propulsion and steering of aircraft other than gyroplanes on land or water.
100—for aircraft landing gear.

17.19. Gyroplanes under subclass 17.11 combined with means in addition to the rotating wing and operating during flight to (1) propel the craft, (2) counteract the torque of the rotating wing, or (3) steer the aircraft.

(1) Note.—The steering means of this subclass, i. e., so-called aerial steering, is directed to devices auxiliary to the rotating wing of the aircraft to effect steering in flight. Such auxiliary devices may include shiftable weights to change the center of gravity of the craft or a rudder on the craft.

Search this class, subclass—
17.13—for auxiliary propulsion, counter-torque or steering devices combined with a safety lowering device, and 17.17, for similar subject matter combined with a landing, mooring or non-aerial propelling or steering device.
17.21—for devices having a rotary as well as a non-rotary means for auxiliary propulsion counter-torque or steering.
86+—for rudders for aircraft.

Search Class—
170—MOTORS, FLUID CURRENT, subclasses 135.26 and 160.1+, for steering by means of a variation in the thrust forces produced by the rotor itself, i. e., tiltable axis or cyclic pitch changes.

17.21. Gyroplanes under subclass 17.19 in which the additional means is rotatable.

(1) Note.—This subclass includes those devices which include a rotary as well as a non-rotary means for auxiliary propulsion, counter-torque or steering.

Search Class—
170—MOTORS, FLUID CURRENT, subclass 135.2+, for plural impellers which are relatively movable and/or have different axes in which no more aircraft structure is included than is necessary to mount the impellers. See (3) Note, subclass 17.11, this class, for the line.

17.23. Gyroplanes under subclass 17.11 which are provided with a plurality of rotating wings.

Search Class—
170—MOTORS, FLUID CURRENT, subclass 135.2+, for plural impellers which are relatively movable and/or have different axes and in which only as much aircraft structure is claimed as is necessary to mount the impelling and/or steering means.

17.25. Gyroplanes under subclass 17.11 in which the direction of lift of the impeller is variable, either by a cyclic pitch control of the impeller thereby tilting the virtual axis of the impeller or by tilting the real axis of the impeller.

Search Class—
170—MOTORS, FLUID CURRENT, subclasses 160.25 and 160.27, for impellers per se having a tiltable axis or cyclic pitch control, and class 170, subclass 135.26, for coaxial impellers having a tiltable axis and/or cyclic pitch control, and see (3) Note under subclass 17.11 for a statement of the line between classes 170 and 244 as to this subject matter.

17.27. Gyroplanes under subclass 17.11 including means to position or support the rotating wing on the aircraft.

Search Class—
170—MOTORS, FLUID CURRENT, subclasses 160.51+ and 160.58+, for means for adjustably mounting the impeller blade on the hub, and 160.51+, for means for adjustably mounting the hub on a drive shaft.

in subclass 53, add:

(4) Note.—Impellers combined with a motor are found in class 170, MOTORS, FLUID CURRENT, subclass 135.7+.

in subclass 62, under "(3) Note," cancel "subclasses 135.5 and 135.6" and substitute: *subclass 135.7+*
in subclass 65, under "(1) Note," after "Current" insert: *subclass 159+*
under "(2) Note," cancel "subclasses 135.5 and 135.6", and substitute: *subclass 135.7+*
and add:

(3) Note.—Plural impellers having relative movement and/or different axes are found in class 170, MOTORS, FLUID CURRENT, subclass 135.2+, and plural impellers having no relative movement are found in class 170, subclasses 165 and 166.

in subclass 69, cancel "(2) Note" and substitute:

(2) Note.—For plural propellers, see class 170, subclass 135.2+.

280, Land Vehicles

establish the following subclass definition:

33.02. Vehicles under subclass 33 in which the connection between the articulated sections is designed to cause and/or permit one section of the vehicle to be moved from a trailing position to a completely supported position on another section of the vehicle.

(1) Note.—Vehicles classified here may or may not include mechanism for positively moving the sections to collapsed position.

(2) Note.—Articulated vehicles in which the coupling between the sections permits one section to be detached from another so that one section may be superposed upon the other for transportation, are classified in other subclasses of this group.

Search this class, subclass—
34+—for extensible vehicles.
142—for adjustable reaches for varying the wheel base of a vehicle.

Search Class—
214—MATERIAL OR ARTICLE HANDLING, subclass 65+, for various types of self-loading vehicles. Note particularly subclass 85 for vehicles having inclined ways or skids, with or without a hoisting rope, for loading or unloading purposes.

294, Handling, Hand and Hoist-Line Implements

in subclass 50.6, cancel "(3) Note," and substitute:

(3) Note.—For devices for impregnating the earth with liquid or gases and having means to hold material such as water or the like and also provided with an earth working implement, see class 111, subclass 6+. For similar devices for setting plants or seeds, see class 111, subclasses 4+ and 92+.

318, Electricity, Motive Power Systems

in subclass 9, under "Search Class" in the reference to class 192, change ".01" to: *.03 to .098*
and cancel: "Indented",
in subclass 41, under "Search Class" in the reference to class 170, cancel "135.6" and substitute: *135.19*
in subclass 85, under "Search Class" in the reference to class 170, cancel "135.6" and substitute: *135.19*
in subclass 161, under "Search Class" in the reference to class 192, change ".01+" to: *.02 to .098*
in subclass 489, under "Search Class" in the reference to class 74, change "5" to: *5+*.

322, Electricity, Single Generator Systems

in the class definition, under "Search Class" cancel the reference to class 170, and substitute:

170—MOTORS, FLUID CURRENT, subclass 135.2+, for plural impellers having relative movement and/or different axes, and subclass 135.7+, for single impellers which are significantly combined with a motor system supplied by a generator.

in subclass 10, under "Search Class" in the reference to class 192, change .01+" to: *.02 to .098*
in subclass 12, under "Search Class" cancel the reference to class 192, and substitute:

192—CLUTCHES AND POWER-STOP CONTROL, subclasses .03 to .098 for mechanism for joint control of a non-electric motor and clutch, subclass .02 where the motor is electric, and subclass 30+ for mechanical clutches.

in subclass 41, under "Search Class" in the reference to class 192, change ".01+" to: *.02 to .098*.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 38

November 22, 1948

The following transfers are hereby ordered to take effect Monday, November 22, 1948:

Class 102, Ammunition and Explosives Devices
Subclasses 1 through 19.2 and 49 through 94 from Division 30 to Division 70.
Subclasses 20 through 48 and 95 through 98 from Division 30 to Division 22.

Class 187, Elevators, from Division 4 to Division 26.
Class 191, Electricity, Transmission to Vehicles, from Division 34 to Division 26.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,446,170. VACUUM TUBE ELECTRONIC SWITCH. Patented Aug. 3, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Electrical switch comprises a sealed evacuated envelope inclosing a central cathode with anodes radially spaced therefrom to receive a flow of electrons from the cathode. A fork-like control electrode extends lengthwise of cathode for rotation relative to the cathode and controls the flow from the cathode to the anodes. Electrical means comprising a permanent magnet and a rotatable armature, both coaxial with the cathode, are provided for rotating the control electrode. (Owner) Burns Conley, Wevaco, W. Va. Group 36—11—19. Reg. No. 15,540.

Pat. 2,442,347. SOUND AND VIBRATION DAMPING STRUCTURE. Patented June 1, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A fabricated sound and vibration damping panel is composed of interwoven strips of metal, plastic, etc. secured between two facing sheets of thin non-perforated flexible sheet material, the inner side impervious to airflow and the outer side thick and porous to absorb sound. Each set of strips are in frictional contact with each other and of such a given coefficient of friction and tightness of weave that they will neither lock together nor move too freely over each other. Sound and vibration will frictionally dissipate in passing from one facing sheet to the other via the interwoven strips. The acoustical device could be built to any desired thickness, thus enabling the material to provide sound absorption and vibration damping to any desired degree. The completed unit is secured to any wall or ceiling. (Owner) H. N. Eklund, 12 East 8th St., New York 3, N. Y. Group 32—73. Reg. No. 15,541.

Pat. 2,446,586. HYDRAULIC CRANE. Patented Aug. 10, 1948. A fluid-operated crane has all of the shifting and lifting operations controlled by two valves, thus eliminating a boom lifting winch. When the power take-off shaft is being driven, a pump connected to the reservoir will operate continuously to withdraw liquid from the reservoir and force it through a conduit connecting the pump with a valve unit to operate the boom. (Owner) Walter L. Harbaugh, 1341 Olney St., Indianapolis, Ind. Group 35—31—61. Reg. No. 15,542.

Pat. 2,442,556. FLANGE FORMING ATTACHMENT FOR RIVET GUNS. Patented June 1, 1948. An elongated head has a flange-bending and -forming wedge at front end. A socket in rear of head receives a conventional die on a rivet gun. A pair of plates project upwardly from opposite sides of the head, and a shrink block is pivoted thereto. A coil spring is attached to the rear end of the block and head. The block projects forwardly of the wedged end and has a vertical slot to receive the upper edge of the sheet metal on which a flange is to be formed. During intermittent reciprocation of the head by the rivet gun the wedge-shaped end of the head strikes the sheet metal and causes a slight bending. (Owner) W. L. V. Bishop, 1721 Beulah Ave., Pueblo, Colo. Group 35—42—69. Reg. No. 15,543.

Pat. 2,433,532. APPARATUS FOR CIRCULATING SOLUTIONS. Patented Dec. 30, 1947. A multi-tray agitator for constantly circulating solutions in the processing of photographic films. A tier of spaced racks for removable trays are pivotally supported in a framework. A manually operated drive shaft is connected to a vertical extension rod loosely attached to the racks. By turning crank, linkage causes racks to rock in one direction and actuates an extension rod to rock racks in another plane. The two rocking movements cause a continuous swirl of the solution over the film. (Owner) Eugene L. Schultz, 53—30 63rd St., Maspeth, Long Island, N. Y. Group 39—12. Reg. No. 15,544.

Pat. 2,439,434. METHOD AND APPARATUS FOR DEWAXING OILS. Patented Apr. 13, 1948. Cold dewaxed oil from the separator of this apparatus is utilized as a medium for chilling the wax-bearing oil prior to its passage into ammonia coolers for final chilling. As the two streams flow in counter-current heat-exchange relation through chillers, the dewaxed oil is chilled by a refrigerant through either part of or its entire course of flow to maintain a substantially constant temperature differential between the streams. The dewaxed oil flows through a duct surrounding the wax-bearing oil duct, and the refrigerant flows through a duct surrounding the dewaxed oil duct. (Owner) Aktiebolaget Separator-Nobel (Sweden). Correspondence to The De Laval Separator Company, 165 Broadway, New York 6, N. Y. Groups 29—11; 35—69. Reg. No. 15,545.

Pat. 2,323,742. INTERNAL-COMBUSTION ENGINE PISTON. Patented July 6, 1943. Reg. No. 15,546.

Pat. 2,376,214. FLEXIBLE PISTON FOR INTERNAL-COMBUSTION ENGINES. Patented May 15, 1945. Reg. No. 15,547.

These two patents relate to a flexible piston adapted to control detonation in an internal-combustion engine. The piston has an auxiliary head which compresses the exhaust gases of the previous cycle into the combustion chamber, causing added turbulence and a more uniform burning of the compressed mixture of fuel and air. A bellows-type expansion spring is provided between the upper and lower portions of piston permitting free absorption of excess combustion pressure during periods of ignition and burning, after which it returns to normal position before the exhaust releases the expanded gas. The auxiliary head retains the exhaust gases during the succeeding intake and compression strokes, thereby acting as a shock absorber and preventing excessive detonation. The auxiliary head is provided with rings and is concentric with the cylinder walls at all times, thereby providing for uniform heat transfer through its rings. (Owner) Philip S. Webster, North Muskegon, Mich. Group 35—19—69.

Pat. 2,446,348. PISTON. Patented Aug. 3, 1948. A liquid-cooled, flexible, dome-type piston for internal-combustion engines is lubricated by the cooling medium. The dome slides over the head of the piston trunk and is constantly urged to extended position by a spring of sufficient force to resist flexing of the dome toward the head except

during the combustion cycle. The space between the dome and the head is supplied with lubricant under pressure which is fed through the inlet lines. During the combustion cycle, the dome is compressed against the head and the lubricant forced through the outlet feed lines. The piston flexes to prevent excessive pressure in the combustion chamber during the combustion cycle and aids in cooling the dome of the piston. A locking-ring fits in groove of dome and extends into recess in trunk of piston and limits the outward flexing of the dome. (Owner) Philip S. Webster, North Muskegon, Mich. Group 35—19—69. Reg. No. 15,548.

Pat. 2,389,619. REFRIGERATED BOTTLE DISPENSING DEVICE. Patented Nov. 27, 1945. A coin-operated refrigerated dispenser for bottled beverages. The cooling chamber has a series of superposed bottle supporting tracks around which cooled air passes. The bottles gravitate toward a delivery cage beneath the lowest track. Additional bottles are pre-cooled on supports at ends of tracks. A fan forces air upwardly into cooling chamber. A shaft attached to the cage extends through a housing for a coin-operated mechanism. The shaft is released when a coin is deposited, and the handle operated, rotating the cage and releasing a bottle. (Owner) Thomas Francis Green, Jr., 2230 Second Ave. South, St. Petersburg 7, Fla. Group 35—51. Reg. No. 15,549.

Pat. 2,448,669. ELECTRIC HEATER FOR TANKS. Patented Sept. 7, 1948. A removable heating unit for boilers or hot-water heaters is so constructed that the core or the coil can readily be replaced without draining the tank. The coils are mounted in a ceramic core in a tubular housing. A mounting plate at outer end of housing is attached to the side wall of a boiler. A pair of terminals carried by the plug at end of housing connect with the coil. Unit can be quickly and cheaply repaired or replaced by withdrawing the locking bolt without removing the housing, which is sealed to the boiler. (Owner) Thomas Francis Green, Jr., 2230 Second Ave. South, St. Petersburg 7, Fla. Groups 33—65; 36—19. Reg. No. 15,550.

Pat. 2,440,131. CONVERTIBLE SPACE SAVING TABLE. Patented Apr. 20, 1948. A compact, convertible, space-saving table may be opened to a number of positions and sizes and may be mounted in any piece of furniture having an open side, such as a chest of drawers or a desk. A U-shaped frame is hinged to the open side of chest and swings inward, forming closure in place of some of the usual chest drawers. A number of table tops having pivotally attached legs are pivotally mounted to fold into nesting position within the frame. May be unfolded part way to provide small-sized table, or all the way to give access to shelves which may occupy space between frame and back wall of chest. Various modifications are shown. (Owner) Anthony Wayne, 241 Lexington Ave., New York 16, N. Y. Group 25—11. Reg. No. 15,551.

Pat. 2,441,461. ELECTRIC UTILITY CONNECTION. Patented May 11, 1948. An electric utility connection consists of an insulated track molding comprised of two sections and formed with slots and recesses which contain a special wire. Provides a continuous electric outlet track so a conventional electric plug can be inserted and held anywhere along the length of the molding. Connecting strips in the form of two- or three-way connections are provided to form a continuous outlet system around a room. May be stored and shipped in rolls. (Owner) Anthony Wayne, 241 Lexington Ave., New York 16, N. Y. Group 36—11. Reg. No. 15,552.

Pat. 2,446,609. RELEASABLE AIRPLANE CABIN. Patented Aug. 10, 1948. A releasable pilot and passenger compartment for an airplane, designed to permit separation of compartment from plane should plane be forcibly stopped by striking ground. Compartment, provided with wheels and supported on tracks at sides and front of fuselage, is held in position normally by an interlocking mechanism. A retractable impact plunger is positioned in the forward end of nose of fuselage, having a compression spring within the plunger extending rearwardly into the nose and abutting a fixed plate. A rod extending through plunger and spring enters the plate and engages a T-shaped head fixed on a cross shaft. Shaft has wheels on either side normally in contact with the forward floor portion of passenger compartment. Plunger is forced inwardly under impact and automatically releases the interlocking mechanism, releasing and elevating forward end of compartment so it will glide over the nose and roll on ground. (Owner) Forrest D. Reed, R. R. 1, St. Paul, Ind. Group 37—22. Reg. No. 15,553.

Pat. 2,325,971. CURRENT COLLECTOR. Patented Aug. 3, 1943. A pair of swiveled magnetic retainers are used in combination with the current collector carried on trolley poles to prevent the collector from jumping the trolley wires when sharp turns are made. The head of a circular collector is channeled to accommodate a ring that carries a tandem arrangement of electromagnetic retainers. The retainers swivel at right angles to the collector head to contact the current conductors of trolley wire and maintain sliding contact as the trolley is turning so that current is uninterrupted. (Owner) Bessie M. Newbrough, 3119 Day St., Seattle 44, Wash. Group 36—11. Reg. No. 15,554.

Pat. 2,402,078. MUFFLER. Patented June 11, 1946. Reg. No. 15,555.

Pat. 2,449,009. MUFFLER. Patented Sept. 7, 1948. Reg. No. 15,556.

These two patents show mufflers wherein gases and sound waves traveling through the mufflers are repeatedly broken up and their direction of travel repeatedly reversed before being exhausted to atmosphere. The muffler of Pat. 2,449,009 has several vertically disposed partitions dividing interior of muffler into a plurality of communicating passageways with apertured walls of partitions, providing communication between them. Flanges on the upper and lower edges of the partitions are welded to top and bottom of muffler housing, which has rows of aligned openings so that portions of flanges are exposed to the atmosphere to cool and weaken gases flowing through muffler. The muffler of Pat. 2,402,078 is divided by transverse partitions into two large and two small chambers with concentric apertured tubes mounted in the large chambers. (Owner) Carl Peters, 1554 Lafayette Ave., St. Louis 4, Mo. Groups 33—73; 38—31.

Pat. 2,449,368. TOOLHOLDER. Patented Sept. 14, 1948. An adjustable tool holder for metal working lathes. The tool rest includes a plate with a convex lower surface fitted in the concaved surface of the base plate, whereby the two plates may be easily adjusted. Upper surface of plate is formed with grooves which cooperate with an upper plate of the tool rest in clamping a parting tool or bit to the tool rest. A securing bolt extends through a central opening in plates whereby the various plates may be bolted together in securing a tool to the tool rest. Plates are held in proper position by guide pins which extend through registering openings in the upper and center plates. (Owner) Louis B. Brown, 118 North Third St., Duquesne, Pa. Group 35—43. Reg. No. 15,557.

Pat. 2,443,399. SANDING BLOCK. Patented June 15, 1948. A sanding block having two sanding surfaces. The two members are pivotally connected at one end, the free ends being attached by screws. The sanding strip is clamped between the free ends of pivoted members. A casing fitting over the major portion of block frictionally secures the members together and forms a hand grip. (Owner) Joseph Paul, 2037 North 33rd St., Milwaukee 8, Wis. Group 33—52. Reg. No. 15,558.

Pat. 2,446,770. CONSTRUCTION TOY. Patented Aug. 10, 1948. A convertible wagon-type construction toy readily assembled or disassembled by a child into a number of different toys such as wagon, pushcart, wheelbarrow, doll carriage, etc. All parts are interchangeable. The basic elements include a flat wagon bed, sides, and front and rear ends, provided with grooves and end pieces for interlocking. Front and rear axles, wheels, a yoke, and a fongue are threaded for wooden bolts and nuts. May be made of wood, metal, or plastic. All parts are of simple, rugged construction and when assembled provide a strong toy, which may be inexpensively manufactured. (Owner) John F. Kershisnik, 248 3rd Ave. North, Twin Falls, Idaho. Group 39—43. Reg. No. 15,559.

Pat. 2,448,938. SANITARY PROTECTIVE APPLIANCE. Patented Sept. 7, 1948. A protective covering which can be sealed to a body appendage. Comprises a round hollow hood-like shield and a finger-like element, folded in accordion fashion, opening from shield. Shield is provided with an adhesive layer (covered with removable gauze) on its inner face adjacent its open end and has an integral gripping lip for removing appliance. Finger-like element (having a small neck) opens out of other end of shield and is expandible. (Owner) Anthony Wayne, 241 Lexington Ave., New York 16, N. Y. Groups 30—51; 39—16. Reg. No. 15,560.

Pat. 2,442,303. INVALID'S CHAIR. Patented May 25, 1948. An automatic lifting and seating chair by the use of which a person afflicted with muscular disorder can be brought to a standing or sitting position unassisted. The seat and back are raised and lowered through a hydraulic lifting jack beneath the chair seat, manually regulated by occupant whether seated or standing. The back has a pivoted linkage with the leg frame and, when the jack is operated to lift the seat, the back is shifted perpendicularly, bringing occupant to a standing position. When the patient desires to be seated, he leans back against the seat and back, which move to a lowered position against the fluid pressure in the cylinder. (Owner) H. D. Mayfield, Box 311, Middlebourne, W. Va. Group 25—32. Reg. No. 15,561.

Pat. 2,428,627. FOCAL FIELD PERIPHERY INDICATING DEVICE IN PHOTOGRAPHIC APPARATUS. Patented Oct. 7, 1947. With this device the focal field for a photographic reproducing machine is indicated by multiple light marks projected onto the original copy table. A reflecting mirror is arranged in front of the camera objective. An incandescent lamp is positioned behind the mirror and masked thereby. Four collimator systems below the lamp have lenses concentrating light rays from the lamp in four narrow ray beams. These beams are reflected by four small mirrors, intercrossing in the principal focus of the objective, and impinge as guiding rays in the four corners of the object on the copy table. (Owners) Alfred Oschwald and Alos A. G. Correspondence to K. A. Mayr, 21 East 40th St., New York 16, N. Y. Group 39—12. Reg. No. 15,562.

Pat. 2,291,690. GEAR SHIFT. Patented Aug. 4, 1942. Reg. No. 15,563.

Pat. 2,302,005. GEAR SHIFT. Patented Nov. 17, 1942. Reg. No. 15,564.

These two patents show automatic electrical gear-shifting mechanism for automobiles. A switch may be manually set in either of two positions to selectively render the mechanism operative to shift the gears into either reverse or forward speeds. In Pat. 2,291,690 a clutch-operating foot switch is substituted for the usual clutch pedal. To start vehicle in either low or reverse, the foot switch is depressed and accelerator slightly opened, followed by release of foot switch. Shifting from low into second and high is accomplished when successive higher speeds are attained by depressing and releasing foot switch without disturbing accelerator. When it is desired to shift from high into either second or low gear without reducing speed of vehicle, a manual switch is thrown, followed by depressing and releasing foot switch to effect such shifting. To prevent drain on battery, all circuits are dead except during shifting operations. (Owner) J. Walter Caves. Correspondence to Francis P. Kelper, 11 Liberty St., Casenovia, N. Y. Groups 36—19—41; 38—31.

Des. Pat. 150,852. COMB HOLDER. Patented Sept. 7, 1948. A peacock-design comb holder. (Owner) Adam J. Gurczak, 411 Smith St., Buffalo 10, N. Y. Group 40. Reg. No. 15,565.

Pat. 2,448,313. AUTOMOBILE TIRE. Patented Aug. 31, 1948. Automobile tire is formed of separable segments, each having an inner U-shaped section to be seated on the wheel rim. Flanges on the segments have side plates bolted to them. The outer segment has a curved tread and a body part with flat sides which fit between the walls of the plates. Side flanges following the curvature of the tread overlap the outer edges of plates. A resilient tread strip is bolted into a groove in the tread of outer section. Outer section is resiliently supported on the inner section by three springs (two S-shaped leaf springs with a coil spring between them) and the sections are held on rim by bolts extending through the springs. (Owner) Curtis Hughes, General Delivery, Forest, Tex. Group 30—11. Reg. No. 15,566.

Pat. 2,424,098. TOOTH BRUSH HOLDER. Patented July 15, 1947. Tooth brush holder encloses bristle portion of brush. Handle protrudes through opening in sliding top of holder when top is in closed position. Ventilation is provided through perforations in lower side walls. (Owner) Thomas Kaskouras, 6966 South Woodlawn Ave., Chicago 37, Ill. Groups 39—81; 40. Reg. No. 15,567.

Pat. 2,449,302. THREAD FEEDING DEVICE. Patented Sept. 14, 1948. Thread-feeding device for sewing machines is designed to eliminate snapping of thread when machine is suddenly started or stopped. The device includes a felt-covered spool platform rotatively mounted on a tilted spindle that is supported in an eccentrically bored collar. A thin rod, fixed by a set screw, passes horizontally through the collar. Both ends of rod are bent upwardly, one end providing an elongated loop or thread guide and the other end fitted with a small leather pad. A spring holds the pad against platform to prevent rotation of platform when the sewing operation is stopped. However, during the sewing operation the pull on the thread counteracts the tension of the spring to hold the pad clear of platform and also permits little slack. (Owner) Stanley J. Ketterer, 4984 Fyler Ave., St. Louis 9, Mo. Group 35—83. Reg. No. 15,568.

Pat. 2,448,232. EXTENSIBLE PIPE UNION. Patented Aug. 31, 1948. Extensible union for oil well pipes consists of a pair of threadedly connected telescopic tubular sections with gland type sealing means carried on the inner section. The inner end of outer section is chamfered to provide a seat for a resilient sealing gasket, and a ball check valve is screwed into an opening in the side of this section. A ferrule-type lock nut is threaded on inner section. After sections of union are properly adjusted in installed position, a sealing compound is forced through check valve in and around the inner-engaging threads of the sections. The lock nut is then tightened to expand the gasket in its seat and lock the sections together. (Owner) William P. Muse, Route 1, Odin, Ill. Group 33—21—22—23—24—61. Reg. No. 15,569.

Pat. 2,446,288. RAIN VISOR. Patented Aug. 3, 1948. A detachable adjustable rain shield for uniform caps. A transparent plastic band encircles the upstanding sides of the cap, being deepest at the back and shallowing gradually to front ends of the band. A small panel with adjustable connecting members encircles remainder of cap. Panel is pivotally secured to one end of the band and detachably fastened to the other end. When not in use, may be rolled and carried in pocket. (Owner) Lester L. Lindley, 2310 Folsom St., San Francisco, Calif. Groups 39—81; 40. Reg. No. 15,570.

Pat. 2,449,850. AUTOMOBILE JACK. Patented Sept. 21, 1948. An automobile jack is carried as a permanent fixture of a car. A beam attached to the car bumper, axle, or the like has two oppositely extending screws rotatably supported for independent rotation. A pair of nuts slidably mounted on the beam have a pair of lever arms connected to them. To elevate a wheel, one screw is rotated advancing a nut and causing the lever arms to move downwardly, the roller contacting the supporting surface. The screw on opposite side of the jack is rotated advancing the other nut toward the center of the beam. This pushes one end of the beam upwardly, raising one wheel. (Owner) Alwin P. Huble, 40 Third St., Elmont, Long Island, N. Y. Groups 33—52; 38—31. Reg. No. 15,571.

Pat. 2,449,813. SAFETY LOWERING DEVICE FOR USE AS A FIRE ESCAPE. Patented Sept. 21, 1948. A safety device for attachment to a person for jumping from a window of a high building in case of fire. Adjustable arm straps attached to a helium tank connect with a safety belt. After proper adjustment, the wearer sits on window ledge and pulls a trip cord to open the valve of the tank, releasing an inflated balloon. As he jumps, his weight causes the valve levers to be drawn upwardly and close the valve at top of tank. (Owner) Anna Lawson, 75 West Palmer, Detroit 2, Mich. Groups 31—99; 37—21. Reg. No. 15,572.

Pat. 2,449,734. MEDICINAL ATOMIZER. Patented Sept. 21, 1948. Medicinal atomizer acts as an inhalator, in the form of a small glass bottle with a screw cap mouth portion at the top and a small screw cap air opening at side near bottom of bottle. Upon inhalation by user, air enters the atomizer and passes over the medicament contained in bottle, carrying a portion of the medicament in vapor form into the mouth. May be economically made in a small pocket size or in large sizes for use with a mechanical device. (Owner) Oscar Otto Wunsch, 60 Chester St., Alexandria, La. Groups 32—21; 39—15; 40. Reg. No. 15,573.

Pat. 2,449,496. ELECTRICAL CONNECTION. Patented Sept. 14, 1948. This electrical connection for cables, resistors, condensers, etc., has a pair of terminals with readily assembled interfitting conductors. Each terminal consists of a thin strip of flat bendable metal with a series of spaced opposed pairs of clamping fingers of uniform thickness, width, and depth. When the terminal straps are connected, the fingers of each terminal interfit and overlap at opposite sides, forming a reputedly foolproof connection. (Owner) Frank J. Matan, 4217 Rhode Island St., Gary, Ind. Group 36—11. Reg. No. 15,574.

Pat. 2,355,474. REPAIR OF VITREOUS ENAMELWARE EQUIPMENT. Patented Aug. 8, 1944. Method of repairing breaks in enamel- or glass-lined equipment produces a chemically resistant patch said to last indefinitely. The broken surface is sand or grit blasted to roughen surface. A metallic coating is then sprayed through a metallizing gun, striking the surface in the form of minute molten or semi-molten droplets. The coating is then smoothed with a wire brush and several coats of an organic resin applied with intermediate buffing to assure good adhesion. Several examples of the procedure are given in the patent. (Owner) American Cyanamid Company, 1937 West Main St., Stamford, Conn. Groups 28—89; 33—74. Reg. No. 15,575.

Pat. 2,060,146. FILING CABINET. Patented Nov. 10, 1936. An adjustable, rearwardly inclined follower plate is mounted inside drawer of this file cabinet in various ways for limited sliding movement in reverse directions during opening and closing of drawer. When drawer (of one embodiment) is closed, the follower slides forwardly and simultaneously rocks from a rearwardly to a forwardly inclined position to compress filed cards, folders, etc., inside drawer. When drawer is opened, follower returns to its normal rearwardly inclined position to permit ready access to contents. In this embodiment, the adjustable follower is pivoted for limited rocking movement on a support releasably secured to a pair of reciprocating rods positioned longitudinally beneath elevated bottom of drawer. The rods are normally spring-urged rearwardly so that when drawer is open, rear ends of rods protrude through back of drawer. As drawer is closed, back of file cabinet will push rods forward. Several modifications are shown. (Owner) Vanderveer Voorhees, Old Orchard Farm, Homewood, Ill. Group 25—22—41. Reg. No. 15,576.

Pat. 2,447,245. MEAT PATTY MOLDING AND CUTTING DEVICE. Patented Aug. 17, 1948. A device for cutting and molding food into patties. An elongated U-shaped wire frame is hingedly connected to an expansible and contractible cutting and molding ring. A centrally arranged sleeve slips on the handle of a conventional implement. Food is scooped up by the blade and the handle of the implement squeezed toward the attachment handle, pushing cutter mold against the blade. May be manufactured as a complete device or as a detachable attachment for a spatula, pancake turner, etc. In a modified form a series of cutter molds are provided. (Owner) Elmer C. Garland, P. O. Box 168, La Conner, Wash. Groups 33—51; 39—81; 40. Reg. No. 15,577.

Pat. 2,109,827. PORTABLE SURFACE GRINDING MACHINE. Patented Mar. 1, 1938. An adjustable, portable grinding tool for refacing any surface of any device (e. g., a slide valve seat of a steam chest) without dismantling the engine or pump. Journals mounted on roller carriages straddle the side members of the frame and travel upon tracks as the operator slides the motor handle longitudinally of the frame over the work or valve seat. Adjustable stops are mounted on the side members for limiting the longitudinal movement of the grinding device to regu-

late the depth of cut. In a modified form the bed of the motor is slidable on a non-rotatable, non-slidable shaft. A sleeve journaled on the shaft is received in the bearings of the motor and forms a support for the grinding tool which is slidable and rotatable on the shaft. (Owner) Edwin G. Moffett, Route 6, Box 64, Mobile, Ala. Group 35—41. Reg. No. 15,578.

Pat. 1,845,660. FLUID-MIXING APPARATUS. Patented Feb. 16, 1932. Reg. No. 15,579.

Pat. 1,845,661. FLUID-MIXING DEVICE. Patented Feb. 16, 1932. Reg. No. 15,580.

Pat. 1,985,570. MIXING APPARATUS AND CONTROL VALVE FOR USE THEREIN. Patented Dec. 25, 1934. Reg. No. 15,581.

These three patents show apparatus for producing and dispensing carbonated water. May be installed at soda fountains and connected to city water line pressure and a source of gas, or embodied in a relatively small self-contained portable unit. Each time faucet of apparatus is opened, a jet of gas and a jet of water are discharged into a mixing chamber against each other from opposite directions to create a swirling action so that the jets are thoroughly mixed immediately prior to discharge from faucet. Pat. 1,845,660 shows differential valve mechanism which is adjustable to compensate for differences in water line pressure to assure discharge of uniform velocity. Pat. 1,985,570 shows a small portable unit for home use consisting of a small water container or jug with a removably attached flask of gas and valve mechanism for automatically causing a thorough mixing operation each time faucet is opened. Two pipes extend down into and terminate near container bottom. The valve controls the admission of gas into mixing chamber on top of container and also into container through one of the pipes. Gas admitted into container bubbles upwardly through liquid and settles on top to create sufficient static pressure to force liquid upwardly through other pipe into mixing chamber each time faucet is opened. (Owner) J. Mills Newton, Box 318, Washington, D. C. Groups 20—81; 39—97.

Pat. 2,450,230. HINGED HEEL SHOE. Patented Sept. 28, 1948. As a simple way of taking shoe off and putting it on, shoe is divided at the vamp and heel portion and hinged together so that entire heel section can be swung into open position. In open position the shoe is easily removed from the foot. An adjustable spring-tensioned catch, engageable and disengageable only through angular movement of the vamp and heel, holds the heel in closed or wearing position. The shoe is of normal appearance in that the catch and leaves of the hinge are all concealed. (Owner) John R. Napton, 869 South Redman St., Marshall, Mo. Group 31—41. Reg. No. 15,582.

Pat. 2,446,188. BRIDGE TYPE MODULATOR CIRCUIT. Patented Aug. 3, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This bridge circuit is suited for use with or as a direct current amplifier, a square wave generator, a vacuum tube voltmeter, a zero-beat indicator, a modulator, or demodulator. Generally stated, an alternating voltage is impressed upon a pair of joined terminals of a bridge circuit. One of the balancing arms of the circuit includes an asymmetric conductor and a source of direct current. This is used to vary the magnitude of unbalanced alternating current traversing an output impedance in circuit between a second pair of joined terminals of the bridge. Several modifications are shown. (Owner) John M. Miller, Jr., 702 Hatherleigh Road, Baltimore 12, Md. Group 36—13. Reg. No. 15,583.

United States Government Owned Patents

The following seven WRRL patents have been assigned to the United States as represented by the Secretary of Agriculture. Licenses to practice the inventions will be issued on a royalty-free, non-exclusive, non-transferable, revocable basis. Applications for licenses should be addressed to the Bureau of Agricultural and Industrial Chemistry, U. S. Department of Agriculture, Washington 25, D. C.

Pat. 2,442,452. METHOD OF ISOLATING LYSOZYME FROM ITS NATURALLY OCCURRING MIXTURES WITH OTHER BIOLOGIC MATERIALS. Patented June 1, 1948. Patent describes process of isolating lysozyme, a proteinous substance having bacteriolytic properties, from natural sources thereof such as egg white. The process involves treatment of the egg white with an adsorbent material such as bentonite followed by elution of adsorbed lysozyme with an organic base, particularly pyridine. Group 28—31. Reg. No. 15,584.

Pat. 2,444,266. PECTIC MATERIALS AND METHOD OF PREPARING SAME. Patented June 29, 1948. This patent claims method of preparing low-methoxyl pectinic acids by partial de-esterification of pectin in citrus peel. The citrus peel is dispersed in water and subjected to controlled conditions of alkalinity and temperature whereby the enzymes present in the peel cause partial deesterification of the pectin naturally occurring in the peel. Group 20—99. Reg. No. 15,585.

Pat. 2,445,028. METHOD OF DISPERSING KERATIN PROTEINS WITH AMIDES AND THE COMPOSITION RESULTING THEREFROM. Patented July 13, 1948. Relates to solubilization of keratin materials such as feathers, hoof, horn, etc., whereby to produce products which can be used for preparation of artificial films, fibers, plastics, and the like. Process involves essentially heating the keratin in an aqueous solution containing an amide, such as urea, and a reducing agent, such as sodium bisulphite. Group 28—83. Reg. No. 15,586.

Pat. 2,445,029. METHOD OF DISPERSING KERATIN PROTEIN WITH AMMONIUM THIOCYANATE AND THE COMPOSITION RESULTING THEREFROM. Patented July 13, 1948. Relates to solubilization of keratin materials such as feathers, horn, hoof, etc., whereby to obtain products which can be used for preparation of artificial films, fibers, plastics, and the like. Process involves essentially heating the keratin in an aqueous solution containing ammonium thiocyanate and a reducing agent such as sodium bisulphite. Group 28—82. Reg. No. 15,587.

Pat. 2,445,299. DRIED EGG POWDER. Patented July 13, 1948. Patent describes process of preparing dried egg powder of superior shelf-life and aeration properties. Process involves adding an acid to the egg emulsion, drying the acidified emulsion, then adding dry sodium bicarbonate to the dry, acidified egg emulsion. When the resulting powder is mixed with water for reconstitution and ultimate use, the bicarbonate neutralizes the acid added previous to drying. Group 20—99. Reg. No. 15,588.

Pat. 2,445,881. APPARATUS FOR PEELING ONIONS, INCLUDING A CONICAL JET OF GAS. Patented July 27, 1948. Patent describes apparatus for peeling onions which involves subjecting onions to a conical, diverging, hollow jet of gas whereby the gas impinging on the surface of the onion first loosens the skin and then tears it away from the onion. Group 35—51. Reg. No. 15,589.

Pat. 2,447,860. METHOD OF DISPERSING KERATIN PROTEINS AND THE COMPOSITION RESULTING THEREFROM. Patented Aug. 24, 1948. This patent relates to solubilization of keratin materials such as feathers, horn, hoof, etc., whereby to obtain products which can be used for preparation of artificial films, fibers, plastics, and the like. Process involves heating the keratin in an aqueous solution containing guanidine and a reducing agent, such as sodium bisulphite. Group 28—83. Reg. No. 15,590.

The following patent has been assigned by the inventor, Harold Warren Laurance, to the United States of America as represented by the Secretary of the Interior. Licenses to practice the invention will be issued on a non-exclusive and royalty-free basis. Inquiries concerning licenses should be addressed to the Solicitor, U. S. Department of the Interior, Washington 25, D. C.

Pat. 2,448,533. CONSISTENCY METER. Patented Sept. 7, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A device for indicating the consistency of concrete mixture is responsive only to variations in the mix and is adjustable for different mixtures, such as baking batters, etc., in an electric mixer. The power input to the mixer motor is balanced by a differential circuit against the power input to a reference motor which operates similarly to the mixer motor. The difference between the two inputs is fed to an indicator, such as a wattmeter, by a potential transformer bank connected in the power line to the two motors. The reference motor has a controllable load which may be varied, so when the mixer is charged with a mix of proper consistency the indicator gives a predetermined reading and thereafter the indicator will show any variations. Group 36—13. Reg. No. 15,591.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 15,592 through 15,900) are the balance of Schedule 5 and part of Schedule 6, Groups 22; 23; 28; 35—32.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 5—Continued

Patents Relating to Sodium and Potassium Silicates

Pat. 1,899,576. Method of Protecting Concrete Surfaces During Curing. Feb. 28, 1933. Method of curing concrete by applying sodium silicate containing a non-precipitating amount of a non-caustic electrolyte, e. g. sodium acetate.

Pat. 1,899,590. Method of Curing Concrete. Feb. 28, 1933. Method of curing concrete by applying sodium silicate containing a non-precipitating amount of an ammonium salt, e. g. ammonium chloride.

Pat. 1,922,832. Process of Purifying Technical Sodium Metasilicate Hydrates. Aug. 15, 1933. Add high $SiO_2 : Na_2O$ silicate to low ore (containing free alkali) to make metasilicate 1 : 1 ratio.

Pat. 1,931,364. Process of Purifying Technical Sodium Pyrosilicate Hydrates. Oct. 17, 1933. Pyrosilicate with free alkali, viz $Na_2O : SiO_2$ more than 3 : 2 adjusted with solution of higher SiO_2 than 3 : 2.

Pat. 1,942,299. Adhesive and Film Forming Composition. Jan. 2, 1934. Silicate adhesive with wetting agent viz naphthalene sulfonic acids, sulfonic acids, etc.

Pat. 1,949,914. Water-Resistant Alkaline Silicate Compositions. Mar. 6, 1934. Silicate adhesive including metal-amino salt specifically Cu, Zn, or Cu metal-amino sulfate or chloride.

Pat. 1,953,839. Crystallization of Sodium Metasilicate Hydrates. Apr. 3, 1934. In a process of preparing a hydrated crystalline sodium metasilicate, the steps which comprise preparing a hot, concentrated solution of sodium metasilicate containing at least 25 grs. NaOH per 100 cc., cooling said solution to a temperature of between +25 to +55° C. and correlating crystallization temperature to free caustic in the solution so that for each 5° C. drop in the crystallization temperature below 55° C. there is an increase of 2 grs. NaOH per 100 cc. of solution above 25 grams.

Pat. 1,953,840. Process of Making Sodium Pyrosilicate Hydrate. Apr. 3, 1934. In a process of making a sodium pyrosilicate hydrate the steps of preparing a concentrated, hot, aqueous solution of sodium hydrosilicate containing an excess of at least about 23 grams of NaOH per 100 cc. and cooling said solution to precipitate a pyrosilicate hydrate.

Pat. 2,018,632. Process of Making an Easily Water-Soluble Alkali Metal Metasilicate. Oct. 22, 1935. To molten sodium metasilicate hydrate add decomposable peroxide specifically H_2O_2.

Pat. 2,045,153. Solutions of Alkali Metal Silicates. June 23, 1936. Adhesive compound silicate plus sulfonated-type wetting agent.

Pat. 2,086,230. Manufacture of Solutions. July 6, 1937. Clear silicate solution by dissolving with no blowing, no boiling, high pressure.

Pat. 2,111,131. Sodium silicate Adhesives. Mar. 15, 1938. Add zinc oxide to sodium silicate by the use of pressure.

Pat. 2,232,162. Process of Producing an Alkali-Metal Silicate-Clay Adhesive. Feb. 18, 1941. Clay is suspended with agitation with or without a deflocculating agent such as a small amount of sodium silicate and the clay is added to a dilute silicate solution.

Pat. 2,287,410. Adhesive. June 23, 1942. Clay slips made with TSP and TSPP is added to sodium silicate adhesive. Extent and character of deflocculation is defined as are the rheological properties, thixotropy, etc. of the adhesive produced.

Pat. 2,287,411. Adhesive. June 23, 1942. Stable silicate-clay adhesives prepared by autoclaving a mixture of sodium silicate, water and clay.

Pat. 2,317,436. Color-Coating Cellulosic Materials. Apr. 27, 1943. A dye dissolved in sodium silicate which is to be used for coating paper.

Pat. 2,344,621. Weld-Rod Coating. Mar. 21, 1944. A welding rod coated with a material comprising potassium silicate having an $SiO_2 : K_2O$ mol ratio of 3.25.

Pat. 2,349,698. Fiberboard. May 23, 1944. A sheet to be corrugated is coated with silicate in such small amounts and in such a way that the ratio between the per cent silicate on the outside is 0.002 in. and the next 0.002 in. is less than 3. A sheet so coated can be corrugated.

Pat. 2,387,367. Silicate Base Adhesive. Oct. 23, 1945. A plasticized hydrocarbon resin and a wetting agent are added to a silicate to produce a resin-silicate adhesive. Dibutyl phthalate may be used to plasticize an indene-coumarone resin or asphalt.

Pat. 2,420,602. Electrolytic Cleaning Process. May 13, 1947. Removing mineral oil from ferrous metals by electrocleaning in a silicate detergent solution containing sodium silicate having an SiO_2/Na_2O ratio of 1.9 to 2.4.

Patents Relating to Sulfamic Acid and Sulfamates

Pat. 2,150,961. Tanning. Mar. 21, 1939. Sulfamic acid or acidic sulfamate used to delime or pickle hides.

Pat. 2,165,870. Production of Leather. July 11, 1939. Sulfamates of Cr, Al, Fe, Ti used for tanning.

Pat. 2,184,538. Composition of Matter and Processes for the Manufacture of the Same. Dec. 26, 1939. Titanyl sulfamate as a new composition of matter.

Pat. 2,188,351. N-Substituted Sulfamate. Jan. 30, 1940. N-substituted alkali metal sulfamate; specifically, sodium sulfamate, and process for preparing in ammonia.

Pat. 2,201,762. Sulphamic Acid Salts of Polymeric Amino Compounds. May 21, 1940. Sulphamates of amino polymers.

Pat. 2,212,152. Flameproof Composition. Aug. 20, 1940. Fire resistant cellulosic material containing as a fire retardant the water soluble fusion product of urea and sulfamic acid.

Pat. 2,212,171. Amine-Sulphamic Acid Addition Product. Aug. 20, 1940. Addition products of sulfamic acid and long-chain primary alkyl monoamines.

Pat. 2,220,451. Composition. Nov. 5, 1940. Sulfamic acid used for cleaning metals.

Pat. 2,225,294. Cleaning Process. Dec. 17, 1940. Sulfamic acid or acidic sulfamate for cleaning calcareous deposits from boiler tubes, dairy equipment wells, or walls.

Pat. 2,236,513. Fire Extinguisher. Apr. 1, 1941. Sulfamic acid is used with a carbonate or a nitrite for fire extinguishers.

Pat. 2,274,252. Compositions. Feb. 24, 1942. Inflating compositions containing sulfamic acid.

Pat. 2,277,744. Pest Control. Mar. 31, 1942. Sulfamic acid and its salts are used as weed killers.

Pat. 2,407,255. Dust Collecting Composition and Method. Sept. 10, 1946. Dust collecting composition comprising glyceryl ammonium sulfate and water.

Patents Relating to Sulfuric Acid

Pat. 1,914,458. Promotion of Catalysts. June 20, 1933. Use of sulfates of barium, thorium, cerium, iron or copper as a promoter for catalyst carriers such as asbestos or magnesium sulfate.

Pat. 1,914,835. Promoted Catalyst and Method of Making the Same. June 20, 1933. Magnesium sulfate catalyst promoted with sulfate of alkaline earth metal, iron, tantalum, or cerium, specifically ferric sulfate.

Pat. 1,949,933. Sulphur Burner. Mar. 6, 1934. Rotary Sulfur Burner with long, inwardly directed spikes.

Pat. 1,980,829. Purification and Regeneration of Platinum Catalysts. Nov. 13, 1934. Treat platinized magnesium sulfate with a volatile reducing agent, specifically formaldehyde, allyl alcohol, etc.

Pat. 2,006,221. Regeneration of Platinum Catalysts. June 25, 1935. Treat spent platinum catalyst with carboxylic acid, specifically acetic or benzoic acid.

Pat. 2,006,222. Treatment of Platinum Contact Masses. June 25, 1935. Regenerate spent platinized magnesium sulfate mass by spraying with formic acid.

Pat. 2,031,787. Sulfuric Acid Contact Process. Feb. 25, 1936. Platinum catalyst carrier containing magnesium sulfate and aluminum and ferric sulfates.

Pat. 2,071,987. Silicic Acid Gels. Feb. 23, 1937. Process of making silica gel catalyst support, carbonate added, later dissolved out.

Pat. 2,086,201. Ore Roasting. July 6, 1937. Roast pyrites with hot air to get molten iron oxides which can be drawn off molten.

Pat. 2,127,561. Heat Exchange Catalytic Converter. Aug. 23, 1938. The catalyst is directly heated rather than by heating the gas.

Pat. 2,173,916. Manufacture of Sulfuric Acid. Sept. 26, 1939. Platinized silica catalyst in first converter, regular platinized magnesium sulfate catalyst in second.

Pat. 2,195,738. Catalytic Converter. Apr. 2, 1940. Isolantite rings substituted for iron screen as support for catalyst in converters.

Pat. 2,207,364. Manufacture of Sulfuric Acid. July 9, 1940. Coal brasses pre-roasted to remove volatile carbon. Any sulfur distilled over is recovered as such or is burned to SO_2.

Pat. 2,240,921. Chemical Apparatus. May 6, 1941. An auxiliary spray is provided to prevent SO_2 escaping from a chamber when the regular spray is removed.

Pat. 2,246,666. Process for Storing Sulfur. June 24, 1941. Sulfur pile covered with molten sulfur to prevent sulfur blowing away.

Pat. 2,246,684. Catalytic Converter. June 24, 1941. Metal plates carry catalyst in heat exchange converter.

Pat. 2,281,762. Process of Producing Sulphur Trioxide and Oxygen. May 5, 1942. SO_2 converted to SO_3 adsorbed in water, expelled from the water, decomposed to $SO_2 + O_2$ and the SO_2 adsorbed in a citrate solution finally to produce pure O_2.

Pat. 2,283,228. Process and Apparatus for Burning Sulfur. May 19, 1942. Sulfur is burned on a sloping shelf.

Pat. 2,285,170. Sulfur Burner. June 2, 1942. Sulfur burner provided with especially designed clean-out box.

Pat. 2,295,605. Sulfuric Acid Manufacture. Sept. 15, 1942. Sulfur purification, burn, convert without intermediate purification.

Pat. 2,300,849. Sulfuric Acid Manufacture and Apparatus Therefor. Nov. 3, 1942. Processes and apparatus involving holding filter cake in place with a gas and then washing back to remove it.

Pat. 2,344,616. Manufacture of Sulfuric Acid. Mar. 21, 1944. Reduce water in gas to cold tower by closer control. The H_2O addition is controlled by reference to the gravity of acid condensed in flue to cold water.

Pat. 2,355,702. Removal of Nitrogen Oxide From Sulphuric Acid. Aug. 15, 1944. Sulfamates are added to 50° and 60° acid to remove nitre. Treatment is effective in the cold for these acids but not for acids of greater strength.

Pat. 2,357,195. Contact Process for Manufacturing Sulphuric Acid. Aug. 29, 1944. Wet purified SO_2 gas is partially dried with acid concentrated in cooling tower.

Pat. 2,364,213. Manufacture of Sulphuric Acid by the Contact Process. Dec. 5, 1944. Chamber acid is added to the drying towers of a contact set where the water removed from the gases dilutes it so that lead sulfate is precipitated. The chamber acid is fortified to make a lead-free concentrated H_2SO_4.

Pat. 2,381,908. Process of Making Sulphur Trioxide and Catalyst Therefor. Aug. 14, 1945. SO_2—Cl_2—O_2 mixture is oxidized by passing thru sodium bisulfate which contains vanadium pentoxide.

Pat. 2,402,553. Sulfuric Acid Manufacture and Apparatus Therefor. June 25, 1946. A shut-off for filtered sulfur is provided so that in the event of filter failure impure sulfur will not go into the system.

Pat. 2,403,459. Chemical Process. July 9, 1946. Stabilizing sulfur trioxide with thionyl chloride.

Pat. 2,415,142. Manufacture of High Strength Sulfuric Acid. Feb. 4, 1947. In contact process manufacture of high strength sulfuric acid, drying the inlet gas with sulfuric acid, then drying the spent sulfuric acid with exit gas and returning the dried sulfuric acid for drying the inlet gas.

Patents Relating to Tanning Agents

Pat. 2,205,901. Tanning. June 25, 1940. Leather tanned with polymers of methacrylic acid subjected to alums; specifically aluminum sulfate.

Patents Relating to Water Repellents

Pat. 2,359,858. Water-Resistant Starch and Paper Containing It. Oct. 10, 1944. Stearate chromic chloride is used to increase the water resistance of various starch compositions such as adhesives and coatings.

Pat. 2,381,752. Process of Insolubilizing Protein and Product. Aug. 7, 1945. A solution of glue to which has been added stearate chromic chloride can be used for coating paper to make it oilproof. Wax-glue-stearate chromic chloride emulsion can also be used.

Pat. 2,401,645. Chemical Processes and Products. June 4, 1946. Chromic chloride-glue reaction product. Glue or another protein is treated with a water-soluble chromic salt such as chromic-chloride while both are in solution.

Patents Relating to Zinc and Zinc Dust

Pat. 2,007,027. Apparatus and Process for the Manufacture of Zinc Dust. July 2, 1935. Zinc dust condensers interconnected to permit equalized pressures.

Pat. 2,131,074. Agglomerating Comminuted Zinciferous Materials. Sept. 27, 1938. Comminuted zinciferous material mixed with wetting agent, kneaded, vacuum extruded to form agglomerates.

Pat. 2,164,950. Process for Forming Agglomerates. July 4, 1939. Vacuum extrudes a plasticized comminuted mineral material.

Pat. 2,420,625. Metal Handling. May 13, 1947. Assembly of interlocking metal slabs for handling and shipping as a unit, e. g. zinc slabs.

Patents Relating to Zinc Salts and Ammonium Chloride

Pat. 1,936,811. Production of Leaded Ammonium Chloride Crystals. Nov. 28, 1933. Crystallize ammonium chloride from alkaline solution containing lead—treat leaded ammonium chloride with acidified ammonium chloride.

Pat. 1,974,436. Flux for Use in Soldering. Sept. 25, 1934. Soldering flux containing zinc chloride and a long chain alcohol sulfate.

Pat. 2,017,930. Purification of Zinc Salt Solutions. Oct. 22, 1935. Add hydrofluosilicic acid then neutral zinc compound or add zinc fluosilicate to zinc salt solution to purify a compound of alkali or alkaline earth metal.

Pat. 2,031,913. Zinc Chloride Base Flux. Feb. 25, 1936. Soldering flux compound $ZnCl_2$ and oxidizing agent, specifically sodium chlorate and sodium nitrate.

Pat. 2,121,399. Process for Production of Zinc Sulfate. June 21, 1938. Keep solution acid when concentrating $ZnSO_4$ solution to get neutral product and dry crystals with adhering mother liquor.

Pat. 2,166,253. Zinc Chloride. July 18, 1939. Citric or tartaric acid added to $ZnCl_2$ to prevent turbidity of solutions.

Pat. 2,369,270. Process for Removing Iron From Zinc Salts. Feb. 13, 1945. The removal of iron from zinc chloride or zinc sulfate solutions is effected by a slow addition of the oxidizer thus producing an insoluble ferric iron precipitate which is readily filterable.

Miscellaneous Patents Not Specifically Classified

Pat. 1,905,833. Nonhygroscopic Composition Comprising Aluminum Sulfate and an Acid Salt. Apr. 25, 1933. Producing nonhygroscopic acid sulfate of aluminum by coating with sodium carbonate and thereafter incorporating with aluminum sulfate.

Pat. 1,916,327. Process for Preparing Organic Fluorine Compounds. July 4, 1933. Making organic fluorine compounds by precipitating an organic diazonium borofluoride from solutions of specified H ion concentration and converting to organic fluoride.

Pat. 1,936,806. Process of Making Strontium Carbonate. Nov. 28, 1933. Ball mill celestite (in Na_2CO_3 separate sodium sulfate solution regrind the solid).

Pat. 1,936,829. Process of Making Nickel Sulfate. Nov. 28, 1933. Producing nickel sulfate by attacking nickel-containing metal with hot sulfuric acid and air under superatmospheric pressure.

Pat. 1,936,830. Process of Making Cadmium Sulfate. Nov. 28, 1933. Producing cadmium sulfate by attacking cadmium metal with hot sulfuric acid and air under superatmospheric pressure.

Pat. 1,944,274. Process of Treating Chemical Compounds. Jan. 23, 1934. Purifying and stabilizing silicon esters with olefine oxides.

Pat. 1,949,916. Soldering Flux. Mar. 6, 1934. Compound hydrochloride of organic (aliphatic) amine specifically aniline or ethanolamine, also $ZnCl_2$ or rosin.

Pat. 1,949,927. Process of Making the Sulfates of Copper and Zinc. Mar. 6, 1934. Producing copper sulfate by attacking brass with sulfuric acid and air under superatmospheric pressure.

Pat. 1,949,928. Process of Making Copper Sulfate From Metallic Copper and Its Alloys. Mar. 6, 1934. Producing copper sulfate by attacking copper-containing metal with sulfur dioxide and air under superatmospheric pressure.

Pat. 1,949,929. Dissolving Cadmium Metal in Sulfuric Acid in the Presence of Metallic Iron. Mar. 6, 1934. Producing cadmium sulfate by attacking cadmium metal with hot sulfuric acid in the presence of metallic iron.

Pat. 1,980,791. Apparatus for Separation of Gases. Nov. 13, 1934. Separation of gases by liquefaction—specific structure permits expansion and contraction.

Pat. 1,986,495. Molecular Addition Compounds of Manganese Nitrate, Urea and Water. Jan. 1, 1935. Crystalline manganese nitrate, water and urea compound having a melting point 40° +, e. g. 1 $Mn(NO_3)_2$, 3 to 6 H_2O and 1 to 3 $CO(NH_2)_2$.

Pat. 1,990,273. Soldering Flux. Feb. 5, 1935. Glucamine soldering flux.

Pat. 1,998,605. Flaked Sodium Bisulphate Composition. Apr. 23, 1935. Flake sodium bisulfate comprising particles embedded in a matrix of solid adhesive and process of making.

Pat. 2,008,003. Lead Phenolate and Method of Making Same. July 16, 1935. Lead phenolates and their preparation from lead hydrocarbons and phenol.

Pat. 2,017,980. Crystallization of Manganese Nitrate Hydrate. Oct. 22, 1935. Add solid CO_2 to manganese nitrate hydrate and stir to form crystalline product "resembling" snow.

Pat. 2,018,633. Flaked Sodium Chloride Composition. Oct. 22, 1935. NaCl flakes include adhesive specifically starch, gums, glues, goulac, etc.

Pat. 2,031,494. Welding Rod Coating. Feb. 18, 1936. Welding compound. $FeO.xMeO.ySiO_2$, Me being Ca or Ba.

Pat. 2,034,070. Cleaning Composition. Mar. 17, 1936. Globular or flake cleaning compound comprising sodium bisulfate and heat treated magnesium chloride having surface film of basic magnesium compound.

Pat. 2,036,249. Preparation of Halogen Alkane-Sulfonic Acids. Apr. 7, 1936. Making haloalkane sulfonic acids from concentrated hydrogen halides and olefine-SO_3 reaction products.

Pat. 2,044,940. Preparation of a Soluble Phosphate. June 23, 1936. Treat H_3PO_4 with BaS and $BaCO_3$, filter, add mother and ammoniate to ⅙ part mono, filter, add $KMnO_4$, filter, concentrate, ammoniate, crystallize and return mother.

Pat. 2,044,946. Leather Tanning. June 23, 1936. Tanning drum with 3 inch pins on heads.

Pat. 2,048,799. Silicone Esters of Modified Polyhydroxy Alcohols. July 28, 1936. Orthósilicates of partially etherified or esterified polyhydric alcohols.

Pat. 2,068,151. Paper Manufacture. Jan. 19, 1937. Add introfier, specifically turpentine, to alkaline straw cooking medium.

Pat. 2,070,634. Xanthic Formates. Feb. 16, 1937. Aliphatic, xanthic and amide esters of xanthic formic acid.

Pat. 2,071,998. Separation of Liquids From Solids. Feb. 23, 1937. Tiltable drain box for obtaining dryer crystals, particularly of Glauber's salt.

Pat. 2,073,010. Halogenated Aralkyl-Aryl Ethers. Mar. 9, 1937. Halogenated benzyl phenyl ethers containing 2 or more halogens in each aromatic ring.

Pat. 2,097,486. Fire Extinguishing Composition. Nov. 2, 1937. Concentrated steep water as foaming agent in fire extinguishing compositions.

Pat. 2,097,509. Fireproofing. Nov. 2, 1937. Urea used to prevent "creeping" of fireproofing solutions.

Pat. 2,111,199. Flash Copper Coating. Mar. 15, 1938. Add inhibitor to H_2SO_4–$CuSO_4$ solution for flash copper coating.

Pat. 2,124,605. Alkyl Chlorides. July 26, 1938. Process for making alkyl chlorides of at least 8 carbon atoms, react the alcohol with dry HCl gas above 100° C.

Pat. 2,135,029. Impregnation of Porous Materials. Nov. 1, 1938. Solvents which boil at less than 5° C. used as menstrum for the impregnation of wood.

Pat. 2,135,030. Treatment of Wood. Nov. 1, 1938. Low boiling solvents as dimethyl ether, propane, etc. for impregnation of porous materials.

Pat. 2,138,997. Submerged Centrifugal Pump. Dec. 6, 1938. Submerged pump with impeller floating so there is no bearing to be attacked by acid.

Pat. 2,143,004. Cast Concrete Article Having a Glossy Surface Resistant to Water Spotting, and Method of Making. Jan. 10, 1939. Glazed concrete—fluosilicates of Mg, Cd, Zn, Na, NH_3, Li, K, Fe, Co, Ni, Cu.

Pat. 2,148,951. Organic Starch Derivatives and Process. Feb. 28, 1939. Soluble cross linked starches.

Pat. 2,151,369. N-Cyclopentylamides of Carboxylic Acids. Mar. 21, 1939. N-cyclopentylamides of aliphatic monocarboxylic acids.

Pat. 2,151,380. Amides of Acids of Phosphorus. Mar. 21, 1939. Phosphonamides and their preparation.

Pat. 2,182,524. Adhesive. Dec. 5, 1939. Ungelatinized starch suspended in deacetylated chitin for boxboard adhesive.

Pat. 2,194,518. Barrel. Mar. 26, 1940. Barrel hoops are treated with phosphoric acid to prevent rusting and to prevent slipping.

Pat. 2,195,715. Composition and Process for Making Leather. Apr. 2, 1940. A soluble titanium compound in form of Werner Complex in acidic solution used to tan leather and fixed in situ by reducing acidity.

Pat. 2,220,153. Ring-Roll Crusher. Nov. 5, 1940. Crusher with bearings of inner roll spring mounted.

Pat. 2,240,934. Manufacture of Beta-Diketones. May 6, 1941. Fatty acid ester (ethyl acetate) and methyl ketone (acetone condensed with metallic sodium under following conditions: Inert liquid (xylol); inert atmosphere (nitrogen); 40–50° C.; reflux reaction mixture. Sodium enolates of beta-diketones (sodium acetylacetonate). The intermediaries in the manufacture of the corresponding chelate cupric enolates are thus formed.

Pat. 2,268,556. Fire Retardant Textile. Jan. 6, 1942. Phytates as fire retardants.

Pat. 2,271,400. Mercaptothiazine Spiro Compounds and Process of Making Same. Jan. 27, 1942. Sulfur-nitrogen compounds from alicyclic ketones, ammonia and carbon bisulfide.

Pat. 2,280,578. Amides of Aliphatic Polycarbothionic Acids. Apr. 21, 1942. Amides of aliphatic polycarbothionic acids.

Pat. 2,286,125. Chemical Process. June 9, 1942. Glyoxal sulfate and a slightly soluble metal carbonate is triturated with cold water. The resulting metallic sulfate is removed by filtration to produce monomeric glyoxal.

Pat. 2,288,976. N-Chloro, N-Hydrocarbon Substituted Sulphamates. July 7, 1942. Nitrogen chlorinated sulphamates

$$R{-}\underset{\displaystyle Cl}{\underset{|}{N}}{-}SO_2{-}X$$

A specific example contains the cyclohexyl nitrogen-chlorinated sodium sulphamate.

Pat. 2,304,624. 5-Substituted Tetrahydrotriazone. Dec. 8, 1942. Tetrahydro-5-(beta-hydroxyethyl)-s-triazone.

Pat. 2,307,045. Process of Producing Water-Repellent Polysaccharides and Product. Jan. 5, 1943. Cellulosic materials waterproofed with tetrachlorides of group IV, sub-group 2, oxychlorides of group VI, sub-group 1, by heating the treated materials to 100–200° C. Typical compounds chromyl-chloride, molybdenum, tungsten, or uranium oxychloride of group VI and silicon germanium, tin or lead tetrachlorides from group IV.

Pat. 2,315,626. Color-Stable Molasses. Apr. 6, 1943. Color of molasses stabilized by adding formic acid, urea, sodium thiosulfate, benzaldehyde, alpha-naphthol, benzene phosphoric acid, or lead acetate.

Pat. 2,321,620. Phenolic Compounds. June 15, 1943. Long chain di(hydroxyaryl) alkanes and their preparation.

Pat. 2,323,111. Process and Product. June 29, 1943. N-(alkylthiomethyl) amides of aliphatic monocarboxylic acids.

Pat. 2,347,031. Air Filter. Apr. 18, 1944. Glyceryl ammonium sulfate (CH_2OH $CHOH$ CH_2OSO_3 NH_4) prepared by reacting glycerine with sulfamic acid used as a dust collecting liquid for air filters.

Pat. 2,357,943. Chemical Apparatus. Sept. 12, 1944. Two filter tubes of half length are used instead of the customary single tube. A rubber gasket is placed between the half length tube. Perforated pipes are installed to permit back-washing immediately above the lower tube.

Pat. 2,365,466. Organic Compounds. Dec. 19, 1944. Alpha-unsaturated alkene phosphonic acid dichlorides.

Pat. 2,383,752. Chemical Process. Aug. 28, 1945. Paraffin hydrocarbon and sulfur trioxide are reacted in the gas phase. SO_2, N_2, or air may be used as diluents.

Pat. 2,391,631. Compositions and Processes. Dec. 25, 1945. Mineral oil containing sulfonated castor oil, tricresyl phosphate, and lorol phosphate can be used as an EP lubricant. The oil can be removed by the use of a silicate detergent.

Pat. 2,402,560. Addition Products of Thiolacetic Acid. June 25, 1946. Addition product of thiolacetic acid and di- or tri-isobutylene.

Pat. 2,402,604. Polymeric Hydroxamic Acids. June 25, 1946. Polymeric hydroxamic acids from hydroxylamine and maleic anhydride interpolymers.

Pat. 2,423,359. Diazonium Fluosilicates. July 1, 1947. Benzene diazonium fluosilicates.

Pat. 2,434,099. Halogenophenylthio-2,3-Epoxypropanes and Halogenophenylthio-2,3-Propanediols. Jan. 6, 1948. 1-halogenophenylthio-2,3-propanediols and the corresponding 2,3-epoxypropanes.

Pat. 2,434,100. 2-Carboxy-Halogeno-1,4-Thiachromanone. Jan. 6, 1948. 2-carboxy-6-halogeno-1,4-thiachromanones.

Pat. 2,436,141. Dialkyl Esters of Long-Chain Alkylphosphonates. Feb. 17, 1948. The chemical compound diethyl dodecylphosphonate useful as insecticide, extreme pressure lubricant and surface active agent.

Pat. 2,438,200. N,N'-Bis(Diethylaminopropylamide) of Dibasic Aliphatic Acids. Mar. 23, 1948. N,N'-bis(3-diethylaminopropylamides) of acids in the adipic-sebacic series.

SCHEDULE 6

Patents Relating to the Preparation of Cellulose Acetate and Intermediates

Pat. 1,986,322. Method of Purifying a Mixture of Acetaldehyde and Acetic Anhydride. Jan. 1, 1935. Acetaldehyde and acetic anhydride vapors, resulting from the splitting of ethylidene diacetate in the presence of a halogen compound, are brought into contact with potassium acetate to prevent subsequent polymerization of the acetaldehyde.

Pat. 2,073,853. Cellulose Esters and Production of Same. Mar. 16, 1937. The production of cellulose acetate capable of yielding solutions and films which are substantially free from haze is accomplished by washing with water, having an A. P. H. A. turbidity below 0.9, which has preferably been treated with an alkaline earth carbonate.

Pat. 2,138,582. Recovery of Lower Aliphatic Acids. Nov. 29, 1938. An improved method for rapidly treating the dilute acetic acid solution, resulting from the partial hydrolysis of cellulose triacetate to produce an acetone soluble material, by employing elevated temperature and super-atmospheric pressure to convert cellulose derivative contaminants into non-interfering water soluble form before recovery of the acetic acid by ether extraction.

Pat. 2,139,445. Method and Apparatus for Drying. Dec. 6, 1938. An improved continuous rotary vacuum drum dryer of the Oliver type characterized by the maintenance of substantially equal air pressure on either side of the doctor knife.

Pat. 2,164,416. Process for the Production of Cellulosic Products. July 4, 1939. Cellulose in the form of dense wood-pulp sheets is rendered readily esterifiable to the usual reagents, by a hot wet disintegration pretreatment with a lower aliphatic acid.

Pat. 2,169,369. Process for Scrubbing Gases Containing Low Boiling Aldehydes. Aug. 15, 1939. In the oxidation of acetaldehyde to acetic acid, the prevention of foam formation during scrubbing of the exit gases from the oxidizer to recover acetaldehyde and acetic acid, by the addition of a small amount of soap to the scrubber liquid.

Pat. 2,172,447. Increasing the Reactivity of Cellulose to Esterification Reagents. Sept. 12, 1939. An aqueous salt solution pretreatment, particularly with triethanolamine perchlorate, of wood pulp or cotton linters to increase the reactivity of the cellulose to subsequent acetylation and to improve the filterability and clarity of resulting cellulose acetate solutions.

Pat. 2,201,502. Fractionating Column. May 21, 1940. A sieve-plate fractionating column of improved efficiency, productive capacity and stability of operation for separating the components of solutions, for example, acetic acid–water.

Pat. 2,244,295. Stabilizing Cellulose Ester. June 3, 1941. Production of cellulose acetate of low sulfate content suitable for use in molding powder by use of a small amount of sulfuric acid as the acetylation catalyst and partially saponifying the resulting triacetate without use of additional catalyst.

Pat. 2,254,212. Catalyst and Process for Producing Vinyl Acetate and Ethylidene Diacetate. Sept. 2, 1941. The use of methane trisulfonic acid as a catalyst for the formation of vinyl acetate and ethylidene diacetate from acetylene and acetic acid at faster rates and in improved yields.

Pat. 2,264,789. Chemical Process for Splitting of Ethylidene Diacetate. Dec. 2, 1941. In the splitting of ethylidene diacetate to produce acetaldehyde and acetic anhydride in the presence of zinc halide as a catalyst, the use of a modifier, comprising zinc derivatives of organic compounds wherein the zinc is directly attached to carbon or nitrogen, for the purpose of reducing the formation of tarry by-products without inhibiting the rate of splitting.

Pat. 2,264,812. Chemical Process for Splitting of Ethylidene Diacetate. Dec. 2, 1941. In the splitting of ethylidene diacetate to produce acetaldehyde and acetic anhydride in the presence of zinc halide as a catalyst, the use of a buffer or modifier, specifically zinc acetamide, to reduce the formation of tarry by-products without inhibiting the rate of splitting.

Pat. 2,278,831. Purification of Aliphatic Acids and Anhydrides. Apr. 7, 1942. Purification of aliphatic acids and anhydrides by treatment with yellow phosphorus to remove impurities which impair color and clarity of cellulose acetate derivatives made therefrom.

Pat. 2,293,160. Portable Container for Calcium Carbide and the Like. Aug. 18, 1942. A portable gas-tight shipping container for calcium carbide which can be used as a bin for feeding an acetylene generator.

Pat. 2,300,180. Stabilizing Cellulose Esters. Oct. 27, 1942. To produce cellulose acetate of improved stability for use in molding powder in compression and injection molding processes, the steps of washing the precipitated cellulose acetate with hard water, preferably containing magnesium carbonate and then for a short time with mineral-free water to remove any free salts remaining from the first wash.

Pat. 2,333,701. Acid. Nov. 9, 1943. An improved method for making methane trisulfonic acid, useful as a catalyst for the production of vinyl and ethylidene esters from acetylene and acetic acid, wherein acetic acid or acetic anhydride is added to oleum.

Pat. 2,343,950. Stabilization of Vinyl Esters. Mar. 14, 1944. Stabilizing vinyl esters against polymerization by treating with an anhydrous ammonium salt such as fused ammonium acetate.

Pat. 2,346,210. Method for Improving Organic Derivatives of Cellulose. Apr. 11, 1944. Dry pressing cellulose acetate to produce material of high density.

Pat. 2,351,658. Stabilization of Vinyl Esters. June 20, 1944. The use of quaternary ammonium compounds in stabilizing vinyl acetate against polymerization.

Pat. 2,351,664. Manufacture of Esters. June 20, 1944. The addition of quaternary onium compounds to the absorber liquor, used in the manufacture of vinyl and ethylidene esters from acetylene and acetic acid, to reduce tar formation.

Pat. 2,352,253. Purification of Aliphatic Acids and Anhydrides. June 27, 1944. Purification of aliphatic acids and anhydrides by treatment with sulfuric acid to remove impurities which color and otherwise deleteriously affect the anhydride and products, particularly cellulose acetate, produced therefrom.

Pat. 2,361,994. Manufacture of Esters. Nov. 7, 1944. Reducing the formation of tars in the manufacture of vinyl and ethylidene esters by the reaction of acetylene on a carboxylic acid, by the addition of cacodyl oxide to the reaction mixture.

Pat. 2,413,038. Stabilized Acetaldehyde and Method. Dec. 24, 1946. A method for inhibiting polymerization of acetaldehyde during storage and distillation which comprises incorporation therein a small amount of metal resinate.

Pat. 2,416,524. Composite Filtering Medium and Method of Filtering. Feb. 25, 1947. An improved filter medium especially adapted for the filtration of cellulosic solutions, comprised of a layer of relatively strong finely woven fabric overlain with a self-sustaining layer of sheeted felted cellulose fibers, then a layer of sheeted cellulose wadding and finally with a facing layer of loosely woven textile material such as gauze.

Patents Relating to Esters, Ethers, Mixed Esters and Other Cellulose Derivatives

Pat. 1,945,310. Esterification of Cellulose and Cellulosic Material. Jan. 30, 1934. Cellulose esters are prepared by reacting cellulose or its partial alkyl ethers or acyl esters with an acetylating agent in the presence of anhydrous hydrogen halides.

Pat. 1,987,672. Preparation of Benzyl Cellulose. Jan. 15, 1935. Preparation and purification of benzyl cellulose by dispersing in benzyl alcohol or other suitable liquid and precipitating the ether.

Pat. 1,990,483. Chemical Compound and Process of Making Same. Feb. 12, 1935. Preparation of mixed esters from polyhydric alcohols, by reacting with ketene, and an organic acid other than acetic, particularly cellulose mixed esters.

Pat. 2,016,299. Carbohydrate Derivative and Process of Making the Same. Oct. 8, 1935. Making sulfuric acid derivatives of carbohydrates from sulfur trioxide and a carbohydrate in the presence of a tertiary amine such as pyridine.

Pat. 2,025,073. Cellulose Derivative and Method of Making the Same. Dec. 24, 1935. Making cellulose sulfuric acid from a mixture of cellulose with pyrosulfuric acid or chlorosulfonic acid and concentrated sulfuric acid in the presence of a tertiary amine.

Pat. 2,033,787. Carbohydrate Derivatives and Process of Making the Same. Mar. 10, 1936. Sulfuric acid derivatives of carbohydrates and their preparation by reacting the carbohydrate with a preformed mixture of a sulfonating material, as chlorosulfonic acid, a tertiary amine, and a diluent inert to the chlorosulfonic acid, tertiary amine mixture and to the cellulosic substance.

Pat. 2,047,952. Cellulose Ether. July 21, 1936. Negative substituted unsaturated cellulose ether whose ether group contains at least three carbons is prepared from the reaction between cellulose, in the presence of an alkali metal hydroxide base at between 70 to 160° C., with a negatively substituted unsaturated olefinic halide.

Pat. 2,053,280. Production of Cellulose Derivatives. Sept. 8, 1936. Acetylating a partially substituted cellulose ester or ether with ketene.

Pat. 2,060,056. New Cellulose Glycolic Acid and Process for Preparing Same. Nov. 10, 1936. The preparation of low substituted cellulose glycolic acids, soluble in dilute alkali below 0° C. by reacting cellulose with an alkali metal salt of a haloacetic acid.

Pat. 2,069,974. Cellulose Esters and Process of Preparing Them. Feb. 9, 1937. Preparation of an alkali soluble cellulose phthalate by esterifying cellulose with phthalic acid anhydride in the presence of a tertiary amine.

Pat. 2,101,262. Cellulose Etherification. Dec. 7, 1937. Low substituted, alkali soluble lower alkyl ethers of cellulose and their preparation by controlled alkylation.

Pat. 2,101,263. Continuous Preparation of Cellulose Derivatives. Dec. 7, 1937. Process for the continuous preparation of low substituted cellulose ethers from alkali cellulose and a liquid etherifying agent.

Pat. 2,104,849. Cellulose Process. Jan. 11, 1938. Partial or complete saponification of cellulose organic acid esters with lower aliphatic alcohols in the presence of a metal alcoholate.

Pat. 2,123,806. Cellulose Esters. July 12, 1938. Acetone soluble cellulose aryl sulfonates and their preparation.

Pat. 2,129,708. Urea Cellulose Solutions. Sept. 13, 1938. Preparation of urea cellulose solutions having commercially desirable stability by dissolving urea cellulose in aqueous caustic alkali in the presence of a zincate.

Pat. 2,131,733. Cellulose Derivatives. Oct. 4, 1938. Preparation of low substituted cellulose ethers by steeping cellulose in an aqueous solution of an etherifying agent.

Pat. 2,134,086. Chemical Process. Oct. 25, 1938. The preparation of organic solvent soluble cellulose alkyl methallyl mixed ethers.

Pat. 2,134,825. Chemical Process. Nov. 1, 1938. Continuous process for preparing urea celluloses soluble in dilute aqueous caustic soda.

Pat. 2,136,296. Nitrogen-Containing Cellulose Derivatives. Nov. 8, 1938. Preparation of dilute acid soluble aminoalkyl celluloses by reacting an aromatic sulfonic ester of a hydroxyalkyl cellulose with a secondary aliphatic amine.

Pat. 2,136,299. Aminocellulose Derivatives. Nov. 8, 1938. Preparation of dilute acid soluble cellulose amines by reacting a pyridine soluble cellulose aryl sulfonate with a monoamine.

Pat. 2,137,343. Chemical Process. Nov. 22, 1938. Low substituted cellulose ethers by reacting a cellulosic material with a solution of an etherifying agent and alkali, in a suitable volatile solvent, and removing the solvent by evaporation.

Pat. 2,138,778. Cellulose Esters of Organic Sulfonic Acids and Preparation Thereof. Nov. 29, 1938. Chloroform soluble cellulose sulfonates by reacting, in the presence of a tertiary base, a substance having a cellulosic nucleus and containing esterifiable hydroxyls with a halide of an organically substituted inorganic acid.

Pat. 2,146,738. Mixed Ether Esters of Cellulose. Feb. 14, 1939. Preparation of cellulose having ether and aromatic ester groups by acting on a solution, in dilute alkali, of an alkali soluble cellulose ether with an esterifying agent which is relatively stable in the presence of dilute alkali.

Pat. 2,148,952. Process for Preparing Cellulose Ethers and Products. Feb. 28, 1939. Preparation of cross-linked cellulose ethers suitable as thickening agents by reacting cellulose with mono- and bi-functional etherifying agents.

Pat. 2,157,530. Process for Producing Low Substituted Alkyl Celluloses. May 9, 1939. Alkali cellulose is reacted with an alkylating agent to produce low substituted alkyl celluloses which are soluble in cold dilute alkali.

Pat. 2,160,106. Process of Dissolving Alkali Soluble Cellulose Derivatives. May 30, 1939. Method of dissolving cellulosic materials in aqueous alkali involving the addition of ice to the dissolving medium.

Pat. 2,160,107. Process for Preparing Cellulose Derivatives. May 30, 1939. Preparation of low substituted cellulose ethers by a process involving limited access to air, thus affording a control of degradation by oxidation.

Pat. 2,175,357. Preparation of Mixed Cellulose Esters. Oct. 10, 1939. Preparation of mixed ester derivatives of cellulose which are soluble in organic solvents using inorganic alkaline catalysts.

Pat. 2,190,445. Regenerated Cellulose Ether Product. Feb. 13, 1940. Regenerated, low substituted cellulose glycolic acid soluble in cold dilute alkali, cellulose glycolic acid and having improved moisture resistance.

Pat. 2,190,451. Cellulose Derivatives. Feb. 13, 1940. Preparation of low substituted cellulose alkoxyalkyl ethers soluble in cold dilute alkali by reacting alkali cellulose with an alkoxyalkyl chloride in dioxane.

Pat. 2,201,663. Xanthate of Cellulose Glycolic Acid. May 21, 1940. Xanthate of low substituted cellulose glycolic acid wherein cellulose partially etherified by means of a hydroxy acid is used.

Pat. 2,236,544. Process of Xanthating Cellulose Ethers. Apr. 1, 1941. Xanthated low substituted cellulose ethers soluble in cold dilute alkali and articles regenerated therefrom which possess remarkably greater affinity for direct dyes.

Pat. 2,236,545. Cellulose Glycolic Acid. Apr. 1, 1941. Low substituted cellulose glycolic acid, giving water soluble alkali metal salts, wherein the cellulose glycolic acid is excellently suited for the preparation of greaseproof paper.

Pat. 2,249,754. Low Substituted Alkyl Cellulose Ether. July 22, 1941. Low substituted alkyl celluloses soluble in cold dilute alkali are prepared by a process of controlled etherification and degradation of cellulose.

Pat. 2,278,389. Cellulose Ether Product. Mar. 31, 1942. Products regenerated from solutions of low substituted alkyl celluloses soluble in cold caustic are prepared by a process consisting of controlled etherification and degradation of cellulose.

Pat. 2,322,575. Preparation of Cellulose Mixed Esters. June 22, 1943. Esterifying cellulose in the presence of an aldehyde with an unsubstituted aliphatic monocarboxylic acid and the anhydride of a different unsubstituted aliphatic monocarboxylic acid to produce a cellulose mixed ester.

Pat. 2,379,917. Esters of Carboxycellulose. July 10, 1945. Esters of carboxycellulose are prepared by treating carboxycellulose with an alcohol in the presence of an acidic esterification catalyst at elevated temperature.

Pat. 2,396,165. Process for Preparing Cellulose Ester in Fiber Form. Mar. 5, 1946. Dry spinning of cellulose acetate crotonate solutions containing sulfur and selected rubber accelerators to provide cellulose esters of improved solvent resistance, resilience, and impact strength.

Pat. 2,406,755. Modified Cellulose Ester Fibers. Sept. 3, 1946. Polysilicic acid ester modified cellulose acetate yarn which is insoluble in tetrachloroethane.

Pat. 2,414,144. Sulfur-Modified Unsaturated Cellulose Ether and Process of Producing the Same. Jan. 14, 1947. Unsaturated cellulose ethers such as crotylcellulose are vulcanized with sulfur, thereby providing increased solvent resistance, resilience, and softening point of cellulose ethers.

Pat. 2,418,498. Organic Solvent Soluble Derivatives of Cellulose and Process for Preparing the Same. Apr. 8, 1947. A method for preparing new organic solvent soluble cellulose derivatives by reacting hydroxyl-containing derivatives with formaldehyde and hydroxy esters.

Pat. 2,420,730. Treatment of Polymers With Acylamides and Aldehydes. May 20, 1947. Polymeric amidomethyl ethers are prepared by reacting hydroxylated polymers, such as cellulose acetate, with an aldehyde and a monoamide.

Patents Relating to the Spinning of Cellulose Acetate Yarn

Pat. 1,901,658. Process of Treating Spinnerets. Mar. 14, 1933. Wiping the face of the spinneret with a nonsolvent for the solute of the spinning solution in order to bring the spinneret into condition for proper and successful spinning for the production of filaments by the dry spinning process.

Pat. 1,918,816. Process for Manufacturing Artificial Threads. July 18, 1933. Producing cellulose acetate threads by the dry spinning process free from scintillating effects, by extruding a preheated spinning solution and introducing cool air in the vicinity of the spinneret.

Pat. 1,975,153. Method of Producing Multicolored Threads. Oct. 2, 1934. A method of producing multicolored threads by mixing two or more different colored spinning solutions just prior to extrusion.

Pat. 2,210,161. Production of Filamentary Structures. Aug. 6, 1940. A relatively inexpensive and simple process for removing residual solvent in threads spun from a volatile solvent-containing solution which consists of withdrawing the thread from the spinning cell, and passing it at a suitable speed through an open-air travel of at least two feet into a substantially enclosed wind-up chamber from which the air is withdrawn and the solvent recovered.

Pat. 2,285,245. Production of Artificial Filaments. June 2, 1942. A radial louvre port in the head of a dry spinning cell as a means for introducing air into the filament bundle close to the face of the spinneret.

Pat. 2,308,141. Spinning of Cellulose Acetate Gum. Jan. 12, 1943. A process for the spinning of an acetic acid solution of cellulose acetate into an aqueous solution of a water soluble amine.

Pat. 2,327,399. Artificial Silk Dry Spinning Apparatus. Aug. 24, 1943. A vane door provided with a window in the head of a dry spinning cell as a means for introducing air into the filament bundle close to the face of the spinneret integrally coupled with a means for visually inspecting the spinneret zone.

Pat. 2,339,316. Wet Spinning of Cellulose Acetate. Jan. 18, 1944. A method for the wet spinning of filaments from an acetic acid solution of cellulose acetate produced in the customary acetylation process, known as acetone soluble cellulose acetate gum, by extruding into a cold acetic acid bath followed by stretching.

Pat. 2,341,586. Wet Spinning of Cellulose Acetate. Feb. 15, 1944. A method for the wet spinning of filaments from an acetic acid solution of cellulose acetate produced in the customary acetylation process, known as acetone soluble cellulose acetate gum, by extruding into an ammonium acetate bath containing acetic acid.

Pat. 2,341,615. Apparatus for Dry Spinning Cellulose Acetate Yarn. Feb. 15, 1944. A closed spinning cell for use in the dry spinning of heavy denier uncrenulated cellulose acetate filaments suitable for use as the pile in carpets.

Pat. 2,366,275. Dry Spinning Apparatus. Jan. 2, 1945. An improved method, particularly useful for the preparation of heavy denier yarns at high speeds by the dry spinning process, for the introduction of air into the head of an evaporative spinning cell through oppositely disposed tubes, one of which is covered with a reticulated structure.

Pat. 2,387,791. Cellulose Acetate Yarn and Process. Oct. 30, 1945. Heavy denier uncrenulated cellulose acetate filaments suitable for use as the pile in carpets are produced by evaporative spinning into a medium highly laden with solvent vapor.

Patents Relating to Processing and Treatment of Cellulose Acetate Yarns

Pat. 1,898,206. Ring Spinning Device for Spinning Continuously-Fed Textile Fibers. Feb. 21, 1933. A ring spinning machine for use with continuously fed textile thread employing a bobbin modified to cause an immediate fastening of the thread thereto when rotation is started.

Pat. 1,898,211. Process of Discharging. Feb. 21, 1933. Discharge printing on cellulose acetate fabrics using charcoal to absorb the dye and a thickening agent to promote the reaction.

Pat. 1,902,833. Method of Treating Textile Threads. Mar. 28, 1933. Simultaneously oiling and tinting a textile thread from a non-aqueous composition.

Pat. 1,909,483. Process of Changing the Solubility of Cellulose Acetate. May 16, 1933. Dissolving cellulose triacetate in phenols and hydrolyzing by means of alkalies in order to produce products soluble in non-solvents for the triacetate, such as acetic acid, acetone and the like.

Pat. 1,923,136. Method of Tinting Thread. Aug. 22, 1933. A process for fugitively tinting cellulose acetate thread.

Pat. 1,927,412. Process of Treating Artificial Thread. Sept. 19, 1933. Delustering of acetate materials by treating with an aqueous solution of a light metal chloride and then with a solution of a salt which yields a solution of acid reaction.

Pat. 1,943,000. Method of Sizing Artificial Fibers. Jan. 9, 1934. Process of sizing by using a swelling agent and a sizing agent.

Pat. 1,961,229. Solutions and Method of Preparing Same. June 5, 1934. Homogenization by forcing a mixture of finely divided pigment and a solvent for the cellulose derivative through small orifices as a means for preparing stable pigmented liquid compositions of said cellulose derivative.

Pat. 1,966,578. Artificial Thread. July 17, 1934. A process for producing a delusterable cellulose acetate yarn, that can subsequently be delustered by treatment with hot aqueous fluids, which comprises spinning a solution containing a plurality of cellulose acetate having different acetyl values or other characteristics.

Pat. 1,966,579. Method of Preparing Cellulose Acetates. July 17, 1934. A process for producing cellulose acetate thread capable of being delustered by treatment with hot aqueous fluids which comprises dry spinning a solution containing a mixture of acetates having the desired average acetyl value, obtained by hydrolyzing a solution containing a plurality of acetates having different acetyl values, until the desired average value is secured.

Pat. 1,986,349. Textile Material. Jan. 1, 1935. A size for cellulose acetate threads comprising a composition of oxidized drying oil and an anti-oxidant.

Pat. 1,986,945. Wool Substitutes and Process of Spinning Short Filaments of Cellulose Derivatives. Jan. 8, 1935. Making crinkled spinnable cellulose derivative fibers by heating in certain moisture-retaining fluids and drying in the air.

Pat. 2,022,838. Artificial Thread and Process of Producing Same. Dec. 3, 1935. Delustering cellulose acetate yarn by forming barium stearate therein.

Pat. 2,035,997. Method of Producing Artificial Silk. Mar. 31, 1936. A process for producing a delustered cellulose acetate thread by incorporating in the cellulose acetate flake a titanium compound and later reacting the titanium compound to form titanium dioxide.

Pat. 2,046,550. Thread Winding Mechanism. July 7, 1936. An anti-bounce spindle for use in winding headless packages at constant thread speed which embodies the use of a compression spring in the end of the spindle to eliminate vibration.

Pat. 2,052,974. Manufacture of Artificial Thread. Sept. 1, 1936. Improving the strength of cellulose acetate threads by stretching in the presence of dichlorethane.

Pat. 2,053,310. Process of Producing Artificial Thread. Sept. 8, 1936. Producing cellulose acetate yarn of low luster by the dry spinning process employing an acetate solution containing a non-volatile substance, and subsequently washing said substance from the thread.

Pat. 2,054,786. Method and Apparatus for Preparing Artificial Materials. Sept. 22, 1936. A method and apparatus for producing artificial horsehair, straw, ribbons, etc., by swelling a bundle of artificial filaments of a cellulose derivative and then conveying them without stretching to a take-up device.

Pat. 2,077,087. Process for Obtaining an Artificial Thread of a Fluffy Character. Apr. 13, 1937. A process for the manufacture of a boucle or shaggy thread characterized by the fact that a plastic filament is attached transversely on the fiber or thread serving as the core thread.

Pat. 2,096,080. Process and Apparatus for the Production of Textile Materials. Oct. 19, 1937. The process and apparatus for continuously forming a cake of artificial thread and continuously and automatically cutting the thread cake into staple lengths.

Pat. 2,096,146. Cellulosic Structures and Method of Preparing Same. Oct. 19, 1937. A process of dyeing cellulose acetate with a water-soluble acid dye consisting of incorporating the acid dye in the spinning or casting solution. The dyed products are substantially fast to aqueous treatments.

Pat. 2,107,657. Process for Obtaining Crepe Effects on Fabrics. Feb. 8, 1938. Producing crepe effects on fabrics, containing highly twisted cellulose acetate yarn in which has been incorporated an extremely water-soluble calcium salt, such as calcium chloride.

Pat. 2,110,926. Process for Making Yarn Packages. Mar. 15, 1938. Preparation of a shipping tube package of cellulose derivative yarn by simultaneously uptwisting and winding from a supply bobbin onto a lightweight cylindrical core, in a single operation employing standard uptwisting equipment.

Pat. 2,112,597. Process of Making Packages of Artificial Yarn. Mar. 29, 1938. A procedure consisting of dry spinning a large yarn package, downtwisting the spun yarn package into at least two pirn packages of twisted yarn, and combining at least two of the pirn packages to form a cone package of twisted yarn in order to produce shipping packages of artificial yarn having a low knot count and a uniform yardage.

Pat. 2,123,502. Textile Fiber. July 12, 1938. Artificial fibers of improved properties comprising filamentous material coated with acetone-insoluble cellulose triacetate.

Pat. 2,147,701. Cellulosic Structures and Method for Preparing Same. Feb. 21, 1939. A cellulose derivative composition containing as a plasticizer therefor a ketonic acid, such as levulinic acid.

Pat. 2,147,702. Composition of Matter and Use of Same in Preparation of Cellulosic Articles. Feb. 21, 1939. The use of ethyl acetonyl carbinol and the like as a plasticizer for cellulose acetate.

Pat. 2,147,703. Cellulose Derivative Composition. Feb. 21, 1939. Plasticizers for cellulose acetate comprising diacetone esters such as diacetone acetate, diacetone levulinate, and the like.

Pat. 2,150,951. Apparatus for the Production of Artificial Thread. Mar. 21, 1939. A thread winding apparatus, suitable for the production of relatively large cakes of cellulose derivative yarn, comprising a removable surface-driven bobbin positioned on a pivoted swinging arm.

Pat. 2,160,458. Artificial Thread Dressing Composition. May 30, 1939. The use of a formamide dressing composition as a modifier for cellulose acetate thread in the production of closely knit fabrics.

Pat. 2,163,099. Process of Preparing N-Methyl Beta Hydroxyethylamines. June 20, 1939. Methylation of ethanolamines by successive or simultaneous reaction with formaldehyde and formic acid. These products are of use in the preparation of dialkylaminoethyl methacrylates which are important agents for modifying the dyeing characteristics of cellulose acetate rayon.

Pat. 2,164,426. Thread Production Apparatus. July 4, 1939. An apparatus for securely positioning tubular cores on a spindle of a winding machine.

Pat. 2,168,335. Cellulosic Material and Method for Preparing Same. Aug. 8, 1939. Improving the affinity of cellulosic materials for acid or direct dyestuffs by incorporating therein a phenol-aldehyde-amine resin.

Pat. 2,168,336. Cellulosic Structure and Method for Producing Same. Aug. 8, 1939. Improving the affinity of cellulose acetate materials for direct dyestuffs by incorporating therein an amino polymer.

Pat. 2,168,337. Cellulosic Structure and Method for Preparing Same. Aug. 8, 1939. Improving the affinity of cellulose acetate materials for acid dyestuffs by the incorporation of an amino polymer therein.

Pat. 2,168,338. Cellulosic Structure and Method of Producing Same. Aug. 8, 1939. Rendering cellulose derivative structures sensitive to all dyes by modifying them with polymeric amino alcohol esters of acrylic acid or an alpha substituted acrylic acid.

Pat. 2,168,348. Cellulosic Composition and Method of Preparing Same. Aug. 8, 1939. The addition of a water soluble organic acid having an ionization constant greater than 1×10^{-5} to reduce turbidity and facilitate spinning of cellulose acetate solutions, modified by the addition of polymeric amino alcohol esters of acrylic acid to obtain enhanced dye sensitivity.

Pat. 2,170,017. Process of Converting Soluble Into Insoluble Cellulose Derivatives. Aug. 22, 1939. Treatment of cellulose ester or ether materials with a dibasic acid halide to insolubilize the same without affecting other properties, such as dyeing.

Pat. 2,170,194. Method and Apparatus for Winding. Aug. 22, 1939. The use of a shield or cone-shaped member in unwinding thread over-end from a yarn package, particularly a pirn package of tapered construction, permits the unwinding at higher speeds without impairing of yarn quality.

Pat. 2,186,452. Artificial Structure and Method of Preparing Same. Jan. 9, 1940. A process for producing a cellulose derivative article metallized with silver or the like, consisting of incorporating silver nitrate into the cellulose derivative solution and reducing the silver nitrate to metallic silver in an aftertreatment of the modified film or thread.

Pat. 2,190,825. Dyeing of Cellulose Derivatives. Feb. 20, 1940. Coupling in cellulose acetate spinning solutions a diazoamino compound with suitable coupling agents, to secure a more uniform and finer distribution of this type of dyestuff in dyed spinning solutions.

Pat. 2,191,887. Cellulosic Structure and Process of Making the Same. Feb. 27, 1940. Rendering cellulose derivative structures sensitive to all dyes by modifying them with a non-cellulosic, non-proteinous polymeric compound containing amino nitrogen.

Pat. 2,194,314. Preparation of N-Substituted Alkylol Amines. Mar. 19, 1940. Process for making N-alkyl alkanol amines such as diethylaminoethanol, by the action of aldehydes on open-chain amino alcohols. Amino alcohols prepared by this method are useful for the preparation of dialkylaminoethyl methacrylates which can be employed to modify the dyeing characteristics of cellulose acetate rayon.

Pat. 2,202,041. Process for Obtaining Crepe Effects on Fabrics. May 28, 1940. The use of sodium lactate as a creping modifier for cellulose acetate yarn.

Pat. 2,211,920. Synthetic Fibers and Method for Producing Same. Aug. 20, 1940. Preparing staple from continuous filaments by intermittently contacting a moving filament bundle with a solvent or softening agent therefor, which in combination with subsequent heating destroys the contacted portion of the filament to form fibers of predetermined length.

Pat. 2,212,149. Process of Preparing Beta-Ethylaminoethanols. Aug. 20, 1940. Process for making diethylaminoethanol by ethylating monoethanolamine with ethyl chloride. The products are useful for preparing diethylaminoethyl methacrylates which can be employed to modify the dyeing characteristics of cellulose acetate.

Pat. 2,223,893. Cellulosic Product and Process for Producing Same. Dec. 3, 1940. Cellulosic textile materials, particularly dyed pigmented ones, are rendered relatively lightproof with manganous lactate.

Pat. 2,232,496. Apparatus for Producing Staple Fibers. Feb. 18, 1941. The use of a card wheel or the like for removing long filament lengths from cut staple during the cutting of continuous filaments in a centrifugal type cutter.

Pat. 2,237,829. Method of Dyeing. Apr. 8, 1941. A process for dyeing, to a solid color, of mixed fabrics composed of cellulose acetate yarn modified with a polymeric compound containing amino nitrogen and wool, silk, cotton, or viscose rayon, with dyestuffs having affinity for the other yarn, but none for unmodified cellulose acetate yarn.

Pat. 2,244,281. Cellulosic Structure, Apparatus and Method for Producing Same. June 3, 1941. A method of producing a preweakened yarn which can be converted readily into a sliver of staple fibers by subsequently imparting a tensile stress of sufficient intensity to part the filaments at the weakened sections.

Pat. 2,264,978. Article of Manufacture. Dec. 2, 1941. A sheer stocking knitted from cellulose acetate monofil.

Pat. 2,272,666. Process of Dry Spinning Artificial Thread. Feb. 10, 1942. A process for forming a cellulose derivative thread, having abrupt variations in denier, by passing into a gaseous evaporative medium traveling countercurrently to the travel of the extruded thread, and by intermittently varying the ratio of the extrusion speed to the speed at which the yarn is drawn from the spinning cell.

Pat. 2,277,486. Method for Producing Cellulosic Structures. Mar. 24, 1942. A process for improving the affinity of cellulose derivative yarn for acid and direct dyestuffs which comprises incorporating therein an aralkylated derivative of a natural nitrogenous material, for instance benzylated casein.

Pat. 2,278,747. Chemical Composition. Apr. 7, 1942. A softening and lubricating composition for cellulose acetate yarn comprising palm kernel oil, an anti-static agent, a corrosion inhibitor and an anti-oxidant.

Pat. 2,282,568. Cellulosic Structure and Method for Preparing Same. May 12, 1942. A process of crinkling artificial filaments and especially cellulose acetate yarn by quickly impregnating the yarn under low tension with a hot liquid such as hot mineral oil.

Pat. 2,296,339. Automatic Doffing Apparatus. Sept. 22, 1942. In continuously winding yarn and especially large filament bundles, the use of two windup spindles in end to end relationship with card clothed members between, to automatically pick up and hold the yarn during the transfer of the winding from one bobbin to the other.

Pat. 2,296,394. Manufacture of Novelty Artificial Y .. Sept. 22, 1942. Producing a novelty yarn having abrupt changes in denier by passing a thermo-plastic yarn around a heated roll, having one or more longitudinally extending channels in the peripheral surface thereof so that only portions of the yarn are softened and subsequently stretched leaving nubs of unstretched yarn portions therebetween.

Pat. 2,303,912. Twister Spindle. Dec. 1, 1942. Reconditioning worn twister spindles of downtwisting machines by grinding out the worn sections and inserting split spring sleeves which preferably are chromium-plated to provide wear resistance.

Pat. 2,303,934. Manufacture of Cellulose Ester Hosiery. Dec. 1, 1942. An improvement in the manufacture of stockings from cellulose acetate yarn which includes the step of preboarding prior to dyeing the knitted stocking.

Pat. 2,311,174. Textile Crinkler. Feb. 16, 1943. An apparatus for imparting crinkle to a bundle of continuous filaments of cellulose acetate which comprises a pair of feed rolls for delivering the thread to the top of a vertically disposed restricting chamber which is fitted at its lower end with a clapper plate for regulating the discharge of said bundle.

Pat. 2,311,175. Bobbin Brake. Feb. 16, 1943. A gravity-actuated brake for stopping the rotation of a yarn package for doffing the package from a winding machine.

Pat. 2,317,131. Film and Filament Formation. Apr. 20, 1943. Treatment of cellulose acetate with ethers of dimethylol-urea for the preparation of derivatives having decreased fusibility and solubility in organic solvents.

Pat. 2,321,989. Triazone Ring Compound. June 15, 1943. Preparation of N,N'-(alkoxymethyl) tetrahydrotriazones, which are useful as modifying agents for cellulosic materials to impart changes in resilience, dye receptivity or solubility.

Pat. 2,327,413. Cellulosic Structure and Method for Producing Same. Aug. 24, 1943. Improving the tenacity of cellulose acetate yarn by swelling in a nitroparaffin, such as nitromethane in toluol and stretching the swollen yarn.

Pat. 2,331,980. Finish Applicator. Oct. 19, 1943. An improved finish applicator particularly suited to the application of non-aqueous finish compositions to artificial filaments consists of two rolls, one of which dips into the finish and the other contacts the film of finish picked up on the first roll and transfers it to the filaments.

Pat. 2,339,340. Fugitive Coloring of Yarns. Jan. 18, 1944. The use of Naphthol Green B for the fugitive tinting of cellulose acetate yarn.

Pat. 2,346,208. Treatment of High Tenacity Yarn of Synthetic Origin. Apr. 11, 1944. Increasing the elongation of stretched cellulose derivative yarn by employing the step of thermal relaxation.

Pat. 2,346,258. Method for Production of Cellulose Acetate Staple. Apr. 11, 1944. An improved process for the manufacture of crinkled cellulose acetate staple comprising mechanically crimping and cutting to staple fiber length while maintaining the solvent plus moisture content of the fibers in a specified range.

Pat. 2,351,090. Process of Preparing Rubber-Coated Artificial Filaments. June 13, 1944. Forming cellulosic filaments having a sheathing of latex rubber by extruding a cellulosic spinning solution into a coagulating bath containing dispersed rubber latex.

Pat. 2,366,278. Spinning Process. Jan. 2, 1945. The production of a yarn comprised of a plurality of filaments having a relatively large number of evenly spaced crimps per unit length by evaporative spinning of a relatively cool solution containing 30–40% of cellulose acetate or the like at a jet velocity of several hundred yards per minute and under such conditions that the filaments issuing from the spinneret fall freely for a distance of at least two feet.

Pat. 2,375,838. Insoluble Cellulose Derivatives and Processes for Their Production. May 15, 1945. Modification of cellulose derivatives with monomeric polyalkoxymethyl melamines to insolubilize and raise the fusion point.

Pat. 2,375,839. Aqueous Tint Finish. May 15, 1945. The stability of aqueous emulsions of tint finishes is improved by the use of an inorganic salt-free dye in the tint finish composition.

Pat. 2,375,864. Treatment of Cellulose Organic Ester Yarns. May 15, 1945. Crinkled fibers or filaments comprised of organic acid esters of cellulose are produced by relaxing or shrinking in an aqueous solution of an alkyl ether alcohol such as the monobutyl ether of ethylene glycol.

Pat. 2,376,890. Cellulose Ester Manufacture. May 29, 1945. Wet-spun cellulose acetate filaments are impregnated while still in the gel stage with glycerin or corn syrup. and the like, to impart affinity thereto for acid, chrome and direct dyestuffs.

Pat. 2,376,891. Cellulose Ester Manufacture. May 29, 1945. Wet-spun cellulose ester structures are impregnated while still in the gel stage with polytriglycol adipamide to impart affinity thereto for acid, chrome and direct dyestuffs.

Pat. 2,376,934. Dry Spun and Dry Cast Structures of Synthetic Materials. May 29, 1945. The affinity for direct, acid and chrome dyestuffs of organic solvent-soluble filament-forming synthetic polymeric substances (e. g., cellulose acetate) is improved, by incorporating into the spinning solution glycol polyformal and a basic nitrogen-containing compound and then spinning by the usual evaporative method.

Pat. 2,378,898. S-Substituted Mercaptomethyl Ethers of Hydroxylated Polymers. June 26, 1945. Acetone soluble cellulose acetate derivatives having appreciable reduced water sensitivity are obtained by reacting cellulose acetate with formaldehyde and monomeric organic thiols.

Pat. 2,385,403. Method for Stretching Cellulose Ester Yarn. Sept. 25, 1945. A hot liquid media, such as a molten solder bath, is used as a heating means for softening of cellulose derivative yarn to enable it to be stretched and thereby to increase the tensile strength thereof.

Pat. 2,391,980. Annular Wick Oiler. Jan. 1, 1946. Relatively uniform application of oil, to yarn being wound up at a varying speed, is obtained by ballooning the yarn up through an annulus in a material capable of wicking up liquid which wicking material dips into a trough of oil or other treating liquid.

Pat. 2,395,421. Treatment of Cellulosic Organic Acid Esters. Feb. 26, 1946. Reducing solution viscosity of cellulose organic acid esters by washing a freshly precipitated ester while it still contains combined mineral acid with hard water containing sufficient mineral acid to lower the pH of the water to a value of not less than 4.5.

Pat. 2,398,831. Spinning Apparatus and Method. Apr. 23, 1946. Dry spun crinkled cellulose acetate filaments are collected in the form of a batt on a belt machine.

Pat. 2,402,532. Method of Making Resilient Batting. June 25, 1946. A resilient batting of free-fall cellulose acetate filaments is produced by impregnating with a toluene solution of polyvinyl butyral and evaporation of the solvent.

Pat 2,416,390. Free Fall Fiber. Feb. 25, 1947. As a new product, highly crinkled filaments, of thermoplastic material and process for making same involving evaporative spinning with extremely high extrusion velocity, upward extrusion and free-fall onto a suitable collecting surface.

Pat. 2,430,911. Alkoxymethyl Derivatives of Cellulose and Process. Nov. 18, 1947. The preparation of alkoxymethyl derivatives of cellulose acetate or similar cellulose ester in which the alkoxy group contains no more than eight carbon atoms.

Patents Relating to the Preparation of Miscellaneous Resins and Polymers

Pat. 2,122,707. Nitrogen-Containing Resins. July 5, 1938. Process for the preparation of ammoniated and aminated vinyl ketone polymers; these materials are valuable for all varieties of coatings.

Pat. 2,207,803. Cyclohexane Sulphonamide-Formaldehyde Resins and Methods of Preparing Same. July 16, 1940. Cyclohexanesulfonamide-formaldehyde resins, which find use as plasticizers for coating compositions used in the moistureproofing of regenerated cellulose film.

Pat. 2,228,271. Polymeric Product of Formaldehyde and an Amino-Hydrogen-Bearing Aminonitrile. Jan. 14, 1941. Aminonitrile-formaldehyde resins, which are useful for imparting water repellency to textiles, for enhancing the dye receptivity of cellulose acetate to acid dyestuffs and for anchoring moistureproofing lacquers to regenerated cellulose film.

Pat. 2,269,997. N-Sulphonylalkylenimine Polymers. Jan. 13, 1942. Polymers of sulfonamides of ethyleneimine which find use as coating and impregnating agents, emulsion stabilizers and can be applied to textiles to impart water repellency or improved dye receptivity.

Pat. 2,436,233. Process for Preparing Monomeric Dithioglycidol. Feb. 17, 1948. Preparation of monomeric dithioglycidol by heating 1,2-dithioglycerol. The monomeric compound is a starting material for the preparation of polymers containing thioether and thiol groups.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING NOVEMBER, 1948

EX PARTE CRUCIBLE STEEL COMPANY OF AMERICA, Serial No. 523,246.

In a decision rendered November 1, 1948 (171 Ms. Dec. 51, 79 USPQ 237), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Crucible Steel Company of America, of New York, N. Y., the word "NU-DIE" as a trade-mark for steel rods, bars, plates, billets, slabs, blocks and forgings, under the Trade-Mark Act of 1905, the word "DIE" being disclaimed.

It was held that the Examiner was right in refusing registration based upon a prior registration of the word "UNI-DIE," the word "DIE" being disclaimed, as a trade-mark for tool steel, since, considered as a whole, they appear so similar in appearance as to give rise to the likelihood of confusion when used as here upon the same goods.

In response to applicant's contention that in view of the method of sale and discriminating character of purchasers there is no actual danger of confusion, it was held that where the marks are so similar the fact that they are sold to discriminating purchasers cannot remove likelihood of confusion.

It was held that applicant's arguments advanced for indicating that the differences in meaning would outweigh the similarities in sound or appearance, would ascribe to applicant's mark a meaning which would require a reinstatement of the original refusal to register on the ground of descriptiveness.

CONSOLIDATED COSMETICS (ASSIGNEE OF SAME NAME, SUBSTITUTED) *v.* NEILSON CHEMICAL COMPANY, Opposition No. 25,494.

In a decision rendered November 1, 1948 (171 Ms. Dec. 48, 79 USPQ 238), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the notice of opposition of Consolidated Cosmetics (assignee of same name, substituted), of Chicago, Ill., to the application of Neilson Chemical Company, of Detroit, Mich., for registration of the word "RUSTABOO," under the Trade-Mark Act of 1905, as a trade-mark for a chemical and detergent preparation for cleaning and preparing metal surfaces for painting. Opposer alleged priority of use and ownership by opposer of "TABOO" and "TABU" as trade-marks for various toilet articles and proved ownership of three registrations disclosing, respectively, "TABU" for toilet soap, and for lipsticks and rouge, and "TABOO" for anti-perspirant, lipstick, rouge, face powder, eyelash and eyebrow mascara, creams for the hands and face, preparations for skin, hair and finger nails and perfumes.

It was held that the goods are so different in their purpose, use and channels of sales that there is not even a remote likelihood that confusion might result from the concurrent use of the marks of the parties upon these goods.

ROBERT ENGLAND *v.* AMERICAN CHEMICAL PAINT COMPANY, Opposition No. 25,646.

In a decision rendered November 3, 1948 (171 Ms. Dec. 52, 79 USPQ 239), *Assistant Commissioner Daniels* reversed, on the ground of failure of proof by opposer, the action of the Examiner of Trade-Mark Interferences who had sustained the notice of opposition of Robert England, of Philadelphia, Pa., to the application of American Chemical Paint Company, of Ambler, Pa., to register, under the Trade-Mark Act of 1905, the word "WEEDEX" for chemical preparations for exterminating weeds. Opposer relied upon ownership and prior use of this same mark for weed killer.

It was held that applicant has introduced a registration of the word "WEEDEX," registered February 9, 1932, on an application filed September 15, 1931, and has introduced certified copies of assignments of such registration to applicant, so that opposer has the burden of establishing its use of the mark since prior to September 15, 1931.

It was held that opposer having elected to establish its successorship and use by oral testimony, its proof must be clear and definite and any ambiguity or absence of material evidence must be resolved against it, so that, since the only testimony to use prior to 1938 is that of Genther and this testimony, because of its vague and general nature fails to indicate that the mark was continuously used by a predecessor of opposer, it must be found that opposer has failed to sustain the burden of proof of establishing prior use upon which it can rely.

CLUETT, PEABODY & CO., INC., *v.* KAYLON INCORPORATED, Opposition No. 25,930.

In a decision rendered November 3, 1948 (171 Ms. Dec. 56, 79 USPQ 241), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the notice of opposition of Cluett, Peabody & Co., of Troy, N. Y., to the application of Kaylon Incorporated, of New York, N. Y., to register the word "HighTide," under the act of 1905 as a trade-mark for pajamas and night robes. Opposer relied upon ownership and prior use, as shown by a registration, registered July 16, 1929, of the word "TIDE" as a trade-mark for collars.

It was held that the goods must be considered to possess the same descriptive properties, and the fact that applicant contends that its pajamas and night robes are actually for women's wear is not sufficient to distinguish between them.

It was held that there is no substantial difference between "TIDE" and "HighTide," as applicant's mark includes opposer's in its entirety, and under well settled authority these marks must be considered so similar that there is likelihood of confusion when used upon goods of the same descriptive properties.

It was held that although there are specific differences between the goods, the marks are so similar that the so-called rule of cumulative differences cannot be considered to change the foregoing conclusion.

EX PARTE KIMBERLY-CLARK CORPORATION, Serial No. 502,219.

In a decision rendered November 12, 1948 (171 Ms. Dec. 57, 79 USPQ 274), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register under the Trade-Mark Act of 1905 to Kimberly-Clark Corporation, of Neenah, Wis., a mark comprising the words "A Product of Kimberly Clark Research," printed on a background design, applicant having filed a disclaimer, apart from the trade-mark herein shown, of the words "A Product of," or the word "Research," or the separate use of the surname "Kimberly," or the separate use of the surname "Clark."

It was held that the Examiner was right in ruling that "Kimberly" and "Clark" as presented are primarily surnames not distinctively displayed, and that these words dominate the mark, which is accordingly dominated by non-registrable material and unregistrable under the act of 1905.

It was held that to combine the words comprising applicant's mark and then disclaim them adds nothing to the registrability of an individual word, or any grouping of the words set out.

TUNGSTEN REPAIR PARTS, INC., *v.* SURELINE MANUFACTURING CO., Opposition No. 25,888.

In a decision rendered November 12, 1948 (171 Ms. Dec. 61, 79 USPQ 272), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Tungsten Repair Parts, Inc., of Long Island City, N. Y., to the application of Sureline Manufacturing Co., of Chicago, Ill., to register, under the Trade-Mark Act of 1905, a mark comprising the word "SURELINE" for certain named automobile repair and replacement parts, particularly for automobile ignitions. Opposer relied upon its ownership and prior use of the trade-mark "SPARKLINE" for ignition repair parts, consisting of coils, caps, condensers, contacts and brushes. Opposer established ownership of a registration, No. 324,758, of the word "SPARKLINE" for the goods listed above, the mark being shown in jagged letters, and the registration including certain pictorial matter in addition to the word.

In response to applicant's contention that there is no likelihood of confusion between these marks as applied to the goods of the parties, it was held that the differences in packaging cannot affect the right to registration.

In response to applicant's contention that the goods to which the trade-marks are applied are not sold to the general public, but to dealers and distributors who in turn sell to service stations and the like, and, because these are trained technical men, there is no likelihood of confusion, it was held that either party may change its marketing methods at any time.

After noting that the marks must be considered in their entirety, and that descriptive or disclaimed material may not be entirely disregarded, it was held that considering these marks as a whole, their similarities are such that their concurrent use upon substantially identical goods as here involved would be likely to cause confusion in trade or deception of purchasers.

It was held that nor would the fact that opposer's mark contains certain pictorial features in addition to the word detract from such likelihood of confusion.

MCKESSON & ROBBINS, INCORPORATED, *v.* ARCHER-TAYLOR DRUG CO., Opposition No. 25,978.

In a decision rendered November 12, 1948 (171 Ms. Dec. 68, 79 USPQ 271), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of McKesson & Robbins, Incorporated, of New York, N. Y., to the application of Archer-Taylor Drug Co., of Wichita, Kans., for registration under the Trade-Mark Act of 1905 of a mark comprising the word "LAVATUM" as a trade-mark for certain named greaseless base ointments. Opposer relied upon ownership and prior use of several marks and the registrations thereof for goods of the same descriptive properties as those of applicant, the one considered most pertinent being registration No. 245,571 of the trade-mark "ALBATUM" for ointment for inflammation.

It was held that if the marks are found to be confusingly similar when considered in their entireties, the fact that both include a commonly used suffix will not detract from such similarity; nor can descriptive or disclaimed matter be entirely ignored in determining the question of similarity.

As to the similarity of the goods, it was held that both are medicated ointments and must be considered to possess the same descriptive properties.

As to the similarity of the marks, it was held that the Examiner correctly found that "ALBATUM" as well as some of opposer's other marks and applicant's mark "LAVATUM" bear such near resemblance in both sound and appearance as to be like-

ly to cause confusion in trade or deception of purchasers when applied concurrently to the products here involved.

In response to applicant's contention that the marks differ to such an extent that when taken in connection with the specific differences between the goods, there is no likelihood of confusion, it was held that such a contention would require that there be doubt as to the similarity with respect to one or the other of these elements, but in this case the goods appear identical for all questions with relation to registration and the marks so similar that the so-called doctrine of cumulative dissimilarities cannot apply.

AMERICAN-LA FRANCE-FOAMITE CORPORATION *v.* WALTER KIDDE & COMPANY, INC., Opposition No. 26,980.

In a decision rendered November 12, 1948 (171 Ms. Dec. 65, 79 USPQ 269), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences granting the motion of opposer, American-La France-Foamite Corporation, of Elmira, N. Y., for summary judgment in an opposition proceeding against the application of Walter Kidde & Company, Inc., of Belleville, N. J., for registration under the Trade-Mark Act of 1905 of the notation "C-B" as a trade-mark for portable hand fire extinguishers. Opposer alleged that it and others had used the letters "C-B" as a designation for chlorobromomethane, a well known fire extinguishing medium, and that since the term was merely descriptive and open to the public, it would be damaged by the registration sought. The answer admitted the foregoing allegations in substance but denied that any one prior to applicant had used the designation "C-B" on fire extinguishers as distinguished from the fire extinguishing medium. Both parties moved for summary judgment.

It was held that the Examiner was right in finding that as between a container and a product which it is designed to hold, a mark merely descriptive of the one necessarily is also descriptive of the other, and consequently is not subject to exclusive appropriation as a trade-mark for either.

It was held that the fact that a prior registration has been granted, which applicant contends is similar in nature to the mark of applicant here involved is not entitled to any consideration whatever.

It was held that it can hardly be questioned that opposer as manufacturer of the extinguishing medium involved must be considered to be damaged but even were this question to be resolved against the opposer, it would result only in the necessity of substituting ex parte for inter partes action.

C-O-TWO FIRE EQUIPMENT COMPANY *v.* WALTER KIDDE & COMPANY, INC., Opposition No. 26,992.

In a decision rendered November 12, 1948 (171 Ms. Dec. 67, 79 USPQ 270), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences granting the motion of opposer, C-O-Two Fire Equipment Company, of Wilmington, Del., for summary judgment in an opposition proceeding against the application of Walter Kidde & Company, Inc., of Belleville, N. J., for registration under the Trade-Mark Act of 1905 of the notation "C-B" as a trade-mark for portable hand fire extinguishers.

It was held that while the pleadings differ slightly, the issues involved are identical with those in *American-La France-Foamite Corporation* v. *Walter Kidde & Company, Inc.*, Opposition No. 26,980, supra, and the statements contained in that decision will not be repeated.

BROWN SHOE COMPANY, INC., *v.* SONS SHOE COMPANY, Opposition No. 25,831.

In a decision rendered November 16, 1948 (171 Ms. Dec. 70, 79 USPQ 306), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Mark Interferences who had sustained the opposition of Brown Shoe Company, Inc., of St. Louis, Mo., to the application of Sons Shoe Company, of St. Louis, Mo., to register, under the Trade-Mark Act of 1905, the word "Tantalizers" as a trade-mark for ladies' and misses' shoes made of leather, fabric or compositions or combinations thereof. Opposer relied upon its ownership and prior use of the trade-mark "NATURALIZERS" for shoes made of leather, cloth, canvas, or combinations thereof, registered, No. 236,545, and renewed.

It was held that the distinct difference in meaning appears sufficient to outweigh any possible resemblance in sound or appearance when the marks are considered as a whole, so that, taking into account the resemblances and differences, the differences are so marked that there is no likelihood that the ordinary purchaser might be confused or deceived thereby.

EX PARTE KADANE-BROWN, INC., Serial No. 367,244.

In a decision rendered November 17, 1948 (171 Ms. Dec. 75, 79 USPQ 307), *Assistant Commissioner Daniels* denied a petition requesting that supervisory authority be exercised to require the Examiner of Trade-Marks to enter an amendment to registration No. 332,628, under the Trade-Mark Act of 1905, owned by petitioner, Kadane-Brown, Inc., of Dallas, Tex. The mark as shown in the original registration comprises the words "Blue Bonnet," a pictorial representation of a star, the upper point of which crosses the letter "B" in the word "Bonnet," and a profile view of the head and shoulders of a girl wearing a large bonnet. The proposed amendment, presented pursuant to section 7(d) of the Trade-Mark Act of July 5, 1946, and rule 34.3 of the Rules of Practice in Trade-Mark Cases, would eliminate the star and change the profile of the figure of the girl to a full faced view of another girl. While in the new pictorial representation the girl wears a bonnet, it is not as large or prominent as that worn by the girl shown in the original registration.

In response to petitioner's contention that the dominant features of the mark as shown in the original registration are the words "Blue Bonnet," it was held that while words forming part of a mark are more apt to be used in calling for a product and have frequently been held to be the feature most likely to be remembered by the public, nevertheless, the other features form a very conspicuous part of the original registration, so that the proposed change is one which would constitute a very material alteration of the mark.

GILL AND KINCAID (GILL ELECTRIC MFG. CORP.) *v.* CENTRAL STATES MFG. CO., INC., Serial No. 545,234.

In a decision rendered November 23, 1948 (171 Ms. Dec. 85, 79 USPQ 339), *Assistant Commissioner Daniels* denied a request by the party Gill and Kincaid (Gill Electric Mfg. Corp.), of Redlands, Calif., for an extension of time for filing a notice of opposition to the application of Central States Mfg. Co., of Arkansas City, Kans., for registration of a trade-mark under the Trade-Mark Act of 1946.

After noting that a telegraphic request attributed the delay to illness and that the confirmatory request states that the illness was that of Mr. Gill, it was held that by the papers filed it seems probable that the party Gill and Kincaid is a partnership, consisting of two partners, but there is no indication that both of them were ill or that no one was able to act, so that under these circumstances, the party Gill and Kincaid is not entitled to the extension sought, this action being taken because of the lack of good cause shown and not because of any informality in the request.

R. H. MACY & CO., INC., *v.* MURRAY M. ROSENBERG, INC. (NOW BY CHANGE OF NAME MILES SHOES INCORPORATED), Opposition No. 25,543.

In a decision rendered November 23, 1948 (171 Ms. Dec. 87, 79 USPQ 338), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the notice of opposition of R. H. Macy & Co., Inc., of New York, N. Y., to the application of Murray M. Rosenberg, Inc. (now by change of name Miles Shoes Incorporated), of New York, N. Y., to register, under the Trade-Mark Act of 1905, a mark comprising the word "GROPALS" as a trade-mark for shoes, slippers, and boots of leather, fabric and combinations thereof. Opposer relied upon ownership and prior use of the trade-mark "Gro-Shoe" for children's and boys' and girls' shoes of leather, rubber, fabric, and combinations, ownership of a registration, No. 192,561, renewed, of that mark for such products having been proven by opposer.

After noting that the goods of the parties are identical and opposer's priority is conceded, it was held that the only question requiring consideration is whether the marks are confusingly similar.

After ruling that "Gro-Shoe" cannot be considered merely descriptive of these products as urged by applicant, that the disclaimed portion of the mark "shoe" cannot be completely ignored, that the marks must be considered in their entirety and that the significance of "Gro" is considered greater than that of the generic portion of the mark, it was held that as such it would appear to be the feature most apt to be noticed and remembered by customers, and that the inclusion of a different suffix in applicant's mark does not appear sufficient to differentiate between these marks, so that agreement was expressed with the ruling of the Examiner of Interferences that there is reasonable likelihood of confusion between these marks as applied to the products of the parties.

J. C. DEAGAN, INC., *v.* SCHULMERICH ELECTRONICS, INC., Opposition No. 27,576.

In a decision rendered November 23, 1948 (171 Ms. Dec. 83, 79 USPQ 337), *Assistant Commissioner Daniels* denied a petition by applicant, Schulmerich Electronics, Inc., of Sellersville, Pa., requesting that supervisory authority be exercised by directing that the notice of opposition of J. C. Deagan, Inc., of Chicago, Ill., be dismissed by the Examiner of Interferences, or in the alternative if the opposition be permitted to continue that the Examiner of Interferences be directed to strike certain paragraphs from the notice of opposition.

It was held that since there is no provision in the statute or rules for appeal in interlocutory matters of this type, applicant is attempting to secure a review of the decision of the Examiner of Interferences by petition, which action is unauthorized in any ordinary case, as it is well settled that the supervisory and summary authority of the Commissioner should not be exercised in a proceeding of this kind except where error is so manifestly apparent that substantial justice cannot be otherwise obtained.

It was held that, with one possible exception, it does not appear that any problem is presented which differs from those which have heretofore ordinarily been considered in opposition matters, and as to that, orderly procedure would appear to require that it be presented in the usual fashion and upon a full record and briefs.

As to the motion to strike, it was held that it is sufficient to state that there is no abuse of discretion in the Examiner's action.

BOTFIELD REFRACTORIES COMPANY *v.* WOOD CONVERSION COMPANY, Opposition No. 27,666.

In a decision rendered November 23, 1948 (171 Ms. Dec. 82, 79 USPQ 341), *Assistant Commissioner Daniels* denied a petition by applicant, Wood Conversion Company, of St. Paul, Minn., requesting exercise of supervisory authority to require dismissal of the notice of opposition of Botfield Refractories Company, of Philadelphia, Pa., without prejudice to applicant's rights under the Trade-Mark Act of 1946. The application was filed under the act of 1905. Fol-

lowing the filing of the notice of opposition applicant filed a "notice of abandonment" of the application, with which was included a request that the opposition be dismissed.

It was held that unless opposer is willing to permit dismissal of the opposition without prejudice, applicant cannot require such action.

ATLAS LEATHER CASE CO. (PLATT LUGGAGE, INC., ASSIGNEE, SUBSTITUTED) *v.* GLADSTONE CASE MFG. CO., INC., Interference No. 3669.

In a decision rendered November 23, 1948 (171 Ms. Dec. 80, 79 USPQ 337), *Assistant Commissioner Daniels* granted, to the extent indicated, a petition filed by Atlas for reconsideration of his decision of October 19, 1948 (616 O. G. 1139, 79 USPQ 184), but upon such reconsideration adhered to the original decision.

On the question of whether the mark had become known to the public to such an extent as to bar the use and registration of the mark by others, it was held that Atlas had the burden of proving such use in other than intracompany matters, cannot rely upon "inference," and any ambiguity or absence of evidence must be resolved against it.

It was further held that the testimony of the witness Platt, accepted in its entirety, was not sufficient to show such use by Atlas as to establish any public recognition thereof.

GOLDEN ARROW TOILETRIES *v.* LANCOME S. A., Opposition No. 25,489.

In a decision rendered November 29, 1948 (171 Ms. Dec. 89, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Golden Arrow Toiletries, of New York, N. Y., to the application of Lancome S. A., of Paris, France, to register, under the Trade-Mark Act of 1905, a mark comprising the word "FLECHES" as a trade-mark for perfumes and rouges. Opposer relied upon prior use and ownership of the trade-mark "Golden Arrow" for various products including facial and bath soaps and astringents.

After noting that applicant concedes that opposer has used its mark upon the goods referred to prior to any date which is claimed by applicant, and that some of opposer's goods are of the same descriptive properties as applicant's goods, it was held that the only question for consideration is whether the Examiner of Interferences was right in holding the marks "FLECHES" and "Golden Arrow" to be linguistic equivalents, "Fleches" being the plural of the French word for "arrow."

Notwithstanding applicant's contentions that the French word "Fleche" has several other English meanings, and that "Fleche" is an English word having an entirely different meaning, it was held that since the marks of the parties have a common arbitrary meaning, which the record indicates is the meaning normally to be given the mark, and that the applicant intends such meaning to be accepted, applicant is hardly in a position under the circumstances to contend that its mark amounts to other than the French word for arrows, so that the Examiner of Interferences was right in finding that the marks of the parties are such that the concurrent use on the related products of the character specified is likely to cause confusion in trade and deception of purchasers.

G. R. KINNEY CO., INC., *v.* OLD COLONY SHOE COMPANY (DOING BUSINESS AS C. H. ALDEN SHOE CO.), Opposition No. 26,023.

In a decision rendered November 30, 1948 (171 Ms. Dec. 91, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences dismissing the notice of opposition of G. R. Kinney Co., Inc., of New York, N. Y., to the application of Old Colony Shoe Company (Doing business as C. H. Alden Shoe Co.), of Brockton, Mass., for registration, under the Trade-Mark Act of 1905, of a mark consisting of the words "Kinetic Shoes," the word "Shoes" being disclaimed, as a trade-mark for shoes, stating that the only question presented on this appeal is that of the similarity of the marks of the parties involved. Opposer relied upon ownership and prior use by it and its predecessor of the words "Kinney" and "Kinney's" as trade-marks for shoes.

It was held that considered in their entireties, the marks appear so different in sound, appearance and meaning that there is no likelihood that confusion would result from their concurrent use upon the same products.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 28, 1948

[VOL. 617. No. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 507,450. YORKVILLE PAPER CO. INC., New York, N. Y. Filed Aug. 14, 1946.

ZER-O-BAG

The word "Bag" is disclaimed apart from the mark.

FOR BAGS FORMED OF PAPER, WAX PAPER, OR CELLOPHANE FOR PACKING COMESTIBLES.

Claims use since June 1, 1945.

Ser. No. 508,067. RUSSAKOV COMPANY OF AMERICA, Chicago, Ill. Filed Aug. 26, 1946.

REVOLV-O-MASTER

No claim is made to the word or symbol "Revolv" per se.

FOR FOOD RECEPTACLES INTENDED FOR PLACEMENT AND USE IN REFRIGERATORS AND THE LIKE—NAMELY, GLASS JARS SUPPORTED BY METAL BASES.

Claims use since July 23, 1946.

Ser. No. 518,802. SUTHERLAND PAPER COMPANY, Kalamazoo, Mich. Filed Jan. 27, 1947.

RESISTO

FOR COLLAPSIBLE CARTONS MADE OF FIBRE BOX BOARD OR CONTAINER BOARD.

Claims use since Aug. 10, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 512,195. WILLIAM ALFRED KORNPOINTER, doing business as National Chemical Exterminating Co., Montreal, Canada. Filed Nov. 7, 1946.

The phrase "DeaDly To Pests," and dominated by the letters "DDT," as well as the word "Chemicals" is disclaimed apart from the mark.

FOR INSECTICIDES AND RATICIDES.

Claims use since Nov. 1, 1936, as to "Era"; and since Sept. 30, 1945, as to the mark as shown.

Ser. No. 514,385. WEKA S. P. R. L., Brussels, Belgium. Filed Dec. 16, 1946.

FOR GARLIC OIL EXTRACT IN CAPSULES FOR PHARMACEUTICAL PURPOSES.

Claims use since Mar. 28, 1946.

Ser. No. 516,821. THE CRAMER CHEMICAL CO., Gardner, Kans. Filed Feb. 3, 1947.

Atomic Balm

No claim is made to the word "Balm" apart from the mark.

FOR ANALGESIC BALM AND OINTMENT PREPARATION.

Claims use since Jan. 9, 1946.

Ser. No. 521,133. RICHARD HUDNUT, New York, N. Y. Filed Apr. 22, 1947.

SCARLET GLOW

The word "Scarlet" is disclaimed apart from the mark as shown.
FOR FACE POWDER, ROUGE, AND LIPSTICK.
Claims use since Mar. 6, 1947.

Ser. No. 521,403. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Apr. 26, 1947.

PENNSALT ARRESTO-MOTH

The word "Moth" is disclaimed apart from the association shown.
FOR INSECTICIDES.
Claims use since Apr. 7, 1947.

Ser. No. 523,778. RICHARD HUDNUT, New York, N. Y. Filed June 7, 1947.

POSTER RED

The word "Red" is disclaimed apart from the mark as shown.
FOR ROUGE AND LIPSTICK.
Claims use since Apr. 24, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 516,561. NATIONAL ALUMINUM MANUFACTURING CO., Peoria, Ill. Filed Jan. 29, 1947.

TOP-O-STOVE

FOR PRESSURE COOKERS OF VARIOUS TYPES AND SIZES, INCLUDING SAUCE PAN COOKERS AND CANNERS, AND ALUMINUM KITCHEN UTENSILS—NAMELY, SAUCE PANS, KETTLES, WAFFLE IRONS, COFFEE POTS, FRYING PANS, CASSEROLES, ROASTERS, GRIDDLES, BROILERS, TRIPLICATE PAN SETS, DOUBLE FRYING PANS, TEA KETTLES, DUTCH OVENS, COVERS, COMBINATION ROASTERS AND COOKERS, AND DOUBLE BOILERS.
Claims use since Dec. 1, 1946, and in a slightly modified form since Jan. 1, 1930.

Ser. No. 521,245. CRANE CO., Chicago, Ill. Filed Apr. 24, 1947.

CRANE-LINE

The word "Line" is disclaimed apart from the remainder of the mark.
FOR BALL COCKS, FLOAT RODS, FLOAT VALVES, TOWEL BARS, AND CLOSET SEATS.
Claims use since Jan. 1, 1947.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 516,897. INTERCHEMICAL CORPORATION, New York, N. Y. Filed Feb. 4, 1947.

RBH

FOR PIGMENT DISPERSIONS, PIGMENTS FOR THE PAINT TRADE, FLATTING AGENTS FOR THE PAINT TRADE, LACQUERS, BOTH FINISHED AND CONCENTRATES, READY-MIXED AND PASTE PAINTS; AND OILS, THINNERS, AND RESINOUS MATERIALS FOR GENERAL USE IN THE PAINT TRADE.
Claims use since September 1929 for dispersions, pigments, thinners, and lacquers; since January 1941 for flatting agents, paints, and oils; and since July 1945 for resins.

Ser. No. 524,061. FOX PRODUCTS CO., New York, N. Y. Filed June 12, 1947.

FOX PRODUCTS CO.

FLORNU

The words "Products Co." are disclaimed.
FOR LIQUID FLOOR POLISH.
Claims use since about Apr. 1, 1946.

Ser. No. 525,413. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed July 1, 1947.

SOVALAC

FOR AN OLEORESINOUS VARNISH USED IN LIEU OF SHELLAC FOR WOOD, STEEL, OR COMPOSITION SURFACES.
Claims use since Oct. 10, 1936.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 516,516. J. B. WOOD, doing business as Wood Manufacturing Co., El Dorado, Ark. Filed Jan. 28, 1947.

Doodler

FOR ARTIFICIAL FISH LURES.
Claims use since Mar. 31, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 520,248. THE APCO CORPORATION, Los Angeles, Calif. Filed Apr. 7, 1947.

ELECTROVATOR

FOR MOBILE ELECTRICAL HIGH VOLTAGE APPARATUS FOR THE ERADICATION OF VEGETATION IN THE SOIL, THE SAME FUNCTIONING AS A WEED KILLER.
Claims use since Feb. 26, 1946.

Ser. No. 520,689. EFCO MANUFACTURING, INC., Hamilton, R. I. Filed Apr. 15, 1947.

FOR WRENCHES AND WRENCH PARTS.
Claims use since Jan. 2, 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 487,617. GRANBERG EQUIPMENT, INC., Oakland, Calif. Filed Aug. 27, 1945.

GRANCO

FOR METERS—NAMELY, ROTARY PRECISION METERS AND LINE METERS OF THE TYPE ADAPTED FOR MEASURING QUANTITY FLOW OF FLUIDS.
Claims use since Nov. 1, 1937.

Ser. No. 509,083. ARCHIE S. FEINBERG, doing business as Great National Air Conditioning Company, Dallas, Tex. Filed Sept. 14, 1946.

EVAP-O-THERMATIC

The lining on the drawing indicates the color red.
FOR DEVICE ADAPTED FOR MANUAL SETTING AND DISPOSED AT A POINT REMOTE FROM AN EVAPORATIVE COOLER TO AUTOMATICALLY OPEN AND CLOSE OR PARTIALLY OPEN AND CLOSE A DAMPER IN THE EXHAUST CONDUIT OF THE COOLER TO VARY THE C. F. M. OF AIR EXHAUSTED FROM THE COOLER.
Claims use since Aug. 1, 1946.

Ser. No. 517,853. KEYSTONE VIEW COMPANY, Meadville, Pa. Filed Feb. 20, 1947.

KEYSTONE STEREO-MOTIVATOR

The word "Stereo" is disclaimed apart from the mark.
FOR APPARATUS FOR TESTING AND TRAINING OF VISION—NAMELY, A TRIPLE SLIDE HOLDER ASSEMBLY WITH MICROMETER ADJUSTMENT PROVIDING FOR EQUAL BUT OPPOSITELY DIRECTED MOTIONS OF TWO SLIDE HOLDERS AGAINST A STATIONARY THIRD SLIDE.
Claims use since May 9, 1946.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Ser. No. 514,441. PAUL A. STRAUB & CO. INC., New York, N. Y. Filed Dec. 17, 1946.

PASCO

FOR CHINA AND EARTHENWARE—NAMELY, BOWLS, CHINA DINNERWARE, COMPORTS, CABARETS, VASES, URNS, AND BOXES AND TRAYS NOT INCLUDING CIGARETTE BOXES AND ASH TRAYS.
Claims use since 1931.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 513,735. CHARLES J. FRENCH, doing business as French Manufacturing Company, Oklahoma City, Okla. Filed Dec. 5, 1946.

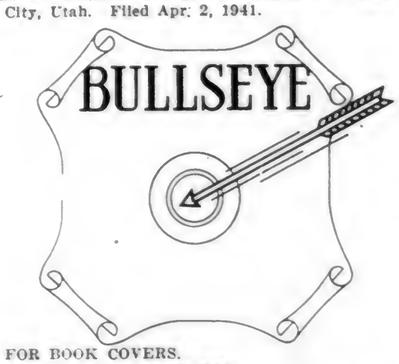
Starlite

FOR DECORATIVE, PLASTIC ROSETTES IN THE NATURE OF ORNAMENTS FOR MIRRORS AND FURNITURE.
Claims use since Nov. 1, 1945.

CLASS 33

GLASSWARE

Ser. No. 506,173. ALEXANDER H. KERR & CO. INC., Los Angeles, Calif. Filed July 24, 1946.



AHK

FOR GLASS CONTAINERS—NAMELY, GLASS JARS AND TUMBLERS.
Claims use since Sept. 9, 1944.

CLASS 37

PAPER AND STATIONERY

Ser. No. 442,219. STEVENS & WALLIS, INC., Salt Lake City, Utah. Filed Apr. 2, 1941.

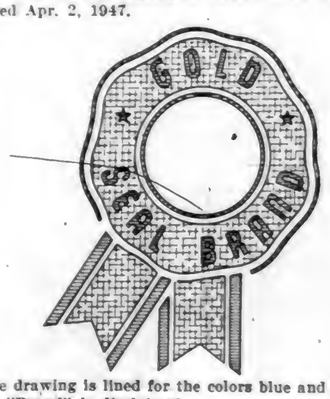
FOR BOOK COVERS.
Claims use since April 1937.

Ser. No. 508,310. REUBEN COMPANY, Chicago, Ill. Filed Aug. 30, 1946.

CONVERTO-BINDER

No claim is made to the word "Binder" apart from the mark.
FOR LOOSE LEAF BINDERS AND RING BINDERS FOR PORTFOLIOS SOLD AS SUCH.
Claims use since December 1939.

Ser. No. 512,131. PARK SQUARE, INCORPORATED, St. Paul, Minn. Filed Nov. 6, 1946.



Waterspun

FOR WRITING PAPER AND CORRESPONDENCE ENVELOPES.
Claims use since Jan. 5, 1946.

CLASS 39

CLOTHING

Ser. No. 520,059. BERNARD SCHERER, New York, N. Y. Filed Apr. 2, 1947.

The drawing is lined for the colors blue and gold. The word "Brand" is disclaimed.
FOR HANDKERCHIEFS.
Claims use since Feb. 3, 1947.

Ser. No. 522,887. WIMELBACHER & RICE, INC., New York, N. Y. Filed May 23, 1947.

DUONYLONSUEDE

FOR FABRIC GLOVES MADE IN WHOLE OR IN PART OF NYLON.
Claims use since May 1, 1947.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 516,321. SOUTHERN BISCUIT COMPANY, INCORPORATED, Richmond, Va. Filed Jan. 24, 1947.

STARLETS

FOR COOKIES.
Claims use since Dec. 18, 1946.

Ser. No. 520,229. CLARA N. PARDEE, Hastings-on-Hudson, N. Y. Filed Apr. 5, 1947.

EAGLE

FOR DRIED BEEF.
Claims use since Mar. 5, 1907.

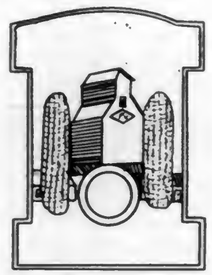
CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 518,577. CHARLES V. SCHUYLER, doing business as Natalun Company, Philadelphia, Pa. Filed Mar. 5, 1947.

natalun

FOR IDENTIFICATION MEDALS MADE OF BASE METALS.
Claims use since Feb. 24, 1947.



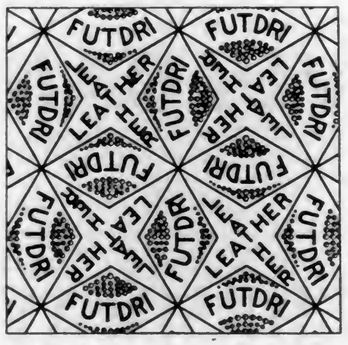
ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 524,413. F. H. PEAVEY & COMPANY, Minneapolis, Minn. Filed Apr. 29, 1948.



Applicant disclaims any right to the exclusive use of a representation of an ear of corn.
FOR AGRICULTURAL SEEDS—NAMELY, FIELD CROP SEEDS.
Claims use since January 1947.

Ser. No. 529,042. J. GREENEBAUM TANNING CO., Chicago, Ill. Filed July 21, 1947.

PRIMO

FOR LEATHER IN THE PIECE, I. E., UPPER LEATHER.
Claims use since Feb. 10, 1925.

Ser. No. 529,043. J. GREENEBAUM TANNING CO., Chicago, Ill. Filed July 21, 1947.

The word "Leather" is disclaimed apart from the mark shown. Applicant claims ownership of registration No. 372,908.
FOR LEATHER FOR OUTER SOLES OR INNER SOLES FOR SHOES.
Claims use since July 7, 1938.

Ser. No. 529,051. J. GREENEBAUM TANNING CO., Chicago, Ill. Filed July 21, 1947.

The mark consists of the letter "G" and a picture of a tree. Applicant claims ownership of registrations Nos. 302,264, 386,658, and 393,381.
FOR LEATHER.
Claims use since Jan. 1, 1932.

Ser. No. 536,540. LOCKPORT COTTON BATTING CO., Lockport, N. Y. Filed Oct. 2, 1947. Under section 2f of the act of 1946.

NO-FLAME

Applicant claims ownership of registration No. 390,349.
FOR COTTON WHICH HAS BEEN TREATED TO RENDER IT FIREPROOF.
Claims use since Sept. 15, 1932.

Ser. No. 541,538. GREAT PLAINS SEED CO., Sioux Falls, S. Dak. Filed Nov. 18, 1947.

FOR FARM AND GARDEN SEEDS.
Claims use since Oct. 21, 1947.

Ser. No. 542,409. J. M. HUBER CORPORATION, New York, N. Y., and Locust, N. J. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

aerfloted

Applicant claims ownership of registration No. 415,264.
FOR CARBON BLACK AND FOR CLAY FILLERS; FOR USE IN INKS, PAINTS, RUBBER OR RUBBER-LIKE COMPOSITIONS AND OTHER PRODUCTS.
Claims use since November 1923.

Ser. No. 542,410. J. M. HUBER CORPORATION, New York, N. Y., and Locust, N. J. Filed Sept. 16, 1947.

FOR CLAY.
Claims use since November 1923.

Ser. No. 543,563. BROWN COMPANY, Berlin, N. H. Filed Dec. 6, 1947.

DURAKRAFT

Applicant claims ownership of registrations Nos. 267,159, 267,160, 286,367, 293,744, and others.
FOR WOOD PULP.
Claims use since Sept. 11, 1947.

Ser. No. 568,090. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Nov. 5, 1948.

ULTROSOL

FOR SYNTHETIC RESINS IN THE FORM OF SOLUTIONS AND EMULSIONS FOR GENERAL USE IN THE INDUSTRIAL ARTS.
Claims use since Oct. 25, 1948.

CLASS 2

RECEPTACLES

Ser. No. 536,452. JACK HOBSON SCOTT, doing business as Caribcraft, Port-Au-Prince, Haiti, West Indies. Filed Oct. 1, 1947.

CARIBCRAFT

FOR CUPS, BOWLS, TRAYS, PLATES, AND DISHES MADE OF WOOD.
Claims use since Sept. 1, 1942.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 554,314. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J. Filed Apr. 10, 1948.

TUSSY

Applicant claims ownership of registration No. 379,732.
FOR SOAP AND WASHING AND SPOTTING COMPOUND FOR TEXTILES AND GARMENTS.
Claims use since Sept. 12, 1939.

CLASS 5

ADHESIVES

Ser. No. 531,809. EUGENE K. KRAKAUR, Patchogue, L. I., N. Y. Filed Aug. 19, 1947.

Adversatape

No claim is made to the rolled tape except as shown.
FOR PLAIN ADHESIVE PAPER TAPE.
Claims use since July 1932.

Ser. No. 543,015. MID-STATES GUMMED PAPER CO., Chicago, Ill. Filed Sept. 9, 1947.

VULCAN

Applicant claims ownership of registration No. 373,737.
FOR GUMMED PAPER VENEER TAPE.
Claims use since June 1, 1939.

Ser. No. 549,024. SOUTHERN FRICTION MATERIALS COMPANY, Charlotte, N. C. Filed Feb. 6, 1948.

CHEMWAY

FOR ADHESIVES FOR FASTENING BRAKE LININGS AND CLUTCH FACINGS TO BRAKE BANDS, BRAKE SHOES, AND BRAKE OR CLUTCH DISCS, AND THE LIKE, AND FOR USE AS A CEMENT FOR FASTENING RUBBER, ASPHALT, PLASTIC, COTTON, AND CORK TILES, SHEET OR ROLL STOCK, WALL COVERINGS, AND TOPPING MATERIALS TO WALLS, FLOORS, CEILINGS, TABLE TOPS, SINK TOPS, CABINETS, AND FURNITURE.
Claims use since 1943 on brake linings and clutch facings; and since 1947 on other materials named.

Ser. No. 549,025. SOUTHERN FRICTION MATERIALS COMPANY, Charlotte, N. C. Filed Feb. 6, 1948.

SOUTHERN

FOR ADHESIVES FOR FASTENING BRAKE LININGS AND CLUTCH FACINGS TO BRAKE BANDS, BRAKE SHOES, AND BRAKE OR CLUTCH DISCS, AND THE LIKE, AND FOR USE AS A CEMENT FOR FASTENING RUBBER, ASPHALT, PLASTIC, COTTON, AND CORK TILES, SHEET OR ROLL STOCK, WALL COVERINGS, AND TOPPING MATERIALS TO WALLS, FLOORS, CEILINGS, TABLE TOPS, SINK TOPS, CABINETS, AND FURNITURE.

Ser. No. 551,802. HUDSON PULP & PAPER CORPORATION, Portland, Maine, and New York, N. Y. Filed Mar. 12, 1948.

Orange Core

FOR GUMMED TAPE.
Claims use since 1927.

Ser. No. 553,357. GAYLORD BROS., INC., Syracuse, N. Y. Filed Mar. 30, 1948.

GAYLO

FOR LIBRARY ADHESIVE.
Claims use since Sept. 1, 1923.

Ser. No. 553,467. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Mar. 31, 1948.

Coragum

Applicant claims ownership of registration No. 344,824.
FOR COMBINATION OF DRY STARCHES, USED AS AN ADHESIVE IN PASTE FORM.
Claims use since Sept. 12, 1936.

Ser. No. 553,469. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Mar. 31, 1948.

Lam-o-dex

Applicant claims ownership of registration No. 362,638.
FOR COMBINATIONS OF DRY STARCHES, DEXTRINES, OR GUMS, FOR PASTING PURPOSES.
Claims use since July 15, 1938.

Ser. No. 553,470. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Mar. 31, 1948.

Moqul

Applicant claims ownership of registration No. 241,992.
FOR CORE BINDER MADE OF STARCH.
Claims use since Mar. 30, 1924.

Ser. No. 555,459. STEIN, HALL & COMPANY, INC., New York, N. Y. Filed Apr. 23, 1948. Under section 2f of the act of 1946.

GLUAID

Applicant claims ownership of registration No. 408,990.
FOR CONVERTED STARCH PRODUCT SUITABLE FOR USES SIMILAR TO GLUE AND USED ALONE OR WITH GLUE FOR ADHESIVE PURPOSES.
Claims use since January 1940.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 487,539. EVELYN WESTALL, doing business as Parfums Evyan Co., New York, N. Y. Filed May 5, 1948.

Evyan

FOR PERFUMES AND COLOGNES.
Claims use since Aug. 22, 1945.

Ser. No. 496,874. TENNESSEE EASTMAN CORPORATION, Kingsport, Tenn. Filed Mar. 3, 1948.

LOOSOL

Applicant claims ownership of registration No. 387,724.
FOR ORGANIC CHEMICAL PREPARATION FOR USE AS AN INHIBITOR TO RETARD DETERIORATION OF ORGANIC MATERIAL; CHEMICAL PREPARATIONS FOR USE AS INHIBITORS IN PREVENTION OF SLUDGE FORMATION IN SCRUBBING OILS FOR ARTIFICIAL GAS.
Claims use since Oct. 1, 1940.

Ser. No. 507,224. ARTHUR R. TURNER, doing business as Artco Products Co., Wilmington, Calif. Filed Mar. 25, 1948.

TERMITROL

FOR A PREPARATION USED AS A WOOD PRESERVATIVE AND AS A PREVENTATIVE AGAINST ALL FORMS OF WOOD DESTROYING ORGANISMS.
Claims use since July 1, 1946.

Ser. No. 510,985. WALKER VITAMIN PRODUCTS, INC., Mount Vernon, N. Y. Filed Aug. 20, 1947. Under section 2f of the act of 1946.

WALKER'S

FOR VARIOUS VITAMIN PREPARATIONS.
Claims use since September 1939.

Ser. No. 515,647. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Aug. 7, 1947.

SESQUI-SEC

FOR MODIFIED SODA.
Claims use since Dec. 24, 1946.

Ser. No. 516,997. HENRY POLLAK, INC., New York, N. Y. Filed Dec. 18, 1947.

POLLAX

FOR CELLULOSE COATING FOR MILLINERY BRAIDS AND HAT BODIES, USED TO ADD SHEEN AND RENDER WATERPROOF.
Claims use since July 1932.

Ser. No. 527,447. TABLE ROCK LABORATORIES, INC., Greenville, S. C. Filed July 5, 1947.

BEFACLIN

Applicant claims ownership of registration No. 365,859.
FOR SOLUTION OF THE WHOLE VITAMIN B COMPLEX AND COMPRESSED TABLETS CONTAINING THE WHOLE VITAMIN B COMPLEX FOR THE TREATMENT OF VITAMIN B DEFICIENCIES, NEURITIS, MALNUTRITION, AND POLYNEURITIS.
Claims use since September 1938.

Ser. No. 530,396. GALREE PRODUCTS CO., INC., New York, N. Y. Filed Aug. 4, 1947.

Regal 4 SQUARE

Applicant claims ownership of registration No. 287,526.
FOR MOTH PREVENTATIVE AND INSECTICIDE.
Claims use since Feb. 15, 1935.

Ser. No. 531,440. CHEMICALS, INC., doing business as So Kleen Products, Oakland and San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

SoKLEEN

The representation of a child in the drawing is fanciful. The words "Soak Don't Rub" are disclaimed apart from the mark. Applicant claims ownership of registration No. 410,418.
FOR HOUSEHOLD BLEACH.
Claims use since Mar. 1, 1940.

Ser. No. 533,538. CHATHAM PHARMACEUTICALS, INC., Newark, N. J. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

Chatham

Applicant claims ownership of registration No. 416,599.
FOR HEMOSTATICS FOR THE CONTROL OF VENOUS AND CAPILLARY BLEEDING; FOR MEDICINAL PREPARATIONS FOR THE TREATMENT OF HYPERACIDITY; AND FOR OINTMENTS FOR THE TREATMENT AND ALLEVIATION OF BURNS AND SKIN DISEASE.
Claims use since Oct. 28, 1942.

Ser. No. 533,579. E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Sept. 5, 1947.

RESONET

FOR TEXTILE FINISHING AGENTS.
Claims use since May 20, 1946.

Ser. No. 533,677. JOAQUIM RODRIGUEZ, Los Angeles, Calif. Filed Sept. 6, 1947.

J. R.
GENERATOR

Applicant disclaims the term "Generator" apart from the mark as shown.
FOR HAIR TONIC.
Claims use since July 29, 1947.

Ser. No. 535,086. ALBERT S. SHARPE, doing business under the name of Eprahs Medicine Co., Detroit, Mich. Filed Sept. 19, 1947.

Eprahs

FOR PREPARATION FOR DIABETES, ASTHMA AND A PILE LOTION.
Claims use since October 1944.

Ser. No. 536,404. C. M. KIMBALL CO., Boston, Mass. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

REFRESH-R

Applicant claims ownership of registration No. 388,145.
FOR BOTTLED LIQUID, WHICH WHEN SPRAYED INTO THE AIR DEODORIZES THE SAME.
Claims use since Apr. 17, 1940.

Ser. No. 537,641. WHITEHALL PHARMACAL COMPANY, New York, N. Y., assignor to Affiliated Products, Inc., New York, N. Y., a corporation of Illinois, now by change of name Whitehall Pharmacal Company, a corporation of Illinois. Filed Oct. 11, 1947. Under section 2f of the act of 1946.

ROWLES
MENTHO-SULPHUR

The portrait is fanciful. No claim is made to the words "Mentho-Sulphur." Applicant claims ownership of registrations Nos. 140,181 and 178,392.
FOR MEDICINAL SALVE FOR THE RELIEF OF AFFECTIONS AND IRRITATIONS OF THE SKIN AND SCALP.
Claims use since May 26, 1923.

Ser. No. 538,442. ODORBASE MANUFACTURING COMPANY, New York, N. Y. Filed Oct. 20, 1947. Under section 2f of the act of 1946.

Odorbase

Applicant claims ownership of registration No. 155,578.
FOR CONCENTRATED PERFUMES.
Claims use since September 1908.

Ser. No. 539,166. THE HERB FARM SHOP LTD., Elizabeth, N. J., and New York, N. Y. Filed Oct. 27, 1947.

The term "Audley" is disclaimed apart from the mark.
FOR PERFUME, TOILET WATER, SACHET POWDER, DUSTING POWDER, BATH ESSENCE, AND TALCUM POWDER.
Claims use since Feb. 18, 1947.

Ser. No. 540,457. HELENA RUBENSTEIN, INC., New York, N. Y. Filed Nov. 7, 1947.

GREEN VELVET

Applicant claims ownership of registration No. 349,251.
FOR PERFUMES.
Claims use since July 30, 1947.

Ser. No. 541,467. ISAIAH D. RUSSELL, doing business as I. D. Russell Co. Laboratories, Kansas City, Mo. Filed Nov. 17, 1947.

Korum

The words "for Poultry" are disclaimed apart from the mark. Applicant claims ownership of registration No. 343,489.
FOR MEDICINES FOR POULTRY.
Claims use since 1929.

Ser. No. 542,680. SUPERIOR BEAUTY PRODUCTS CO., Chicago, Ill. Filed Nov. 28, 1947.

Mil-ett

FOR CREAM SHAMPOO.
Claims use since Nov. 21, 1947.

Ser. No. 543,700. RALPH I. GUY, doing business as The Rig Company, Glendale, Calif. Filed Dec. 8, 1947.

AP 8

FOR NIACIN.
Claims use since Jan. 10, 1936.

Ser. No. 548,973. MACDERMID INCORPORATED, Waterbury, Conn. Filed Feb. 6, 1948.

DYCLENE

FOR A CHEMICAL PREPARATION FOR CLEANING METALS PRIOR TO ELECTROPLATING.
Claims use since Jan. 10, 1940.

Ser. No. 548,975. MACDERMID INCORPORATED, Waterbury, Conn. Filed Feb. 6, 1948.

METALEX

The vertical lining on the drawing indicates the color red.
FOR DRY ALKALINE CLEANSING PREPARATIONS IN THE NATURE OF SOLUBLE SALTS FOR CLEANING METALS PREPARATORY TO PLATING, BUFFING, ETC.
Claims use since May 1940.

Ser. No. 549,277. RIVERDALE CHEMICAL COMPANY, Harvey, Ill. Filed Feb. 10, 1948.

RIVICOL

FOR INSECTICIDE.
Claims use since June 1, 1945.

Ser. No. 550,031. THE DENVER CHEMICAL MANUFACTURING COMPANY, New York, N. Y. Filed Feb. 18, 1948.

Antiphlogistine

The drawing is lined to indicate the color orange. Applicant claims ownership of registrations Nos. 44,419 and 404,462.
FOR MEDICINAL PREPARATION POSSESSING HEALING PROPERTIES AND BEING A HEALING PREPARATION FOR INJURIES AND ACUTE AND CHRONIC INFLAMMATORY AFFECTIONS, AND ALSO FOR A MEDICATED RUB.
Claims use since Oct. 1, 1893, as to word "Antiphlogistine" on medicinal preparation; since Nov. 1, 1942, as shown on medicinal preparation; and since Feb. 5, 1948, on medicated rub.

Ser. No. 550,260. REXALL DRUG COMPANY, doing business as Lorie, Los Angeles, Calif. Filed Feb. 20, 1948.

ADRIENNE

Applicant claims ownership of registration No. 237,405.
FOR COSMETICS—NAMELY, BATH POWDERS, TALCUM POWDERS, CLEANSING CREAMS, COLD CREAMS, FINISHING CREAMS, FOUNDATION CREAMS, SKIN CREAMS, LIPSTICKS, LIQUID BRILLIANTINES, ASTRINGENT LOTIONS, SKIN LOTIONS, SKIN FRESHENERS, COLOGNES, PERFUMES, ROUGES, AND SACHET PERFUMED POWDER IN BAGS AND PADS.
Claims use since Mar. 16, 1927.

Ser. No. 551,174. EVANGELINE PRODUCTS, INC., Brooklyn, N. Y. Filed Mar. 4, 1948.

Evangeline

Applicant claims ownership of registration No. 289,488.
FOR SHOE DYE FOR FABRIC AND LEATHER.
Claims use since June 15, 1931.

Ser. No. 551,728. THE OCA MEDICINE COMPANY, INC., New York, N. Y. Filed Mar. 11, 1948. Under section 2f of the act of 1946.

O. K.

Applicant claims ownership of registrations Nos. 327,988 and 385,972.
FOR PREPARATIONS INDICATED IN AND FOR THE TREATMENT OF HEADACHES, NEURALGIAS, COUGHS, COLDS, GRIPPE, MUSCULAR ACHES AND PAINS, FEVER, AS A GARGLE FOR THE RELIEF OF MINOR THROAT IRRITATIONS, AND ALL SUCH OTHER RELATED HUMAN AILMENTS AND PATHOLOGICAL CONDITIONS IN OR FOR THE TREATMENT OF WHICH IT MAY BE NECESSARY OR ADVISABLE TO ADMINISTER ANALGESICS, ANODYNES, AND ANTIPYRETICS.
Claims use since 1915.

Ser. No. 552,489. POND'S EXTRACT COMPANY, New York, N. Y. Filed Mar. 19, 1948. Under section 2f of the act of 1946.

POND'S

Applicant claims ownership of registrations Nos. 215,081, 260,316, 323,881, 354,558, 400,349, 415,955, and 435,562.
FOR TOILET, COSMETIC, AND PHARMACEUTICAL PRODUCTS—NAMELY, EXTRACT OF HAMAMELIS OR WITCH HAZEL, COLD CREAM, VANISHING CREAM, LIQUEFYING CREAM, DRY SKIN CREAM, SKIN FRESHENER, FACE POWDER, DUSTING POWDER, TALCUM POWDER, LIPSTICKS, ROUGE, COLOGNE, AND PREPARATION TO BE APPLIED TO THE FACE TO FORM A MAKE-UP BASE OR FOUNDATION.
Claims use since 1846.

Ser. No. 553,468. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Mar. 31, 1948.

Hawkeye

Applicant claims ownership of registrations Nos. 81,092 and 81,093.
FOR STARCH FOR LAUNDRY AND MANUFACTURING PURPOSES.
Claims use since 1900.

Ser. No. 553,671. JOSEPHINE BUCKLEY, doing business as Fronz-Buckley Co., Brooklyn, N. Y. Filed Apr. 2, 1948.

FRONZYST

FOR LINIMENT FOR EXTERNAL APPLICATION IN THE TREATMENT OF MUSCULAR ACHES AND PAINS.
Claims use since Mar. 1, 1948.

Ser. No. 556,016. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed May 1, 1948.

SEOTAL SODIUM

The word "Sodium" is disclaimed apart from the mark shown. Applicant claims ownership of registration No. 430,202.

FOR MEDICINAL PREPARATION OF SODIUM PROPYL-METHYL-CARBINYL ALLYL BARBITURATE USEFUL AS A HYPNOTIC.
Claims use since Mar. 29, 1948.

Ser. No. 556,267. HOFFMANN-LA ROCHE INC., Nutley, N. J. Filed May 5, 1948.

THEPHORLIN

Applicant claims ownership of registration No. 59,581.
FOR PREPARATIONS EXHIBITING ANTISPASMODIC AND ANTIHISTAMINIC ACTIVITY.
Claims use since Apr. 19, 1948.

Ser. No. 556,408. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 7, 1948. Under section 2f of the act of 1946.

Carey

Applicant claims ownership of registrations Nos. 150,520 and 105,340.
FOR MAGNESIA, LIGHT CALCINED MAGNESIA, LIGHT CALCINED MAGNESIA POWDER, CARBONATE OF MAGNESIA, AND CARBONATE OF MAGNESIA POWDER.
Claims use since Aug. 1, 1888.

Ser. No. 556,457. LENTHÉRIC INCORPORATED, New York, N. Y. Filed May 7, 1948.

GENDARME

FOR PERFUMES, TOILET WATERS, AND COSMETIC CREAMS.
Claims use since Apr. 14, 1948.

Ser. No. 556,498. VAN PELT AND BROWN, INCORPORATED, Richmond, Va. Filed May 7, 1948.

TRIFONAMIDE

FOR PREPARATION IN LIQUID, TABLET, AND LOZENGES FORM, USED FOR THE CHEMEOTHERAPEUTIC TREATMENT OF BACTERIAL INFECTION.
Claims use since Mar. 9, 1948.

Ser. No. 557,330. MILFORD H. WISE, doing business as Rawl Chemists Co., New York, N. Y. Filed May 18, 1948.

METHEPONEX

FOR CAPSULES FOR LIVER DISORDERS AND ENDOCRINE DISTURBANCES.
Claims use since Apr. 22, 1948.

Ser. No. 557,429. CORTUNON CO., INC., New York, N. Y. Filed May 20, 1948.

KLEV

FOR MEDICINAL PREPARATION FOR USE IN THE SYMPTOMATIC THERAPY IN RHEUMATISM AND ARTHRITIS.
Claims use since May 7, 1948.

Ser. No. 557,673. MEYER CHEMICAL COMPANY, Detroit, Mich. Filed May 24, 1948.

LUTESTRA

FOR A PARENTERAL SOLUTION CONTAINING PROGESTERONE, ALPHA-ESTRADIOL, WITH CHLOROBUTANOL FOR USE IN THE TREATMENT OF AMENORRHEA OR MENOMETORRHAGIA.
Claims use since Sept. 24, 1946.

Ser. No. 557,799. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed May 25, 1948.

INTRACILLINE

Applicant claims ownership of registration No. 435,106.
FOR PENICILLIN PREPARATIONS FOR USE AS ANTI-BACTERIALS.
Claims use since Apr. 2, 1948.

Ser. No. 557,800. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed May 25, 1948.

Gelu-cilline

Applicant claims ownership of registrations Nos. 378,528, 422,035, and others.
FOR PENICILLIN PREPARATIONS FOR USE AS ANTI-BACTERIALS.
Claims use since Apr. 2, 1948.

Ser. No. 558,109. E. C. DE WITT & CO. INC., Chicago, Ill. Filed May 29, 1948. Under section 2f of the act of 1946.

DeWitt's

Applicant claims ownership of registrations Nos. 44,550, 45,039, 45,281, 145,945, 163,307, 190,422, 192,053, and 197,205.
FOR PREPARATIONS FOR INTERNAL AND EXTERNAL USE IN LIQUID FORM, SEMILIQUID, OR SOLID FORM, IN SIRUP FORM, TABLET FORM, CANDY FORM, CREAM FORM, SALVE FORM, JELLY FORM, POWDER FORM, OR IN THE FORM OF PILLS, RECOMMENDED FOR ALLEVIATING THE DISTRESS OF STOMACH ACIDITY; A DIURETIC STIMULANT FOR THE KIDNEYS; ALSO PREPARATIONS RECOMMENDED FOR THE RELIEF OF HEADACHE, COUGHS, COLDS, MUSCULAR PAINS, AND IRRITATION OF THE EYES CAUSED BY DUST, FAILING APPETITE; ALSO PREPARATIONS FOR REMOVING CORNS AND CALLI; ALSO SHAMPOO, TOILET CREAM, ANTACID POWDER, HYGIENIC POWDER; ALSO PREPARATIONS TO BE APPLIED TO CUTS, BRUISES, SPRAINS, BURNS, AND THE LIKE; PREPARATIONS FOR THE RELIEF OF CONSTIPATION; PREPARATIONS FOR THE RELIEF OF NASAL CONGESTIONS; OIL FOR SOFTENING ACCUMULATION OF WAX IN THE EARS; PREPARATION FOR THE ALLEVIATION OF TOOTHACHE; FOOT POWDER FOR THE RELIEF OF TIRED AND ACHING FEET; ASPIRIN; HAIR DRESSING; SUN TAN LOTION AND SUN TAN CREAM.
Claims use since 1889.

Ser. No. 558,145. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J. Filed May 29, 1948. Under section 2f of the act of 1946.

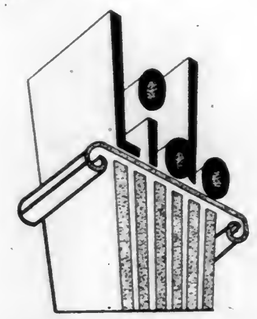
DOROTHY GRAY

The trade-mark is not intended to identify any particular individual, no person by that name being at present in any way connected with applicant's business or being the source of applicant's goods. Applicant claims ownership of registrations Nos. 200,419, 285,634, 290,936, and 352,321.
FOR PERFUMES, EAU DE COLOGNE, TOILET WATER, FACE POWDER, DUSTING POWDER, TALCUM POWDER, SACHET POWDER, CAKE MAKE-UP, LIPSTICKS, ROUGE, FINISHING LOTION, TOILET CREAMS, CLEANSING CREAMS AND LOTIONS, COLD CREAM, FOUNDATION CREAM, SUNBURN CREAM, TANNING OIL, SUNTAN LOTION, WHITENING CREAM, SUPPLING CREAM, SPECIAL SKIN CREAMS, MASQUE PREPARATIONS, HYGIENIC LOTION, HAND CREAM AND LOTIONS, THROAT CREAM, DEODORANT CREAM, DEPILATORIES, SKIN CIRCULATION AND MASSAGE OINTMENT, ASTRINGENTS, OILS AND LOTIONS FOR THE SKIN, EMOLLIENT AND LUBRICANT CREAMS FOR THE SKIN, PORES AND TISSUES, HYGIENIC PASTE, CLEANSING GRAINS (A TOILET PREPARATION IN GRANULATED FORM USED AS A CLEANSING MECHANICAL STIMULANT), LEG TINTING OR MAKE-UP COSMETIC, MASCARA, EYE SHADOW, EYEBROW PENCILS, EYE EMOLLIENT CREAM, BATH ESSENCE, BUBBLING BATH OIL, PREPARATION RECOMMENDED FOR USE AS A BODY RUB, BABY OIL, BABY POWDER, BABY ANTICHAFING OINTMENT, BABY SOFTENING SKIN CREAM, SHAMPOO, NAIL CREAM, NAIL POLISH, NAIL POLISH REMOVERS, NAIL POLISH FIXATIVES, VANITY CASES CONTAINING POWDER AND/OR ROUGE AND/OR LIPSTICKS, ROUGE REFILLS AND LIPSTICK REFILLS FOR VANITIES, LIPSTICKS AND COMPACTS, REFILLS FOR MASCARA.
Claims use since 1916.

Ser. No. 558,901. LES PARFUMS DE DANA, INC., New York, N. Y. Filed June 10, 1948.

Applicant claims ownership of registration No. 383,832.
FOR PERFUME, TOILET WATERS, LIPSTICKS, FACE POWDERS, TOILET CREAMS, AND ROUGE.
Claims use since December 1940.

Ser. No. 558,984. AMERICAN GUM PRODUCTS COMPANY, New York, N. Y. Filed June 11, 1948.



GOULAC

Applicant claims ownership of registration No. 92,500 (renewed).
FOR CHEMICAL COMPOUND USEFUL AS AN EMULSIFYING AND DISPERSING AGENT IN THE MANUFACTURE OF ROAD OILS, PORTLAND CEMENT, AND ORE FLOTATION, AND AS AN AGENT EMPLOYED IN MINERAL SEPARATION PROCESSES IN CONNECTION WITH METAL REFINING.
Claims use in connection with an emulsifying agent in the manufacture of insecticides and road oils, since on or about Mar. 12, 1930; in connection with Portland cement, since on or about Dec. 17, 1935; in connection with ore flotation, since on or about May 3, 1940; and as an agent employed in mineral separation processes in connection with metal refining, since on or about June 10, 1926.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 513,639. REXON INC., New York, N. Y. Filed Sept. 18, 1947.

FOR CIGARETTE AND CIGAR CASES, CIGARETTE AND CIGAR HOLDERS, AND ASH TRAYS, MADE OF BASE METAL AND/OR COMPOSITION MATERIAL.
Claims use since July 5, 1945.

Ser. No. 549,563. MURRAY MENSCHIK, doing business as Joell Manufacturing Co., Brooklyn, N. Y. Filed Feb. 12, 1948.

JOELL

FOR LEATHER GOODS—NAMELY, TOBACCO POUCHES.
Claims use since Feb. 1, 1945.

CLASS 10

FERTILIZERS

Ser. No. 528,420. ARMOUR AND COMPANY, Chicago, Ill. Filed July 12, 1947.

GOLD BOND

FOR FERTILIZERS.
Claims use since 1912.

Ser. No. 551,981. KAW RIVER VALLEY FERTILIZER CO., Lawrence, Kans. Filed Mar. 15, 1948.

Vitagreen

FOR FERTILIZER AND PLANT FOOD.
Claims use since Mar. 5, 1948.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 535,990. OLD TOWN RIBBON & CARBON CO., INC., Brooklyn, N. Y. Filed Sept. 27, 1947. Under section 2f of the act of 1946.

OLD TOWN SUPER-KLEEN

The word "Kleen" is disclaimed apart from the mark.
FOR CARBON PAPER.
Claims use since Nov. 17, 1934.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 532,622. MONDEAUX MILLWORK AND SUPPLY COMPANY, Medford, Wis. Filed Aug. 27, 1947.

Mon-Do

FOR WINDOW SASHES IN WEATHER-STRIPPED WINDOW FRAMES, DOOR AND WINDOW FRAMES, WINDOW SASHES, AND DOORS.
Claims use since July 15, 1946.

Ser. No. 539,377. AMERICAN CROSSARM & CONDUIT COMPANY, Chicago, Ill. Filed Oct. 29, 1947. Under section 2f of the act of 1946.

RAINIER

FOR CROSSARMS, BRACES, PINS, AND BRACKETS, ALL SAID GOODS BEING MADE OF WOOD, FOR TELEPHONE, TELEGRAPH, AND ELECTRIC POWER POLES AND OTHER SUPPORTING STRUCTURES.
Claims use since Dec. 1, 1926.

Ser. No. 541,140. EDWARD HINES LUMBER CO., Chicago, Ill. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

HINES

FOR PONDEROSA PINE LUMBER.
Claims use since April 1934.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 474,081. CLAYTON MARK & COMPANY, Evanston, Ill. Filed Jan. 21, 1948. Under section 2f of the act of 1946.

HYDRO

FOR UNIONS FOR CONNECTING PIPES OR RODS, AND UNION CHECK VALVES.
Claims use since Mar. 3, 1930.

Ser. No. 501,025. STAR EXPANSION BOLT COMPANY, New York, N. Y. Filed Aug. 5, 1948.

★STAR GRIPZIN

Applicant disclaims the word "Gripzin" apart from the mark. Applicant claims ownership of registrations Nos. 349,618 and 391,079.
FOR METAL EXPANSION SHIELDS FOR MACHINE SCREWS AND MACHINE BOLTS.
Claims use since Mar. 12, 1946.

Ser. No. 502,796. BLACKHAWK MFG. CO., Milwaukee, Wis. Filed July 10, 1947.

BLACKHAWK

Applicant claims ownership of registration No. 424,871.
FOR VALVES FOR CONTROLLING THE FLOW OF FLUIDS THROUGH CONDUITS; METALLIC PIPES AND TUBES; AND PIPE, TUBE, AND HOSE COUPLINGS.
Claims use since March 1927.

Ser. No. 530,347. STANDARD HORSE NAIL CORPORATION, New Brighton, Pa. Filed Aug. 2, 1947.

KOOLHEAD

FOR NAILS.
Claims use since 1923.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 534,742. CENTURY ELECTRIC COMPANY, St. Louis, Mo. Filed Sept. 17, 1947.

CARBITE

FOR CASTINGS OF IRON.
Claims use since June 1, 1947.

Ser. No. 539,060. THE INTERNATIONAL NICKEL COMPANY, INC., New York, N. Y. Filed Oct. 25, 1947.

INCO
INCONEL

Applicant claims ownership of registrations Nos. 403,265 and 429,027.
FOR NICKEL ALLOYS AND ALLOYS OF NICKEL, CHROMIUM AND IRON.
Claims use since Sept. 23, 1947.

Ser. No. 549,120. CHICAGO STEEL AND WIRE COMPANY, Chicago, Ill. Filed Feb. 9, 1948.

FOR ROUND BOOKBINDERS' WIRE, FLAT BOOKBINDERS' WIRE AND BOXMAKERS' WIRE.
Claims use since 1936.

Ser. No. 550,288. AMPCO METAL, INC., Milwaukee, Wis. Filed Feb. 21, 1948.

Sil-Trode

FOR METALLIC WELDING RODS AND ARC WELDING ELECTRODES.
Claims use since Oct. 17, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 536,496. CARDINAL CHEMICAL CORPORATION, Newark, N. J. Filed Oct. 2, 1947.

Colloil

FOR LUBRICATING OILS.
Claims use since Sept. 5, 1947.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

FOR SALVES.
Claims use since Apr. 1, 1891.

Reg. No. 99,387. Registered Aug. 25, 1914. ALPHONSE P. FOOSE, Dayton, Ohio. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

FOR REMEDY FOR FOOT AILMENTS.
Claims use since Oct. 1, 1910.

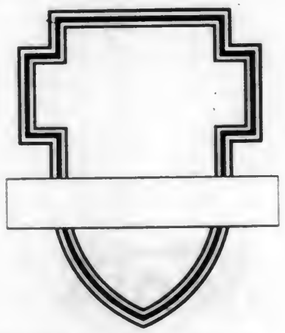
Reg. No. 110,997. Registered June 20, 1916. THE SEPTIGYN COMPANY, Dallas, Tex. Republished by Myra German Thompson, also known as Mrs. O. J. Thompson, trading as The O. J. Thompson Co., Dallas, Tex.

Septigyn

FOR MEDICINES TO BE USED AS AN ANTISEPTIC.
Claims use since Jan. 1, 1909.

Reg. No. 180,743. Registered Mar. 4, 1924. SCHRAMM-JOHNSON, DRUGS, Salt Lake City, Utah. Republished by Carrel, Ltd., Chicago, Ill., a corporation of Illinois.

HILLROSE



FOR HAIR DRESSING, BATH SALTS, ALMOND-MEAL CREAM, A CREAM FOR EXTREME PERSPIRATION; SALVE AND TINT FOR TINTING THE LIPS, CHEEKS AND FINGER NAILS; PREPARED HENNA, HAIR TONIC, VANISHING CREAM, BANDOLINE, LIQUID NAIL ENAMEL, AND EAU DE QUININE.
Claims use since 1906.

Reg. No. 184,349. Registered May 20, 1924. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York. Republished by registrant.

ORCHARD

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Apr. 1, 1908.

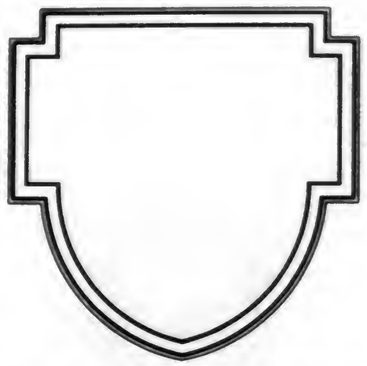
Reg. No. 184,350. Registered May 20, 1924. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York. Republished by registrant.

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Sept. 11, 1923.

Reg. No. 192,053. Registered Nov. 25, 1924. E. C. DE WITT & Co. INC., Chicago, Ill., a corporation of New York. Republished by registrant.

DeWitt's

FOR EYE BATH.
Claims use since October 1922.



Reg. No. 201,008. Registered July 14, 1925. E. C. DE WITT & Co. INC., Chicago, Ill., a corporation of New York. Republished by registrant.

Baby COUGH SYRUP

The words "Cough Syrup" are disclaimed apart from the mark as shown.
FOR COUGH SIRUP.
Claims use since January 1924.

Reg. No. 215,759. Registered July 27, 1926. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York. Republished by registrant.

FOR HEAVY CHEMICALS, ALSO KNOWN AS COMMERCIAL OR TECHNICAL CHEMICALS, AND FOR REAGENT CHEMICALS.
Claims use since November 1925.

Reg. No. 274,643. Registered Sept. 2, 1930. WALGREEN CO., doing business as Valentine Laboratories, Chicago, Ill. Republished by Valentine Laboratories, Inc., Chicago, Ill., a corporation of Illinois.

ANIDON

FOR TABLETS FOR THE RELIEF OF DISTRESS AND DISCOMFORT DUE TO SIMPLE HEADACHE, HEAD COLDS, MUSCULAR ACHES AND PAINS, AND AFTER TOOTH EXTRACTION.
Claims use since Mar. 27, 1930.

Reg. No. 285,647. Registered Aug. 4, 1931. GERMANIA TEA COMPANY, Minneapolis, Minn. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

The drawing is lined for blue.
FOR MEDICINES—NAMELY, AN HERB TEA FOR CAUSING THE ORGANS TO ELIMINATE.
Claims use since Mar. 1, 1927.

Reg. No. 292,487. Registered Mar. 15, 1932. EARNSHAW KNITTING COMPANY, Newton, Mass. Republished by The Vanta Company, Newton, Mass., a corporation of Massachusetts.

FOR STERILIZED BABY POWDER.
Claims use since Aug. 19, 1931.

Reg. No. 292,488. Registered Mar. 15, 1932. EARNSHAW KNITTING COMPANY, Newton, Mass. Republished by The Vanta Company, Newton, Mass., a corporation of Massachusetts.

Vanta

FOR STERILIZED BABY POWDER.
Claims use since Aug. 19, 1931.

Reg. No. 292,489. Registered Mar. 15, 1932. EARNSHAW KNITTING COMPANY, Newton, Mass. Republished by The Vanta Company, Newton, Mass., a corporation of Massachusetts.

Vanta

FOR STERILIZED BABY POWDER.
Claims use since Aug. 19, 1931.

Reg. No. 292,558. Registered Mar. 15, 1932. EARNSHAW KNITTING COMPANY, Newton, Mass. Republished by The Vanta Company, Newton, Mass., a corporation of Massachusetts.

FOR STERILIZED OLIVE OIL.
Claims use since Aug. 19, 1931.

Reg. No. 292,579. Registered Mar. 15, 1932. EARNSHAW KNITTING COMPANY, Newton, Mass. Republished by The Vanta Company, Newton, Mass., a corporation of Massachusetts.

Vanta

FOR STERILIZED OLIVE OIL.
Claims use since Aug. 19, 1931.

Reg. No. 292,580. Registered Mar. 15, 1932. EARNSHAW KNITTING COMPANY, Newton, Mass. Republished by The Vanta Company, Newton, Mass., a corporation of Massachusetts.

Vanta

FOR STERILIZED OLIVE OIL.
Claims use since Aug. 19, 1931.

Reg. No. 303,123. Registered May 9, 1933. THE DRACKETT CHEMICAL COMPANY, Cincinnati, Ohio. Republished by The Drackett Company, Cincinnati, Ohio, a corporation of Ohio.

Drackett

FOR CAUSTIC SODA, CHLORINATED LIME, EPSOM SALT, LYE, AND CHEMICAL PREPARATIONS IN THE NATURE OF A DRAIN PIPE SOLVENT FOR CLEANSING DRAINS, SINKS, WASHBOWLS, KITCHEN UTENSILS, BATH ROOM FIXTURES, GARBAGE RECEPTACLES, AND THE LIKE.
Claims use since on or about Jan. 1, 1921.

Reg. No. 312,053. Registered Apr. 17, 1934. WM. P. POYTHRESS & CO., INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

URO PHOSPHATE S

The words "Uro-Phosphate" are disclaimed apart from the mark as shown.
FOR PREPARATION USEFUL IN THE TREATMENT OF URINARY INFECTION OF THE COLON BACILLUS ORIGIN.
Claims use since Aug. 28, 1918.

Reg. No. 330,278. Registered Nov. 26, 1935. NATIONAL LICORICE COMPANY, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

"HELPS"

The drawing is lined for red and gold. No claim is made to the word "Helps" or to the representation of the container apart from the mark as shown.
FOR LOZENGES FOR THE TREATMENT OF COUGHS, COLDS, AND SORE THROATS.
Claims use since Mar. 6, 1935.

Reg. No. 330,411. Registered Dec. 3, 1935. DALARE ASSOCIATES, Philadelphia, Pa., a partnership. Republished by registrant.

DALARE ASSOCIATES

FOR FERMENTED CULTURES, VETERINARY ANTISEPTIC, DEODORANTS, GERMICIDES, DUSTING POWDER, FLEA AND LICE POWDER, AND QUICK KURD SOUR MILK TESTING SOLUTION.
Claims use since May 1, 1935.

Reg. No. 342,305. Registered Jan. 12, 1937. WM. P. POTTBRESS & CO., INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

TCS

FOR DIURETIC DRUG USED IN TREATING HYPERTENSION, ANGINA PECTORIS, CORONARY THROMBOSIS, MYOCARDIAL INSUFFICIENCY, EDEMA, AND RELATED CONDITIONS.
Claims use since July 27, 1935.

Reg. No. 343,025. Registered Feb. 9, 1937. SWEET FEET, INCORPORATED, Gulfport, Miss., a corporation of Mississippi. Republished by registrant.

SWEET FEET

FOR PREPARATION FOR DEODORIZING AND TREATING ATHLETE'S FOOT.
Claims use since May 15, 1936.

Reg. No. 355,102. Registered Mar. 8, 1938. WALGREEN CO., doing business as Valentine Laboratories, Chicago, Ill. Republished by Valentine Laboratories, Inc., Chicago, Ill., a corporation of Illinois.

CERADYNE

The drawing is lined for shading.
FOR ANTI-PAIN TABLET.
Claims use since July 1937.

Reg. No. 364,913. Registered Feb. 21, 1939. WALGREEN CO., doing business as Union Drug Co., Chicago, Ill. Republished by Valentine Laboratories, Inc., Chicago, Ill., a corporation of Illinois.

BISMADINE

FOR MEDICINE FOR USE AS A STOMACHIC PREPARATION.
Claims use since December 1929.

Reg. No. 366,255. Registered Apr. 4, 1939. WM. P. POTTBRESS & CO. INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

ANTROCOL

FOR ANTISPASMODIC AND SEDATIVE DRUG USED IN THE TREATMENT OF GASTROINTESTINAL DISTURBANCES, SMOOTH MUSCLE SPASMS, HYPERCHLORHYDRIA, HYPERTENSION, CARDIAC NEUROSES, DYSMENORRHEA, BRONCHIAL ASTHMA, AND RELATED DYSFUNCTIONS.
Claims use since Oct. 1, 1938.

Reg. No. 393,169. Registered Jan. 27, 1942. VALENTINE LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FORMULA 2 0 SHAMPOO

The words "Formula" and "Shampoo" are disclaimed apart from the mark as shown. The drawing is lined for gold.
FOR SHAMPOO.
Claims use since March 1941.

Reg. No. 394,578. Registered Apr. 14, 1942. THE WHITE & BAGLEY COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

VITASOLV

FOR LIQUID FLUSHING AND CLEANING COMPOUND FOR FLUSHING AND CLEANING MOTORS, ENGINES, GEARS AND GEARING, GEAR BOXES, AND CRANK CASES.
Claims use since Mar. 16, 1938.

Reg. No. 396,215. Registered June 30, 1942. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

ROSUL

FOR CHEMICALS AND INSECTICIDES FOR SPRAYING AND DUSTING PURPOSES.
Claims use since Nov. 17, 1941.

Reg. No. 399,596. Registered Jan. 19, 1943. THE PIERCE OIL PRODUCTS CORP., East Rochester, N. Y., a corporation of New York. Republished by registrant.

VORITE

FOR PROCESSED VEGETABLE OIL PRODUCT FOR USE AS A RUBBER SUBSTITUTE, RUBBER EXTENDER, RUBBER PLASTICIZER, A SYNTHETIC RUBBER SUBSTITUTE, RUBBER EXTENDER AND RUBBER PLASTICIZER, AND ALSO HAVING INCIDENTAL PROPERTIES FOR USE IN PAINTS, VARNISHES, ENAMELS, AND RESINS.
Claims use since July 27, 1904.

Reg. No. 405,280. Registered Jan. 18, 1944. CARREL, LTD., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Hillrose K

FOR LOTION FOR ROUGH HANDS, WHICH SOFTENS, WHITENS, PROTECTS AND BEAUTIFIES THE SKIN.
Claims use since July 9, 1930.

Reg. No. 408,195. Registered July 25, 1944. VALENTINE LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BERITE

FOR VITAMIN PREPARATION FOR INTERNAL USE FOR TREATMENT OF VITAMIN DEFICIENCY.
Claims use since Feb. 9, 1944.

Reg. No. 410,073. Registered Nov. 7, 1944. CENTRAL CHEMICAL CORPORATION, Everett, Pa., and Hagerstown, Md., a corporation of Maryland. Republished by registrant, present address Hagerstown, Md.

PRO-TEX

FOR INSECTICIDE AND FUNGICIDE.
Claims use since May 1937.

Reg. No. 413,250. Registered Apr. 17, 1945. VALENTINE LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FORMULA 20

The word, "Formula," and the red colored label are disclaimed apart from the mark as shown. The drawing is lined for the colors red and silver.
FOR HAIR TONIC.
Claims use since June 26, 1935.

Reg. No. 413,258. Registered Apr. 17, 1945. OLAFSEN VITAMINS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BAYTOL

FOR VITAMIN PREPARATION FOR INTERNAL USE FOR TREATMENT OF VITAMIN DEFICIENCY, BEING A MEDICINE.
Claims use since Jan. 3, 1944.

Reg. No. 414,502. Registered June 12, 1945. E. C. DE WITT & CO. INC., Chicago, Ill., a corporation of New York. Republished by registrant.

CREOSANT

FOR EXPECTORANT AND A COUGH SYRUP FOR COUGHS DUE TO COLDS.
Claims use since October 1935.

Reg. No. 415,402. Registered Aug. 7, 1945. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

N-R-S DUST

The word "Dust" is disclaimed apart from the mark as shown.
FOR CHEMICALS AND INSECTICIDES FOR SPRAYING AND DUSTING PURPOSES.
Claims use since Feb. 21, 1944.

Reg. No. 432,437. Registered Sept. 2, 1947. HANSON-VAN WINKLE-MUNNING COMPANY, Matawan, N. J., a corporation of New Jersey. Republished by registrant.

ALBALOY

FOR ELECTROPLATING BATH INGREDIENTS.
Claims use since May 22, 1946.

Reg. No. 434,186. Registered Nov. 11, 1947. AVON PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

MERRIMENT

FOR LIPSTICKS, ROUGES, AND NAIL POLISH.
Claims use since Oct. 17, 1946.

Reg. No. 434,322. Registered Nov. 18, 1947. AVON PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROSY MORN

FOR LIPSTICK, ROUGE, NAIL POLISH.
Claims use since July 1940.

Reg. No. 434,354. Registered Nov. 18, 1947. AVON PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

FORGIVE ME

FOR PERFUMES, TOILET WATERS, AND COLOGNES.
Claims use since Aug. 28, 1946.

Reg. No. 434,432. Registered Nov. 18, 1947. U. S. STANDARD PRODUCTS CO., Woodworth, Wis., a corporation of Wisconsin. Republished by registrant.

ZYCLOPHEN

FOR PHARMACEUTICAL PREPARATION FOR EXPERIMENTAL USE ONLY IN TREATMENT OF FUNGUS INFECTIONS AND SCABIES.
Claims use since July 1, 1944.

CLASS 7

CORDAGE

Reg. No. 115,269. Registered Feb. 6, 1917. AMERICAN MANUFACTURING COMPANY, Boston, Mass., and Brooklyn, N. Y., a corporation of Massachusetts. Republished by registrant, present address Brooklyn, N. Y.

CLIPPER

FOR ROPE, CORD, LINES, AND TWINE MANUFACTURED FROM VEGETABLE FIBER.
Claims use since Sept. 27, 1916.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 323,757. Registered Apr. 30, 1935. MATCH KING, INC., Chicago, Ill. Republished by Galter Products Co., Chicago, Ill., a corporation of Illinois.

Jumbo

FOR PYROPHORIC CIGAR AND CIGARETTE LIGHTERS.
Claims use since on or about June 1, 1930.

CLASS 10

FERTILIZERS

Reg. No. 353,017. Registered Dec. 21, 1937. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

CENTRAL CHEMICAL CORPORATION OF MD · DEPENDABLE · FARMRITE · QUALITY · HAGERSTOWN · MARYLAND

The words "Dependable Quality" and "Hagerstown Maryland" are disclaimed apart from the mark as shown.
FOR FERTILIZERS.
Claims use since May 12, 1937.

Reg. No. 374,186. Registered Jan. 2, 1940. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

CENTRAL CHEMICAL CORPORATION OF MD. · FARMRITE · HAGERSTOWN MARYLAND

FAMOUS

The words "Dependable Quality" and "Hagerstown Maryland" are disclaimed apart from the mark as shown.
FOR FERTILIZERS.
Claims use since May 25, 1937.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 283,238. Registered May 19, 1931. MOSINEE PAPER MILLS COMPANY, Mosinee, Wis., a corporation of Wisconsin. Republished by registrant.

CORDEX

FOR THERMAL INSULATING PAPER.
Claims use since Aug. 15, 1930.

Reg. No. 330,697. Registered Dec. 10, 1935. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

ALAMO

FOR FIRE BRICK.
Claims use since May 23, 1935.

Reg. No. 345,612. Registered May 4, 1937. THE R. C. A. RUBBER COMPANY, Akron, Ohio, a corporation of Ohio. Republished by registrant.

"FLEXI-FLOR"

The word "Flor" is disclaimed apart from the mark as shown.
FOR RUBBER COMPOSITION FLOORING MATERIALS OR RUBBER TILING.
Claims use since Sept. 21, 1934.

Reg. No. 345,613. Registered May 4, 1937. THE R. C. A. RUBBER COMPANY, Akron, Ohio, a corporation of Ohio. Republished by registrant.

WALL-FLEX

FOR RUBBER TILING IN SHEET OR BLOCK FORM FOR WAINSCOATING AND WALL SURFACES.
Claims use since Nov. 1, 1935.

Reg. No. 427,307. Registered Feb. 4, 1947. ALSCO, INC., Akron, Ohio, a corporation of Ohio. Republished by registrant.

ALSCO

FOR STORM WINDOWS AND STORM DOORS.
Claims use since Dec. 27, 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 88,364. Registered Sept. 10, 1912. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

R & L BCo

FOR STERLING SILVER KNIVES, FORKS, SPOONS, TONGS, LADLES, SIFTERS, PINS, BUCKLES, BROOCHES, NAPKIN RINGS, NAPKIN MARKERS, SALT AND PEPPER SHAKERS, MUFFINEERS, TEA BALLS, TEA STRAINERS, BAGS, CUPS, CASES, CHESTS, AND THE FOLLOWING NAMED GOODS HAVING STERLING SILVER MOUNTINGS: BUTTONS, CHAINS, RINGS, BOWLS, PITCHERS, CANDLESTICKS, DISHES, POTS, PLATTERS, SERVERS, VASES, TRAYS, BOXES, BOTTLES, MUGS, COASTERS, BRUSHES, COMBS, MIRRORS, NAIL FILES, SCISSORS, SHOE HORNS, BUTTON-HOOKS, BUFFERS, JARS, BOTTLE OPENERS, CORKSCREWS, BABY RATTLES AND WHISTLES, BELLS, MARKERS AND LOCKETS.
Claims use since Sept. 1, 1902.

Reg. No. 145,191. Registered July 26, 1921. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

Treasure

FOR KNIVES, FORKS, SPOONS, LADLES, TONGS, TEA BALLS, TEA STRAINERS, SIFTERS, NAPKIN RINGS, NAPKIN MARKERS, NAPKIN BANDS, SALT AND PEPPER SHAKERS, CHILDREN'S CUPS, BOWLS, PITCHERS, DISHES, POTS, PLATTERS, SERVERS, MUGS, COASTERS, CANDLESTICKS, VASES, BOTTLE OPENERS, CORKSCREWS, MUFFINEERS, BELLS, BOTTLES, BABY RATTLES, RATTLE-WHISTLES, BABY PINS, BROOCHES, TRAYS, BOXES, BUFFERS, JARS, BRUSHES, COMBS, MIRRORS, NAIL FILES, SCISSORS, SHOE HORNS, AND BUTTON HOOKS, ALL MADE PARTLY OR WHOLLY OF SILVER OR PLATED OR ORNAMENTED THEREWITH.
Claims use since Dec. 2, 1920.

Reg. No. 151,482. Registered Feb. 7, 1922. FRANKLIN SILVER PLATE COMPANY, Greenfield, Mass. Republished by Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts.

WEE FOLK'S

FOR KNIVES, FORKS, SPOONS, NAPKIN RINGS, NAPKIN MARKERS, CUPS, BOWLS, DISHES, PLATTERS, SERVERS, TRAYS, MUGS, BRUSHES, COMBS, MIRRORS, BABY PINS, BABY RATTLES, WHISTLES, BELLS AND LOCKETS, ALL OF SAID ARTICLES BEING MADE WHOLLY OR IN PART OF STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD AND GOLD PLATE.
Claims use since Feb. 2, 1921.

Reg. No. 161,601. Registered Nov. 14, 1922. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

Little Men and Little Women

FOR BABIES' AND CHILDREN'S TABLEWARE—NAMELY, KNIVES, FORKS, SPOONS, NAPKIN RINGS, NAPKIN MARKERS, CUPS, BOWLS, DISHES, PLATTERS, SERVERS, TRAYS, MUGS, BRUSHES, COMBS, MIRRORS, BABY PINS, LOCKETS, BABY RATTLES, AND BELLS, ALL OF SAID ARTICLES BEING MADE OF OR ORNAMENTED WITH STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD AND GOLD PLATE.
Claims use since January 1917.

Reg. No. 296,766. Registered Aug. 23, 1932. THE ACCURATE PARTS MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

FOR SCREWS, BOLTS, NUTS, METAL WASHERS, LOCK WASHERS, AND COIL SPRINGS, FOR GENERAL USE.
Claims use since Oct. 1, 1926.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 67,461. Registered Feb. 4, 1908. GLOBE WIRE COMPANY, LIMITED, Sharpsburg, Pa. Republished by Firth Sterling Steel & Carbide Corp., McKeesport, Pa., a corporation of Pennsylvania.

GLOBE

FOR POLISHED DRILL-RODS AND DRAWN WIRE.
Claims use since March 1897.

Reg. No. 279,268. Registered Jan. 13, 1931. UNION STEEL CASTING COMPANY, Pittsburgh, Pa. Republished by Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey.

"UNIVAN"

FOR SPECIAL ALLOY STEEL CASTINGS.
Claims use since Mar. 31, 1928.

Reg. No. 374,254. Registered Jan. 2, 1940. AMERICAN TYPE FOUNDERS, INC., Elizabeth, N. J. Republished by American Type Founders, Incorporated, Elizabeth, N. J., a corporation of New Jersey

duratin

FOR LEADS, SLUGS, AND RULES CAST IN TYPE METAL.
Claims use since July 2, 1937.

Reg. No. 432,438. Registered Sept. 2, 1947. HANSON-VAN WINKLE-MUNNING COMPANY, Matawan, N. J., a corporation of New Jersey. Republished by registrant.

ALBALOY

FOR ELECTROPLATING ANODES.
Claims use since May 22, 1946.

CLASS 15

OILS AND GREASES

Reg. No. 253,425. Registered Feb. 26, 1929. NEW YORK LUBRICATING OIL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR LUBRICATING GREASES AND LUBRICATING OILS FOR MACHINERY, ENGINES, MOTORS, AND DYNAMOS.
Claims use since May 3, 1928.

Reg. No. 292,045. Registered Mar. 1, 1932. THE WHITE & BAGLEY COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

VITALUBE

FOR PENETRANTS AND LUBRICANTS, PRINCIPALLY PENETRATING OIL FOR USE IN THINNING MOTOR OIL FOR COLD WEATHER LUBRICANTS, FOR THINNING TRANSMISSION OIL FOR COLD WEATHER LUBRICATION, FOR THINNING MOTOR OIL BREAKING IN NEW MOTORS, FOR UPPER MOTOR LUBRICATION, FOR THE PURPOSE OF FREEING STICKY VALVES, REMOVING RUST, AND STOPPING SQUEAKS IN SPRINGS; ALSO FOR OILS FOR GENERAL LUBRICATION.
Claims use since Oct. 20, 1931.

Reg. No. 302,872. Registered May 2, 1933. THE WHITE & BAGLEY COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

VITAFILM

FOR LUBRICATING OILS AND GREASES.
Claims use since Dec. 10, 1932.

Reg. No. 304,246. Registered June 27, 1933. THE WHITE & BAGLEY COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

ROYAL WORCESTER

The word "Worcester" is disclaimed apart from the mark as shown.
FOR LUBRICANT OILS FOR MOTORS AND OTHER MACHINERY.
Claims use since May 4, 1899.

Reg. No. 330,647. Registered Dec. 10, 1935. THE WHITE & BAGLEY COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

VITA SPRAY

The word "Spray" is disclaimed apart from the mark as shown.
FOR LIQUID LUBRICANT FOR AUTOMOBILE BODIES, SPRINGS, AND THE LIKE.
Claims use since May 31, 1935.

Reg. No. 389,465. Registered Aug. 5, 1941. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

BUCKEYE

FOR LUBRICATING OIL.
Claims use since on or about July 1, 1930.

Reg. No. 422,658. Registered Aug. 6, 1946. STANDARD OIL COMPANY, Louisville, Ky., a corporation of Kentucky. Republished by registrant.

KYSO

FOR VAPOR OIL, COAL SPRAY OIL, FUEL OIL, AND BURNER OIL.
Claims use since May 1935.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 146,396. Registered Sept. 6, 1921. WADSWORTH-HOWLAND COMPANY, Chicago, Ill. Republished by Jewel Paint & Varnish Co., Chicago, Ill., a corporation of Illinois.

CONQUEROR

FOR MIXED PAINT, VARNISH, ENAMEL FOR DECORATIVE PURPOSES, AND LIQUID WOOD FILLER.
Claims use since Nov. 15, 1897.

Reg. No. 151,233. Registered Jan. 24, 1922. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TAXITE

FOR PREPARATION FOR THE REMOVAL OF PAINTS, FINISHES, ENAMELS, JAPANS, VARNISHES, STAINS, LACQUERS, SHELLACS, DRIERS, PRIMERS, AND FILLERS FROM WOOD, METAL, AND OTHER SURFACES.
Claims use since Apr. 14, 1904.

Reg. No. 229,066. Registered June 21, 1927. WADSWORTH-HOWLAND COMPANY, Chicago, Ill. Republished by Jewel Paint & Varnish Co., Chicago, Ill., a corporation of Illinois.

JEWEL
LO-LUSTRE

The words "Lo-Lustre" are disclaimed apart from the mark as shown.
FOR SEMI-GLOSS ENAMEL FINISH PAINT.
Claims use since June 1926.

Reg. No. 276,711. Registered Oct. 28, 1930. JEWEL PAINT & VARNISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

JEWEL

FOR READY MIXED PAINT, VARNISH STAIN, OIL STAIN, IRON PAINT, FLAT PAINT, VARNISH, ALUMINUM PAINT, RIM-COATING PAINT, AUTO PAINTS, OIL COLORS, WAGON AND MILL PAINT, FLOOR PAINT, DECK PAINT, UNDERCOAT PAINT, PAINT ENAMEL, FURNITURE ENAMEL, IRON ENAMEL, BICYCLE ENAMEL, KALSOMINE AND LAMPBLACK.
Claims use since 1890.

Reg. No. 312,965. Registered May 15, 1934. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

WOODCRAFT

FOR PAINTS (READY-MIXED, PASTE FORM AND DRY), PAINT ENAMELS, LACQUERS, VARNISHES, STAINS, AND PAINT FILLERS.
Claims use since July 15, 1908.

Reg. No. 324,756. Registered May 28, 1935. COLORGLO PRODUCTS, Whittier, Calif., a firm. Republished by registrant.

colorglo

FOR LUSTRE CREAM, A WAX PREPARATION AND POLISH FOR AUTOMOBILES, FURNITURE, AND PAINTED, VARNISHED, OR LACQUERED SURFACES.
Claims use since July 21, 1934.

Reg. No. 325,591. Registered July 2, 1935. JEWEL PAINT AND VARNISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

VelVeneer

The word "Veneer" is disclaimed apart from the mark as shown.
FOR READY MIXED PAINT AND PAINT ENAMELS AND VARNISH.
Claims use since Jan. 1, 1935.

Reg. No. 334,098. Registered Apr. 21, 1936. JEWEL PAINT & VARNISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

JEWEL
DOUBLEQUICK

The word "Doublequick" is disclaimed apart from the mark as shown.
FOR PAINT AND/OR VARNISH REMOVER.
Claims use since Nov. 29, 1935.

Reg. No. 388,270. Registered June 17, 1941. JEWEL PAINT & VARNISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BRUSHMASTER

FOR READY MIXED AND PASTE PAINTS, VARNISHES, PAINT ENAMEL.
Claims use since Jan. 11, 1941.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 286,948. Registered Sept. 8, 1931. WOLF BROTHERS & CO., Red Lion, Pa., a firm. Republished by registrant.

MARK TWAIN

KNOWN TO EVERYONE-LIKED BY ALL

FOR CIGARS.
Claims use since about July 1877.

CLASS 19

VEHICLES

Reg. No. 104,622. Registered June 8, 1915. THE MARKET FORGE COMPANY, Chelsea, Mass. Republished by The Market Forge Company, Everett, Mass., a corporation of Massachusetts.

MAFORCO

FOR METAL TRUCKS.
Claims use since Apr. 1, 1908.

Reg. No. 237,236. Registered Jan. 3, 1928. TROPIC-AIRE, INCORPORATED, Minneapolis, Minn., a corporation of Delaware. Republished by registrant, present address Chicago, Ill.

TROPIC-AIRE

FOR HEATERS FOR AUTOMOTIVE VEHICLES HEATED BY THE VEHICLE ENGINE-COOLING FLUID.
Claims use since about Dec. 1, 1926.

Reg. No. 395,756. Registered June 9, 1942. ECONOMY AUTO STORES, INC., Atlanta, Ga., a corporation of Georgia. Republished by registrant.

FOR ACCESSORIES, REPLACEMENT PARTS AND SUPPLIES FOR AUTOMOTIVE VEHICLES—NAMELY, RADIATOR CAPS, WINDSHIELD WIPER BLADES, SHOCK ABSORBERS, AND BRAKE SHOES.
Claims use since May 15, 1941.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 130,018. Registered Mar. 23, 1920. THOMSON ELECTRIC WELDING COMPANY, Boston, Mass. Republished by Thomson Electric Welder Company, Lynn, Mass., a corporation of Massachusetts.

THOMSON

FOR ELECTRIC METAL-WORKING APPARATUS—NAMELY, MACHINES AND DEVICES FOR ELECTRIC WELDING, HEATING, FORGING, RIVETING, BRAZING, SOLDERING, AND SHAPING OF METALS AND TRANSFORMERS, REACTIVE COILS, SWITCHES, AND PARTS FOR SUCH APPARATUS.
Claims use since Apr. 18, 1888.

Reg. No. 230,874. Registered Aug. 9, 1927. HENRITE PRODUCTS CO., INC., Jersey City, N. J. Republished by Henrite Products Corporation, Ironton, Ohio, a corporation of Ohio.

HENRITE

FOR COMMUTATOR BRUSHES FOR ELECTRIC MOTORS AND GENERATORS.
Claims use since July 11, 1923.

Reg. No. 238,982. Registered Feb. 21, 1928. MALLEABLE IRON RANGE COMPANY, Beaver Dam, Wis., a corporation of Wisconsin. Republished by registrant.

Paramount

FOR ELECTRIC RANGES, COAL ELECTRIC RANGES, AND GAS ELECTRIC RANGES.
Claims use since Jan. 26, 1925.

Reg. No. 303,469. Registered May 23, 1933. BUD RADIO, INC., Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

BUD

FOR RADIO APPARATUS, SUPPLIES, AND EQUIPMENT CONSISTING OF RADIO SETS FOR SENDING AND RECEIVING; SHORT WAVE CONVERTERS, SPEAKERS, AERIAL ELIMINATORS, SPEAKER EXTENSION CORDS, TONE CONTROLS, COIL FORMS, SPEAKER PLUGS, EXTENSION CORD PLUGS, AERIAL FILTERS, VOLTAGE CONTROLS, RESISTORS, TRANSFORMERS, INTERFERENCE FILTERS, ADAPTERS, SOCKETS, TEST LEADS, AUTO RADIO AERIALS, SPARK PLUG SUPPRESSORS, GENERATOR SUPPRESSORS, AUTO RADIO SILENCER KITS, VARIABLE CONDENSERS, TIP JACKS, SURE GRIP JACKS, SUBPANEL SOCKETS, PHONE PLUGS, SOLDERLESS PLUGS, JACKS, SCREEN GRID CAPS, SELECTOR SWITCHES, UNIVERSAL AERIALS, PORTABLE OUT-

LET CORDS, PORTABLE UNDER RUG BANDING, TUBE SHIELDS, SCREEN GRID EXTENSION, ELECTRIC EXTENSION CORDS, SPEAKER CORDS, PHONE CORDS, SPEAKER EXTENSION CORDS, AERIAL WIRES, MAGNET WIRES, LEAD-IN WIRES, DIAL CABLES, HOOK-UP WIRES, SHIELDED WIRES, PUSH BACK WIRES, WIRE CABLES, KNIFE SWITCHES, AERIAL KITS; AERIAL EQUIPMENT CONSISTING IN GROUND CLAMPS, LEAD-IN STRIPS, GROUND RODS, STRAIN INSULATORS, SCREW-EYE INSULATORS, STAND-OFF INSULATORS, AND LIGHTNING ARRESTERS; CONDENSERS, FIXED RESISTORS, RADIO FREQUENCY CHOKES, TRANSMITTING CHOKES, DIALS, CABLE PLUGS, MICROPHONE CABLES, MICROPHONE CABLE EXTENSIONS, TUBE BASES, TUBE ADAPTER FORMS, SOLDERING IRON TIPS, TRANSMISSION CABLES, VOLUME CONTROLS; SHORT WAVE AND TELEVISION KITS FOR TRANSMITTING AND RECEIVING, SHORT WAVE AND TELEVISION LO-COIL KITS FOR TRANSMITTING AND RECEIVING, CODE PRACTICE SETS, POWER TRANSFORMERS, AUDIO TRANSFORMERS, PUSH PULL TRANSFORMERS, INPUT TRANSFORMERS, OUTPUT TRANSFORMERS, FILAMENT TRANSFORMERS, MICROPHONE TRANSFORMERS, RADIO CONVENIENCE OUTLETS, MICROPHONE STANDS, MICROPHONE RINGS, MICROPHONE SPRINGS, MICROPHONE RECEPTACLES, MICROPHONE PLUGS, KNOBS, TOGGLE SWITCHES, ROTARY SWITCHES, BINDING POSTS, TERMINALS.

Claims use since December 1928.

Reg. No. 353,114. Registered Dec. 28, 1938. WILLIAM P. HERMAN, Providence, R. I. Republished by Electrix Corporation, Pawtucket, R. I., a corporation of Rhode Island.

FOR ELECTRICAL FIXTURES, AND PARTICULARLY PLUGS AND CONTACT PARTS MADE OF INSULATING MATERIAL.

Claims use since Nov. 2, 1936.

Reg. No. 396,142. Registered June 30, 1942. ECONOMY AUTO STORES, INC., Atlanta, Ga., a corporation of Georgia. Republished by registrant.

FOR ELECTRIC GENERATORS, SPARK PLUGS, RADIO RECEIVING SETS, AND WET AND DRY STORAGE BATTERIES.

Claims use since May 15, 1941.

Reg. No. 418,856. Registered Jan. 15, 1946. JAMES H. CANNON, Los Angeles, Calif. Republished by registrant.

CANNON

FOR ELECTRICAL EQUIPMENT AND PARTS THEREFOR—NAMELY ELECTRICAL CABLE CONNECTORS: WALL AND BOX MOUNTING RECEPTACLES AND ACCESSORY EQUIPMENT FOR THIS TYPE OF PRODUCTION, INCLUDING DUST-CAPS, JUNCTION BOXES, AND SPECIAL FLANGES: SPECIAL FUNCTION SOLENOIDS: ELECTRICAL RELAYS: ELECTRICAL SWITCHES AND PUSH-BUTTONS: ANY INSTITUTIONAL SIGNAL EQUIPMENT, INCLUDING CALL STATIONS, ENUNCIATORS, CORRIDOR PILOT LIGHTS, PAGING SYSTEMS, AND EXPLOSION AND VAPOR-PROOF SWITCHES.

Claims use since about May 8, 1942.

Reg. No. 423,515. Registered Sept. 3, 1946. FARMCO, INC., Jersey City, N. J., and New York, N. Y., a corporation of New Jersey. Republished by registrant.

FARMCO

FOR ELECTRIC MOTORS.

Claims use since Oct. 9, 1945.

Reg. No. 425,506. Registered Nov. 26, 1946. JAMES H. CANNON, Los Angeles, Calif. Republished by registrant.

CANNON

FOR ELECTRICAL EQUIPMENT AND PARTS THEREFOR—NAMELY, ELAPSED TIME RECORDERS IN THE FORM OF DEVICES FOR MEASURING THE PASSAGE OF TIME AFTER SIGNALS, AND EXPERIMENTAL PANELS AND SWITCHBOARDS ADAPTED FOR USE IN SCHOOLS AND LABORATORIES AND CARRYING VARIOUS KINDS OF ELECTRICAL EQUIPMENT, SUCH AS PLUGS AND CONNECTORS, AND PARTICULARLY CARRYING INSTRUMENTS FOR MEASURING AND VARYING ELECTRIC CURRENTS, SUCH AS METERS AND TRANSFORMERS.

Claims use since 1920.

Reg. No. 432,855. Registered Sept. 16, 1947. DOUGHBOY INDUSTRIES, INC., New Richmond, Wis., a corporation of Wisconsin. Republished by registrant.

The words "Magnetic" and "Sealer" are disclaimed apart from the mark as shown.

FOR AN ELECTRICALLY HEATED AND OPERATED BAR TYPE MACHINE FOR APPLYING HEAT AND PRESSURE TO THERMOPLASTIC SHEETS FOR UNITING THE SAME.

Claims use since Mar. 27, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 88,364. Registered Sept. 10, 1912. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

FOR STERLING SILVER KNIVES, FORKS, SPOONS, TONGS, LADLES, SIFTERS, PINS, BUCKLES, BROOCHES, NAPKIN RINGS, NAPKIN MARKERS, SALT AND PEPPER SHAKERS, MUFFINEERS, TEA BALLS, TEA STRAINERS, BAGS, CUPS, CASES, CHESTS, AND THE FOLLOWING NAMED GOODS HAVING STERLING SILVER MOUNTINGS: BUTTONS, CHAINS, RINGS, BOWLS, PITCHERS, CANDLESTICKS, DISHES, POTS, PLATTERS, SERVERS, VASES, TRAYS, BOXES, BOTTLES, MUGS, COASTERS, BRUSHES, COMBS, MIRRORS, NAIL FILES, SCISSORS, SHOE HORNS, BUTTON-HOOKS, BUFFERS, JARS, BOTTLE OPENERS, CORKSCREWS, BABY RATTLES AND WHISTLES, BELLS, MARKERS AND LOCKETS.

Claims use since Sept. 1, 1902.

Reg. No. 145,191. Registered July 26, 1921. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

Treasure

FOR KNIVES, FORKS, SPOONS, LADLES, TONGS, TEA BALLS, TEA STRAINERS, SIFTERS, NAPKIN RINGS, NAPKIN MARKERS, NAPKIN BANDS, SALT AND PEPPER SHAKERS, CHILDREN'S CUPS, BOWLS, PITCHERS, DISHES, POTS, PLATTERS, SERVERS, MUGS, COASTERS, CANDLESTICKS, VASES, BOTTLE OPENERS, CORKSCREWS, MUFFINEERS, BELLS, BOTTLES, BABY RATTLES, RATTLE-WHISTLES, BABY PINS, BROOCHES, TRAYS, BOXES, BUFFERS, JARS, BRUSHES, COMBS, MIRRORS, NAIL FILES, SCISSORS, SHOE HORNS, AND BUTTON HOOKS, ALL MADE PARTLY OR WHOLLY OF SILVER OR PLATED OR ORNAMENTED THEREWITH.

Claims use since Dec. 2, 1920.

Reg. No. 151,482. Registered Feb. 7, 1922. FRANKLIN SILVER PLATE COMPANY, Greenfield, Mass. Republished by Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts.

WEE FOLK'S

FOR KNIVES, FORKS, SPOONS, NAPKIN RINGS, NAPKIN MARKERS, CUPS, BOWLS, DISHES, PLATTERS, SERVERS, TRAYS, MUGS, BRUSHES, COMBS, MIRRORS, BABY PINS, BABY RATTLES, WHISTLES, BELLS AND LOCKETS, ALL OF SAID ARTICLES BEING MADE WHOLLY OR IN PART OF STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD AND GOLD PLATE.

Claims use since Feb. 2, 1921.

Auto Brik

FOR BRICK MACHINES.
Claims use since on or about Jan. 7, 1922.

Reg. No. 209,074. Registered Feb. 16, 1926. DIAMOND CALK HORSE SHOE COMPANY, Duluth, Minn., a corporation of Minnesota. Republished by registrant.

DIAMOND

FOR WRENCHES.
Claims use since 1919.

Reg. No. 264,309. Registered Nov. 26, 1929. WHITMAN & BARNES, INC., Detroit, Mich. Republished by United Drill & Tool Corporation, Chicago, Ill., a corporation of Michigan.

W&B

FOR ARBORS, BITS, CENTER REAMERS, COUNTERBORES, COUNTERSINKS, DRIFTS, LATHE CENTERS, MANDRELS, REAMERS, SLEEVES, SOCKETS AND TWIST DRILLS PARTICULARLY ADAPTED FOR USE IN THE METAL AND WOODWORKING INDUSTRIES.
Claims use since 1906.

Reg. No. 266,707. Registered Jan. 28, 1930. THE HERBRAND Co., Fremont, Ohio. Republished by The Bingham-Herbrand Corporation, Toledo and Fremont, Ohio, a corporation of Ohio.

VAN CHROME

The word "Chrome" is disclaimed apart from the mark as shown.
FOR WRENCHES OF ALL KINDS.
Claims use since 1919.

Reg. No. 291,003. Registered Jan. 26, 1932. THE ACCURATE PARTS MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

AP

FOR CLUTCHES AND PARTS THEREOF, CLUTCH PLATES, COIL SPRINGS FOR CLUTCHES, UNIVERSAL JOINT DISCS, AND VALVE LOCKS.
Claims use since on or about Oct. 1, 1926.

Reg. No. 298,002. Registered Oct. 11, 1932. THE ACCURATE PARTS MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Power*flex*

The word "Power" is disclaimed apart from the mark as shown.
FOR CLUTCH PLATES AND DISCS.
Claims use since on or about Mar. 16, 1932.

Reg. No. 298,077. Registered Oct. 11, 1932. THE ACCURATE PARTS MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Cushion*flex*

The word "Cushion" is disclaimed apart from the mark as shown.
FOR CLUTCH PLATES AND DISCS.
Claims use since on or about Mar. 16, 1932.

Reg. No. 344,264. Registered Mar. 16, 1937. BROWN MANUFACTURING COMPANY, INC., Newport News, Va., a corporation of Virginia. Republished by registrant.

STARR "X"

FOR STATIONARY BOTTLE OPENERS.
Claims use since 1930.

Reg. No. 348,634. Registered Aug. 3, 1937. BLACKHAWK MFG. Co., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR AUTOMOBILE JACKS.
Claims use since Dec. 24, 1936.

Reg. No. 352,718. Registered Dec. 7, 1937. BLACKHAWK MFG. Co., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR HYDRAULIC JACKS AND WRENCH SETS.
Claims use since Jan. 7, 1937.

Reg. No. 371,408. Registered Sept. 26, 1939. BLACKHAWK MFG. Co., West Allis, Wis., a corporation of Wisconsin. Republished by registrant.

TORKFLASH

The drawing is lined for red.
FOR WRENCHES AND TWISTING TOOL SETS FOR NUT, STUD, AND BOLT DRIVING.
Claims use since Nov. 15, 1938.

Reg. No. 378,715. Registered June 18, 1940. COLONIAL KNIFE COMPANY, INC., Providence, R. I., a corporation of Rhode Island. Republished by registrant.

FOREST-MASTER

FOR POCKET KNIVES.
Claims use since Aug. 15, 1934.

Reg. No. 398,941. Registered Dec. 8, 1942. W. P. HILGER, doing business as The Hilger Company, St. Cloud, Minn. Republished by The Hilger Company, St. Cloud, Minn., a corporation of Minnesota.

HILCO

FOR FLOOR SANDING MACHINES.
Claims use since Feb. 1, 1932.

Reg. No. 401,456. Registered May 18, 1943. DIAMOND CALK HORSE SHOE COMPANY, Duluth, Minn., a corporation of Minnesota. Republished by registrant.

DIAMALLOY

FOR WRENCHES AND PARTS THEREOF, ADJUSTABLE HAND WRENCHES, WRENCH SETS AND CASES, COUNTER ADVERTISING CARDS, DISPLAYING WRENCHES, MOTOR PUMP PLIERS, BATTERY PLIERS, SIDE CUTTING PLIERS, LONG NOSE PLIERS, LONG NOSE SIDE CUTTING PLIERS, DIAGONAL CUTTING PLIERS, NEEDLE NOSE PLIERS, HEAVY DUTY PLIERS, AND STAPLE PULLERS.
Claims use since latter part of 1931.

Reg. No. 401,457. Registered May 18, 1943. DIAMOND CALK HORSE SHOE COMPANY, Duluth, Minn., a corporation of Minnesota. Republished by registrant.

DIAMOND

FOR SINGLE END ADJUSTABLE WRENCHES, DOUBLE END ADJUSTABLE WRENCHES, WRENCH PARTS, COUNTER ADVERTISING BOARDS DISPLAYING WRENCHES, THIN STRAIGHT NOSED PLIERS, THIN BENT NOSED PLIERS, MOTOR SPECIAL PLIERS, D. C. COMBINATION SLIPJOINT PLIERS, NUMBER 1000 PLIERS, SIDE CUTTING PLIERS, CRATE OPENERS, HORSESHOE CALK EXTRACTORS, BOTH SINGLE AND DOUBLE ENDED; CALK PUNCHES, MACHINE AND HAND THREADED-FORMING TAPS.
Claims use since latter part of 1920.

Reg. No. 416,406. Registered Sept. 11, 1945. BLACKHAWK MFG. CO., West Allis, Wis., a corporation of Wisconsin. Republished by registrant.

NUGGET

The drawing is lined for yellow or gold color.
FOR WRENCHES AND TWISTING TOOL SETS FOR NUT, STUD, AND BOLD DRIVING.
Claims use since Feb. 14, 1938.

Reg. No. 423,516. Registered Sept. 3, 1946. FARMCO, INC., Jersey City, N. J., and New York, N. Y., a corporation of New Jersey. Republished by registrant.

FARMCO

FOR ELECTRIC CREAM SEPARATORS.
Claims use since Oct. 9, 1945.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 431,216. Registered July 15, 1947. FARMCO, INC., Jersey City, N. J., and New York, N. Y., a corporation of New Jersey. Republished by registrant.

FARMCO

FOR HOUSEHOLD TYPE ELECTRIC CLOTHES WASHING MACHINES.
Claims use since Mar. 22, 1946.

CLASS 26

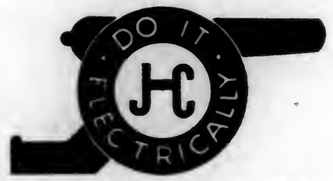
MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 60,206. Registered Jan. 29, 1907. CONSTANTIN WAGNER, New York, N. Y. Republished by registrant.

FOR GRADUATED TESTING-BOTTLES, GRADUATED FLASKS, AND GRADUATED LABORATORY-GLASSWARE.
Claims use since about Mar. 1, 1905.

Reg. No. 300,417. Registered Jan. 17, 1933. UTILITY MANUFACTURING COMPANY, INC., New York, N. Y. Republished by Jack Galter, Chicago, Ill.

Falcon



FOR PHOTOGRAPHIC CAMERAS AND PARTS THEREOF.
Claims use since May 28, 1932.

Reg. No. 364,464. Registered Jan. 31, 1939. HENRY T. SCHIFF, Chicago, Ill. Republished by Jack Galter, Chicago, Ill.

REGAL

FOR CAMERAS, PHOTOGRAPHIC LENSES, AND SENSITIZED PHOTOGRAPH FILMS.
Claims use since July 7, 1935.

Reg. No. 425,507. Registered Nov. 26, 1946. JAMES H. CANNON, Los Angeles, Calif. Republished by registrant.

The words "Do It Electrically" are disclaimed apart from the mark as shown.
FOR ELECTRICAL EQUIPMENT AND PARTS THEREFOR—NAMELY, ELAPSED TIME RECORDERS IN THE FORM OF DEVICES FOR MEASURING THE PASSAGE OF TIME AFTER SIGNALS, AND EXPERIMENTAL PANELS AND SWITCHBOARDS ADAPTED FOR USE IN SCHOOLS AND LABORATORIES AND CARRYING VARIOUS KINDS OF ELECTRICAL EQUIPMENT, SUCH AS PLUGS, AND CONNECTORS, AND PARTICULARLY CARRYING INSTRUMENTS FOR MEASURING AND VARYING ELECTRIC CURRENTS, SUCH AS METERS AND TRANSFORMERS.
Claims use since 1920.

Reg. No. 425,508. Registered Nov. 26, 1946. JAMES H. CANNON, Los Angeles, Calif. Republished by registrant.

FOR ELECTRICAL EQUIPMENT AND PARTS THEREFOR—NAMELY, ELAPSED TIME RECORDERS IN THE FORM OF DEVICES FOR MEASURING THE PASSAGE OF TIME AFTER SIGNALS, AND EXPERIMENTAL PANELS AND SWITCHBOARDS ADAPTED FOR USE IN SCHOOLS AND LABORATORIES AND CARRYING VARIOUS KINDS OF ELECTRICAL EQUIPMENT, SUCH AS PLUGS, AND CONNECTORS, AND PARTICULARLY CARRYING INSTRUMENTS FOR MEASURING AND VARYING ELECTRIC CURRENTS, SUCH AS METERS AND TRANSFORMERS.
Claims use since 1920.

Reg. No. 433,340. Registered Oct. 7, 1947. THE BREARLEY COMPANY, Rockford, Ill., a corporation of Illinois. Republished by registrant.

COUNSELOR

FOR WEIGHING SCALES.
Claims use since on or about Oct. 10, 1933.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 380,394. Registered Aug. 20, 1940. KARL PLEPLA, New York, N. Y. Republished by registrant.

FLYTIMER

FOR CLOCKS AND WATCHES.
Claims use since Feb. 24, 1940.

Reg. No. 400,514. Registered Mar. 16, 1943. KARL PLEPLA, New York, N. Y. Republished by registrant.

UTILITIMER

FOR WATCHES.
Claims use since Mar. 18, 1942.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 88,364. Registered Sept. 10, 1912. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

FOR STERLING SILVER KNIVES, FORKS, SPOONS, TONGS, LADLES, SIFTERS, PINS, BUCKLES, BROOCHES, NAPKIN RINGS, NAPKIN MARKERS, SALT AND PEPPER SHAKERS, MUFFINEERS, TEA BALLS, TEA STRAINERS, BAGS, CUPS, CASES, CHESTS, AND THE FOLLOWING NAMED GOODS HAVING STERLING SILVER MOUNTINGS: BUTTONS, CHAINS, RINGS, BOWLS, PITCHERS, CANDLESTICKS, DISHES, POTS, PLATTERS, SERVERS, VASES, TRAYS, BOXES, BOTTLES, MUGS, COASTERS, BRUSHES, COMBS, MIRRORS, NAIL FILES, SCISSORS, SHOE HORNS, BUTTON-HOOKS, BUFFERS, JARS, BOTTLE OPENERS, CORKSCREWS, BABY RATTLES AND WHISTLES, BELLS, MARKERS AND LOCKETS.
Claims use since Sept. 1, 1902.

Reg. No. 145,191. Registered July 26, 1921. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

Treasure

FOR KNIVES, FORKS, SPOONS, LADLES, TONGS, TEA BALLS, TEA STRAINERS, SIFTERS, NAPKIN RINGS, NAPKIN MARKERS, NAPKIN BANDS, SALT AND PEPPER SHAKERS, CHILDREN'S CUPS, BOWLS,

PITCHERS, DISHES, POTS, PLATTERS, SERVERS, MUGS, COASTERS, CANDLESTICKS, VASES, BOTTLE OPENERS, CORKSCREWS, MUFFINEERS, BELLS, BOTTLES, BABY RATTLES, RATTLE-WHISTLES, BABY PINS, BROOCHES, TRAYS, BOXES, BUFFERS, JARS, BRUSHES, COMBS, MIRRORS, NAIL FILES, SCISSORS, SHOE HORNS, AND BUTTON HOOKS, ALL MADE PARTLY OR WHOLLY OF SILVER OR PLATED OR ORNAMENTED THEREWITH.

Claims use since Dec. 2, 1920.

Reg. No. 151,482. Registered Feb. 7, 1922. FRANKLIN SILVER PLATE COMPANY, Greenfield, Mass. Republished by Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts.

WEE FOLK'S

FOR KNIVES, FORKS, SPOONS, NAPKIN RINGS, NAPKIN MARKERS, CUPS, BOWLS, DISHES, PLATTERS, SERVERS, TRAYS, MUGS, BRUSHES, COMBS, MIRRORS, BABY PINS, BABY RATTLES, WHISTLES, BELLS AND LOCKETS, ALL OF SAID ARTICLES BEING MADE WHOLLY OR IN PART OF STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD AND GOLD PLATE.

Claims use since Feb. 2, 1921.

Reg. No. 161,601. Registered Nov. 14, 1922. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

Little Men and Little Women

FOR BABIES' AND CHILDREN'S TABLEWARE—NAMELY, KNIVES, FORKS, SPOONS, NAPKIN RINGS, NAPKIN MARKERS, CUPS, BOWLS, DISHES, PLATTERS, SERVERS, TRAYS, MUGS, BRUSHES, COMBS, MIRRORS, BABY PINS, LOCKETS, BABY RATTLES, AND BELLS, ALL OF SAID ARTICLES BEING MADE OF OR ORNAMENTED WITH STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD AND GOLD PLATE.

Claims use since January 1917.

Reg. No. 247,216. Registered Sept. 25, 1928. UNCAS MANUFACTURING COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

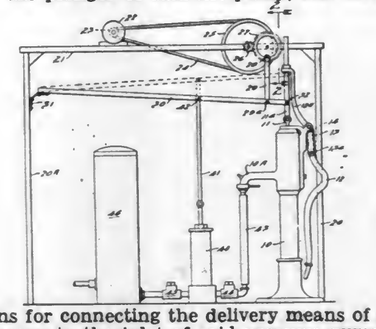
REISSUES

DECEMBER 28, 1948



23,067
PUMP

Erle K. Baker, Detroit, Mich., assignor to Baker Axle Company, Cleveland, Ohio, a corporation of Ohio

Original No. 2,429,384, dated October 21, 1947, Serial No. 644,363, January 30, 1946. Application for reissue December 13, 1947, Serial No. 791,571

11 Claims. (Cl. 103—5)

1. In combination with a conventional hand operated reciprocating plunger containing lift pump, means for providing delivery under pressure, said means consisting of a frame, a motor mounted thereon, a lever pivoted at one end to said frame, actuating means connecting said motor and lever whereby to oscillate the latter, a pressure pump operably connected to said lever, means on said lever to connect the same with the plunger of said lift pump, and conduit

means for connecting the delivery means of said lift pump to the inlet of said pressure pump.

PLANT PATENTS

GRANTED DECEMBER 28, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

816
AVOCADO TREE

Charles H. Hamburg, Whittier, Calif.

Application October 26, 1946, Serial No. 705,960

1 Claim. (Cl. 47—62)

A variety of avocado tree substantially as disclosed, characterized by an upright, central leader type, slender and vigorous habit, uniformly distributed branches, and clusters of foliage at terminals of the branches, said tree bearing a relatively thin-skinned, green fruit maturing in greatest proportion during June and July when propagated in Southern California.

817
JAPANESE HOLLY PLANT

John Franklin Styer, Concordville, Pa.

Application August 28, 1946, Serial No. 693,426

1 Claim. (Cl. 47—59)

The new variety of *Ilex crenata*, Japanese holly plant, characterized particularly by branch growth substantially horizontal, associated with rapid growth and free branching in all directions, with leaves smaller than the ordinary or type of the species, with great plant hardiness and with plant form more broad than tall, as shown and described.

PATENTS

GRANTED DECEMBER 28, 1948

2,457,108

ADHESIVE AND METHOD OF MAKING

Chester L. Baker, Narberth, and Robert H. Sams, Upper Darby, Pa., assignors to Philadelphia Quartz Company, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Application July 24, 1943, Serial No. 496,088
16 Claims. (Cl. 106—79)

1. In the manufacture of dry-mix adhesives, the process which comprises mixing a colloidal clay with a concentrated sodium silicate solution having a ratio of Na_2O to SiO_2 within the range of about 1:1.5 to 1:4, the clay being in amount sufficient to produce dehydration of said silicate at least to a semi-solid state, mixing in a vegetable protein in a quantity at least equal to the weight of the clay in the mixture and bringing the water content to within the range of from 5 to 47.5 per cent by weight to form a dry-mix adhesive which, when added to water, forms a final adhesive having an operating life substantially longer than that of an adhesive of similar composition formed directly from said silicate solution without passing through said semi-solid stage.

2,457,109

PROCESS OF PREPARING 2-AMINO-4-HYDROXY-6-METHYL PYRIMIDO [4,5-b] PYRAZINE

James H. Boothe, Pearl River, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application February 2, 1946, Serial No. 645,253
3 Claims. (Cl. 260—251)

1. A method of preparing 2-amino-4-hydroxy-6-methylpyrimido [4,5-b] pyrazine which comprises mixing together in a solvent 2,4,5-triamino-6-hydroxy pyrimidine and an ester of a haloacetol and thereafter recovering the said product.

2,457,110

CHOCOLATE COATED EDIBLES

Henry Russell Burbank, New York, and Benjamin J. Zenlea, Ozone Park, Long Island, N. Y., assignors to Rockwood & Co., Brooklyn, N. Y., a corporation of Delaware

No Drawing. Application May 25, 1945, Serial No. 595,886
10 Claims. (Cl. 99—134)

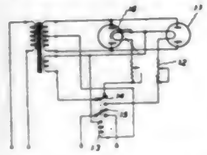
1. The method of making chocolate coated edibles which comprises dipping the edible in a homogeneous liquid comprising chocolate-coating material and water, the chocolate-coating material having a butter-fat content in such proportion to the other constituents of said material that upon elimination of the water substantially entirely from the coating on the edible the chocolate coating thereof has a viscosity not substantially less than about 2000° MacMichael at a temperature of about 100° F.

2,457,111

SUCCINIC ESTER SYNTHESIS

William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 28, 1947, Serial No. 738,007
7 Claims. (Cl. 260—485)



1. A process for the synthesis of esters of succinic acid which comprises heating a beta-alkoxypropionic ester of the formula $ROCH_2CH_2COOR'$, R and R' being alkyl groups containing from 1 to 4 carbon atoms, with carbon monoxide at a temperature within the range of 125° to 300° C. in the presence of a catalyst of the class consisting of BF_3, H_2SO_4, and $H_4P_2O_7$, under a pressure of at least about 300 atmospheres whereby a dialkyl succinate of the formula $ROCOCH_2CH_2COOR'$ is produced, and recovering the said dialkyl succinate from the resultant reaction mixture.

2,457,112

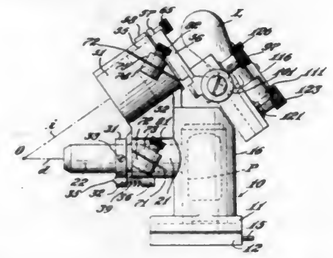
TIME-DELAY SWITCH OPERATING SYSTEM

David John Abercrombie, Edward Anthony Brettingham-Moore, and Winston Thomas Muscio, Alexandria, near Sydney, New South Wales, Australia, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application October 10, 1944, Serial No. 558,004
In Australia November 16, 1943
3 Claims. (Cl. 175—320)

1. A time delay switch operating system comprising an indirectly heated double diode valve including cathode and anode electrodes, said cathode having a heater, a directly heated double diode valve, said valves circuited in parallel, means for applying a potential difference across the electrodes of said valves and for supplying current to the heaters of said valves, a pair of resistances, each respectively included in the heater circuits of said valves, a relay coil between said cathode and said means for applying a potential difference, a pair of switches in operative association with said relay coil, a first of said switches in the circuit under control, and the second of said switches operating to close the heater circuit of either of said valves.

2,457,113



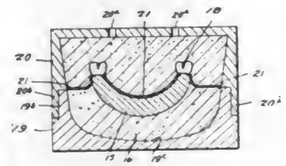
SCANNING UNIT

Milton Alden, Brockton, Mass.

Application June 26, 1945, Serial No. 601,702
5 Claims. (Cl. 250—41.5)

1. A self-contained scanning unit incorporating a lamp and a light detector which supervises

through an optical system an object illuminated by the lamp through another optical system, comprising a unitary mounting block having means for securing it to a support and carrying above said securing means integrally therewith a lamp system mount, a detector system mount and a detector housing, said mounts rigidly and permanently securing intersection of the axes of said systems; a lamp platform secured to said lamp system mount for movement along and defining a plane substantially normal to said lamp system axis; means for positively driven adjustment of



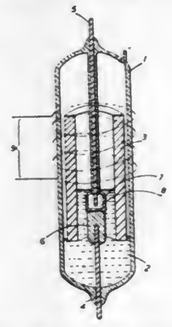
said platform along said lamp system axis; a lamp base slidingly mounted on said platform; means for positively driven adjustment of said base in two intersecting directions within said plane; means for rigidly fixating said platform and said lamp base in adjusted position; a detector lens system supported on said detector system mount for movement along said detector system axis; and means for positively adjusting and fixating the position of said detector lens system; said adjusting and fixating means having manual controls which terminate in close proximity to each other near the free end of said block substantially opposite said securing means.

2,457,114

PROCESS OF FORMING DENTURES FROM POLYMERIZABLE ACRYLIC MATERIALS

Sam Amenta, Chicago, Ill.

Application July 12, 1944, Serial No. 544,557
2 Claims. (Cl. 18—55.1)



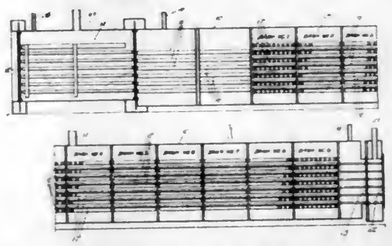
1. In a process of forming dentures, in which polymerizable acrylic materials are placed over artificial teeth set in mold forming materials in a metal flask and cured, the improvement in the curing operation comprising immersing the flask containing the said materials in a bath of water having a temperature between 150° and 160° F. for from fifty to sixty minutes, then in a bath of boiling water for thirty minutes, then in a bath of water having a temperature between 130° and 140° F. and after the flask has been in said last named bath approximately thirty minutes removing the flask therefrom and immediately removing the denture from the flask.

2,457,115

ELECTRIC SWITCH

James Leslie Ashford, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application June 22, 1943, Serial No. 491,753
In Great Britain July 28, 1942
2 Claims. (Cl. 200—112)



1. An electric switch comprising an upstanding cylindrical vessel filled with an inert gas under pressure, a pool of mercury in the vessel, a conducting lead extending through the bottom end wall of the vessel and into contact with the mercury pool, a piston-like armature of magnetic material in the vessel and of a diameter to have a sufficiently close fit therein to prevent the rise of mercury in the intervening space closely adjacent the side walls thereof, a solenoid surrounding the vessel and positioned above the mercury pool and capable of energization to determine the extent to which the armature is immersed in the mercury, and an insulating cup member supported on the upper end portion of the said lead and having a diameter to establish a close spaced relation with the internal surface of the armature and a lead through the top end wall of the vessel having an insulating coating extended within the cup and an exposed end immersed in the mercury within said cup.

2,457,116

VACUUM DRYING

John M. Baer, Chicago, Ill., assignor, by mesne assignments, to Guardite Corporation, Wilmington, Del., a corporation of Delaware

Application February 28, 1944, Serial No. 524,177
6 Claims. (Cl. 34—37)

1. The method of drying a moisture-containing product which comprises substantially removing air therefrom and replacing it with an atmosphere of steam at low absolute pressure, introducing the deaerified product in successive increments under vacuum to a drying zone, supplying an atmosphere

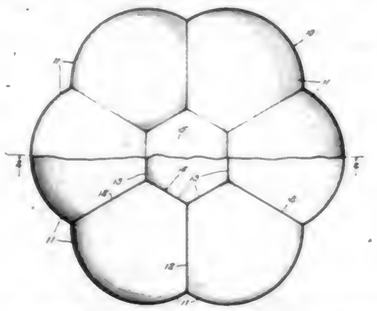
substantially of superheated steam, moving the product in increments through the zone in a predetermined course concurrently with a surrounding stream of said superheated steam in contact therewith while subjecting the product to intense radiant energy on all sides from a source adjacent the product other than the superheated steam in contact therewith, then moving the product countercurrent to another stream of superheated steam introduced into the drying zone from an outside source to complete the drying, simultaneously introducing succeeding increments of the product concurrently with succeeding portions of the first stream of steam, and removing both currents of steam together centrally of the drying zone.

2,457,117

PROCESS FOR THE MANUFACTURE OF AMINO ACIDS

Dominic J. Bernardi, Bronx County, N. Y., assignor to Interchemical Corporation, a corporation of Ohio

No Drawing. Application October 23, 1945, Serial No. 624,081
4 Claims. (Cl. 260—309)



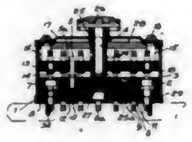
2. In the process of separating lysine and arginine from hydrolyzed protein which contains them and other amino acids, the steps which comprise adjusting the pH value of the hydrolysate to about 8, passing said hydrolysate in contact with a body of loose, particulate ion-exchange material which operates in the salt cycle whereby the lysine and arginine of the hydrolysate are retained in said ion-exchange material while the remaining amino acids of the hydrolysate are in the effluent, and washing said ion-exchange material with a dilute salt solution to eluate the lysine and arginine in the washing liquid whereby they may be recovered separately from the other amino acids which were contained in the hydrolysate.

2,457,118

SPHEROIDAL PRESSURE VESSEL

Harry C. Boardman, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois

Application October 7, 1943, Serial No. 505,297
5 Claims. (Cl. 220—1)



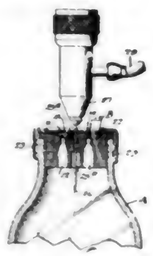
1. A pressure vessel of generally spheroidal form comprising a pressure shell consisting of intersecting spherical segments composed of integrated sheet metal worked plates welded at their intersections to provide a fluid tight vessel, and secured against pressure deformation by inwardly extending diaphragms welded to the intersecting segments at the points of intersection of adjacent segments, said diaphragms having their inner edges connected, the total weight of metal in said vessel being not substantially more than required for a spherical pressure vessel of equal volume and pressure capacity.

2,457,119

ELECTRICAL CONNECTOR

Paul L. Bour, Paris, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application March 1, 1943, Serial No. 477,644
In France March 6, 1942
7 Claims. (Cl. 173—328)



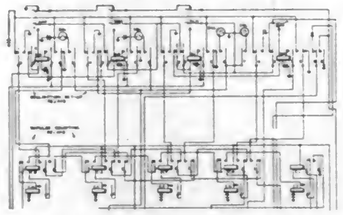
1. An electrical multi-contact connector having a fixed element and a movable element, the latter comprising an insulating plate carrying a plurality of contact elements and a plurality of spacer posts, a cover resting upon and being releasably secured to said spacer posts, and an envelope encircling said insulating plate and spacer posts and including at least one cable outlet nozzle projecting from said envelope in a predetermined direction, said envelope having an inwardly bent rim portion adapted to be clamped between said posts and said cover.

2,457,120

CONTAINER AND METHOD OF USING SAME

Wayne D. Brandon, Skokie, Ill., assignor to Baxter Laboratories, Inc., Glenview, Ill., a corporation of Delaware

Application November 28, 1944, Serial No. 565,536
9 Claims. (Cl. 128—214)



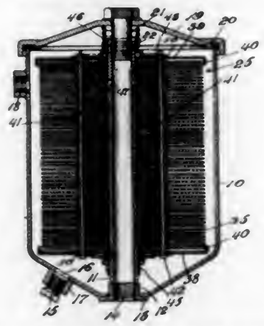
9. In a container provided with an open neck, closure means for said container comprising a resilient plug engaging the neck of the container in sealing relation therewith, said plug being provided with a pair of passages extending therethrough, each of which is closed in its upper portion by a thin integral diaphragm, said plug having its bottom portion cut away at a point generally between said openings to provide a thick diaphragm, said diaphragm, after being punctured with a point-equipped tube, being self-sealing against the passage of air therethrough when said tube is withdrawn, and a resilient flexible sealing member extending across the top wall of said plug and adapted to form an indentation above either of said passages under the influence of vacuum within said container if either of said diaphragms should be broken.

2,457,121

ELECTRIC SIGNALING SYSTEM

Andrew Brown and Thomas Alfred Marshall, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application January 12, 1944, Serial No. 517,970
In Great Britain February 9, 1943
7 Claims. (Cl. 177—353)



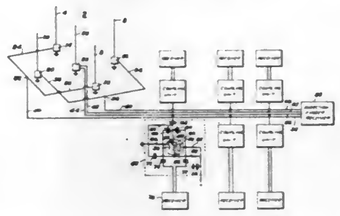
1. A train describer comprising a plurality of groups of relays each group arranged to store a train description according to the selective operation of individual relays within the group, a group of prestorage relays, oppositely polarized receiving relays, means for passing the description immediately from said oppositely polarized receiving relays to said group of prestorage relays and relay means for subsequently transferring the description in said group of prestorage relays to the appropriate group of storage relays and for transferring successive descriptions from said prestorage relays into successive groups of said storage relays in a closed cyclic order.

2,457,122

CELL TYPE FILTER ELEMENT

George D. Burley, Cleveland, Ohio, assignor, by mesne assignments, to Fram Corporation, East Providence, R. I., a corporation of Rhode Island

Application June 27, 1947, Serial No. 757,630
5 Claims. (Cl. 210—169)



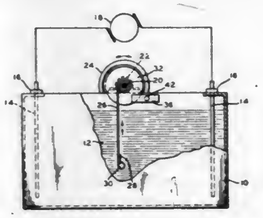
1. A cell type filter element comprising a stack of sheet members of identical configuration, each member having an opening for registering with a like opening in the next member, and each member having a web portion radiating from said opening throughout substantially 180° of arc from the center of said opening to the periphery of said element and radiating a lesser amount oppositely to enclose said opening, adjacent members being oppositely disposed to form cells between like positioned members on opposite sides of a diametrical line through the center axis of the element and with the portions surrounding the openings overlapping to provide the cell spacing.

2,457,123

COUPLING ARRANGEMENT

Henri G. Busignies, Forest Hills, Trevor H. Clark, New York, and Arbor G. Everhart, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

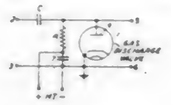
Application August 26, 1943, Serial No. 500,076
4 Claims. (Cl. 250—9)



1. In combination, a direction finding system comprising an aperiodic directional antenna system and an aperiodic non-directional antenna system, a direction finding receiver, a pair of low impedance transmission lines each coupled at one of their ends to separate of said antenna systems, and terminating at their other ends at said direction finding receiver and coupled thereto, an even number of additional receivers, and a like number of coupling units, half of said coupling units coupling half of said receivers to one conductor of one of said transmission lines and the other half of said coupling units coupling the other half of said receivers to the other conductor of said one transmission line, whereby any interaction of one of said receivers with one of the transmission lines is balanced by a like interaction of one of the receivers coupled to the other of the transmission lines, with said other of the transmission lines.

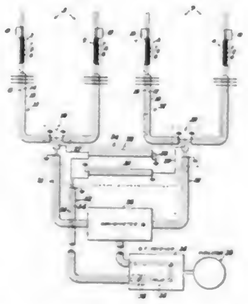
2,457,124

WATER RHEOSTAT CONTROL



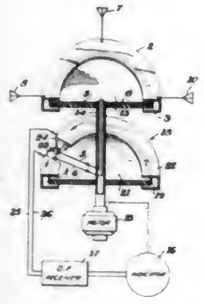
Vincent Chadwick, Chelsea, and Olaf I. E. Haliberg, Boston, Mass.

Application July 9, 1945, Serial No. 604,006
7 Claims. (Cl. 201—57)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A device for controlling a rheostat including a tank containing electricity conducting liquid and electrodes mounted in spaced relation therein, said device comprising a rotatable shaft mounted transversely of said electrodes, a curtain of insulative material wound upon said shaft, means for weighting the free end of said curtain, and a member on said shaft for rotating the latter to raise or lower the curtain between said electrodes.

2,457,125
CIRCUIT ARRANGEMENT FOR PRODUCING ELECTRICAL PULSES
Prafulla Kumar Chatterjea and Leslie Wilfred Houghton, London W. C. 2, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 23, 1943, Serial No. 480,156
In Great Britain March 27, 1942
4 Claims. (Cl. 315—340)

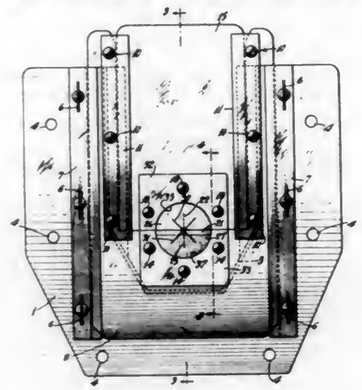


1. A receiving arrangement for reconstituting a time modulated pulse from two pulses marking its leading and trailing edges respectively, comprising a differentiating circuit, means for applying said two marking pulses to said differentiating circuit, means for deriving from said differentiating circuit two differential pulses of opposite sign for each marking pulse, a gas discharge valve including a plate and a cathode, a steady high tension potential source connected between said plate and said cathode to make said plate positive, means for applying said differential pulses to the input of said valve to initiate a discharge in response to the first marking pulse and subsequently to extinguish such discharge in the valve in response to the second marking pulse the time intervals between successive initiation and extinguishment of the said discharge being fixed by the interval between corresponding successive pairs of differential pulses, and an output circuit for said valve.

2,457,126
ANTENNA SYSTEM
Frank O. Chesus, Jackson Heights, and Frank G. Thomas, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 31, 1945, Serial No. 608,046
9 Claims. (Cl. 343—115)

1. A direction finder comprising two separate cross-connected pairs of spaced antenna units, means taking the difference between the voltages induced in the units of one pair, means taking the difference between the voltages induced in the units of the other pair, means comparing said differences to produce a directional indication, and a sensing arrangement including means taking the algebraic sum of the voltages induced in all of said units.

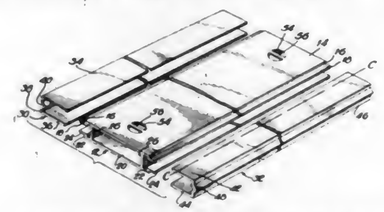
2,457,127
ANTENNA SYSTEM
Frank O. Chesus, Jackson Heights, and Frank G. Thomas, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 27, 1945, Serial No. 601,800
24 Claims. (Cl. 343—124)



1. A goniometer comprising a pair of conductive members inductively related by a substantially uniform field, one of said members having coupling means connected to substantially symmetrically spaced points thereon, a pair of leads coupled to symmetrical points on the other conductor, and means for effectively rotating the position of said points of said coupling to said other member relative to said one member.

24. A direction finder collector system comprising two crossed pairs of spaced antenna units symmetrically disposed about a central axis, and a goniometer comprising three coaxial annular conductive members positioned adjacent each other and lying in parallel planes, means coupling the antenna units of one pair to diametrically opposite points on the upper of said members, means coupling the antenna units of the other pair to diametrically opposite points on the lower member which points are at right angles to said first mentioned points, a pair of leads coupled to substantially diametrically opposite points on the middle member, and means for effectively rotating the position of the points of connection of said leads relative to said upper and lower members.

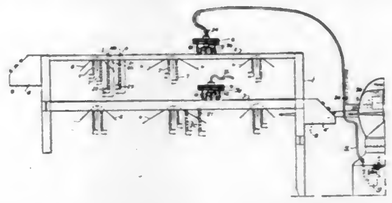
2,457,128
WATER BARRIER
Frank J. Churnell, Bloomfield, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 18, 1945, Serial No. 617,003
2 Claims. (Cl. 61—22)



1. A cover forming a water seal while permitting the passage of a cylindrical body, comprising two rigid plate members formed with aligned holes, to accommodate said body, and a plurality of flexible diaphragms clamped between said plate members and formed of two parts each, including a first diaphragm adjacent one of said plate members having one part which extends substantially to the center of said holes and having another part formed with an extension lying within the hole of said one plate and extending across the width of said hole, said extension overlapping the edge of said one part, and further including a second diaphragm having two parts with abutting edges, said diaphragms being formed with slots extending radially of said holes

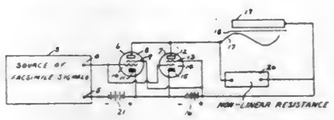
but less than the full diameter thereof, in such a manner that the slots in said first diaphragm

are staggered with respect to those in said second diaphragm.



2,457,129
HATCH COVER
John K. Collings, Englewood, N. J., assignor to The Metal Lumber Corporation of New Jersey, Hoboken, N. J., a corporation of New Jersey
Application February 27, 1946, Serial No. 650,658
2 Claims. (Cl. 189—46)

1. A hatch cover section comprising a substantially rectangular tubular metallic body member having top and bottom walls and side walls connecting said top and bottom walls and a laterally extending flange at each side of said top and bottom walls, and a channel-shaped member at each side of said body member each having top and bottom flanges and a connecting web, said flanges of said body member and of said side members being formed with complementary joint portions for positioning said flanges of said side members in overlapping relation with said flanges of said body member, said side members being integrally secured to said body members.

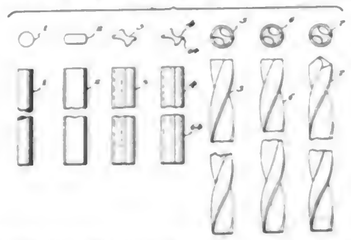


2,457,130
BLIND FLYING AND BLIND LANDING SYSTEM FOR AVIATION FLIGHT TRAINERS
Carl J. Crane and George V. Holloman, Dayton, Carl W. Muller, Osborn, and Raymond K. Stout, Dayton, Ohio
Application February 26, 1940, Serial No. 320,879
49 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

49. In a radio compass homing system for use in aviation ground trainers, a ground trainer, a reference surface, a course indicator movable relative to said reference surface at a speed proportional to the assumed flight velocity of said trainer, a radio compass signal receiving loop antenna rotatably mounted on said indicator, and means

controlled by said trainer for simultaneously directionally controlling said relative motion of said course indicator and the plane of said radio compass loop antenna.

2,457,131
FACSIMILE OVERLOAD CONTROL WITH NONLINEAR RESISTANCE IN OUTPUT
Richard C. Curtis, Short Hills, N. J., assignor to Faximile, Inc., New York, N. Y., a corporation of Delaware
Application September 25, 1946, Serial No. 699,171
1 Claim. (Cl. 346—33)



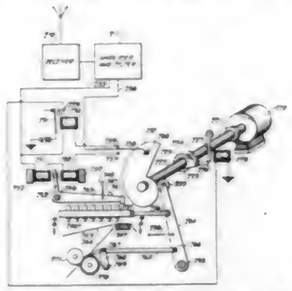
In a recorder adapted to record upon a recording medium exhibiting a maximum tolerable recording voltage, a source of signals, at least one constant current vacuum tube for controlling a recording current, input and output circuits to said tube, said input circuit being connected to said signal source, at least one pair of electrodes connected to said output circuit for impressing recording signals upon said recording medium located therebetween, and at least one non-linear resistor, having a relatively high resistance at voltages below said tolerable voltage and a relatively low resistance at voltages above said tolerable voltage, connected across said electrodes and the output circuit of at least one of said constant current tubes, said non-linear resistance alternately preventing the output voltage of said output circuit from exceeding said maximum tolerable recording voltage and preventing said output voltage from decreasing to a point where low output voltage may injure said constant current tubes.

2,457,132
METHOD OF MANUFACTURING TWIST DRILLS
Harry W. Delaney, Chicago, Ill., assignor, by mesne assignments, to Republic Drill & Tool Company, a corporation of Delaware
Application May 31, 1941, Serial No. 395,961
8 Claims. (Cl. 76—108)

1. In the method of making twist drills the steps which comprise heating bar stock of multiple drill length to a temperature high enough to facilitate mechanical working, forming longitudinal flutes in the full length of said stock and simultaneously forming beads along alternate

edges of said flutes, and twisting said fluted stock by torsional forces applied to opposite ends of

said stock to drill form of uniform cross-sectional shape throughout its length.



2,457,133

FRAGMENTARY CHARACTER PRINTER

Edmond M. Deloraine, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Original application October 18, 1941, Serial No. 415,554, now Patent No. 2,365,458, dated December 19, 1944. Divided and this application September 6, 1944, Serial No. 552,887. In Canada June 24, 1943

1 Claim. (Cl. 178—30)

In a facsimile printer a record surface comprising a paper tape, a stationary platen therefore, an inked ribbon disposed over said tape, a printhammer disposed over said platen means for moving said printhammer in response to signal impulses, a chariot, a guideway in which said chariot may move between said printhammer and inked ribbon, a plurality of diagonally disposed styli movably supported in said chariot and arranged when struck by said printhammer to cause said ribbon to mark the paper tape, a pivoted arm arranged to be oscillated, a link connecting said arm to said chariot whereby the chariot is moved in said guideway corresponding to the movement of said arm, a single-cycle rotary cam swinging said arm uniformly in one direction for printing and releasing it for rapid return, and means operated by said arm in its return movement to feed the paper tape.

2,457,134

RADIO SYSTEM FOR TRANSMISSION AND RECEPTION ON THE SAME FREQUENCY

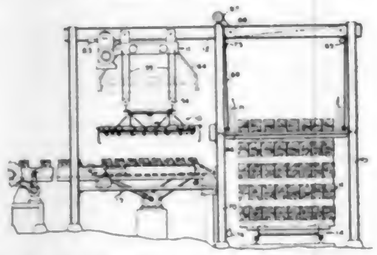
Melvin L. Doelz, Cedar Rapids, Iowa, assignor to Collins Radio Company, a corporation of Iowa

Application February 28, 1944, Serial No. 524,206

9 Claims. (Cl. 250—13)

1. Radio apparatus of the character described, including: a variable frequency generator; a fixed frequency generator; means for mixing the outputs of said generators and filtering the resultant waves to provide an initial wave output; means for amplifying and transmitting said initial wave output; means for displacing the frequency of the fixed generator to effect a predetermined displacement of the frequency of the wave output; and a super-heterodyne receiving system having an intermediate frequency

amplifier adapted to pass a frequency corresponding to the difference between the initial and displaced frequencies of said waves, a mixer delivering its output to the intermediate frequency amplifier, and means for connecting the first mentioned mixer to the last mentioned mixer, whereby the displaced waves serve as the local heterodyning waves for said receiving system.



2,457,135

GRAPPLE

August M. Delters, Atlanta, Ga., assignor to Southern Wood Preserving Company, Atlanta, Ga., a corporation of Georgia

Application November 4, 1946, Serial No. 707,683, which is a division of application Serial No. 707,681, dated November 4, 1946. Divided and this application November 4, 1946, Serial No. 707,682

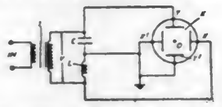
12 Claims. (Cl. 294—87)

10. A grapple for lifting as a unit a rick layer of crossties or the like consisting of a plurality of spaced parallel crossties having at least one of their adjacent ends mounted on a transverse stringer crosstie, comprising a substantially rectangular frame; a plurality of pairs of grab hooks pivotally mounted on the frame and adapted to engage the opposite ends of the spaced crossties; a pair of grab hooks extending transversely of and pivotally mounted on said frame adjacent each end thereof and adapted to engage the opposite end of a stringer crosstie; a horizontally spaced pair of bridle members extending longitudinally of and rigidly secured to said frame, said bridle members having a plurality of horizontally aligned longtiudinally spaced pairs of suspension means formed thereon; a lifting member adapted to be connected to cable hoist positioned between said bridle members with its ends adapted to selectively engage a pair of said aligned suspension means whereby when said lifting member is hoisted by said cables, said grapple will be suspended from said lifting member; said aligned pairs of suspension means being so positioned relative to the transverse axis of the grapple that the grapple will be balanced in a horizontal plane about its transverse axis when suspended with the lifting member engaged in a pair of aligned suspension means pre-selected with reference to the particular load; and means for shifting said lifting member from one pair of aligned suspension means to another.

2,457,136

ARRANGEMENT FOR FREQUENCY MEASUREMENTS

Charles William Earp, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware



Application January 16, 1945, Serial No. 573,103

In Great Britain December 8, 1943

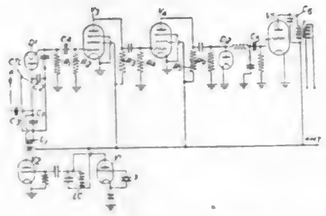
Section 1, Public Law 690, August 8, 1946

Patent expires December 8, 1963

5 Claims. (Cl. 172—245)

1. An arrangement for measuring the frequency of an electrical signal wave comprising a potential divider which includes two series-connected network portions solely composed of reactive elements and having different reactance characteristicts, means for applying the signal wave to the potential divider, a measuring instrument, means for separately applying the potential differences obtained across the said network portions to said measuring instrument to indicate frequency, and means comprising at least one series resonant circuit connected in shunt with the potential divider to improve the uniformity of response of said instrument.

2,457,137



ULTRA HIGH FREQUENCY SYSTEM

Charles William Earp and Charles Eric Strong, London W. C. 2, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application March 24, 1943, Serial No. 480,312

In Great Britain May 22, 1942

4 Claims. (Cl. 250—6)

1. The method of signaling which comprises generating a carrier wave at an ultra high frequency, successively varying said carrier wave over a continuous frequency range at a uniform repetition rate negligibly low in comparison to any carrier frequency, amplitude modulating said carrier in accordance with intelligence bearing signals to be transmitted, said intelligence bearing signals being at frequencies lower than, but generally of the same order, as said repetition rate so that substantially all carrier energy is in said continuous range, transmitting said carrier to a receiving station, and beating said received carrier with a frequency substantially equal to the mean of said varied frequency, amplifying the resulting beat frequency in an amplifier possessing a narrow band width relative to the frequency spectrum of the received signals whereby pairs of pulses repetitive at a rate proportional to said repetition rate and of amplitude proportional to said intelligence bearing signals are produced, detecting said pairs of pulses, and amplifying said pulses in an amplifier tuned to said repetition rate whereby the amplitude modulation corresponding to said intelligence bearing signals is obtained.

2,457,138

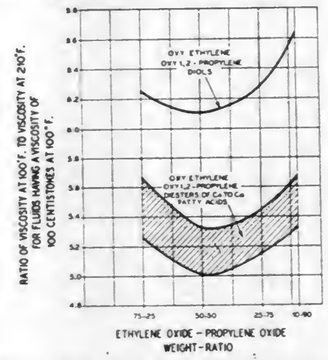
RECTIFIER

Charles A. Escoffery and Walter H. Hawk, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application July 22, 1947, Serial No. 762,696

10 Claims. (Cl. 175—366)

1. A rectifier comprising a tubular member, at least the interior surface portion being electrically conductive material, a semi-conductive material coated on the said electrically conductive portion of said member, a counter-electrode layer on said semi-conductive material, and caps sealing the ends of said member, said caps including means electrically connected, respectively, to said member and to said counter-electrode.

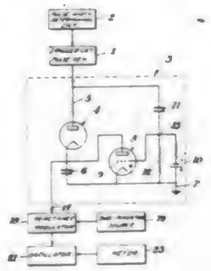


2,457,139

ESTERS OF POLYOXYALKYLENE DIOLS

Harvey R. Fife, Mount Lebanon, Pa., and Walter J. Toussaint, South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York

Application February 26, 1946, Serial No. 650,318

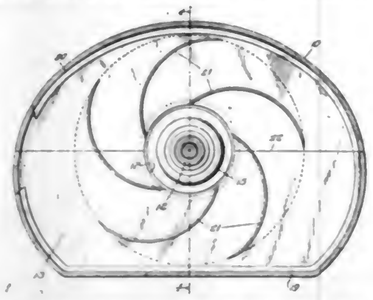


9 Claims. (Cl. 260—410.6)

1. Fatty acid esters of a mixture of heteric oxyethylene-oxy 1,2-propylene diols in which ethylene oxide and 1,2-propylene oxide are combined therein as oxyethylene and oxy 1,2-propylene groups in a ratio which is at least one-third part of 1,2-propylene oxide for each part of ethylene

oxide, by weight; said diols containing in a single molecule both the oxyethylene and the oxy 1,2-propylene groups and said mixture having an average molecular weight of at least 300 attributable to said groups.

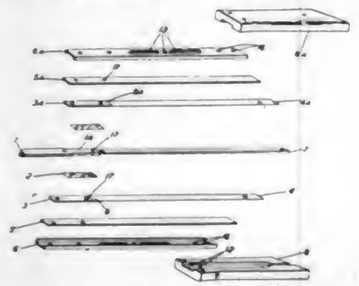
2,457,140
VOLTAGE CONTROL CIRCUIT
Sidney Frankel, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 9, 1944, Serial No. 557,805
7 Claims. (Cl. 250—36)



7. An electrical system for providing a final voltage having an amplitude proportional to the varying widths of control pulses comprising a storage means, a rectifier circuit, means for charging said storage means with said control pulses through said rectifier circuit, a gas-filled electron discharge device coupled across said storage means, said device comprising a control electrode, means for differentiating said control pulses, to obtain an output thereof, means for applying said differentiated output to said control electrode whereby said device discharges said storage means to a given level.

2,457,141
METHOD OF PREPARING DOUBLE SALTS OF ASCORBO-SALICYLATE
Joel G. Freeman, Mount Vernon, N. Y., assignor to Pharmaceutical Organics Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application June 12, 1946, Serial No. 676,340
10 Claims. (Cl. 260—344.5)

10. A method of preparing calcium ascorbosalicylate consisting of mixing substantially stoichiometric proportions of ascorbic acid and salicylic acid, and adding a suspension of calcium hydroxide in a relatively small amount of water, thereby converting said mixture into a pasty mass of flowable consistency at normal temperature, whereby an exothermic reaction is induced resulting in the formation of calcium ascorbosalicylate.

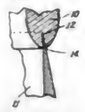


2,457,142
FAN FOR SUCTION CLEANERS
Edward A. French, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application January 6, 1945, Serial No. 571,573
15 Claims. (Cl. 230—130)

1. A fan of the type used in suction cleaners comprising a generally oval-shaped housing with the long axis of the oval arranged in horizontal position, a plurality of rotatable blade assemblies, a fixed blade assembly between each two consecutive rotatable blade assemblies and held by said housing, and a single unitary hub connected to a

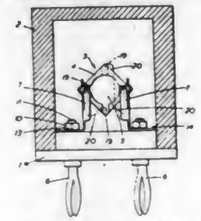
motor shaft and upon which the rotatable blade assemblies are mounted.

2,457,143
ELECTRIC SOLDERING IRON
Gilbert Gilliver, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application July 20, 1943, Serial No. 495,417
In Great Britain October 23, 1942
5 Claims. (Cl. 219—26)



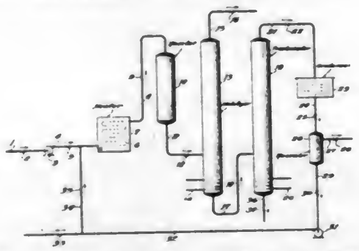
1. An electric soldering iron comprising a bit formed with a flattened extended heat conducting portion, a pair of oppositely positioned channel members, flat current-conducting strips of electric resistance material interposed between the channel members and the bit extension and facing said bit extension, the areas of the facing surfaces of said extension and said strips being substantially equal and continuous means for electrically insulating the strips from the bit along at least the greater portion of their lengths, means for electrically and heat insulating the channel members from the bit, conductors connected to the strips at one end thereof and common means to clamp the parts together and to electrically connect the opposite ends of the resistance strips.

2,457,144
METHOD OF SEALING METAL TO GLASS
Lynn C. Goodale, Newark, N. J., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application June 29, 1942, Serial No. 448,936
5 Claims. (Cl. 49—81)



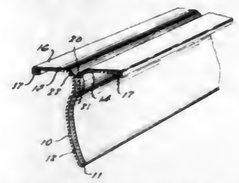
1. The method of sealing glass to metal which includes the steps of placing the metal and glass in contact while at normal temperature, raising the temperature of the glass sufficiently to soften

it, forcing the metal into the softened glass for a predetermined distance and retracting the met-



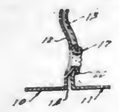
al for a lesser distance, forming a positive meniscus at the surface of contact.

2,457,145
MOUNTING FOR PIEZOELECTRIC CRYSTALS
Frank Gray, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 5, 1946, Serial No. 639,291
In Great Britain January 23, 1945
4 Claims. (Cl. 171—327)



1. A mounting for a piezo-electric crystal in the form of a square lamina comprising two spring strips mounted parallel to one another and each having a free end povided with a V-shaped recess, said recesses being adjacent and facing one another, said recesses being shaped so that said V has an angle slightly less than one right angle for receiving opposite corners of the crystal and for exerting a gripping pressure transverse to the diagonal between said corners.

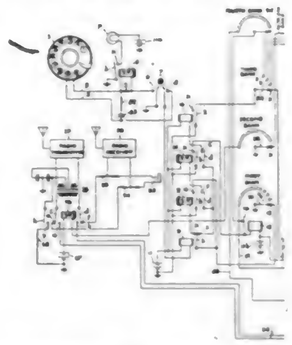
2,457,146
PROCESS FOR PRODUCING HIGH BOILING POLYMERS
Henry W. Grote, Downers Grove, Robert L. Swoope, Berwyn, and Charles S. Brearley, Jr., Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application June 27, 1947, Serial No. 757,512
15 Claims. (Cl. 260—683.15)



1. A process which comprises polymerizing propylene containing not more than about 0.03 mole per cent of water in the presence of a solid polymerization catalyst containing a phosphoric acid catalyst compound, isolating from the resultant polymer product a fraction comprising essentially olefins with more than about 10 carbon atoms per molecule, and recycling polymers containing less than about 12 carbon atoms per molecule to the polymerization zone together with additional fresh propylene-containing charging stock.

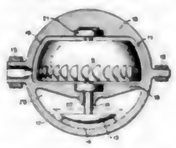
2,457,147
BEAM
William J. Hall, Detroit, Mich., assignor, by mesne assignments, to Great Lakes Steel Corporation, Detroit, Mich., a corporation of Delaware
Application December 29, 1943, Serial No. 516,001
1 Claim. (Cl. 189—37)

A metal nailing beam comprising a relatively thicker piece of strip steel rolled to form parallel webs connected along one edge by a reverse bend in the strip and having a flange directed laterally from the other edge of each web to form a T-shape beam, said flanges having their inner portions flaring outwardly to form an elongated nail guiding depression, and a cover strip of relatively thinner, puncturable metal overlying the outer faces of the flanges and the depression between the flanges, said cover strip being connected to the flanges and connecting the strip and flanges together and including an elongated, continuous depression nesting in the first mentioned depression with the side walls of the depression in said cover strip contacting the sides of the depression formed by the flanges and resiliently holding the webs in predetermined spaced relation to form a nail receiving slot therebetween while permitting limited spreading of the webs when a nail larger than the slot is driven into the slot between the webs.



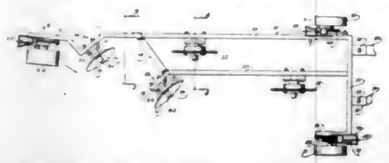
2,457,148
STRUCTURAL BEAM
William J. Hall and Orley J. Crowe, Detroit, Mich., assignors to Great Lakes Steel Corporation, a corporation of Delaware
Application August 2, 1943, Serial No. 497,012
1 Claim. (Cl. 189—37)

A nailing beam comprising two webs and a plurality of connecting means fastening said webs together and holding them in predetermined spaced relation for receiving and anchoring nails driven therebetween, each of the connecting means comprising metal of one web pressed outwardly toward the other web to form a boss and a tubular projecting form of web metal located inwardly from the margin of the boss to leave a marginal shoulder extending completely about the tubular projection, said tubular projection extending from the shoulder through an opening in the other web having the same size and shape as the exterior of the tubular projection in the opening, said shoulder engaging the inner surface of the other web around the opening to maintain the webs in predetermined spaced relation and



said tubular projection having its outer free end expanded outwardly into clamping engagement with the other web about the opening to lock the webs together and hold said other web against said shoulder.

2,457,149
SELECTIVE SIGNALING CIRCUIT
John Amos Herbst, Pompton Lakes, N. J., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 20, 1947, Serial No. 735,939
11 Claims. (Cl. 177—353)

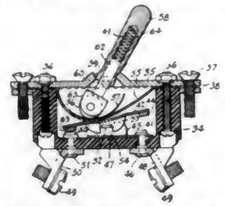


1. In a selective call system means for storing a call number digit-by-digit, means for comparing adjacent digits one with another, means operative to translate the stored call number into a code signal of the type wherein different figures are represented by pulses each having one of ten different frequency characteristics, and means controlled by said comparing means for introducing into said code signal a pulse having an eleventh frequency characteristic to represent the second of two adjacent digits that are numerically the same.

2,457,150
GYROSCOPE SYSTEM
Guy L. H. Herondelle, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 1, 1943, Serial No. 481,507
In France October 30, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires October 30, 1961
8 Claims. (Cl. 74—5)

1. A gyroscopic system including a mass and a shaft, supporting said mass and arranged to rotate therewith, comprising a hollow body supporting said shaft at one end thereof, a liquid ballast contained in said hollow body, means for rotating said mass and said shaft, said hollow body and shaft being so arranged that the axis of generation of said hollow body passes through the center of gravity of the rotary system, and the other end of the shaft of the gyroscope being partially immersed in and rotating the liquid ballast in such a way that the trajectory of the center of gravity of the liquid ballast will follow a direction substantially opposite to the gyroscopic precession.

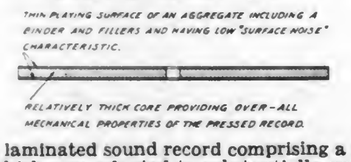
2,457,151
DISK PLOW
Levi Cummings Hester, Jacksonville, Fla.
Application April 19, 1945, Serial No. 589,185
1 Claim. (Cl. 97—53)



In a disc plow the combination with a frame comprising a forward cross piece having a short rearwardly extending wheel carrying arm at one end and a long rearwardly extending side rail at its other end, said side rail having a bent portion extending at an angle inwardly and a wheel bearing extremity projecting therebeyond and lying at an obtuse angle to the forward portion of the side rail, an intermediate rail attached to the cross piece parallel to the side rail and of shorter length than the latter and provided with an inwardly bent extremity, and a rearwardly extending arched bracing member connecting rear portions of the two rails, of disc plows mounted on the angularly bent portions of the two rails, coulters on the parallel portions of the rails, disposed one ahead of the other, supporting wheels on the forward end of the frame and a ground wheel carrying the rear end of the side rail behind the disc thereon and rotating in a plane to resist the lateral thrust of the plow created by said discs.

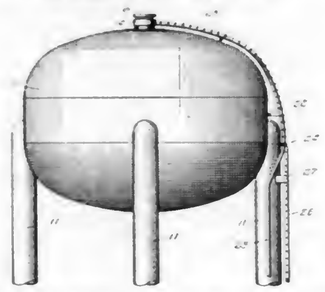
2,457,152
ELECTRODEPOSITING COMPOSITION AND BATH
Raymond A. Hoffman, Euclid, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 7, 1943, Serial No. 493,755
23 Claims. (Cl. 204—54)

1. In a process for the electrodeposition of tin the step comprising effecting electrodeposition from an aqueous, tin-plating bath which contains a soluble tin compound, the process comprising effecting electrodeposition in the presence of 0.001 to 25 grams per liter of a bath soluble polyalkylene oxide of molecular weight over 400 as an addition agent.



2,457,153
SEALED SWITCH
Harvey Hubbell, Long Hill, Conn.
Application February 3, 1945, Serial No. 575,958
14 Claims. (Cl. 200—168)

14. An electrical switch comprising as a unitary structure an insulating base, metal contacts mounted on the base one of which is movable toward and from the other, walls forming a sealed chamber enclosing said contacts sealed from the outer atmosphere and including a thin flexible insulating wall adjacent the movable contact capable of being moved to shift the contact, means mounting the contacts in the sealed chamber independently of the flexible wall, movable operating means mounted outside the chamber as

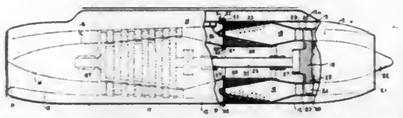


a part of said structure to shift the flexible wall and through it to shift the movable contact, and conductors connected with the contacts.

2,457,154
PHONOGRAPH RECORD
James H. Hunter, Bridgeport, Conn., assignor to Columbia Records Inc., a corporation of Delaware
Application July 26, 1941, Serial No. 404,204
5 Claims. (Cl. 154—43)

1. A laminated sound record comprising a relatively thick core adapted to substantially provide the over-all mechanical properties of the pressed record, and a thin playing surface of an aggregate including a binder and a first filler of comminuted diatomaceous earth having irregular particles varying in size from substantially less than a micron up to the order of four microns in largest dimension, and a second filler having substantially uniform size particles of the order of one-quarter micron permitting ready dispersion thereof both upon the surfaces of and between said diatomaceous earth particles, the ratio of binder to filler being of the order of one to three so that after pressing the particles of said fillers are homogeneously distributed in close relation substantially without intervals therebetween.

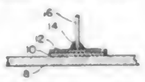
2,457,155
VENT, OVERFLOW, AND LADDER UNIT FOR STORAGE TANKS
Robert A. Jackson, Tulsa, Okla., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application June 5, 1946, Serial No. 674,615
15 Claims. (Cl. 137—21)



15. In a storage tank structure including a storage portion, an overflow and ladder unit comprising an overflow opening, a conduit attached thereto and extending down the outside of the tank, a ladder associated with said conduit, and rollers for maintaining the conduit and ladder in a position spaced from the tank, said conduit and ladder being movable as a unit by means of said rollers around at least a portion of the tank surface.

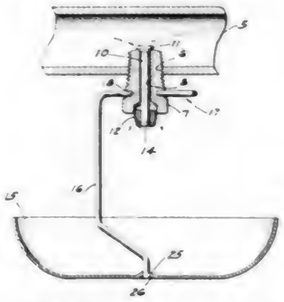
2,457,156
METHOD OF MANUFACTURING DIAMOND STUDDED TOOLS
John Paul Jones, Toronto, Ontario, Canada
Application January 12, 1946, Serial No. 640,939
3 Claims. (Cl. 51—309)

1. A method of manufacturing diamond studded tools consisting in preparing a mould with diamond placing cavities in its surface, positioning diamond particles in the cavities in said mould, packing powdered glass in said cavities around said diamonds, said diamond particles being arranged in the desired orientation in said cavities to provide the correct cutting angles desired in the completed tool and being temporarily held in position by said powdered glass packing, raising the temperature of said mould to bring said glass to a tacky state to bond said diamonds in oriented position in said cavities, then moulding metal to form the tool around the exposed portion of the diamond particles to form a direct bond between the tool metal and the diamonds, then finally breaking away the mould and the glass.



2,457,157
TURBINE APPARATUS
Alexander S. King, Jr., Prospect Park, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 30, 1946, Serial No. 687,193
3 Claims. (Cl. 263—19)

1. In combustion apparatus, wall structure defining a combustion chamber, said wall structure including an annular wall increasing in diameter from the upstream end of the combustion chamber towards the downstream end thereof and separating said combustion chamber from an overlapping air space, said annular wall having longitudinally-spaced groups of openings for admission of air from said overlapping air space to said combustion chamber, the groups communicating with the upstream portion of said chamber admitting primary air and the groups communicating with the downstream portion of said chamber admitting secondary air; partition structure separating said overlapping air space into passages each communicating with a different group of said air admission openings and comprising a plurality of cylinders of different diameters concentric about the annular wall with their downstream ends adjacent the latter intermediate the longitudinally-spaced groups of air

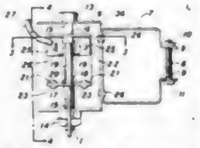


admission openings; and valve means for controlling admission of air to said passages, said valve means being adjustable to vary the ratio of primary and secondary air admitted through said passages.

2,457,158
VITREOUS BONDING COMPOSITIONS
Daniel O. Koch, Rahway, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 23, 1947, Serial No. 762,986
5 Claims. (Cl. 106—49)

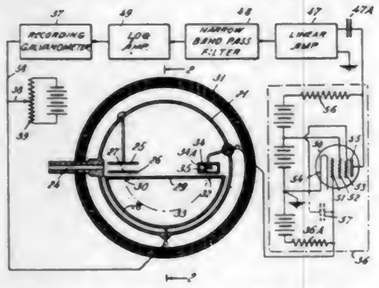
1. A silver-glass flux bonding composition comprising finely divided silver particles taken from the group consisting of silver, silver oxide, and silver carbonate and glass flux particles mixed with a non-reactive liquid vehicle in a proportion by weight, of the metallic silver content of said silver particles to glass flux between 6:1 and 18:1, said glass flux containing between 40% and 75% PbO, between 1% and 10% B_2O_3, between 12% and 35% SiO_2, and between 1% and 8% TiO_2.

2,457,159
WATER DISPENSER FOR POULTRY
Reed S. Kofford, Van Nuys, Calif.
Application June 30, 1947, Serial No. 758,139
6 Claims. (Cl. 119—72.5)



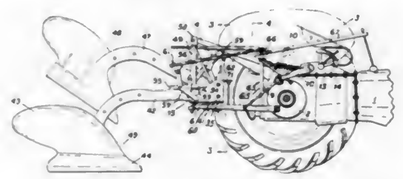
1. In a water dispenser for poultry, an overhead water supply means including a body attachable to the lower side of a horizontal supply pipe and having a vertical valve controlled water passage through it, said body having horizontally grooved opposite side portions, a drippage cup, and a wire support for said cup having a loop with side runs engageable with said grooves to support said cup vertically below said grooved body.

2,457,160
PHENOL-ALDEHYDE SEALING AGENT AND METHOD OF MAKING THE SAME
Stewart S. Kurtz, Jr., Merion, and James S. Sweely, Swarthmore, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application August 9, 1945, Serial No. 609,927
11 Claims. (Cl. 260—29.3)



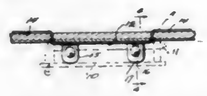
1. Method of preparing a sealing agent for sealing porous formations which comprises reacting phenol with formalin in the weight proportion of one part of phenol to 1–4 parts of formalin under catalyzed condensation conditions to form a thermosetting resin, conducting the reaction through a stage at which a resin phase precipitates and continuing the reaction until the resin has reached an intermediate plastic solid stage at which it is dispersible by stirring in water without the aid of an emulsifying agent to form a non-colloidal suspension stable for at least five hours, stopping the reaction when said intermediate plastic solid stage is reached whereby to obtain a partially condensed resin capable of further condensation to a hard infusible stage upon application of heat, and dispersing the resin in water to form, as the desired product, a non-colloidal aqueous suspension which, when forced into a bed of 10 mesh sand, will form a resin sheath at the face of the bed capable of thermosetting to a hard layer non-porous to drilling fluid.

2,457,161
TIRE DEFLATION SWITCH
William Clark Laidlaw, Pasadena, Calif.
Application August 7, 1945, Serial No. 609,368
3 Claims. (Cl. 200—58)



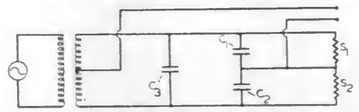
1. In a tire deflection indicator, the combination which comprises a U-shaped plate having two arms extending one above the other, an operating lever fulcrumed to the lower arm with its lower end adapted to contact the ground, and with its upper end adapted to swing between the upper and lower arms, a supporting bracket adapted for attachment to a vehicle and within which the plate is vertically movable, a height adjusting bolt passing through the supporting bracket and through both arms of the plate and threaded into at least one of the pieces through which it passes, and an electrical contact member mounted within the U-shaped plate for electrical contact with the upper end of the lever.

2,457,162
MASS SPECTROMETRY
Robert V. Langmuir, Schenectady, N. Y., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California
Application April 20, 1943, Serial No. 483,745
10 Claims. (Cl. 250—41.9)



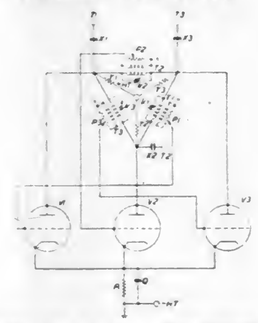
8. In mass spectrometry involving the production of ions and the separation of these ions by field forces which control their deflection into a plurality of ion beams having different mass-to-charge ratios, the improvement which comprises pulsating a field force which controls such deflection during the separation so that the beams are oscillated, and collecting ions of a resulting oscillating beam to produce an alternating current.

2,457,163
PLOW ATTACHMENT FOR TRACTORS
Warren S. Lansing, Loveland, Colo.
Application March 13, 1945, Serial No. 582,432
4 Claims. (Cl. 97—29)



1. In a two plow construction for association with a tractor having a lifting and pulling mechanism including a link pivotally connected to the tractor, said plow structure comprising two beams each carrying a plow, a transverse member, means for pivotally connecting the forward ends of the plow beams to the transverse member, a draw bar secured to the transverse member and arranged to be connected to the lifting mechanism of the tractor, a post structure extending upwardly from the draw bar and adapted to have connected thereto the outer end of the link pivoted to the tractor to limit movement of the post away from the tractor as the draw bar and transverse member are lifted, means for preventing pivotal movement of each plow beam with respect to the transverse member, and means for disabling the last named means and holding at will each beam in a lifted position after the beam is lifted and the lifting mechanism is released.

2,457,164
CLIP FOR ATTACHING DECORATIONS AND MEDALS
Frederick G. Lutz, Moorestown, N. J., and Charles P. O'Rourke, Sharon Hill, Pa.
Application July 21, 1945, Serial No. 606,459
3 Claims. (Cl. 24—85)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

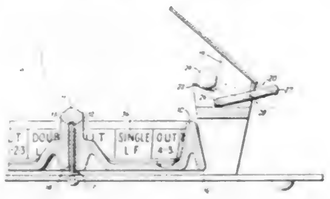


3. A display comprising a backing, a resilient clip mounted thereon and an ornamental bar having a pin fastener, said clip having two pairs of outwardly projecting spaced arms, each arm having a projection extending toward the opposed arm and said projection being spaced from the outer end of the arm a distance slightly less than the distance between the pin and the back of the bar, whereby the pin may be received between the pairs of arms below the projections while the back of the bar rests on the ends of the arms.

2,457,165
ELECTRICAL BRIDGE
Bernard F. McNamee, Altadena, Calif., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California
Application May 20, 1944, Serial No. 536,623
5 Claims. (Cl. 323—75)

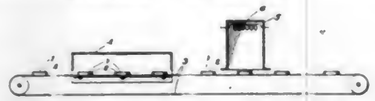
1. In an alternating current bridge having four impedance arms, a first pair of opposite bridge points across which an alternating voltage is impressed and a conjugate pair of opposite bridge points across which an output voltage is taken, a branch comprising a potentiometer having an adjustable tap, said potentiometer being connected between the first pair of points, a connection from the adjustable tap on said potentiometer to one of said output terminals, a pair of condensers, one on each side of and in series with said potentiometer, another branch comprising a potentiometer having an adjustable tap, said last-mentioned potentiometer being connected across the first pair of terminals, and a connection from the tap of the last mentioned potentiometer to the other of said output terminals and to one of the conjugate pair of bridge points.

2,457,166
POLYPHASE OSCILLATION GENERATOR
Eric Malcolm Swift McWhirter and Roland Harris Dunn, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 27, 1945, Serial No. 631,154
In Great Britain May 29, 1942
7 Claims. (Cl. 250—36)



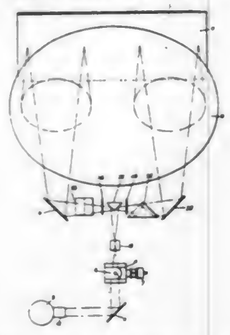
1. A multi-phase high-frequency oscillator comprising an odd plurality of similar thermionic valve amplifying stages each having a control grid and an output plate, the same number of similar transformers each having primary and secondary windings, means to connect the primary windings of said transformers in series in a closed ring, means to connect the plates respectively to separate junctions of said primary windings, and means to connect the control grid of each stage to the secondary winding of the transformer whose primary winding connects the plates of another two stages, so that the total output current of the said stage is in phase opposition to the vector sum of the plate voltages on said plates and proportional in magnitude thereto.

2,457,167
BASEBALL GAME
Maximilian C. Meyer, Brooklyn, N. Y.
Application April 7, 1945, Serial No. 587,071
6 Claims. (Cl. 273—93)



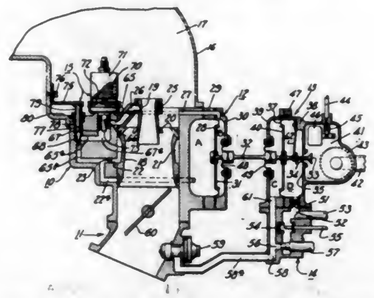
1. A baseball game comprising a rotatable wheel element containing a plurality of separate compartments adapted to receive a ball, a stand positioned adjacent to said wheel, said stand having a pitching side and a batting side the pitching side facing said wheel, a plurality of openings located in said pitching side adapted to receive a ball, a plurality of impelling means corresponding to the number of said openings, each adapted to impel a ball when located in its opening into the air with the proper force and direction so as to land said ball within said rotatable wheel element, each of said means for impelling the ball having a ball striking means at one side adapted to be directed into its ball-receiving opening, an actuating means at an opposite side extending outwardly from the batting side of the stand and a pivotal connection with said stand intermediate said ball striking means and said actuating means, and means for concealing said openings in said pitching side of said stand from said batting side.

2,457,168
BASEBALL GAME
Maximilian C. Meyer, Brooklyn, N. Y.
Application April 19, 1946, Serial No. 663,523
4 Claims. (Cl. 273—93)



1. A baseball game comprising a rotatable wheel element containing a plurality of separate compartments adapted to receive a ball, a stand positioned adjacent to said wheel, said stand having a pitching side and a batting side, the pitching side facing said wheel, a plurality of openings located in said pitching side adapted to receive said ball, a separate means for each of said openings for impelling said ball located in said opening into the air with the proper force and direction so as to land said ball within said rotatable wheel element, said means for impelling said ball comprising a pivotally mounted lever arm one end of which extends into said opening and the other end of which extends beyond the batter's side of the stand to form an actuating element, means for concealing said openings in said pitching side of said stand from said batting side, said means for impelling said ball comprising a means for adjusting the distance the end of the lever arm extends into the opening.

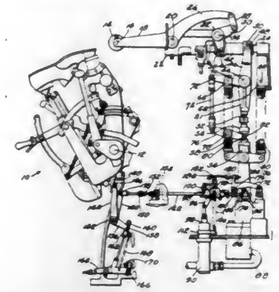
2,457,169
METHOD OF MANUFACTURING OF RECTIFIER ELEMENTS
Arthur J. Miller, Oak Ridge, Tenn., and Julius W. Fleisher, New York, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 12, 1945, Serial No. 582,278
5 Claims. (Cl. 175—366)



1. The method of manufacturing a selenium rectifier element which comprises applying a first heat treatment of selenium to about 120° C. under pressure, then after cooling off the selenium layer applying a second heat treatment without pressure at a higher temperature than that applied in the first heat treatment yet below the melting point of the selenium, and after cooling the selenium to about room temperature applying a momentary third heat treatment at a temperature ranging from 300 to 450° C.

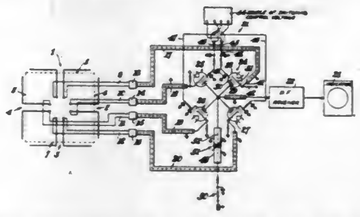
2,457,170
OPTICAL PROJECTION APPARATUS
Kenneth Mitchell, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 8, 1944, Serial No. 539,285
In Great Britain June 11, 1943
2 Claims. (Cl. 88—24)

1. Optical projection apparatus, including a single screen, means for producing on said screen two identical silhouette images constituting the same profile of an object, means for causing said images to be projected on the screen and inverted with respect to one another in two directions at right angles to one another and means operating without change in the initial setting of said projecting and inverting means for moving said images in said two directions to obtain a better comparison thereof, the foregoing apparatus including a source of light, a lens system for forming by said light an image of an object to be examined, a prism having external mirrored surfaces and located in the beam from said lens system so as to divide said beam into two beams, an internally reflecting prism located in each of said two beams, one of said last-mentioned prisms reversing the image vertically and the other reversing the image horizontally, fixed mirrors directing the respective image-reversed beams upon said screen, and means for moving said object alternately in each of two directions at right angles in a plane normal to the axis of the beam from said lens system, whereby relative movement of the two images in corresponding directions on said screen is provided.



2,457,171
CHARGE FORMING DEVICE
Frank C. Mock, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 22, 1944, Serial No. 532,261
5 Claims. (Cl. 261—39)

1. In a device for supplying a fuel-air mixture to an engine, an air-intake conduit having Venturi means therein, a fuel-air regulator including a fuel valve and a movable valve-actuating member operatively connected thereto, air differential pressure chambers on opposite sides of said member, a passage arranged to communicate conduit pressure to one of said chambers and another passage arranged to communicate Venturi suction to the other of said chambers, flow orifices arranged in series in one of said passages, a pair of valves coacting with said orifices for regulating the differential pressure across said member, flow restricting means coacting with said orifices and becoming increasingly effective as said orifices are progressively reduced in effective flow capacity, a pressure-responsive element operatively connected to one of said latter valves and a temperature-responsive element operatively connected to the other, said elements and valves controlled thereby being independently operable but coacting with one another to regulate the differential in relation to changes in density of the ambient air irrespective of whether such changes are in the pressure component, the temperature component or both components.

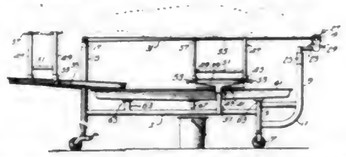


2,457,172
LEVELING MACHINE
Fred L. Mooney, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 16, 1947, Serial No. 761,181
5 Claims. (Cl. 12—34)

1. In a leveling machine, a shoe support, a leveling tool, means mounting said support for movement in directions lengthwise of a shoe thereon to cause the leveling tool to operate progressively along the shoe bottom, spring means for pressing the leveling tool upon the bottom of the shoe, mechanism for lifting said tool against the action of said spring means, latch means rendering said mechanism ineffective with the shoe support in its forwardmost position in which a shoe carried thereon is located forwardly of the leveling tool, means operative upon release of said latch means for rendering said mechanism immediately effective, and means operative in response to the initial

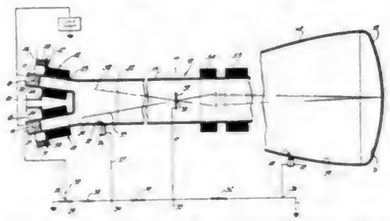
rearward movement of said shoe support for releasing said latch means.

2,457,173
ELECTRONIC SWITCHING SYSTEM
John H. Newitt, Montclair, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 23, 1945, Serial No. 579,451
4 Claims. (Cl. 343—121)



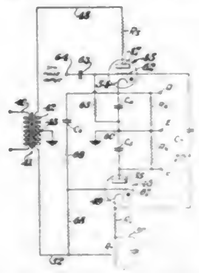
1. An electronic switch system for switching current from an ultra high radio frequency source to a load comprising an electron discharge device having an envelope, an anode, a cathode, leads for the cathode and anode, a grid, and a low impedance grid lead providing an external terminal for the grid and connected inside the envelope thereto, said grid lead and grid serving as an electrostatic shield between the anode and its lead and the cathode and its lead, means forming a substantially non-inductive capacity coupling said grid lead to ground and of such a value as to maintain said grid at ground potential for the radio frequency current to isolate said anode and said cathode, an impedance means coupling said cathode to ground, means for coupling said source across said impedance means, a source of switching control voltages, means impressing said switching control voltages on said grid, and means coupling the anode to said load.

2,457,174
BURN BATH TABLE
Neal Owens, New Orleans, La., and Raymond L. Jewell, Erie, Pa., assignors to American Sterilizer Company, Erie, Pa.
Application October 11, 1944, Serial No. 558,160
7 Claims. (Cl. 311—7)



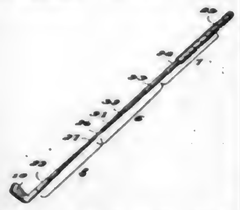
1. A surgical table of the character described having a floor supported frame, vertical risers secured to the ends of the frame and a horizontal body supporting strip secured to the vertical risers, auxiliary arm and leg supporting means mounted on the frame, a liquid trough positioned on the

frame below the body supporting strip, and elongated basins carried by the arm and leg sup-



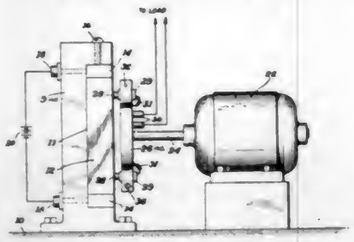
porting means arranged to discharge into the said trough.

2,457,175
PROJECTION CATHODE-RAY TUBE
Louis W. Parker, Little Neck, N. Y., assignor to Federal Telecommunication Laboratories, Inc., New York, N. Y., a corporation of Delaware
Application December 19, 1946, Serial No. 717,224
4 Claims. (Cl. 250—150)



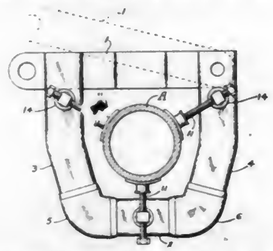
1. A cathode-ray tube comprising an envelope having a fluorescent screen, a plurality of electron guns for developing respective electron beams, an electron baffle electrode having a central opening symmetrically disposed with respect to said beams, and having a focus-indicator surface facing said guns which is coated with fluorescent material to fluoresce when said beams impinge thereon, means to focus said beams at said opening to form a virtual composite cathode thereat, and an electron lens for forming on said screen an image of said composite virtual cathode.

2,457,176
WAVE GENERATING SYSTEM
Albert Preisman, Flushing, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application January 23, 1943, Serial No. 473,312
4 Claims. (Cl. 315—229)



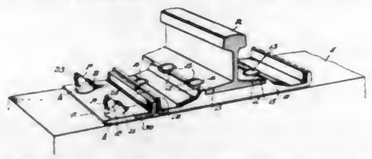
1. A system for producing saw-tooth voltage balanced to ground comprising a first gas discharge tube, a second gas discharge tube, a pair of condensers connected in series between the tubes, the connection common to the two condensers being connected to ground, means to apply a source of power across said tubes and condensers in series, means to cause said tubes to fire substantially simultaneously to thereby charge said condensers, the firing of said tubes being extinguished when a predetermined potential build-up is reached on said condensers, and means to control the discharge of said condensers.

2,457,177
GOLF CLUB
Milton B. Reach, Springfield, Mass.
Application October 17, 1944, Serial No. 559,027
5 Claims. (Cl. 273—80)



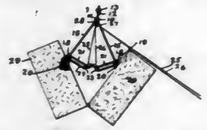
1. A tubular steel golf club shaft having an elongated cylindrical waist zone of uniform wall thickness, and of minimum diameter and maximum flexibility relative to the balance of the shaft, the shaft progressively increasing in diameter from one end of said zone to its head-end be a series of cylindrical sections, that of largest diameter being of a size enabling it, in a club assembly, to telescope over the hosel of a club head, and the shaft further including a portion forming a continuation of the opposite end of the waist zone including a plurality of cylindrical sections of progressively increasing diameters, the end section being of a size and length to constitute a foundation for a grip element.

2,457,178
RESISTANCE SINE WAVE GENERATOR
Avery G. Richardson, Boonton, N. J., and Trevor H. Clark, New York, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 6, 1943, Serial No. 513,198
3 Claims. (Cl. 175—364)



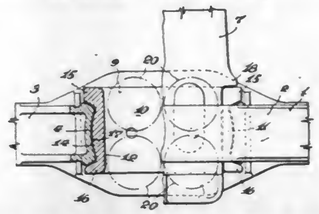
1. In combination with a load consuming a substantial amount of current, a converter for supplying true sine wave alternating current energy from a direct current source to said load, which comprises a flat resistance unit and output brushes movably engaging the face of said unit over a cyclic path, said unit consisting of a block of resistance material of uniform thickness and composition terminating at each of two opposite edges in a strip of highly conductive material, the junction line between the resistance block and each conductive strip and said cyclic path being so relatively shaped as to provide a true sine wave output potential at said brushes when direct current is supplied to the conductive strips and alternating current flows to the load.

2,457,179
CORELESS INDUCTION HEATER AND METHOD OF MAKING SAME
Bela Ronay, Annapolis, Md.
Application September 18, 1945, Serial No. 617,156
6 Claims. (Cl. 219—47)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



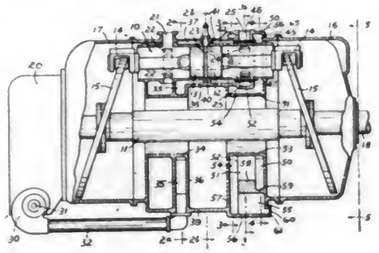
1. A coreless induction heater coil having U-shaped units secured together in mutually insulated relation with means extending between them to form the coil, each of said units consisting of a straight and two bent or offset tube sections connected by two elbows, said assembled unit being in a flattened condition and in substantially U-shape, the flattened tubing being of a thickness substantially three times its wall thickness, and said elbows being in a proportionately flattened condition and greater than 90 degrees, the degree of bend of the said bent sections of said flattened unit being about 15 degrees and such as to substantially compensate for the greater than 90 degree elbows, end portions of said bent sections being substantially parallel to each other in said U-shaped unit.

2,457,180
RAIL TRACK FASTENING
Herschel Lee Rushing, Nashville, Tenn.
Application March 24, 1945, Serial No. 584,636
6 Claims. (Cl. 238—304)



1. A buck-plate securable to a rail-tie beyond and in abutting engagement with an end portion of a standard metal track-rail supporting plate so that the latter may have a relative vertical movement with respect to said buck-plate, said buck-plate having a substantially flat tie engaging bottom surface and having spike holes extending through from its top and bottom surfaces in a direction oblique to the plane of said buck-plate and with their upper ends at an acute angle to the direction of the thrust applied to the buck-plate from said rail supporting plate, said holes each having its axis lying in a plane substantially transverse to the track-rail to be supported by said track supporting plate, bosses on the upper surface of said buck-plate forming and defining elongated continuations of said holes, respectively and having top surfaces at right angles to the axes of said holes, headed screw spikes to be extended through said holes and guided and positioned by the holes into said tie at said oblique angle corresponding to the axis of said holes and with their heads bearing against the top surface of said bosses, whereby thrust exerted by said track-rail supporting plate to said buck-plate will be transmitted to said spikes and exerted thereon in a direction longitudinally of the spikes, and recesses in the bottom surface of said buck-plate and one of such recesses surrounding each of said holes therein to accommodate bulges produced on the adjacent surface of the tie by said spikes driven into said tie.

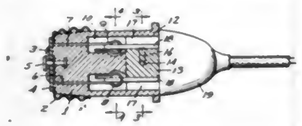
2,457,181
DEVICE FOR HOISTING BALES
John W. Rutledge, Early, Iowa
Application January 14, 1946, Serial No. 641,060
2 Claims. (Cl. 294—107)



1. A device for hoisting bales comprising a central bar, a pair of further bars spaced from said central bar, means for pivoting said further bars from said central bar, means for engaging bales attached to said further bars, including hooks attached to the bars, means for rotating said bars to an engaging or disengaging position, including arms attached to said further bars, cables attached to said arms, said arms being rigidly attached to said further bars, said hooks being rigidly attached to said further bars, foldable arms attached between said central bar and said further bars, said arms including journals at either end thereof whereby all of said bars are rotatably mounted.

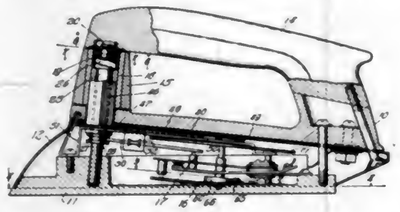
2,457,182
RAILWAY CAR TRUCK
Eugene B. Schrock, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application November 9, 1944, Serial No. 562,641
15 Claims. (Cl. 105—178)

9. In a truck, a bolster, a reversible adapter saddle, means interlocking the bolster with the saddle at a fixed point longitudinally of the bolster, a side frame receiving said saddle, and mutually cooperating abutment means on the side frame and saddle determining the position of the saddle transversely of the frame and displaced from the interlocking means longitudinally of the bolster whereby upon reversing the position of the saddle in the frame, the position of the frame longitudinally of the bolster is varied.



2,457,183
COOLING JACKET AND CYLINDER CONSTRUCTION
Thomas L. Sherman, Springfield, Ohio, assignor to The Steel Products Engineering Co., Springfield, Ohio, a corporation of Ohio
Application March 22, 1946, Serial No. 656,293
8 Claims. (Cl. 123—173)

4. In a crankless mechanism of the character described and including a plurality of cylinders circumferentially disposed in parallel relation about a central shaft, each having a substantially centrally located combustion chamber and an annular exhaust chamber positioned between said combustion chamber and one outer end thereof, and a pair of opposed pistons mounted in each cylinder for reciprocation in opposite directions parallel to said shaft, a cooling system comprising, in combination, means providing an annular supply chamber for coolant surrounding said shaft and disposed axially at the opposite side of said combustion chambers of said cylinders from said exhaust chamber, means providing a second annular chamber coaxial with said annular supply chamber and positioned between said exhaust chambers and the adjacent outer ends of said cylinders, means providing an annular passage for coolant surrounding each of said cylinders and connecting with both said annular supply chamber and said outer annular chamber, a locating member positioned within each said annular passage substantially overlying the combustion chamber of the adjacent cylinder and having outer dimensions substantially equal to the inner dimensions of said passage, means providing a plurality of grooves across said locating member parallel to the axis of said cylinder, said grooves providing for restricted travel of said coolant through said annular passage and in contact with the outer wall of said combustion chamber, and means providing a plurality of outlet passages for said coolant from said outer annular chamber and directing said coolant into contact with the outer walls of said exhaust chambers.

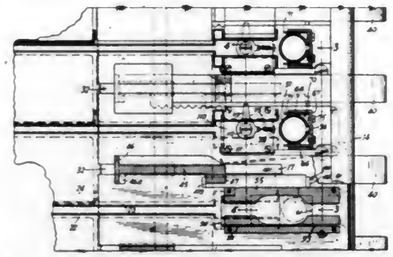


2,457,184
ROTARY LOCKING SCREW PLUG
William J. Sherman, Sr., New Albany, Ind.
Application August 19, 1946. Serial No. 691,419
2 Claims. (Cl. 173—343)

1. In an electrical connector, the combination with a pair of stationary conductor blades forming spaced terminals, of a rotatable head adjoining said terminals a transverse bore in said head, diametrically opposed arcuate shaped grooves in said connector, spring-pressed detents in said bore co-acting with the grooves in the connector for limiting movement of the head, a detachable plug having spaced conductor prongs mounted in and projecting through the head for electrical connection with the blades, and co-

acting means on the prongs and blades for locking said members together.

2,457,185
HEAT REGULATING IRON
Charles H. Sparklin, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application May 15, 1944, Serial No. 535,645
11 Claims. (Cl. 38—74)

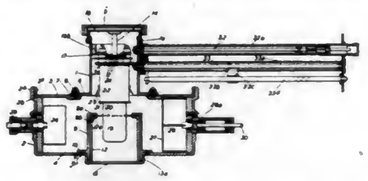


6. In an electric iron including a heating means and having a handle and a body portion including a handle support below the handle, a thermostatically operated switch in the body, means for adjusting the thermostatically operated switch to predetermined settings corresponding to predetermined operating conditions of the iron, means convenient to the front of the handle for operating the adjusting means, and setting-indicating means remote from the adjusting means and located within the body of the iron at a point convenient to the eye of the user while manipulating the iron, with the setting-indicating means being visible through an opening in the body of the iron, said setting-indicating means being synchronously operatively connected to the adjusting means and being operable by the operating means, and said setting-indicating means being visible through the handle support.

2,457,186
METHOD OF ELECTROFORMING RECTIFIER ELEMENTS
Murray J. Stateman, Brooklyn, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application April 9, 1945, Serial No. 587,422
5 Claims. (Cl. 175—366)

1. In the manufacture of selenium rectifier elements, the steps that comprise selecting elements comprising a base plate carrying a selenium layer and a counterelectrode and electroforming said elements at a voltage up to about 25 volts for about one-half hour, interrupting the electroforming and moistening the elements, and thereafter electroforming these elements while still moist for a period of about five minutes using a progressively increasing voltage until a level of about 30 volts is reached.

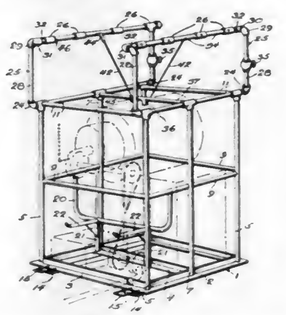
2,457,187
DISPENSING DEVICE
Louis Steiner, Rockaway Park, N. Y., assignor to Mills Industries, Incorporated, a corporation of Illinois
Application May 16, 1946, Serial No. 670,135
9 Claims. (Cl. 312—67)



9. In a vending machine, a casing having a front wall, a vertical article holding chamber within the casing and spaced from said wall, a vertical auxiliary article holding chamber disposed between said first chamber and said wall, said second chamber being aligned with said first chamber, a coin tube disposed between said auxiliary chamber and said front wall, said coin tube being offset with respect to said auxiliary chamber, means to dispense articles from said chambers and means controlled by said last mentioned means for dispensing coins from the coin tube.

2,457,188
BENZOCAINE SOLUTION
Raymond Stone, Chicago, Ill., assignor to Americaine, Inc., Chicago, Ill., a corporation of Illinois
No Drawing. Application May 24, 1945, Serial No. 595,653
9 Claims. (Cl. 167—52)

1. An epithelial anesthetic solution comprising at least 10% by weight of benzocaine base dissolved in a solvent predominantly comprising a solvent having a boiling point not substantially less than 250° C. and selected from the group consisting of aliphatic polyoxyalkylene glycols and aliphatic ethers of dihydric alcohols, the ratio of the total number of aliphatic ether groups per molecule to the molecular weight of the compound being not less than 0.0033; aromatic ethers of aliphatic dihydric alcohols, carboxylic acid esters of aliphatic dihydric alcohols, and carboxylic acid esters of aromatic and aliphatic ethers of aliphatic dihydric alcohols, the ratio of the total number of ether groups and ester groups per molecule to the molecular weight of the compound being not less than 0.0055.

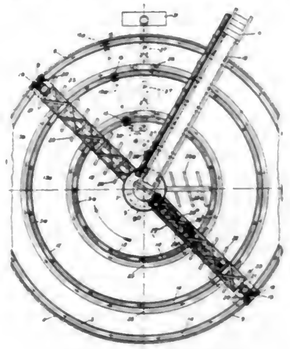


2,457,189
ULTRA HIGH FREQUENCY OSCILLATION GENERATOR
Frank Howard Taylor, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 13, 1944, Serial No. 526,213
In Great Britain March 23, 1943
19 Claims. (Cl. 315—39)

1. A device for use at ultra high frequencies comprising a first cavity resonator having one pair of opposite sides provided with aligned apertures, a second cavity resonator having one side provided with an aperture, means mounting said second resonator on the outside of said first resonator with the aperture of the second resonator adjacent one aperture of the first resonator and in alignment with the apertures of said first resonator, an electron discharge tube of the disc seal type, means in said second resonator holding said electron discharge tube, means connected

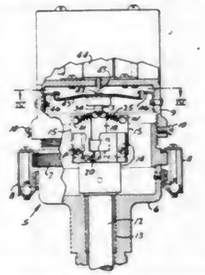
to the second resonator adjacent the aperture therein making electrical connection to a grid disc terminal of the disc seal type electron discharge tube positioned in said holding means, and means connected to said first resonator adjacent the other aperture thereof making electrical connection to the anode disc terminal of the discharge tube.

2,457,190
PORTABLE SHOWER UNIT
Le Roy L. Werner, Washington, D. C.
Application October 22, 1945, Serial No. 623,839
8 Claims. (Cl. 4—156)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



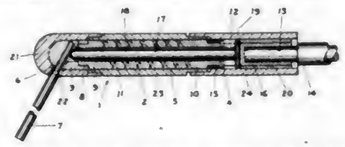
1. A portable shower unit comprising a supporting frame and a nozzle-carrying frame section forming the top of said unit, said section being movable into position for delivering bathwater to points outside said supporting frame.

2,457,191
SEDIMENTATION APPARATUS
Paul L. Wigton, Denver, Colo.
Application October 26, 1943, Serial No. 507,695
20 Claims. (Cl. 210—55)



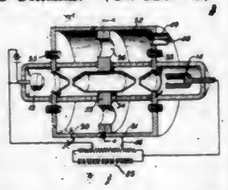
1. In sedimentation apparatus, a tank, at least one partition dividing said tank into a plurality of concentric treatment compartments located within common horizontal planes, means for overflowing clarified liquid separately from each compartment, a rotary truss member mounted for movement around the plurality of compartments, means for rotating the truss member, scrapers carried by said truss member and extending into each said compartment to move settled solids to a point of discharge therein, and

means distant from the clarified liquid overflow for delivering material to the plu-



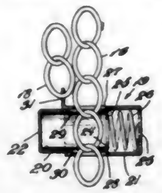
rality of compartments independently of each other.

2,457,192
GOVERNOR WITH SWITCH CONTROL
William J. Williams, Wilmette, Ill.
Application April 7, 1945, Serial No. 587,081
9 Claims. (Cl. 200—80)



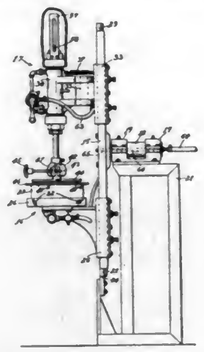
1. The combination of a governor housing; a driving shaft carried by said housing; centrifugally operated fly weights surrounding said shaft and rotated thereby; a sliding plunger operated by said weights; a switch operating lever; a plurality of switch actuating elements; means to move said switch lever from said plunger; arranged whereby said lever is first moved to operate one of said switch elements and upon continued pressure of said sliding plunger subsequently operates the other of said switch elements when the speed of the governor shaft increases.

2,457,193
ELECTRODE HOLDER
Arthur R. Wynn, Long Beach, Calif.
Application August 29, 1945, Serial No. 613,407
14 Claims. (Cl. 219—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



14. An electrode holder comprising a solenoid, a tip connected to one end of said solenoid, an electrical contact member formed integral with the other end of said solenoid and adapted to receive an electrical lead wire, a transverse opening in said tip adapted to receive an electrode, a core disposed axially within said solenoid having a diameter almost as large as the inside diameter of said solenoid, a sheath of insulating material between said core and said solenoid, and a spring biasing said core toward said tip.

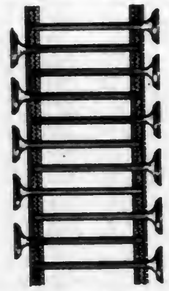
2,457,194
MICROWAVE OSCILLATOR
Alva Eugene Anderson, Spring Lake, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 23, 1943, Serial No. 491,961
5 Claims. (Cl. 315—6)



1. An oscillator comprising an electron beam apparatus including a source of an electron beam, a cavity resonator having a gap adjacent the path of the beam to vary the electron velocities in the beam, a second cavity resonator having a gap adjacent the path of the beam at a point of density variation therein to receive energy from the beam, said resonators having their gravest mode of operation at substantially the same frequency and means coupling the second resonator to the first for feeding back energy thereto, said coupling means having a transmission frequency range which is limited to frequencies considerably above the frequency of the gravest mode whereby oscillations of a higher mode are produced and oscillations of the gravest mode are inhibited.

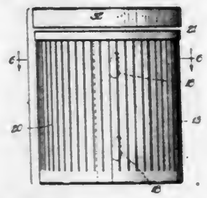
2,457,195
EXTENSION KEY CHAIN
Joseph Carlton Bagnall, Jr., Attleboro, Mass., assignor to Swank, Inc., a corporation of Delaware
Application March 10, 1947, Serial No. 733,488
4 Claims. (Cl. 24—3)

1. A device of the type described comprising an article holding element, a flexible member having one end secured to said element, another portion extending back upon itself to provide a loop, a unit comprising two tubular parts in axial telescoping relation, each having a lateral opening therethrough, through which said member extends, means to relatively move said parts to cause them to bind on said member passing through said openings, and the end of said flexible member being attached to said unit at a point spaced from the bind of said parts.



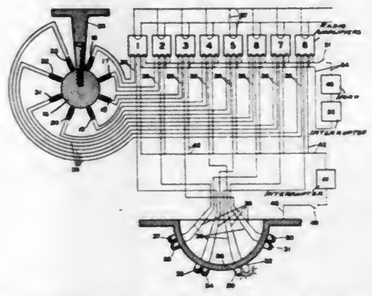
2,457,196
CORE MAKING MACHINE
Royal D. Baysinger, Rockford, and Lyle W. Fulton, South Beloit, Ill., assignors to George D. Roper Corporation, Rockford, Ill., a corporation of Illinois
Application April 21, 1944, Serial No. 532,122
5 Claims. (Cl. 22—10)

4. In a machine of the character described, in combination, a beam structure pivotally mounted intermediate its ends to turn about a horizontal axis, a base mounted on one end portion of the beam structure, a core-box holder for positively securing the core-box to the base, a head assembly mounted on the opposite end portion of the beam structure and including a cylinder and a piston plunger operable in the cylinder and equipped with a head adapted to engage a core-plate and clamp it against the core-box by the operation of fluid pressure in the cylinder against the piston plunger, the beam structure being rotatively movable about its support to locate the base either at a lower position at which the core-box is to be filled and clamped or to an upper position at which the core-box is inverted and the cylinder is underneath in a position for drawing the core downwardly, and a valve device for controlling the supply of fluid pressure to either end of said cylinder and for controlling the exhaust of said pressure from the cylinder, said fluid pressure operating the plunger in one direction in a core-plate clamping stroke, the valve device having an exhaust opening arranged for fast exhaust of the fluid pressure during said clamping stroke and having a separate exhaust opening arranged for slow exhaust of the fluid pressure during said core drawing stroke.



2,457,197
PACKAGING ARTICLES
Melbourne A. Beckmann, Cincinnati, Ohio, assignor to Aluminum Industries, Incorporated, Cincinnati, Ohio, a corporation of Ohio
Application May 18, 1945, Serial No. 594,541
6 Claims. (Cl. 211—60)

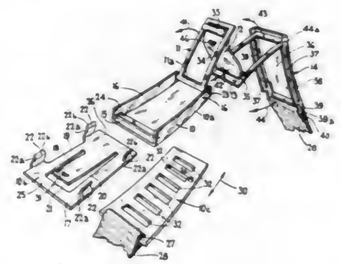
1. A dispensing holder for articles consisting of stem portions with enlarged annular laterally extending flanged portions, comprising two relatively stiff opposed end wall supports each being provided with alternately arranged slotted and grooved portions spaced slightly more than the radii of the annularly flanged portions of the articles adapted to be received in the holder, said slotted and grooved portions extending down from the tops of said end wall supports to a distance from the bottom of the walls slightly more than said radii and the slots and grooves of one wall support spaced to register with the grooves



and slots, respectively, of the opposed end wall support.

2,457,198
CONTAINER AND BLANK THEREFOR
John G. Bell, Chicago, Ill., assignor to Morbell Products Corporation, a corporation of Delaware
Application October 22, 1945, Serial No. 623,738
8 Claims. (Cl. 229—4.5)

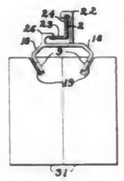
7. A container having a top and bottom and lateral walls, the lateral walls comprising a continuous strip of material wrapped upon itself and of such length as to provide a wall of double thickness, the upper edges of the two layers being rolled outwardly and downwardly to form a stiffening ring about the top of the container, the inner layer being wider than the outer layer, with its upper edge extending around and below the adjacent edge of the outer layer in said stiffening ring, and a metallic stiffening ring slipped between the outer wall of the container and the downturned portion of its upper edge.



2,457,199
PROXIMITY AND DIRECTION INDICATOR
Frank Ellison Best, Indianapolis, Ind.
Application January 9, 1942, Serial No. 426,190
3 Claims. (Cl. 343—101)

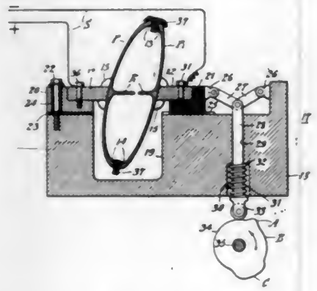
1. In a proximity and direction indicator, rotatable electric circuit interrupter means, com-

prising two relatively fixed circular rows of alternate conductor and insulator members, each conductor of each row being paired with an insulator of equal width of the other row, two contactors positioned for simultaneous engagement with the conductor and insulator member of each pair and for successive engagement with said pairs of conductor and insulator members as the circuit interrupter is rotated, a transmitter circuit connected with one of said contactors, a receiving circuit connected with the other of said contactors and signal devices and a direction distinguishing means connected with said receiving circuit.



2,457,200
FOLDABLE BRACELET CATCH
Jonas Bikoff, Brooklyn, N. Y.
Application February 26, 1947, Serial No. 730,980
2 Claims. (Cl. 24—71)

2. In a bracket catch, having pivoted link members adapted to be folded one over the other when the catch is in a closed contracted position, or to be strung out into a chain-like arrangement when the device is expanded, the combination, of a spring plate secured inside of one end member, spaced apart therefrom, an inwardly and outwardly slidable grid plate between said spring plate and said end member, one end of the bracelet chain being secured to said grid plate whereby the length of the chain may be adjusted by the movements of said grid plate, a spring tongue struck out of said spring plate and curved away from said grid plate, an indentation on said spring tongue, means on one of the intermediate folding members, adapted to bend said spring tongue towards said grid plate when the catch is closed, the indentation on said tongue then engaging the slots in said grid plate, said indentation permitting an inward movement of said grid plate but locking the same against an outward one, by engaging a respective slot therein.



2,457,201
FURNACE ARCH AND WALL STRUCTURE
William H. Boyd, Drexel Hill, Pa., assignor to General Refractories Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 13, 1943, Serial No. 498,564
7 Claims. (Cl. 110—99)

1. The combination of a supporting framework, angle bars carried thereby and comprising angularly related flanges having free edge portions, and brick-supporting hangers comprising a body portion adapted to lie relatively closely parallel with one of said flanges, and spaced substantially parallel arms of unequal length having hooked

ends that surround the angularly directed free edge portions of said flanges.

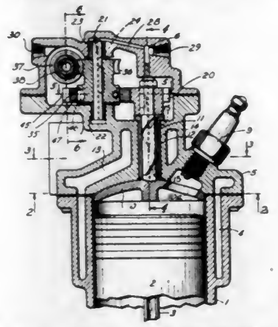
2,457,202
METHOD OF MAKING INTERNALLY REINFORCED HOLLOW PROPELLER BLADES
George W. Brady, Upper Montclair, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application September 7, 1944, Serial No. 553,094
1 Claim. (Cl. 29—156.8)

The method of producing an internally reinforced hollow metal propeller blade from two preformed arched plates each of which is provided on its concave face with a substantially central integral longitudinally extending rib portion of substantial length and of a height to bring its edge beyond a transverse line joining the rib edges which consists in so mounting said plates, one each, with their concave faces disposed toward one another, on the opposed relatively movable portions of a press so as to align the edges thereof and the edges of said rib portions respectively; in placing between said opposed plate edges a strip of insulating material to prevent contact between said edges as said press portions are moved toward one another; in so moving said press portions toward one another as to bring the edges of said rib portions into contact with one another notwithstanding the fact that the plate edges are held apart by said insulating strip; in passing an electric welding current through the contacting rib portions so as to produce a flash welded elastic joint therebetween; in further pressing said rib portions together to produce a rib height of such magnitude that said plate edges would be in substantial contact with one another were they not held apart by said strips of insulating material; in thereafter, and only after the rib portions are welded together, removing said insulating strip so as to admit of said plate edges, due to the inherent resiliency of the metal of said plates, springing into contact with one another; and in thereafter uniting the contacting edges of said plates.

2,457,203
METHOD OF MAKING SCENTING ESSENTIAL OILS FROM PLANTS
Arno Brasch, Brooklyn, N. Y., assignor, by mesne assignments, to Electronized Chemicals Corporation, a corporation of Delaware
No Drawing. Application July 17, 1947, Serial No. 761,744
13 Claims. (Cl. 47—1.3)

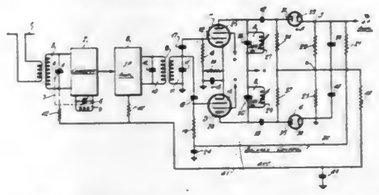
13. Method of making scenting essential oils comprising the steps of bombarding cut plants when they are adapted to form scenting essential oils at a low temperature with high speed electrons having a velocity equivalent to more than one million volts; storing said thus irradiated cut plants under substantially sterile conditions at a low temperature for a period of time sufficient for said irradiated cut plants to continue to form scenting essential oils without substantially wilting; and extracting the thus formed scenting essential oils from said thus stored irradiated cut plants.

2,457,204
SYNTHESIS OF ESTERS
Richard E. Brooks, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 17, 1946, Serial No. 670,527
5 Claims. (Cl. 260—483)



1. A process for the synthesis of esters which comprises introducing into a pressure-resistant vessel a reaction mixture consisting essentially of methanol, carbon monoxide and a catalyst of the class consisting of metallic cobalt, cobalt oxide, cobalt carbonyl, and cobalt carbonyl hydride, heating the said reaction mixture at a temperature of about 100° to 325° C. under a pressure of about 200 to 1500 atmospheres, and thereafter separating the resulting ester from the resulting reaction product.

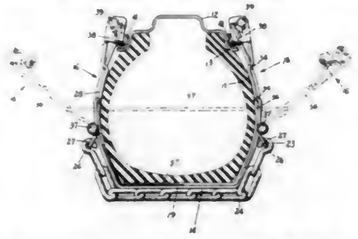
2,457,205
CONTAINER SUITABLE FOR DROPPING FROM AIRCRAFT AND THE LIKE
Edward Ralph Campbell, Ivanhoe, Kenneth Moreton Frewin, Elsternwick, Frank Wentworth Lennox, Toorak, and Rowland Price Morris, North Brighton, Victoria, Australia, assignors to Air Supply Packs Proprietary Limited, Melbourne, Victoria, Australia
Application June 14, 1944, Serial No. 540,328
In Australia June 21, 1943
13 Claims. (Cl. 244—138)



1. A container having a storage compartment and comprising a plurality of coaxially arranged interfitting tubular units one of said units being a percussion member located at one end of the container a circumferential series of loops of flexible material projecting externally from spaced units of the container, and longitudinally extending flexible tie means arranged externally of the container and connected to said spaced series of projecting loops whereby the said units are detachably secured together.

2,457,206
ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES
Bert G. Carlson, Cleveland, Ohio
Application March 16, 1945, Serial No. 583,146
3 Claims. (Cl. 123—80)

1. In an internal combustion engine having a cylinder and a piston, the combination of a head having one inlet port and one exhaust port, a rotary valve in said cylinder having a passage therethrough registrable with said ports successively and one at a time, and means operatively associated with said valve for rotating it at a constant speed through one complete revolution and moving said passage successively past said exhaust and inlet ports during the exhaust and intake cycles of the engine and then causing the valve to dwell during the compression and firing cycles of the engine.



2,457,207
ANGLE MODULATED CARRIER RECEIVER
Wendell L. Carlson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 3, 1944, Serial No. 533,917
28 Claims. (Cl. 250—27)

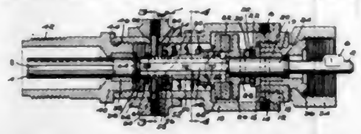
1. A frequency discriminator-rectifier circuit comprising a signal transmission channel including a pair of opposed rectifiers each having an output load impedance, said rectifiers providing an output potential which is the difference between the potentials created across their respective load impedances, resonant circuit means coupled to said rectifiers to provide different respective amplitude-frequency response characteristics with different peak frequencies, said

resonant circuit means having frequency response curves which cross each other substantially at said input circuit frequency, means for applying frequency modulated wave energy to said resonant circuit means, and amplifier means provided in said signal transmission channel for automatically locking the cross-over point of the frequency response curves of the discriminator network substantially in step with the mean frequency of the applied frequency modulated wave energy.

2,457,208
TRACTION DEVICE FOR VEHICLE WHEELS
Glen F. Carpenter, Des Moines, Iowa
Application December 4, 1947, Serial No. 789,703
5 Claims. (Cl. 152—223)

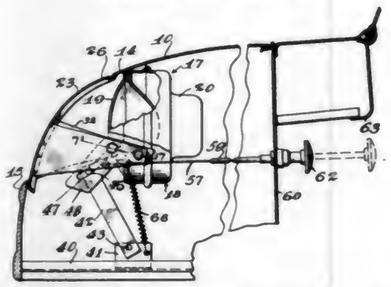
2. A traction device for a vehicle wheel having a tire and a rim comprising, a flexible band member positioned about said tire with the ends thereof arranged at opposite sides of said rim, a traction member arranged about the intermediate section of said band, a pair of rim-supported units arranged at opposite sides of the tire having the lower portions thereof pivotally connected with the opposite ends of said traction member, pivoted arms on said units having their free ends rockably supported in releasable engagement with said rim, spring means for yieldably holding said arms in engagement with said rim, and means for connecting said spring means with the ends of said band member such that said pivoted arms are rockable on said rim in response to a flexing movement of said band.

2,457,209
RESINOUS COMPOSITIONS
William B. Clark, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 4, 1945, Serial No. 571,372
7 Claims. (Cl. 260—72)



5. A thermosetting resinous composition comprising formaldehyde-modified polymethylenediamine-carbon bisulfide reaction product, said polymethylenediamine having the formula

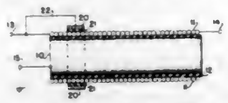
$$NH_2(CH_2)_nNH_2$$



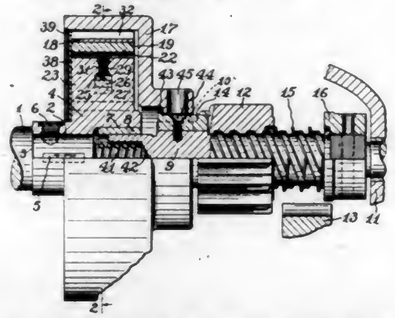
in which n has a value of from 3 to 10.

2,457,210
CLUTCH
Roger T. Coffey, Marblehead, Mass., assignor to Barbour Stockwell Company, Cambridge, Mass., a corporation of Massachusetts
Application October 1, 1947, Serial No. 777,165
1 Claim. (Cl. 192—53)

A clutch comprising aligned driving and driven shafts, a first clutch plate affixed to said driving shaft, a thrust bearing supporting said driving shaft and clutch plate against movement away from said driven shaft, a sleeve longitudinally slidable on said driven shaft, mutually engageable members connected to said clutch plate and said sleeve so that, when said members are brought into engaging position by longitudinal movement of said sleeve, relative rotation of said clutch plate and said sleeve will be prevented, a second clutch plate carried by said sleeve whereby there may be relative longitudinal movement between said sleeve and said second clutch plate, means for preventing rotational movement between said driven shaft, said sleeve, and said second clutch plate, a second thrust bearing for exerting a force on said sleeve in the direction of said clutch plates, a compression spring between said second clutch plate and said second thrust bearing, and means for moving said second thrust bearing in the direction of said clutch plates whereby said clutch plates will be brought into engagement with each other, and after an increasing force has been applied to said clutch plates by the compression of said spring, continued movement of said second thrust bearing and said sleeve will bring said members into engaging position whereby any further rotational movement between said shafts will be precluded.

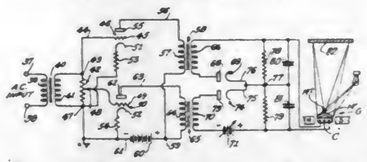


2,457,211
MOTOR VEHICLE LIGHTING
Edgard C. De Smet and John W. Dickason, Toledo, Ohio, assignors to Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware
Application April 23, 1945, Serial No. 589,912
2 Claims. (Cl. 240—7.1)



1. In a motor vehicle having an exterior surface formed with an opening; an illuminating means disposed adjacent the opening; a closure for said opening movable to mask and unmask the illuminating means; said closure being supported for pivotal movement about a relatively fixed axis and arranged to swing downwardly to an open position; the exterior surface of said closure being in the same plane with the exterior surface of the vehicle surrounding the opening when said closure is in closed position; an arm arranged for pivotal movement about a relatively fixed axis; a second arm pivotally connected to said closure and arranged for movement simultaneously therewith; a slot formed in one of said arms; a projection carried by the other of said arms and cooperating with said slot whereby movement of said pivoted arm causes movement of said closure; resilient means to partially counterbalance the weight of said closure, said pin and slot connection and said resilient means forming a retaining means for securing said closure in masking and unmasking positions and manipulating means connected to said pivoted arm to control the position of said closure.

2,457,212
TIME-DELAY NETWORK
Michael J. Di Toro, Brooklyn, N. Y., assignor, by mesne assignments to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application June 18, 1945, Serial No. 599,985
13 Claims. (Cl. 178—44)



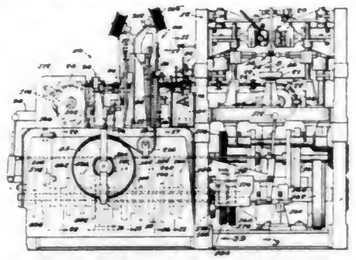
1. A time-delay network for translating a signal pulse comprising, an elongated conductive member, an elongated winding insulated from but electrically coupled along a major portion of its length to said conductive member for providing a distributed capacitance in said network and having a substantial inductive coupling between turns tending to produce a transient distortion pulse in response to an applied signal pulse, and a condenser bridged across a preselected number of turns of said winding, the value of said condenser and the number of said preselected turns being so chosen as to produce in response to said applied signal pulse and superimposed on the delayed pulse output a short pulse comparable in amplitude but opposite in polarity to said distortion pulse and occurring ahead of the leading edge of said delayed pulse in substantial coincidence with said distortion pulse.

2,457,213
ENGINE STARTER GEARING
Richard G. Dickens, Elmira Heights, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application July 31, 1946, Serial No. 687,246
3 Claims. (Cl. 74—7)

1. In a transmission for connecting a small internal combustion engine to start a large internal combustion engine, a power shaft rotated by the starting engine, a driving clutch member fixed thereon, a screw shaft slidably journalled in the driving clutch member, a pinion threaded on the screw shaft for movement into and out of mesh with a gear of the engine to be started, a driven clutch drum surrounding the driving clutch member and non-rotatably connected to the screw shaft, a centrifugal clutch means mounted on the driving clutch member to rotate therewith with freedom for radial movement into engagement with the driven clutch drum and yielding means for normally holding the centrifugal clutch member out of engagement with the clutch drum.

2,457,214
RECORDING DEVICE
Henri-Georges Doll and Gerald K. Miller, Houston, Tex., assignors to Schlumberger Well Surveying Corporation, Houston, Tex., a corporation of Delaware
Application July 21, 1942, Serial No. 451,789
16 Claims. (Cl. 346—33)

14. In recording apparatus of the character described, including recording means, the combination of means receiving an input signal proportional to a variable and providing an output that is fed to said recording means, switching means for changing the ratio between said output and said input, means for providing a voltage proportional to said variable quantity, means for rectifying said voltage, and an electronic trigger control circuit controlled by said rectified voltage for actuating said switching means.



2,457,215
GAS WELDING ROD
John Trimble Eash, Westfield, N. J., assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application November 20, 1945, Serial No. 629,923. In Canada August 3, 1945
5 Claims. (Cl. 219—8)

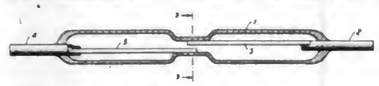
3. A method of producing welding rods which comprises melting a charge of nickel-chromium cast iron, superheating said melted charge to a temperature of about 2850° F. to about 3000° F., cooling said charge to a temperature of about 2800° F. to about 2600° F., adding a metallic lithium-free calcium-containing agent in an amount sufficient to introduce about 0.05% to about 1.0% calcium uniformly into said melt and casting said melt in a welding rod mold having a casting surface devoid of releasable silica-containing particles.

2,457,216
MEANS AND METHOD FOR PRODUCING INFUSION BAGS WITH NONTANGLING HANDLES
Lewis B. Eaton and Robert William Vergobbi, Quincy, Mass., assignors to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts
Application December 11, 1945, Serial No. 634,358
27 Claims. (Cl. 93—3)

1. In apparatus for producing non-tangling infusion bags of the type provided with handles, in combination, means for forming a strip of connected, filled and closed rectangular-shaped bag sections, means for severing successive endmost bag sections from the strip, conveying means having a plurality of grippers arranged to receive successive endmost bag sections prior to severance from the strip, and means for attaching a handle comprising a length of twine and a tag to

each of successive bags while supported in said grippers, said last named means including means for retaining one end portion of said length of twine adjacent one edge of said bag, means for fastening a tag to the end of said twine remote

from the bag, means for rotating the bag to effect winding of the twine about the bag and to dispose the tag in proximity to the bag with the extended end of the twine adjacent said one end portion, and means for thereafter fastening both ends of the twine to the bag.

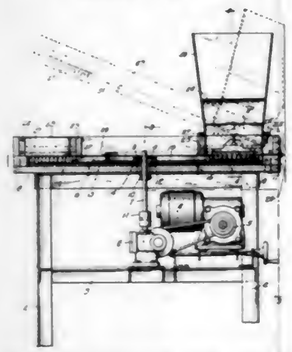


2,457,217
DUAL FOUNTAIN PEN
Max Ernst, Wiesendangen, Switzerland
Application July 13, 1945, Serial No. 604,813
In Switzerland April 30, 1945
4 Claims. (Cl. 120—42.10)

1. In a dual fountain pen having an ink reservoir disposed at each end thereof, and a plunger operatively mounted in each reservoir, the improvement comprising: an inwardly extending, threaded spindle connected to each plunger; and an operating member rotatable with respect to said dual fountain pen and threadedly connected to each spindle, whereby rotation of said member serves selectively to effect axial reciprocal movement of either plunger.

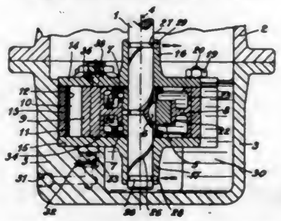
2,457,218
METHOD OF MANUFACTURING SEALED CONTACT DEVICES
Enoch B. Ferrell, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 14, 1944, Serial No. 568,191
3 Claims. (Cl. 49—81)

1. The method of manufacturing a sealed flexible reed contact device, which consists of forming a seat on the inside surface of a tubular glass body, inserting a flexible reed into said body, said reed being of smaller dimensions than the interior of said body, holding, by means of a magnetic force, the movable end of the flexible reed against the said formed seat without placing any strain



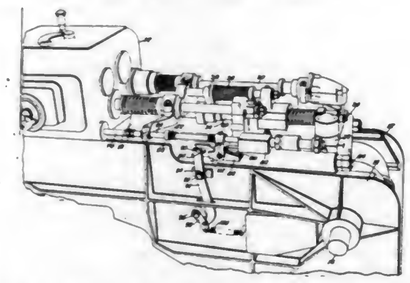
thereon other than that incident to the application of said magnetic force, fusing the other end of said flexible reed to the said glass body, and removing said holding magnetic force whereby said movable end of the reed is free to move.

2,457,219
SPONGE RUBBER GARMENT PRODUCT
Albert C. Fischer, Chicago, Ill.
Application June 19, 1940, Serial No. 341,382
7 Claims. (Cl. 2—243)



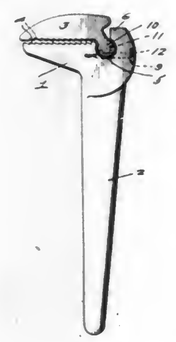
1. A garment formed of sponge rubber having portions thereof reenforced with solid fillers and also of different thickness for obtaining the desired supporting and shaping effects.

2,457,220
TABLET COUNTING APPARATUS
Chester C. Fowler, Evanston, and George T. Clark, Chicago, Ill., assignors to Lanteen Medical Laboratories, Inc., a corporation of Delaware
Application March 16, 1945, Serial No. 583,114
7 Claims. (Cl. 226—2)



5. In a tablet counting machine, a turntable having in an annular path a plurality of spaced groups of a predetermined number of holes, a hopper under which said groups of holes successively pass so that one tablet will fall into each hole of the group under the hopper, means for rotating the turntable, and means for releasing the tablets of a group at a point removed from the hopper to pass into a container so that the container will contain an exact predetermined number of tablets, a vertically swingable frame above said turntable, means for guiding any stray tablets away from the location of the tablet-releasing point, said first mentioned hopper and said stray tablet guiding means being fixed to said frame for swinging movement therewith toward and away from the turntable.

2,457,221
ROTARY COMPRESSOR SEALING MEANS
Edmond Paul Girard, Geneva, Switzerland
Application November 11, 1943, Serial No. 509,852
In Switzerland August 1, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires August 1, 1962
3 Claims. (Cl. 230—205)



1. In a rotary compressor, the combination of a vertical rotatable driving shaft, an eccentric mounted thereon, a substantially hollow piston encircling said eccentric, said piston being arranged and positioned to be gyrated in a horizontal plane by said eccentric, a cylinder surrounding said piston, the walls of said cylinder and of said piston defining a fluid chamber within said piston adapted to be filled with a lubricating fluid, and means carried by the eccentric and positioned within said chamber to impart a rotating movement in a horizontal plane to the fluid contained in said chamber whereby the fluid is driven by centrifugal force into the joints between said piston and said surrounding cylinder.

2,457,222
SAFETY DEVICE FOR BREECH LOADING GUNS
William V. Goodhue, East Greenwich, R. I., and Emerson C. Gill, Saugus, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 4, 1947, Serial No. 772,167
6 Claims. (Cl. 89—6.5)

1. In combination, a breech-loading gun having a displaceable breechblock, a ramming mechanism for delivering a round of ammunition to the gun, a stop to interrupt the movement of the round before it reaches the breechblock, means for releasing said stop, a detent to prevent release of the stop, and means responsive to the position of the breechblock to move the detent into and out of operative relation to the stop-releasing means.

2,457,223
PIVOTED OUTER JAW PIPE WRENCH
Clyde H. Green, Macedonia, Ohio
Application November 6, 1945, Serial No. 627,001
1 Claim. (Cl. 81—98)

A pipe wrench, comprising a fixed jaw formed with a transverse groove, said groove being formed in an axial direction with an inwardly-bowed center portion, a pivotal jaw provided with a transverse cylindrical projection constructed to rotatably engage in said groove and to be rockably supported on said inwardly-bowed center portion thereof, said cylindrical projection being formed with an arcuate slot concentrically thereof, a removable bolt passing transversely through the fixed jaw from the back thereof and intersecting said groove in the region of said center portion, and said bolt being provided with a shank adapted to be slidably seated in said arcuate slot of said cylindrical projection.

2,457,224
PREPARATION OF POLYDIOXOLANE
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 3, 1945, Serial No. 603,111
9 Claims. (Cl. 260—2)

8. Crystalline homopolymers of 1,3-dioxolane.

2,457,225
PREPARATION OF ACRYLATES
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 1, 1946, Serial No. 666,516
8 Claims. (Cl. 260—486)

1. A process which comprises dealcoholizing a beta-alkoxy-substituted monocarboxylic acid ester to an unsaturated carboxylic acid ester by passing the beta-alkoxy-substituted monocarboxylic acid ester in the vapor phase over a solid inorganic base as the catalyst at a temperature between 300 and 550° C.

2,457,226

PREPARATION OF CHOLINE CHLORIDE

William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 7, 1946, Serial No. 668,019
7 Claims. (Cl. 260—501)

5. A process for the synthesis of choline chloride which comprises heating methyl formate with a beta-(alkoxymethoxy)ethyl dimethylamine in a closed vessel at a temperature of about 75° to 200° C., separating beta-(alkoxymethoxy)ethyl trimethylammonium formate from the resulting mixture, treating the said beta-(alkoxymethoxy)-ethyl trimethylammonium formate with hydrochloric acid and an alkanol at a temperature of at least about 50° C. and thereafter separating choline chloride from the resultant reaction products.

7. A compound having the formula

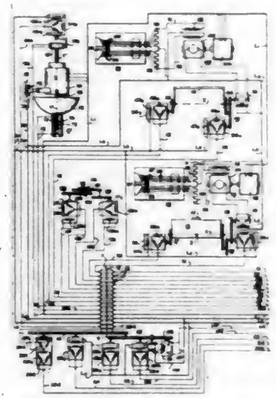
$$C_2H_5OCH_2OCH_2CH_2N(CH_3)_3OOCH$$

2,457,227

STABILIZATION OF FATS AND OILS

Myers F. Gribbins, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application December 27, 1945, Serial No. 637,499
7 Claims. (Cl. 99—163)



1. In a process for inhibiting the rancidity of a member of the group consisting of edible vegetable, animal and fish oils, fats and waxes, containing metals, the step which comprises heating the compound of the group with a beta-mercaptopropionic compound having the linear structural formula $ROOCCH_2CH_2S—X$ in which R is selected from the group consisting of hydrogen, and hydrocarbon groups and in which the monovalent substituent X is a member of the group consisting of hydrocarbons, oxygenated-, sulfur-, sulfur- and oxygenated-, and sulfur- and nitrogen-hydrocarbons and thereafter separating the precipitated metal.

2,457,228

LEVELING AND TRAINING MECHANISM

Clinton R. Hanna, Pittsburgh, and Lawrence B. Lynn, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 1, 1944, Serial No. 524,560
32 Claims. (Cl. 318—19)

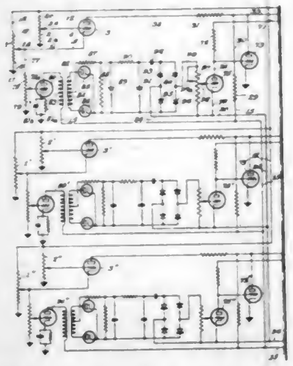
1. In a stable element for a structure subject to rolling and pitching movements, a member mounted on the structure for movement about a training axis, means providing a reference vertical carried by said member, first and second pivotally-connected elements, means including a universal connection providing for movement of the first element in train with said member, means for universally connecting the second element to said structure so as to prevent movement of the second element in train with the first element relative to the structure, means utilizing the reference vertical to position said elements so that the plane of pivotal movement thereof is horizontal, a motor for moving said member about the training axis, and means responsive to relative angular movements of said elements with respect to their pivot axis and brought about by roll and pitch to control said motor.

2,457,229

HIGH MOLECULAR WEIGHT PRODUCTS OF ETHYLENE

William E. Hanford, Easton, Pa., and John R. Roland, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original application January 1, 1943, Serial No. 471,028. Divided and this application June 13, 1946, Serial No. 676,578
6 Claims. (Cl. 260—614)



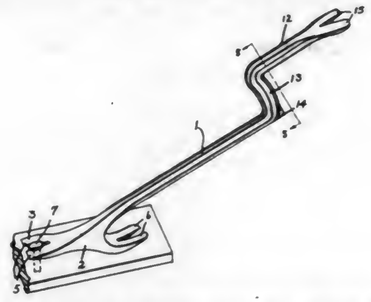
1. A process for the preparation of a dialkyl ether/ethylene reaction product which comprises heating under ethylene pressure above 200 atmospheres a dialkyl ether free of olefinic unsaturation and a peroxy catalyst.

2,457,230

AUTOMATIC ELECTRONIC AIRCRAFT FLIGHT CONTROL OR PILOT

Walter J. Harshbarger, New York, N. Y., and Donald R. Putt, Jersey City, N. J., assignors to Rex Cole, New York, N. Y.

Application August 27, 1943, Serial No. 500,226
10 Claims. (Cl. 318—489)



10. In a device for controlling and stabilizing an aircraft equipped with a gyroscope, aircraft controls and a servomotor for operating said controls, a potentiometer controlled by said gyroscope, means for impressing an alternating current voltage across said potentiometer, said potentiometer including a center tap connected with said gyroscope to move in accordance with deviations in movement of said aircraft, a second potentiometer, means for impressing an alternating current voltage across said second potentiometer, said second potentiometer having a center tap controlled by said servomotor and being at the same potential as the first mentioned center tap when both center taps are in central position whereby deviation of the aircraft or movement of the servomotor will result in a difference in potential between the two taps, means for expressing this difference in terms of alternating current voltage to operate said servomotor, a third potentiometer connected between the first mentioned center tap and ground and having a third center tap, an electron tube having a grid connected to said third center tap, a cathode connected to ground through a condenser and a resistor in parallel and a plate, and a transformer having its primary connected to said plate and its secondary connected to means whereby an amplified alternating voltage will be impressed on the first mentioned voltage to operate said servomotor accordingly.

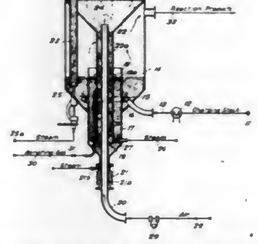
2,457,231

WRECKING BAR

William F. Henderson, Colfax, Wash.

Application August 9, 1946, Serial No. 689,488
1 Claim. (Cl. 254—25)

A wrecking tool comprising a bar having a foot at its front end formed with forwardly and rearwardly extending claws, the rear portion of the bar being bent to form a rearwardly extending handle connected with the main portion of the bar by a shank extending upwardly from the bar at substantially right angles thereto, said handle having its rear portion curved longitudinally and flattened and split to form claws, and the shank being curved longitudinally and at its junction with the bar having a rearwardly extending block adapted to be struck with a hammer for forcing the claws at the front end of the foot under the head of a nail to be pulled.



2,457,232

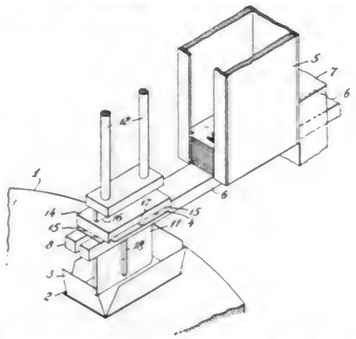
CATALYTIC CONVERSION SYSTEM

Robert J. Hengstebeck, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application April 17, 1944, Serial No. 531,383
14 Claims. (Cl. 196—52)

1. In apparatus suitable for effecting catalytic conversion of hydrocarbons with solid catalyst of small particle size, a vertical cylindrical conversion chamber having inclined bottom walls and top walls, a vertical cylindrical regeneration chamber superimposed above said conversion chamber the top walls of the conversion chamber forming at least a portion of the bottom walls of the regeneration chamber, a tube extending downwardly through the conversion chamber and communicating at its upper end with the inclined walls which form the base of the regeneration chamber, a cylindrical stripping chamber surrounding said tube with its upper end open to said conversion chamber and with its lower walls extending below the inclined walls of the conversion chamber, an expansion joint at the base of said stripping chamber, a compressed air pipe extending through said expansion joint and axially through at least a substantial part of said tube, the lower end of said tube being spaced from the bottom wall of said stripping chamber whereby fluidized solids may flow from the stripping chamber into an annular space between said tube and said pipe, said space forming a catalyst return conduit, means for introducing an aeration gas into said catalyst return conduit, means for regulating the amount of aeration gas so introduced, means for introducing steam at a low point in the stripping chamber at a level above the bottom of said tube, means for introducing compressed air into said pipe and for distributing said compressed air into the regeneration chamber along with catalyst from the top of said return conduit, a stand-pipe communicating at its upper end with said regeneration chamber, means for introducing catalyst from the base of said standpipe into said conversion chamber, means for removing regeneration gases from the upper part of said regeneration chamber and means for removing conversion products from the upper part of said conversion chamber.

11. The method of effecting catalytic conversion with a solid catalyst of small particle size which requires periodic regeneration, which method comprises introducing a regenerated catalyst from a downwardly moving aerated column thereof into a conversion zone which is underneath a regeneration zone, introducing a charging stock at a low point in said conversion zone and passing said charging stock as a gaseous stream upwardly through said conversion zone at such low velocity as to maintain a suspended turbulent dense catalyst phase therein superimposed by a light catalyst phase, withdrawing a product stream from said light dispersed catalyst phase, withdrawing catalyst from the dense phase in the conversion zone into an adjacent stripping zone and stripping the catalyst with a stripping gas in said stripping zone, conveying catalyst from a low level in the stripping zone directly upward to said regeneration zone as an upwardly moving aerated column, maintaining a pressure at the base of the stripping zone which is substantially higher than the pressure in the regeneration zone at the upper end of said column, introducing aeration gas into the upwardly moving column in such amounts that the average bulk density of the catalyst in the column multiplied by the length of the column gives a head



sufficient to substantially balance the pressure difference between the base of the stripping zone and the regeneration zone at the upper end of the column so that by increasing aeration in the column upward catalyst flow is increased and by decreasing aeration in the column to a sufficient extent catalyst flow therein may be stopped, the extent of aeration thus serving the function of a regulating valve and the column without aeration serving the function of a cut-off valve, introducing a regeneration gas at a low point in the regeneration zone and passing said regeneration gas upwardly at such low velocity as to maintain a dense turbulent suspended catalyst phase superimposed by a light dilute catalyst phase, withdrawing regeneration gases from said dilute catalyst phase in the regeneration zone, withdrawing catalyst from the regeneration zone directly from the dense phase as a downwardly moving aerated column and returning catalyst from the base of said column to said conversion zone.

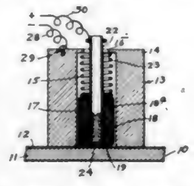
2,457,233

BLADE WRAPPING MACHINE

Charles Norton Henshaw, Plattsburg, N. Y., assignor, by mesne assignments, to Pal Blade Co. Inc., New York, N. Y., a corporation of New York

Application July 21, 1945, Serial No. 606,336
9 Claims. (Cl. 214—8.5)

5. Blade-transfer mechanism for a blade-wrapping machine comprising a blade magazine for a stack of slotted blades, a slide having a bifurcated blade support and a pusher for moving the lowermost blade from the magazine and holding it on the support above a wrapper, a vertically movable pilot, means for lowering the pilot through the slot in the blade and between the prongs of the support to a point close to the wrapper, means for retracting the support to permit the blade to descend along the pilot to the wrapper and means for raising the pilot.



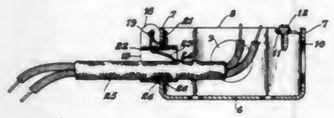
2,457,234

APPARATUS FOR ELECTROLYTICALLY DETERMINING THE THICKNESS OF METAL COATINGS

William S. Herbert, Madison, Wis., and Howard T. Francis, Chicago, Ill., assignors to Armour Research Foundation of Illinois Institute of Technology, a corporation of Illinois

Application September 25, 1943, Serial No. 503,828
2 Claims. (Cl. 204—195)

1. Apparatus for use in determining the thickness of a metal coating over a dissimilar foundation metal, comprising an open-ended hollow metal member for direct gravity contact with the coating to be measured, said member having an upper inturned annular shoulder, annular insulating and sealing means movable within said member for resting against said coating to define a predetermined area thereof, resilient means between said shoulder and said annular insulating and sealing means transmitting a part only of the weight of said metal member to urge said insulating and sealing means



against said coating, a hollow electrode extending into said metal member and fitted into said annular insulating and sealing means to form the side walls of a receptacle for an electrolyte, and external electrical connections to said electrode as the cathode and said metal member as the anode to complete an electrical circuit including said electrode, metal member and said electrolyte to effect an anodic dissolution of metal from said coating over said predetermined area.

2,457,235

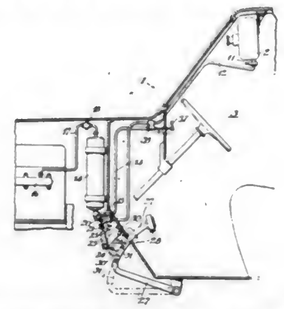
CONNECTOR FOR ELECTRIC RECEPTACLES

Karl Hoehn, Canton, Ohio

Application October 21, 1946, Serial No. 704,687
3 Claims. (Cl. 285—6.5)

1. A cable connector for an electric outlet box inlucding a substantially cylindrical body adapted at one end for projecting through a knock-out hole of the box, spaced upright ears on the other end of said body, and a gravity latch pivoted on said ears for swinging within said body, said latch having an upwardly curved leg for frictionally clamping the upper edge of said hole, and a downwardly curved leg for engaging a cable passing through said body.

2,457,236



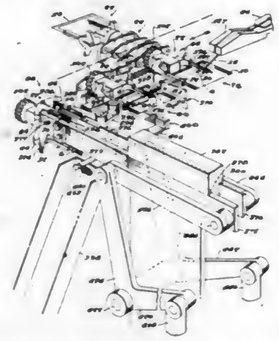
VEHICULAR MOTION-PICTURE CAMERA

William G. Hokett, Phoenix, Ariz.

Application December 4, 1947, Serial No. 789,657
2 Claims. (Cl. 88—16)

1. A vehicular motion picture camera operating device, for installation in a motor vehicle having a driver's compartment and an internal combustion engine, having an intake manifold and a brake pedal, including, in combination, a motion picture camera mounted on said vehicle positioned to photograph road conditions ahead of said vehicle, a vacuum motor attached to said camera and adapted to drive the photographing mechanism thereof; a tank connected to the engine manifold of said vehicle, a check valve operative between said manifold and said tank to retain vacuum drawn in said tank by suction from said manifold; a tube, including a throttle valve, connecting said tank to said vacuum motor,

mechanism including an arm operative on said valve, and a lever actuated by a brake pedal of



said vehicle adapted to open and close said valve corresponding to the operation thereof.

2,457,237

APPARATUS FOR PRODUCING FILLED BAGS

Stanley R. Howard, Milton, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts

Application June 4, 1947, Serial No. 752,543
11 Claims. (Cl. 93—2)

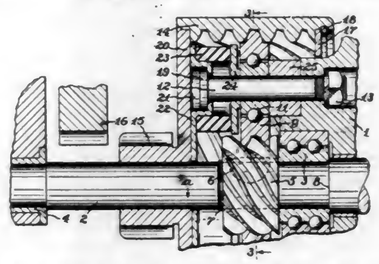
1. In apparatus for producing infusion bags, in combination, bag supporting means arranged to receive and support a bag, means for attaching a handle comprising a tag and a length of twine to the bag including means for relatively moving the twine and the bag to loop the twine about the bag and its support, means for withdrawing the bag from its support, and means for releasing the loop from the support prior to the withdrawing operation.

2,457,238

FRACTIONATION OF POLYMERIC ETHYLENE

Edward Hunter and Raymond B. Richards, Northwich, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application October 25, 1944, Serial No. 560,352. In Great Britain November 29, 1943
2 Claims. (Cl. 260—94)



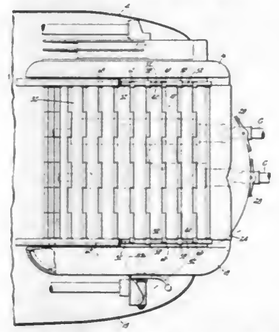
1. A process which comprises dissolving a solid polymer of ethylene having a molecular weight between 10,000 and 40,000 in ethylene gas at a pressure in excess of 500 atmospheres and a temperature between 50 and 350° C., cooling the resulting mixture and thereafter blowing down to atmospheric pressure whereby polymers of ethylene are obtained in two solid phases.

2,457,239

ENGINE STARTER GEARING

Burr W. Jones, Rochester, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware

Application February 10, 1947, Serial No. 727,544
15 Claims. (Cl. 74—7)

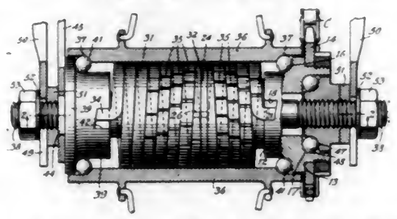


1. In a heavy duty drive for engine starters, a power shaft, a spiral pinion fixed thereon, a plurality of spiral idler gears journalled on fixed bearings meshing with said pinion with freedom for longitudinal movement, a spiral internal gear enclosing and meshing with said idlers, and means actuated by said internal gear to engage and drive a member of an engine to be started.

2,457,240

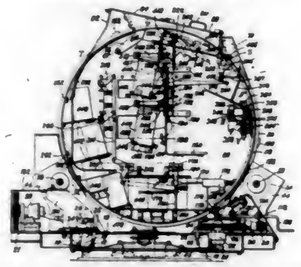
SHIELD FOR GUN MOUNTS

Jacob C. Jorgensen, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey



Application September 23, 1946, Serial No. 698,715
6 Claims. (Cl. 89—36)

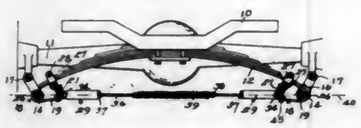
1. An airplane gun mount comprising a pair of vertically spaced circular supports mounted for limited turning movements about a vertical axis, said supports providing between them an opening, a gun carried between said supports for movement therewith in azimuth and projecting through said opening, a flexible shield for that portion of the opening traversed by the gun, said shield comprising a plurality of narrow, vertically-extending plates, pintles pivoting said plates together about axes parallel to the axis of turning movement of the supports, pins carried by said pintles extending beyond the ends of said plates, rolls carried by said pins and received in



recesses in the periphery of said supports, means for locking a predetermined number of said rolls in said recesses, and means operative upon turning said supports for guiding said rolls away from said supports at that side of the shield toward which said gun is moved in azimuth and for causing said plates to assume a folded relation.

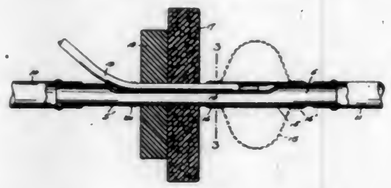
2,457,241
COASTER BRAKE
Mathias Klein, Hawthorne, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application September 25, 1945, Serial No. 618,505
9 Claims. (Cl. 192—6)

1. In combination, a fixed member, a cylindrical hub, a cylindrical drive sleeve disposed between said fixed member and said hub in concentric spaced relation, means journaling said hub and drive sleeve on said fixed member, means carried by said drive sleeve adapted to couple said sleeve to said hub upon rotation of said sleeve in one direction, additional means anchored with respect to said fixed member and supported by said sleeve adapted to frictionally engage said hub upon limited rotation of said sleeve in an opposite direction and prehensile means responsive to said last named rotation to engage said additional means with said hub.



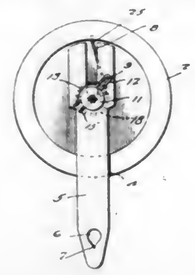
2,457,242
GUN TURRET
Cutler D. Knowlton, Rockport, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 30, 1944, Serial No. 565,939
10 Claims. (Cl. 89—41)

1. In a turret for anti-aircraft guns, the combination with a base, of a ring fixed upon the base and provided with an upwardly extending flange within which a surface of the ring furnishes a track, a table, a drum rotatable upon the table, a plurality of brackets depending from the table, means for securing the brackets in different positions radially of the table, and frusto-conical rolls rotatable upon the brackets and revoluble along the track, said table being retained against lateral displacement by engagement of the larger ends of the rolls with the flange of the ring.



6. In combination, a movable turret, a gun mounted upon the turret, motors by which the turret is moved in azimuth and in elevation to direct the fire of the gun, controlling means including valve mechanism by which the azimuth and elevation motors are governed and grip mechanism movable in azimuth and in elevation through which the gunner may move the valve mechanism, a grip member extending from the controlling means to a point convenient for actuation by a second man in the turret and supported for movements corresponding to those of the gunner's grip mechanism, and means for connecting the grip member to move the controlling means.

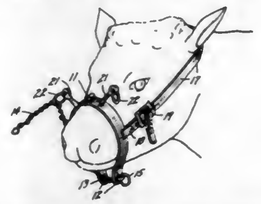
2,457,243
VEHICLE SPRING
Joseph B. Kucera, Traer, Iowa
Application February 21, 1945, Serial No. 578,996
3 Claims. (Cl. 267—29)



1. A spring assembly comprising a semi-elliptical spring, pivot means supporting said spring at its opposite ends for flexing movement, a pair of bracket members at the ends of said spring, with said bracket members being integrally formed with hook portions extended about said spring ends, and arm portions projected inwardly from said spring ends opposite the concave side of said spring, means securing said hook portions against the convex side of said spring ends such that the inner ends of said arm portions are movable up and down relative to said pivot means in response to a change in the curvature of the spring at said spring ends, and a coil spring connected under tension between the inner ends of said arm portions.

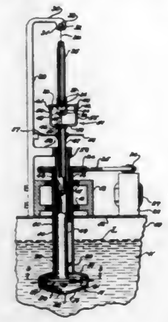
2,457,244
MEDICAL APPLIANCE FOR CONTROL OF ENEMATA
Otis F. Lamson, Seattle, Wash.
Application June 22, 1943, Serial No. 491,841
1 Claim. (Cl. 128—246)

An appliance for the control of enemata comprising the combination of a rectal pipe providing a main fluid canal arranged to be inserted by its forward end through the anal canal into the lower region of a patient's bowel and being adapted to connect by its rear end with an enema tube, said pipe when inserted exposing its said rear end beyond the distal end of said anal canal; an inflatable element carried upon the forward end of the pipe and arranged and adapted to be ballooned by injection of pressure air from a normally collapsed condition permitting the same to pass freely through said anal canal into an expanded compass exceeding that of the internal mouth of the anal canal, said element being comprised of a single-thickness fistular-shaped sheet of elastic rubber sleeved over said forward end of the pipe and, when collapsed, finding a snug fit upon the latter and having its end extremities made fast to the pipe to provide a seal against the escape of air introduced to the element for ballooning the same; an air duct isolated from said main fluid canal of the pipe and extending longitudinally from the outer end of the pipe to terminate in an outlet port giving access to the interior of the balloon, the admission end of said air duct being arranged for connection with a source of controlled pressure air; and means also carried upon the pipe and in the use of the appliance operating to fit snugly against the anus of the patient and in consequence hold the inflated balloon against said internal mouth of the anal canal.



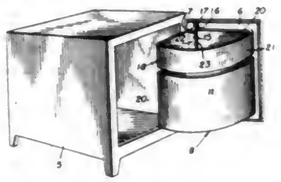
2,457,245
TENSION INDICATOR FOR THREADS ON SEWING MACHINES
Albert H. Larson and Charles W. Fox, El Dorado, Ark.
Application January 22, 1946, Serial No. 642,760
2 Claims. (Cl. 73—143)

1. A thread tension indicator comprising a casing having a front section provided with a central opening, and a rear section provided with a marginal recess and a hollow central boss, a shaft journaled at one end in said central opening and at its opposite end in said boss and having an annular recess intermediate the length thereof and tranverse holes therethrough, one at each side of said annular recess, a flat control bar slidably received in said marginal recess having in one end an elongated slot receiving the annularly-recessed portion of said shaft and adjacent its opposite end an aperture having a V-shaped extension directed toward the adjacent end of said bar, a pin projecting from said bar adjacent said slot, a U-shaped spring clip having a straight leg inserted through one transverse hole in said shaft and a curved leg embracing said shaft and receiving said pin between the leg portions adjacent the closed end thereof to operatively connect said bar to said shaft, a coil spring having one end received in the other hole in said shaft and its other end secured to said casing, said coil spring surrounding said shaft and said boss and applying a spring force to said shaft urging said bar inwardly of said casing, a dial on the outer face of said casing front section, and a pointer secured on the corresponding end of said shaft overlying said dial.



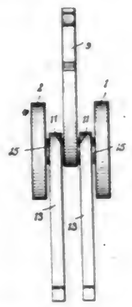
2,457,246
BREAKING LEAD HALTER FOR CATTLE
John G. Lawrence, Des Moines, Iowa
Application July 18, 1946, Serial No. 684,503
2 Claims. (Cl. 54—24)

2. A lead halter for cattle comprising: two, arcuate, side yoke members; means hinging said



members together at their upper extremities to form a loop-like muzzle yoke for the animal; downwardly turned lower extremities on said members, said extremities being perforated; a head strap secured to said members and adapted to extend over the head of the animal; a post fixed to and extending upwardly and outwardly from one of said members; a receiving ring carried on the extremity of said post; and a flexible member extending through said perforations and upwardly through said receiving ring to form a leash for the animal.

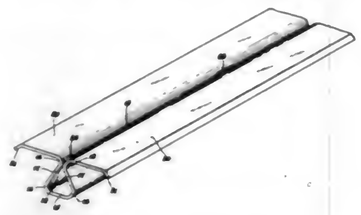
2,457,247
VISCOSIMETER
Walter D. Lawshe, Seattle, Wash., assignor, by mesne assignments, to Monsanto Chemical Company, Seattle, Wash., a corporation of Delaware
Application August 28, 1946, Serial No. 693,553
5 Claims. (Cl. 73—59)



1. In a viscosimeter, a support, an upper torsion member fixed to and depending from said support, a lower torsion member in fixed connection with and depending from the lower end of said upper member, a rotatable member fixed to the lower end of said lower member, means for applying torque to said rotatable member in accordance with the viscosity of the material to be tested, said torsion members being unequally torque resistant so that one is twistable through a certain range by said rotatable member without substantial twisting distortion occurring in the other, means operative before said twisting range is exceeded for transferring the torque of said rotatable member from said one to said other torsion member, and indicating means driven from said rotatable member.

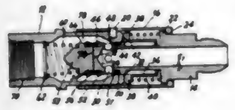
2,457,248
CABINET HAVING PIVOTALLY MOUNTED BINS
George John Lemke, Rugby, N. Dak.
Application January 13, 1947, Serial No. 721,844
2 Claims. (Cl. 312—152)

1. A cabinet comprising a casing having a hinged door, a lower bin fixed to the inner face of said door, and an upper bin hingedly disposed above said lower bin for covering placement thereover, vertical sleeves carried by said bins, a vertical shaft having its upper end inturned and detachably secured to the inner face of the door and having its shank disposed through the sleeve on the upper bin and extending into the sleeve on the lower bin, means disposed on said shaft for spacing said bins apart.



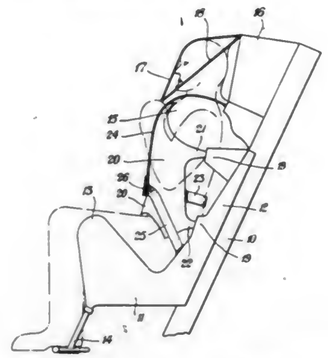
2,457,249
TOY
Sidney K. Lipschitz, New York, N. Y.
Application August 23, 1946, Serial No. 692,637
1 Claim. (Cl. 46—22)

In a constructional toy, a pair of body sections, limbs pivotally mounted between the sections, pivot pins on which the limbs are mounted and which connect the body sections together, the body sections having recesses in their inner faces only, said recesses extending only partly through the body sections, the ends of the pivot pins being frictionally and removably fitted into said recesses, the recesses in one of the body sections being spaced slightly farther apart than those in the other body section so that the pivot pins will be placed under stress when fitted in the recesses in the two body sections.



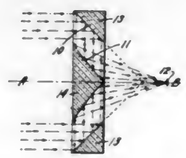
2,457,250
TUBULAR SECTION STRUCTURAL MEMBER
Stanley Macomber, North Canton, Ohio
Application May 3, 1948, Serial No. 24,749
9 Claims. (Cl. 189—37)

1. A structural member comprising a single piece of sheet metal of indefinite length and uniform cross section, longitudinally bent into tubular form with a longitudinal groove of predetermined definite width in one side thereof, opposite side portions of the sheet metal being



arcuately bent to form the walls of said groove, and welds at spaced points in the entrance to the groove for rigidly holding the walls thereof to a predetermined definite spacing.

2,457,251
QUICK CONNECT SELF-SEALING COUPLING
Benjamin A. Main, Jr., Jackson, Mich., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich., a corporation of Michigan
Application March 28, 1945, Serial No. 585,307
1 Claim. (Cl. 284—19)

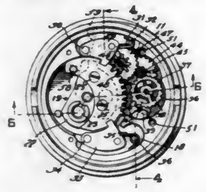


A self-sealing coupling of the kind consisting of two tubular body parts of which one comprises an interior co-axial tubular stem closed at the coupling end and defining an annular space between itself and its tubular body part, said tubular stem having fluid-flow ports in its hollow wall portion adjacent said closed end and said ports being closable by a sleeve slidable upon said tubular stem and within said annular space, whereas the other tubular body part has an end opening of a diameter approximating the interior diameter of said sleeve and closable by an axially movable valve member which, when the two body parts are coupled together, is displaced inwardly by contact with the closed end of said stem at the same time as the said sleeve is pushed back along the stem to open said ports due to the endwise pressure exerted against the sleeve by the second said tubular body part characterized in that the said axially movable valve member has a circumferential groove around its outer periphery containing a fluid sealing ring for maintaining a fluid tight seal with the said end opening, when this valve member is closed, and that the said tubular stem also has external circumferential grooves on opposite sides of said fluid-flow ports and containing fluid sealing rings, said sleeve having an inwardly directed shoulder, at the end thereof remote from the closed end of the stem, engageable with a shoulder on the stem to limit the outward axial movement of the sleeve to close said fluid-flow ports and the one sealing ring on the said stem, on the side of the said fluid-flow ports remote from the closed end of the stem, serving, when the sleeve is displaced inwardly by the said second body part, to maintain a fluid seal between the stem and the said end opening in said second body part.

2,457,252
BODY PROTECTING DEVICE FOR AIRCRAFT PERSONNEL
James Martin, Higher Denham, near Uxbridge, England
Application September 16, 1947, Serial No. 774,382
In Great Britain October 13, 1946
5 Claims. (Cl. 244—122)

1. A body protecting device for the personnel of aircraft comprising a cover plate shaped and adapted to fit over the front of the body and rearward extensions from the sides of the cover plate adapted to engage abutments on an ejection seat for launching from an aircraft and which support the cover plate free of the body of the occupant of the seat so as to protect the body and the vital organs therein from the pressure of the air which will be met if and when the seat with its occupant is launched from the aircraft in flight.

2,457,253
REFLECTING OPTICAL OBJECTIVE SYSTEM
Clifford W. Martin, Denver, Colo.
Application December 22, 1947, Serial No. 793,146
2 Claims. (Cl. 88—57)

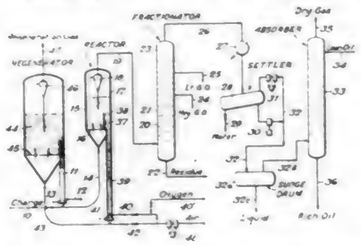


1. A ray focusing system comprising: an annular, conical, truncated, inside reflecting surface; a second concave-conical, outside reflecting surface positioned concentrically within the annulus of, and in the plane of, the first reflecting surface, with its apex directed toward the smaller diameter of the first surface, the largest diameter of the second surface being substantially equal to the smallest diameter of the first surface, the projected width of both surfaces on the optical axis being substantially equal, the diameter of the second surface exceeding twice its width on said optical axis, any radial cut section through said second surface presenting a curved line; and any radial cut section through said first surface presenting a straight line, the radius of any plane through said second surface perpendicular to the optical axis being equal to "Y" in the following formula:

$$Y=\frac{(X+m)^2}{2X}-\frac{X}{2}$$

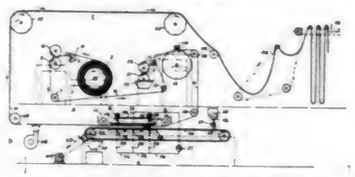
in which "X" is the focal length desired and "m" is the distance from the apex of the second reflecting surface along the optical axis to said plane.

2,457,254
DELAY ARMING DEVICE FOR FUSES
James F. McCaslin, Cleveland, Ohio, and Jean Fink, Delavan, Wis.; said Fink assignor to The George W. Borg Corporation, Delavan, Wis., a corporation of Delaware
Application September 18, 1947, Serial No. 774,752
1 Claim. (Cl. 102—79)



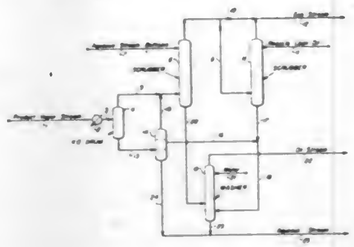
A delay arming device for rotatable projectiles comprising a housing adapted to be disposed between the fuze and booster of the projectile, said housing having a flash opening therein arranged in communication with the booster, a rotor rotatably mounted in said housing, said rotor being heavier on one side of its axis of rotation than on its other side, a detonator carried by the rotor at a point spaced from its axis and adapted in one position to be out of registration with the housing flash opening and in another position of the rotor to be in registration with the flash opening, an escapement mechanism operatively connected to said rotor to retard its rotational movement, centrifugally released means comprising substantially diametrically opposed spring urged detents engaging the rotor to lock the rotor in its unarmed position with the detonator out of registration with the housing flash opening, and centrifugally actuated positive locking means to lock the rotor in its armed position with its detonator in registration with the housing flash opening, said rotor comprising a rotor body and a gear plate secured to the forward face of the rotor body and having gear teeth adapted to engage said escapement mechanism, said gear plate having peripheral notches adapted to be engaged by the detents, said gear plate extending beyond one side of the rotor body and carrying a lug disposed in spaced relation to said side of the rotor body, whereby an arming wire carried by the housing may be passed between the lug and rotor body to lock the rotor in its unarmed position.

2,457,255
STRIPPING OF SPENT CATALYST IN A HYDROCARBON CONVERSION PROCESS
Paul F. McElherne, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application April 20, 1945, Serial No. 589,337
3 Claims. (Cl. 196—52)



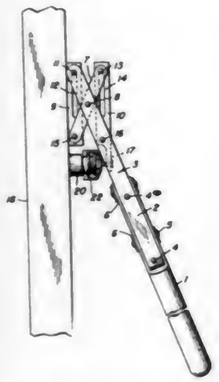
1. In a catalytic conversion system wherein catalyst in a conversion zone accumulates carbonaceous deposits comprising vaporizable hydro-

carbons, wherein the catalyst from the conversion zone is stripped for removal of the vaporizable hydrocarbons in a stripping zone and wherein the catalyst is thereafter regenerated by burning unvaporized carbonaceous residue therefrom, the improved method of operation which comprises effecting said stripping solely by heating the base of the stripping zone to a temperature substantially higher than the temperature in the conversion zone and sufficiently high to establish a temperature gradient from a lower portion to an upper portion of the stripping zone, passing the catalyst contaminated with said carbonaceous deposits downwardly through said stripping zone whereby the carbonaceous deposits are subjected to increasing temperatures in its downward passage, vaporizing vaporizable components from



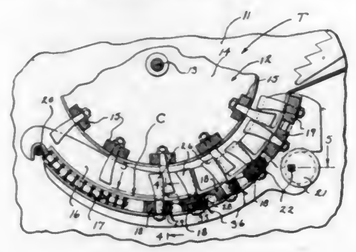
residual components of said deposits as the catalyst passes downwardly through the stripping zone, passing the vaporized components upwardly through at least the upper portion of the stripping zone, condensing and recovering at least a substantial portion of said vaporized components, effecting said heating by introducing a gas containing at least about 20% of free oxygen at the base of said stripping zone for effecting partial combustion of said residual components and employing an amount of said gas which is sufficiently large to maintain the catalyst in fluidized condition at the base of said stripping zone but sufficiently small so that most of the products of said partial combustion are carried downwardly with said catalyst from the base of the stripping zone.

2,457,256
APPARATUS FOR MANUFACTURE OF COATED WEBS
Romie L. Melton, Raymond C. Benner, and Henry P. Kirchner, Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application December 29, 1939, Serial No. 311,606
15 Claims. (Cl. 91—18)



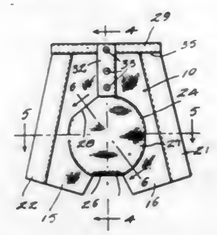
1. Apparatus for the manufacture of abrasive coated webs comprising upper and lower electrodes, means for applying an alternating electromotive force of a high potential difference to the upper and lower electrodes, means for supporting an adhesive coated web between said electrodes and with an adhesive coated surface downward, and means for supplying abrasive particles between said web and the lower of said electrodes, said apparatus being adapted electrostatically to project the abrasive particles against the downwardly facing adhesive surface of the web.

2,457,257
SEPARATION OF OXYGENATED COMPOUND WITH BISULFITE ADDUCTS
Vesta F. Michael and Scott W. Walker, Tulsa, Okla., assignors to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware
Application September 24, 1947, Serial No. 775,918
20 Claims. (Cl. 260—643)



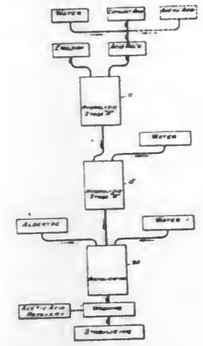
1. In a process for separating an alcohol from an organic solution comprised thereof, the steps which comprise contacting said organic solution with an immiscible aqueous phase in the presence of at least one bisulfite-ketone adduct and at least one bisulfite-aldehyde adduct; separating and withdrawing an aqueous extract; heating said aqueous extract to a temperature above the decomposition temperature of bisulfite-ketone adducts, but below the decomposition temperature of any bisulfite-aldehyde adduct contained therein; and separating from the heated aqueous extract an organic mixture comprising said alcohol and any liberated ketone.

2,457,258
PULLING IMPLEMENT FOR DETACHING INSULATORS
Gordon P. Mitchell, Merrill, Wis.
Application October 23, 1947, Serial No. 781,623
4 Claims. (Cl. 254—21)



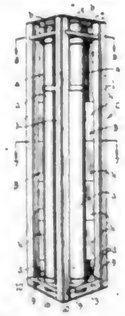
1. An implement for detaching an insulator from one side of a post comprising an elongated handle, a longitudinally split shank extending forwardly from said handle, a cross bar pivoted in the front end of said shank for engagement sidewise with said side of the post adjacent the insulator and on which said shank is swingable by said handle, a second cross bar pivoted in said shank for swinging therein parallel to the first cross bar, means on said second cross bar for attaching the same to said insulator, and means for causing said second cross bar to maintain a position parallel to the first cross bar during swinging of said shank by said handle whereby said attaching means is adapted to exert a pull on said insulator in a direction at a right angle to said post.

2,457,259
DISAPPEARING TOOTH BARS FOR CONCAVES
Fred M. Moll, West Bend, Wis.
Application November 13, 1944, Serial No. 563,279
3 Claims. (Cl. 130—27)



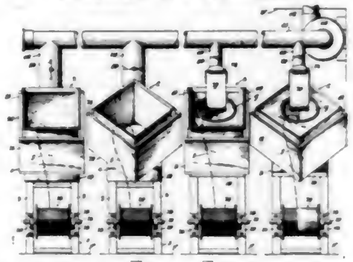
1. In a threshing machine, a concave including a plurality of pivotally supported toothed bars, the teeth of said bars being of a greater length than the distance between the bars, means for rocking said bars, and said bars having grooves for receiving teeth of adjacent bars when the bars are rocked to move the teeth to a lowered position to form a support and stop for said teeth.

2,457,260
UNDERGARMENT
William P. Morris, Hobbs, N. Mex.
Application May 2, 1947, Serial No. 745,578
2 Claims. (Cl. 128—159)



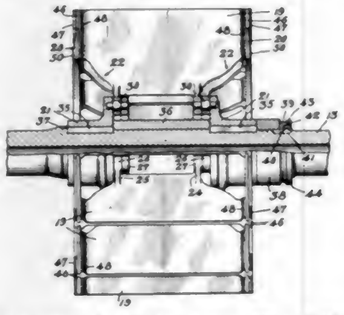
1. A garment of the character described comprising a single piece central front and rear section formed of knit material, outer leg sections formed of cloth, a waistband having dependent integrally formed fly sections, an elastic insert in said waistband, said front section having a vertically extending slot provided with an enlarged lower portion and a border of sweat absorbing material affixed to the inner side of the front knit section adjacent the opening therein.

2,457,261
POLYVINYL ACETAL RESINS
George Osman Morrison, Frederick Pettit Lossing, Albert Harold Heatley, and Joseph Frederic Leo Marcel Germain, Shawinigan Falls, Quebec, Canada, assignors to Shawinigan Chemicals Limited, Montreal, Quebec, Canada, a corporation of Canada
Application May 16, 1945, Serial No. 594,060
In Canada August 19, 1944
1 Claim. (Cl. 260—73)



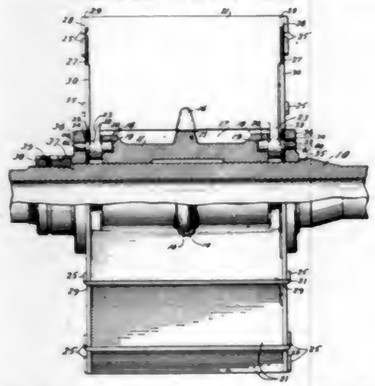
A process of preparing a polyvinyl acetal resin having a residual polyvinyl alcohol content from 9% to 30% by weight which consists in polymerizing vinyl acetate in aqueous dispersion in the presence of a water soluble partial hydrolysis product of polyvinyl acetate thereby to form an aqueous dispersion of polyvinyl acetate having a viscosity above 20 centipoises determined at 20° C. in a molar solution in benzene and containing said hydrolysis product as a dispersing agent, hydrolyzing said last aqueous dispersion in the presence of a mineral acid catalyst at a temperature within the range from 40° C. to 70° C. to form an aqueous solution of partially hydrolyzed polyvinyl acetate hydrolyzed to at least 75%, diluting said solution to form an aqueous solution containing from 3% to 7.5% of such partially hydrolyzed polyvinyl acetate, adding to said solution from 1% to 4% of sulphuric acid by weight, adding to said last-mentioned solution an aldehyde selected from the group consisting of butyraldehyde, benzaldehyde and a mixture of butyraldehyde and acetaldehyde while maintaining the reaction mixture at a temperature within the range from 0° C. to 15° C., the amount of aldehyde added being within the range from 50 to 220 parts by weight per 100 parts of partially hydrolyzed polyvinyl acetate, reacting the aldehyde with the hydrolysis product while maintaining the temperature within the range from 0° C. to 15° C. under vigorous agitation thereby to cause precipitation of partially acetalized resin as fine particles and continuing the agitation until such particles assume a condition wherein they will not, on being heated, agglomerate into a mass while such agitation is continued, then heating the charge to a temperature of 25° C. to 65° C., while continuing agitation and causing the reaction to proceed until a polyvinyl acetal resin is formed containing between 9% and 30% residual polyvinyl alcohol, washing the resin to remove acid, and stabilizing said resin by subjecting it at an elevated temperature to the action of a solution consisting of water and an alkaline substance selected from the group consisting of sodium hydroxide and potassium hydroxide.

2,457,262
SHIPPING ASSEMBLY
Glenn H. Norquist, Jamestown, N. Y.
Application October 17, 1944, Serial No. 558,980
3 Claims. (Cl. 206—65)



1. An article accessible shipping assembly, designed to contain and protect an article during shipment and handling including in combination, a knockdown supporting framework having a partition member adjacent each end thereof, each of said partition members having an opening therein through which one end of the article may be telescoped and removably supported by said partition members, means for removably joining each of said frame members to said partitions to removably retain said partition members in fixed spaced relationship to provide an article supporting framework unit but permitting lateral knockdown removal of said frame members from said partition members, comprising a notch adjacent each end of each of the frame members adapted to receive the adjacent edge of said partition members, and an enclosing case designed to removably contain and support said framework, comprising side wall panels and a bottom end wall panel, adapted to snugly receive said framework with the frame members thereof positioned at the inner corners of the case, and a removable cover end panel for said case.

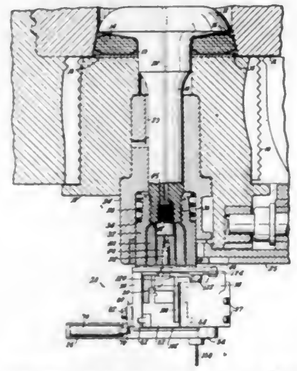
2,457,263
SOLDERING STAND ASSEMBLY
Glenn H. Norquist, Jamestown, N. Y.
Application June 23, 1945, Serial No. 601,212
3 Claims. (Cl. 113—111)



1. A soldering stand assembly including in combination, a fixed supporting structure, a holding frame adapted to contain and support the work piece to be soldered, means for rotatably mounting said holding frame on said supporting structure in inclined position to expose and make conveniently accessible the areas of the work piece to be soldered, said means including a tubular collar fixed to said supporting structure and arranged in inclined position, a tubular member fixed to the bottom wall of said holding frame and communicating with a fume exhaust opening in said holding frame, means for releasably and rotatably securing said tubular member to said fixed collar, and a suction pipe connected to said fixed collar through which the fumes generated during the soldering operation are exhausted.

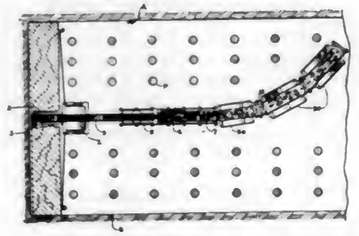
2,457,264
HIGH-TEMPERATURE FAN
Carl Nygren, Michigan City, Ind., assignor to Michiana Products Corporation, Michigan City, Ind., a corporation of Indiana
Application April 28, 1945, Serial No. 590,753
10 Claims. (Cl. 230—134)

1. In a centrifugal fan, a plurality of blades in circular arrangement about a common axis of rotation with the inner portions converging inwardly toward said axis and the outer portions diverging outwardly from said axis, hub members overlapping the assembled inner end portions of the blades, and means between each pair of adjacent blades for making said inner end portions of the blades fast to each other and to the hub portions to hold them against individual bodily movement outwardly due to centrifugal force and rotary movement relative to the hub portions.



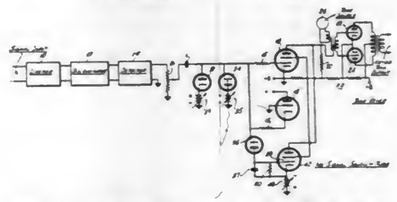
2,457,265
HIGH-TEMPERATURE FAN
Carl Nygren, Michigan City, Ind., assignor to Michiana Products Corporation, a corporation of Indiana
Application April 24, 1947, Serial No. 743,516
7 Claims. (Cl. 230—134)

1. In a high temperature centrifugal fan, a plurality of blades in circular arrangement about



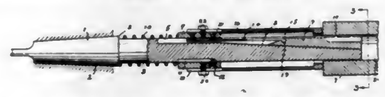
a common axis of rotation with their outer portions diverging outwardly from said axis and their inner portions converging inwardly toward said axis and terminating in spaced legs, a hub member straddled by the legs and having outwardly opening notches receiving the converging inner ends of the blades to effect a driving connection with them, and means in circular series about the axis for making the legs fast to hold the blades against individual bodily movement outwardly due to centrifugal force.

2,457,266
GUN PRIMER MECHANISM
John R. Oliver, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 20, 1945, Serial No. 606,048
8 Claims. (Cl. 89—27)



8. A primer mechanism for ordnance using separate loading ammuntion, said mechanism constituting a complete unit and including a demountable frame constructed for direct attachment to an obturator and breechblock carrier, said frame enclosing a primer holding plug, an inner block arranged to slide in a direction running transversely and longitudinally to said plug, and an outer block pivoted to said frame, and said outer block being formed to exert a wedge action on the inner block to actuate the latter.

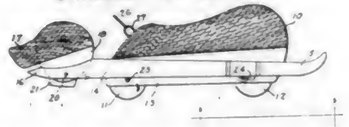
2,457,267
COAL LOADING AND CONVEYING MECHANISM
Richard Peale, Clearfield, Pa., and Rembrandt Peale, Jr., Greenwich, Conn., assignors to themselves as trustees
Application January 29, 1945, Serial No. 575,080
7 Claims. (Cl. 214—41)



1. In apparatus for loading and conveying coal, in combination, a plurality of cars having coal-receiving bins, said cars being coupled together in a string, each car having a shaking conveying unit mounted thereon and oscillatable relatively thereto, means for coupling the conveyor units on the successive cars so that said units are movable together to convey coal the length of the string of cars, a driving unit for shaking said coupled conveying units together, and means for delivering coal from any conveyor unit into the bin of the car on which it is mounted.

2,457,268
SIGNALING
Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 8, 1946, Serial No. 675,348
18 Claims. (Cl. 178—66)

1. In a signalling system in combination, an impeder across which a signal potential appears which potential varies in magnitude between maximum and minimum values separated by a substantially fixed amount, said potential being of an average value which may vary slowly to thereby change said maximum and minimum values, an electron discharge device having a control grid coupled to said impeder to be potential modulated in accordance with the signal potential through a selected substantially fixed range of substantially fixed average value, means in the said coupling for preventing changes in the average value of said signal potential from materially changing the average value of said potential modulation of said grid and means in said coupling for preventing variations in the magnitude of said potential modulation from exceeding selected maximum and minimum values.

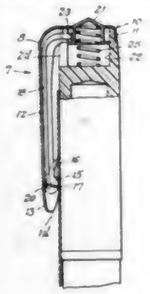


2,457,269
RECESSING TOOL
Harry J. Pfrehm, Houston, Tex.
Application January 26, 1946, Serial No. 643,574
1 Claim. (Cl. 77—58)

A recessing tool comprising, a shank, a cutter expander formed integrally with the shank and extended forwardly and provided with a deep lengthwise groove extending substantially throughout the length thereof and whose bottom is formed with an outwardly tapering face extending to the free end of the expander, an elongated cutter carrier mounted on said face and having a transverse groove and provided with a cutter and recessed in front of said cutter, a tubular bushing forming an anchor and slidable on the expander, a coil spring around the expander one end of which abuts the outer end of the anchor, said expander having a longitudinal keyway within the anchor, a key on the anchor extended into the keyway, a flexible arm within said slot

and anchored at one end to said anchor and whose other end is formed with a catch which projects into said transverse groove, a tubular spacer sleeve one end of which surrounds said anchor and is provided with longitudinal slots and whose other end is inwardly thickened and provided to abut the work, clamp screws extended through said longitudinal slots and having a threaded connection with the anchor whereby said tubular spacer may be adjusted relative to the anchor and fixed at any selected point of adjustment.

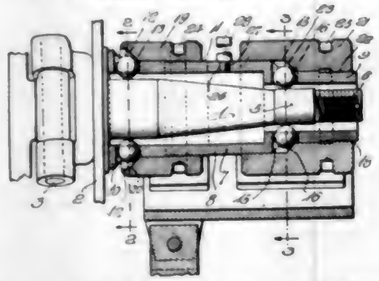
2,457,270
ANIMATED TOY
Towner H. Phillips, Portland, Oreg.
Application November 9, 1946, Serial No. 708,894
4 Claims. (Cl. 46—104)



1. An animated toy mounted on wheels comprising a horizontally elongated body portion having a longitudinal groove in the bottom thereof, an elongated member positioned within said groove and extending rearwardly from said body portion to form a tail section and forwardly from said body portion to form neck and lower jaw sections, a head mounted by transverse pivot on the forward end of said elongated member to cooperate with said lower jaw section in simulation of a mouth, ears pivotally mounted on either side of said head, and means for reciprocally actuating said elongated member.

2,457,271
MODIFICATION OF PREFORMED MONOOLEFIN/CARBON MONOXIDE POLYMERS
Paul S. Pinkney, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 31, 1945, Serial No. 575,560
20 Claims. (Cl. 260—66)

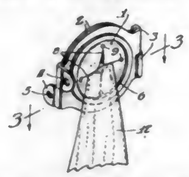
1. In a process for modifying monoolefin hydrocarbon/carbon monoxide polymers, said monoolefin being an acyclic hydrocarbon containing from 2 to 4 carbon atoms per molecule, the steps which comprise reacting the said polymer with from 1% to 10% by weight, based on the weight of the polymer, of a basic material of the class consisting of basic alkali metal and basic alkaline earth metal compounds, in an organic medium which is a solvent for the base and the polymer, at a temperature within the range of from 20° C. to the decomposition temperature of the said polymer, said polymer and basic material being the sole reactants, continuing the resulting reaction until a substantial, but incomplete, deoxygenation of the polymer has occurred, diluting the resulting mixture with water, and thereafter precipitating the resulting alkali treated polymer by acidifying the resulting mixture.



2,457,272
LOCKING CLIP
Ralph W. Pritchard, Jr., Chicago, Ill.
Application April 16, 1947, Serial No. 741,709
2 Claims. (Cl. 24—11)

1. A safety clip for an article such as a pen or pencil, which comprises in combination, a stationary clip member having an attachment portion for securement to said article adjacent the top thereof and having a clip portion extending down the side of said article and spaced therefrom so as to permit a pocket front to slip freely between said stationary clip member and said article, a pawl member pivotally attached to the lower end of said stationary clip member so that the prong portion of said pawl is directed upwardly and inwardly toward said article and may be moved into and out of engagement with a pocket front, an actuating arm fitting within

said stationary clip member, the lower end of said actuating arm being pivotally connected to said pawl member so that vertical movement of said actuating arm actuates said pawl member, a plunger member mounted on the upper end of said article, a spring in the upper end of said article normally biasing said plunger in an outward position, and means interconnecting the upper end of said actuating clip arm with said plunger; said pawl prong being normally biased into locking engagement with a pocket front and being released from said locking engagement upon depression of said plunger.

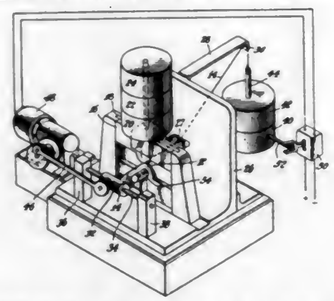


2,457,273
SPINDLE ADAPTER
Joseph C. Renfroe, Jacksonville, Fla.
Application November 17, 1947, Serial No. 786,341
4 Claims. (Cl. 308—190)

1. An axle spindle adapter comprising an elongated, cylindrical sleeve having circumferentially disposed radial passages formed therethrough adjacent its opposite ends, ball bearings in said passages, and threaded hubs or bushings having angular circumferentially disposed bearing surfaces adapted to engage said ball bearings.

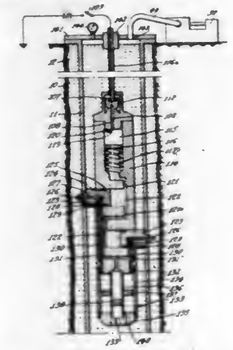
2,457,274
TOWEL OR CLOTH HOLDER
Louis L. Rifken, Elgin, Ill.
Application April 24, 1947, Serial No. 743,635
5 Claims. (Cl. 248—314)

1. In a towel or cloth holder of the class described, in combination, a pair of similar base holders having aligned openings; also attachment lugs adapted to be interengaged with the opposite holders and mounting lugs, and a re-



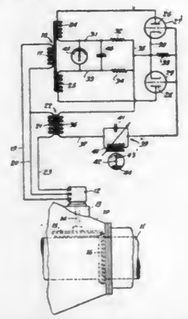
silient slitted member held between said base holders and adapted to receive a towel inserted through the opening at either side of the device and to grip the same.

2,457,275
TUBULAR LINK CONSTRUCTION
Saul Ritter, New York, N. Y.
Application April 16, 1946, Serial No. 662,544
5 Claims. (Cl. 59—79)



1. An expansible band comprising a plurality of telescopical links, each of said links including an outer member and an inner member, said inner member disposed in said outer member so as to be slidable from a position wherein it is substantially fully received within the outer member to a position wherein a major portion of said inner member extends from one end of said outer member, said outer member being formed from a sheet metal blank to tubular form with the opposite edges of the blank forming a longitudinal seam in a wall of said outer member, an extension adjacent to said end of said outer member and integral with one of said edges, said other edge having an aperture to receive said extension to interlock said edges.

2,457,276
STRAND TESTING
Samuel L. Ross, New Brunswick, N. J., assignor to Johnson & Johnson, a corporation of New Jersey
Application July 17, 1945, Serial No. 605,480
6 Claims. (Cl. 73—7)



1. Apparatus for testing the abrasion resistance of a fibrous strand comprising in combination means for holding a strand, a pair of opposed members including a tooth cusp adapted to compress the strand and to yieldingly resist passage of the strand between said members and means for effecting relative movement between the strand and the members in a direction transverse to the length of the strand to cause the strand to be compressed and to pass between the members while under tension.

2,457,277
WELL CONDITIONING APPARATUS
Marcel Schlumberger, Paris, France; vested in the Attorney General of the United States
Original application August 1, 1941, Serial No. 405,024. Divided and this application June 2, 1945, Serial No. 597,217
6 Claims. (Cl. 166—1)

1. In an apparatus for working inside a bore hole, the combination of a tool adapted to be driven towards the wall of the hole, an explosion chamber containing an explosive charge, the explosion of which actuates the tool, igniting means for said explosive charge, means for controlling said igniting means, an expansion chamber, and means for making a communication between this expansion chamber and said explosion chamber, so as to control the return stroke of the tool after the working stroke has been effected.

2,457,278
FREQUENCY RESPONSIVE SYSTEM
Joseph R. Schoenbaum, Roseland, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application May 12, 1945, Serial No. 593,524
7 Claims. (Cl. 172—245)

1. In a frequency deviation responsive system, a multi-phase source of alternating current, the phases of which are in fixed phase relationship, an electrical device having a natural frequency,

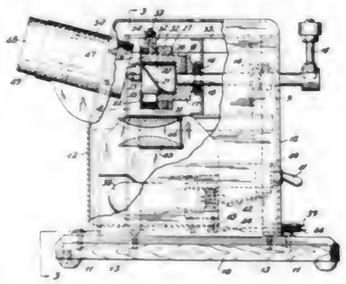
a vacuum tube bridge including two grid-containing electron tubes in two arms thereof with the plate-cathode circuit of each serially connected in its respective arm, and load impedances in the other two arms, a first circuit means for impressing the voltage of one phase of said source upon both grids of said electron tubes in unison, a second circuit means for impressing an alternating current voltage derived from another phase of said source upon each of the electron tube arms, the phase relation of said arm voltages with respect to said grid phase voltage being leading and lagging by equal angles at the source, means for including at least part of said device in series with one only of said circuit means to cause a phase shift in said one circuit means when the source frequency deviates from the natural frequency of the electrical device, means for establishing a connection between the midpoint of said load impedances and the midpoint of said tube arms, and means sensitive to and acting in response to the magnitude and direction of the average voltage drop across said load impedances.

2,457,279

MODIFICATION OF PREFORMED MONOOLEFIN/CARBON MONOXIDE POLYMERS BY REACTION WITH BASIC COMPOUNDS

Samuel L. Scott, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 31, 1945, Serial No. 575,559
20 Claims. (Cl. 260—66)



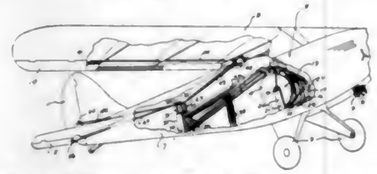
1. A process for modifying monoolefin/carbon monoxide polymers which comprises reacting a monoolefin hydrocarbon/carbon monoxide polymer with a basic compound, said polymer and basic compound being the sole reactants, at a temperature below the decomposition temperature of the said polymer, said monoolefin having from 2 to 4 carbon atoms per molecule, whereby a modified monoolefin/carbon monoxide polymer is obtained.

2,457,280

PROJECTION APPARATUS FOR CHANCE SELECTED INDICIA

Harold E. Seaman, Cleveland Heights, Ohio

Application February 21, 1947, Serial No. 730,125
3 Claims. (Cl. 88—24)



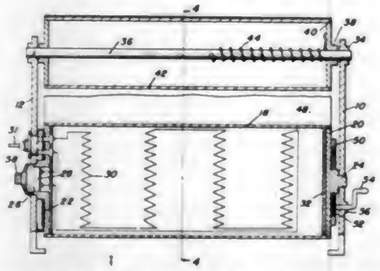
1. In apparatus of the character described, a horizontal shaft having a head, means for rotating said shaft and returning it to a predetermined angular position, said head having a flat portion adjacent its normally upper side, a ring loose upon said head, said ring having a series of image forming sections, each of which has an internal and an external flat, each of said internal flats being adapted to engage the flat portion of said head, means for causing a beam of light to impinge upon a section occupying a predetermined angular position, and for projecting said beam, and a yieldable member biased toward said ring having a flat surface adapted to ride against the ring as the latter revolves and by engagement with an external flat to center a ring section with respect to said light beam when the ring comes to rest.

2,457,281

CONTROL MECHANISM FOR MODEL AIRPLANES

John K. Shannon, Kenosha, Wis.

Application May 11, 1946, Serial No. 669,021
2 Claims. (Cl. 46—78)



1. In a toy vehicle having a pivoted control surface, a spiral cam track provided on its periphery with lobes and valleys, means for rotating said cam track, a pivoted spring pressed lever engaging said cam track and movable therealong during the rotation thereof, said lever being adapted to rise and fall different distances during its travel on said cam track by said lobes and valleys, and means operatively connecting the lever to the pivoted control surface for swinging the same, said cam track including a plurality of detachable cam track sections of different peripheral configurations.

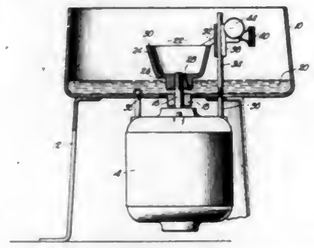
2,457,282

MATRIX DRYING AND ROASTING MACHINE

Oscar R. Simmons, Topeka, Kans.

Application June 19, 1947, Serial No. 755,677
3 Claims. (Cl. 219—19)

1. In a matrix drying and roasting machine including a pair of side members, a hollow cylindrical member having end plates, heating coils mounted within said cylindrical member, and a spring tensioned roller journaled between said side members, bearings carried by the end plates of said oven rotatably engaging the side members, one of said bearings being hollow to receive a thermal controlled unit for the heating coils of said oven, an internally toothed ring gear fixed to one end plate of said oven, a crank handle carried by one of said side members, a pinion carried by said crank handle engaging said ring gear, an electrical connection carried by said remaining side member, conductive members



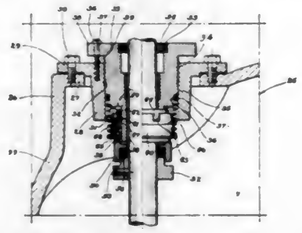
carried by said remaining end plate and connected to the heating coils, said conductive members engaging said electrical connection, and a shield carried by said last mentioned side member embracing and shielding said conductive members.

2,457,283

TUNGSTEN CARBIDE TOOL GRINDER

Frank P. Slater, Kansas City, Mo.

Application January 14, 1946, Serial No. 641,121
3 Claims. (Cl. 51—125)



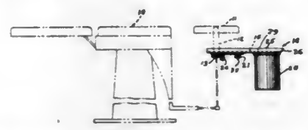
1. In a tool grinder of the character described, a reservoir for liquid coolant; a grinding element rotatably mounted in the reservoir with a portion thereof below the level of the liquid; and means for directing the liquid toward one surface of the element as the element is rotated, said means comprising a duct formed in the element with one end thereof below the surface of the liquid, the said duct being inclined with respect to the axis of rotation of the element and with the said one end of the duct leading the remaining portion thereof as the element is rotated in one direction.

2,457,284

ADJUSTABLE FLUID SEAL

Archie J. Solari, Chicago, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois

Application September 24, 1945, Serial No. 618,102
3 Claims. (Cl. 286—11)



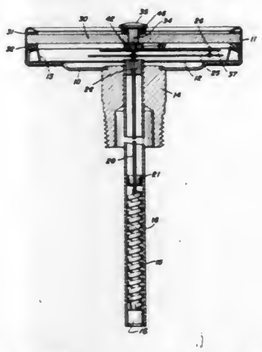
1. A sealing device for relatively rotatable members which comprises a sealing ring, an adjustable abutment for the ring on one of the members, a seal sub-assembly including an axially movable washer, and means for mounting the sub-assembly on the other member, said other member having a threaded opening therein, said means including a sleeve insertable into the threaded opening around the first-mentioned member and having threads cooperating with the threads of the opening, means for effecting a seal solely between the sleeve and the mounting means, an axial extension on the sleeve aligned with a portion of the ring, means for sealing the washer with respect to the extension, said sub-assembly being compressible such that the extension may be advanced by means of the threads into contact with the ring after the washer has contacted the sealing ring, and means for locking the sleeve against rotation, thereby to fix the sleeve axially relative to the ring.

2,457,285

TRAY

Harvey A. Stepner, Richmond Hill, N. Y.

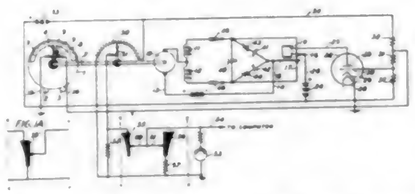
Application May 14, 1946, Serial No. 669,720
1 Claim. (Cl. 155—188)



In a tray adapted for use with the foot rest of a chiropodist's chair and including means detachable mounting said tray on said foot rest in forwardly subjacent relation thereto, the improvement comprising a plane surface on said tray, said surface being formed with a waste disposal aperture therein, a depending annular flange integral with said tray and surrounding said aperture, a waste receptacle for said tray, said receptacle being formed with an open top, and said flange and said top including complementary means for readily detachably connecting said receptable to said flange below said aperture.

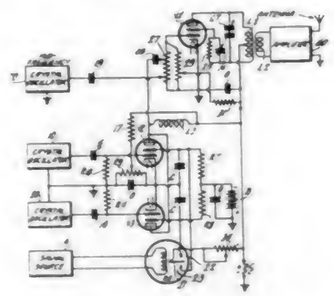
2,457,286

MAXIMUM DEMAND INDICATOR



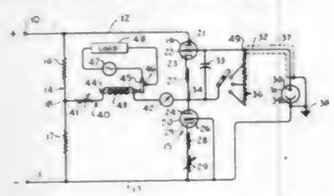
Reidar A. Tollefsen, Brighton, and Robert A. Hunt, Greece, N. Y., assignors to Rochester Manufacturing Company, Rochester, N. Y., a corporation of New York

Application November 28, 1947, Serial No. 788,748
9 Claims. (Cl. 116—129)



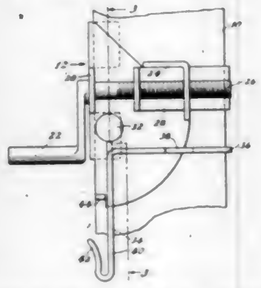
4. A dial gauge comprising a rotary indicating pointer which is movable in the operation of the gauge, a supporting member, a recording pointer, which is made of a magnetically attractable material, journaled on said supporting member, means for moving the recording pointer in one direction on movement in one direction of the indicating pointer, and a ring made of permanently magnetized material mounted on said supporting member to surround the hub of the recording pointer to hold the recording pointer in any position to which it may be moved by the indicating pointer.

2,457,287
AIR-SPEED INDICATING SYSTEM
Charles H. Townes, Delray Beach, Fla., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 7, 1944, Serial No. 543,935
4 Claims. (Cl. 73—182)



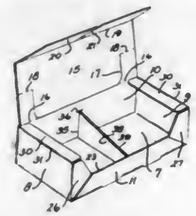
1. A system for producing an electrical quantity proportional to true air speed in air of known temperature and pressure comprising in combination an air speed indicating instrument having an indicating element, a source of voltage, means for continuously deriving a voltage from said source proportional to the movement of the indicating element of said instrument, an electrical circuit including said source of voltage, said voltage deriving means and means for modifying the derived voltage from said source, said last-named means comprising a variable resistance having a variable element, and means for determining the variation of said resistance comprising in combination a stationary scale and a scale movable with the variable element of said resistance adjacent said stationary scale, one of said scales being calibrated in terms of temperature and the other of said scales being calibrated in terms of altitude.

2,457,288
FREQUENCY SHIFT KEYING
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application February 11, 1944, Serial No. 521,907. Divided and this application February 7, 1946, Serial No. 646,069
7 Claims. (Cl. 250—8)



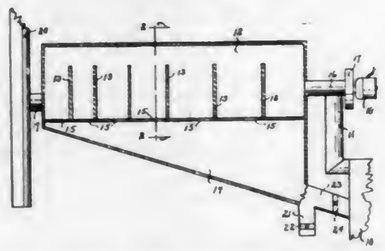
5. The method of signalling by frequency shift keying which includes these steps, producing oscillatory energy the frequency of which is readily variable, producing oscillations of a first and substantially fixed frequency, entraining said first mentioned oscillations by said second mentioned oscillations, generating oscillations of a second and substantially fixed frequency higher than the frequency of said first oscillations of substantially fixed frequency, generating oscillations of a third and substantially fixed frequency lower than the frequency of the first mentioned oscillations of fixed frequency, entraining said oscillations of readily variable frequency alternately in accordance with said oscillations of second and third fixed frequency, generating signalling currents the characteristic of which alternates from a condition indicating mark to a condition indicating space and vice versa, and controlling the entraining of said oscillations of readily variable frequency by said oscillations of said second and third substantially fixed frequency in accordance with changes in the character of said signals.

2,457,289
PHOTOTUBE CONTROL-TEMPERATURE INDICATING APPARATUS FOR FURNACES
Alan Warnick, Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application January 16, 1948, Serial No. 2,784
12 Claims. (Cl. 250—41.5)



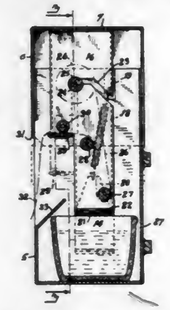
1. An electrical circuit for temperature control comprising an electrical bridge circuit including two series resistors and two series vacuum tubes connected in series, one of said tubes being provided with grid and cathode elements, a current source connected to the respective junctions of each tube and the adjacent series resistor, and a load circuit between the junctions of the respective resistors and tubes, means in the bridge circuit for balancing the bridge at a selected temperature level, and means for unbalancing the bridge at another temperature level, said means comprising a phototube connected to said grid and in parallel with the other of said tubes, whereby variation of current in said phototube controls the voltage of the tube grid.

2,457,290
PAINT BUCKET BRACKET
William H. Welsh, Detroit, Mich.
Application May 23, 1946, Serial No. 671,877
2 Claims. (Cl. 248—210



1. A device of the character described, comprising a hanger plate, parallel U-shaped arms on said plate at the top and bottom edges thereof for engaging a support, a crank, means on said plate for journalling said crank therein, a clamp threadably mounted on said crank for engaging the opposite side of said support, and an arm on said plate for supporting a paint bucket and paint brushes thereon.

2,457,291
CARTON AND DISPLAY STAND
Frederick W. Wenzel, Milwaukee, Wis., assignor to Hummel & Downing Company, Milwaukee, Wis., a corporation of Wisconsin
Application February 10, 1945, Serial No. 577,270
5 Claims. (Cl. 229—27)

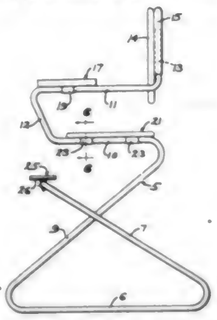


1. In a carton, the combination with a tray portion having a bottom and front, rear and end walls, the rear wall having upright slit means, of rear reenforcing panels connected to the respective end walls and extending therefrom behind the rear wall toward said slit means, partition plies connected with said panels and extending through said slit means and forwardly across said bottom, and means interlocking the extremities of said partition plies with said front wall, the rear wall being provided with a cover panel in hinged connection therewith having at its free margin a slit terminal flap, said cover panel being transversely foldable substantially upon its longitudinal center line, and the slit portion of its flap being adapted for interlocking engagement with the partition plies.

2,457,292
SMOKE AND SOOT ELIMINATOR
Roger F. Williams, Des Moines, Iowa
Application February 27, 1946, Serial No. 650,654
2 Claims. (Cl. 183—110)

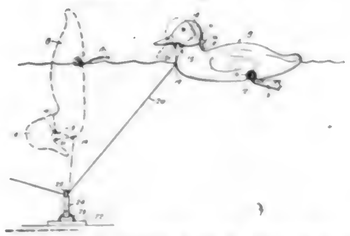
1. In a device of the class described, a housing, a plurality of spaced apart vertical baffle walls inside said housing each extending from the bottom of said housing and terminating a distance from the top of said housing to provide a straight uninterrupted flow of gases above them, soot outlet openings in the bottom of said housing, a conduit communicating with the inside of said housing at a point below the top planes of said baffle walls and its other end communicating with the inside of a combustion chamber, an outlet pipe having one end communicating with the outside atmosphere and its other end communicating with the inside of said housing at a point below the top planes of said baffle walls, a collecting compartment on the bottom of said housing communicating with said openings and having its bottom sloping toward and communicating with the inside of said combustion chamber, a means for closing the inside of said collecting compartment from said combustion chamber at times, an outlet conduit communicating with the inside bottom of said collecting compartment, and a means for closing said last-mentioned conduit at times.

2,457,293
TOWEL PAPER MOISTENER AND DISPENSER
Godfrey K. R. Winzer, Seattle, Wash.
Application August 25, 1947, Serial No. 770,402
5 Claims. (Cl. 91—14)



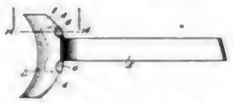
1. A device of the character described, comprising upper and lower box-like members interconnected at their open ends for telescopic movement, a liquid reservoir supported on the bottom of the lower member, means for limiting the telescopic movement of the members in both directions, means comprising springs operatively interconnecting the two members to normally hold them in maximum extended position, two spaced brackets secured to and extending downwardly from the top of the upper member, a roller supported for rotation by the brackets near their upper ends for supporting a roll of towel paper thereon, a roller interconnecting the lower ends of the brackets, a roller interconnecting the brackets between the upper roller and the lower roller, the last named roller being spaced to one side of a plane passing through the upper and lower rollers, a cross bar interconnecting the brackets below the last roller, forming a space through which the paper may pass, means between the last roller and lower roller for guiding the paper into said space, and a serrated lower edge on the front side of the upper box-like member for severing the paper.

2,457,294
HIGH CHAIR CONSTRUCTION
Halbert M. Wood, Madison, Wis.
Application August 12, 1946, Serial No. 690,059
3 Claims. (Cl. 155—196)



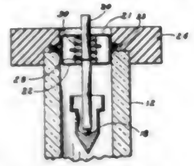
1. In a high chair construction, a frame embodying sections constructed of lengths of tubular material formed to provide vertical ends, a back, a tube secured to the back, the ends of the

tube being vertically disposed and in which the vertical ends of the frame sections are secured, the opposite ends of the frame sections being extended inwardly, a footrest, a tube secured to the



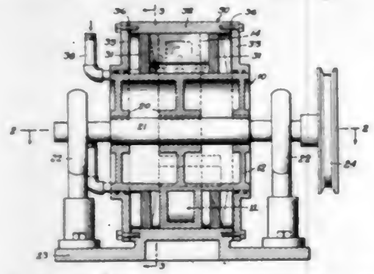
footrest and adapted to receive the inwardly extended ends of the frame sections, and said back and footrest securing the sections of the frame together.

2,457,295
DUCK DECOY
John A. Woodhead, Swarthmore, Pa.
Application January 14, 1944, Serial No. 518,229
6 Claims. (Cl. 43—3)



1. A duck decoy comprising a body, and a pair of foot members movably mounted on said body, by a pair of spirally wound flat metal springs, each spring having one end secured to said body and the other end attached to the respective foot member.

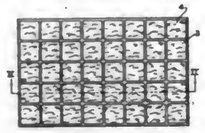
2,457,296
TRIGGER FOR FIREARMS
Victor G. Yawman, Rochester, N. Y., assignor to Yawman Metal Products, Inc., Rochester, N. Y., a corporation of New York.
Original application May 10, 1943, Serial No. 486,442. Divided and this application February 14, 1946, Serial No. 647,619
4 Claims. (Cl. 42—69)



1. A trigger comprising a sheet metal finger hold portion substantially U-shaped in transverse section, to provide a rearwardly opening channel, and a sheet metal loop-shaped extension, said extension having end portions in parallel engagement with each other secured in and substantially filling a material part of the length of the channel of said portion to extend outwardly therefrom.

2,457,297
FLUID METER
Willis Fay Aller, Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio
Application November 10, 1944, Serial No. 562,779
1 Claim. (Cl. 73—209)

A measuring device of the character described comprising an upright, transparent flow tube having a tapered passage with its lower end forming the supply portion and its upper end forming the discharge portion for the respective supply and discharge of a gaseous fluid, a support for said tube, a float in said tube responsive to the rate of flow of fluid through the tube, said float being cup shaped with a hollow upper portion and an imperforate lower wall the upper surface of such wall providing an upwardly and outwardly flaring central recess inside the float, a stem extending only partly down the tube and having its lower portion rounded and adapted to enter the hollow upper portion of the float in contact with the recess in the float's imperforate lower wall, and a spring carried at the upper end of said tube and yieldingly supporting said stem to gradually absorb the impact of the float.

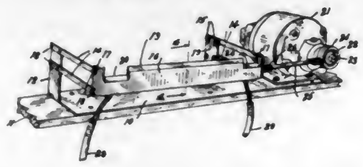


2,457,298
ROTARY AXIAL VANE COMPRESSOR
David Lewis Ball, San Luis Obispo, Calif.
Application October 5, 1944, Serial No. 557,248
3 Claims. (Cl. 230—152)

1. In a machine of the character described, a vane comprising an outer member having a convex top edge, an inner member having a concave bottom edge, a shim positioned between the two members, and means holding said members and said shim together.

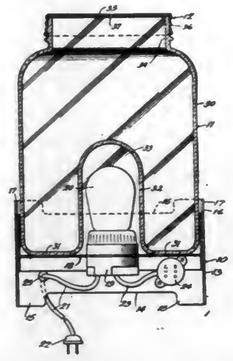
2,457,299
SURFACE COVERED STRUCTURE AND SURFACE COVERING THEREFOR
George K. Biemesderfer, Jr., Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application January 11, 1944, Serial No. 517,858
2 Claims. (Cl. 175—264)

1. A flexible surface covering of the type capable of being rolled for shipment and installation comprising a non-conductive, flexible backing, flexible strips of electrically conductive plastic sheet material overlying and secured to the backing in closed spaced relationship, said strips being electrically connected into a current conducting grid, and inlays of flexible composition in sheet



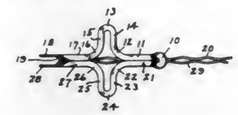
form secured to the backing and filling the openings in said covering and terminating in the plane of the upper surface of the grid, said grid, inlays and backing being consolidated into a unitary final structure capable of being rolled for shipment.

2,457,300
LOWER POLYMER OF GLYCIDYL SORBATE AND METHOD OF MAKING IT
Albert Bernard Boese, Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application September 24, 1946, Serial No. 699,076
6 Claims. (Cl. 260—348)



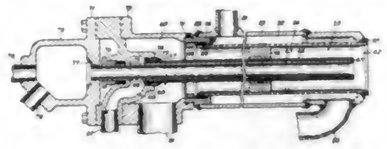
1. As a new composition of matter a mixture of lower polymers of glycidyl sorbate.

2,457,301
MACHINE FOR REMOVING THE WAX CAPS FROM HONEYCOMBS
William T. Brand, Beemer, Nebr.
Application October 4, 1946, Serial No. 701,268
1 Claim. (Cl. 6—12)



A honey capping device comprising: a base plate; two flat, upstanding posts extending upwardly from said base plate adjacent one side thereof in parallel, spaced relation, with their planes at right angles to the long axis of the base plate; a pair of horizontal, resilient arms secured to and extending from each post over said base plate; a knife blade; rearwardly turned extremities on said knife blade forming terminal flanges thereon; means for fixedly securing each terminal flange to one pair of arms so as to support said knife blade in a vertical plane parallel to the axis of said base plate, the resiliency of said arms allowing said blade to reciprocate longitudinally and horizontally; means for heating said knife blade; a connecting rod fixedly secured at one extremity of said knife blade, said rod comprising an elongated, flat, resilient member lying in a horizontal plane so that its projecting extremity may flex vertically; a motor mounted on said base plate adjacent one extremity thereof; a cam operated by said motor; means for communicating the eccentric motion of said cam to said connecting rod; and a sharpened upper edge of said knife blade, there being notches in said blade at each extremity of said edge to receive the side members of a honeycomb.

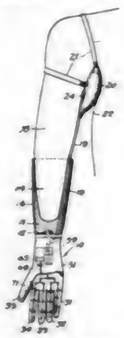
2,457,302
DISPLAY DEVICE FOR FOODSTUFFS
Harold E. Christensen, Wilmette, Ill., John J. Stein, Cleveland, Ohio, and Arthur S. Kester, Chicago, Ill.
Application October 11, 1945, Serial No. 621,746
2 Claims. (Cl. 219—45)



1. A food crisping and display device for displaying and crisping foodstuffs comprising a base having an electric light socket facing upwardly from the base for receiving an electric light bulb to provide a source of heat and light, and a transparent container for the foodstuffs carried by the base and including a recess in the bottom thereof for accommodating the electric light bulb to heat and illuminate the container for displaying and crisping the foodstuffs therein, an opening at the top of the container to provide access into the container for dispensing the foodstuffs and a cover for the opening.

2,457,303
HAIR CURL PIN
Donald Odell Cross, Evansville, Ind.
Application August 31, 1946, Serial No. 694,373
8 Claims. (Cl. 132—46)

1. A hair curl pin comprising a pair of hair gripping members normally lying side by side; an upper member extending in part at least laterally across over the said pair of members; and means yieldingly interconnecting said upper member with rear end portions of said pair of members; whereby said pair of members may yieldingly, compressibly straddle a hank of hair adjacent the scalp and said upper member compressibly retain a curl of hair extending from said hank in a flattened condition over said pair of members; said pair of members being normally pressed one toward the other and rear end portions thereof being normally spaced one from the other whereby squeezing together of those rear end portions will rock apart the forward ends of said pair of members; said interconnecting means comprising laterally spaced, substantially arcuate extensions of said pair of members, upper forwardly turned ends of which extensions connect with said upper member.

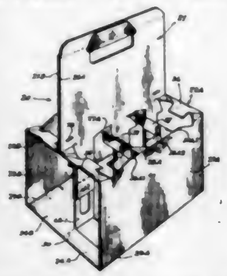


2,457,304
ATOMIZING FUEL BURNER WITH COOLING JACKET
John Marshall Crowe, Covington, Ky.
Application January 23, 1945, Serial No. 574,049
9 Claims. (Cl. 158—11)

1. In a burner of the class described, the combination of a burner body including a cooling jacket, tubular in form and having an open passageway axially within it, a fuel tube extending longitudinally through said passageway, and having a fuel inlet end and an outlet end, fuel atomizing means at the inlet end of the fuel tube, a second tube surrounding the fuel tube in spaced relationship, to provide a heating fluid chamber extending substantially from end to end of the fuel tube, said heating fluid chamber being open at the outlet end of the fuel tube for discharge of heating fluid in the direction of the fuel discharge, and means for directing a heating fluid into said chamber.

7. In a burner of the class described, the combination of a burner body including a cooling jacket tubular in form and having an open passageway axially within it, a fuel tube extending longitudinally through said passageway, and having a fuel inlet end and an outlet end, fuel atomizing means at the inlet end of the fuel tube, a second tube surrounding the fuel tube in spaced relationship, to provide a heating fluid chamber extending substantially from end to end of the fuel tube, said heating fluid chamber being open at the outlet end of the fuel tube for discharge of heating fluid in the direction of the fuel discharge, and means for directing a heating fluid into said chamber, said second tube being spaced from the cooling jacket to provide a passageway therebetween terminating in a discharge port at the outlet end of the fuel tube, and terminating in a gas entry port near the opposite end of the fuel tube, and means for feeding gas under pressure to said entry port.

2,457,305
ARTIFICIAL HAND
Frank L. Dale, New York, N. Y.
Application January 30, 1946, Serial No. 644,359
1 Claim. (Cl. 3—12)

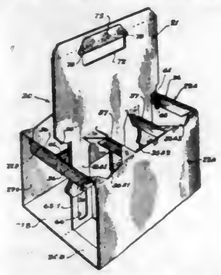


In an artificial hand having a thumb and four fingers, members for closing each finger, each of said members engaging one end of one of a pair of arms, linkage between said pair of arms and a third arm and additional linkage between said third arm and a lever, means for operating said lever to transmit through said linkage and said arms tension on said retractable members to close said hand, said means comprising a pair of cylinders mounted in said hand, pistons in said cylinders, one of said pistons having a shaft engaging said lever and means for forcing air into the other of said cylinders to force fluid from said cylinder into the other cylinder to operate the piston in said cylinder comprising a bag worn between the arm and body of the wearer, a valve in said bag controlled by the wearer and a tube communicating from said bag to said cylinder whereby the exertion of pressure against said bag will force air out of said bag through said tube into said cylinder to operate said pistons.

2,457,306
SYNTHETIC POLYMERS OF HEXADIENE-1,5
Henry Dreyfus, London, England; Claude Bonard, administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 22, 1944. Serial No. 519,361. In Great Britain December 3, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 2, 1962
5 Claims. (Cl. 260—93)

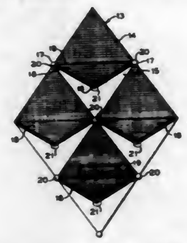
1. Process for the manufacture of polycyclic unsaturated synthetic resins which are solid at temperatures below 120° C., which comprises heating hexadiene-1:5 in the absence of other unsaturated hydrocarbons to a temperature of 150° C.–180° C. until a polymer of melting point lower than 100° C. has been formed, and then heating this low melting polymer to a temperature of 180° C.–220° C. for at least three hours by means of a phenol as heating liquid, the whole of the process being carried out under non-oxidizing conditions.

2,457,307
BOTTLE CARRIER
Maynard G. Hall, Rutherford, and Thomas Hurban, Jr., Hasbrouck Heights, N. J., assignors to Empire Box Corporation, Garfield, N. J., a corporation of Delaware
Application July 12, 1945, Serial No. 604,654
15 Claims. (Cl. 224—45.2)



7. A pre-formed bottle carrier formed from cardboard or like material and adapted to receive bottles of predetermined height and comprising side walls, a bottom wall, a handle portion comprising juxtaposed panels, and bottle receiving sections extended between the side walls and the respective panels of said handle portion whereby the handle portion is disposed above said bottom wall substantially midway between said side walls, said bottle receiving sections having bottle receiving openings therein, bottle cushioning flaps cut from said bottle receiving sections and disposed to depend in opposed pairs from the respective panels of said handle portion in alignment therewith, said handle portion including a part which may extend above the tops of bottles of said predetermined height that are disposed in said bottle receiving openings and rested on said bottom wall, said part having a handle opening therein, said flaps having the lower edges thereof normally spaced from said bottom wall sufficiently to enable limited downward movement of said handle portion to thereby enable the upper free end of said handle portion to be moved downwardly substantially into alignment with the tops of the bottles whereby said part of said handle portion may be depressed so as not to interfere with the stacking of one bottle carrying carrier of the aforesaid character directly over and upon the tops of bottles in another such carrier, connecting links cut from the material of said bottom wall and connected thereto substantially midway between said side walls, said connecting links having longitudinally extended slots formed therein, and said links being extended upwardly so as to project between the pairs of bottle cushioning flaps, and means extended through each pair of bottle cushioning flaps so as to extend through the slot of the related connecting link to thereby afford lost-motion weight-supporting connections to support the weight of said bottles directly from said handle when said handle is in its upper position and allow depressing movement of said handle as aforesaid when one carrier is to be stacked upon another.

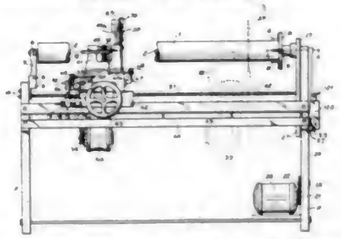
15. A pre-formed collapsible bottle carrier formed from cardboard or like material and comprising a bottom wall, side walls, a handle portion, and bottle receiving sections extended between said side walls and said handle portion, each of said bottle receiving sections comprising a plurality of webs arranged at spaced intervals therein to afford bottle receiving openings in the sections between said webs, said webs having ends thereof respectively connected to the handle portion and a side wall along score lines, the webs at the ends of said bottle receiving sections having the score lines along which they are connected to the side walls disposed at such an angle to the longitudinal axis of such webs that the inner ends of such last mentioned score lines are disposed closer to said bottom wall than the outer ends of such last mentioned score lines, and such end webs also having a plurality of other score lines formed adjacent to the fold line that joins the end webs to said handle portion and extending from the outer edge of said webs inwardly at an angle to said last mentioned fold line and in diverging relation to each other, and a flap formed on each of said end webs and extended into the adjacent bottle receiving opening for engagement by a bottle as it is loaded into such opening to tilt the related web inwardly and downwardly in a predetermined amount as the bottles are loaded into the carrier.



2,457,308
BOTTLE CARRIER
Maynard G. Hall, Rutherford, and Thomas Hurban, Jr., Hasbrouck Heights, N. J., assignors to Empire Box Corporation, Garfield, N. J., a corporation of Delaware
Application November 9, 1945, Serial No. 627,680
4 Claims. (Cl. 224—45)

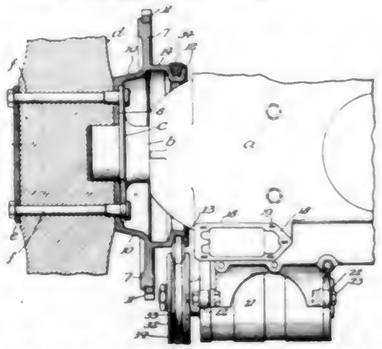
3. A pre-formed collapsible bottle carrier formed from cardboard or like material and comprising a bottom wall, side walls, a handle portion, and bottle receiving sections extended between said side walls and said handle portions, each of said bottle receiving sections comprising a plurality of webs arranged at spaced intervals therein to afford bottle receiving openings in the sections between said webs, all of said webs having ends thereof connected to a side wall along score lines, and those webs that are spaced from the ends of said carrier being connected to said handle section along score lines, the webs at the ends of said bottle receiving sections having the score lines along which they

are connected to the side walls disposed at an angle to the longitudinal axis of such webs, and each of such end webs also having another score line formed adjacent to the fold line that joins the end webs to the side wall and extending from the outer edge of said web inwardly at an angle to said last mentioned fold line and in diverging relation to each other, said end webs being severed from said handle section at the ends thereof that are spaced from said side walls, securing flaps cut in part from the material of said handle section and joined along fold lines to said last mentioned ends of said end webs, and means securing said securing flaps together.



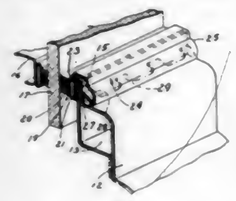
2,457,309
CHANGEABLE DECORATIVE FABRIC
Atha-Lane Joyce, Washington, D. C.
Application August 23, 1946, Serial No. 692,548
3 Claims. (Cl. 2—278)

1. A fabric comprising at least four individual units secured together, each of said units comprising two pieces of cloth of the same size and shape and different color, said two pieces of cloth being secured together along their edges over a portion of the length thereof and having their remaining portions oppositely disposed, the resulting double thickness portion being foldable from one extreme position to another along a line connecting the terminations of the secured portions, the single thickness portions of the unit being secured to an adjacent single thickness portion of a corresponding unit of the same size and shape, at least four of these units being



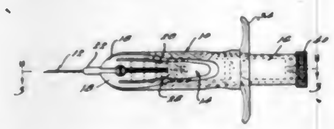
secured together to produce a decorative panel or piece of fabric of the desired size and shape, fastening means secured on the fabric, cooperative fastening means secured to the foldable portion of each unit, said foldable portion being secured in either one or the other extreme position by said fastening means whereby upon such movement and fastening the appearance of the fabric is materially changed as by design, color or both.

2,457,310
CUTTING MACHINE
David N. Judelshon, Park Ridge, N. J.
Application January 21, 1947, Serial No. 723,235
9 Claims. (Cl. 164—69)



5. A cutting machine which has a frame and a support for the material which is to be cut, a knife-carriage which is movable to-and-fro relative to said frame in a selected path, knife-carriage guide means for guiding said knife-carriage to move in said selected path, a knife head pivoted to said knife-carriage, a knife mounted in said knife head, a gage-carriage slidable on respective gage-carriage guide-means relative to said frame in said selected path and also slidable towards and away from said knife-carriage in said selected path, a stop fixed to said knife-carriage, said stop being located to abut said gage-carriage to limit the movement of said knife-carriage away from said gage-carriage, and gage-carriage holding-means for holding said gage-carriage releasably fixed to said frame.

2,457,311
STARTING AND GENERATOR-DRIVING MECHANISM FOR ENGINES
Robert S. Kidd, Williamsport, Pa., assignor to Avco Manufacturing Corporation, a corporation of Delaware
Application January 19, 1945, Serial No. 573,529
4 Claims. (Cl. 170—135.75)

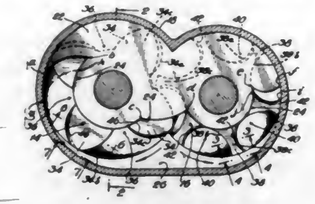


1. The combination with an engine including a casing and a power output shaft; a propeller fixedly mounted on the outer end of said shaft; an engine starter mounted on the casing; an electric generator movably mounted on the casing; of a combined demountable unit secured to rotate with the shaft and the propeller, for driving the generator from the engine and driving the engine from the starter, the unit including a wheel for driving the generator and a gear engageable by the starter, said gear and wheel being both coaxial with the shaft and disposed between the propeller and the engine casing.

2,457,312
WEATHERSTRIP MOLDING
Clarence F. Kramer, Birmingham, Mich.
Application July 30, 1945, Serial No. 607,767
7 Claims. (Cl. 296—44.5)

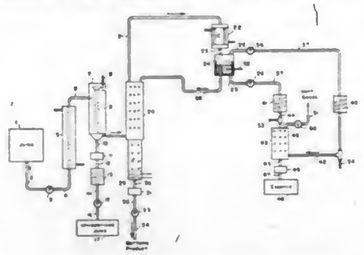
7. An article of manufacture comprising a sealing strip retainer having a wall adapted to extend along the inner side of a welding flange or the like of a window opening and having a base portion adapted to extend laterally outwardly over the edge of the flange, and a channel shape molding having one edge portion embracing the base portion of the retainer and having its other edge portion notched out at linearly spaced points to provide prongs which are adapted to engage the welding flange to hold the assembly thereon.

2,457,313
HYPODERMIC SYRINGE
Marshall L. Lockhart, Rutherford, N. J.
Application March 5, 1945, Serial No. 580,988
6 Claims. (Cl. 128—220)



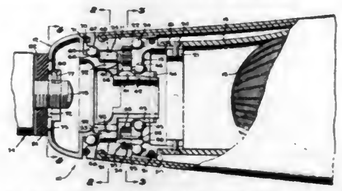
4. As an article of manufacture, an ampule comprising a tubular body, an end wall permanently closing one end of the same, the opposite end of said body being open and screw threads of a diameter larger than said body and disposed adjacent the closed end of the same.

2,457,314
ROTARY SCREW WHEEL DEVICE
Alf Lysholm, Stockholm, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application August 12, 1943, Serial No. 498,321
7 Claims. (Cl. 230—143)



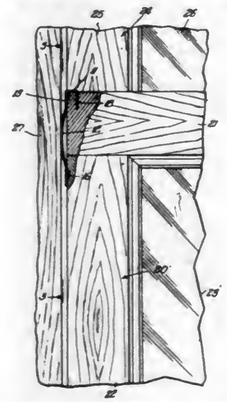
1. A rotary device comprising a casing and intermeshing male and female rotors mounted for rotation in said casing, said rotors being provided with helical lands and grooves, the lands

of the male rotor having convexly curved flanks at least the major portions of which lie outside the pitch circle of the rotor, the lands of the female rotor having concavely curved flanks at least the major portions of which lie inside the pitch circle of the rotor and the lands of both of said rotors having inlet end surfaces extending transversely of the axes of the rotors, said casing having inlet and outlet ports and including a ported inlet end wall cooperating with said inlet end surfaces of the lands to alternately open and



close the inlet end of each of said grooves as the rotors revolve, the inlet end surface and the leading flank of each land of at least one of said rotors being joined by a chamfer extending generally transversely of the axis of rotation of the rotor along the curved line of juncture of said inlet end surface with said leading flank and the apex edge of said leading flank extending without change of helix angle from a point on the rotor remote from the inlet end of the rotor to or closely adjacent to the inlet end surface of the land.

2,457,315
VOLATILE FLAVOR RECOVERY PROCESS
Howard P. Millerville, Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture
Application September 17, 1945, Serial No. 616,953
2 Claims. (Cl. 99—205)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



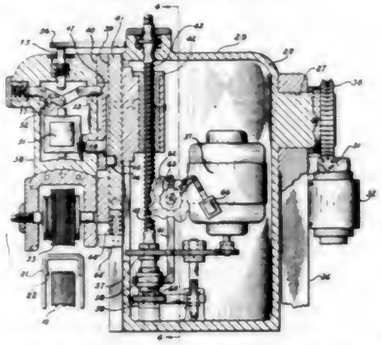
1. A process for recovering the volatile flavors from a fruit juice, comprising vaporizing a portion of the juice, which vaporized portion contains water vapors, volatile flavors, and noncondensible gases, removing the bulk of the water vapors from the vaporized portion by fractional distillation, condensing the remaining vapors to form a liquid condensate without condensing the noncondensible gases and volatile flavors associated therewith, and recovering substantially all the volatile flavors by contacting the noncondensible gases and gaseous volatile flavors with the liquid condensate at a pressure not less than atmospheric to remove the volatile flavors from the noncondensible gases by dissolving said flavors in the condensate to give at least a 25-fold essence.

2,457,316
PROSTHETIC WRIST
John K. Northrop, Los Angeles, and Michael J. Nagy, Inglewood, Calif., assignor to Northrop Aircraft, Inc., Hawthorne, Calif., a corporation of California
Application November 18, 1946, Serial No. 710,500
10 Claims. (Cl. 3—12)

9. A prosthetic wrist for use in partial amputation of the forearm, comprising a first member adapted for connection to the upper arm of the user and held thereby against turning, a second member rotatable with respect to said first member and adapted for connection to the forearm stump to be turned thereby, a third member adapted for connection with a prosthetic hand, means for supporting said third member for rotary movement relative to said first member about an axis disposed longitudinally of said second member and the stump, rotary motion transmitting means operable independently of the length of the stump for transmitting rotary motion at an arbitrarily selected increased speed ratio between said second member and said third member, an input for said rotary motion transmitting means responsive to rotary motion of said second member, and an output for said rotary motion transmitting means for imparting rotary motion to said third member at said increased speed ratio, said rotary motion transmitting means and said input and said output therefor being disposed along said axis and within the longitudinal space between said second member and said third member.

2,457,317
WINDOW CLAMP
Marvin R. Olsen, Glen Ellyn, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 14, 1946, Serial No. 654,339
4 Claims. (Cl. 292—76

1. In an anti-rattling device for windows and the like, an integral strip of metal, including a leg



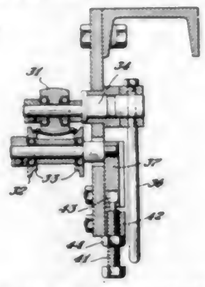
portion and a right angle flange portion at one end of the leg portion, an arcurate section formed in the leg portion by bending the same outwardly centrally thereof in a direction opposite to that of the flange portion, securing means provided by the flange portion and comprising a spike disposed at right angles to the flange portion and having a spaced parallel relation with the leg portion, and said leg portion having a prong bent from the metal thereof forming additional securing means.

2,457,318

GRINDING MACHINE WITH AUTOMATIC CRUSH DRESSING MECHANISM

Louis F. Polk, Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio

Application March 2, 1945, Serial No. 580,589
10 Claims. (Cl. 125—2)



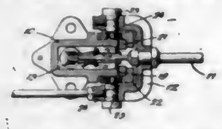
1. A grinding machine having a grinding wheel and a rotatable crusher for forming the surface of said grinding wheel, a crusher supporting housing, means pivotally carrying said supporting housing for rotational adjustment of the crusher axis towards and from the grinding wheel, and means for moving the crusher bodily in said support to feed the crusher into the grinding wheel, and mechanism providing for sequential operation of said means to initiate the operation of one of said means after the operation of the other.

2,457,319

CINEMATOGRAPHIC DYE PRINTING

Gerald F. Rackett, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine

Application August 31, 1945, Serial No. 613,828
8 Claims. (Cl. 271—2.1)



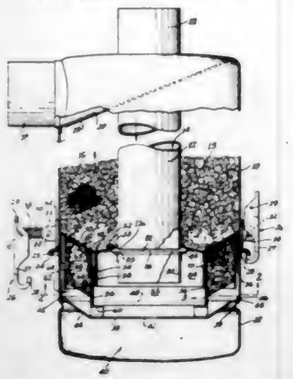
1. In the art of printing by imbibition from a dyed matrix to a blank having a dye absorptive layer, apparatus comprising an endless belt adapted to travel in an orbital path, the belt having marginal rows of teeth shaped to fit into the sprocket holes of superposed films to hold the films in registry while the films are traveling with the belt, and the belt being curved transversely so that it is concave on the film side, whereby the margins of the films, when pressed together against the belt, remain in intimate contact while on the belt.

2,457,320

FLUID SEAL

Albert J. Rosenberger, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois

Application March 22, 1945, Serial No. 584,074
2 Claims. (Cl. 286—29)



1. A fluid seal for a pressure responsive instrument comprising a hollow housing adapted to be exposed on its inside to a pressure different than that on its outside, a lever pivoted adjacent the housing one end of which extends into the housing, a pair of spaced annular diaphragms around the lever, each diaphragm being formed by a single annular sheet of curved cross section means connecting the outer edge of one of the diaphragms to the lever, means to connect the outer edge of the other diaphragm to the housing, and a tube around the lever connected at its ends to the inner edges of the diaphragms.

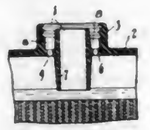
2,457,321

AIR CLEANER

Kenneth F. Russell, Claremont, Calif., assignor, by direct and mesne assignments, to Herman H. Garner, Claremont, Calif.

Application January 4, 1945, Serial No. 571,258
14 Claims. (Cl. 183—15)

7. An air cleaner, comprising in combination: a casing; tubular partition means providing a centrally disposed chamber and an annularly disposed chamber therearound, one of said chambers constituting a low velocity air filter chamber, and the other a high velocity air intake chamber; baffle means extending laterally from said partition means and beneath a portion of said filter chamber; additional baffle means



spaced laterally from and extending beyond the adjacent end of said air intake chamber, thereby providing an extension of said inlet chamber of greater cross-sectional area than that of said inlet chamber and a complementary extension of said filter chamber of smaller cross-sectional area than that of said filter chamber, the cross-sectional areas of said chamber extensions approximating each other to approximately equalize air velocities therethrough, said additional baffle means having a free edge remote from said intake chamber; and closure means lying beyond said free edge and providing an air passage under said edge and connecting said chamber extensions, said baffle means separating and blocking communication between said inlet chamber extension and said filter chamber and its extension.

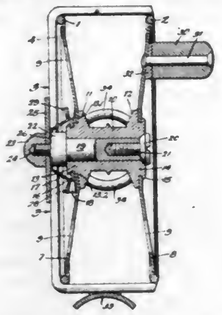
2,457,322

ELECTROLYTE LEVEL CONTROL DEVICE FOR STORAGE BATTERIES

Julius Sandusky, Toronto Township, Peel County, Ontario, Canada

Application August 2, 1947, Serial No. 765,681
6 Claims. (Cl. 136—177)

1. In an electrolyte level control device for storage batteries, a cell having a filling opening in the top thereof, an outer filling tube mounted in the top of the cell around the filling opening and open at its upper end, an inner tube of smaller diameter than the outer tube open at both ends and adapted to provide an opening for initial filling of the battery and insertion of a hydrometer tube for testing said inner tube, being spaced from the outer tube so as to form an annular passage between it and the outer tube, said inner tube extending into the cell below the top thereof to form a closed air space beneath the top of the cell, a shoulder extending between the outer tube and the inner tube below the top of the latter to provide a bottom for the annular space and form a well, a vent aperture communicating between the otherwise closed air space beneath the top of the cell and the well, the aperture being of such size that liquid poured into the well will form a seal over the aperture when the electrolyte in the cell closes the bottom of the inner tube, and a removable cap adapted to be mounted on the outer filling opening to cover the outer open ends of the outer and inner tubes.



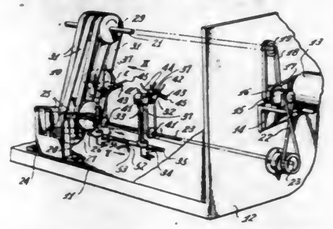
2,457,323

FISHING REEL

George J. Sharps, Chicago, Ill., assignor to Pachner & Kollef, Inc., Chicago, Ill., a corporation of Illinois

Application April 20, 1945, Serial No. 589,297
8 Claims. (Cl. 242—84.6)

1. In a fishing reel, a skeleton frame, a spool disposed within said frame, a stationary shaft on which said spool is rotatably mounted thereon, said shaft being axially secured to said frame, a click gear integrally secured to said spool, an elongated click spring semi-permanently secured to said shaft and frame, spanning said click gear



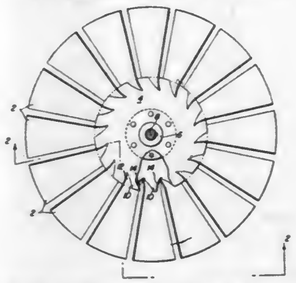
and having both ends thereof in coactive relationship therewith.

2,457,324

EGG CLEANING MACHINE

Escu W. Shock, Rogue River, Oreg.

Application October 6, 1947, Serial No. 778,196
10 Claims. (Cl. 51—144)

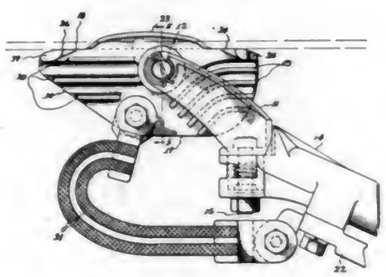


1. An egg cleaning machine comprising: a cradle adapted to receive an egg; a pair of resilient rollers disposed in the cradle for rotating the egg about its longitudinal axis; a plurality of sanding belts engaging a surface of the egg that projects from the cradle; and means for oscillating the cradle substantially through the center of an egg to present the curved end portions of the egg to the sanding belts.

2,457,325

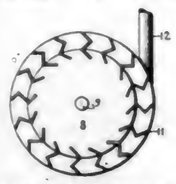
AXIAL FLOW FAN

Philip A. Sidell, Rock Island, Ill., assignor to American Machine and Metals, Inc., East Moline, Ill., a corporation of Delaware



Application May 15, 1943, Serial No. 487,090
6 Claims. (Cl. 170—173)

1. An axial flow fan comprising a central blade supporting element having adjacent its periphery,

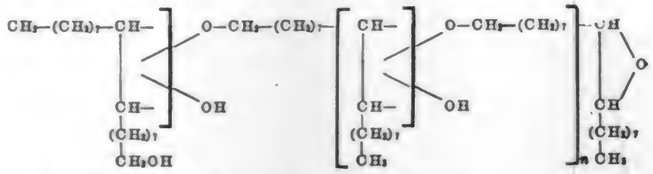


opposed side surfaces disposed in substantially parallel planes, a plurality of blades formed from metal plates connected to said surfaces and having their fluid impelling surfaces angularly disposed with respect to the plane of rotation of said element, the connection between each of said blades and said element being characterized in that a slot is provided in the base of each blade in such manner as to provide anchorage sections on both sides of said slots, said anchorage sections being mounted in straddling relation with respect to the periphery of said element and having their slot defining edges disposed in abutment with the opposed surfaces of said element, said anchorage sections extending in opposed relation peripherally whereby to dispose said edges in substantially parallel planes to provide for substantial line contact thereof with the surfaces of said element when said blades are mounted angularly on said element and means for securing said anchorage section to said element.

2,457,326
TROLLEY GLIDER
William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 2, 1945, Serial No. 580,593
4 Claims. (Cl. 191—59.1)

1. A current collector comprising a glider having an elongated upper contact surface adapted to collect current from a trolley wire, a portion of said contact surface being flanged to form a groove to retain said glider to the trolley wire, and the advance end of said contact surface being flared out beyond the lateral boundaries of said flanges to afford substantially the same contact surface with the trolley wire when in contact with a curving trolley wire as when in contact with a straight trolley wire, said end of said contact surface terminating into a relatively heavy rib extending transversely of the advance end of said glider to radiate the heat caused by the heavy current loads passing therethrough, and a plurality of cooling fins disposed beneath said contact surface and extending laterally from said glider to circulate the air around said glider upon movement thereof and to maintain said glider at a predetermined low temperature both by convection and radiation.

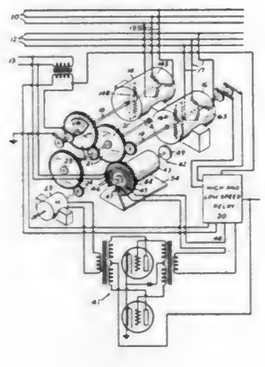
2,457,327
TURBINE WHEEL
Philip H. Stevenson, Cincinnati, Ohio
Application January 11, 1946, Serial No. 640,528
4 Claims. (Cl. 253—50)



1. A turbine wheel comprising a hub, side plates secured to both side faces of said hub, said side plates being of larger diameter than said hub, and a series of blades secured to the periphery of said hub and to both of said side plates, said hub having slots parallel to the axis thereof, and at an angle to the respective radii of the hub, and the inner ends of said blades being engaged in said slots, the impact receiving surfaces of said blades being constituted by two plane surfaces parallel to the axis thereof and at an angle to the axis of said hub and at an angle to each other.

2,457,328
1,2-EPOXIDES AND PROCESS FOR THEIR PREPARATION
Daniel Swern and Geraldine N. Billen, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application May 28, 1946, Serial No. 672,906
6 Claims. (Cl. 260—348)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

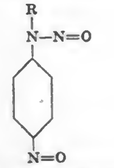
1. A 1,2-epoxide selected from the group consisting of 1,2-epoxytetradecane and 1,2-epoxyoctadecane.



2,457,329
POLYMERS OF 9,10 - EPOXYOCTADECANOL AND PROCESSES FOR THEIR PREPARATION
Daniel Swern and Geraldine N. Billen, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 27, 1946, Serial No. 699,647
17 Claims. (Cl. 260—348)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

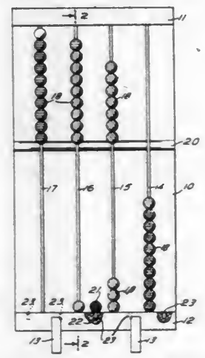
1. A compound of the general formula

where n is zero or any integer.



2,457,330
ELECTRIC ANTIHUNT SERVO SYSTEM
John P. Toner, Woodhaven, N. Y., assignor to Arma Corporation, Brooklyn, N. Y., a corporation of New York
Continuation of application Serial No. 631,078, November 27, 1945. This application October 31, 1947, Serial No. 783,301
24 Claims. (Cl. 318—30)

1. In an electromechanical servo-control system having a servo-motor energized by the voltage generated in a transformer rotor winding driven by the servo-motor toward non-inductive angular relation in the field of the transformer stator winding energized in accordance with the movements of a remote self-synchronous transmitting means, the combination of a damping generator having rotable rotor and stator members, driving connections between said servo-motor and said stator member, means responsive to changes in speed of said stator member for driving said rotor member, and means mounted on said rotor member and cooperating with said stator member for supplying to said servo-motor a voltage that is a function of changes in the speed of said stator member, whereby the response of said servo-motor to the voltage induced in said transformer rotor winding is modified by the voltage generated in said damping generator.

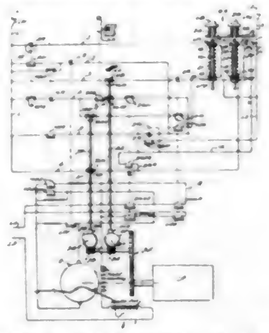


2,457,331
VULCANIZATION OF ISOBUTYLENE RUBBER
Joseph H. Trepagnier, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 8, 1945, Serial No. 621,169
7 Claims. (Cl. 260—79)

1. In the process of vulcanizing isobutylene rubbers which are copolymers of isobutylene and small amounts of a diolefine, which copolymers have a range of unsaturation of from 0.1% to 10% of the unsaturation of natural rubber, the step which comprises incorporating into the vulcanizable isobutylene rubber mix containing sulfur and a vulcanization accelerator of the group consisting of thiuram sulfides and dithiocarbamates, from 0.01 to 3 parts, per 100 parts of isobutylene rubber, of an N-nitroso-p-nitrosoaniline of the formula:

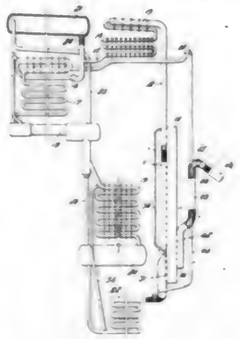
wherein R stands for a hydrocarbon radical of the class consisting of an alkyl group containing not more than 6 carbon atoms, a mono-cycloalkyl group containing not more than 6 carbon atoms and an aralkyl group in which the alkyl chain contains not more than 3 carbon atoms and the aryl group is of the benzene series.

2,457,332
EDUCATIONAL APPARATUS
Francis A. Wade and William Metzner, Philadelphia, Pa.
Application February 5, 1947, Serial No. 726,478
2 Claims. (Cl. 35—33)



1. An abacus comprising the combination of a panel, a plurality of vertically disposed denominationally ordered wires carried by said panel forming spaced rows, a group of ten beads strung on each wire for sliding movement relative thereto, the top bead of each group being visually distinguishable from the nine below it but visually identical with the lower nine beads in the group of the next adjacent higher order, and a horizontal support on said panel intermediate the length thereof for supporting all bead groups, in such a way that flexing any wire releases and drops a selected number of beads from said support to form a sequence supported by the bottom of said panel and corresponding to a selected number readable as a place value.

2,457,333
ELECTRICAL CONTROL SYSTEM
William G. Wamsley, Detroit, Mich.
Application June 14, 1946, Serial No. 676,652
10 Claims. (Cl. 318—445)

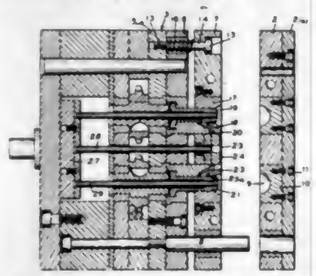


10. In a multi-speed electric control system, a first electric circuit operable to control operation of a mechanism at a first speed, a second electric circuit operable to control operation of a mechanism at a second speed, a first accelerating relay controlling means having two positions of operation, said means when in one of said positions being operable to energize said first circuit

and when in the second of said positions being operable to energize said second circuit, a third electric circuit operable to control said first controlling means, said first controlling means being operable upon energization of said third circuit to move to said one position and upon de-energization to move to said second position, a second up controlling means having three positions of operation, said second means being oper-

able in the first of said positions to energize said third circuit and in the second of said positions to energize said first circuit and maintain said third circuit energized and in the third of said positions to energize said second circuit and to de-energize said third circuit, and time delay means including electric-energy storage means operable upon de-energization of said third circuit to maintain said first controlling means in said one position for a predetermined time interval.

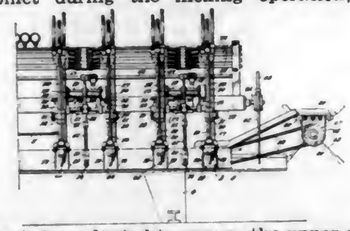
2,457,334
CORROSION INHIBITORS IN REFRIGERATION SYSTEM
Nils Erik Widell, Stockholm, Sweden, assignor to Aktiebolaget Elektrolux, Stockholm, Sweden, a corporation of Sweden
Application September 29, 1944, Serial No. 556,313
In Sweden November 4, 1943
8 Claims. (Cl. 62—119.5)



5. In the art of refrigeration employing an hermetically sealed absorption refrigeration system utilizing ammonia as a refrigerant and water as an absorbent and in which solid chemical reaction products are apt to interfere with the proper operation of the system, that improvement which consists of adding from 1 to 5% of an alkali nitrite to the aqueous ammonia solution in the system to inhibit corrosion and produce only soluble or gaseous reaction products.

2,457,335
PROCESS FOR INCREASING TACKINESS OF RUBBER-LIKE MATERIALS
Ira Williams and Clinton A. Carlton, Borger, Tex., assignors to J. M. Huber Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application March 13, 1944, Serial No. 526,320
9 Claims. (Cl. 260—27)

9. A process of increasing the surface tackiness of an unvulcanized rubber, which comprises incorporating in a solid rubber consisting at least predominantly of diene hydrocarbon polymer, a salt formed by reacting a rosin acid upon an amine of the class of aliphatic amines in which any oxygen is connected to the carbon by only one bond and consisting of cetyl dimethylamine, dioctylamine and ethanolamines.

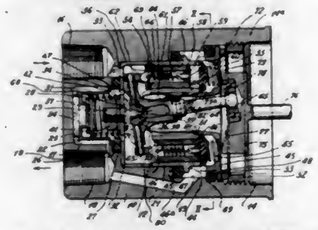


2,457,336
INJECTION MOLD
Gardiner C. Wilson, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application July 11, 1942, Serial No. 450,541
12 Claims. (Cl. 18—42)

1. In an injection molding machine adapted to form simultaneously a plurality of internally threaded articles, the combination of a fixed resistance plate having cavities therein, a platen, a movable mold plate having a plurality of openings therein, said mold plate being supported by said platen and movable toward and from said fixed plate, means for yieldably supporting said mold plate including springs so disposed as to urge said plate away from said platen as a unit to apply force to the molded articles to release them from threaded members, injecting means, headed rods passing through said movable mold plate and said platen with said springs disposed about said rods, the heads on said rods limiting movement of said movable mold plate by said springs, rotatable threaded members adapted to extend through the openings in the mold plate and into the fixed plate cavities when the mold is closed to form the interior surface of the molded articles, and runner channel connecting the injecting means and the mold cavities, said yieldably supported mold plate being held under compression when the mold is closed and being adapted upon opening of the mold and rotation of said threaded members to urge the molded articles outwardly to release them from said members.

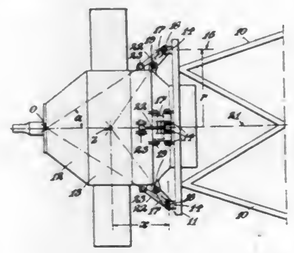
2,457,337
BILLET NICKING MACHINE
August H. Yoch, Melrose, Pa., and William W. Rice, Jr., Jackson Heights, N. Y., assignors to Air Reduction Company, Incorporated, a corporation of New York
Application June 22, 1945, Serial No. 601,010
13 Claims. (Cl. 266—23)

13. In a billet nicking machine, an oxy-fuel gas torch having a tip directed toward the upper surface of the billet, means for moving the torch at cutting speed across the top surface of the billet to cut a nick in such surface, a vertically movable member to which the torch is connected, billet engaging means connected to such member and adapted to engage the upper surface of the billet during the nicking operation, such



means being adapted to engage the upper surface of the billet throughout a horizontal torch travel which exceeds the width of the billet, a quenching liquid supply pipe, and at least one nozzle on the pipe, said nozzle being so positioned relative to the torch as to discharge quenching liquid onto the billet adjacent a nick formed by the torch and to the rear of the torch.

2,457,338
CRYSTAL MOUNTING
Harold S. Bates, Philadelphia, and Samuel A. Robinson, Upper Darby, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application February 27, 1945, Serial No. 579,988
4 Claims. (Cl. 171—327)



1. In combination, a rectangular piezo-electric crystal having opposite substantially parallel major surfaces, said surfaces being metalized and forming electrodes, and mounting means comprising a pair of substantially circular metallic members each having a continuous annular plane surface between which surfaces the crystal is clamped, said annular plane surfaces contacting corner portions of adjacent metalized major surfaces of said crystal.

2,457,339
WOBBLE PLATE PUMP
Alex Bertea, Pasadena, Calif.
Application August 31, 1946, Serial No. 694,303
1 Claim. (Cl. 103—173)

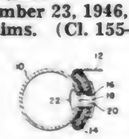
In a wobble plate pump, a working cylinder, a head valve normally sealing one end of the cylinder, a tubular piston placed in the cylinder and having a valve seat formed on the end toward the head valve, an inlet valve positioned on the valve seat and so shaped with respect to the piston end and the head valve that no voids exist when the piston is at the extreme of its stroke toward the head valve, and wobble plate means for reciprocating the piston in the cylinder.

2,457,340
MOUNTING FOR VIBRATORY BODIES
Philip Edwin Berry, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a company of Great Britain
Application January 16, 1945, Serial No. 573,044
In Great Britain December 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 30, 1963
4 Claims. (Cl. 248—5)

1. A suspension for carrying an overhanging vibratory body from a support comprising devices spaced about said support each device having a member for attachment to the support, a member for attachment to the vibratory body and an elastic member disposed between said support and the body-attachment members, said elastic members for one set of suspension devices having two principal axes of stiffness whereof one is tangential to a circle co-axial with the axis of torsion and the other intersects the corresponding axes of the other devices of that set at the centre of gravity of the body and said elastic members for the other set of suspension devices having a principal axis of stiffness directed to intersect at a point beyond the centre of gravity of the body from the plane of suspension thereof.

3. A suspension for an overhanging vibratory body as claimed in claim 1 wherein the elastic members of the other set of suspension devices are connected to the body each by a universal joint.

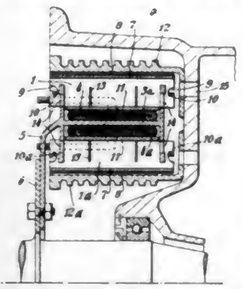
2,457,341
CRAVAT HOLDER
Leon J. Biagi, Rumford, R. I., assignor to Swank, Inc., a corporation of Delaware
Application August 13, 1946, Serial No. 690,172
4 Claims. (Cl. 24—49)



1. A cravat holder comprising a front bar, a rear jaw bent therefrom for reception and gripping of a cravat between them by the inherent resiliency of the material of which the holder is made, and means independent of the front bar and cooperating with the rear jaw to clamp the rear jaw to the edge of a shirt at a position located between the front bar and the rear bar.

2,457,342
LIPSTICK
Chester H. Braselton, New York, N. Y.
Application September 24, 1946, Serial No. 699,025
6 Claims. (Cl. 132—88.7)

1. A lipstick applicator comprising an open-ended paste guide for receiving a filling of lipstick paste lying substantially flush with the open end of the guide and in contact with and supported by the guide walls at said open end, said paste guide having its open end truncated in mutually relieving directions for framing an outwardly projecting free ridge of paste of considerable depth extending transversely across said open end between the spaced tips produced by the truncation of said end, the perimetral walls of said guide constituting the sole means for maintaining in use the wholly paste-formed ridge of lipstick material between the spaced tips thereof, and paste-advancing means operable for maintaining the paste substantially flush with the truncated end of the guide.

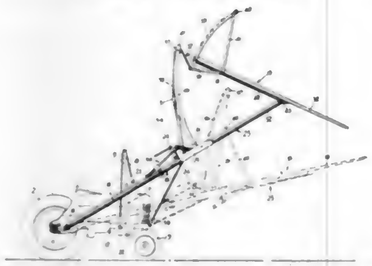


2,457,343
MEANS OF SECURING WEBBING STRIPS TO FURNITURE FRAMES
Paul G. Braunschweiger, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application December 23, 1946, Serial No. 717,899
3 Claims. (Cl. 155—187)

1. In an article of furniture having a frame and a plurality of strips of thermo-plastic material carried by said frame with means for attaching the ends of said strips to said frame, comprising a plurality of laminations forming the end of each strip, a clip, said laminations forming windings about said clip, a hole in each clip, holes extending through the laminations in registration with the hole in said clip, said lamination holes being on opposite sides of said clip, the edges of the holes in the laminations being welded together whereby the holes in the laminations and clip are coated with material which lines the walls of the holes in said laminations and said clip, and means passing through the hole in each clip and the laminations on the opposite sides thereof and connecting the same with said frame.

2,457,344
FLUID PRESSURE BRAKE APPARATUS
Henry James Butler, Sutton Coldfield, England, assignor to Dunlop Rubber Company Limited, County of London, England, a British company
Application June 1, 1945, Serial No. 597,121
In Great Britain June 3, 1944
7 Claims. (Cl. 188—152)

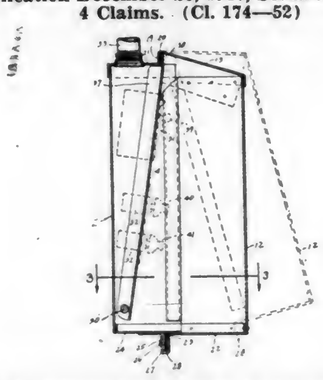
1. Wheel brake apparatus which comprises a pair of concentric spaced brake drums, a stationary cylindrical support between said brake drums, expansible annular tubes on opposite sides of said stationary cylinder, pressure transmitting members between said tubes and said brake drums arranged in a pair of concentric annular series between their respective annular tubes and said brake drums, each of said members having a radial flange set edgewise relative to one of said annular tubes and extending toward its respective brake drum and having a flat surface opposed



to the surface of said brake drum, a friction plate on said flat surface, means to hold said members from rotating relative to said stationary cylinder and spring rings to hold said members against their respective annular tubes.

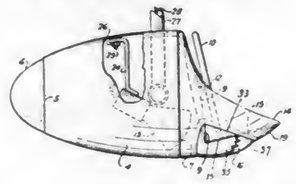
2,457,345
DEVICE FOR DISPENSING ARTICLES
John G. Carline, London, England
Application June 20, 1945, Serial No. 600,439
In Great Britain April 17, 1945
7 Claims. (Cl. 206—56)

2. In a device for dispensing individual articles, a container including a resilient diaphragm forming the bottom wall of the container, said diaphragm having an opening therein of a diameter smaller than the diameter of a ball to be dispensed from the container, a tubular member surrounding the opening adjacent the outer face of the diaphragm for moving the bottom wall axially of the container to dilate the opening, and the length of said tubular member being greater than the diameter of the ball and of less length than one and one-half diameters of a ball.



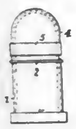
2,457,346
LOADING AND STACKING MACHINE
Carl Anton Carlson and Alvie W. Bittner, Fort Dodge, Iowa
Application July 1, 1946, Serial No. 680,714
3 Claims. (Cl. 214—140)

1. In a loading and stacking machine having a pair of pivoted lifting arms arranged at opposite sides of a portable frame, a rake tiltably mounted on said arms, an upright stationary



frame on said arms located rearwardly of said rake, and inclined upwardly and forwardly such that its upper end projects forwardly of the rear end of the rake, when the rake is in a loading position, flexible means connected at one end to the rear end of said rake and extended upwardly over said frame and then downwardly below said frame for connection at its opposite end with said portable frame, and means including a pulley at the upper end of said upright frame for movably supporting said flexible means.

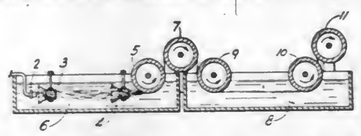
2,457,347
ELECTRICAL OUTLET STRUCTURE
Leslie R. Casler and Leslie Fred Milner, Indianapolis, Ind.
Application December 26, 1947, Serial No. 793,942
4 Claims. (Cl. 174—52)



3. A protective type outlet structure including an open face box into which circuit wires are introduced, a panel member pivoted near its lower end to the box near the lower end thereof and normally biased for tilting downwardly and outwardly to expose the rear face of the panel for circuit wire connection purposes, and a cover for said box pivotally and releasably supported on the upper ends of both the box and the panel, said cover having an inclined top portion terminating in a depending tongue and being tiltable outwardly and upwardly to expose said panel, the latter being retained within the box by said inclined top portion until the cover is tilted outwardly and upwardly at an angle greater than 30 degrees.

2,457,348
COMBINED SIGNAL LIGHT AND REARVIEW MIRROR
Paul A. Chambers, Santa Monica, Calif., assignor of one-half to Loyal E. Harris, Santa Monica, Calif.
Application March 7, 1946, Serial No. 652,769
9 Claims. (Cl. 177—329)

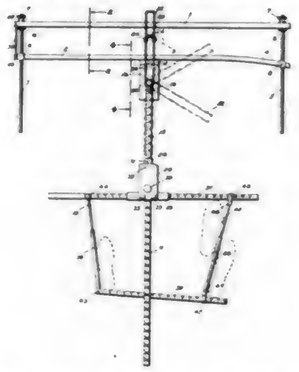
8. In a device of the character referred to, a housing having a lens at one end, another lens in the side wall of said housing, a light shield in said housing spaced from said lens, and a rear view mirror mounted on said light shield for universal movement relative thereto and to said housing.



2,457,349
MANUFACTURE OF PESSARIES
Joseph F. Clark, Paterson, N. J., assignor, by direct and mesne assignments, to Durex Products, Inc., New York, N. Y., a corporation of New York
Application October 1, 1946, Serial No. 700,567
3 Claims. (Cl. 18—58.5)

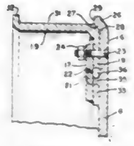
1. In the forming of an appliance of the class set forth on a cylindrical form having a substantially semi-spherical end, the method which consists in depositing on all the exterior surface of the form which includes said end and the cylindrical part of the form thereto adjoining a coating of liquid latex which is at least translucent, positioning, in embracing relation to said part and in contact with the margin of the coating remote from said end and while the coating still remains tacky, an endless flexible elastic core, depositing on the coating, between said core and end and remote from the latter, a band of colored latex in liquid state, and, when said band has assumed substantially solid state and said coating still remains tacky, rolling the core continuously of itself toward said end and meanwhile wrapping the coating around the core continuously thereof, and continuing such rolling and wrapping while the coating still remains tacky and until the portion of the coating which wraps the core contacts that portion of the coating which is between the band and said end of the form.

2,457,350
METHOD AND APPARATUS FOR SPINNING ARTIFICIAL FILAMENTOUS PRODUCTS
Ernest D. Copson and Robert J. Taylor, Claymont, Del., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application July 7, 1943, Serial No. 493,712
8 Claims. (Cl. 18—8)



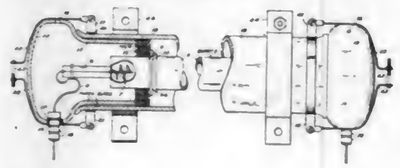
1. In apparatus for producing artificial filamentous products, a liquid coagulating bath, a spinneret therein, an after-treating liquid bath, guide rollers having substantially smooth cylindrical peripheral surfaces of substantial breadth partially immersed in adjacent ends of the respective baths for receiving and maintaining the filaments proceeding from the spinneret as a web-like sheet, and another guide roller having a

substantially smooth cylindrical peripheral surface of substantial breadth arranged outside the bath with its peripheral surface in close proximity to, but out of contact with, the surfaces of the



first-mentioned rollers such that the air travel of the web-like sheet between adjacent rollers is not over 50% of the width of the sheet nor over 6 inches.

2,457,351
GOLF TRAINING AND RECORDING APPARATUS
Robert Crowley, North Quincy, Mass.
Application May 13, 1947, Serial No. 747,736
3 Claims. (Cl. 273—35)



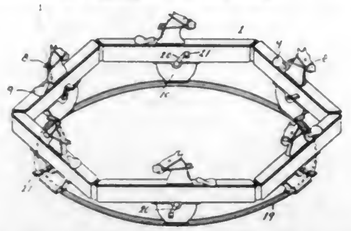
3. A golf training, practicing, and recording apparatus comprising a pair of adjustable and substantially parallel swing-guiding bars to be positioned lengthwise in the direction of the line of flight of a golf ball to be struck by a club-head, one end of said inner bar curved to represent a preferred hitting arc for said clubhead, a pair of rods adjacent each end of said bars and adjustable connections between said rods and said bars permitting variation in spacing the bars, fixed means on said inner bar to detachably secure one end of a longitudinal gauge perpendicular to said bars, a universally pivoted ball-locating member mounted adjacent said end of the gauge, means adjustably slidable on said gauge and carrying cross-means to slidably receive a transverse gauge, a shorter transverse gauge crossing said longitudinal gauge adjacent the free end thereof, adjustable telescoping means connecting both of said transverse gauges whereby the feet location of a player may be simulated, and measuring means on said gauges and on quadrants carried by said gauges to accurately determine the position of the player relatively to the location and the intended line of flight of the ball.

2,457,352
BRAKE DRUM ASSEMBLY
William D. Davidson, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a corporation of California
Application December 11, 1944, Serial No. 567,553
1 Claim. (Cl. 188—218)

A brake drum assembly comprising a brake wheel provided with a radially extending wheel flange, a circular flange integral with said wheel flange and extending axially from a side surface thereof, a brake rim having a radially inwardly extending brake flange engaging the side surface of said wheel flange and surrounding said circular flange, a clamping ring having a notched inner periphery surrounding said circular flange and engaging said brake flange, a key secured to said circular flange in spaced relationship to said side surface of said wheel flange and extending radially into a notch in the inner periphery of said clamping ring to lock said clamping ring and said wheel flange against relative rotation, and a plurality of bolts extending through said wheel flange, said brake flange and said clamping ring.

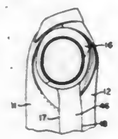
2,457,353
QUARTZ LAMP ASSEMBLY
Raymond R. Davis, Rochester, N. Y., assignor to Paragon Revolute Corporation, Rochester, N. Y., a corporation of New York
Application July 30, 1945, Serial No. 607,867
3 Claims. (Cl. 176—122)

1. In a quartz lamp assembly, a lamp comprising a closed quartz tube having an ionizible medium therein, each end of said tube being provided with a vacuum seal having an electrode sealed therein to project into the tube, a conductor connected to each electrode externally of said tube, a shield comprising a cylinder of material having the property of passing long ultraviolet rays therethrough and of preventing the passage therethrough of short ultraviolet rays such as generate ozone from the air, said cylinder being open at both of its ends, said shield also comprising removable ventilating covers closing the open ends of said cylinder, and mica-like supporting means engaging the inner surface of each end of the cylinder, said supporting means also engaging each end of the tube.



2,457,354
SUBCALIBER ATTACHMENT FOR GUNS
James M. Dial, Dayton, Ohio
Application February 8, 1946, Serial No. 646,399
13 Claims. (Cl. 42—77)

1. A subcaliber attachment for the barrel of a gun comprising a barrel member receivable in the gunbarrel, means provided at the rear end of the barrel member for limiting insertion thereof in the gun barrel, and a plurality of peripherally spaced screws threaded into the barrel member

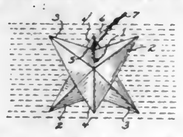


forwardly of the rear end thereof and radially adjustable to engage the bore of the gun barrel to regulate the position of the barrel member axis relatively to the gun barrel axis.

2,457,355
MERRY-GO-ROUND
William W. Dittmar, Williamsport, Pa.
Application March 22, 1945, Serial No. 584,167
4 Claims. (Cl. 272—33)

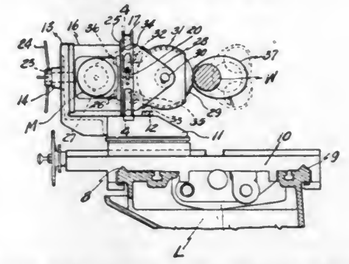
2. A merry-go-round comprising a stationary circular track, an inverted U-shaped framework movable over said track, a wheel housing spanning and attached to the lower edges of said U-shaped framework, said wheel housing having parallel sides depending below the lower edges of said U-shaped framework, a vertical driving wheel provided with a crank axle supported between the sides of said wheel housing to engage said stationary track, said wheel having a pedal driving member extending outside of said wheel housing, said wheel housing carrying vertically movable self-adjustable bearings positioned above said wheel axle, means preventing said bearings from wedging during their vertical movements, said parts cooperating for the purpose described.

2,457,356
JACKET WITH BISWING GUSSET IN FRONT AND IN BACK
Charles E. Enck, Ashland, Ohio, assignor to Cresco Manufacturing Company, Ashland, Ohio, a corporation of Ohio
Application December 31, 1947, Serial No. 795,099
7 Claims. (Cl. 2—93)



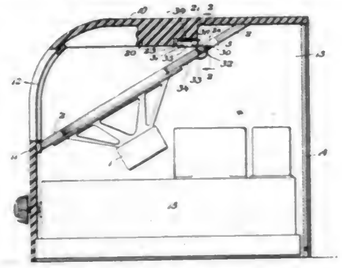
4. In an article of apparel such as a coat or the like, a front panel and a back panel connected along a shoulder seam and having a sleeve opening therebetween, a side gusset connecting said panels and forming therewith front and back side seams extending from the under-arm portion of the sleeve opening, a sleeve, said sleeve being connected to the front and back panels at the shoulder seam and to said gusset, and a front and back bi-swing extending from the shoulder seam to said front and back side seams respectively and connecting said sleeve to the edge of said sleeve opening in said front and back panels respectively, each of said bi-swings comprising an outer panel and an inner panel connected together along one edge thereof, said inner panel having its free edge connected to said sleeve and said outer panel having its free edge connected to said front and back panels respectively, said last-mentioned connected edges of said front and back bi-swings each connecting with said front and back side seams respectively at a point below the connection between the gusset and the under-arm portion of the sleeve, said last-mentioned edges of said back bi-swing terminating at said back side seam at a point above the terminating point of the said last-mentioned edges of the front bi-swing with the front side seam.

2,457,357
NOVEL ADHESIVE PRODUCT AND PROCESS OF MAKING SAME
James E. Fenn, Baldwin, N. Y.
No Drawing. Application June 14, 1947, Serial No. 754,765
9 Claims. (Cl. 260—17.5)



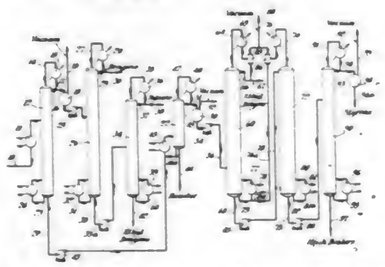
3. An adhesive comprising the reaction product of the concentrated waste liquor of the sulfite pulp process and phosphoric acid equivalent to 0.5% to 3% phosphoric acid of 75% H_3PO_4 based on the liquid basis of the liquor, where the concentrated waste liquor of the sulfite pulp process and the phosphoric acid are the sole reactants.

2,457,358
SINKER FOR DEEP-SEA AND BEACH FISHING
John Harry Flaugher, Tiffin, Ohio
Application December 27, 1943, Serial No. 515,767
4 Claims. (Cl. 43—52)



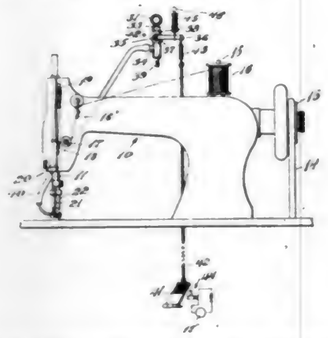
1. A fishing line sinker comprising a body formed of heavy metal and having radiating pyramidal shaped arms tapered to points at their outer ends and having flat side faces intersecting to form sharp side edges for the arms, said arms being arranged in pairs, the arms of each pair being disposed in longitudinal alignment with each other and at right angles to the other pairs of arms, and an eye carried by said body and projecting therefrom between bases of certain of said arms.

2,457,359
PORTABLE PIN GRINDING MACHINE
Frederick S. Floeter, Saginaw, Mich., assignor to Wickes Bros., Saginaw, Mich.
Application August 11, 1945, Serial No. 610,227
7 Claims. (Cl. 51—259)



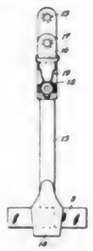
1. A portable pin-grinding machine adapted to be mounted on a lathe, and comprising a subbase, a motor frame mounted for revolvable movement on the sub-base and including a wheel support, a motor mounted on said frame, a grinding wheel journaled on said support and rotatable therewith, means for rotating said frame, and flexible belt means for drivingly connecting said motor in frictional engagement with the outer peripheral surface of the grinding wheel.

2,457,360
FASTENING CONSTRUCTION
Laurence H. Flora, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 24, 1946, Serial No. 686,042
7 Claims. (Cl. 24—259)



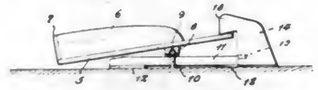
7. A fastening construction comprising a part provided with a recess having spaced shoulders in diverging relation in said recess, a resilient stud received in said recess comprising a sheet metal body having diverging side wings engaging said diverging shoulders and preventing transverse movement of said stud in the recess and a spring finger engaging a wall of said recess and urging said wings into resilient engagement with said shoulders and preventing movement of said stud in a direction normal to said body, a prong on said spring finger clutching the wall of said recess to anchor the resilient stud therein, and a spring arm member formed from said body at the end opposite said spring finger and extending through an opening in a cooperating part and engaging a surface thereof adjacent said opening.

2,457,361
STYRENE DISTILLATION
Truman A. Gadwa, Mount Vernon, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application September 21, 1946, Serial No. 698,439
4 Claims. (Cl. 202—52)



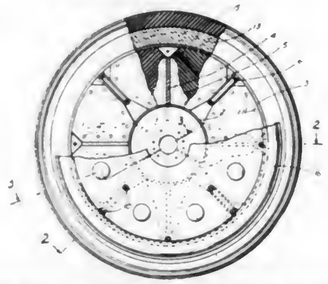
1. A step in the process of separating styrene from a styrene-containing mixture derived from the dehydrogenation of ethyl benzene to styrene and including benzene, toluene, ethyl benzene and higher boiling materials, without appreciable polymerization of the styrene, which comprises effecting an initial distillation under a pressure of about 160 mm. Hg absolute, removing toluene, lower boiling materials and about 20% of the ethyl benzene as overhead, removing the remainder of the ethyl benzene and all of the higher boiling materials as bottoms, and subsequently removing the styrene from the remainder of the ethyl benzene and higher boiling materials by further distillation under a substantial vacuum.

2,457,362
APPARATUS FOR COOLING SEWING-MACHINE NEEDLES
Antonio J. Giglio, Providence, R. I., assignor to Premier Thread Company, a corporation of Rhode Island
Application December 22, 1944, Serial No. 569,322
3 Claims. (Cl. 112—218)



1. In a sewing machine, a reciprocating needle, a presser foot, a conduit for conducting liquid coolant to said needle having a portion thereof extending laterally across said presser foot and attached thereto at a location adjacent to the path of movement of said needle, said portion comprising a tubular member having an opening therein facing said needle for the discharge of coolant onto said needle.

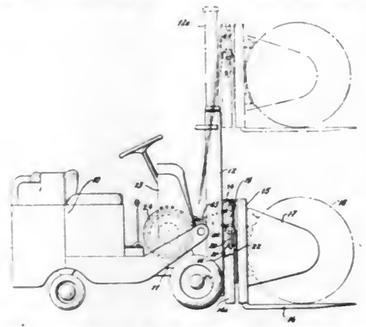
2,457,363
SOCK SUPPORT
Ole Kjole Gjertsen, New York, N. Y.
Application October 16, 1947, Serial No. 780,124
1 Claim. (Cl. 2—303)



In a sock support comprising a strap member for encircling the ankle of the wearer, an upright mounted at the lower end thereof upon said strap member and upon the upper end having a separable fastening means, the features which include a sock suspension member having means for engaging with and retaining a sock attached thereto and at least one fastening member adapted to engage with the separable fastening means as the sole connection between said upright and said sock suspension member, and a bridge or connecting piece secured exteriorly upon the strap member and the lower end of said upright having an upward projection along said upright and being widened laterally in both directions along the strap member and also having the bottom thereof extended below said strap member to form an extensive reinforcement for the strap member and upright at the junction thereof and having the lateral widened portions and the upward projection joined by diagonal portions covering the meeting angles of said upright and strap member above the latter.

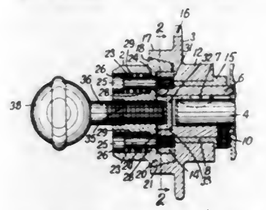
2,457,364
DESK TRAY
Maxfield Gluckman, Jackson Heights, N. Y.
Application August 28, 1944, Serial No. 551,506
4 Claims. (Cl. 129—35)

3. A desk tray comprising a base consisting of a pair of crossed members, one crossed member projecting above the other to form a fulcrum, a block secured to one end of the other crossed member, an abutment on the block overlying the base, an article support rockably mounted on the fulcrum, and having one end disposed beneath the abutment, the opposite end of the support being heavier to hold the first named end of the support against said abutment.



2,457,365
VEHICLE WHEEL
Herman Griebat, Lodi, Calif.
Application July 5, 1945, Serial No. 603,313
3 Claims. (Cl. 152—40)

1. A wheel comprising a hub, a tire supporting rim separate therefrom, resilient compressible panels between said rim and hub, said panels having their corners cut away to form an outer row of void spaces bounded externally by said tire supporting rim, and an inner row of void spaces bounded internally by said hub, transverse driving plates rigid with and projecting radially outward from said hub between and in contact with adjacent pairs of said panels, and transverse driving plates rigid with and projecting radially inward from said rim between and in contact with the individual panels of each of said pairs.

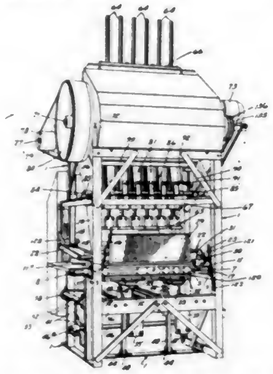


2,457,366
INDUSTRIAL TRUCK
Paul R. Guerin, East Cleveland, Ohio, assignor to Towmotor Corporation, Cleveland, Ohio, a corporation of Ohio
Application August 29, 1946, Serial No. 693,644
1 Claim. (Cl. 214—113)

A lift truck comprising a mobile chassis assembly, vertical mast means mounted forwardly on said assembly, a carriage slidable on said mast means, power means for raising said carriage, said carriage comprising a support mounted on said mast means and a load carrying member movably mounted on said support, a double acting piston and cylinder assembly mounted on said carriage and arranged for moving said load carrying member on said support, a reel mounted on said chassis assembly and disposed behind said mast adjacent a lower portion thereof, conduit guide means disposed forwardly of said reel, said reel and mounting including dual-ported fixed

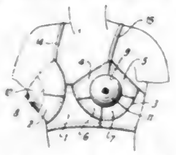
means cooperating with reel hub means to form a swivel fluid joint, a pair of flexible conduits, each conduit being connected at one end to said hub means, passed about said reel and over said guide means, and connected at the other end to one end of said carriage mounted cylinder, and means to connect a source of fluid under pressure to said fixed ported means.

2,457,367
AXIALLY ENGAGING FRICTION CLUTCH
Ralph F. Hale, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application October 13, 1943, Serial No. 506,113
13 Claims. (Cl. 192—66)



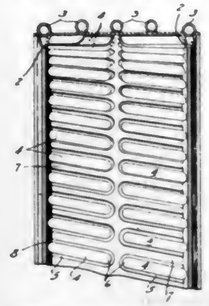
1. In a clutch mechanism, in combination, a driving member and a driven member arranged in coaxial relation, clutch means for connecting said members together including a clutch member supported by said driven member for movement axially of the latter relative to said driving and driven members, means for yieldingly urging said clutch member toward said driving member, and means reacting against said driven member and having threaded engagement with said clutch member for adjusting the position of the latter relative to said driving member.

2,457,368
CONCRETE BLOCK MACHINE
Newell B. Hanson, Lake Lillian, Minn.
Application October 10, 1945, Serial No. 621,507
3 Claims. (Cl. 25—41)



1. In a machine of the kind described, a mold having a molding cavity opening through its bottom, a pallet adapted to close the bottom of the mold cavity, a horizontal conveyor located below

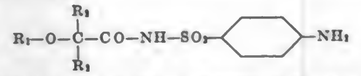
the plane of the bottom of the mold and having its intermediate portion directly beneath the mold, said horizontal conveyor comprising laterally spaced conveyor rollers and extending from a receiving point laterally offset from the mold in one direction to a delivery point laterally offset from the mold in another direction, an elevator platform element located below the mold and mounted for approximately vertical movements between adjacent cooperating rollers of the horizontal conveyor, whereby to raise a pallet off of the intermediate portion of the conveyor into operative engagement with the bottom of the mold and return the same to the intermediate portion of the conveyor for continued conveyance by the latter, said horizontal conveyor rollers being continuously driven in like directions, a stop arm pivotally mounted below the plane of the upper surfaces of the conveyor rollers on an axis



substantially parallel to the axes of the rollers and having a free head end swingable into and out of the path of travel of a pallet moving on the horizontal conveyor rollers, and means yieldingly biasing said stop arm to an intermediate position wherein it is inclined in a direction opposing the direction of horizontal feed and wherein its head is in the path of travel of a pallet on the horizontal conveyor, the yielding biasing force on the stop arm being sufficient to stop a pallet after a pre-determined movement of the stop arm in the direction of horizontal feed, whereby the stop arm will be returned to its said inclined intermediate position upon elevation of the pallet and will be deflected to an inoperative position below the pallet upon lowering of the pallet to the conveyor rollers, thereby permitting continued unidirectional horizontal feeding movements of the pallet upon return to the horizontal conveyor rollers.

2,457,369
BRASSIÈRE
Bernice Harman, Flushing, N. Y.
Application November 20, 1947, Serial No. 787,153
1 Claim. (Cl. 2—42)

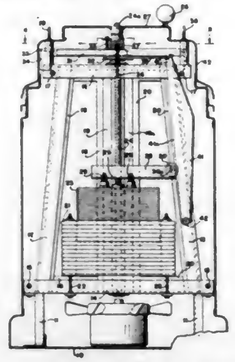
In a brassière having conical or cupped support and molding breast pockets, each pocket being provided with a central circular unobstructed opening of substantial diameter thereby to provide forward protrusion of a substantial portion of the wearers breasts through the respective openings.



2,457,370
MOLD CONSTRUCTION
Paul E. Hawkinson, Minneapolis, Minn., assignor to Paul E. Hawkinson Company, Minneapolis, Minn., a corporation of Minnesota
Application September 25, 1947, Serial No. 775,991
1 Claim. (Cl. 18—18)

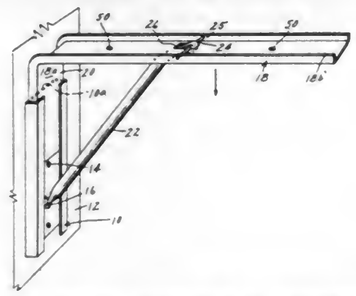
A device of the class described comprising an unbroken cylinder-like mold having radially inwardly projecting cross-sectionally V-shaped confining flanges adjacent its edges, a plurality of elongated cross-sectionally U-shaped mold elements secured to said mold intermediate said flanges so as to provide a plurality of radially inwardly projecting generally transversely-extending parallel tread pattern-forming ribs, each of said mold elements being of less radial depth than said flanges, and each of said mold elements being formed with one closed end and having its opposite end abutting against and shaped to conform to the edge of one of said confining flanges.

2,457,371
ACYLATED p-AMINOBENZENE SULFONAMIDES
Rudolf Hirt, Riehen, and Hans Gysin and Henry Martin, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application March 10, 1945, Serial No. 582,182. In Switzerland November 5, 1943.
6 Claims. (Cl. 260—397.7)



1. An acylated p-aminobenzene sulfonamide of the formula

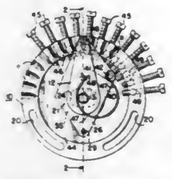
wherein R_1 and R_3 each represents a lower alkyl radical and R_2 represents a member selected from the group consisting of hydrogen and a lower alkyl radical.



2,457,372
ALTERNATING CURRENT VERTICAL WELDER
Edward A. Hobart and Russell T. Flora, Troy, Ohio, assignors to The Hobart Brothers Company, Troy, Ohio, a corporation of Ohio
Application February 11, 1947, Serial No. 727,830
3 Claims. (Cl. 171—119)

1. In a welding transformer having a pair of relatively movable transformer coils, adjusting means for relatively moving said coils, a uniformly graduated indicator dial showing the output of said transformer, means for actuating said dial to variably spaced positions during the relative movement between said coils to regularly spaced positions comprising a lever means, and

means for regulating said last mentioned lever means so that said dial is moved at rates which vary according to the relative positions of said coils comprising a contacting device moved by said adjusting means engaging said lever and moved longitudinally thereof upon relative movement of said coils.



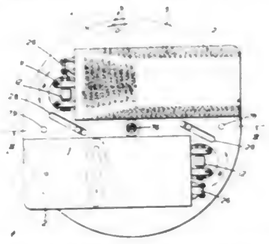
2,457,373
REMOVABLE BRACKET
Charles H. S. Hunter, Trona, Calif.
Application February 6, 1946, Serial No. 645,787
1 Claim. (Cl. 248—244)

A shelf support comprising a channeled bar bent to provide a pair of arms disposed at right angles to each other, a brace pivotally attached at its outer end to one of said arms, the other of said arms presenting a recess to receive the other end of the brace, and a bracket shaped to slidably receive the last-named arm, said bracket having means for securing it to a vertical supporting member.

2,457,374
TUNING CONTROL MECHANISM
William M. Hurst, Douglaston, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application April 3, 1947, Serial No. 739,207
2 Claims. (Cl. 74—10.41)

1. A tuning control mechanism comprising: a first means including a plurality of radially disposed spaced stop portions; a shaft rotatably supported by said first means; a crank, connected to said shaft for rotation with respect to said first means and having a stop portion at the free end thereof for selectively registering with individual ones of said stop portions, for establishing predetermined angular relationships between said first means and said crank; a follower pivotally connected to said crank for actuation thereby and having a first portion movable with reference to any selected one of said registering stop portions for positioning a controlled element in accordance with the relative positions of said first means, said crank and said follower; said follower having a second portion remote from said stop portion of said crank and the axis of said shaft; a plurality of radially disposed adjusting

screws on said first means for selective engagement with said second portion of said follower for adjusting said follower about the pivotal connection therefor with reference to any selected one of said registering stop portions, thereby to permit for each of said predetermined angular relationships between said first means and said crank an adjustment of the position of said controlled element which is independent of the corresponding predetermined angular relationship between said first means and said crank; means connected to said crank and said follower for biasing said second portion of said follower into engagement with individual ones of said adjusting screws; and locking means on said first means for maintaining each of said adjusting screws in a selected position of adjustment.



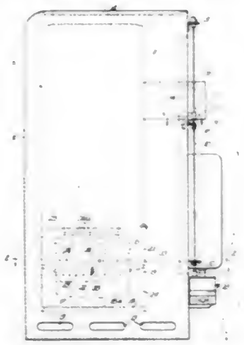
2,457,375
PURIFICATION OF PTEROIC ACID AMIDES
Brian L. Hutchings, Montvale, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 11, 1946, Serial No. 669,099
12 Claims. (Cl. 260—251)

4. A process of separating glutamic acid amides of 4 - {[(2 - amino-4-hydroxy-6-pyrimido [4,5-b] pyrazyl) methyl] amino} benzoic acid from related pterins in association therewith which comprises the step of converting the pterins in the mixture to alkaline earth-metal salts and subjecting the mixed salts to the action of an aqueous solution containing not more than about 25% of a lower aliphatic alcohol and separating the water-insoluble materials from the water-soluble substances.

2,457,376
AIRCRAFT WITH ROTATABLE SUSTAINING BLADES
Vittorio Isacco, London, England
Application June 7, 1945, Serial No. 598,111
In France September 29, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 29, 1961
18 Claims. (Cl. 244—138)

1. A parachute having rotatable sustaining blades, comprising a case, a top plate rotatably

mounted on said case, means for rotating the top plate, sustaining blades each comprising a number of telescopic sections, hinge means having axes perpendicular to the plate for mounting the blades, means for limiting the relative outward



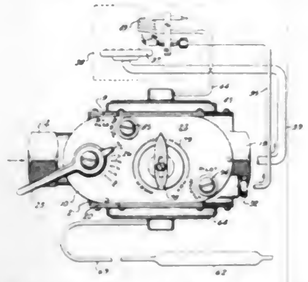
movement of the telescopic sections of the blades, the blades being collapsed by folding on their hinge means to a position to overlie the top plate, the space occupied by the blades when folded and collapsed being substantially equal to the lateral dimensions of the case.

2,457,377

SPACE HEATER AND CONTROL MEANS THEREFOR

Kenneth S. Jenson, Wisconsin Rapids, Wis., assignor to Prentiss Wabers Products Co., Wisconsin Rapids, Wis., a corporation of Wisconsin

Application May 9, 1946, Serial No. 668,436
8 Claims. (Cl. 126—93)



1. In a space heater, in combination, a heating drum, a burner disposed interiorly of said heating drum and providing with said heating drum a passageway for combustion air, a diaphragm located in said last mentioned passageway, said burner having peripherally spaced air inlet ports communicating with said passageway on one side of said diaphragm and other peripherally spaced inlet ports communicating with said passageway on the other side of said diaphragm, a flue for conducting gases from said drum to the exterior of said casing, valve means for controlling the passage of combustion air through said diaphragm, damper means for said flue, a valve for metering the flow of fuel to said burner, means for operating said metering valve and means connecting said metering valve to said valve means and to said damper whereby said valve means and said damper move in unison with said metering valve, said damper being in a position to provide less than its maximum dampering effect when said valve is in closed position.

2,457,378

GAS CONTROL VALVE

Roy W. Johnson and Cedric E. Zarwell, Milwaukee, Wis., assignors to Automatic Products Company, Milwaukee, Wis., a corporation of Wisconsin

Application June 5, 1944, Serial No. 538,729
8 Claims. (Cl. 236—1)

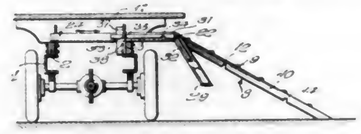
3. In a system for controlling the supply of a fluid fuel, a space heating main burner, a pilot burner, a valve casing, a valve within the casing for controlling flow of fuel to the main burner, means defining a chamber expanding in response to combustion of fuel at the pilot burner and contracting upon extinguishment of the pilot flame, a compression spring seated between the valve and the chamber for urging the valve open during expansion of the chamber, a spring biased leverage under joint action of the chamber and the first spring for urging the valve toward closed position upon extinguishment of the pilot flame, means responsive to the temperature of the space to be heated, and a second leverage within the casing and actuated by the space temperature responsive means to urge the valve closed upon increase of the space temperature above a predetermined value.

2,457,379

INCISION NEEDLE

Irene Kallenbach, Dayton, Ohio, assignor to Vern J. Kallenbach, Erie, Pa.

Application September 28, 1945, Serial No. 619,035
3 Claims. (Cl. 128—340)



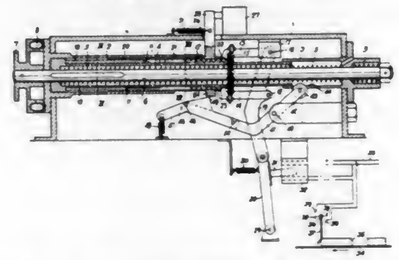
1. A combination surgical instrument consisting of a handle member having a chuck formed at one end thereof and a suture guide member having an offset projection thereon removably affixed to said handle by said chuck, the said suture guide consisting of a curved channel section having the outermost end thereof of flattened spoon shape and with an orifice therethrough, means on said handle for supplying a section of suture to the said guide and a chuck on said offset projection of said suture guide member for removably mounting an incision needle, the said incision needle including a barbed latch to enable it to be employed in pulling a section of suture through the opposing edges of an incision to be joined.

2,457,380

RETRACTABLE STEP AND RAMP APPLIANCE FOR VEHICLES

Raymond J. Kelberer, Wolf Point, Mont.

Application April 29, 1946, Serial No. 665,800
8 Claims. (Cl. 280—164)



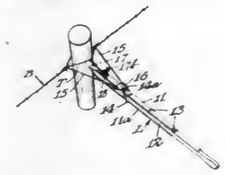
2. A vehicle appliance comprising a multiplicity of guide members connected with the frame structure of a vehicle chassis and extending vertically therefrom, each of said guide members having recesses therein directed in alignment with each other, a ramp provided with side portions each coacting with the recesses in said guide members, and latching means carried by the side portions of said ramp and engageable over said guide members for maintaining said ramp in position with respect to said chassis, and a horizontally shiftable fulcrum device carried by said chassis, and movable from a position adjacent said frame structure to a position displaced to one side thereof for engagement by the end of said ramp when said ramp is detached from said guide members and moved to loading and unloading position.

2,457,381

IMPULSE TRANSMITTING APPARATUS

John Bertil Rudolf Kilholm, Koping, Sweden

Application November 10, 1943, Serial No. 509,812
In Sweden November 23, 1942
6 Claims. (Cl. 74—111)



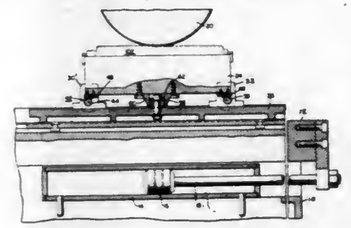
1. An impulse transmitting apparatus, comprising a mechanism for initiating a series of impulses, an impulse receiver, a movable ratchet member adjustable in a starting position, a pivotally mounted lever, means for transforming impulses from said initiating mechanism into rocking movements of said lever, a first spring-loaded pawl pivotally mounted on said lever for imparting a series of forward steps to said ratchet member, a spring device tending to force said ratchet member into its starting position, a second spring-loaded pawl constructed to prevent said ratchet member from returning towards said starting position, a control device for determining the number of said forward steps, a slidable member adapted to be actuated by said control device during the last forward step of said ratchet member for energizing said impulse receiver, and a releasing device adapted to be actuated by said slidable member for disengaging said pawls from said ratchet member, whereby to permit said ratchet member to return to its starting position.

2,457,382

FENCE REPAIR TOOL

William H. Koch, Minneapolis, Minn.

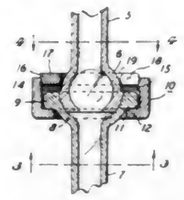
Application May 28, 1945, Serial No. 596,114
2 Claims. (Cl. 140—123.5)



1. A tool for repairing wire fences comprising an elongated lever bar having a forward end adapted to be engaged against a fence post to facilitate lever action, a slide block embracing said bar and selectively adjustable in a multiplicity of positions on the medial portion of said bar, said slide block carrying a laterally projecting flanged spool for winding connection of a smooth fence wire thereon and a lock arm fulcrumed to the forward portion of said lever bar and having an outer end adapted to be swung into projecting engagement with the post in spaced relation to the engagement element of said bar, said lock arm also carrying a laterally projecting flanged spool for winding connection of a smooth fence wire therewith.

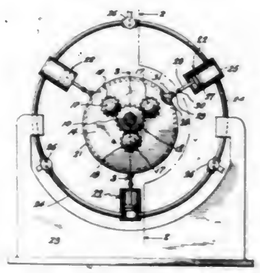
2,457,383

APPARATUS FOR GRINDING



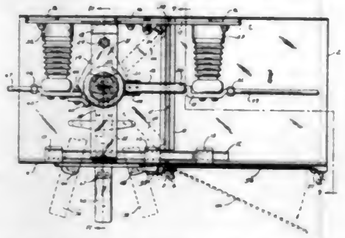
Frederich G. Krafft, Springfield, Ohio, assignor to The Thompson Grinder Company, Springfield, Ohio, a corporation of Ohio

Application September 21, 1946, Serial No. 698,500
9 Claims. (Cl. 51—94)



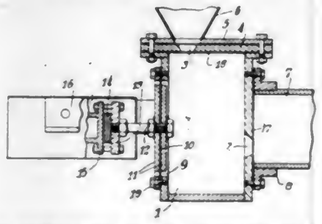
1. In a grinding machine; a rotatable grinding wheel; a workpiece supporting fixture; eccentric means supporting said fixture at each end; an arm on each eccentric means; a cam for each arm; means for relatively reciprocating said wheel and fixture for grinding a workpiece carried on the latter; and means for simultaneously moving said arms and cams relatively for actuating said eccentric means for a predetermined sequence of tilting movements of said fixture.

2,457,384
CLAMP FOR SPHERICAL JOINTS
Harry Krenz, Somers Point, N. J., assignor to Ace Glass Incorporated, Vineland, N. J.
Application February 17, 1947, Serial No. 729,079
3 Claims. (Cl. 285—95)



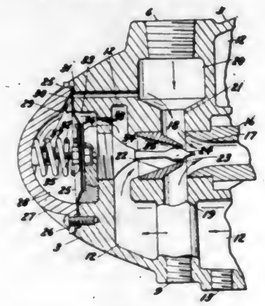
2. A clamp for spherical pipe joints or the like, comprising a cup having a circular wall provided with threads and an open bottom bounded by an inwardly extending flange provided with diametrically opposite notches for permitting the insertion of the female member of the joint, the main diameter of the bottom opening being smaller than the outside diameter of the female member, and a disk having threads engaging the threads of the cup, said disk having a central opening for the reception of the male member of the joint, said disk also having a lateral opening extending from its central opening to the edge thereof to permit the disk to be slipped sideways onto a pipe or the like connected to the male member.

2,457,385
UNIVERSAL REDUCTION GEAR TRANSMISSION
Joseph Lewit, Washington, D. C.
Application September 11, 1945, Serial No. 615,540
2 Claims. (Cl. 74—293)



1. Apparatus of the class described having a driving shaft, a driven shaft, gears rigid on said shafts, a plate loose with respect to said shafts, second shafts, said second shafts being journaled in said plate, planetary gears on said second shafts on opposite sides of the plate, said plate having a bearing opening into which one of the first-mentioned shafts extends, said planetary gears being enmeshed with the first-mentioned gears, an endless fluid conduit surrounding said plate, a throttle valve in said conduit, a pump cylinder intersected and carried by the conduit, piston means for the pump cylinder operable by the periphery of said plate and a support for the apparatus in engagement with said endless fluid conduit.

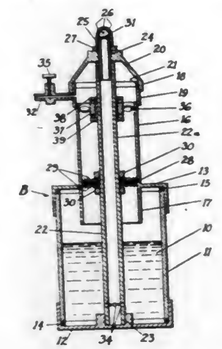
2,457,386
ANTENNA DISCONNECTING SWITCH
William H. Lindae, St. Louis, Mo., and Ben W. Strachan, New York, N. Y.; said Lindae assignor of one-fourth to Eola Lindae and one-fourth to Joseph P. Pohrer
Application July 8, 1944, Serial No. 543,998
4 Claims. (Cl. 200—50)



1. An antenna disconnecting switch comprising a housing having side walls provided with opposed parallel slide-ways and a bottom wall provided with a transverse slot terminating with its ends beneath the slide-ways, hinge-forming hangers mounted on the outer face of the bottom wall and opening upwardly to the slot, a panel swingably mounted in the hangers and adapted to slide upwardly through the slot into the slide-ways for dividing the housing into two separate compartments, stationary contact means mounted within one compartment, movable contactor means operatively mounted in the other compartment and arranged for movement from a position entirely within said compartment to a position in which it extends partially into the first-named compartment and into circuit-completing engagement with the stationary contact means when the partition is removed, locking means shiftable across the slot into slot-blocking position responsive to movement of the contactor means for preventing movement of the partition into compartment-dividing position when the contactor means is engaged with the stationary contact, and means for simultaneously actuating the contactor means and locking means.

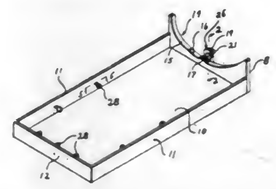
2,457,387
CONVEYANCE OF FLUENT MATERIALS
James Reginald Locker, Warrington, England
Application April 21, 1945, Serial No. 589,660
In Great Britain August 25, 1943
3 Claims. (Cl. 198—218)

1. An apparatus for the conveyance of viscous pasty materials such as zinc oxide paste comprising a closed chamber of rectangular section having an inlet port of restricted area in its top wall and an outlet port of slightly larger area in one of its side walls, a diaphragm in and forming a part of the opposite side wall of the chamber, electro-magnetic means exterior to said chamber and connected with said diaphragm for vibrating the same, a hopper located above the chamber and discharging through said inlet port, the inlet and outlet ports being both subject to the vibrations set up by the diaphragm and the material entering the chamber under its own weight and through the effect of the outward movement of the diaphragm and passing out of the chamber because of the larger area of the outlet port and the effect of the inward movement of the diaphragm.



2,457,388
INJECTOR-IMPELLER PUMP
Kenneth R. Lung, Kendallville, Ind., assignor to Flint & Walling Manufacturing Co. Inc., Kendallville, Ind., a corporation of Indiana
Application June 27, 1945, Serial No. 601,872
6 Claims. (Cl. 103—5)

1. A rotary pump having an intake port, a tube discharging into said intake port, said tube having an expanded end remote from said pump converging to a restricted throat, a supply passage for the pump connected to the expanded end of the tube, a nozzle having a port coaxial with the tube and directed across said supply passage into said expanded end of the tube, a needle valve centrally positioned in and never completely closing said port, a suction chamber, a duct between the chamber and the supply passage, an additional chamber, said pump having a discharge passage provided with a duct to the additional chamber and to the needle valve side of the nozzle for flow discharge about the needle valve toward the throat, and pressure responsive control, means coacting between the chambers, said means having connection therefrom to the needle valve to vary the effective cross-sectional area for flow between the needle and port.

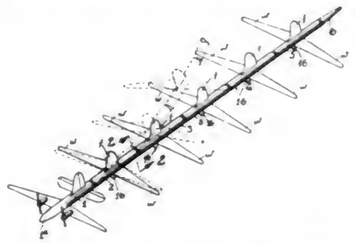


2,457,389
TOP CYLINDER OILER FOR INTERNAL-COMBUSTION ENGINES
William A. Maclay, Windsor, Ontario, Canada
Application August 30, 1945, Serial No. 613,574
3 Claims. (Cl. 123—196)

1. Lubricating means for internal combustion engines comprising a lubricant receptacle, an atomizing chamber thereabove having its lower end open and communicating with the lubricant receptacle above the level of the lubricant contained therein, an air feeding conduit communicating with said receptacle below the level of said lubricant, an outlet conduit adapted to communicate between said atomizing chamber and a cylinder of said engine to impose a condition of partial vacuum in said chamber during operation of the engine to cause intake of air to and through the receptacle and a flow of air and lubricant to said cylinder, a filter extending across said chamber above the lower open end of the latter to filter the air and lubricant flowing to said cylinder, an air filter disposed in said air feeding conduit,

and a rotatable means in the atomizing chamber for breaking up the inflowing mixture of air and oil.

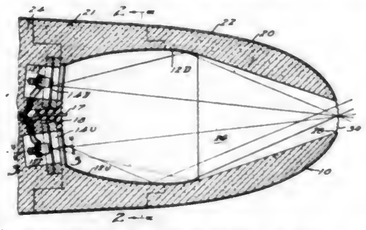
2,457,390
BASEBALL GAME APPARATUS
Halfdan August Markussen, Hempstead, N. Y.
Application January 21, 1948, Serial No. 3,461
4 Claims. (Cl. 273—90)



1. A game apparatus including a wall having a concave upper edge, said edge having a longitudinal groove therein thereby providing a raceway adapted to have a ball roll down the same when the ball is set thereon above the lowest point thereof, a support mounted on said wall and projecting above said raceway at the position of mounting of the support, said support having a bore therethrough a right angles to said wall positioned above said raceway at said position of mounting, a peg slidably mounted in said bore, means normally positioning said peg in said bore so that the end of the peg adjacent the raceway is withdrawn into the bore, said peg being adapted to be struck on the other end thereof to force said peg toward said wall whereby said ball in descending the raceway is adapted to be impelled by contact of said first-named end of the peg with the ball.

2,457,391
AIRPLANE TRAIN
Bruce Mitchell, San Diego, Calif.
Application February 8, 1944, Serial No. 521,534
2 Claims. (Cl. 244—3)

1. In an airplane train of the class described, a glider load carrying airplane including the combination of a relatively long hollow circular in cross section invariable diameter fuselage open at its opposite ends and opposed wings secured



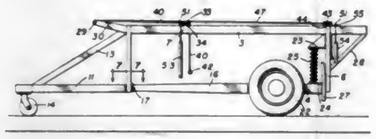
thereto intermediate its ends, a vertical fin secured to the upper side of said fuselage intermediate said wing, and a wheel connected to said fuselage at its lower side intermediate its ends.

2,457,392
HYDROGENOLYSIS OF THIOL ESTERS
Ralph Mozingo, Elizabeth, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application March 17, 1945, Serial No. 583,387
6 Claims. (Cl. 260—618)

1. The process that comprises reacting in the presence of a solvent a pyrophroric nickel catalyst and a compound of the formula RCOSR' where R and R' are each selected from the class consisting of aliphatic groups and aromatic groups, at a temperature not exceeding about 80° C.

2,457,393
APPARATUS FOR CAUSATION AND PREVENTION OF COLLISIONS
Glenn Muffly, Springfield, Ohio
Application January 14, 1942, Serial No. 426,758
3 Claims. (Cl. 244—77)

1. In an approach responsive system carried by an aircraft, in combination, a pair of microphones, a housing enclosing both said microphones and having an opening for sound, and means for causing air to flow over said housing around said opening at a velocity greater than the air speed of said aircraft to provide during flight of said aircraft a shield of high velocity air to uniformly protect the microphones of said pair from sounds produced on said aircraft, such protection being provided by the velocity of air flow in proportion to the velocity of sound in air.

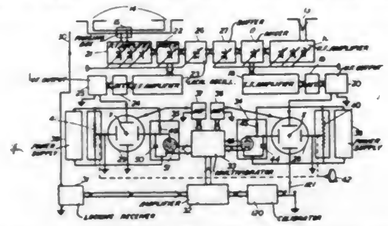


2,457,394
GRIP FOR KITCHEN UTENSILS
George Anton Novak, Broadview, Ill., assignor to Union Asbestos & Rubber Company, Chicago, Ill., a corporation of Illinois
Application June 6, 1947, Serial No. 753,127
2 Claims. (Cl. 16—116)

1. A grip adapted to be slipped endwise onto the handle of a cooking utensil and the like comprising an elongated tubular fabric member open at one end and substantially closed at the other end, said member being normally maintained in a substantially flattened configuration by means of an elongated resilient bail member disposed within and adapted to spread the tubular member transversely thereof, each of the spaced free end portions of the bail being formed with a loop

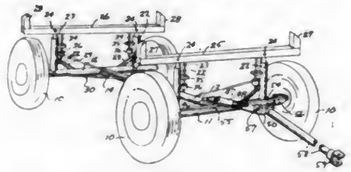
disposed in a plane perpendicular to the plane of the bail and secured to a longitudinal edge of the grip adjacent the open end thereof, whereby the parallel edges of the grip at the open end thereof will be spaced from each other a distance substantially equal to the outside diameter of said loop to form an open throat on the grip adapted to facilitate the entrance of said handle into the grip.

2,457,395
BOAT TRAILER
Ivan L. Owens, Detroit, Mich.
Application June 5, 1947, Serial No. 752,608
7 Claims. (Cl. 214—65)



1. A boat trailer comprising a substantially rectangular frame having depending corner legs supported thereby, lower side frame members pivotally supported at their forward ends to the front of said frame, supporting wheels mounted on said side frame members, a swivel wheel mounted forwardly of said frame, means on said frame for raising a boat from the ground, means disposable below the boat having its opposite ends attached to said frame for supporting said boat in elevated position, and a detachable bed frame having pivoted foldable legs disposed at the corners thereof.

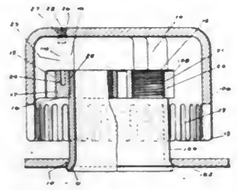
2,457,396
RADIO LOCATING APPARATUS
Philip Edward Pollard, London, England, assignor to Minister of Supply in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England
Application October 8, 1943, Serial No. 505,553
In Great Britain March 24, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 24, 1962
7 Claims. (Cl. 343—11)



7. In radio locating apparatus of the type wherein the position of a distant body is located by means of radio frequency energy radiated in the form of an exploring beam by a transmitter and reflected by the target in the form of echo pulses back to a receiver, a plurality of cathode ray oscillographs each indicating a co-ordinate magnitude of the position of an object, one of said oscillographs being adapted to indicate the range of said object, means for presenting echo pulses reflected from said object against a time

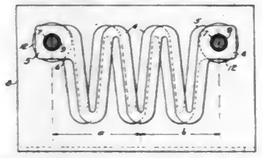
base on the screen of each oscillograph, adjusting means for shifting simultaneously the positions of the traces produced by said echo pulses along said time bases, means for generating signal selecting impulses, means for controlling the timing of said impulses with respect to the timing

of said echo pulses, a common control member for simultaneously actuating said adjusting means and said timing control means, and means for utilizing said impulses to control the intensity of the electron beam of at least one other oscillograph in order to emphasize only the trace produced by said echo pulses on the screen thereof.



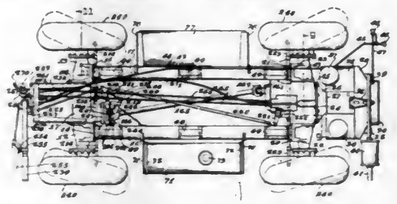
2,457,397
RESILIENT SUSPENSION FOR FARM WAGONS
Grover E. Richards, Youngstown, Ohio
Application February 4, 1946, Serial No. 645,355
2 Claims. (Cl. 280—124)

1. In a farm wagon including wheels and axles and frame means spacing the said axles, transversely positioned wagon bed frames located over the said axles and wheels, and means supporting the said wagon bed frames with respect to the said axles, said means including a plurality of sleeve members vertically positioned on the said axles and slidably engaging a plurality of depending support members affixed on said wagon bed frames, resilient members in each of the said sleeve members on the said axles, the said depending support members normally resting on the said resilient means, and means for limiting the upward travel of the said depending means, said means including brackets formed on the said guide means, and depending headed rods affixed to the said wagon bed frames and passing through openings in the said brackets, and resilient members positioned on the said depending rods below the said brackets.



2,457,398
BUBBLE CAP
David S. Roberts, Brighton, and Robert A. De Luca, South Boston, Mass.; said De Luca assignor to said Roberts
Application April 18, 1946, Serial No. 663,001
7 Claims. (Cl. 261—114)

1. A bubble cap assembly adapted to cover an opening in a bubble tower tray and comprising a tubular riser extending upwardly from said opening in the tray, said riser being free from any interior obstruction, a cap-supporting collar carried by the riser and situated exterior thereto, and



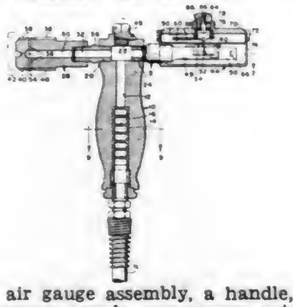
a cap element enclosing the upper end of the riser and removably supported by said collar.

2,457,399
RESISTANCE GRID AND METHOD OF ASSEMBLING
Charles H. Rockwood, West Allis, and Daniel J. Sikorra, Milwaukee, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application April 21, 1944, Serial No. 532,090
9 Claims. (Cl. 201—69)

1. A resistance grid comprising a heat dissipating portion having an irregular shape in a given plane, a first supporting portion positioned in said plane a predetermined lateral distance in one direction from the longitudinal center line through said heat dissipating portion, and a second supporting portion position in said plane a lateral distance greater than said predetermined distance in the opposite direction from said center line through said heat dissipating portion.

2,457,400
AUTOMOTIVE VEHICLE
Delmar G. Roos, Toledo, Ohio, assignor to Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware
Application December 2, 1944, Serial No. 566,309
8 Claims. (Cl. 180—48)

1. A vehicle of the character disclosed in combination, a pair of spaced front and rear enclosures; a frame including a pair of laterally spaced tubular members rigidly connecting said enclosures; a body having a substantially uniplanar load supporting surface mounted upon said tubular members; pairs of road wheels arranged beneath said body and adjacent each of said enclosures for supporting the vehicle, at least one pair of road wheels being pivotally mounted for dirigible movement; an engine disposed beneath



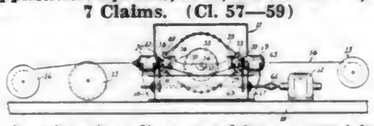
said body and rearwardly of said rear enclosure; power transmission mechanism contained within said enclosures for conveying power from said engine to each of said wheels; and a steering member arranged forwardly of said body connected to said dirigibly supported road wheels whereby steering movements may be effected.

2,457,401

PNEUMATIC GAUGING APPARATUS

Frederick L. Rupley, Cincinnati, Ohio, assignor to Merz Engineering Co., Indianapolis, Ind., a corporation of Indiana

Application August 29, 1946, Serial No. 693,721
2 Claims. (Cl. 73—37.5)



1. In an air gauge assembly, a handle, there being a pressure supply passageway extending axially through said handle, a series of restricted orifices and expansion chambers in said passageways in said handle, means for connecting a source of air pressure to said passageway at the rear of said handle, a threaded connection at the end of said handle, a pressure gauge mounted in said connection, a radially disposed threaded connection to said passageway in said handle located adjacent the front end of said handle, and a gauge head mounted in said last named connection.

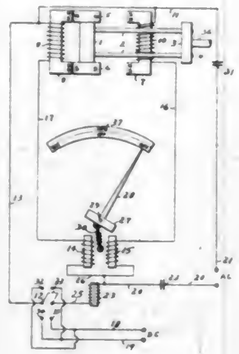
2,457,402

WIRE-STRANDING MACHINE

Arthur J. Roetting, New Haven, Conn., assignor to Wire Machinery Corporation of America, Inc., New Haven, Conn., a corporation of Connecticut

Application April 18, 1947, Serial No. 742,381
7 Claims. (Cl. 57—59)

1. A wire-stranding machine comprising a stand, a flyer rotatably mounted therein, said flyer comprising spaced trunnions, and carriers connecting said trunnions, each of said carriers comprising a flexible metallic cable connected at its ends to the trunnions, said cable being longer than the distance between the trunnions and arched between said trunnions.



2,457,403

POSITION INDICATOR FOR MAGNETIC ACTUATORS

Emmett F. Sarver, Lenexa, Kans., assignor to Rohlm Manufacturing Company, Inc., Erie, Pa., a corporation of Kansas

Application August 22, 1945, Serial No. 612,013
4 Claims. (Cl. 177—311)

1. A magnetic actuator of the character described comprising, spaced electromagnets, a permanent magnet movable between said electromagnets, the magnetic attraction of said permanent magnet effecting adherence thereof to the electromagnet with which it is in contact, an indicator, an alternating current circuit for energizing the electromagnets, means including a direct current circuit connectable in circuit with the electromagnets for changing the polarity of the electromagnets for moving the permanent magnet from one electromagnet to the other to change the inductive impedance in the electromagnetic circuits, and means for actuating the indicator in response to said change of inductive impedance in the electromagnetic circuits for indicating the position of the permanent magnet.

2,457,404

NITROPARAFFIN MODIFIED AMINOPLASTS

Milton J. Scott, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application September 25, 1945, Serial No. 618,588
7 Claims. (Cl. 260—67.6)

1. A resinous heat reaction product of an aminotriazine-aldehyde condensation product and a mononitro paraffin containing from 1 to 4 carbon atoms in which at least one hydrogen atom is attached to the same carbon atom to which the nitro group is attached, the mol ratio of nitroparaffin to aminotriazine varying from 3–6 to 1.

2,457,405

HALO NITROPARAFFIN MODIFIED AMINOPLASTS

Milton J. Scott, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application September 25, 1945, Serial No. 618,589
11 Claims. (Cl. 260—67.6)

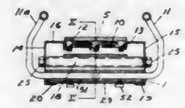
1. A resinous heat reaction product of an aldehyde reactable aminotriazine, an aldehyde and a halogenated nitroparaffin in which at least one hydrogen atom is attached to the same carbon atom to which the nitro group is attached said nitroparaffin containing from 2 to 5 carbon atoms and a single nitro group.

2,457,406

HALO NITROALCOHOL MODIFIED AMINOPLASTS

Milton J. Scott, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application September 25, 1945, Serial No. 618,590
9 Claims. (Cl. 260—29.4)



1. A composition comprising a resinous heat reaction product of an aminotriazine-aldehyde condensation product and a compound taken from the group consisting of acyclic compounds having from 3 to 6 carbon atoms to which are attached one nitro group, from 1 to 2 halogen atoms, from 1 to 2 hydroxyl groups none of which are attached to a carbon atom to which the nitro group and halogen atoms are attached, said compounds containing no other substituent, the molar ratio of said compounds to aminotriazine varying from 2–1 to 10–1.

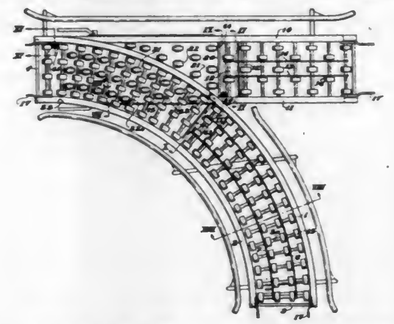
2,457,407

ROLLER SUPPORT FOR CONVEYER BELTS

James R. Sebastian, Grand Rapids, Mich., assignor to The Rapids-Standard Company, Inc., Grand Rapids, Mich., a corporation of Michigan

Application January 8, 1945, Serial No. 571,750
6 Claims. (Cl. 198—184)

3. In conveyor construction, the combination comprising: a box-shaped frame member having upper, side and bottom sheets and constructed with a plurality of apertures in the upper sheet of said frame member arranged across the width thereof and aligned in longitudinal rows, and a continuous strip affixed perpendicularly to said upper sheet on the underside thereof and longitudinally of said frame member closely adjacent each row of apertures and extending along said frame member for a substantial portion of its length; a plurality of roller supporting shafts held by said strips; a plurality of rollers supported by said shafts within said frame member extending partially through said apertures; a conveyor belt carried by said rollers and normally spaced away from said upper sheet of said frame member a relatively small distance, the spacing of said rollers from each other and the spacing of said belt away from said upper sheet such that under load the belt may be partially supported by direct contact with said upper sheet; transversely arranged tubular support members rigidly affixed to the box-shaped frame members; laterally adjustable side rails extending longitudinally of said frame members and substantially the full length thereof, said side rails having parts thereof slidably inserted into said tubular support members and adjustably held thereto.



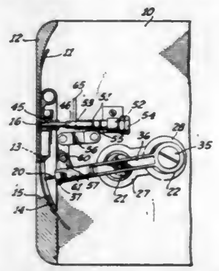
2,457,408

CONVEYER SWITCH

James R. Sebastian, Grand Rapids, Mich., assignor to The Rapids-Standard Company, Inc., Grand Rapids, Mich., a corporation of Michigan

Application March 20, 1946, Serial No. 655,723
7 Claims. (Cl. 193—36)

2. In a conveyor switch mechanism having one track branching from another track, the combination comprising: a first pair of curved rails defining one track and having a plurality of article supporting rollers in operative position therebetween; a second pair of rails affixed branchingly and rigidly to said first pair of rails defining a second track and likewise having a plurality of article supporting rollers in operative position therebetween; means including a vertically movable platform having a plurality of article supporting rollers mounted thereon effecting switching from one track to the other; means including a pair of cams at each of the ends of

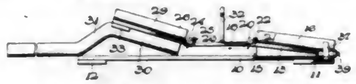


said platform for effecting vertical movement of said platform; a vertically movable gate selectively blocking at least one of said tracks and thereby preventing passage of articles carried by said conveyor from said track into the area of juncture of said two tracks; means operative from said vertically moving platform actuating said gate whereby said gate is moved into and out from article blocking position as the switch is moved with respect to the track in which said gate is located out from or into respectively article conveying position.

2,457,409

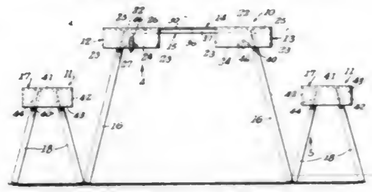
INTERMITTENT FILM ADVANCING MECHANISM

Robert P. Shea, North Hollywood, Calif., assignor to Edward Furer, Burbank, Calif., doing business as Acme Tool and Manufacturing Company



Application September 27, 1946, Serial No. 699,898
13 Claims. (Cl. 88—18.4)

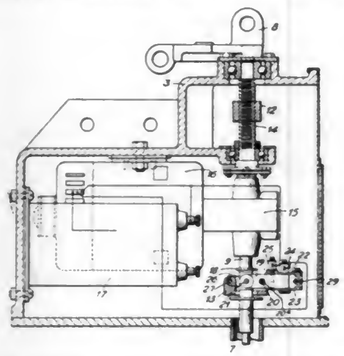
1. A film advancing mechanism which includes; means for guiding a film; a pin adapted to enter a perforation in said film to move the latter; a first eccentric; a second eccentric approximately aligned with said pin and said first eccentric, said first and second eccentrics being continuously driven at the same speed; a crank arm attached to said pin to move the latter; means attaching said crank arm to said first ec-



centric whereby said arm is moved laterally and longitudinally by said eccentric; and means attaching said crank arm to said second eccentric whereby said arm is moved laterally by said eccentric and is free to move longitudinally with respect thereto, said arm being momentarily aligned with a line passing through the axes of said eccentrics during the rotation of the latter.

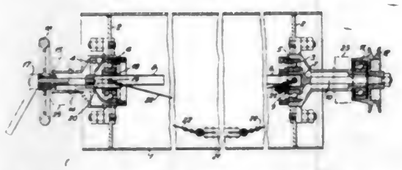
2,457,410
BENDER
Wallace A. Smith, Speed, Ind.
Application July 25, 1946, Serial No. 686,072
7 Claims. (Cl. 153—16)

1. In a device of the class described, a trough-shaped receiving member for the material to be bent, a link hinged to said receiving member, a second trough-shaped receiving member hinged to said link, and an operating handle secured to said second named receiving member, the hinges being so constructed and arranged that when said handle is rotated one of said receiving members is moved into position beside and approximately parallel to the other of said receiving members.



2,457,411
SET OF KNOCKDOWN FURNITURE
Laurel Eugene Steinberger, San Fernando, Calif.
Application October 21, 1946, Serial No. 704,554
10 Claims. (Cl. 155—123)

1. A set of knockdown furniture comprising a pair of similar table top members, a pair of similar bench top members, a table leaf member, and at least supports for the table top and bench top members, said table top members being each formed with a hollow compartment for nesting one of the bench top members and for storing said supports, and means separably connecting the table top members with the table leaf member therebetween to form a case in which said table top members comprise the outer portions of the case.



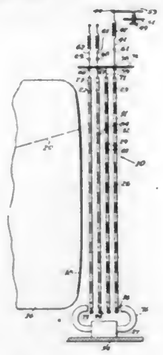
2,457,412
VALVE CONTROL MECHANISM FOR HYDRAULIC CLASSIFIERS
Rupert Octavius Stokes, London, England
Application October 16, 1945, Serial No. 622,629
In Great Britain October 24, 1944
1 Claim. (Cl. 209—496)

In equipment for classifying the solid and liquid constituents of a mixture, of the class wherein a valve operable by a reversible electric motor controls the discharge of solids accumulating in a bed under the conjoint control of the positioning of the valve itself and operation of a pressure actuated device responsive to pressure in said equipment, the combination with said motor and said pressure actuated device of a reversing switch comprising a switch base, a first lever pivoted on the base, upper and lower contacts on the said first lever, a second lever pivoted on the base, the lever pivots being spaced apart in the length direction of the levers, a contact member mounted on the said second lever to make contact selectively with the upper and lower contacts on the first lever and normally to float between the said contacts, a connection from the pressure actuated device to the two levers acting at a position between their respective pivots to move the levers in contrary directions on a movement of the

pressure actuated device, electrical connections between the switch and the motor to cause the motor to run in one direction when the contact member touches the upper contact on the first lever and in the other direction when it touches the lower contact, and a mechanical connection between the valve and the switch base, whereby the contact member on the second lever is restored to a floating position between the upper and lower contacts of the first lever on a change in the degree of opening of the valve in response to a movement of the pressure actuated device.

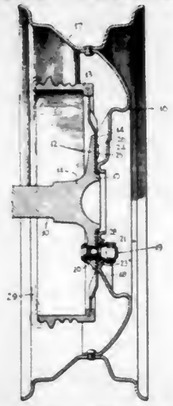
2,457,413
VIBRATOR
Rupert Octavius Stokes and George Kopp, London, England
Application November 2, 1945, Serial No. 626,282
In Great Britain November 1, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 1, 1964
8 Claims. (Cl. 74—87)

1. A vibrator for a reciprocating structure, comprising a substantially cylindrical casing including substantially radial parts near the respective ends of the casing, a bearing on each radial part coaxial with the casing, an axially movable member mounted to rotate in a first of said bearings, an elongated member mounted by one of its ends for rotation in the second of said bearings and mounted by its other end on said axially movable member, both ends of said elongated member being mounted in the bearing axis and said elongated member normally lying in the bearing axis but being capable of flexing to bring



the major part of it out of said axis when the axially movable member moves toward said second bearing, thereby to constitute an out-of-balance weight, and a driving member connected to one end of said elongated member.

2,457,414
HAIR CURLING DEVICE
Frank Susi, Bronx, N. Y.
Application October 19, 1946, Serial No. 704,361
2 Claims. (Cl. 132—33)

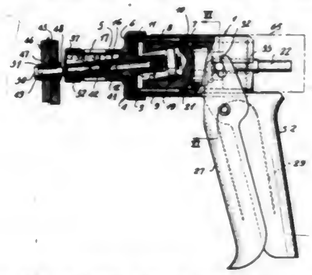


1. In a hair curler device, in combination, a solid, elongated, cylindrical member, said member being tapered at one end narrowing towards said end, said member having at both ends respective pairs of rectangularly disposed intersecting open slits, said slits forming a cross shaped depression of limited extension in an inward direction into said member, longitudinal grooves arranged parallel on the surface of said member and in alignment with said slits, so as to form straight channels extending from said slits on one end of the member to corresponding slits on the other end of the member, forming an integral connection with said slits respectively, a comb element, having longitudinal flanges provided along its back and transversely projecting therefrom, presenting therewith a cross section of substantially cross like configuration, said comb element being insertably attachable into said open slits so that the toothed portion and back thereof will fit into one of said slits while said flanges will fit into the slit rectangularly disposed thereto, whereby part of said toothed portion and portions of said flanges will be placed within said solid member, said toothed portion projecting therefrom through said respective slit.

2,457,415
COLOR TELEVISION
George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1945, Serial No. 585,907
2 Claims. (Cl. 178—5.4)

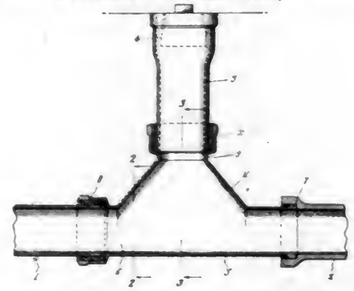
1. Color television apparatus comprising a cathode ray tube having a target area, scanning means associated with said tube to scan said target area successively and cyclically, a light filter device substantially equal in area to the target area of said tube scanned by said scanning means, said filter device being interposed in a light path which includes the target area of said tube, said light filter device comprising a plurality of filter members of a shape in outline corresponding to the outline of the scanned target area of the tube, each member having light transmitting strips alternating with light modifying strips, the light modifying strips of one of said members serving to block the passage of light, and means for shifting said remaining members sequentially in a predetermined order in timed relationship with the successive scannings of the said target area.

2,457,416
WHEEL AND BRAKE DRUM ORGANIZATION
Robert B. Temple, Grosse Pointe, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 18, 1947, Serial No. 774,801
3 Claims. (Cl. 301—6)



1. In a wheel, a hub having a radial flange, a brake drum having a mounting portion seated against the outboard face of said flange, a wheel body having a mounting portion seated against the outboard face of the mounting portion of said drum, and an annular series of bolting-on means extending through aligned holes in said hub flange, drum mounting portion and wheel body mounting portion for securing said parts together, the mounting portion of said drum being formed, intermediate at least some of its securing holes, with pry holes whose margins are offset outwardly of the plane of the main body of said drum mounting portion and the mounting portion of the wheel body being outwardly offset in the region of said pry holes to freely receive the offset margins thereof, said pry holes permitting the insertion of a prying tool for prying the brake drum off the hub flange after the bolting-on means have been released and the wheel body removed.

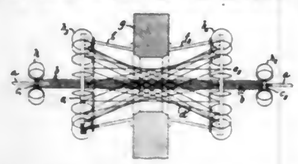
2,457,417
CUTTING TOOL
Herbert L. Trautmann, Los Angeles, Calif., assignor to Cherry Rivet Company, Los Angeles, Calif., a corporation of California
Application December 14, 1945, Serial No. 635,065
14 Claims. (Cl. 30—272)



1. In a cutter for severing the protruding stem of a blind rivet, the combination of: a member having an orifice for receiving said stem and having sharpened edges; and a mechanism that

displaces said member about said stem with a planetary motion with respect to said stem

whereby said motion causes said sharpened edges to cut into said stem and sever said stem.

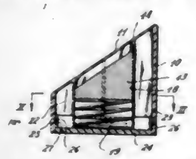


2,457,418
CLEANOUT Y
William C. Turpin and John R. Turpin, Newport News, Va.
Application April 30, 1946, Serial No. 666,135
2 Claims. (Cl. 285—210)

1. In clean-out connections of the Y-type for sewers and the like, wherein the connection includes a pair of axially-alined openings positioned for connection within the sewer formation and a third opening having its axis extending normal to the axis of the pair of openings and adapted for connection with a stem portion leading to the ground surface, a connection of such type having its body portion formed for open communication between said openings, said body portion including opposite wall portions connecting the zone of the single opening with the respective zones of the pair of openings, said wall portions presenting an outward and downward straight line flare of the body leading downward from the single opening and extending generally at a definite angle to the single opening axis and leading to the top zones of the pair of openings, each of such flared wall portions meeting the top of the sewer end zone at a definite angle to thereby establish a definite angular relation between such meeting point and such axially aligned openings.

2,457,419
HIGH-VOLTAGE BUSHING
Edward Uhlig, Wettingen, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland
Application October 15, 1945, Serial No. 622,403
In Switzerland October 14, 1944
7 Claims. (Cl. 174—151)

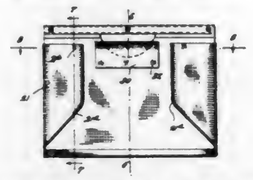
1. A bushing for leading a high voltage conductor through an opening in a wall which is at a much lower voltage comprising inner and outer electrode members at the wall opening spaced radially of the conductor for controlling the electrical field around the conductor, said inner electrode member being constituted by a plurality of thin wires spaced parallel and ar-



ranged concentrically around the conductor and conductively connected thereto, and said outer electrode member being constituted by a plurality of thin wires forming a cage concentrically about said inner electrode member and conductively connected to said wall.

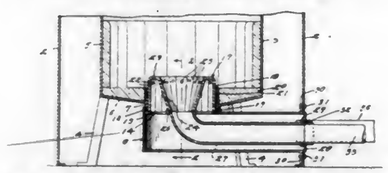
2,457,420
PROCESS OF MAKING CORRUGATED GALVANIZED STEEL SHEETS
Nicholas P. Veeder, Clayton, Mo., assignor to Granite City Steel Company, Inc., Granite City, Ill., a corporation of Delaware
Application November 26, 1945, Serial No. 630,907
3 Claims. (Cl. 29—148)

1. The process of making corrugated galvanized steel sheets, which comprises galvanizing cold reduced strip material, omitting the conventional annealing, temper rolling and pickling operations and then corrugating such sheets to produce a sheet having greater resilience than sheets produced by the said conventional operations, the corrugating operation providing an initial shorter center-to-center distance between corrugations than in the case of conventional sheets that have been annealed and temper rolled, the resilience of the sheets causing them to elongate and have a final center-to-center distance between corrugations to be the same as in the case of said conventional sheets.



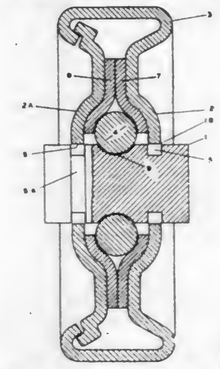
2,457,421
MAGNETIC RETAINER
Charles W. Warren, Burbank, Calif.
Application March 10, 1947, Serial No. 733,551
2 Claims. (Cl. 175—367)

1. A desk type magnetic retainer for paper clips and the like comprising a housing of non-magnetic material having a well therein with one portion of the well straight and having one end of the well closed at an acute angle to the axis of the well, a permanent magnet adapted to fit within the well and having one side thereof flatted to correspond with the straight portion



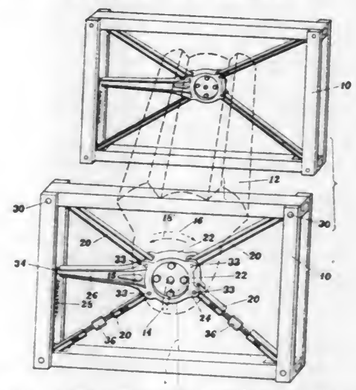
of the well and having poles thereof aligned to fit against the end wall of the well, whereby the poles of the magnet will be aligned with the inclined well wall, and means for retaining the magnet within the well.

2,457,422
COLLAPSIBLE LUNCH OR SHOPPING BAG
Clyde J. Warner, McKeesport, Pa.
Application March 15, 1946, Serial No. 654,682
1 Claim. (Cl. 150—1.7)



A collapsible handy bag of strong, foldable material, comprising a rectangular bottom and four rectangular sides of said material which are conventionally joined together along their adjacent portions, a reinforcing strip of stiff material permanently secured along each long side edge of the bottom and a similar short strip detachably secured along each of the short end edges thereof; other similar reinforcing strips being secured along the top edges of the long sides over which the top edges are folded and stitched, thereby forming the entrance opening, a pair of handles being provided beneath the top strips by the removal of a small portion of each long side to form a pair of opposed, centrally disposed apertures; a small aperture covering flap secured by stitching at one edge thereof below the handle opening to the inner side of one of the long sides, cooperating snap fastener elements disposed respectively on the other edge of the flap and on the inner side of the opposite long side for securing the free edge of the flap to the other long side; each of said rectangular short sides being foldable along a vertical line to form parallel and inwardly directed portions each detachably securable to one of the long sides.

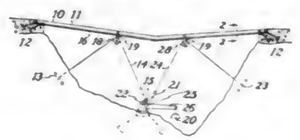
2,457,423
FURNACE STOKER
Emory O. White, Albertville, Ala.
Application July 11, 1945, Serial No. 604,391
2 Claims. (Cl. 110—45)



2. A warm air heating plant comprising a leg supported furnace having a centrally apertured bottom and a brick lined combustion chamber disposed thereabove, a cylindrical flange in the aperture, a retort in the flange and including radially spaced outer and inner parts joined at their upper ends, said retort parts being apertured above the combustion chamber bottom, a wind box having an opening with a cylindrical flange surrounding the first flange and with a radial flange underlying said first flange, and heat resisting sealing means between said flanges.

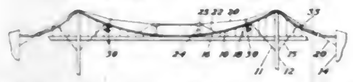
2,457,424
ROLLER WHEEL
Cecil Wolf, Rock Falls, and Neil M. Foulds, Sterling, Ill., assignors of one-half to The Rapids-Standard Company, Inc., Grand Rapids, Mich., a corporation of Michigan, and one-half to Frantz Manufacturing Company, Sterling, Ill., a corporation of Illinois
Application October 17, 1945, Serial No. 622,802
2 Claims. (Cl. 301—5.7)

1. In roller wheel construction the combination: an axle having a raceway for bearing balls thereon; a pair of wheel disks surrounding said axle and means holding said disks affixed to each other; means held between said wheel disks providing an outer bearing raceway and a plurality of bearing balls located in said raceway; a wheel flange mounted on and circumferentially surrounding said disks; a dirt arresting groove having substantially rectangular cross section circumferentially surrounding said axle and located thereon substantially in alignment with each of the said disks and slightly wider longitudinally of the axle than the corresponding thickness of the said disk, the axle receiving opening in said disk providing a close sliding fit with respect to said axle.



2,457,425
STABILIZING DEVICE FOR RESILIENT STRUCTURES
Merl R. Wolfard, Cambridge, Mass.
Application June 23, 1944, Serial No. 541,828
9 Claims. (Cl. 248—20)

9. Means for minimizing vibratory movements in a load-carrying resilient structure having



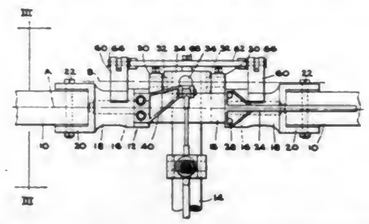
spaced apart regions which tend to approach each other and to recede from each other when the structure is subjected to disturbing forces, comprising in combination at least two stabilizing tying means each extending between two of said regions, the directions of said tying means being oblique to each other; bar leverage means having at least two short arms and having longer arm means; each said tying means having one of said short arms connected into it and constituting a part of itself; and means, other than the said stabilizing tying means, for continually applying force to said longer arm means for providing a loading which is common to said tying means and stresses each of said tying means when the structure is static; whereby when the structure is disturbed so that two of said tied regions which a said tying means ties together tend to recede from each other the tying means between those regions becomes subjected to a larger percentage of the said common loading than it carried when the structure was static.

2,457,426
DEVICE FOR ARRESTING UNDULATIONS IN BRIDGING STRUCTURES
Merl R. Wolfard, Cambridge, Mass.
Application November 5, 1945, Serial No. 626,661
7 Claims. (Cl. 14—1)

1. A structure having migratory loading means for arresting its own undulations—being a bridging structure, extending between supporting means and sustaining dead load and live load along the span between those supporting means, of a type in which there is a principal lengthwise element which is inflected so that an incipient depressing of that element in one end-half-portion of the span below its static position tends to cause rise of that element in the other end-half-portion of the span, and so that the said principal element extends from a said supporting means at an angle of less than 45° with the horizontal—said arresting means comprising a distribution of dead load relative to two particular regions of the said principal lengthwise element, each of which regions sustains a magnitude of dead load burden which exceeds that imposed on any other portion of equal extent along that element in the same end-half-portion of the span when the structure is static; each end-half-portion of the span having one of these particular regions, they being spaced apart a distance which is in the range of two-tenths to six-tenths of the length of the span between said supporting means; there being tying means extending from a common dead load burden directly to each of said regions, this common burden being sustained in part at each said region when the structure is static, and said part constituting a portion of the said greater magnitude of dead load burden at a said region; at least a major portion of the said common burden, so sustained in common, being available to migrate through the tying means to either of said regions, upon the advent of live loadings which tend to cause rise first at one of said regions and then at the other of these said regions.

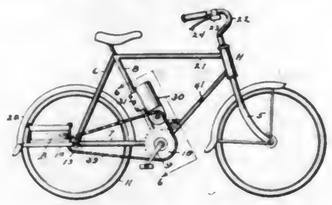
2,457,427
SPRING MEANS FOR MINIMIZING UNDULATIONS IN SUSPENSION BRIDGES
Merl R. Wolfard, Cambridge, Mass.
Application March 1, 1946, Serial No. 651,346
5 Claims. (Cl. 14—18)

1. In a bridging structure, means for minimizing undulatory movements of a load-sustaining principal element—said element being anchored at its ends and supported upon intermediate towers, with a span between those towers having in each end-third-portion of the length of the span at least one stay which is fast to the principal element, inclined downward, and fast to the tower—said means comprising, in combination, a tension element extending above and along said principal element, at least through the mid-region of the span, said tension element being held at its ends against lengthwise slip relative to the principal element; and spring means engaged between said principal and tension elements for deflecting yieldably, the tension element, the yieldable force being applied against the principal element in a direction to oppose those undulatory movements of that principal element which are in a direction that would tend to unstress said stay.



2,457,428
FISHING HOOK AND FLY
R B. Worden, Granger, Wash.
Application February 3, 1947, Serial No. 726,163
1 Claim. (Cl. 43—28)

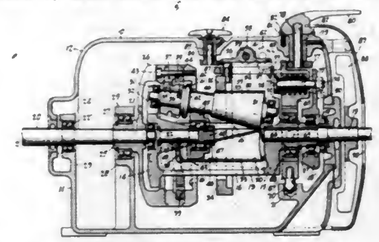
In fishing tackle, a hook having a shank and an eye formed at one end of the shank, a snell passing freely through the eye and a bead having the end of the snell passed through the bead in one direction and back in the opposite direction to form a loop, the free end of the snell being knotted, and said hook shank passing through said loop whereby the looped and bead carrying end of the snell has sliding movement on the hook shank.



2,457,429
ROTARY WING AIRCRAFT
Arthur M. Young, Buffalo, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application May 9, 1945, Serial No. 592,823
8 Claims. (Cl. 170—160.26)

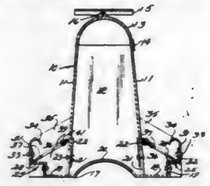
1. In an aircraft of the rotary wing type the combination which comprises a support having a main axis, a rotor comprising a hub arranged to rotate about said main axis, a universal joint mounting for said hub relative to said axis, said joint defining transverse pivot axes, two blades extending in opposite radial directions from said hub in a plane perpendicular to said main axis and below the plane of said transverse pivot axes, means rotatably journalling said blades upon said hub, means for rocking said hub and blades as a unit about one of said pivot axes for feathering

of said rotor, and means for individually rotating said blades upon their journalling means with respect to said hub for blade pitch changes.



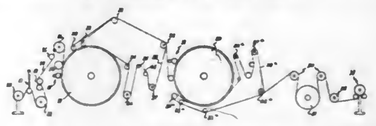
2,457,430
ELECTRIC BICYCLE
Stefanos Argyris, New York, N. Y.
Application February 20, 1946, Serial No. 648,971
2 Claims. (Cl. 180—34)

1. The combination with a bicycle of the conventional type which includes a frame, front and rear wheels, a coaster brake assembly in the rear wheel, front and rear sprockets, the front sprocket having attached pedals and the rear sprocket being carried by the rear wheel, of an electric motor secured to the bicycle frame in a position to have its shaft lie fore and aft of the bicycle, reducing gearing connected to the motor shaft and including a shaft which lies transversely of the bicycle frame, a clutch element upon the last named shaft, a second clutch element coacting with the first clutch element to constitute an overrunning clutch, a sprocket chain, a sprocket carried by the second clutch element over which said sprocket chain passes, said chain likewise engaging the front sprocket wheel and the rear sprocket wheel.



2,457,431
VARIABLE-SPEED TRANSMISSION
Alfred G. Bade, Wauwatosa, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application September 30, 1944, Serial No. 556,524
7 Claims. (Cl. 74—281)

1. In a variable speed transmission the combination of a housing horizontally split to form a base portion and a separable cover portion, a cage rotatable in said housing, means including bearings carried by said base portion for supporting said cage independently of said cover portion, a set of inclined planet rollers mounted for rotation with and with respect to said cage, a ring encircling said rollers and in rolling contact therewith, means carried by said base portion independently of said cover portion for shifting said ring relative to said rollers to vary the speed ratio of the transmission, and means carried by said cover portion and operable from



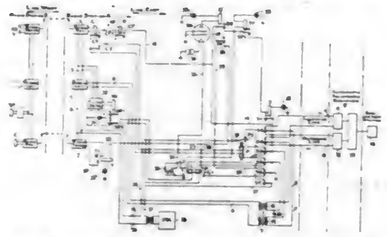
a point externally of said housing for actuating said last named means.

2,457,432
POULTRY FEEDER
Dana R. Ballard, Madera, Calif.
Application January 10, 1947, Serial No. 721,245
3 Claims. (Cl. 119—53)

1. A poultry feeder, comprising a hopper adapted for containing feed and including sides and ends having portions extending externally transversely of the hopper, a tray secured to the lower end of the hopper and including portions extending externally transversely of the hopper, vertically upstanding flanges carried by the outer edges of the tray, adjustable Z-shaped members attached to the upstanding flanges, adjustable guards attached to the Z-shaped members, feeder strips supported upon the Z-shaped members and the sides of the hopper, adjustable shutters mounted upon the feeder strips, both ends of said transverse tray portions, said Z-shaped members, said guards and said feeder strips being enclosed by the transversely extending portions of the ends of the hopper, and a cover for the hopper.

2,457,433
APPARATUS FOR COATING PAPER
William Barrett, International Falls, Minn., assignor to Minnesota and Ontario Paper Company, Minneapolis, Minn.
Application November 24, 1943, Serial No. 511,752
6 Claims. (Cl. 91—55)

1. A device for coating paper which comprises means for passing a web forwardly, a cylindrical backing means carrying the web of paper, a coating unit disposed adjacent the backing means and including a resilient surfaced roll which contacts the web of paper upon the backing means and positively driven means for holding the coated web in close contact with the backing means sur-



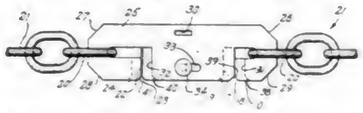
face after the coating material had been given a preliminary set by heat drying during its passage over a portion of the backing surface means, said positively driven means for holding the web in close contact with backing means being located a considerable distance around the periphery of the backing means in the direction of movement of the web from the position of the coating unit.

2,457,434

SIGNALING SYSTEM FOR TWO-WAY DIALING OVER RADIO AND CARRIER TELEPHONE CIRCUITS

Everhard H. B. Bartelink, Bronxville, N. Y., assignor to General Telephone Corporation, New York, N. Y., a corporation of New York

Application February 20, 1947, Serial No. 729,830
9 Claims. (Cl. 250—6)



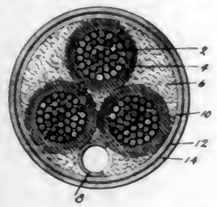
6. In a two-way dial telephone signaling system for relaying signals between a low-frequency wire circuit and a carrier wave circuit: a carrier wave transmitter and receiver; an incoming and an outgoing wire circuit; a carrier relay responsive to carrier current incoming to said receiver and to dialing interruptions thereof; a slow-release relay responsive to said carrier relay; a transmitter relay for energizing said transmitter to transmit outgoing carrier; a sequence relay energized by said slow-release relay for energizing said transmitter relay and for connecting said incoming circuit to contacts of said carrier relay for repeating in said circuit the dialing pulse operation of said carrier relay; a line relay; means including release contacts of said sequence relay, for connecting said line relay to said outgoing circuit, and for energizing said relay; and means including operate contacts of said line relay, for energizing said transmitter relay, said line and transmitter relays responding to dialing pulses, for interrupting the outgoing carrier in response to dialing signals received over said outgoing line.

2,457,435

AUTOMOBILE CHAIN SNAP

Lawrence R. Beckman, Erhard, Minn.

Application March 28, 1947, Serial No. 737,872
5 Claims. (Cl. 24—73)



1. An automobile chain snap including a substantially rectangular front plate provided with two hook shaped slots adjacent its ends, the vertical portion of each slot extending in the same direction and the horizontal slot portions extending in opposite directions, a rear plate having the same size and shape as the front plate and provided with two hook slots of the same width as the slots in the front plate, the two plates being slidably connected with each other, the vertical slot portions in the rear plate being located so that the inner edge of one of said slot portions coincides with the outer edge of the corresponding slot portion in the front plate and the outer edge of the other vertical slot portion in the rear plate coincides with the inner edge of the corresponding slot portion in the front plate, when the two plates are arranged to cover each other.

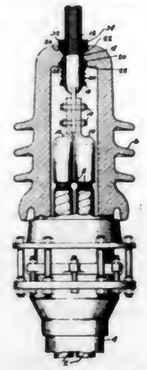
2,457,436

HIGH-TENSION ELECTRIC CABLE

Charles E. Bennett, Ridgewood, N. J., assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey

Application May 9, 1944, Serial No. 534,722
1 Claim. (Cl. 174—26)

A sealed electric cable comprising in combination a plurality of separately insulated conductors, fillers about the exterior of said insulated conductors to build up the desired cross section, a tight fitting metal sheath extruded about said assembly of conductors and fillers, said conductor insulation consisting of an oil permeable tape wrapped about each conductor, said fillers consisting of oil permeable material, the tape and fillers being oil impregnated, a tubular fluid-distribution conduit within the cable, said conduit being in the form of a flexible open helix extending continuously the length of the cable, and cabled with the said conductors and means for maintaining the cable under superatmospheric pressure under all conditions of cable operation, said means comprising a mixture of oil and dichloro difluoromethane under superatmospheric pressure filling said conduit and the spaces between the overlapping tape wraps of the conductors and permeating and filling the voids and interstices of the fillers.



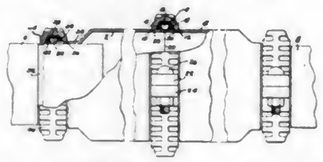
2,457,437

TERMINAL BUSHING FOR POWER CABLES

Charles E. Bennett, Ridgewood, and Paul V. White, Rochelle Park, N. J., assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey

Application August 9, 1944, Serial No. 548,688
3 Claims. (Cl. 174—77)

1. A terminal for electric cables comprising in combination an insulating casing under internal superatmospheric pressure for receiving a cable conductor which is to be terminated, a connector for attachment to the terminal end of the cable conductor, said connector projecting through the terminal end of the insulating casing, an abutment on said connector within the insulating casing and rigid with the connector, a non-metallic gasket surrounding the connector and interposed between it and the inner face of the insulating casing, a compression ring for said gasket loose upon the connector, a spring under compression carried by the connector between said connector abutment and said compression ring, a non-metallic gasket at the outer face of the terminal end of the insulating casing between the insulating casing and the connector, a compression ring therefor, and a nut threaded upon the connector and bearing against said last mentioned compression ring and maintained thereby out of contact with said insulating casing, said compression rings, nut and connector being out of contact with the insulating casing, tightening of said nut compressing said gaskets between their respective compression rings and the insulating casing.



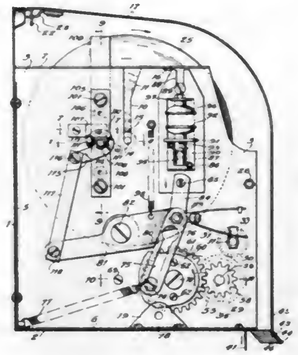
2,457,438

JOINT FOR PIPE LINES

Charles E. Bennett, Ridgewood, N. J., assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey

Application July 23, 1946, Serial No. 685,574
4 Claims. (Cl. 285—194)

1. In a joint for electric cable systems, a coupling for coupling the joint casing to a pipe line of the system and which extends into the casing, the combination of a continuous gasket of resilient material and composed of a web and two side flanges stretched about the pipe line and joint casing, one flange of the gasket resting upon the joint casing, the other upon the pipe line, and a housing for the gasket, said housing being composed of two sections bolted together, the two sides or edges of the housing being shouldered to provide two annuli constituting keys which enter annular grooves formed in the pipe line and joint casing.



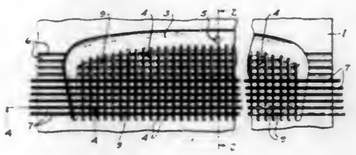
2,457,439

DISPENSING APPARATUS FOR SHEET MATERIAL

Rudolph G. Birr, Lombard, Ill., assignor, by mesne assignments, to American Linen Supply Co., Carson City, Nev., a corporation of Nevada

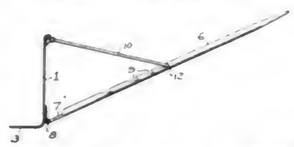
Application July 14, 1944, Serial No. 544,919
9 Claims. (Cl. 242—55.5)

1. A dispensing device comprising a measuring roll, a stop mechanism controlled by and controlling said roll, a supply roll of paper freely rotatable on a support, means for exerting a braking pressure on said roll, and means operated through the stop mechanism for causing said braking pressure means to apply pressure to prevent continuation of supply roll rotation when the stop is set, the said braking pressure means being adapted to relieve the pressure when the stop mechanism is released.



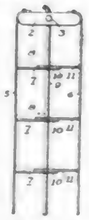
2,457,440

METHOD FOR PRODUCING TUFTED PLASTIC COMBS



Herbert L. Booth, Staten Island, N. Y.

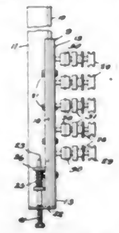
Application June 5, 1947, Serial No. 752,755
4 Claims. (Cl. 18—59)



4. The method of making an injection molded comb whose teeth are provided with opposed tufts in the inter-tooth spaces, which method comprises providing an injection mold having a pair of molding sections adapted for relative movement between an open position wherein they are in spaced relation and a closed position wherein they are in abutting relation, each section of said pair having a recessed molding surface portion forming with the other section of said pair in the closed position an internal comb molding cavity and parallel rows of openings, each row providing a passageway connecting successive tooth-forming portions of said cavity; disposing a length of compacted tuft-forming cord in each row of opening forming recesses of one of said sections while the mold is in open position, each of said cords being of substantially the same cross-sectional area as the openings of its row so as to seal said openings with the mold in closed position; closing said mold; filling said comb cavity with a settable liquid plastic under pressure; opening said mold when the plastic has sufficiently set and removing the comb formed; and, severing the tuft-forming cord between the comb teeth to form the opposed tufts.

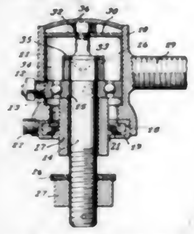
2,457,441
CHEESE PUSHER
Frank B. Branchfield, Sr., Canton, Ill.
Application September 27, 1946, Serial No. 699,804
5 Claims. (Cl. 210—149)

3. In a pushing implement as described, the combination with a longitudinally extending frame and a reticulated screen mounted therein, and an adjustable handle pivoted on the frame, of a brace arm having a pivotal joint on the frame and spaced from the handle pivot, a longitudinally extending blade rigid with the frame and disposed at an angle therefrom, and co-acting means on the free end of the arm and on the handle for retaining the frame and handle in adjusted angular position.



2,457,442
LADDER TAPE
George F. Brent, Pittsburgh, Pa., assignor to Brent Industries, Inc., a corporation of Pennsylvania
Application July 14, 1945, Serial No. 605,074
10 Claims. (Cl. 160—178)

1. In a Venetian blind including a supporting bar, two horizontally spaced flexible ladder-like hangers suspended from said bar, a series of slats supported in vertical spaced re'ation by the cross arms of said ladder-like hangers, and a cord extending downward from the supporting bar at each hanger and extending through openings in the slats; the invention herein described wherein said ladder-like hangers each comprise two flexible hanger members extending vertically upon the front and rear edges of the series of slats, and a series of spaced cross arm elements secured to each hanger member and extending between said slats, the cross arm elements of one hanger member being paired with the cross arm elements of the other hanger member and being interengaged by said cord associated with the hanger to provide slat-supporting cross arms.

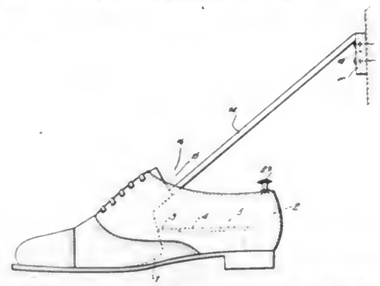


2,457,443
TROLLEY FOR ELECTRIC CRANES
Eugene W. Burroughs, Sr., Norfolk, William J. Byrd, Suffolk, and Miles P. Seawell, Norfolk, Va.
Application October 1, 1948, Serial No. 52,262
4 Claims. (Cl. 191—45)

1. A trolley arm for use with multiple trolleys, comprising a base plate having a rectangular opening formed therein, a movable plate mounted on the base plate over said opening, arms secured to the plate and being insulated from the plate, trolley wheels mounted at the outer ends of the arms and on which the trolley wires rest, plates secured to the base plate with portions thereof overlying the side edges of the movable plate, holding the movable plate in position on the base

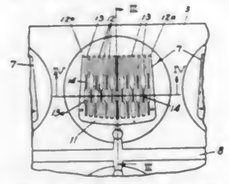
plate, and yieldable means connected with the movable plate and base plate, normally urging the movable plate in one direction forcing the trolley wires into engagement with the trolleys associated therewith.

2,457,444
TIE ROD END INSTALLATION
Donald E. Cave, Griffin, Ind.
Application October 18, 1946, Serial No. 704,267
2 Claims. (Cl. 287—90)



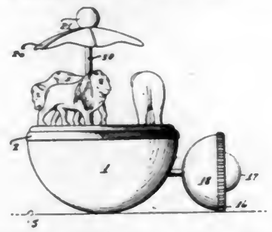
1. A tie rod end comprising an inverted cup-shaped housing open at its lower end and formed intermediate its upper and lower ends with an internal shoulder, a ball bearing unit axially arranged above said internal shoulder with its outer race engaging the interior of said housing, a bolt axially depending through the inner race of said ball bearing unit and reaching below the open lower end of said housing, said bolt having a head on its upper end resting upon said inner bearing race, said head being formed with an upwardly facing ball socket, a ball therein having an upwardly extending shank, a washer spaced above said bolt head to which said shank is secured whereby said bolt is supportably connected to said washer, said washer being larger in diameter than said internal shoulder whereby upon disintegration of said ball bearing unit and consequent fall of said bolt said washer will be supported by said internal shoulder in a manner to prevent said bolt from falling through the open lower end of said housing.

2,457,445
COMBINATION SHOE TREE AND SHOESHINE BRACKET
Verne Clair, Rye, N. Y.
Application May 4, 1946, Serial No. 667,240
3 Claims. (Cl. 12—128.6)



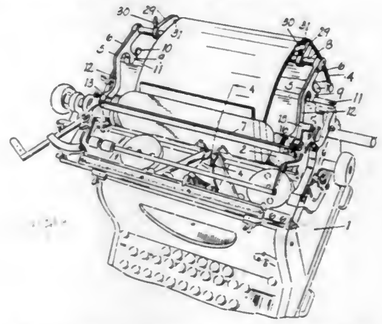
1. A shoe tree having a substantially full instep portion with its central portion having a longitudinally-extending socket substantially aligned with the center of the bottom of said shoe tree along a line transversely aligned with the

ball portion thereof, a straight bar having a lower end fitting slidingly in said socket and an upper end provided with releasable means for mounting



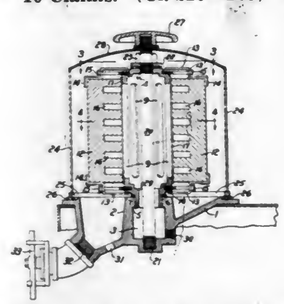
it to a support with said shoe tree substantially horizontal, and releasable means for retaining said bar's lower end in said socket.

2,457,446
PUSH COMB
Harold S. Cloyd, Erie, Pa., assignor to National Organ Supply Company, Erie, Pa., a corporation of Pennsylvania
Application July 12, 1944, Serial No. 544,573
1 Claim. (Cl. 132—21)



A push comb injection molded in a single step from thermoplastic synthetic resin and comprising a back and spaced teeth extending from the back and curved longitudinally and transversely in the molding operation to provide a generally spherical contour to the comb surface, adjacent teeth being separated a substantial distance over a portion of their length and having portions forming a constriction therebetween where the teeth are in substantial contact solely as a result of the cooling shrinkage after the molding operation, and the comb retaining its original shrinkage stresses.

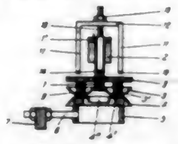
2,457,447
CARROUSEL TOY FOR CHILDREN
Irwin Cohn, Leominster, Mass.
Application June 4, 1946, Serial No. 674,275
2 Claims. (Cl. 272—31)



1. A carousel toy for children comprising a hemispherical body member, a cover body member, a plurality of objects arranged about the peripheral area of the cover body member, a spring motor within the body member, a shaft projected through the body member and rotatably connected to said spring motor and a driving wheel carried by said shaft, the hemispherical body member and wheel being adapted for simultaneous contact with a plane support, the wheel being adapted to rotate the body member on its vertical axis.

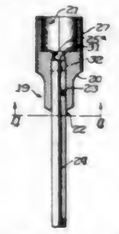
2,457,448
MANIFOLDING DEVICE
Delbert G. Dalby, Amarillo, Tex., assignor to Roberts Paper Company, Amarillo, Tex.
Application March 30, 1946, Serial No. 658,463
9 Claims. (Cl. 197—126)

3. A manifolding apparatus including in combination a platen of a typewriting machine, a bar-like clamp member disposed beyond the platen relative to the path of travel of the paper thereover, an eccentrically mounted manually rotatable rockshaft, clamping shoes mounted on said rockshaft to be actuated to and from coacting clamping relation with said clamp member by rotative movement of said rockshaft, said shoes being spaced to lie outside of the side edges of a sheet of paper in said machine and to clamp the tabs of a carbon pack comprising a plurality of carbon sheets having laterally projecting side edge tabs to said clamp member.



2,457,449
FILTER
John V. Davis and John S. Hoffman, Detroit, Mich., assignors to The Udylite Corporation, Detroit, Mich., a corporation of Delaware
Application May 13, 1946, Serial No. 669,310
10 Claims. (Cl. 210—120)

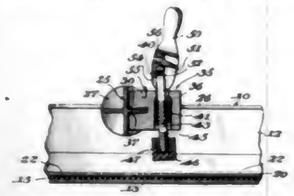
1. In a filter, a hollow frame having a plurality of outward faces, each face having a longitudinal slot, a filter block secured to each of



said faces in overlying relation to the slot thereof and having cavities opening at said slot, and a gasket inserted between each block and the adjacent face and having a slit along said slot and cavities.

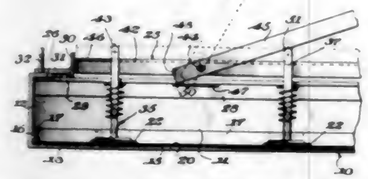
2,457,450
YARN TENSIONING DEVICE
Raymond Dewas, Amiens, France
Application June 5, 1946, Serial No. 674,494
In France March 26, 1946
20 Claims. (Cl. 242—150)

1. A yarn tensioning device which comprises a fixed support, a spindle secured by one of its ends to said support and projecting downwardly therefrom, an upper disc rotatably mounted on said spindle, a fixed concentric ring located below and spaced apart from said upper disc, a lower disc adapted to rest on the upper face of said fixed ring and having a central hole therein for the evacuation of the material or fluff which becomes detached from the yarn as it passes between said discs, the length of said spindle being limited so that its lower end is located above the level of the plane of contact of said upper and lower discs.



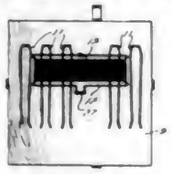
2,457,451
METHOD OF MAKING INTERNAL WRENCHING TOOLS
Lawrence C. Domack, Elmwood Park, Ill.
Application June 16, 1947, Serial No. 754,858
5 Claims. (Cl. 76—114)

1. A method of joining a socketed shank to a non-circular cross-section bit, to form an internal wrenching tool, comprising the steps of: (*a*) forming a bore in said shank; (*b*) broaching a portion of said bore to a cross-section corresponding in shape but slightly smaller than said bit; and (*c*) pressing an end portion of said bit entirely through the broached portion of said bore and into the unbroached portion thereof to enlarge said bore sufficiently to hold the bit therein by frictional engagement.



2,457,452
LITHOGRAPHIC PLATE GRAINING MACHINE CLAMP
Martin G. Dunn, Washington, D. C.
Application December 3, 1946, Serial No. 713,690
5 Claims. (Cl. 51—6)

1. In a lithographic plate graining machine, a grainer tub, a supporting member extending above and in spaced relation to the bottom of the tub, and at least one plate clamp carried by said member, said clamp comprising a body portion secured to said member, a presser foot depending from



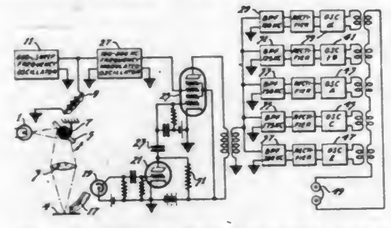
said body portion, means for urging said foot resiliently downwardly upon a plate resting upon the bottom of said tub, and manually adjustable cam means for raising said foot from operative clamping position.

2,457,453
MULTIPLE CLAMP FOR LITHOGRAPHIC PLATE GRAINING MACHINES
Martin G. Dunn, Washington, D. C.
Application January 6, 1947, Serial No. 720,389
10 Claims. (Cl. 51—6)

1. In a lithographic plate graining machine, a grainer tub, an elongated clamp supporting frame secured to and extending across and above the tub in spaced relation to the bottom thereof, a plurality of plate clamps carried by said frame, each of said clamps including a presser foot adapted to exert bearing pressure upon a plate resting upon the bottom of the tub, means for resiliently urging said feet downwardly toward said plates, and means for simultaneously raising said clamps from and lowering them to clamping position.

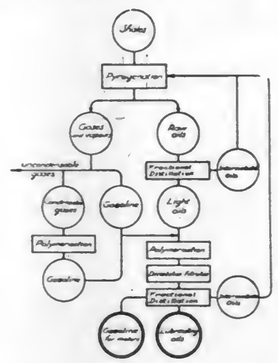
2,457,454
SOFTBALL KIT
Henry Lee Dunlap, Dearborn, Mich.
Application June 7, 1946, Serial No. 675,205
2 Claims. (Cl. 273—25)

1. A kit of equipment for laying out and setting up a softball playing field comprising a plurality of flat plates for use as bases, each plate having a plurality of identically arranged slots therein, a plurality of stakes for holding down said bases, a laterally extending head portion at the upper end of each stake, a layout line and winder therefor, a laterally extending flange portion projecting from said winder fitted in one of said slots, said



stakes and winder lying substantially flat on one of said plates with the lateral projections of said stakes fitted into certain of said slots in said one plate, the remainder of said plates placed above and below said plate containing the stakes and winder, and means for substantially holding said plates together in their assembled position.

2,457,455
CLINICAL THERMOMETER
Logan Eisele, Nashville, Tenn.
Application May 4, 1944, Serial No. 534,064
2 Claims. (Cl. 73—371)

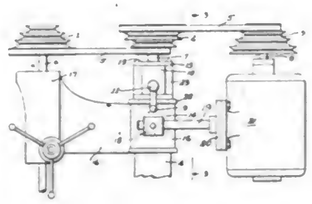


1. A clinical or self-registering thermometer comprising a stem portion having a small bore therethrough, a mercury containing bulb joined to said stem, said stem having a cavity in its lower end communicating with said bulb and said bore, said bulb being formed at one end with a perforated neck member which carries at its distal end an enlargement which extends into said cavity, the outer surface of said enlargement and the inner surface of said cavity defining therebetween small leakage openings of such size that the forces of gravity and cohesion are unable to cause mercury to pass therethrough but at the same time large enough that a reasonable amount of shaking or slinging will cause mercury to pass therethrough, said bulb and said bore being partially filled with mercury and evacuated.

2,457,456
READING AID FOR THE BLIND
Leslie E. Flory, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 14, 1946, Serial No. 669,542
17 Claims. (Cl. 250—41.5)

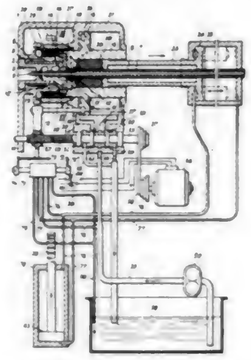
4. The combination which includes means for scanning an area in one direction with a spot of light while advancing said spot across said area in a direction at an angle to the scanning direction; a source of oscillations; means for modulating the frequency of said oscillations in synchronism with the scanning movement of said spot; a plurality of frequency selective filter networks each responsive to a different frequency; means for applying said frequency modulated oscillations to said networks; means for varying the amplitude of said applied oscillations in accordance with the amount of light reflected from said area at any instant, means for producing currents of distinctive frequencies characteristic of each of said networks; and means for controlling individually the amplitudes of said currents in accordance with the variations of amplitude of said applied oscillations.

2,457,457
METHODS FOR TREATING BITUMINOUS SHALES
Jean Léon Maurice Fréjacques, Paris, France, assignor to Compagnie de Produits Chimiques et Electrometallurgiques Alais, Froges et Camargue, Paris, France, a corporation of France
Application April 24, 1945, Serial No. 590,106
In France February 13, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires February 13, 1962
4 Claims. (Cl. 196—78)



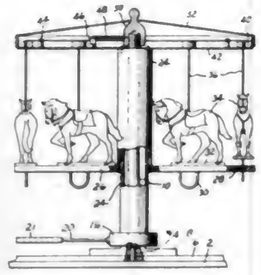
1. A method for producing a sulfur-free high grade lubricant from bituminous schists, which comprises initially distilling said schists in the presence of a recycle oil fraction of boiling range intermediate lubricating oil and gasoline and obtained from a prior fractional distillation operation, to produce a distillate oil, subjecting the distillate oil so produced to fractional distillation to obtain a lighter fraction and a heavier fraction, subjecting the lighter fraction to a polymerization treatment with a metal halide catalyst of the Friedel and Crafts type to produce a polymerization product, fractionating the polymerization product to obtain a plurality of fractions including a lubricating oil fraction and a recycle oil fraction of boiling range intermediate lubricating oil and gasoline, and recycling said recycle oil fraction to the initial distillation operation.

2,457,458
SPEED DEVICE
Clyde A. Girod, Winona, Minn.
Application November 27, 1945, Serial No. 631,201
4 Claims. (Cl. 74—242.1)



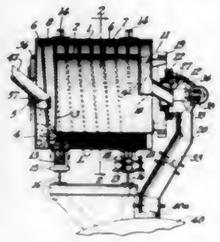
1. A crank for the speed belt drive for drill presses and the like comprising a drive pulley,

a driven pulley, a speed change pulley, a first belt driving the speed change pulley from the drive pulley, a second belt for driving the driven pulley from the speed change pulley, a hollow column, means slidably mounted in the said hollow column and comprising a standard having a



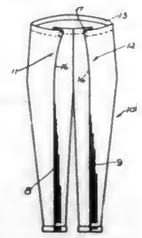
threaded hole diametrically therethrough, a screw rotatable in said threaded hole, a bar secured to said screw for translation therewith, and a stub shaft for said speed change pulley secured to said bar for translation therewith.

2,457,459
PRESS FOR THE COVERING OF ELECTRODE RODS
Karl Gloor, Zurich, Switzerland
Application June 18, 1945, Serial No. 600,201
In Switzerland May 31, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 31, 1964
9 Claims. (Cl. 18—13)



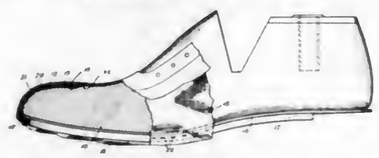
1. A press for coating electrode rods, comprising a fixed cylinder head containing a pressing nozzle, a cup-shaped case having an inner chamber directed toward said nozzle for transmitting a coating mass to said nozzle, and further having openings formed in the front end thereof, another case having a web located adjacent the first-mentioned case and having openings formed therein and adapted to aline with the openings of the first-mentioned case, means connected with the second-mentioned case for rotating it relatively to the first-mentioned case to bring the openings of the two cases in and out of alinement, means engaging said cases to cause them to move jointly longitudinally and a filling piston movable within the second-mentioned case, whereby relative longitudinal movement between said filling piston and the second-mentioned case will press the coating mass into said inner chamber when the openings are in alinement.

2,457,460
TOY, MORE PARTICULARLY TOY MERRY-GO-ROUND
Harold R. Goodale, Bristol, Conn.
Application October 23, 1946, Serial No. 705,161
7 Claims. (Cl. 272—31)



2. In a toy of the character indicated, a carrier, means for rotating the carrier around an axis, a series of figures distributed around the periphery of the carrier, a string for suspending each figure, a pulley, and means responsive to rotation of the carrier for causing the pulley to successively engage and displace the strings.

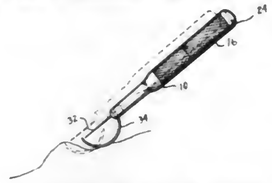
2,457,461
CATALYST FEEDER
Johan E. A. Graae, New York, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application May 29, 1946, Serial No. 673,125
6 Claims. (Cl. 214—17)



6. A feeder device for granular material, including a rotor comprising a pair of concentric drums, the outer drum projecting axially beyond one end of the inner drum, a helical wall extending between the concentric walls of said drums and defining therewith a helical tubular conduit coaxial with the drums and open at its ends for reception and discharge respectively, of said material, said helical wall extending into the portion of the outer drum projecting from said end of the inner drum and defining, with the outer drum, an open helical channel to receive the material for passage to said tubular conduit, and means supporting the rotor for rotation about the helix axis of said conduit in a horizontal position to cause gravitation of the material within the conduit to one side of the axis and thereby form of the material a gas seal within the conduit, for axial advance of the material through said channel and conduit and for maintenance of the gas seal during said advance.

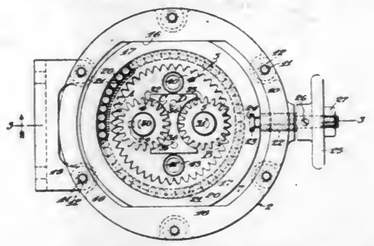
2,457,462
TROUSERS
Max Gray, New York, N. Y.
Application January 31, 1945, Serial No. 575,457
6 Claims. (Cl. 2—237)

1. In a garment of the type worn downwardly from the waistline, a pleat formed of the material of the garment, extending outwardly and downwardly from the waistline of the garment; said pleat being adapted to be folded to lie flat against the garment; said garment including in its unpleated material a plurality of pockets extending downwardly from the waistline adjacent the crease line of the pleat lying flat against the garment and a pleat securing means on the garment comprising an inverted substantially U-shaped member, the arms of which are adapted to hold garment material placed between them; one arm of said member being inserted with its free end downwardly between plies of the pleat along the crease line of said pleat and the other arm of said member being inserted in one of said pockets; the waistline size being adapted to be changed by shifting the latter arm of said member from one pocket into another of said pockets.



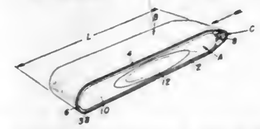
2,457,463
PROCESS OF MAKING SAFETY SHOES
Wirt G. Greenan, Revere, Mass.
Application April 1, 1948, Serial No. 18,459
4 Claims. (Cl. 12—146)

1. The process of making safety shoes which includes the steps of placing a lining and a plastic toe box upon the toe end of a last having a transverse ridge approximately at its tip line and extending to the bottom edge of the last on both sides, placing a metal toe box over the plastic box with its rear arched edge disposed wholly in front of the ridge on the last, padding the outer surface of the metal toe box, and then lasting the leather tip of the upper smoothly over the assembled parts.



2,457,464
SURGICAL INSTRUMENT
Leo L. Grose, Attica, N. Y., assignor of twenty-five per cent to Joseph Grose, Niagara Falls, N. Y.
Application November 8, 1946, Serial No. 708,637
1 Claim. (Cl. 128—347)

A surgical instrument including a handle, a needle secured to said handle, and a guard member of arcuate form carried by said handle having a central portion curving outwardly from said needle and a point portion extending beyond and adjacent the point of said needle when extended and adapted to limit the penetration of said needle, said handle having an interiorly threaded barrel member operatively associated



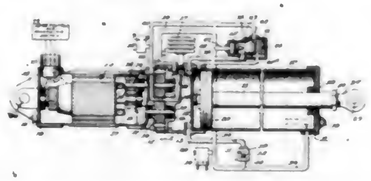
with an exteriorly threaded cylinder provided terminally with needle holding means, and a member rotatably mounted on said barrel with a portion thereof extending within said cylinder to rotate the same and thus extend and retract said needle.

2,457,465
VARIABLE DISPLACEMENT GEAR PUMP
Christian E. Grosser, Warwick, R. I., assignor, by mesne assignments, to Cread Engineering and Research Company, Cranston, R. I., a corporation of Rhode Island
Application April 27, 1946, Serial No. 665,440
6 Claims. (Cl. 103—120)

1. A variable-displacement gear-pump comprising a casing, a ring-gear rotatable within the interior of the casing, means for adjusting the ring-gear in a direction diametrically of its axis, a pair of pinions journaled in spaced relationship within the casing with their teeth in mesh with the teeth of the ring-gear, a separator held fixedly within the casing between the pinions and provided with concave faces on its opposite sides in contact with the peripheries of the teeth on the two pinions, and suction and discharge openings in the casing located on opposite sides of a line passing through the axes of both of said pinions, said openings being separated from each other at all times by said pinions, said ring-gear and said separator.

2,457,466
HAND-OPERATED ABRADER
Atto N. Hanna, Atlantic Highlands, N. J.
Application November 28, 1945, Serial No. 631,297
1 Claim. (Cl. 51—185)

A hand-operated abrader comprising a supporting block having end walls, opposite side walls



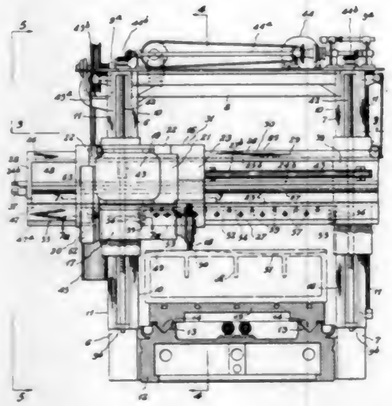
and long flat top and bottom walls, said top and bottom walls being parallel, said opposite side walls having hand hold depressions, one of said end walls being smoothly and bluntly curved and the other of said end walls having a central flattened portion, said block having a pair of holes extending inwardly parallel to said top and bottom walls from said flattened portion of said other of said end walls, said holes being provided with shoulders disposed inwardly from said flattened portion, a friction lining affixed to said top and bottom walls and said smoothly rounded end wall, a removable flexibly backed abrasive strip in continuous form enveloping the top, bottom and end walls of said block, said enveloped top and bottom and said other of said end walls being exposed for abrasive action, the side walls of said block being exposed to be grasped by the operator's hand, a sharply curved pusher bar provided with a pair of supporting arms each adapted to fit within one of said holes in said supporting block, and a coil spring loosely surrounding each of said supporting arms, each of said springs adapted to have one end seated against the shoulder in the appropriate holes and the other end active against said pusher bar, said pusher bar being located between said block and said abrasive strip and resiliently urged by said abrasive strip and resiliently urged by said springs into contact with the interior of said continuous abrasive strip so as to be frictionally active thereupon to releasably hold the same under tension in non-slipping relationship to said block, the strip being rotationally movable over the top, bottom and end walls of the block and over said pusher bar for bringing a fresh abrasive surface thereof over any desired one of said walls only when said springs are contracted, the top and bottom walls of said abrader in conjunction with said abrasive strip defining broad flat abrasive surfaces, the bluntly curved end wall of said block in conjunction with said abrasive strip defining a bluntly curved abrasive surface, and said pusher bar in conjunction with said abrasive strip defining a curved abrasive surface of extreme narrowness.

2,457,467

ELECTRICALLY AND HYDRAULICALLY OPERATED EXTENSIBLE STRUT

Milton V. Hartman, Chicago, Ill., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware

Application March 8, 1945, Serial No. 581,699
4 Claims. (Cl. 60—52)



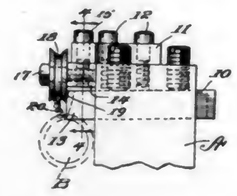
3. An electrically and hydraulically operated extensible strut comprising an elongated casing having a plurality of fixed, spaced apart cross partitions whereby it is divided into a longitudinally extending cylinder at one end, a motor compartment at the other end, and a fluid reservoir and a pump compartment between the cylinder and the motor compartment, a piston slidably mounted in the cylinder and provided with an outwardly projecting piston rod extending slidably through the cross partition that defines the outer end of the cylinder, a reversible electric motor mounted in the motor compartment, a gear pump mounted in the pump compartment, and connected for drive by the electric motor, means forming a first fluid passage extending between, and communicating with, one side of the gear pump and the inner end of the cylinder, means forming a second fluid passage extending between, and communicating with, the other side of the gear pump and the outer end of the cylinder, means forming a third fluid passage extending between, and communicating with, the reservoir and the second passage, a check valve positioned in the third passage and closing in the direction of the reservoir, a valve casing interposed in the first passage and having an outlet and a spring closed valve for the outlet, means forming a fourth fluid passage leading from the outlet to the reservoir, and means operative in response to the pressure of the fluid in said second passage when the pump is driven to supply fluid under pressure through said second passage into the outer end of the cylinder to open said spring closed valve, the last mentioned means consisting of a coacting piston and cylinder and a fluid passage leading from the second passage to the last mentioned cylinder.

2,457,468

METHOD OF AND APPARATUS FOR CORRECTING DEVIATIONS IN CROSSRAILS OF MACHINE TOOLS

Lad L. Hercik, Lakewood, Ohio

Application December 31, 1945, Serial No. 638,530
15 Claims. (Cl. 51—166)



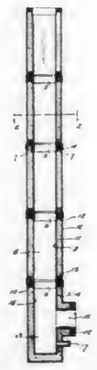
1. Apparatus of the character described, comprising: elongated continuous suspended cross-rail means having supporting means restricted to a localized area along its length, and having also an unsupported portion extending beyond said supporting means, a carriage movable on said unsupported portion and subjecting the same to deviation under load stresses from the intended rectilinear form of said cross rail means, and a rectifying device carried by said cross-rail means and including means operable to exert a flexing force upon said unsupported portion of said cross-rail means, said flexing force being exerted counter to said load stresses, thus to flex the unsupported portion of the cross-rail means to its intended rectilinear form when subjected to said load stresses.

2,457,469

CHIP BREAKER

Lloyd A. Hillman, Bay City, Mich., assignor of one-half to Lowell R. Cuthbert, Essexville, Mich.

Application April 19, 1945, Serial No. 589,131
1 Claim. (Cl. 29—96)



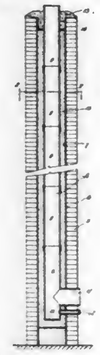
In a metal turning machine, a holder mounted on said machine, and a tool carried by said holder for turning a work piece, the improvement consisting of operatively connecting a device to said holder for kinking and breaking the shavings removed from said work piece, said device comprising a plate arranged in superposed relation with respect to said holder and releasably secured to the latter, a portion of said plate projecting beyond said holder and positioned above said tool, a bearing dependingly supported by said projecting portion and adjustably mounted for lateral movement with respect to said plate, a horizontally-disposed shaft projecting from the forward face of said bearing and secured to the latter, and a grooved roller rotatably mounted on the projecting end of said shaft.

2,457,470

INSULATED CHIMNEY

Ernest O. Howle, Chicago, Ill.

Application December 5, 1945, Serial No. 632,863
3 Claims. (Cl. 72—92)



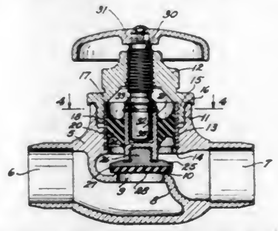
1. A sectionalized chimney comprising a plurality of sections, every section having a vitrified metallic flue casing and an outer metallic casing spaced from the flue, and a filling of finely ground aluminum silicate filling the space between the casings, and end plugs comprising rings of aluminum silicate and a binder for preventing escape of the powdered insulating material.

2,457,471

CHIMNEY CONSTRUCTION

Ernest O. Howle, Chicago, Ill.

Application December 5, 1945, Serial No. 632,864
4 Claims. (Cl. 72—94)

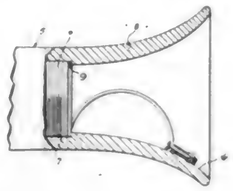


1. Chimney construction including a casing of brick or the like, a non-heat absorbent liner for the casing, a metallic flue spaced from the said liner and arranged with its lower end above the lower end of the casing, said flue having a closed bottom, a take-off for connection to a heater extending laterally from the flue and through the casing, and a filler of finely ground aluminum silicate below the lower end of the flue and occupying all of the space between the bottom of the casing and the lower end of the flue and all of the space between the flue and said casing liner.

2,457,472

PACKLESS GLOBE VALVE

George H. Hufferd and George O. R. Lindgren, Cleveland, Ohio, assignors to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio



Application May 15, 1944, Serial No. 535,611
3 Claims. (Cl. 251—31)

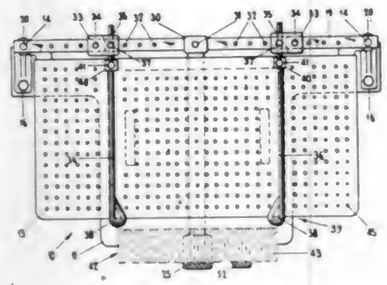
1. A packless valve comprising a valve body having a valve chamber, a diaphragm chamber disposed above said valve chamber, and an annular shoulder between said chambers, said being formed with an annular groove opening toward said diaphragm chamber, a bonnet secured to said body, a sealing member comprising a sleeve having its lower end pressed into said groove and in sealing relation with said annular shoulder and its upper end engaged by said bonnet, an annular rubber diaphragm having its outer periphery bonded to said sleeve and a valve stem carried by and bonded to the inner periphery of said diaphragm, said diaphragm member being relatively thick in an axial direction and extending generally radially between its areas of

attachment with said sleeve and stem, means carried by said bonnet for reciprocating said valve stem, and a valve closing member carried by the lower end of said stem.

2,457,473
WATER ABSORBER FOR CLARINETS AND THE LIKE
Giuseppe Incampo, West Point, N. Y.
Application February 26, 1946, Serial No. 650,163
7 Claims. (Cl. 84—382)

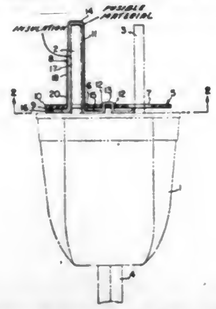
1. The combination with a clarinet or like wind instrument having a flared bell, of a removable water absorber comprising an upwardly-bowed wire, said wire being disposed longitudinally within said bell, a sponge retainer on the forward end of said bowed wire, said retainer being adapted to hold a sponge resiliently against the lower interior wall portion of said bell adjacent the mouth thereof, and a retainer member on the opposite end of said bowed wire, said last-named retaining member being adapted to be detachably engaged with interior portions of said bell rearwardly of the mouth thereof.

2,457,474
LOCKING MEANS FOR DIVIDERS
William L. Jameson and Frank L. Rogers, San Jose, Calif.
Application May 27, 1946, Serial No. 672,636
3 Claims. (Cl. 33—153)



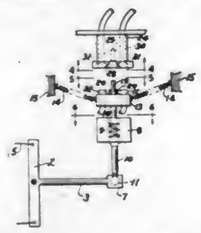
3. In a pair of dividers having an arcuate member projecting from one of the shanks for sliding engagement with the other shank, a lever mounted lengthwise upon the second shank forwardly of the arcuate member and having a pointed rear end adapted for locking engagement with the arcuate member, the lever having a front arm projecting over the shank at a slight incline, a leaf spring having its front end anchored to the shank forwardly of the lever and having a rear section bearing on the underface of the arm for urging the pointed end of the lever into engagement with the shank, and an inclined seat supporting the forward portion of the leaf spring and terminating in a slot alined with the seat for anchoring the forward portion of the leaf spring, the rear edge of the seat being raised with respect to the shank surface and close to the front edge of the lever arm to stiffen the spring upon operation of the lever, and the rear end of the spring extending to within close proximity of the shank so as to bear on the latter when the lever is depressed for giving a second support to the spring.

2,457,475
METHOD OF AND DEVICE FOR WRAPPING WIRE ON TERMINALS
Fleming W. Johnson, Detroit, Mich., assignor to International Detrola Corporation, Detroit, Mich., a corporation of Indiana
Application December 22, 1945, Serial No. 636,641
4 Claims. (Cl. 140—123)



1. The method of securing wires to terminals by means of an open-ended hollow member having an apertured peripheral wall which comprises the steps of inserting an end portion of the wire to be wound around the terminal into the hollow portion of the member and outwardly through the aperture, of placing the hollow member over the terminal in telescoping fashion with the wire inserted therein, and of rotating the member relative to the terminal until the inserted end of the wire is withdrawn inwardly through the aperture and wound about the terminal.

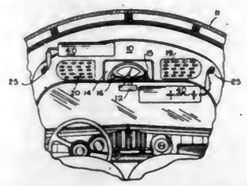
2,457,476
STEAM SIZING MACHINE
William Kaplan, Brooklyn, N. Y., assignor to Wilbe Research Corporation, Brooklyn, N. Y.
Application November 20, 1946, Serial No. 711,041
2 Claims. (Cl. 223—70)



2. In a steam sizing machine for steaming knitted tubular cloth from the exterior of the cloth, comprising a steam heated table having a horizontally positioned and perforated upper face, a guide bar supported parallel with said upper face and being mounted for up and down movements rearwardly of said steam table, a solid skeleton cloth spreading frame comprising two spreading arms slidably supported by said guide bar in a horizontal position and being relatively adjustable thereon to and from each other and lengthwise of said steam table, said guide bar in lowermost position being adapted to bring said spreading frame in contact with the perforated upper face of said steam table, and foot-actuated pedal means in front of said steam table for raising and lowering said spreading frame, while both hands of the operator are free for mounting and adjusting tubular cloth on said spreading frame to be successively brought into overlying contacting relation with said table and said cloth steam treated and stretched to size.

2,457,477
FUSE ATTACHMENT FOR ELECTRIC PLUGS
Anthony La Rizza, Revere, Mass.
Application August 9, 1947, Serial No. 767,671
6 Claims. (Cl. 200—115.5)

6. The combination with an electric plug having prongs for insertion into a socket terminal element, of a fuse attachment therefor comprising a strip of insulating material having a portion which embraces one of said prongs, and a fuse element embracing said insulating strip and having one end interposed between the insulating strip and the prong and in contact with the latter, said insulating strip insulating the remaining portion of the fusible element from said prong.

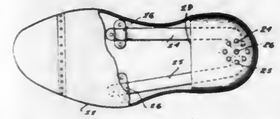


2,457,478
SERVICE COUPLING
Abe Letvin, Detroit, Mich., assignor of one-half to Harry Moore, Detroit, Mich.
Application May 14, 1946, Serial No. 669,704
7 Claims. (Cl. 280—33.05)

1. A coupling comprising a guide member, a stem slidable in one end thereof, a coupling block adjacent to the opposite end of said guide member, a stem extending from said block into said guide member, a spring enclosing the free ends of said stems, means for sliding the first named stem and ejecting the second named stem and said spring from said guide member, and a receiving block engageable by said coupling block on said sliding of the first named stem.

2,457,479
SUNSHADE MOUNTING
Charles E. Lipuma, Chicago, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application February 21, 1944, Serial No. 523,224
4 Claims. (Cl. 296—97)

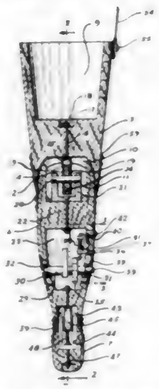
1. In an automobile, a header plate, radio apparatus mounted on the header plate, a sound opening through the header plate for sound emanating from said apparatus, a control knob mounted within said automobile contiguous to the header plate and arranged to control said apparatus, a sunshade support mounted adjacent said opening on the plate, a first arm rotatably mounted in said support, the axis of rotation of said first arm being substantially coincident with a horizontal line passing through the horizontal center of said opening, a second arm rotatably mounted within said first arm, a sunshade adjustably mounted on said second arm, said opening and header plate being arranged to allow transmission of substantially all of the sound



through said opening and space within which the sunshade may be positioned wherein said sunshade blocks ready access to said control knob to a person sitting on the front seat of said automobile, said second arm having a length greater than half the vertical dimension of said opening whereby said sunshade may be positioned either in a position above said opening or in a position below said opening wherein the sunshade produces no interference to said transmission of sound or to operation of said control knob.

2,457,480
BLACKENING COPPER ALLOYS
Earle B. Lewis, Southington, Conn.
No Drawing. Application April 19, 1945, Serial No. 589,267
5 Claims. (Cl. 148—6.14)

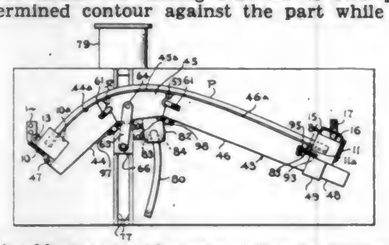
4. The process of producing a black surface on a copper base alloy, the process comprising immersing the alloy in an aqueous solution which is approximately at the boiling temperature and which consists essentially of an alkali selected from the group comprising sodium hydroxide and potassium hydroxide and of an oxidizing agent selected from the group comprising sodium bromate and potassium bromate, the concentration of the solution ranging from 10 g./l. hydroxide and 15 g./l. bromate to 800 g./l. hydroxide and 400 g./l. bromate, continuing the immersion until the surface color of the alloy is uniformly changed to a brownish color in the range from grey-brown to purple-brown, and thereafter immersing the alloy in a second hot aqueous solution consisting essentially of an alkali selected from the group comprising sodium hydroxide and potassium hydroxide and of a chlorite selected from the group comprising sodium chlorite and potassium chlorite.



2,457,481
ARCH SUPPORTING DEVICE
John S. MacArthur, Scottsville, N. Y.
Application January 28, 1947, Serial No. 724,841
7 Claims. (Cl. 36—71)

2. In footwear, an arch supporting structure comprising a pair of arched leaf spring elements,

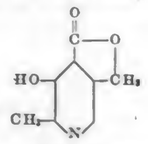
independent means for securing the forward ends of the leaf spring elements to the sole of the footwear in spaced relation to each other, said means, including longitudinally extending channels fixed to said sole and slidably receiving said forward ends, a heel plate, and means for securing the rear ends of said leaf spring elements to said heel plate.



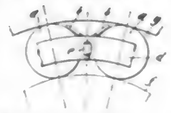
2,457,482
ARTIFICIAL LEG
Kostandean Marean, Dayton, Ohio
Application March 25, 1946, Serial No. 656,890
3 Claims. (Cl. 3—2)

1. An artificial leg comprising upper and lower sections having in their adjacent ends opposed cavities, each cavity having side walls, a front wall and an end wall, the side walls of the cavity in said lower section being arranged between the side walls of the cavity in said upper section, the front walls of said cavities being of less length than the respective side walls and being arranged to have abutting contact one with the other when said sections are in alinement, a bearing member within the cavity in said lower section and supported wholly on the end wall of the cavity in said lower section, a second bearing member mounted on the first mentioned bearing member for movement thereon about an axis transverse to said sections and secured to the end wall of the cavity in said upper section, and a spring connected with said sections to yieldably retain the same in alinement.

2,457,483
STRETCH-FORMING APPARATUS, INCLUDING A SEGMENTAL DIE CONNECTED AT OPPOSITE ENDS TO SHIFTABLE VISES
Royal E. Martin, Mansfield, Ohio
Application October 2, 1946, Serial No. 700,654
5 Claims. (Cl. 153—48)



3. Apparatus for stretch-forming metal parts, comprising a support, a pair of vises for releasably gripping opposed ends of a part to be formed, means for relatively shiftably mounting said vises on said support to be maintained in predeterminately spaced apart relation restrainingly to hold the unformed part while gripped at said opposed ends thereof, an elongate segmental die connected at opposite ends to said shiftable vises and providing part-forming surface portions along the die to be engageable along the length of the unformed part, the segments of said die being pivotally joined, adjustable means for positively limiting flexing of said die to provide a predetermined contour along said part-forming portions, and power means for flexing said die to said predetermined contour against the part while re-

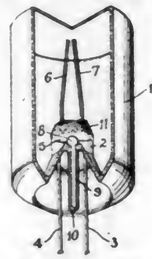


strained between said vises and thereby to stretch-form said unformed part to acquire said predetermined contour.

2,457,484
SUBSTITUTED PYRIDINE COMPOUND
John Halley Mowat, Pearl River, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 7, 1944, Serial No. 521,431
5 Claims. (Cl. 260—295)

5. A compound of the formula

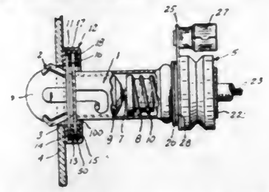
2,457,485
CAGE FOR ROLLER BEARINGS
Bertie Frederick Newton, Chelmsford, England, assignor to Norma Hoffmann Bearings Corporation, Stamford, Conn.
Application February 9, 1945, Serial No. 576,944
In Great Britain March 31, 1944
1 Claim. (Cl. 308—217)



In a roller bearing having rollers and a pair of spaced parallel roller end aligning rings with circumferentially disposed spaced openings, Y-shaped roller separating members having in combination a single piece of sheet metal with a bend for overlapping contacting stem portions forming the stem of the Y, and each stem portion at its upper end having a bend at an obtuse angle with the stem portion to form the V portion of the Y, the stem portions being spaced from the rollers, the stem and parts of the V portions adapted to abut at their lateral ends against the inner surfaces of the rings, with the other lateral parts of the V portions free of contact with the rings and extending outwardly beyond the same, said last named lateral parts being axially narrower than the stem portions for entry into the race of the rollers and for yieldingly contacting with the rolling surfaces of the adjacent rollers, and said stem portions each having a lateral extension at each end passing through an opening in the ring and engaging the outer surface of the ring.

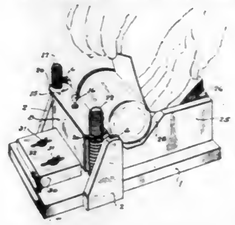
2,457,486
GARMENT HANGER
Kathleen R. O'Grady, Chicago, Ill.
Application July 19, 1946, Serial No. 684,702
3 Claims. (Cl. 223—92)

1. A garment hanger particularly adapted to support women's garments having padded shoulders, comprising in combination, a transverse support member, and enlarged shoulder pad supports extending from the opposite ends of said transverse support member, said shoulder pad supports lying generally in a horizontal plane and each having a relatively large central opening surrounded by an inwardly turned flange having an upwardly turned flange upstanding therearound for the greater part of the periphery thereof, so as to retain garment shoulder pads therein.



2,457,487
GLOW RELAY
Arnold L. Peacock, Danvers, and Bergitte A. Jensen, Boston, Mass., assignors to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application October 17, 1945, Serial No. 622,738
3 Claims. (Cl. 200—113.5)

1. A glow relay comprising a sealed envelope having a stem at one end thereof, lead-in wires sealed through said stem, straight bimetal wire electrodes extending from said lead wires inside said bulb and terminating with their free ends close together but spaced apart, a gaseous filling in said envelope and a getter material on the press only of said stem inside said envelope, said getter comprising a mixture of aluminum, zinc, magnesium and thorium metal powders.

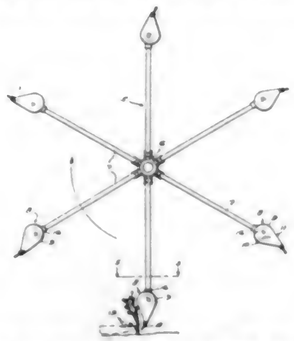


2,457,488
LAMP SOCKET AND RESISTOR
Charles S. Penfold, Bronson, Mich., assignor to H. A. Douglas Mfg. Co., Bronson, Mich., a corporation of Michigan
Application August 11, 1945, Serial No. 610,281
3 Claims. (Cl. 201—49)

1. A lamp socket and resistance element assembly comprising a sheet metal tubular casing having on one end a lamp receiving opening end means for detachably mounting the assembly on a support, a metal sleeve extending axially from the opposite end of said casing having a passage communicating with the interior of the casing for accommodating a conductor wire and having an outwardly extending flange on the end thereof remote from said casing, a layer of insulating material surrounding said sleeve, a resistance element mounted on said layer of insulating material and electrically connected to said sleeve by engaging said flange, a terminal unit also

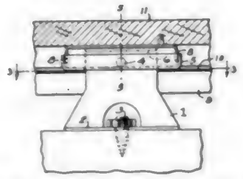
mounted on said layer comprising a metal mounting part disposed between said casing and said resistance element and having electrical contact with the latter, and an insulating washer disposed between said part and said casing whereby current will be caused to flow from said casing through said sleeve, resistance element, and said terminal unit.

2,457,489
DEVICE FOR ASSISTING IN A HAND-LABELING OPERATION
Eugene H. Pierce, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
Application October 24, 1945, Serial No. 624,157
4 Claims. (Cl. 216—50)



1. A container labeling device, comprising: a base member; a repository for a stack of labels carried by said base member including side walls and a rear wall rigidly secured to said base member, said side walls having opposed recessed portions therein intermediate the ends thereof adapted to position a container above said stack of labels so that one of the ends of the uppermost of said labels may be readily grasped and wrapped around said container; a gluepot having a longitudinal opening in the lower end thereof; and means guiding said gluepot for vertical movement relative to said base so that said opening in said gluepot contacts the other end of the uppermost of said labels transversely thereof and adjacent thereto.

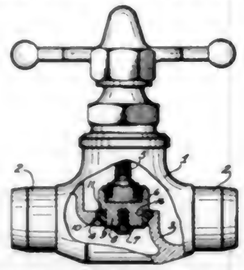
2,457,490
REEL FOR GRAIN HARVESTERS
Ray A. Press, Lancaster, Calif.
Application July 5, 1944, Serial No. 543,558
4 Claims. (Cl. 56—220)



1. A harvester reel comprising, in combination with the usual hub and its radially disposed arms, of paddles pivotally mounted on the outer ends of said arms for limited swinging movement about axes parallel with the axis of the reel and so as to descend upon the grain substantially edgewise, said paddles having resilient yieldable blades

projecting at the outer portions thereof, each paddle comprising a hollow elongated member of substantially bulbous form in cross section with slots in its broader inner portion through

which the associated arms freely extend said arms being pivoted to the paddles within said hollow members thereof adjacent the inner broader portions of the same.



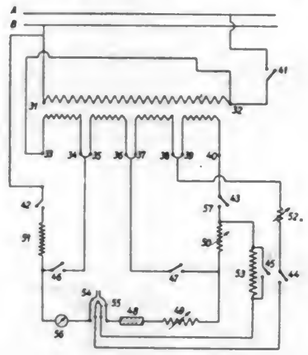
2,457,491
SLIDING DOOR MOUNTING
De Witt Ramsey, Miami, Fla.
Application September 25, 1946, Serial No. 699,243
2 Claims. (Cl. 16—93)

1. A device for sliding doors that are adapted to be used with a support having spaced parallel lower tracks, comprising a hanger blade attached to a door, adapted to depend below and through said tracks, a slide plate slidable on the tracks and having a slot through which the blade passes, a pin passing through the blade and engaging the plate, a flange at the upper end of the blade, a flat band resting on the flange and having downturned ends engageable within flanges on the plate.

2,457,492
VALVE
Frank J. Raybould, Lakewood, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application May 22, 1944, Serial No. 536,655
2 Claims. (Cl. 251—159)

1. A valve comprising a body having a conical seat, an annular seal having a conical surface engageable with said seat and comprising an annulus of substantially non-compressible, deformable material, and axially spaced rings of relatively stiff material surrounding the outer end edges of said annulus, and engageable with said seat, a head having a cylindrical portion on which said annulus is mounted, the ring adjacent to the free end of said cylindrical portion radially engaging said portion, and the other ring being spaced radially from said cylindrical portion under normal pressures, said last mentioned ring being radially compressible, and means for exerting pressure on said head and seal after the

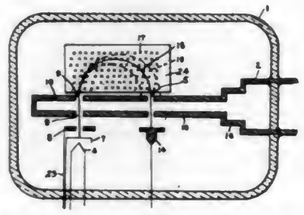
latter has engaged said seat and thereby moving said rings relative to each other and deforming said annulus therebetween.



2,457,493
ART OF MAKING PHENOL-ALDEHYDE REACTION PRODUCTS AND THE PRODUCT THEREOF
Donald V. Redfern, Seattle, Wash., assignor to American-Marietta Company, Adhesive, Resin and Chemical Division, Seattle, Wash., a corporation of Illinois
No Drawing. Application September 3, 1947, Serial No. 772,016
12 Claims. (Cl. 260—57)

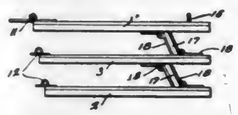
1. The process of producing a thermosetting phenol-aldehyde resin condensation product comprising forming an aqueous mixture of a phenol selected from the group consisting of phenol, cresol, xylenol, and resorcinol, an aldehyde in which the aldehyde group is the sole reactive group, and an inorganic alkaline catalyst accelerating the formation of the resin reaction-product on heating, said catalyst expressed as sodium hydroxide being present in an amount equivalent to not over 10% of the total mix constituents, the molar ratio of the aldehyde to the phenol varying from 1:1 to 3:1, heat-reacting said mix and producing a water-soluble phenol-aldehyde reaction product, the viscosity of the latter increasing during this initial reaction period and being indicative of the advancement of the water-soluble reaction-product towards a stage where the water-soluble state terminates, said aldehyde retaining its activity during the formation of the water-soluble phenol-aldehyde reaction-product, reducing the viscosity of the water-soluble reaction-product and its tendency to progress to a water-insoluble reaction-product by adding additional inorganic alkaline material, and further condensing the water-soluble resin to a stage where an aqueous solution of the mass shows a precipitate upon the addition of ethanol, said condensation reaction-product remaining water-soluble, said alkaline material increasing the pH of the finally condensed product to between 9.5 and 14 inclusive.

2,457,494
TRANSFORMER AND CONNECTION FOR STARTING ARC LAMPS
David Reichinstein, Zurich, Switzerland, assignor to Fanal Licht A.-G., Lucerne, Switzerland
Application March 28, 1944, Serial No. 528,420
In Switzerland September 30, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 8, 1963
1 Claim. (Cl. 315—96)



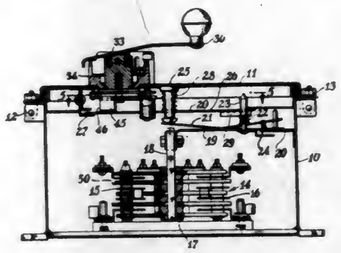
A system for the starting of an arc lamp, said system comprising, in combination, a transformer

having a primary winding connected to a source of alternating electrical current, and a plurality of secondary winding coils having at least three intermediate terminals and two end terminals, said coils constituting in their entirety a secondary winding supplying high lamp-igniting voltage, means connecting one terminal of the arc lamp to said source and comprising a resistance, means connecting the other terminal of the arc lamp to an end terminal of the secondary winding coils and comprising a switch and a resistance in series therewith, means connecting the other end terminal of the secondary winding coils to the primary winding, an auxiliary electrode for heat-



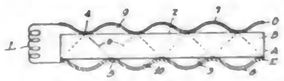
ing the electrodes of the arc lamp, means connecting one terminal of said auxiliary electrode to an intermediate terminal of the secondary winding coils and comprising a switch and a resistance in series therewith, means connecting the other terminal of the auxiliary electrode to the first-mentioned switch and comprising a resistance and a switch short-circuiting said resistance, means connecting the first-mentioned means to another intermediate terminal of the secondary winding coils and comprising a switch, and means connecting the second-mentioned means to a third intermediate terminal of the secondary winding coils and comprising a switch.

2,457,495
ULTRA HIGH FREQUENCY TUBE
Nathaniel Rochester, South Hamilton, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application December 18, 1944, Serial No. 568,734
1 Claim. (Cl. 315—5)



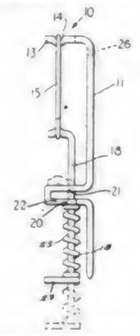
An ultra-high frequency oscillator comprising: a longitudinal waveguide closed at one end and open at the other for transmission of power therefrom and having two spaced apart sets of openings therein for the passage of electron beams laterally therethrough at two separated places therein, a cathode in register with one set of openings, means on the opposite side of said waveguide from said cathode for producing a magnetic field on said opposite side of said waveguide from said cathode and transverse to the path of the electron beam through said sets of openings and a collector electrode on the same side of the waveguide as the cathode and in register with the second set of openings in the waveguide.

2,457,496
TRIPLE SEALED ICEBOX DOOR
Harold E. Ross, Kettle Falls, Wash.
Application September 14, 1945, Serial No. 616,222
1 Claim. (Cl. 20—35)



In combination with a refrigerator including a doorway having a frame and vertically extending strips along one side thereof, a door structure comprising an outer door member, an inner door member, an intermediate door member, said door members being hinged to said strips, sealing strips for engagement by the hinged side portions of the door members when closed, spacing strips extending diagonally between the door members and being hinged to confronting faces of the door members, said spacing strips serving to maintain the door members in spaced relation to each other and causing the door members to move simultaneously toward opened and closed positions and bevelled ends on the spacing strips to engage confronting areas of the door members and limit movement of the door in one direction.

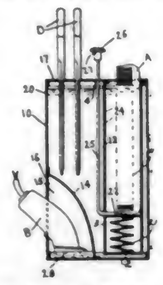
2,457,497
ELECTRIC SWITCH
Raymond N. Rowe, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application December 6, 1945, Serial No. 633,147
9 Claims. (Cl. 200—50)



4. Switching mechanism including a box containing the switch contacts, a cover therefor, a disc rotatably carried by said cover, a rotatable actuating handle carried by said cover, an oscillatable member, two opposed throwing springs connected thereto, a lost-motion connection between said handle and said oscillatable member, a lost-motion connection between said oscillatable member and said disc and means for connecting said disc to a movable switch member.

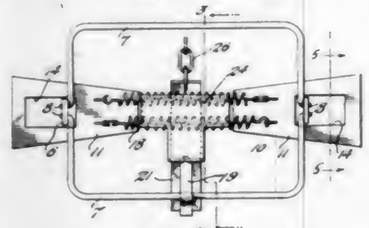
2,457,498
RADIO-FREQUENCY PARALLEL BONDING
George F. Russell and Julius W. Mann, Tacoma, Wash.
Application December 11, 1945, Serial No. 634,323
3 Claims. (Cl. 154—116)

1. A method of bonding abutting edges of material which comprises placing the material in abutting relationship with a thermo-responsive adhesive therebetween and then subjecting the thus formed joint to a high frequency electrostatic field disposed in a zig-zag manner parallel to the abutting edges within the plane of said adhesive to activate the said adhesive within the said electrostatic field areas of the joint.



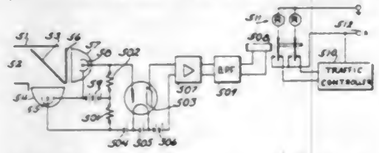
2,457,499
FIRE ALARM TRIP MECHANISM
Joseph Philip Santole, Waterbury, Conn.
Application May 9, 1945, Serial No. 592,767
2 Claims. (Cl. 74—2)

1. An alarm device comprising a support including an upper arm, an extension integral with said support, apertures in said extension and a fusible link having an eye at one end attached to said arm, an eye on the opposite end of said link, an alarm control link, a tongue at one end and a contact at the other end thereof, said tongue being received in said second mentioned eye and said control link being slidably received in said apertures, a spring encircling said control link engaging said extension and said contact and tensioning said control link.



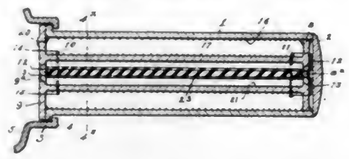
2,457,500
STERILIZER
John J. Scandura, Roslindale, Mass.
Application April 30, 1945, Serial No. 591,201
1 Claim. (Cl. 21—87)

A sterilizer for barbers' implements comprising in combination a container for antiseptic liquid open at the top, a cover for said chamber having a guide hole in the top, and provided with a depending tubular member open at the top and closed at the bottom and having a slot on one side and a platform slidable vertically in said tubular member and having a part thereof extending through said slot, a spring bearing on the bottom of the tubular member and on the underside of the platform and normally tending to push said platform upward, a rod secured to the part of the platform which extends through the slot, said rod extending upwardly through the guide hole in the cover and having a notch therein at a point to engage the cover at the edge



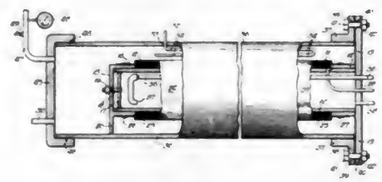
of the guide hole when the platform is in lowest position and retaining the implements thereon immersed in the liquid until the notch is disengaged from the cover.

2,457,501
ANIMAL TRAP
Francis E. Shene, Vermontville, N. Y.
Application October 26, 1946, Serial No. 705,845
5 Claims. (Cl. 43—88)



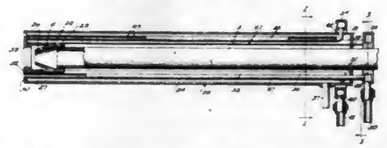
1. An animal trap comprising a U-shaped base, a pair of inverted U-shaped jaws pivoted at their ends to the upper ends of said base for vertical swinging movement into and out of closed position, a pair of plates pivoted at one end to said base for vertical swinging movement and engaging the sides of the jaws to close the jaws upon an upward movement of said plates, a trip releasably holding the jaws in an open set position, and a coil spring connecting the plates and operable to raise the latter.

2,457,502
SIGNAL SYSTEM EMPLOYING POLARIZED LIGHT
Judson O'D. Shepherd, Atlanta, Ga.
Application August 9, 1944, Serial No. 548,691
16 Claims. (Cl. 177—337)



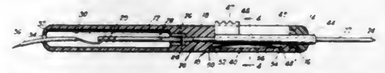
9. A traffic control system comprising, in combination, traffic signaling devices, means connected to said devices to operate said devices to produce traffic controlling signals, means to control last said means, means to produce light polarized in a predetermined manner and modulated in a particular manner, and means connected to said signal control means responsive to light so polarized and so modulated to cause said control means to function to result in the production of a predetermined traffic controlling signal under control of said light producer.

2,457,503
REFLECTING VAPOR LAMP
Grover C. Singer, Brownsville, Tex.
Application September 20, 1946, Serial No. 698,173
2 Claims. (Cl. 176—122)



1. An electric discharge lamp comprising a tubular glass envelope initially closed across one end and open at the other having a fixture engaging flange at the open end, a unit assembly consisting of a tubular glass core having welding discs at its opposite ends one fitting within the outer end of the envelope and having peripheral contact with the inner surface thereof, the other closing the flanged end of the envelope, said unit also embodying electrodes surrounding the core adjacent the proximate faces of the discs, and lead in wires for the electrodes extending through the discs, those of the outer electrode being led through the core, the inner surface of the envelope and the outer surface of the core bearing luminescent coatings and being evacuated and containing an ionizable gas.

2,457,504
METHOD AND APPARATUS FOR FORMING WOOD VENEER PLYWOOD TUBES
John J. Snoke, Goshen, Ind.
Application March 9, 1944, Serial No. 525,672
3 Claims. (Cl. 154—117)

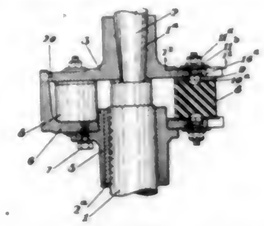


1. The method of forming a veneer plywood tube which comprises applying successive wrappings of veneer plywood around a mandrel with a thermosetting adhesive between the plies, applying a flexible air-tight sleeve over the mandrel and tube and exhausting said sleeve to press the plies tightly together and into close conformity with the mandrel, clamping the end of said flexible sleeve air-tight to the mandrel, placing the mandrel with the tube thereon in an autoclave and simultaneously applying heat and pressure to the interior of the autoclave and externally of the flexible sleeve, tube and mandrel to press the plies together and into close conformity with the tube and to set, cure, or harden the thermosetting adhesive.

2,457,505
GASEOUS FUEL BURNER
Robert H. Solem, Rockford, Ill., assignor to Eclipse Fuel Engineering Co., Rockford, Ill., a corporation of Illinois
Original application April 30, 1943, Serial No. 485,095. Divided and this application April 13, 1944, Serial No. 530,911
5 Claims. (Cl. 158—99)

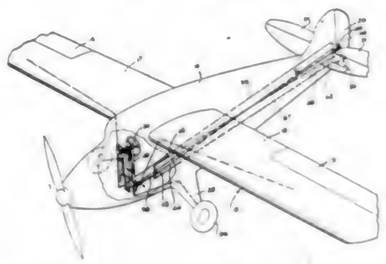
1. A gaseous fuel burner comprising an elongated tube having one end thereof adapted to receive a gaseous fuel mixture under pressure and its other end open for discharge of the mixture for combustion purposes, a substantially full length water jacket extending around the tube and embodying a tubular side wall around, and in spaced relation with, the tube, and end walls at the ends of the side wall, means for circulating water through the water jacket, and means for supplying secondary air under pressure to the mixture emanating from said other end of the tube in order to complete combustion, embodying a pipe extending longitudinally through the water jacket and disposed substantially midway between the tube and the side wall of the water jacket, and having the end thereof that is adjacent said one end of the tube provided with means for supplying it with air under pressure and its other end open and extending through the adjacent end wall of the jacket and terminating adjacent said other end of the tube.

2,457,506
SAFETY PROD
Steffen H. Sorensen, New York, N. Y.
Application September 11, 1945, Serial No. 615,597
4 Claims. (Cl. 173—273)



1. A device of the character described, comprising a plastic body having a circular recess in the rear end of said body, and an open front end, a circular bore at the front end thereof, a removable apertured plug in the open front end, a longitudinally extending bore in said body at the center thereof communicating with said recess and said circular bore, a test prod mounted in said longitudinally extending bore, said prod having the rear end thereof terminating in the bore at the rear thereof, and the front end thereof extending forwardly of said plug, and having an electrical conductor connected to the rear end thereof within said longitudinally extending bore, and a plastic sleeve slidably mounted on the forward end of said prod within said circular bore and said plug to insulate said prod.

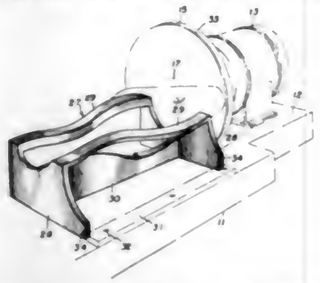
2,457,507
SHAFT COUPLING
Nikita Borisowich Strachovsky, Erie, Pa., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application October 22, 1943, Serial No. 507,263
3 Claims. (Cl. 64—11)



3. In a flexible coupling, axially spaced driving and driven members, a plurality of axially extend-

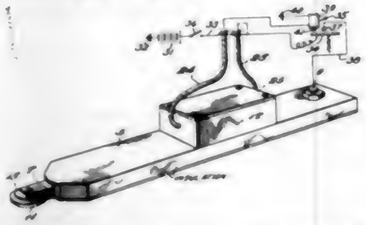
ing parts of elastic material radially spaced around the axis of the coupling connecting said members and exerting forces thereon dependent upon the misalignment of the members, means

for adjusting the relative radial spacing of the parts to balance the reaction on said members of the forces due to the individual parts, and means for holding the parts in adjusted position.



2,457,508
AIRCRAFT CONTROL SYSTEM FOR CONTROL SURFACES AND WHEEL BRAKES
Edgar Bernard Todd, Billings, Mont.
Application July 9, 1945, Serial No. 603,974
6 Claims. (Cl. 244—50)

1. Aircraft which includes a pair of spaced landing wheels for supporting the forward end of the aircraft when it is grounded, a caster wheel for supporting the tail of the aircraft when it is grounded, common means selectively to control the speed of rotation of each landing wheel for steering the aircraft when it is grounded, means connected to the common means for steering the aircraft while it is in flight a throttle lever for regulating the power output of the aircraft power unit and means actuated by the throttle lever to render the common means inoperative relative to the landing wheels when the throttle lever is moved to flying position.

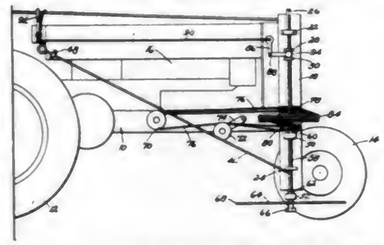


2,457,509
DRESSING MACHINE FOR BOWLING PINS
Anthony C. Vacanti and James Vacanti, Dunkirk, N. Y.; said James Vacanti assignor to said Anthony C. Vacanti
Application April 3, 1947, Serial No. 739,222
1 Claim. (Cl. 51—125)

In a dressing machine for bowling pins, the combination of an elongated bed having a flat upper surface, a rotatable abrading disc adjacent one end of said bed, a guide bar provided at one longitudinal edge of said bed and extending perpendicularly to the plane of said disc, and a bowling pin receiving cradle slidably and removably resting on said bed, said cradle including lateral

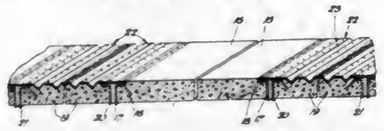
extensions engageable with said bar to guide said cradle toward said disc.

2,457,510
ELECTROPLATING APPARATUS
Delbert G. Van Ornum, Great Falls, Mont.
Application January 23, 1946, Serial No. 642,921
4 Claims. (Cl. 204—224)



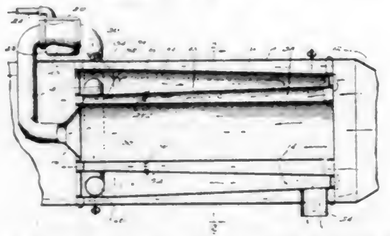
1. An electroplating device comprising a housing of non-conductive material and adapted to be moved in a fixed path over a piece of work to be electroplated, an electrode projecting out of said housing to travel therewith with one end in close proximity to the work, said electrode being slidably mounted in said housing for retraction therein, work-engaging means of insulation material secured to and extending beyond said electrode for causing retraction of the electrode into said housing as the thickness of the electroplating on the work increases, a switch carried by said housing for controlling an electric circuit in which the electrode is interposed, and means for opening said switch operative by retraction of said electrode in a predetermined degree.

2,457,511
POWER OPERATED TRACTOR MOUNTED TREE FELLING SAW
Kenneth R. Ware, Mound Valley, Kans.
Application October 18, 1946, Serial No. 704,119
6 Claims. (Cl. 143—43)



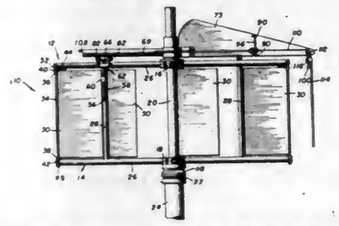
6. An adjustable power operated saw adapted to be mounted on a tractor comprising, a main supporting bracket adapted to be secured to a fixed portion of the tractor chassis and carrying a pair of vertically spaced guides adjacent the opposite ends thereof, a pivot shaft slidably and rotatably mounted in said guides, an arm swingably mounted on said pivot shaft, a vertical drive shaft rotatably mounted in said arm and having a circular saw at its lower end, means operatively associated with said drive shaft for rotating said saw, and means for adjusting the vertical height of said saw including a bell crank

pivotally mounted on said bracket having a clevis at one end operatively associated with said pivot



shaft and a control lever at its other end operable from the driver's seat of said tractor.

2,457,512
HIGHWAY WARNING SIGNAL
Harold B. Wheeler, Berwyn, Ill., assignor of one-half to Albert G. McCaleb, Evanston, Ill.
Application October 27, 1944, Serial No. 560,564
5 Claims. (Cl. 94—1)



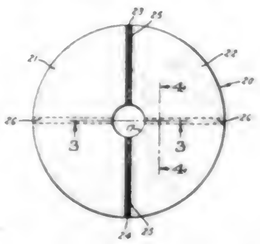
1. A highway pavement reinforcing and signal generating member, comprising in combination with a concrete paving slab a metal plate having a pair of substantially flat side portions connected by a V-shaped channeled intermediate portion, the side portions having a plurality of openings therein, the V-shaped intermediate portion being in partially embedded engagement with a pavement slab, and the side portions being in partly embedded engagement with said pavement slab to bring the upper surface of said side portions flush with the top surface of said pavement slab, and anchoring means secured to said plate and extending downwardly into embedded anchoring engagement with the concrete of said pavement to anchor said plate securely to said pavement.

2,457,513
INTERNAL-COMBUSTION HOT-AIR HEATER
Lynn A. Williams, Jr., Northfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application February 26, 1943, Serial No. 477,191
3 Claims. (Cl. 126—116)

1. A heater of the class described, comprising a cylindrical casing having one end adapted to be connected to a source of air supply, a frusto-conical wall in said casing and cooperating therewith to form a tapered ventilating air passage communicating with said source, a second frusto-conical wall in said first-mentioned wall and cooperating therewith to form a gas passage tapered oppositely to said ventilating air passage, a tube in said second-mentioned wall and cooperating therewith to form a ventilating air passage tapered in the same direction as said first-mentioned air passage, a carburetor receiving a supply of combustible air from said tube, means forming a combustion chamber communicating with said tapered gas passage, and an induction tube connecting said carburetor with said combustion chamber.

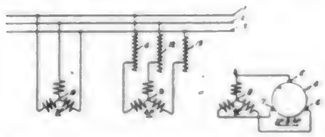
2,457,514
AIR POWER WINDMILL
Daniel B. Wood, Bowling Green, Ky.
Application March 6, 1947, Serial No. 732,898
6 Claims. (Cl. 170—17)

2. A wind motor comprising a rotor, a plurality of vanes journaled thereon, a plurality of fixed stops on said rotor for limiting pivotal movement of said vanes and additional means for selectively limiting the pivotal movement of said vanes, and adjusting means for positioning said additional means to prevent their limiting pivotal movement of said vanes, said adjusting means including a body pivoted for movement about the axis of rotation of said rotor, a rod slidable in said body, rollers carried by said rod and selectively engageable with said additional means for successively positioning the same in operative and inoperative condition.



2,457,515
INSULATING COATING COMPOSITIONS AND METHOD OF MAKING
John T. Acker, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 13, 1941, Serial No. 418,894
3 Claims. (Cl. 106—65)

1. The method of preparing a coating mixture for wire elements which comprises mixing finely divided aluminum oxide and water in proportions to form a suspension of creamy consistency, adding hydrochloric acid to the suspension to increase the fluid content by of the order of 10 per cent, and adding finely divided aluminum oxide to the suspension to increase the solid content by of the order of 50 per cent.

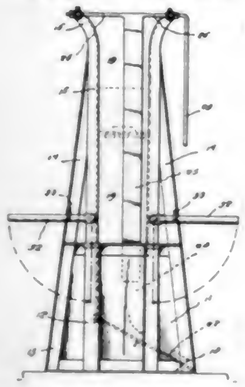


2,457,516
METHOD OF MAKING ABRASIVE CUTOFF WHEELS
Hugh V. Allison, Fairfield, Conn., assignor to The Allison Company, Bridgeport, Conn., a corporation of Connecticut
Application May 10, 1947, Serial No. 747,291
8 Claims. (Cl. 51—293)

1. The method of making an abrasive cut-off wheel comprising preparing strips of abrasive

grain and a bond, preparing a laminated structure by laying a first pair of said strips in side-by-side slightly spaced substantially parallel relation, laying a second pair of said strips across and substantially at right angles to the strips of the first pair and in slightly spaced substantially parallel relation to one another, blanking a disc from the laminated structure so built up with the center of said disc substantially at the point of crossing of a pair of lines bisecting the spaces between the respective pairs of strips, and then curing said blanked disc.

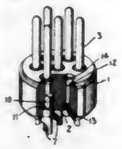
2,457,517
ALTERNATING CURRENT COMMUTATOR MACHINE
Frederick W. Baumann, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 23, 1947, Serial No. 770,242
10 Claims. (Cl. 318—244)



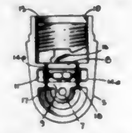
1. In a dynamoelectric machine adapted to operate from an alternating current line and having a stator, a rotor, a commutator and commutator brushes therefor, the combination of a winding on said rotor connected to said commutator and arranged to be inductive to at least two different numbers of stator poles, a winding arranged on said stator to produce at least one of said different numbers of poles, another winding on said stator arranged to produce another of said different numbers of poles, means for supplying excitation to one of said stator windings, means for simultaneously providing a substantially direct connection between said line and the other of said stator windings, and means for externally completing a circuit between said commutator brushes.

2,457,518
WATERPROOFING PLASTIC COMPOSITIONS
James Alfred Bell, Leatherhead, England, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application May 26, 1945, Serial No. 596,101. In Great Britain July 11, 1944
3 Claims. (Cl. 106—243)

1. A waterproof plastic insulating composition consisting essentially of 10–35% by weight of a dehydrated asbestos fiber having a moisture content not exceeding 0.1% by weight stable at temperatures up to at least 220° F., 25–55% by weight of a mineral lubricating oil and 10–40% by weight of a water-insoluble soap of a mixture of distilled fatty acids having 16 to 18 carbon atoms and wool grease stearine.



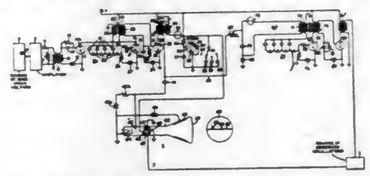
2,457,519
PORTABLE BATTERY STRIPPING DEVICE
Nathan Bemel, Rochester, Minn.
Application July 13, 1945, Serial No. 604,835
1 Claim. (Cl. 29—204)



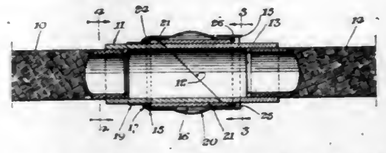
A portable battery stripping device, comprising a unitary portable structure having a substantially vertical chute body creating a lower box-like hopper, involving a base, upstanding side panels and spaced inner and outer angle bars, respectively, the latter carrying and reinforcing the side panels at the outer faces thereof, upward extensions to the inner bars and having outwardly flared upper ends above the panels, surfacing plates supported by the inner bars and effecting a guide throat communicating with the hopper, said hopper having a dispensing doorway and an inclined bottom directed toward the latter for gravity dispensing of battery elements through the doorway, striking shoulders at the point of communication of the hopper and the throat for arresting a battery casing when dropped within the said throat, the throat being open at opposite sides thereof above the hopper, a horizontal shaft journaled in the upper side plates of the throat, a kicking blade depending from said shaft extending into the hopper entirely through the throat in confronting relation to the open sides of said throat, a lever integral with said shaft for turning said shaft and kicker plate, and portable hand grips attached to the chute body.

2,457,520
PLUG CONNECTOR
George B. Benander, Oaklawn, R. I., assignor to Monowatt Incorporated, a corporation of Connecticut
Original application March 24, 1943, Serial No. 480,348. Divided and this application September 8, 1945, Serial No. 615,136
1 Claim. (Cl. 173—361)

A plug comprising a base of insulating material having an axially extending opening therethrough an intermediate portion of which is non-circular in cross section and end portions of which are round and of a diameter such that they define shoulders at the ends of the intermediate portion, and a prong having an intermediate portion shaped to fit the non-circular portion of said opening and flanges spaced apart axially a distance equal to the distance between said shoulders for engagement with said shoulders, one of said flanges being spaced from the non-circular portion of said prong to provide a prong portion between said non-circular portion and said flange of a size in cross section less than said non-circular portion and capable of being distorted by twisting, and said one flange having a contour such that it will pass through said opening whereby a prong may be inserted from one end of the opening and then twisted to bring such flange into tight engagement with the adjacent shoulder to secure the prong in the opening.



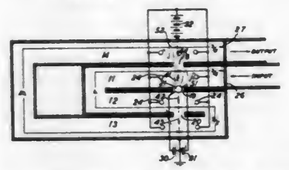
2,457,521
ELECTRIC-LIGHT FIXTURE
George B. Benander, Oaklawn, R. I., assignor, by mesne assignments, to Monowatt Incorporated, Providence, R. I., a corporation of Connecticut
Application January 3, 1946, Serial No. 638,776
7 Claims. (Cl. 173—358)



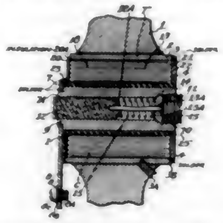
1. In combination, a lamp socket comprising a casing split longitudinally to provide a base part and a cover part, walls forming a wiring shelf in the base part having narrow spaced crosswise slots therein, said base part having a passage in its wall the inner end of which terminates between said slots at the center of said shelf, lamp contacts in the socket, a cord extending along said passage having its conductor ends bent at right angles in opposite directions along said shelf, strip metal contact members of a thickness equal substantially to the width of said slots positioned edgewise in said slots, the bared ends of said conductors being positioned in said slots beneath said contact members to make electrical contact therewith and attach the conductor ends to the socket, means connecting said contact members to said lamp contacts, and means fastening the cover part and base part together.

2,457,522
ELECTRONIC SAW-TOOTH WAVE GENERATOR
Frank J. Bias, Scotia, and Harold W. Lord, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Original application November 17, 1944, Serial No. 563,920. Divided and this application April 19, 1946, Serial No. 663,319
2 Claims. (Cl. 250—27)

1. In combination, a source of substantially constant unidirectional potential, a source of substantially rectangular recurrent voltage pulses having an intensity at least equal to said unidirectional potential, an electron discharge device having an anode, a cathode and a control electrode, means biasing said control electrode to maintain said discharge device normally conductive, a unilateral conducting circuit including a rectifying device and connecting said source of unidirectional potential and said pulse voltage source in opposing series circuit relation between said anode and said cathode, said rectifying device and unidirectional potential source being poled to provide a normal anode current flow through said discharge device in the absence of said pulses, and a capacitive energy storing element connected between said anode and said cathode in parallel circuit relation with said voltage sources, said pulses rendering said rectifying device non-conductive and permitting said element to discharge through said discharge device during said pulses.

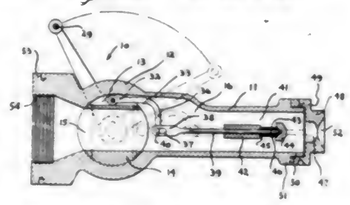


2,457,523
QUICK DISCONNECT JOINT
Stanley P. Bird, Verona, N. J., assignor to Breeze Corporations, Inc., Newark, N. J., a corporation of New Jersey
Application December 14, 1946, Serial No. 716,282
9 Claims. (Cl. 285—174)



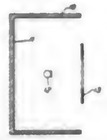
1. In a quick disconnect coupling, a pair of opposed ferrules, a guide tube attached to one of the said ferrules, a spring member attached to the other ferrule and a sleeve to secure the ferrules together by compressing the said spring member.

2,457,524
WAVE GUIDE REPEATER
Arnold E. Bowen, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 26, 1945, Serial No. 595,911
7 Claims. (Cl. 315—5)



1. A continuous length of hollow pipe wave guide having two laterally contiguous portions separated by a common wall having an aperture, a cathode directly across from said aperture in a portion of the wall of the wave guide opposite said common wall, and means in each of said laterally contiguous portions of the wave guide to impart reciprocating motion to charged particles from said cathode in the respective portion of the wave guide.

2,457,525
CAPACITY BRUSH HOLDER
Joseph M. Brian, Westmount, Quebec, Canada, assignor to Radio Corporation of America, a corporation of Delaware
Application April 12, 1945, Serial No. 587,899
6 Claims. (Cl. 171—323)



1. In combination, a cylindrical brush holder for an electrical device having a grounded frame, a capacitive element in the form of a cylindrical roll condenser arranged to surround substantially the entire length of said cylindrical brush holder, said capacitive element having one terminal directly fixed, both electrically and mechanically, to said brush holder, the other terminal of said capacitive element being substantially directly connected through a path of very low impedance to the grounded frame of said electrical device.

2,457,526
FIRE HOSE NOZZLE
Daniel Brown, Burlington, N. J.
Application September 15, 1945, Serial No. 616,637
3 Claims. (Cl. 299—136)

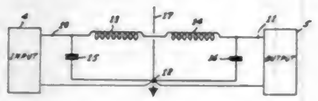
1. A fire hose nozzle comprising an elongated hollow nozzle body being internally threaded at its inner end and externally threaded at its outer end, said body being formed with a transversely extending bore forming spaced cylindrical tapered bearing seats, a plug valve formed with a transverse passage having enlarged spaced tapered bearing ends adapted to be rotatably supported in said bearing seats, removable cap members in the outer ends of said transverse bore, rectangular shaped pintles disposed axially on the ends of said plug valve extending through and beyond said cap members, a U-shaped valve operating yoke or handle secured to the outer ends of said pintles, a detachable spray nozzle having a valve seat on its inner end threadable on the outer end of said nozzle body, a guide supported interiorly of said hollow nozzle body upon the inner wall thereof formed with an axially extending bore, a valve stem slidably disposed in said axial bore, a valve on the outer end of said stem adapted to seat on said valve seat in said detachable spray nozzle, and a crank connected between said plug valve and said valve stem whereby the operation of said plug valve when opened and closed will cause a similar operation of the valve cooperating with the valve seat in said detachable spray nozzle.

2,457,527
ACOUSTIC DEVICE
Edmond Bruce, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 2, 1942, Serial No. 460,545
16 Claims. (Cl. 181—31)

13. An acoustic device for translating signals within a band of frequencies comprising a cylindrical member of a diameter sufficient to include several interference zones corresponding to the mean wave-length in said band of frequencies, said member being closed at one end and open at the other and having a depth substantially equal to

$$\frac{n}{2}$$

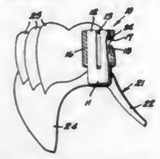
times said wave-length, n being an integer, a sound translating device within said member, on the axis thereof and substantially mid-way between the ends thereof, and an annular masking member coaxial with said cylindrical member and substantially in the plane of the open end thereof, said annular member having an inner diameter of substantially



$$\sqrt{2n+1}$$

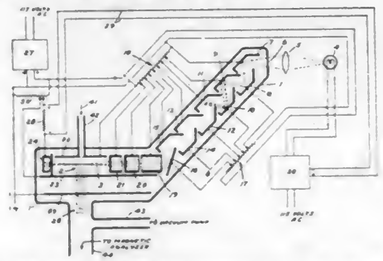
times said wave-length and an outer diameter of substantially

$$2\sqrt{n+1}$$



times said wave-length.

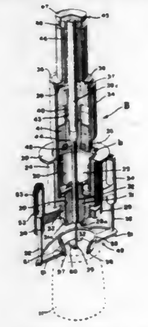
2,457,528
ELECTRIC TRANSFORMING ARRANGEMENT
Cabot Seaton Bull, Hillingdon, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application February 17, 1944, Serial No. 522,847
In Great Britain February 20, 1943
4 Claims. (Cl. 178—44)



1. In a transformer apparatus for transferring alternating electric currents in a band of high frequencies from an input circuit to an output circuit: a transfer network for receiving said currents at an input potential and supplying currents at a different potential, said network including input connectors; output connectors; at least one inductance in series between an input and an output connector; a first capacitance in shunt across the input connectors; a second capacitance in shunt across the output connectors; said shunt capacitances and series inductance forming essentially a single closed circuit resonant to said band of high frequencies, and the ratio of the capacitance across the input connectors to the capacitance across the output connectors being inversely proportional to the ratio of the potential received to the potential supplied; and decoupling means for reducing the capacitive coupling across said inductance between input and output.

2,457,529
DENTURE STRESS RELIEVER
Luther W. Busby, Manhattan Beach, Calif.
Application May 31, 1946, Serial No. 673,674
10 Claims. (Cl. 32—5)

1. In an artificial denture, the combination of: a clasp for engagement with an abutment tooth, a denture adjacent said clasp, a stud extending substantially vertically in relation to said denture and fixed at its lower end to said denture, and a sleeve slidable on said stud and removable from the upper end of said stud, said sleeve being secured to said clasp, said stud and said sleeve permitting relative vertical movement between said clasp and said denture.

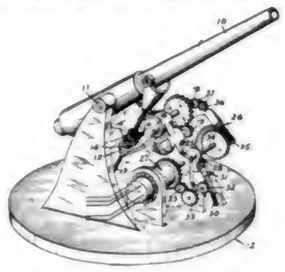


2,457,530
ELECTRON GUN FOR MASS SPECTROMETERS
Norman D. Coggeshall, Verona, and Nathan F. Kerr, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application August 6, 1946, Serial No. 688,736
5 Claims. (Cl. 250—41.9)

1. A mass spectrometer comprising an envelope having a light permeable window, a photosensitive cathode in said envelope for receiving light entering through said window, a plurality of multiplying electrodes in said envelope, means comprising at least one electron lens element for focusing electrons from said multiplying electrodes into an electron stream, a collector electrode disposed in the path of said stream for collecting electrons therefrom, means for admitting molecules into said envelope into the path of said electron stream for ionizing said molecules, and analyzer means including a magnet for analyzing said molecules.

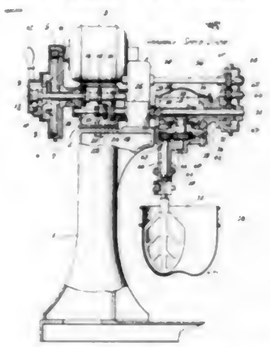
2,457,531
MEASURING VALVE
Theodore M. Costakos, Minneapolis, Minn.
Application August 8, 1947, Serial No. 767,483
17 Claims. (Cl. 222—453)

1. In a dispenser, a container having an opening in the bottom thereof providing a chamber for a supply liquid to be dispensed, valve mechanism adapted to dispense from the container successive charges of liquid in measured quantities, said valve mechanism comprising a cupped valve body received in said opening in the bottom of the container and providing a sump chamber therefor, said valve body being formed with a discharge bore therein opening downwardly from said sump chamber, a lift valve movable downwardly by gravity and including an axially upright valve sleeve slidable in the sump chamber for downward retraction thereinto and for upward projection therefrom, and a valve stem connected with said valve sleeve and extending downwardly through said discharge bore, means associated with the valve stem beneath the container for elevating the lift valve, said lift valve further including a valve plug on said valve stem downwardly movable into said bore to obstruct



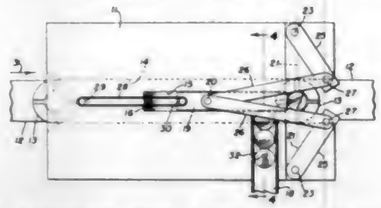
the same upon the descent of the lift valve and upwardly movable out of said bore to clear the same upon the elevation of the lift valve, a closure cap for the upper end of the valve sleeve, supporting means guiding the closure cap for vertical movement and limiting its gravitating descent to a level spaced above the retracted valve sleeve, said closure cap being engaged and lifted by the valve sleeve during the elevation of the lift valve, said sump chamber together with the valve sleeve and closure cap constituting a compartment which, upon engagement of said valve sleeve with said closure cap, traps therein a measured charge of liquid from the container, the clearing of said discharge bore by said plug following the engagement of said valve sleeve with said closure cap to release from the dispenser the charge of liquid trapped in said measuring compartment.

2,457,532
GUN CONTROL COMPENSATING MECHANISM
Frederick W. Cunningham, Stamford, Conn., assignor to Arma Corporation, Brooklyn, N. Y., a corporation of New York
Application June 20, 1945, Serial No. 600,597
2 Claims. (Cl. 89—41)



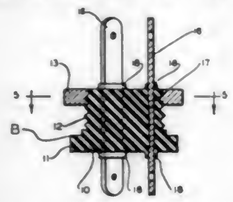
1. In combination with a motor-driven nut and screw mechanism for driving a member about a pivot, means for correcting the inherent non-linear characteristics of said mechanism including a cam having a contour conforming to the difference between the inherent non-linear drive pattern of said mechanism and the desired linear pattern, driving connections between said mechanism and said cam, a control transformer having a rotatable rotor and a rotatable stator, a source of signal voltage for energizing said mechanism, electrical connections between said

source and said stator, electrical connections between said rotor and said motor, driving connections between said motor and said rotor for rotating the latter to non-inductive angular relation with said stator, and driving connections



between said cam and said stator for rotating the latter to thereby change the angle through which the rotor is driven by said motor for accordingly correcting the movement of said member.

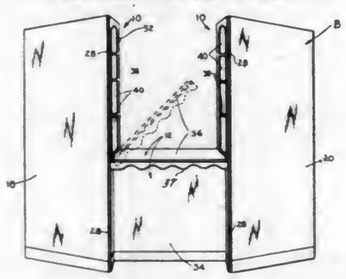
2,457,533
VERTICAL MIXER
Walter F. Dehuff, Glen Rock, Pa., assignor to American Machine & Foundry Company, a corporation of New Jersey
Application September 5, 1945, Serial No. 614,535
4 Claims. (Cl. 74—300)



1. In a mixer, the combination with a vertical shaft, of a head revolubly mounted for rotation about the axis of rotation of said shaft, a vertical spindle revolubly mounted in said head with its axis eccentric to the axis of rotation of said head, whereby the rotation of said head will move said spindle in an orbital path, a bevel gear fastened to and coaxial with said head, a bevel gear fastened to said vertical shaft, a horizontal shaft, a bevel gear loosely mounted on said horizontal shaft and meshing with and driving the bevel gear secured to the head, a bevel gear fastened on said horizontal shaft and meshing with and driving the bevel gear fastened on said vertical shaft, a pinion secured on said vertical shaft, a gear secured on said spindle and meshing with said pinion, driving mechanism for driving said horizontal shaft whereby said spindle will be revolved on its own axis, and a variable speed device driven from said driving mechanism and connected to and driving the bevel gear loosely mounted on said horizontal shaft whereby said head will be revolved to move said spindle in an orbital path, said device being operable to vary the speed at which said head is revolved and thereby to vary the precession ratio of the rotation of the spindle relative to the rotation of the head.

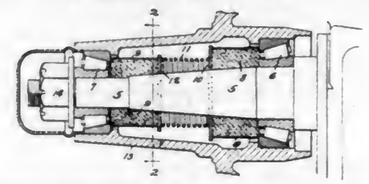
2,457,534
BUTTON BLANK FEEDING ATTACHMENT
Joseph A. De Marco, Brooklyn, N. Y.
Application January 7, 1947, Serial No. 720,553
1 Claim. (Cl. 79—17)

In association with a conveyor including a row of blank receiving chucks, a feeding attachment comprising in combination, an elongated plate positioned above said conveyor and provided in the underside thereof with a longitudinally extending passage for said chucks, the upper surface of said plate being formed with a longitudinally extending channel terminating at one end thereof in an opening communicating with said passage, an ejecting bar slidable in said channel, a blank delivery trough communicating with said channel adjacent said opening, a pair of rotatable shafts extending through said plate on the relatively opposite sides of said passage, a pair of transversely aligned coacting dogs secured to the lower ends of said shafts and projecting into said passage, a pair of levers mounted on the upper ends of said shafts, an upright pivot pin provided medially the length of said bar, a pair of links each mounted at one end thereof on said pin, the remaining end of each link being pivoted to one of said levers, the engagement of said chucks with said dogs sliding said bar toward said opening, and tensioning means for returning said bar to its initial position.



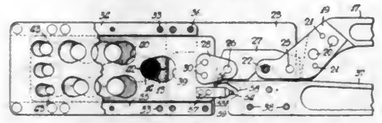
2,457,535
ELECTRICAL TERMINAL BUSHING
Russell S. Diethert, Chicago, Ill., assignor to Northwest Plastics, Inc., St. Paul, Minn., a corporation of Minnesota
Application July 20, 1944, Serial No. 545,841
4 Claims. (Cl. 174—153)

1. An electric terminal of the character described including, the elongate flat-strip-like conductor elements, transverse serrations formed on the flat opposed side faces of said conductor elements, a non-metallic plastic body of insulating material molded about and between said conductor elements intermediate the ends of the latter and extending into said serrations so as to prevent relative longitudinal movements between said conductor elements and body, said body being



formed with flat parallel ends and a flanged end and an externally screw-threaded surface, and means threadedly engaged with the externally threaded surface of the body.

2,457,536
CONVERTIBLE REFRESHMENT BAR AND PARTITIONING SCREEN
David L. Doggett, Mount Kisco, and Wallace Schler, Forest Hills, N. Y., assignors to Hofstatter's Sons, Inc., Long Island City, N. Y., a corporation of New York
Application September 6, 1945, Serial No. 614,760
9 Claims. (Cl. 312—140.2)



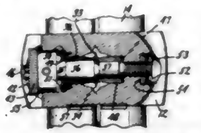
8. As an article of furniture, a convertible refreshment bar and partitioning screen comprising a stand provided with a structure defining a refreshment serving station, said stand being constructed at its front side with stationary outside panel members and movable inside panel members, the movable inside panel members being movable to open position to expose said serving station and being movable to closed position to conceal said serving station, the said front panel members when the movable panel members are moved to their closed position being arranged to define a partitioning screen, said serving station including a backdrop and a counter shelf, the counter shelf being movable between vertical inoperative and horizontal operative positions, the movable panel members being movable to closed position when the shelf is moved to its inoperative position.

2,457,537
MOTOR VEHICLE FRONT WHEEL LUBRICATION DEVICE
Porter D. Douglass, Oakland, Calif.
Application April 9, 1947, Serial No. 740,340
4 Claims. (Cl. 308—187)

1. The combination with the bearing races of a spindle and wheel operating on the spindle, of a lubricating mechanism comprising cartridges containing lubricating material, said cartridges having central openings for positioning over the spindle in contact with the bearing races, and a yieldable member disposed between the cartridges adapted to urge the cartridges into engagement with the bearings, lubricating the bearings.

2,457,538
CRIMPING TOOL
Henry Peter Dupre, New York, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
Application November 11, 1944, Serial No. 563,029
4 Claims. (Cl. 153—1)

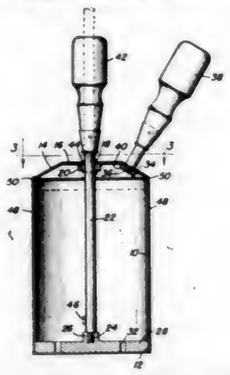
1. A tool for reforming the shapes of articles comprising a plurality of plates, at least one of said plates being intermediately positioned between two co-acting plates all of said plates being spaced immediately adjacent each other, to prevent bending the article axially; means for moving the intermediate and the adjacent plates in a predetermined linear direction with respect to each other, during the reforming of the shapes of the articles and alternately returning the plates to their original positions each of said plates containing a plurality of cut-out sections arranged non-transversely to the direction of motion, each one of the cut-out sections in the intermediate plate being transversely aligned in position with respect to a cut-out section in each of the adjacent plates in their original positions to permit the article to be inserted transversely therethrough, at least one of said cut-out sections in each transverse aligned sections provided with a working die surface for reforming the shape of the article when the intermediate and adjacent plates are moved with respect to each other.



2,457,539
TREATMENT OF CHLOROMETHYL-SUBSTITUTED POLYSILOXANES
John R. Elliott and Robert H. Krieble, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application May 5, 1945, Serial No. 592,291
5 Claims. (Cl. 260—46.5)

1. In the process of treating a preformed methylpolysiloxane containing silicon-bonded chlorinated methyl groups thereby to obtain a methylpolysiloxane of higher molecular weight, the step which comprises effecting intimate contact between said polysiloxane and an aqueous alkaline solution having a pH of at least 9 whereby the said bond is cleaved and the corresponding chlorinated methane is formed, and allowing the resulting polysiloxane to condense to form a methylpolysiloxane of higher molecular weight than the starting methylpolysiloxane.

2,457,540
DEVICE FOR SLITTING THE SHEATH OF A CABLE
Dudley Farlin Fasoldt, Prospect Heights, Rensselaer, N. Y.
Substituted for abandoned application Serial No. 339,600, June 10, 1940. This application January 18, 1947, Serial No. 722,925
5 Claims. (Cl. 30—91)

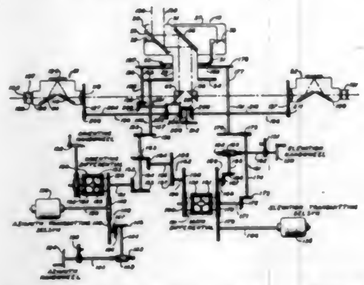


1. In a cable cutting device, a head provided with an opening in which a cable provided with a sheath is receivable, a shaft mounted in said head above said cable and at substantially right angles thereto, a revoluble cutting tool provided with a hole of greater diameter than that of said shaft and mounted thereon, means for preventing undesirable longitudinal movement of said cutting tool on said shaft, means associated with

said shaft and said cutting tool for displacing said cutting tool axially of said shaft whereby the

depth of scarf cut by said tool in said sheath may be varied, and means whereby said cutting tool may be moved longitudinally along said cable.

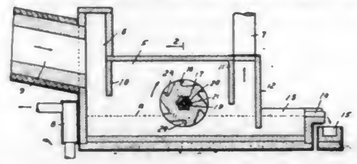
2,457,541
ICE-CREAM PACKER
Leo J. Gilcrest, Cyrus, Minn.
Application August 20, 1947, Serial No. 769,638
2 Claims. (Cl. 107—48)



1. An ice cream packer comprising a cylindrical body having open upper and lower ends, an elongated guide plate having its terminals rigidly secured to said body at the upper end thereof, an aperture centrally located in said guide plate, a piston rod slidably mounted in said aperture, a piston carried by said rod, hand gripping means carried by said guide plate and inclined relative to said rod for holding said body, said guide plate provided with a slot communicating with said aperture, a lug carried by the innermost end of said rod extendable through said slot to bear upon the outer face of said guide plate for retaining said piston at the upper end of said body, and a substantially U-shaped member carried by said body for reducing the frictional engagement between the outer periphery of said body and a material in which the same is inserted, said U-shaped member including a web portion extending across the lower end of said body.

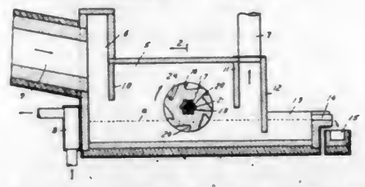
2,457,542
PROCESS OF THICKENING LATEX
Victor Golden, Chatham, N. J., assignor to The Patent and Licensing Corporation, New York, N. Y., a corporation of Massachusetts
No Drawing. Application August 12, 1944, Serial No. 549,285
12 Claims. (Cl. 260—8)

1. The process of thickening an aqueous dispersion of a rubber which comprises forming an intimate mixture of said dispersion with a small amount of a slurry of water-swellable thickening agent in a non-aqueous, water miscible liquid in which the said thickening agent is substantially insoluble, said water-swellable thickening agent combining with water originally present in the said dispersion to which said thickening agent is added, thereby producing a gel which causes thickening of the dispersion to take place.



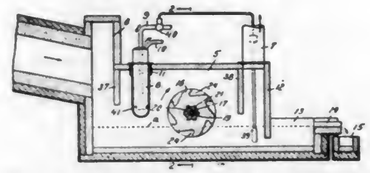
2,457,543
OPTICAL SIGHTING DEVICE HAVING REFLECTOR MEANS FOR TRACKING MOVABLE OBJECTS
Elsworth H. Goldsmith, New York, N. Y., Roy V. Terry, Maplewood, N. J., and Jacob W. Schaefer, Philadelphia, Pa., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 16, 1946, Serial No. 654,980
4 Claims. (Cl. 88—72)

1. An optical sighting apparatus comprising a box-like body, apertured top and side walls in said body, a dome-like head rotatably supported on said body and rotatable on a vertical axis with respect to said body, an L-shaped casing supported in said head and rotatable on a horizontal axis with respect to said head, means for rotating said head on the vertical axis, and means for rotating said L-shaped casing on the horizontal axis, a light reflecting device in said L-shaped casing to receive light reflections from outside said L-shaped casing and to transmit the light reflections into said head, a light reflecting device in said head arranged to receive light reflections from the light reflecting device in said L-shaped casing, and to transmit the light reflections into said body, a set of light reflecting devices in said body to receive the reflections transmitted into said body by way of said head, each light reflecting device in said set being arranged to transmit light reflections in a direction different from the direction of transmission by other light reflecting devices in said set, and an optical eye-piece individual to each reflecting device in said set and supported in spaced relation in said body and extending through an apertured side wall in said body, said optical sighting apparatus providing a means whereby a plurality of persons operating the optical sighting apparatus may simultaneously see an image of a distant object on which the optical sighting apparatus is trained.



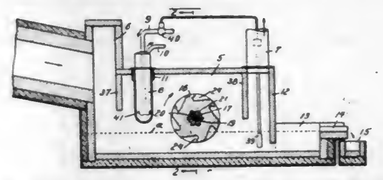
2,457,544
METHOD OF CONDENSING ZINC VAPOR
Erwin C. Handwerk, George T. Mahler, and Harry C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Original application November 3, 1945, Serial No. 626,508. Divided and this application September 11, 1946, Serial No. 696,172
2 Claims. (Cl. 75—88)

1. The method of condensing zinc vapor which comprises passing a gaseous stream containing zinc vapor through a condensing chamber having a body of molten zinc in the bottom thereof, and hurling by centrifugal action a substantially continuous and upwardly-directed shower of said



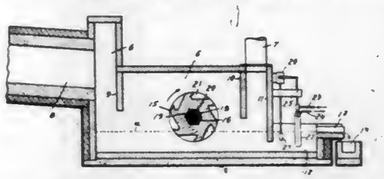
molten zinc of such violence as to provide by itself and by its splashing against the confining upper portion of the chamber turbulent sheet-like showers of molten zinc through which the gaseous stream passes.

2,457,545
CONDENSING ZINC VAPOR
Erwin C. Handwerk, George T. Mahler, and Harry C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application November 3, 1945, Serial No. 626,508
11 Claims. (Cl. 266—1)



11. A condenser for zinc vapor comprising a condensing chamber provided with top, wall and bottom members and having a zinc vapor inlet and a gas outlet and adapted to hold a body of molten zinc, a generally cylindrical rotor having peripheral surface pockets rotatably mounted within said chamber with its axis substantially horizontal and with its lowermost pocket beneath the level of the molten zinc adapted to be held in the chamber, and means for rotating said rotor so that its successively ascending pockets are caused to pick up in rapid succession and throw into the chamber in a substantially continuous and upwardly-directed shower small amounts of the molten zinc held in the chamber.

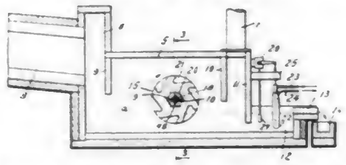
2,457,546
PROCESS FOR CONDENSING ZINC VAPOR
Erwin C. Handwerk, George T. Mahler, and Harry C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Original application December 5, 1945, Serial No. 633,004. Divided and this application January 14, 1947, Serial No. 722,066
2 Claims. (Cl. 75—88)



1. The method of condensing zinc vapor which comprises passing a gaseous stream containing zinc vapor through a condensing chamber having a body of molten zinc in the bottom thereof, subjecting the gaseous stream during its passage through the chamber to the cooling effect of a stream of extraneous cooling medium flowing through a confined path within the chamber and out of direct contact with the zinc therein, and hurling sheets of molten zinc from said body thereof upwardly against the confined path of said cooling medium in such manner that heat exchange between the zinc vapors in said gaseous stream and the cooling medium in said confined path is effected through the medium of the molten zinc splashed on said confined path.

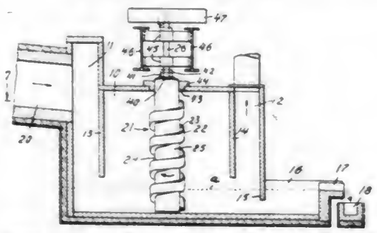
2,457,547
INTERNALLY COOLED ZINC CONDENSER
Erwin C. Handwerk, George T. Mahler, and Harry C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application December 5, 1945, Serial No. 633,004
2 Claims. (Cl. 266—15)

1. A condenser for zinc vapor comprising a condensing chamber provided with top, wall and bottom members and having a zinc vapor inlet and a gas outlet and adapted to hold a body of molten zinc, a cooling shell depending into said chamber from the roof thereof, a horizontally disposed shaft extending through the walls of said chamber and mounted in bearings outside the chamber, means providing zinc vapor and molten metal seals where said shaft extends through the walls of the chamber, a generally cylindrical rotor having peripheral surface pockets secured to said shaft within the chamber with the lowermost pocket beneath the level of the molten zinc adapted to be held in the chamber, and means for rotating said shaft so that the successively ascending pockets of the rotor are caused to throw an upwardly-directed shower of molten zinc into and substantially completely transversely of the chamber in the region of said cooling shell.



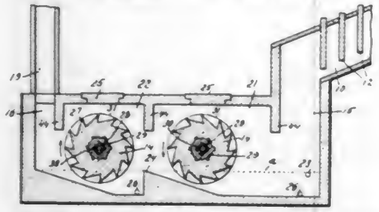
2,457,548
PROCESS FOR CONDENSING ZINC VAPOR
Erwin C. Handwerk and George T. Mahler, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application June 22, 1946, Serial No. 678,540
2 Claims. (Cl. 75—88)

1. The method of condensing zinc vapor which comprises passing a gaseous stream containing zinc vapor through a condensing chamber having



a body of molten zinc therein, maintaining exteriorly of the condensing chamber a body of molten zinc communicating with the body of molten zinc in the chamber, effecting intimate contact between the gaseous stream and the molten zinc within the condensing chamber by hurling molten zinc from said body thereof upwardly into the upper portion of the condensing chamber through which the gaseous stream passes while facilitating circulation of molten zinc between the bodies thereof by the agitation of the body of molten zinc in the condensing chamber, and controlling the operating temperature of the condensing chamber by subjecting said exterior and communicating body of molten zinc to the cooling effect of a stream of extraneous cooling medium flowing through a confined path in said molten zinc but out of direct contact therewith.

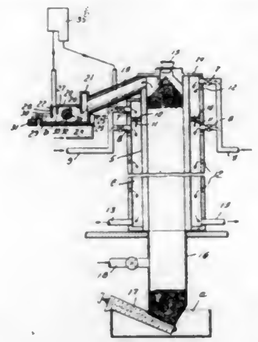
2,457,549
APPARATUS FOR CONDENSING ZINC VAPOR
Erwin C. Handwerk and George T. Mahler, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application July 1, 1947, Serial No. 758,288
3 Claims. (Cl. 266—15)



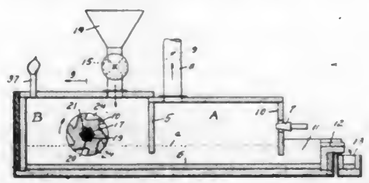
1. A condenser for zinc vapor comprising a condensing chamber having a zinc inlet and a gas outlet and adapted to hold a body of molten zinc, a well communicating directly with said chamber and adapted to hold a body of molten zinc in communication with molten zinc in the chamber, a rotor provided with peripherally disposed pockets capable upon rotation of the rotor of agitating molten zinc in the condensing chamber to facilitate circulation of molten zinc between said bodies thereof and capable of hurling molten zinc from said body thereof within the condensing chamber into the upper portion of the chamber in the path of zinc vapor passing therethrough, means for rotating said rotor, and a cooling shell positioned in the molten zinc in said well.

2,457,550
CONDENSING ZINC VAPOR
George T. Mahler, Palmerton, and Erwin C. Handwerk, Lehighton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application March 11, 1948, Serial No. 14,286
2 Claims. (Cl. 75—88)

1. The method of condensing zinc vapor which comprises maintaining a body of molten zinc within a condensing chamber, raising molten zinc from said body thereof vertically within the chamber and throwing the raised molten zinc by centrifugal force outwardly in the form of an umbrella-like shower into the chamber above the body of molten zinc therein, and condensing the zinc vapor by passing it in a gaseous stream through the chamber in contact with said shower.



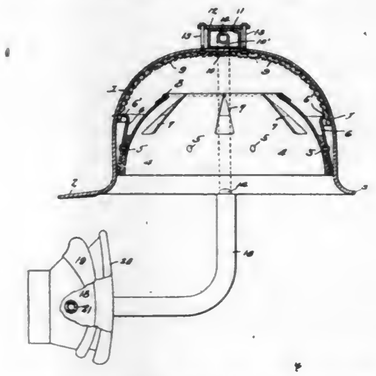
2,457,551
CONDENSING ZINC VAPOR
Stanley Robson, Bristol, England, assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application January 14, 1947, Serial No. 722,083
In Great Britain March 12, 1946
2 Claims. (Cl. 75—88)



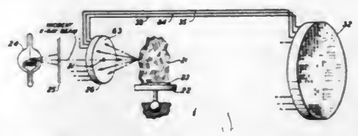
1. In the method of condensing zinc vapor in which zinc vapor bearing gases are condensed in a first zone comprising a baffle-type condenser, and the residual zinc vapor bearing gases and molten zinc are passed into a second zone within a chamber wherein the molten zinc collects in a pool, the improvement which comprises condensing zinc vapor in said first zone while maintaining the condensing surfaces in said zone at a temperature sufficiently high to prevent substantial formation of physical blue powder, and effecting in said second zone condensation of previously uncondensed zinc vapor in said gases by hurling by centrifugal action a substantially continuous and upwardly-directed shower of said molten zinc of such violence as to provide by itself and by its splashing against the confining upper portion of the chamber turbulent sheet-like showers of molten zinc through which said zinc vapor-containing gases pass, the condensation in said second condensing zone being conducted in two phases having separate pools of molten zinc which communicate with one another, the molten zinc in the pool of the first phase being maintained at a temperature of at least about 500° C. to permit tapping of the molten metal therefrom and the temperature of the molten zinc in the pool of the second phase being maintained approximate the melting point thereof, causing the zinc vapor bearing gases and the condensed molten zinc to flow countercurrently through the two phases, tapping molten zinc from the pool thereof in the first phase, and withdrawing uncondensed gases from the second phase.

2,457,552
VERTICAL RETORT PROCESS FOR ZINC SMELTING
Erwin C. Handwerk and George T. Mahler, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application January 17, 1946, Serial No. 641,711
1 Claim. (Cl. 75—88)

The improvement in the continuous smelting of an agglomerated charge of mixed zinciferous material and carbonaceous reducing agent in an externally-heated vertical retort, which comprises heating the top of the column of agglomerated charge in the retort to a sufficiently high temperature to inhibit any substantial condensation of zinc vapor and refluxing of molten zinc approximate the top of the charge column, passing the zinc vapor bearing smelting gases continuously through a condensing chamber having a body of molten zinc in the bottom thereof, hurling by centrifugal action a substantially continuous and upwardly-directed shower of said molten zinc of such violence as to provide by itself and by its splashing against the confining upper portion of the condensing chamber turbulent sheet-like showers of molten zinc through which the gaseous stream passes, withdrawing the worked-off charge from the bottom of the retort through a depending extension thereof sealed from the atmosphere at its bottom, and introducing into said extension a combustion supporting gas in amount of 2 to 3 times that required to insure an upward draft in the retort, said amount being sufficient to supply by its combustion with carbon in the charge a substantial amount of internal heating of the charge in the retort with attendant substantial dilution of the zinc vapor bearing smelting gases.



2,457,553
METHOD FOR MELTING ZINC DUST
Erwin C. Handwerk, George T. Mahler, and Harry C. Haupt, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application December 21, 1945, Serial No. 636,420
3 Claims. (Cl. 75—86)



1. The method of melting finely divided zinc in a heated melting chamber having a body of molten zinc in the bottom thereof which comprises hurling by centrifugal action a substantially continuous and upwardly-directed shower of said molten zinc of such violence as to provide by itself and by its splashing against the confining upper portion of the chamber turbulent sheet-like showers of molten zinc within the chamber, and introducing the finely divided zinc into said shower of molten zinc whereby the particles of zinc to be melted mingle and contact with the molten zinc thrown upwardly into the chamber and are melted or entrapped thereby.

2,457,554
HELMET
Harry C. Harding, Trucksville, Pa.
Application March 15, 1946, Serial No. 654,583
3 Claims. (Cl. 128—145)

1. The combination with a ported helmet having a removable interior support formed with air openings therein, of a filter removably insertable in the helmet in close relation thereto, an interior ring in the helmet connected to and surrounding the support and adapted, when inserted in the helmet, to press the filter against the helmet, said support and helmet forming a chamber the sole egress from which is through the helmet port, and communicating means between said port and a mouthpiece.

2,457,555
APPARATUS FOR ORIENTING QUARTZ CRYSTALS BY X-RAYS
Francis E. Haworth, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 9, 1945, Serial No. 603,938
8 Claims. (Cl. 250—53)

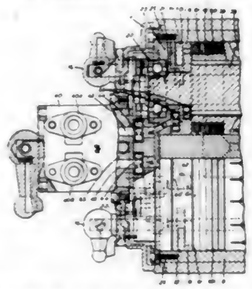
2. Apparatus for orienting a specimen of crystalline material which comprises means for projecting a beam of X-rays onto said specimen, means for receiving the Laue pattern of X-rays reflected by said specimen on a selective pattern receiver, a group of individual light sources, and means for selectively energizing the light sources of said group in accordance with the pattern received by said pattern receiver, said receiving means and said energizing means operating substantially simultaneously and in step.

2,457,556

REGENERATION OF SYNTHETIC METAL SILICATE ADSORBENTS BY OXIDATION

Heinz Heinemann, Upper Darby, and Knut A. Krieger, Philadelphia, Pa., assignors to Attapulgus Clay Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application July 28, 1945, Serial No. 607,678
2 Claims. (Cl. 252—242)



1. A method of regenerating a spent synthetic metal silicate adsorbent containing adsorbed carbonaceous materials, which comprises purging said spent silicate with steam to remove at least a portion of the carbonaceous materials, removing moisture resulting from the steaming of said purged silicate at a temperature not higher than 700° F., and then heating said purged silicate at a temperature between 900° F. and 1400° F. in a current of air carrying not more than 3 milligrams of water per liter of air measured at 75° F. and 760 mm. pressure for a period of time sufficient to remove an additional portion of said carbonaceous materials.

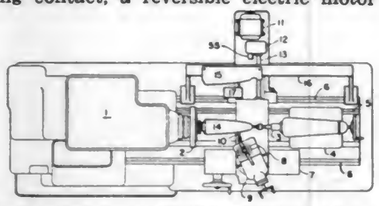
2,457,557

PROJECTOR FOR LIQUID AND PULVERULENT OR SMALL MATERIAL

George Seymour Higginson, Ilford, England, assignor of one-half to Guy Stedman May Ashby, Hermitage, England

Application September 22, 1944, Serial No. 555,364
In Great Britain September 24, 1943
12 Claims. (Cl. 259—18)

1. A projector for fluid materials comprising a cylindrical rotor in which are a number of angularly spaced, lonitudinal pockets, said pockets being adapted to receive the material to be projected, and valve controlled means for supplying fluid under superatmospheric pressure to each pocket in the vicinity of the end of each pocket toward the axis of the rotor and substantially throughout the whole of the length thereof when the pocket attains a predetermined position during turning of the rotor.



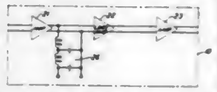
2,457,558

MEASURING AND CONTROL SYSTEM

Anthony J. Hornfeck, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware

Application March 20, 1944, Serial No. 527,308
2 Claims. (Cl. 82—14)

1. In a duplicator for machine tools and the like having a relatively movable tool and work piece; a pattern having a shape corresponding to the desired shape of the work piece; a tracer for scanning the pattern and comprising a three-legged core member, one of said legs having an A. C. energized primary winding, the two remaining legs having each a secondary winding inductively energized from the primary, a movable armature piece carrying said tracer for varying the coupling between said windings, a resistor connected into a bridge circuit with said secondary windings and having an adjustable balancing contact, a reversible electric motor ar-



ranged to relatively move said tool and work piece and said tracer and pattern, means responsive to unbalance in said bridge circuit to regulate the speed and direction of said motor in accordance with the degree and direction of departure from balance, and an interconnecting drive between said motor and contact to provide movement of the contact by the motor tending to at least partially rebalance said bridge.

2,457,559

REPEATER FOR PULSE COMMUNICATION SYSTEM

George H. Huber, Manhasset, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application February 15, 1945, Serial No. 577,954
1 Claim. (Cl. 179—171)

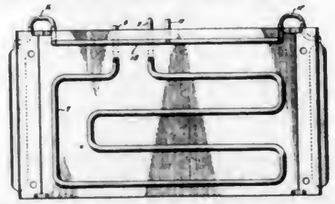
In a system for communication by modulated pulses of high frequency waves at least one repeater including a receiver for detecting the incoming high frequency waves, an amplifier for the pulse output of said receiver, a transmitter for generating new pulses of high frequency waves in response to the pulse output of said amplifier and operating inherently to produce pulses of high frequency waves of shorter duration than the signal pulse input from said amplifier, and a pulse shaping circuit associated with said amplifier and comprising an open-ended delay network having its input terminals connected to the amplifier path and of such characteristics as to reflect each pulse at said terminals with a time delay less than the length of any pulse to be transmitted, and means for clipping the combined directly transmitted and reflected pulses to produce shaped pulses of substantially uniform amplitude and of length greater than the input pulses by an amount equal to the time delay of the reflected pulses.

2,457,560

PECTIC ENZYME PREPARATIONS FORTIFIED WITH PECTINESTERASE

Eugene F. Jansen and Hans Lineweaver, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application June 18, 1946, Serial No. 677,466
1 Claim. (Cl. 195—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



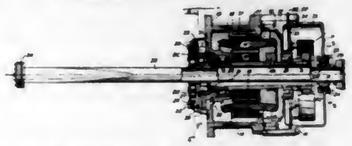
The process of increasing the glycosidic hydrolysis action on polygalacturonides of a pectic enzyme preparation comprising fortifying the preparation with from about 0.085 to about 2.360 parts of pectinesterase per part of pectic enzyme preparation.

2,457,561

EVAPORATOR UNIT

Bernard C. Johnson, Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan

Application September 26, 1946, Serial No. 699,459
9 Claims. (Cl. 62—126)



9. An evaporator comprising a U-shaped unit having fluid circulating ducts therein terminating in header chambers in the legs of the U, a heat transfer wall member spanning the legs of the U and having a fluid circulating duct and a drying duct, a refrigerant supply tube connected to the circulating duct in said wall member, a conduit connecting the circulating duct in said wall member and the ducts in said U-shaped unit, and conduits connecting said header chambers with the drying duct in said wall member for receiving refrigerant from the headers after the refrigerant has circulated through the fluid circulating ducts in both the wall member and U-shaped unit.

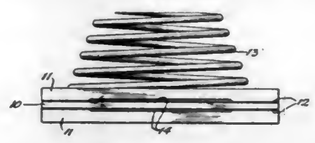
2,457,562

ANTENNA DRIVE MECHANISM

Edward H. Karleen, Morris Plains, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 9, 1945, Serial No. 603,991
3 Claims. (Cl. 250—33.63)

1. A radio signaling device having a wave guide element, a mechanism for actuating said wave guide, said mechanism comprising a motor having a hollow shaft, a cup-shaped member carried by said shaft and eccentrically disposed relative to the longitudinal axis thereof, a casing for said motor, a gimbal bearing mounted in said casing for supporting one end of said wave guide and a bearing mounted in said cup-shaped member supporting said wave guide at another point to cause the latter to generate a conical movement relative to the longitudinal axis of said hollow shaft upon the operation of said motor.



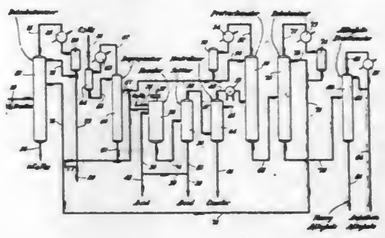
2,457,563

CRYSTAL MOUNTING

Dan W. Keller, Chicago, Ill.

Application April 10, 1944, Serial No. 530,279
3 Claims. (Cl. 171—327)

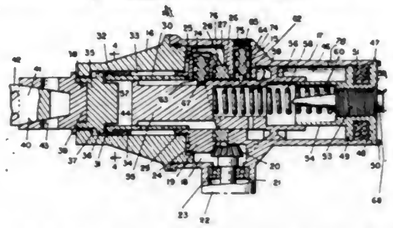
1. A crystal mounting comprising a thin resilient sheet of metal of a thickness between .002" and .016" overlying and in surface contact with the crystal throughout substantially the entire



surface of one face of the crystal, and means engaging the sheet and pressing it against the crystal.

2,457,564

PREFRACTIONATION OF HYDROCARBON ALKYLATE TO ELIMINATE PROPANE

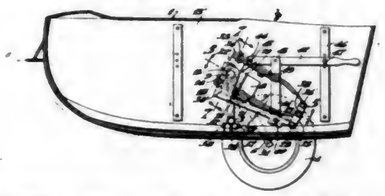


Ludwig Kniel, Jackson Heights, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware

Application April 29, 1942, Serial No. 440,931
3 Claims. (Cl. 260—683.4)

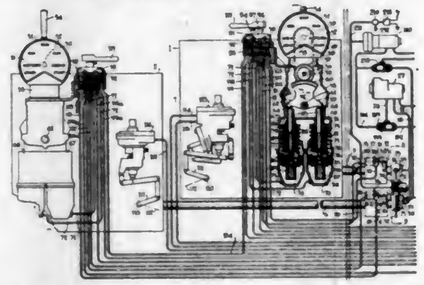
1. The process of alkylating an isoparaffin with a normally gaseous olefin to form high antiknock motor fuel, which comprises fractionating a feed stock containing the isoparaffin and unreactive hydrocarbons both higher boiling and lower boiling than the isoparaffin to separate the isoparaffin and the lower boiling hydrocarbons as overhead therefrom, contacting the isoparaffin overhead with the normally gaseous olefin in the presence of an alkylation catalyst to effect alkylation of the isoparaffin with the olefin, maintaining an excess of isoparaffin over that required to react with the olefin during alkylation, separating the resulting hydrocarbon mixture from the alkylation catalyst, subjecting the hydrocarbon mixture to a prefractionation to separate the lower boiling unreactive hydrocarbons and a portion only of the excess isoparaffin as overhead therefrom to concentrate the unreactive hydrocarbons in such overhead, passing such overhead to a zone independent of the zone of said prefractionation and there fractionating such overhead alone under fractionating conditions independent of fractionating conditions within the prefractionation zone to separate the unreactive lower boiling hydrocarbons from the excess isoparaffin therein, eliminating the separated unreactive hydrocarbons from the system, fractionating the remainder of said hydrocarbon mixture to separate the remaining isoparaffin from the alkylate, recycling the isoparaffin recovered in the system to the alkylation zone to maintain the excess of isoparaffin therein, and fractionating the alkylate to recover a high antiknock motor fuel.

2,457,565
POWER TOOL
Leo F. Kott, Detroit, Mich.
Application January 21, 1946, Serial No. 642,568
5 Claims. (Cl. 255—43)



1. In a power tool, a tool holder, means for imparting a succession of blows to said holder including a reciprocable plunger, a spring constantly urging said plunger in a direction toward said tool holder, means for intermittently urging the plunger in the opposite direction, said means including a cam on the plunger, a member rotatable about the axis of the plunger, a follower rotatable with said member and engageable with said cam, and a driving connection between the member and tool holder permitting sliding movement of the latter relative to the former.

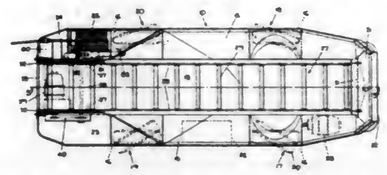
2,457,566
REGENERATION OF ALUMINA ADSORBENTS BY OXIDATION
Knut A. Krieger, Philadelphia, and Heinz Heinemann, Upper Darby, Pa., assignors to Porocel Corporation, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application July 7, 1945, Serial No. 603,744
2 Claims. (Cl. 252—242)



1. A method of regenerating a spent alumina containing adsorbed carbonaceous materials, which comprises purging said spent alumina with steam to remove at least a portion of the carbonaceous materials, removing moisture resulting from the steaming of said purged alumina at a temperature not higher than 700° F., and then heating said purged alumina at a temperature between 900° F. and 1400° F. in a current of air carrying not more than 3 milligrams of water per liter of air measured at 75° F. and 760 mm. pressure for a period of time sufficient to remove an additional portion of said carbonaceous materials.

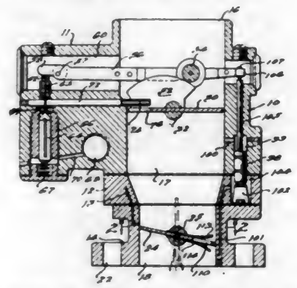
2,457,567
BOAT TRAILER
Ray F. Kuns, Cincinnati, Ohio
Application July 10, 1945, Serial No. 604,180
3 Claims. (Cl. 9—1)

1. The combination with a boat, of two wheels positioned outside said boat and adjacent the sides thereof, manually operative means to lower said wheels in contact with the ground to support said boat comprising rotatable means passing through the sides of said boat, leg member rigidly connected with the outer ends of said rotatable means and with the spindles of said wheels, leaf spring suspension means inside said boat rigidly connected with the inner ends of said rotatable and oscillating means, independent links having shackle connections with the free ends of the respective leaf spring suspension means, manually operable levers pivoted eccentrically of the rotatable means and having the remaining ends of the respective links pivotally connected thereto intermediate the ends of said levers and relatively closer to the pivotally mounted ends of the levers, the respective levers being independently and manually movable through one hundred eighty degrees (180°) to positions substantially parallel to the longitudinal axis of the boat, and means for anchoring the free ends of said levers to the inside of the boat.



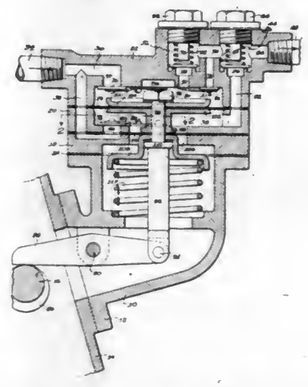
2,457,568
CONTROL APPARATUS FOR PLURAL MOTOR PROPULSION SYSTEMS
Arthur G. Larson, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application August 31, 1943, Serial No. 500,630
4 Claims. (Cl. 192—.01)

1. In combination, a prime mover, coupling means operable to transmit power from said prime mover, coupling control means operable upon supply of fluid under pressure to one pipe to render said coupling means effective and upon supply of fluid under pressure to a second pipe to render said coupling means ineffective, a manually operative coupling control device operable in one position to supply fluid under pressure to said one pipe and in a second position to supply fluid under pressure to said second pipe, speed regulating means for said prime mover adjustable by pressure of fluid in a chamber to effect operation of said prime mover at a speed proportionate to such pressure and at an idling speed when the pressure in said chamber is atmospheric pressure, manually operable speed control means operative to vary the pressure of fluid in said chamber, said coupling control device controlling the fluid control communication between said manually operable speed control means and chamber and being operative to open said communication in said one position and in said other position to close said communication and open said chamber to atmosphere.



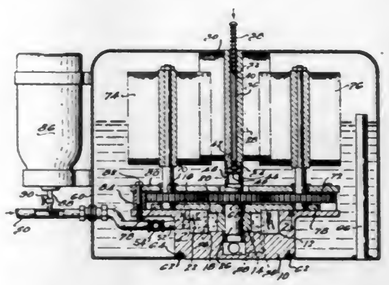
2,457,569
SHUTTLE CAR
Arthur L. Lee, Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application January 19, 1944, Serial No. 518,810
22 Claims. (Cl. 214—83.36)

21. A vehicle including a main frame, a material conveying body on said main frame, a longitudinally extending endless conveyor in the bottom of said body, a pair of power driven wheel assemblies at one end of said frame, one on each side thereof, each including a traction wheel, a driving motor for driving both of said wheels, and a drive shaft extending transversely of said



frame and interconnecting drive gearing to both of said wheels, said drive gearing including a differential in one of said assemblies located outside said main frame, the axis of said transversely extending drive shaft being located below a horizontal plane passing through the axes of rotation of said wheels, and extending between the upper and lower runs of said endless conveyor.

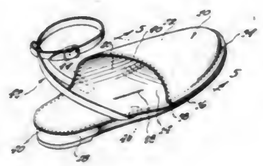
2,457,570
CARBURETOR
William E. Leibing, Detroit, Mich., assignor, by mesne assignments, to R. D. Fageol Co., Detroit, Mich., a corporation of Michigan
Application April 20, 1944, Serial No. 531,874
1 Claim. (Cl. 261—39)



In an internal combustion engine comprising an induction passage designed to communicate with the intake manifold of the engine, an air vane in said induction passage movable toward open position by the flow of air therethrough, a fuel nozzle positioned adjacent said air vane and cooperating therewith to produce a combustible fuel-air mixture under all conditions of engine operation and constituting the sole source of such mixture in the carburetor, means controlled by temperature and suction for enriching said mixture for starting, a manually operable disk throttle posterior to said fuel nozzle and controlling said induction pasage, said throttle being provided with an aperture spaced from said edges for by-passing additional fuel mixture, and a resilient valve member mounted upon the anterior face of the throttle and overlying said aperture and held by its resilience spaced anteriorly from said aperture to permit fuel mixture from said nozzle to pass therethrough but movable by suction posterior to the throttle only when the throttle is in or near its closed position and the absolute pressure posterior to the throttle is below a predetermined value to a position wherein it restricts said aperture.

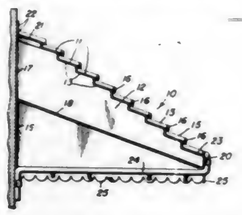
2,457,571
FUEL PUMP
William E. Leibing, Detroit, Mich., assignor, by mesne assignments, to R. D. Fageol Co., Detroit, Mich., a corporation of Michigan
Application September 4, 1945, Serial No. 614,418
9 Claims. (Cl. 103—150)

1. A fuel pump for an internal combustion engine comprising a casing formed of a plurality of superposed metallic sections forming a recess, a flexible member interposed between adjacent sections and dividing said recess into two pumping chambers, an aperture leading from one of said chambers to the exterior of the casing, a flexible diaphragm of less cross sectional area than said flexible member closing said aperture, an actuating member extending through said aperture and secured to said flexible member and said diaphragm, means energized by the engine for moving said actuating member positively in one direction and yieldingly in the opposite direction to alternately decrease the volume of the respective chambers, an inlet and an outlet line each having connections to each of said chambers, and a pressure controlled bypass from the outlet line to one of said chambers.



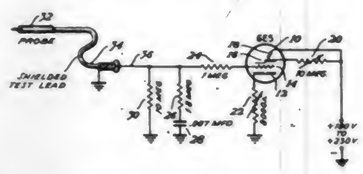
2,457,572
WASHING MACHINE
Joseph B. Leonard, Detroit, Mich.
Application November 23, 1944, Serial No. 564,776
2 Claims. (Cl. 15—76)

1. A washing device comprising a fluid motor having inlet and outlet passages, a tubular member journaled in said motor, said motor having a a rotor carried by said tubular member, said motor outlet passage communicating with one



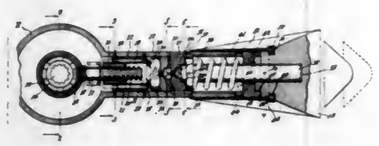
end of said tubular member at one side of said rotor, said tubular member having an outlet passage at the opposite side of said rotor, a rotatable brush carried by said tubular member, a valve for the outlet passage in said tubular member, said brush having an axially extending passage therethrough, a valve for said axially extending passage, a rod extending through said axially extending passage projecting beyond said brush and carrying said valves, and rotatable brushes adjacent said first named brush and rotatably driven by said rotor.

2,457,573
SHOE WITH SHEATH FORM OF UPPER
David E. Levin, Brooklyn, N. Y., assignor to I. Miller & Sons, Inc., Long Island City, N. Y., a corporation of New York
Application November 6, 1947, Serial No. 784,441
4 Claims. (Cl. 36—11)



1. In a shoe having an outsole, an upper having a vamp which includes a portion shape to conform to the longitudinal arch of the foot and a bottom part disposed over and attached to said outsole as an element of the shoe bottom, said bottom part being integral with the forward portion of said vamp and said portion of the upper at the longitudinal arch side of the shoe and extending to the opposite side of the shoe, said vamp and said bottom part having adjacent edge portions secured in position at said last mentioned side of the shoe, said vamp and said portion of the upper terminating in a rear edge which extends forwardly from a point located in the rear part of the shoe at said first mentioned side thereof to a point located in the forward part of the shoe at said opposite side thereof.

2,457,574
AWNING
Fred G. Lewis, Charleston, W. Va.
Application August 18, 1947, Serial No. 769,263
3 Claims. (Cl. 20—57.5)

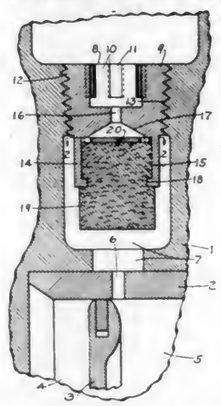


1. An awning comprising in combination, a plurality of substantially V-shaped plates arranged in a spaced, overlapping relation, a pair of end members supporting said plates in an inclined position, and upturned flanges provided at the lower edges of said plates, said flanges on each plate being mutually spaced to provide a drain opening therebetween.

2,457,575
VOLTAGE INDICATOR
Arthur Liebscher, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application May 23, 1944, Serial No. 536,892
2 Claims. (Cl. 175—183)

1. A voltage indicator including an electron ray tube having a signal input electrode, a cathode, an anode, and a fluorescent target electrode, a circuit interconnecting said anode and said target electrode, a source of positive voltage, means connecting said circuit to said voltage source, a variable resistor included in said interconnecting circuit and positioned between said anode and said connecting means, the value of said resistor being such that any increase in the voltage applied to said signal input electrode beyond a predetermined value causes no corresponding increase in the current flowing in said interconnecting circuit, a circuit connecting said signal input electrode and said cathode, said last mentioned circuit including a grid current limiting resistor and a series connected resistor-capacitor series combination, the value of the resistor in said combination being relatively low, a relatively high value resistor in parallel with said combination, and a variable cathode resistor in series with said combination for controlling the magnitude of the nominal plate current derived from said tube.

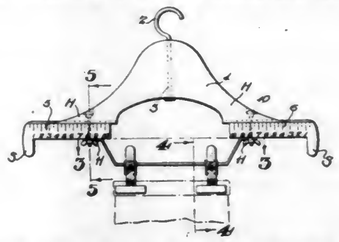
2,457,576
AIRPLANE PROPELLER AND MEANS FOR ADJUSTING SAME
John G. Littrell, San Antonio, Tex.
Application July 20, 1944, Serial No. 545,767
3 Claims. (Cl. 170—160.11)



1. In an airplane propeller, a hub, tubular propeller sockets radiating from said hub a blade movable inwardly and outwardly of said hub with respect to said tubular propeller sockets and also adjustable angularly, substantially about the axis of the socket, a spindle, one end of which is affixed to said blade and located concentrically within said socket and the other end of which is affixed to a first cross head, a second cross head movable radially in said socket and fixedly coupled to said blade means to move said first cross head radially in said socket, and means between said cross heads and sockets for requiring said second cross head to rotate incident to its radial traverse.

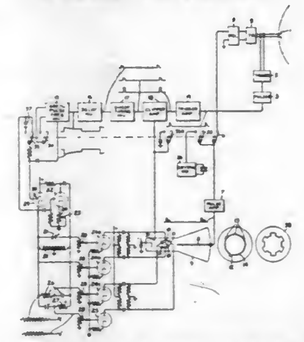
2,457,577
PRODUCTION OF LOW-METHOXYL PECTINIC ACIDS FROM ALUMINUM-PECTIN COMPOSITIONS
William D. Maclay, Berkeley, Allan D. Shepherd, El Cerrito, Rolland M. McCready, Berkeley, and Robert P. Graham, Albany, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application December 11, 1946, Serial No. 715,594
7 Claims. (Cl. 195—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process for preparing low-methoxyl pectinic acids from a dilute aqueous solution of pectin which comprises adding to said solution a water-soluble aluminum salt, adjusting the pH of the solution to about 4.2 to 4.5 to precipitate a water-insoluble pectin-aluminum composition, separating the precipitated pectin-aluminum composition and subjecting it to the action of an enzymic demethoxylating agent to form low-methoxyl pectinic acids, and then isolating the low-methoxyl pectinic acid.



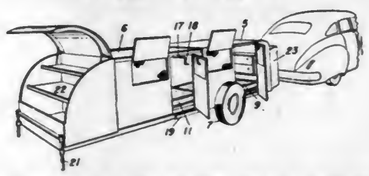
2,457,578
CHOKE FITTING
Charles W. Maliphant, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application May 31, 1944, Serial No. 538,178
1 Claim. (Cl. 138—41)

A removable choke plug comprising a body having a fluid flow restricting bore open to one end of said body, an axial bore of larger diameter connecting said restricting bore to the opposite end of said body to permit flow of fluid in the direction from said larger bore to said restricting bore, said body comprising at the outer end of said larger bore an inwardly directed annular flange, and a removable compressible filter element comprising a portion disposed in said larger bore, a portion disposed outside said body beyond said opposite end, and an intermediate portion disposed within and compressed by said annular flange for removably holding said filter element in said body.



2,457,579
ADJUSTABLE COAT AND TWO PANTS HANGER
Theodore H. Maurer, Richmond Hill, N. Y.
Application June 6, 1947, Serial No. 752,894
4 Claims. (Cl. 223—90)

1. In a garment supporter, the combination with a suspending hanger having spaced alined heads, of a pair of slidably adjustable measuring arms mounted on said heads, quick-detachable means co-acting with said heads and arms for

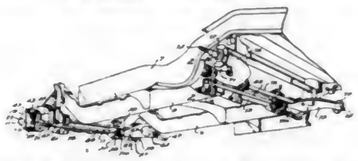


securing the arms in adjusted position, a supporting frame suspended from said quick-detachable means, and garment suspending means mounted on said frame.

2,457,580
RADIO LOCATING EQUIPMENT
Harry F. Mayer, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Original application November 30, 1943, Serial No. 512,301. Divided and this application December 26, 1944, Serial No. 569,740
5 Claims. (Cl. 315—22)

2. In combination, a multivibrator, a sweep frequency oscillator keyed by said multivibrator, a cathode ray tube normally biased off, means excited by said oscillator for deflecting the cathode ray tube beam in a circular trace, delay means made operative by the leading edge of said first multivibrator output, and means for biasing the cathode ray beam on during the operative period of said delay means.

2,457,581
TRAILER
Byrl N. McCain, San Jose, Calif.
Application October 8, 1947, Serial No. 778,592
1 Claim. (Cl. 296—23)

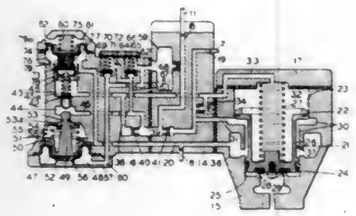


In a trailer, a pair of telescoping sections, one slidable within the other in a longitudinal direc-

tion, extensions formed on the outer of said sections for supporting said inner section when extended, reversible supports carried by said inner section for supporting the free end of said inner section when extended, a bed positioned in said outer section and having its sides spaced from the sides of said outer section, a second bed positioned in said inner section, said second-mentioned bed being suspended by cables, and a crank operatively connected to said cables whereby said second-mentioned bed may be elevated above the plane of said first-mentioned bed when said telescopic sections are in telescoped position.

2,457,582
GREASE COMPOSITION
Paul R. McCarthy, Allison Park, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application June 11, 1947, Serial No. 754,065
4 Claims. (Cl. 252—36)

1. An improved grease composition comprising between about 55 and about 80 per cent by weight of a refined mineral oil having a viscosity between about 500 and about 2000 S. U. V. at 100° F., between about 10 and about 20 per cent by weight of asphalt, and between about 10 and about 25 per cent by weight of a mixture of alkali-metal and zinc fatty acid soaps, the ratio of alkali-metal soap to zinc soap being between about 3:1 and about 1:1.



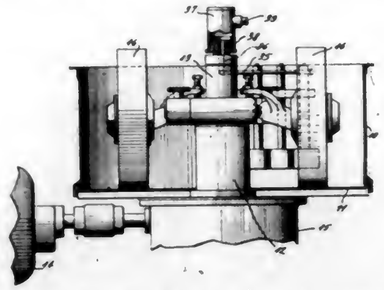
2,457,583
VEHICLE TORSION BAR INDIVIDUAL WHEEL SUSPENSION
Henry C. McCaslin, Dexter, Mich., assignor, by mesne assignments, to Kaiser-Frazer Corporation, Willow Run, Mich., a corporation of Nevada
Application October 24, 1946, Serial No. 705,385
8 Claims. (Cl. 280—124)

1. In a wheel suspension for a vehicle, a frame including longitudinal beams on opposite sides thereof, a transverse tubular member secured to and extending outwardly beyond said longitudinal beams, spaced bracket mounting means secured to said tubular member and said frame beams, brackets rigidly connected to each of said bracket-mounting means, a pair of transversely disposed wheel mounting members rotatably connected to said brackets, and a torsion bar for each of said wheel mounting members fixedly connected at one end to one of said wheel mounting members and at the opposite end thereof to one of said brackets which carries the other of said wheel mounting members.

2,457,584
CONTROL VALVE APPARATUS
Glenn T. McClure, McKeesport, and John W. Rush, Wilkinsburg, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application May 24, 1946, Serial No. 672,134
7 Claims. (Cl. 303—69)

1. The combination of a fluid pressure controlled valve device having a normal position in which it establishes a communication through which fluid under pressure may be supplied to a fluid pressure receiving device and operative in response to a rapid reduction of the pressure in a control chamber to a different position in which the said communication is cut off and an exhaust communication is established through which fluid under pressure is released from the receiving device, a passageway through which fluid under pressure may be vented from the control chamber under the control of said valve device while in its said different position thereby to

cause a continued reduction of the pressure in the control chamber to maintain the said valve device in its said different position, and valve means operatively controlled by the pressure of the fluid in the receiving device in such manner as to open said passageway so long as the pressure in said receiving device exceeds a certain value, and to close said passageway upon the reduction of the pressure in said receiving device to below said certain value to render said value device ineffective in its said different position to continue the reduction of the pressure in the control chamber, thereby to enable restoration of the valve device to its normal position.



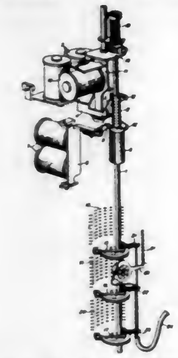
2,457,585
METHOD OF PRODUCING PENICILLINS
Robert B. McCormack, Milltown, N. J., assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application June 10, 1944, Serial No. 539,797
3 Claims. (Cl. 195—81)

1. The method of producing a penicillin which comprises sterilizing a solid substrate essentially comprising moist oats, sodium citrate, and calcium carbonate, and growing a penicillin-forming mold thereon.

2,457,586
GREASE COMPOSITION
John F. McGrogan, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 4, 1946, Serial No. 694,633
6 Claims. (Cl. 252—36)

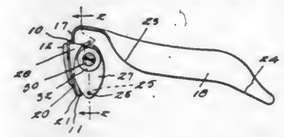
1. A grease composition consisting essentially of mineral lubricating oil, calcium soaps of fatty acids in an amount sufficient to impart the desired consistency to the grease, and a small quantity of a lead salt of an aliphatic monocarboxylic acid containing not more than 8 carbon atoms sufficient to increase the dropping point of said grease to a temperature between 300° F. and 500° F.

2,457,587
MATERIAL RECLAMATION SYSTEM
Robert Louis McIlvaine, Glencoe, Ill., assignor to Herbert S. Simpson, Evanston, Ill.
Application April 7, 1945, Serial No. 587,163
6 Claims. (Cl. 22—89)



1. An attachment for a material mulling and agitating machine including a muller roller and a revolving head for moving the roller in a material confining chamber, a support fastened to and rotatable with said head and with said roller, a nozzle carried by and rotatable with said support for projecting downwardly a jet of flame directly into the material being treated to burn off foreign matter therefrom.

2,457,588
SPLIT RING CORD GUIDE FOR STEP-BY-STEP SWITCHES
Victor F. Miller, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 18, 1946, Serial No. 717,052
3 Claims. (Cl. 179—27.52)



3. In a switch comprising a shaft, contact banks, wiper assemblies secured to said shaft and having projections thereon, means for actuating said shaft to cause the wipers of said assemblies to engage contacts in said banks and conductors connected to said assemblies, guide rings for confining said conductors therein, said guide rings detachably connectable to said assemblies, each of said guide rings comprising a split ring, the free end of one section of said split ring circumferentially resiliently overlapping another section of said split ring, other sections of said split ring formed into hook portions by means of which hook portions said guide ring may be secured to said assembly, said hook portions having a resilience therebetween due to the configuration of said ring whereby said hook portions may be separated resiliently for attachment thereof to said projections on said assemblies, said overlapping sections of said ring adapted to be resiliently separated to permit said conductors to be inserted therethrough to be confined within said ring and to be removed therethrough to be free from said ring without necessitating removal of said ring from said assembly and without necessitating removal of said assembly from said shaft and without necessitating disturbance of other assemblies, their rings or conductors on said shaft.

2,457,589
WIPER ASSEMBLY FOR STEP-BY-STEP SWITCHES
Victor F. Miller, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 18, 1946, Serial No. 717,053
6 Claims. (Cl. 179—27.52)

1. In a switch a wiper assembly comprising a body member adapted to be attached to a shaft of said switch, two electrically conductive resilient wiper arms insulatedly attached to said body member at one end of each of said two arms, the free ends of said two arms pretensioned to flex toward each other, a third arm extending from said body member and extending between the free ends of said two arms, and an insulating member attached to each arm near the free end thereof for separating the free end of each of said two arms from the extension of said third arm, for orienting said free ends prior to functioning of said free ends and for guiding said free ends during said functioning.

2,457,590
SAFETY RAZOR
William L. Mills, Waco, Tex.
Application June 21, 1944, Serial No. 541,386
2 Claims. (Cl. 30—69)

1. In a razor having a guard plate, a clamping plate, and a stud and lugs on the clamping plate occupying openings in the guard plate, a handle having a terminal through which the stud passes, fastening means on the stud engageable

against the terminal, a guard roller, means mounting said guard roller in operative position to the cutting edge of the blade, comprising side plates in which the roller is journaled, and means rotatably and slidably securing the side plates to the guard plate.

2,457,591

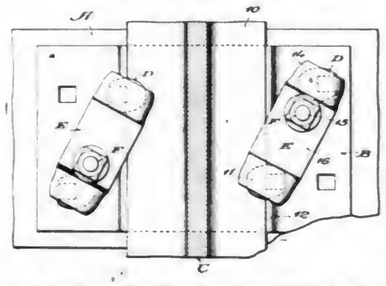
HYDROPHILIC-ORGANOPHILIC PIGMENTS AND METHODS FOR PRODUCING SAME

Maryalice Conley Moore, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 12, 1946, Serial No. 640,989

10 Claims. (Cl. 106—308)

4. A process for preparing an improved pigment which comprises mixing a pigment with from about 0.05% to 10% by weight, based on the pigment of a water-soluble omega-amino-alkylnitrile containing not to exceed 6 carbon atoms, and then polymerizing said nitrile on said pigment at a pressure ranging from 50–150 pounds per square inch and an elevated temperature ranging from 400–1100° F.



2,457,592

RAIL RETAINING AND SPIKE FASTENING MEANS

George W. Muller, Miami Beach, Fla.

Application April 21, 1944, Serial No. 532,071

12 Claims. (Cl. 238—294)

1. In a railway track structure, a tie, a tie-plate superimposed thereon, a rail seated upon said tie-plate and acting by its own weight and by train-weights imposed thereon to urge the tie-plate downwardly against the tie, a pair of headed track - element - fastening - spikes extending through openings in said tie-plate into the tie, a highly resilient sheet steel clamp-plate spanning the space between said spikes and seated upon the heads thereof, and a bolt securing said clamp-plate intermediate its ends to said tie-plate and maintaining the same under material downward flexure exerting constant downward pressure upon said spikes, whereby the latter are held against upward loosening movement relative to the tie and are urged constantly downwardly into more secure engagement with the tie in harmony with any appreciable amount of downward wear of the tie-plate into the tie.

2,457,593

DETACHABLE CONNECTION FOR ELECTRIC CABLES

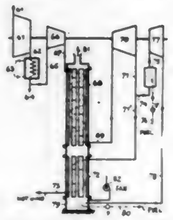
John W. Nelson, Wickliffe, Ohio

Application November 8, 1944, Serial No. 562,431

5 Claims. (Cl. 287—76)

1. In an electrical circuit, the combination of a pair of terminal devices provided with electrical contact elements adapted to be detachably connected together, each of said elements having a contact face for intimate engagement with the complemental face of the other element when so connected, one of the elements having a slot extending to and opening at one side of such element, and the other element being provided with an aperture registrable with a portion of said slot, an axially slidable pin mounted in said aperture and arranged to be entered into said slot when the elements are to be connected together,

a collar mounted on each end of said pin, and a spring disposed between one of said collars and the apertured element and yieldably urging the pin endwise in one direction to engage the other collar with the slotted element and pressurally maintain intimate electrical contact between said complemental faces of the elements when they are connected, the pin being movable in the opposite direction against the action of the spring to disengage said other collar from the slotted element when the connection is to be broken.



2,457,594

TURBINE COMPRESSOR PLANT

Frederick Nettel, Manhasset, and Johann Kreitner, New York, N. Y.

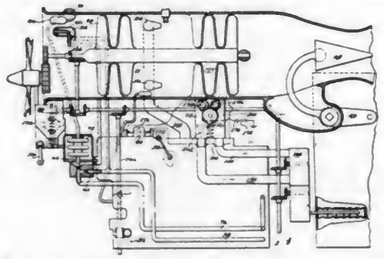
Application May 14, 1942, Serial No. 443,000

9 Claims. (Cl. 263—19)

1. In the method of producing wind for metallurgical furnaces or similar consumers in air turbine driven blowers, the steps of compressing more air than required for the furnace to a pressure substantially higher than the required wind pressure, drying it by cooling it at said higher pressure, compressing it thereafter to a still higher pressure, energizing it by heating it at said highest pressure, expanding it in power producing expansion means to the required wind pressure, branching off the required wind quantity into wind heating means, and expanding the remainder in power producing expansion means to atmospheric pressure.

2,457,595

GAS TURBINE CONTROL



Andrew William Orr, Jr., Detroit, Mich., assignor to George M. Holley and Earl Holley

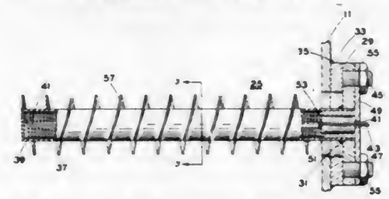
Application July 22, 1946, Serial No. 685,520

18 Claims. (Cl. 170—135.71)

1. A temperature control device for an air compressor connected to a gas turbine having a combustion chamber between the compressor and the turbine, comprising a fuel entrance to said control device, a fuel exit, a fuel restriction therebetween, a bypass around said fuel restriction, a second fuel restriction located in said bypass, a fuel diaphragm responsive to the drop in pressure

at said second restriction, an air entrance to said air compressor, differential pressure means in said air entrance responsive to the air flow, an air diaphragm responsive to said air differential pressure, a third fuel restriction in series with said second fuel restriction, a valve in said third fuel restriction, means connecting said valve to both of said diaphragms so that an increase in

air flow tends to open said valve and an increase in fuel flow tends to close said valve, means responsive to the temperature of the compressed air entering said combustion chamber to vary the inlet temperature of said gas turbine, additional means responsive to the position of said valve to jointly control with the first mentioned means the inlet temperature of said gas turbine.



2,457,596

WATER HEATER

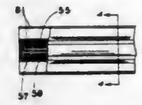
Clark M. Osterheld, Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware

Application November 19, 1946, Serial No. 710,774

2 Claims. (Cl. 219—39)

1. An electric water heater adapted for insertion into a hot water tank comprising a round, tubular, metallic casing having a closed inner end and consisting of a metal having high heat conductivity, a relatively thin metallic liner of high heat conductivity in said casing, a helically wound-on-edge metallic resistance strip adapted to expand its helix when in its operative position inside said liner and casing to hold said liner in close engagement with the inside surface of said casing and a metallic fin secured to the outside surface of said casing and extending helically therealong, said fin consisting of metal of high heat conductivity, said resistance strip and said liner having thereon an integral, inorganic, heat-conducting, high-temperature-resisting and electric-insulating coating.

2,457,597



WATER HEATER

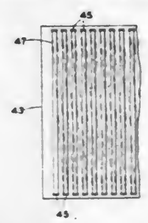
Clark M. Osterheld, Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware

Application November 19, 1946, Serial No. 710,775

1 Claim. (Cl. 219—39)

An electric water heater for insertion into a hot water tank, comprising a relatively thin, round, tubular, metallic casing having closed inner end, a thin metal liner covering substantially all of the inner surface of said casing, a metallic resistor strip helically wound on edge in said casing and inherently expanded to hold said liner in tight engagement with said casing and a

heat-transmitting sheath on said casing forming with the external surface of said casing a series of longitudinal spaces, the inner surface of said casing, the entire surface of said liner and of said resistor strip having thereon an integral, inorganic, heat-conducting, high-temperature-resisting and electric-insulating coating.



2,457,598

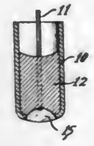
ELECTRIC AIR HEATER

Clark M. Osterheld, Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware

Application December 19, 1946, Serial No. 717,273

1 Claim. (Cl. 219—38)

An electric air heater comprising a casing, a relatively thin sheet of metal supported in a substantially vertical position in and by said casing, a plurality of horizontally alined openings adjacent the upper and the lower edges of said sheet of metal and a metallic resistance conductor wound helically through said openings, said sheet of metal and said resistance conductor having on their entire outer surface an integral, inorganic, heat-conducting, high-temperature-resisting and electric-insulating coating.



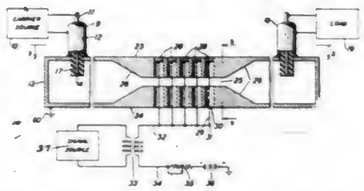
2,457,599

METHOD OF CLOSING TUBE ENDS BY DIPPING IN MOLTEN SOLDER

Leopold Pessel, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Application October 27, 1944, Serial No. 560,725

5 Claims. (Cl. 113—112)

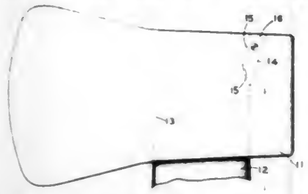


2. The method of closing the end of a tubular body, comprising dipping an end of the body in molten solder to form a concave depression, cooling the dipped end, again dipping the end in molten solder to transform the concave depression into a globular projection, and finally dip-

ping the projection end in a pool of oil on the surface of the molten solder, the temperature of said oil being higher than the melting point of said solder.

2,457,600
LINOLEUM SURFACE COVERING
Paul O. Powers, Manheim Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
No Drawing. Application November 2, 1944, Serial No. 561,636
10 Claims. (Cl. 260—13)

1. A finished wall or similar surface covering of linoleum type suitable for use as consolidated and without maturing or similar treatment comprising a filler and a binder, said binder comprising about 55% to about 80% of a non-matured siccative oil-resin linoleum cement in which the oil is oxidized to a semi-solid gel including from about 65% to about 85% by weight of siccative oil and from about 35% to about 15% by weight of resin; and about 45% to about 20% of a reinforcing agent for said siccative oil-resin cement, said reinforcing agent including about 33% to about 67% of a cellulose ether soluble in said siccative oil-resin cement and selected from the group consisting of methyl cellulose, ethyl cellulose, and benzyl cellulose and from about 67% to about 33% of a hard, high melting point resin soluble in said siccative oil-resin cement and having a melting point between about 100° C. and 160° C.

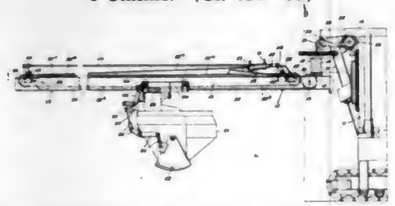


2,457,601
WAVE TRANSLATING APPARATUS
Douglas H. Ring, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 27, 1945, Serial No. 607,429
14 Claims. (Cl. 179—171.5)

1. A microwave translating apparatus comprising, in combination, a section of guide for the transmission of microwaves, a plurality of variable impedance elements, means for individually coupling said elements different distances from an antinodal region of maximum field intensity at respective successive points along said section of guide, and electrical circuit means for varying the impedance of said elements concurrently.

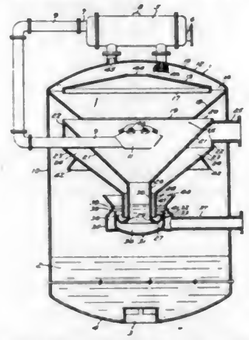
2,457,602
HEADLOCK WEDGE
Reginald W. Rodgers, Winnipeg, Manitoba, Canada
Application February 15, 1946, Serial No. 647,665
2 Claims. (Cl. 306—33)

1. A hand implement comprising a head member, a bore in said head member, a handle member having an upper portion adapted to be received in said bore, the upper rear wall of said bore being upwardly and rearwardly inclined from a point intermediate the inner and outer ends of the bore to the outer end thereof, the rear surface of said handle member adjacent said upper rear wall being formed with an undercut recess extending from a point below the outer end of the handle substantially corresponding to the point intermediate the inner and outer ends of the bore to the outer end of the handle and



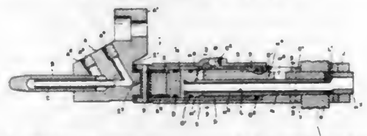
having a substantially straight upwardly and rearwardly inclined upper portion and a curved lower portion, a wedge member lockingly fitted in the space defined by said undercut recess and said inclined bore wall portion, and a fastener member passing through said head member and engaging said wedge member.

2,457,603
POLYVINYL BORONATES AND METHODS FOR PRODUCING SAME
Paul L. Salzberg and Frank K. Signaigo, Brandywine Hundred, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 28, 1945, Serial No. 585,396
9 Claims. (Cl. 260—85)



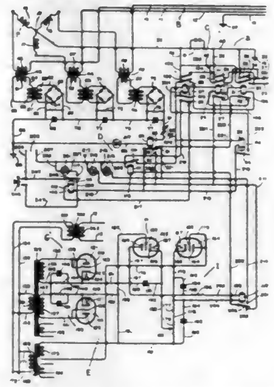
1. A polyvinyl ester of an organo-boronic acid having the general formula $RB(OH)_2$, in which R is an organic radical joined to the boron atom through a carbon atom and is a member selected from the group consisting of an aliphatic hydrocarbon, an aromatic hydrocarbon, and the halogen, hydroxyl, and amino-substituted derivatives of said aliphatic and aromatic hydrocarbons.

2,457,604
MATERIAL DISTRIBUTING APPARATUS
Raymond M. G. Schiro, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 17, 1946, Serial No. 697,411
5 Claims. (Cl. 214—59)



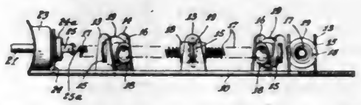
1. In material distributing apparatus of the class described, the combination of a linear trackway; a material receptacle traversably mounted on said trackway and provided with a discharge controlling door; a traverse cable connected to said receptacle for moving it along the trackway; means for driving said cable; guide means carried by the trackway and engaged by the traverse cable to provide a running loop thereof extending along the trackway; connections between a portion of said cable loop and the receptacle door, operable through relative movement between the receptacle and said loop portion to open and close said door; and means for shifting said loop-forming guide means at will to volitionally variable extents, to produce controlled movement of said cable loop portion relative to the receptacle, with correspondingly controlled movement of the door.

2,457,605
FEED-WATER HEATER
Joseph F. Sebald, Bloomfield, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application July 14, 1944, Serial No. 544,889
6 Claims. (Cl. 261—115)



1. In a water heating and deaerating system the method of utilizing high temperature high pressure condensate auxiliary to the main water flow through the heater for augmenting the final heating and deaerating of the feed water, which consists in first primarily heating the water by direct contact with steam, subsequently heating the water by a thorough mixing of the primarily heated water with steam, ejecting the mixed water and steam into a space of relatively low pressure to provide separation of the released gases from the heated water, and introducing the high temperature high pressure auxiliary condensate into the discharging ejecting mixed steam, and water prior to its discharge into the low pressure area.

2,457,606
WELDING GUN
Charles Senn, Detroit, Mich.
Application May 3, 1948, Serial No. 24,742
4 Claims. (Cl. 219—4)



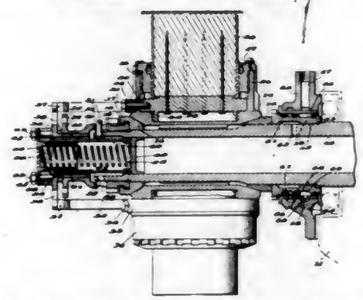
1. A welding gun comprising a head having an electrode secured to and projecting therefrom and a shank projecting oppositely from said electrode, a cylinder secured to said shank and electrically insulated therefrom, the rear end of said cylinder having a bore of slightly smaller diameter, an external casing receiving and fitting said cylinder and having at its rear end a portion with a bore corresponding to the small diameter bore of said cylinder, a member within said cylinder having a piston head fitting the same and a rearwardly extending cylindrical shank fitting the small bore of said cylinder and casing and extending outward through the same being rigidly attached to said casing, said piston shank having longitudinally extending passages therein one extending through said piston head and the other connected to the space surrounding said piston shank, the opposite ends of said passages being adapted for connection with an independent source of fluid pressure, whereby pressure fluid entering the one will move said cylinder outward from said casing and press the electrode against the work while pressure fluid entering the other will retract said cylinder into said casing.

2,457,607
REMOTE CONTROL SYSTEM
Charles E. Seymour, Baraboo, Wis., assignor to Control Corporation, Minneapolis, Minn., a corporation of Minnesota
Application November 8, 1946, Serial No. 708,536
15 Claims. (Cl. 171—97)

2. In a remote control system, operable over a polyphase alternating current line, a transmitter including a resistance connected to said line, said transmitter utilizing a direct current voltage and including a terminal having a positive potential, actuating means responsive to the load on said line and operating when the load on the line exceeds a certain value to connect said terminal to one end of said resistance to procure a shift in the axis of the potential of said line in one direction and when the load falls below a certain value to connect said terminal to the other end of said resistance to shift the axis of the potential of said line in the opposite direction, and a receiver responsive to variations in the shift of the axis of an alternating current voltage and responding in different ways to the shift of the axis in opposite directions, said receiver being connected in said line at a locality remote from said transmitter.

2,457,608
ELECTRIC HEATING ELEMENT
Adolph F. Shafter, Decatur, Ill., assignor to U. S. Manufacturing Corporation, Decatur, Ill., a corporation of Illinois
Application November 9, 1945, Serial No. 627,651
3 Claims. (Cl. 219—19)

3. In a device of the character described, a plate-like metallic member, sets of parallelly ar-



ranged spaced apart flanges upstanding from a face of said member, each of the flanges having a longitudinally extending slot, with the slots of the flanges of each set extending in substantial parallelism with each other and substantially perpendicular to the face of said plate-like member, tubular insulating elements provided with surface projections extending into the slots of the flanges, one such element only being supported between flanges of a set, an electrical heating coil threaded through the tubular elements so supported, and electrical terminals, said heating coil being joined electrically to said terminals.

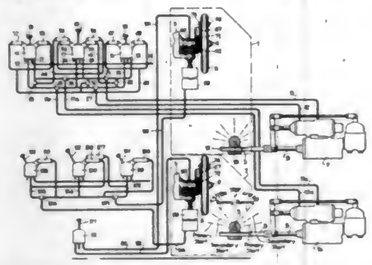
2,457,609

PITCH CHANGING MECHANISM

George James Smith-Pert and Archibald Graham Forsyth, Cheam, England, assignors to The Fairey Aviation Company Limited, Hayes, England

Application February 8, 1945, Serial No. 576,740
6 Claims. (Cl. 170—160.32)

1. A variable pitch propeller for aircraft and the like comprising, a propeller hub mounted for rotation on a propeller drive shaft, said hub having propeller blade supporting members, propeller blades supported by said members for rotary movement about their longitudinal axes, a segment-shaped counterbalance plate carried by each of said members for rotary movement about said axes, said plates being connected with the propeller blades to turn therewith during pitch changing movement, said plates being disposed in planes parallel to the axis of said propeller drive shaft, a member supported forwardly of said propeller drive shaft for relative rotary movement with respect thereto, said last-mentioned member having arm means provided with a gear portion engaging a gear on a peripheral portion of each of said plates, whereby said plates upon rotation of the hub will move toward the plane of rotation of the blades and effect a pitch change in one direction, and also move said arm means and said last-mentioned member in one direction about the axis of the propeller drive shaft, and hydraulic means for moving said last-mentioned member and arm means in the other direction, whereby said plates are returned to their original position thus effecting a pitch change to the original pitch position.



2,457,610

CONTROL APPARATUS FOR PRIME MOVERS

Roy R. Stevens, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application May 22, 1943, Serial No. 488,040
6 Claims. (Cl. 60—97)

1. In combination, a device adjustable by fluid under pressure, two control means individually operable to provide fluid under pressure for controlling said device, and means operable by fluid

under pressure, provided by one of said control means for controlling said device, to prevent operation of the other control means.

2,457,611

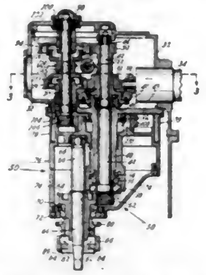
PROCESS FOR THE PREPARATION OF MONOETHENOIC ACIDS AND THEIR ESTERS

Daniel Swern and Waldo C. Ault, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application January 20, 1945, Serial No. 573,798
17 Claims. (Cl. 260—409)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process for the preparation of purified oleic acid from a material selected from the class consisting of fats and oils, the fatty acids of which contain saturated acids, oleic acid, and polyunsaturated acids, the latter two in the ratio of at least three to one, respectively, comprising selectively hydrogenating said material to reduce substantially all of said polyunsaturated acids to either saturated or monoethenoic acids without significantly affecting the oleic acid, followed by hydrolyzing the hydrogenated material to form a mixture consisting essentially of saturated and monoethenoic fatty acids, and then separating the saturated acids from the monoethenoic acids by causing the crystallization of the saturated acids as a solid phase from said fatty acid mixture and recovering the monoethenoic acids, which consist essentially of oleic acid, as the liquid phase thereof.

2,457,612



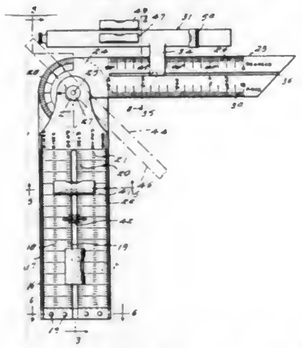
MIXING MACHINE GEARING

Louis F. Thiel, Springfield Gardens, N. Y., assignor to American Machine & Foundry Company, a corporation of New Jersey

Application October 3, 1944, Serial No. 556,937
7 Claims. (Cl. 74—300)

1. In a mixer, the combination with a head revolubly mounted for rotation about a stationary axis, of a vertical center shaft concentric with the axis of rotation of said head, means for driving said center shaft, a vertical shaft revolubly mounted in said head with its axis eccentric to the axis of rotation of said head, means driven from said center shaft for revolving said eccentric shaft on its own axis, a pair of pinions secured on said center shaft, a vertical jack shaft, a gear fastened on said head, a gear fastened on said jack shaft and meshing with and driving the gear on said head to revolve the head, a pair of gears loosely mounted on said jack shaft and meshing with and driven from the pinions on said center shaft, a clutch member splined on

said jack shaft intermediate the loosely mounted gears on the jack shaft and normally engaged with one of said loosely mounted gears whereby the jack shaft will be driven and the head will be revolved to carry said eccentric vertical shaft in an orbital path, and a device for engaging said



clutch member with the other of said loosely mounted gears on said jack shaft to revolve said head at a different speed and thereby vary the precession ratio of the rotation of the vertical shaft on its own axis relative to the rotation of the head.

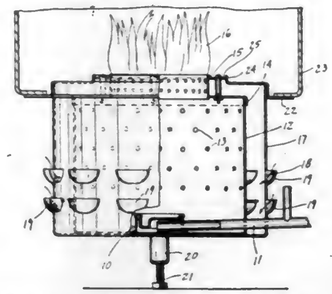
2,457,613

COMBINATION BEVEL

William Thomas, Keddie, Calif.

Application February 9, 1945, Serial No. 577,003
1 Claim. (Cl. 33—73)

An instrument of the class described comprising a stock, a tongue pivotally connected thereto and coacting therewith to form a bevel including a protractor, a peep sight carried by the tongue, a spirit level carried by the peep sight, said tongue having a longitudinal groove in one side thereof, disposed parallel to its longitudinal edges and opening outwardly of its free end, and said peep sight having a bracket comprising spaced, substantially parallel arms disposed perpendicular to its axis for engaging opposite sides of the tongue, one of said arms having an inturned free end for close fitting engagement with the groove for detachably mounting the peep sight on the tongue and in parallel relationship thereto.



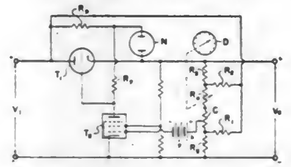
2,457,614

BURNER FOR BROODER STOVES

Donald B. Tolley, Macomb, Ill., assignor to Globe American Corporation, Kokomo, Ind., a corporation

Application March 20, 1946, Serial No. 655,725
1 Claim. (Cl. 158—91)

In a burner for a brooder stove including a bowl for receiving in-flowing fuel and having an oil inlet pipe connected thereto, a mixing drum arising from and connected to said bowl provided with a series of air inlet holes in its wall, a centrally apertured top plate extending over said drum to partially enclose the space therein to provide a combustion chamber, a casing surrounding said drum having a vertical wall spaced therefrom, said casing being closed except for a series of air inlet openings substantially greater in area than the inlet holes of said drum, said air inlet openings being provided in the vertical wall of

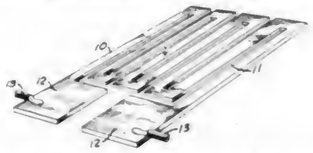


said casing and spaced about the periphery thereof in a substantially uniform pattern and so spaced vertically in relation to said air inlet holes of the drum as to lie below the upper half thereof, and a baffle shield secured to the outer peripheral wall of said casing about each of said air inlet openings closed below and at the sides thereof and open at the top for directing incoming air currents downwardly therethrough into the space between said drum and casing below said air inlet holes.

2,457,615

VOLTAGE STABILIZING CIRCUITS

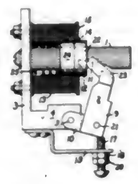
Adrianus Johannes Heins van der Ven, Bournemouth, Hants, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee



Application December 1, 1944, Serial No. 566,210
In Great Britain July 22, 1943
Section 1. Public Law 690, August 8, 1946
Patent expires July 22, 1963
2 Claims. (Cl. 323—22)

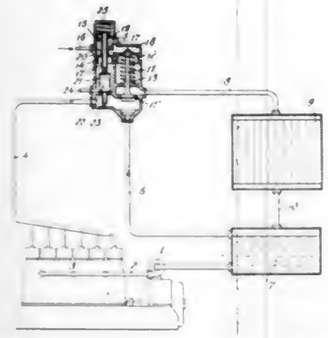
1. An electrical circuit arrangement comprising, input means comprising a positive lead and a negative lead for connecting to a source of voltage subject to variations in value, output means comprising a positive lead and a negative lead for connecting to a load of fluctuating value, a discharge tube having an anode connected to the positive lead of the input means, a cathode connected to the positive lead of the output means and a control electrode, a first fixed value resistance element, a variable value resistance element and a second fixed value resistance element connected in series relationship in the order named with the free ends of the first and second fixed value resistance elements connected across the positive lead and the negative lead of the output means, a potentiometer interposed between

the variable value resistance element and the second fixed value resistance element and being provided with a variable tapping, a third fixed value resistance element interposed between the positive lead of the input means and the junction of the first fixed value resistance element and the variable resistance element, a fourth fixed value resistance element interposed between the positive lead of the input means and the junction of the second fixed value resistance element and the potentiometer, the values of said first, second, third, and fourth fixed value resistance elements being such as to form a bridge circuit, a thermionic tube having a cathode connected to the negative lead of the output means, an anode connected to said control electrode and a control grid connected to said variable tapping, a resistance element interposed between the anode of the thermionic tube and a positive voltage point having a substantially constant value relative to the voltage of the positive lead of the output means, and means interposed between the control grid and the cathode of said thermionic tube for applying a biassing potential to said control grid, said variable value resistance element being calibrated in volts output and being adjustable to vary the voltage at said output means, and said potentiometer being adjustable for varying the calibration of said variable value resistance element.



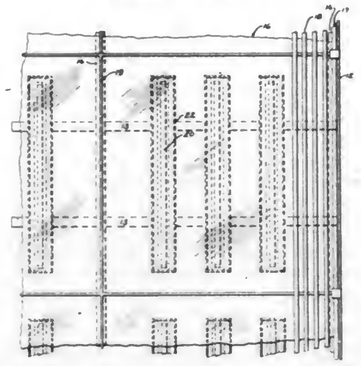
2,457,616
METAL FOIL TYPE STRAIN GAUGE AND METHOD OF MAKING SAME
William D. Van Dyke, Tarzana, and Paul A. Dennis, Manhattan Beach, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application July 16, 1946, Serial No. 683,813
15 Claims. (Cl. 201—63)

1. An instrument of the type described comprising: a thin zigzag strip of material whose electrical resistance varies in accordance with changes of strain therein; lead wires electrically connected to the opposite ends of said strip; and an insulating sheath of thermoplastic material completely encasing said strip.



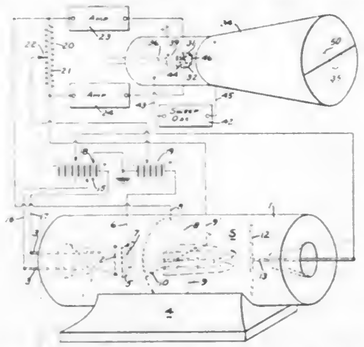
2,457,617
TIME ELEMENT ELECTROMAGNETIC DEVICE
Ludwig S. Walle, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York
Application February 4, 1947, Serial No. 726,366
9 Claims. (Cl. 175—372)

1. In an electromagnetic device, a magnetic circuit having cooperating stationary and movable magnetic members, a winding for magnetizing said circuit when energized by an oscillating current above a predetermined magnitude to tend to effect movement of the movable member toward the stationary member, a short circuited winding of positive temperature coefficient of resistivity material movably mounted in inductive repulsion relation with said winding and having connections for exerting on said movable member an opposing force greater than the magnetic attractive force thereon to prevent movement of the member toward said stationary member until the heating action of the current induced in the



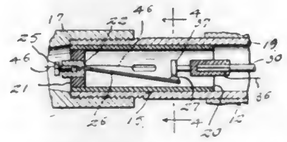
short circuited winding increases the resistance thereof sufficiently to reverse the predominance of said forces.

2,457,618
TEMPERATURE REGULATED COOLING CIRCUIT
Fritz Wiesendanger, Winterthur, Switzerland, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland
Application October 17, 1944, Serial No. 559,080
In Switzerland February 8, 1944
7 Claims. (Cl. 123—178)



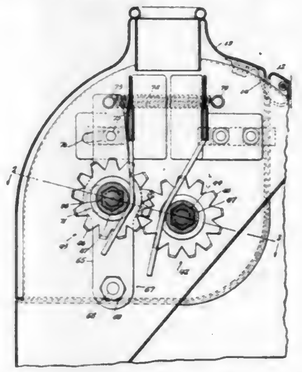
7. As a sub-combination, a device including a flow-through chamber having at least three flow passages thereinto, valve means for closing alternatively one or the other of a pair of said passages, and a hydraulic servomotor assembly controlling said valve means, said assembly including a source of fluid under pressure, a pressure fluid discharge, a single-action, spring-loaded piston connected to said valve means to close one of said pair of passages under influence of fluid under pressure and the other, under influence of the spring-loading, and means to control the fluid pressure action on said piston that include an expansion body responsive to temperature in said chamber and a two-part valve to control the passage of fluid to and from said piston from and to said pressure source and said discharge, respectively, the first part of said two-part valve being in contact with said expansion body and the second part having a travel limited by contact with stop portions of the first part, said control means being so arranged that, when a movement of the first part causes a control edge of the second part partially to connect said piston to either said pressure source or said discharge, said second part moves immediately the full distance of its travel relative to said first part, thus rapidly freeing the whole cross-sectional area of flow from and to said source or discharge, respectively.

2,457,619
ICE SKATING RINK
Reuben J. Yocum, Omaha, Nebr.
Application October 31, 1947, Serial No. 783,359
15 Claims. (Cl. 62—12)



5. An illuminated ice-skating rink comprising, a floor of light transmitting material, means providing a light transmitting ice-skating surface on said floor, boundary walls extending upwardly of said floor for retaining said ice-skating surface, a light source for illuminating said rink disposed below said ice-skating surface and arranged to direct illuminating beams upwardly through said ice-skating surface and light transmitting refrigerating means for said ice-skating surface, said refrigerating means comprising headers and interconnecting tubes of light transmitting material containing a non-opaque fluid medium disposed between the light source and ice-skating surface.

2,457,620
MEANS AND METHOD OF INDICATING ACCELERATION
Charles R. Abraham, San Francisco, Calif.
Application June 26, 1942, Serial No. 448,697
2 Claims. (Cl. 175—183)

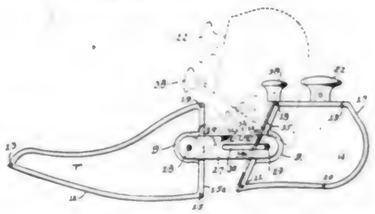


1. In combination, an acceleration responsive device comprising an envelope including a source of electrons, anode means for projecting a beam of electrons into space, means for retarding said electrons in said space, collecting anodes symmetrically disposed with respect to the path of said beam and extending normally to said path, said collecting anodes having adjacent spaced edges, means for energizing said collector anodes to substantially the same positive potential to collect beam electrons in substantially equal amounts when said source of electrons is at rest, and in unequal amounts when said source is accelerated in a direction normal to both said beam path and said collector anode edges; and apparatus having movement; said acceleration-responsive device being affixed to said apparatus with both said beam path and said adjacent spaced edges of said anodes disposed substantially normal to the direction of such acceleration.

2,457,621
THERMOSTATIC ELECTRICALLY HEATED COMB
Paul Aeres, New York, N. Y.
Application August 5, 1946, Serial No. 688,545
1 Claim. (Cl. 219—21)

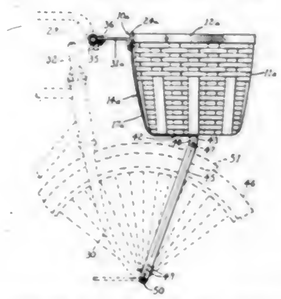
An electrically heated comb comprising a comb, a handle for said comb having a longitudinal bore extending therethrough, a heating element in said comb, and a heating element temperature control including a bi-metallic element connected at one end thereof in the circuit of said heating element and having a contact point on the other end thereof, a block fixed in said handle bore, a control rod in said bore threadably engaging and extending through said block, a second contact consisting of a spiral cam fixed on the inner end of said control rod adjacent to said first contact, and stops carried by said control rod and adapted to engage said block for limiting the rotation of said spiral cam whereby rotation of said control rod and said cam controls the separation of said contacts upon deflection of said bi-metallic element thereby selectively controlling the temperature of said heating element and said comb.

2,457,622
MEAT TENDERING MACHINE
Arthur H. Ahrndt, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application September 9, 1944, Serial No. 553,330
1 Claim. (Cl. 17—26)



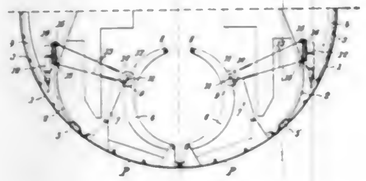
In a meat tendering machine having a base and a movable element, a plurality of rotatable

knife assemblies, one of which is mounted upon said base, and another upon said movable element, a drive pulley rotatably mounted upon the base of the machine, a pinion mounted upon the base of the machine for rotation with said drive pulley and operatively related to said one of the knife assemblies, a driven gear mounted upon said movable element and operatively related to the other knife assembly for engagement with said pinion, a second pinion mounted upon said movable element for rotation with said driven gear, and a second driven gear mounted upon the base of the machine and operatively related to said one of the knife assemblies and adapted to engage said second mentioned pinion, said pinions being disengaged from their respective driven gears whenever the meat tendering machine is overloaded



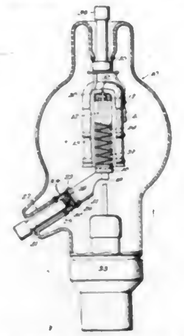
---

2,457,623
SHOE TREE
George Albino, Waterbury, Conn.
Application June 17, 1946, Serial No. 677,184
9 Claims. (Cl. 12—128.6)



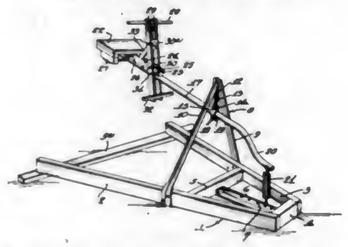
1. In a shoe tree, a hollow toe part, a hollow heel part, a link pivotally connected to each of said parts by means of pivot pins embedded in the material of said toe and heel parts, said link having a plurality of notches in its upper surface, and an upstanding locking member slidable in the forward face of said heel part for engaging selectively in any one of said notches according to the fit of the shoe.

2,457,624
BICYCLE BASKET
Vytant Aleks, Rockford, Ill., assignor to The Washburn Company, Worcester, Mass., a corporation of Massachusetts
Original application October 23, 1942, Serial No. 463,102. Divided and this application July 28, 1947, Serial No. 764,188
7 Claims. (Cl. 224—36)



7. A bicycle basket support, comprising an inverted generally U-shaped bracket made from three pieces of narrow sheet metal strip material, namely, two laterally spaced upright members and a cross-member secured to the upright members spaced downwardly from their upper ends, the upper end portions of said upright members above the cross-member defining two fixedly spaced attaching lugs in substantially vertical coplanar relation for connection with a bicycle basket, substantially horizontal elongated sheet metal arms having substantially vertically bent front end portions connected to the cross-member, said arms extending rearwardly from the cross-member and having means on the rear ends thereof for detachably fastening the same to a bicycle handle bar, said arms being formed to channel-shaped cross-section between the front and rear ends for added strength and rigidity, means connected with the lower ends of the upright members for detachably fastening the same in rigid relation to the legs of a bicycle front fork, and a fastener clip secured on the upper rim portion of a basket and formed to receive the aforesaid attaching lugs for demountably supporting a bicycle basket on said bracket, the cross-member serving to limit downward movement of the fastener clip on said attaching lugs, whereby to support the basket to which the clip is secured.

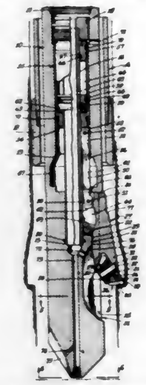
2,457,625
CONTROLLING MEANS, ESPECIALLY FOR DOORS
Felix Amiot, Neuilly-sur-Seine, France
Application August 5, 1939, Serial No. 288,680
In France January 19, 1939
Section 3, Public Law 690, August 8, 1946
Patent expires January 19, 1959
7 Claims. (Cl. 244—129)



1. In an airplane or the like fuselage having an opening through the wall thereof and a door lying flush with the outer side of the wall of said fuselage, means supporting said door in said opening comprising a rotatable member mounted in said fuselage to rotate about a first axis, a link member pivoted at one end to said rotatable member for rotation about a second axis spaced from said first axis, the other end of said link member being pivoted to one portion of said door, one of said members engaging the other upon predetermined relative rotation in one direction providing a stop to prevent further relative rotation in said one direction, arm means pivoted to said fuselage and to another portion of said door, and means for rotating said rotatable member whereby, upon relative rotation between said rotatable member and said link means, to move at least one portion of said door inwardly to clear the sides of said opening and whereby when said stop prevents said relative rotation, to swing said arm about the pivot of said arm to move said door laterally from said opening.

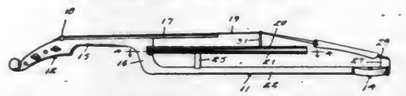
2,457,626
GRID CONSTRUCTION
Zed J. Atlee, Elmhurst, Ill., assignor to General Electric X-Ray Corporation, Chicago, Ill., a corporation of New York
Application July 3, 1945, Serial No. 603,031
5 Claims. (Cl. 250—27.5)

1. An inert grid comprising a foraminous screen of beryllium.



2,457,627
SWINGING SEESAW
Emmett C. Bailey, Washington, D. C.
Application January 10, 1944, Serial No. 517,694
12 Claims. (Cl. 272—55)

1. A seesaw comprising a support, elongated seat-carrying means, and a plurality of spaced connecting means between said support and said first-named means permitting lateral movement of said seat-carrying means about an axis located between two of said connecting means and extending in the same general direction thereof, one of said means providing inherent resilience for counter-balancing the weight of a rider carried by said first-named means.

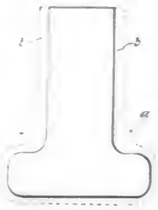


2,457,628
UNDERREAMER
Reuben C. Baker, Coalinga, Calif., assignor to Baker Oil Tools, Inc., Vernon, Calif., a corporation of California
Application June 17, 1942, Serial No. 447,392
4 Claims. (Cl. 255—76)

1. A rotary underreamer for operation in a well bore, including a body adapted for connection to a tubular drilling string, a supporting member movable axially along said body, said supporting member having an upwardly extending arm, a cutter on the lower end of said supporting member, a projection on said body cooperable with said supporting member between said cutter and arm, means connected to said supporting member for moving it upwardly along an expander surface on said projection to cause said projection to force said cutter laterally outwardly of said body, a first coacting means on said projection above said expander surface having a surface substantially parallel to said body axis and engageable with said supporting member for holding said cutter in such outward position, a second means on said body engageable with said arm for limiting the

extent of lateral outward movement of said cutter, a third means on said body engageable with said supporting member at the base of said arm to limit the extent of upward movement of said supporting member on said body, said first, second and third means being engageable simultaneously with said supporting member and its arm to hold said cutter in its outward position and prevent its inadvertent inward movement.

2,457,629
FIDDLE
Joseph R. Beckman, Stockton, Calif.
Application May 10, 1948, Serial No. 26,200
4 Claims. (Cl. 84—275)

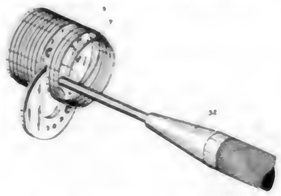


1. An improved musical instrument of the kind described comprising an elongated base member, a violin scroll on the front end of said base member, a pair of overlying sound boards extending from said scroll spaced above said base member, a finger board on said scroll spaced above said sound boards, a bridge on the uppermost sound board, and an elongated triangular wedge member between said sound boards spacing the rear end of said sound boards in spaced relation one to the other, and a supporting block between said base member and the forward end of said sound boards.

2,457,630
METHOD OF MANUFACTURING FULLED OR HARDENED FELT ARTICLES SUCH AS FELT BOOTS OR FOOTWEAR
Geoffrey Harley Beetson, Hudcar Mills, Bury, England, assignor to The Bury Felt Manufacturing Company Limited, Bury, England
Application October 16, 1945, Serial No. 622,547
In Great Britain March 26, 1945
1 Claim. (Cl. 12—142)

The method of manufacturing felt boots which consists in providing a batt of fibrous material

having a partially hardened shaped area forming a leg portion and half foot portions extending from opposite sides of the leg portion at one end thereof with an unhardened margin around said portions, folding said leg portion into cylindrical form with its unhardened longitudinal margins overlapping each other at the front and thereby



bringing the foot portions into parallel disposition at one end of said cylindrical leg portion with the complementary unhardened margins of said foot portions also overlapping, and subjecting the overlapping edges of the leg and foot portions to the action of a felting machine, thereby to cause said overlapped margins to be felted together.

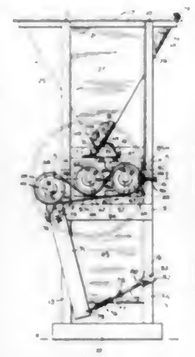
2,457,631

CYLINDRICAL HAIRSPRING FORM

William Ogle Bennett, Jr., Lancaster Township, Lancaster County, Pa., assignor to Hamilton Watch Company, Lancaster, Pa.

Application September 22, 1943, Serial No. 503,398
3 Claims. (Cl. 263—2)

1. A form for holding cylindrical hairsprings with preformed inturned ends during heat treatment comprising an arbor, a series of discs consisting of inner discs and end discs, said inner disc being substantially identical and said end disc being formed to receive the ends of the spring in a predetermined configuration, discs being adapted to be placed upon the arbor, means for aligning said discs in predetermined position, a spiral guideway formed by the periphery of said discs to receive a wire and means for anchoring the inturned ends of said wire at each end of the assembled discs.



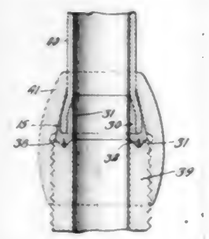
2,457,632

BELT DRIVEN ROLLER MILL WITH ADJUSTABLY AND YIELDABLY MOUNTED ROLLER

William P. Blake, Fairmont, Okla., assignor to K & B Manufacturing Co., Fairmont, Okla.

Application June 25, 1946, Serial No. 679,202
2 Claims. (Cl. 241—230)

2. In a device as described, a frame, a pair of oppositely arranged slide blocks guided therein, a shaft having its ends journalled in said slide blocks, a second shaft having its ends fixedly journalled in said frame, a driving pulley made fast on the latter shaft at one end, rollers on said shafts, a rocker arm pivoted adjacent its upper end to said frame, a second pulley journalled at the upper end of the rocker arm, pulleys made fast on the shafts and in line with the rocker arm pulley, a belt trained around the second pulley, around the pulley of the shaft on the slidable blocks and bowed into engagement with the under side of the remaining pulley, a spring having one end fixedly mounted on said frame, and the other connected to the lower



end of said rocker arm for tilting said rocker arm to slide the slide blocks to positions in which the two shafts approach each other, and expansible means between the ends of the shafts for engaging said slide blocks and moving them in a counterdirection and for tilting said rocker arm in a counterdirection to tension said rocker arm spring.

2,457,633

SEALING DEVICE

Gustave A. Borg, Naugatuck, Conn.

Application February 21, 1946, Serial No. 649,168
7 Claims. (Cl. 285—86)

1. A sealing device of the kind described for tubing or the like comprising a body having an axially tapering end section adapted for insertion into an end of a tubing to outwardly flare the same and to receive the outwardly flared end of said tubing under radial tension, sealing means at the other end of said body cooperating with an associate coupling element to effect a seal therewith, a relatively thin outer clamping member extending toward said first end of said body and in external surface engagement with the outwardly flared end of said tubing and cooperating therewith to develop a clamping force on said tubing, and a clamping sleeve adapted for connection with said associate element and having an internal camming surface cooperating with the outer surface of said clamping member to force the latter inwardly against the outwardly flared tubing.

2,457,634

BREAKING EMULSIONS

Donald C. Bond, Northbrook, and Michael Savoy, Chicago, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio

No Drawing. Application October 8, 1945, Serial No. 621,176
5 Claims. (Cl. 252—338)

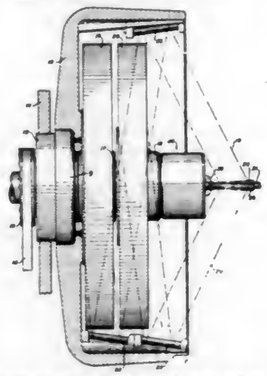
1. The method of breaking water-in-oil emulsions comprising, mixing said emulsions with a small amount of an agent which is a non-resinous reaction product of a mineral acid and an oil formed by reacting at ambient temperature in the presence of a small amount of water substantially equimolar amounts of a secondary aliphatic amine free from acidic groups, an alkylated phenol free from acidic groups, and selected from the group consisting of those having an active position ortho to a nuclear hydroxy group and those having an active position para to a nuclear hydroxy group, and an aldehyde.

2,457,635

METHOD OF REGENERATING AQUEOUS ALKALI SOLUTION USED TO EXTRACT WEAKLY ACIDIC SULFUR COMPOUNDS FROM HYDROCARBON FLUIDS

Donald C. Bond, Northbrook, and Michael Savoy, Chicago, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio

No Drawing. Application October 10, 1945, Serial No. 621,590
17 Claims. (Cl. 196—30)



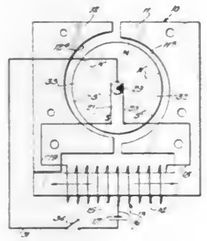
5. The method of regenerating aqueous alkali solution used to extract weakly acidic sulfur compounds from hydrocarbon fluids under non-oxidizing conditions comprising contacting said solution with gas containing free oxygen in the presence of from 0.1 to 3 per cent by weight of an added phenolic substance which is less effective than hydroquinone as an oxidation catalyst in the reaction and has an oxidation potential higher than that of the sulfur compounds, and from .0001 to 1 per cent by weight of a salt of metal selected from the group consisting of copper, nickel, cobalt and iron, the metal salt being soluble in the alkali solution and being present in an amount equal to a small fraction of the amount of the phenolic substance.

2,457,636

MATERIAL SERVING APPARATUS

Yves A. Bouget, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

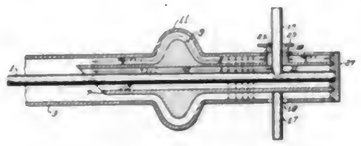
Application December 31, 1947, Serial No. 794,966
11 Claims. (Cl. 57—16)



1. In a material serving apparatus rotatable about a core, advancing longitudinally at a given rate of speed, to wind materials simultaneously in superimposed spiral layers on the core, a rotatable hollow spindle through which the core travels, supports carried thereby for supplies of materials fed to the core, fingers disposed adjacent the path of the core to guide their respective materials to the core, rockable supports for the guide fingers normally holding the fingers at given angular positions with respect to the path of the core to cause application of each material under a given tension at a given angular position on the core, and means responsive to variations in the tensions of the materials from the given tension to rock the supports to vary the angles of application of the materials to the core to cause uniform lay of the materials on the core.

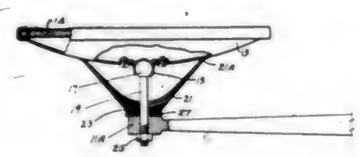
2,457,637

ELECTRICAL MOTOR



Harrison D. Brailsford, Harrison, N. Y.

Application August 17, 1945, Serial No. 611,066
7 Claims. (Cl. 172—36)



6. A self-starting direct current electric motor comprising upper and lower frame plates, means supporting the plates in spaced relation, an armature comprising a disc shaped rotor disposed between said plates and having a shaft journalled at the ends in said plates, a field comprising a magnetic core supported between said plates in the plane of said rotor and provided with a pair of field poles having faces of arcuate form substantially surrounding the periphery of said rotor and terminating in end portions arranged in juxtaposed pairs at diametrically opposed portions of said faces, one end portion of each pole face being disposed closer to the periphery of the rotor than the other end portion of the respective pairs to provide a shortened magnetic path between the pole faces diametrically of the rotor, a pair of brush contacts electrically connected to said winding, contact means on said rotor shaft aranged to effect alternate contact with said brush contacts during the rotation of the rotor for altering the direction of current flow in said winding from a current source, a switch for effecting the starting and stopping of the motor, and diametrically opposite permanent poles of opposite sign provided in said rotor whereby upon opening said switch said rotor poles exert rotative effects by magnetic attraction with respect to adjacent pole faces for moving the motor to a position of rest wherein said rotor poles are aligned within said shortened magnetic path and whereby upon reclosing of said switch each pair of said end portions of the field poles cooperate to provide both attractive and repelling forces that act on the adjacent rotor poles in one rotative direction for starting the rotor.

2,457,638
PHASE SPLITTING COUPLING FOR COAXIAL TRANSMISSION LINES
Rene A. Braden, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 27, 1946, Serial No. 699,682
9 Claims. (Cl. 250—33)

8. A network for coupling a source of high frequency energy through a transmission line having coaxial inner and outer conductors to a pair of dipoles including a portion of said outer line conductor having a larger diameter than the remainder thereof, an intermediate tubular conductor interposed between said inner and outer conductors, said intermediate conductor also having a portion having a larger diameter than the remainder thereof, said larger diameter portions of said outer and intermediate conductors being aligned to provide with said inner and outer conductors two concentric lines differing in length by substantially an odd number of one-half wavelengths in the line at the operating frequency, means for connecting said dipoles respectively to said inner and intermediate conductors at points an odd number of quarter wavelengths from the ends thereof remote from said source, means conductively terminating and supporting the ends of all of said conductors remote from said source whereby said load is effectively balanced with respect to said outer line conductor, and means comprising a cylindrical sleeve and an annular ring coaxial with one of said dipoles and connected to said intermediate conductor for shielding said last-mentioned dipole from wave energy propagated between said intermediate and outer line conductors.

2,457,639
MOUNTING FOR REAR-VISION MIRRORS
Harry G. Brooks, Byhalia, Miss.
Application March 13, 1945, Serial No. 582,463
1 Claim. (Cl. 88—98)

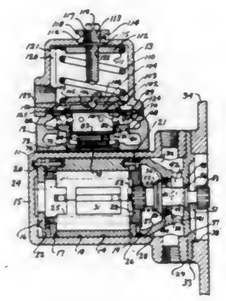
The combination with a rear view mirror as for a vehicle, said mirror including a housing having a spherically arcuate back; a rigid carrying member, a post secured to and extending from said member, ball and socket means coupling the back of said housing to the extending end of said post, a hollow resilient cup as of rubber, said cup having a heavy base portion, flattened to seat against said member and apertured to tightly embrace said post, said cup thinning gradually from said base to a flexible rim portion having a feather edge, and being interposed between said carrying member and said housing with the rim of said cup shiftably seated in contact with the back of said housing, said contact being spaced outwardly from said ball and socket means, said spacing being in excess of the diameter of said socket, whereby said mirror may be manually shifted into desired angular position with relation to said member and post, and twisted with relation to the rim portion of said cup to shift said mirror back with relation to said cup and adjust said back and said cup into related holding positions maintaining said angular position.

2,457,640
HYDROXYCARBOXYLIC ACID
Herman A. Bruson, Rydal, and Warren D. Niederhauser, Philadelphia, Pa., assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application November 9, 1945, Serial No. 627,776
3 Claims. (Cl. 260—407)

3. A compound of the formula

$$HO[CH_2{-}R(C_4H_8){-}(CH_2)_9COO]_nH$$

wherein n is an integer from one to one hundred. R representing a six-sided carbocycle of the formula C_6H_8.

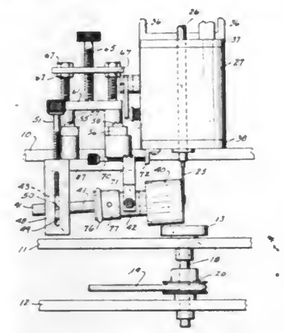


2,457,641
WAX TREATMENT OF UNCURED RUBBER GOODS
Fred H. Bunn, Westfield, N. J., assignor to S. C. Johnson & Son, Inc., Racine, Wis.,
No Drawing. Application November 1, 1946, Serial No. 707,345
6 Claims. (Cl. 18—53)

1. A method of treating rubber goods preformed from sheet rubber comprising coating the rubber goods prior to curing with an aqueous wax emulsion and then heating said rubber goods by direct contact of a fluid medium at a temperature within the range from about 230° F. to about 275° F. until said rubber goods are cured.

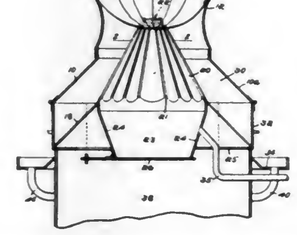
2,457,642
METHOD OF TREATING LACTALBUMIN
George P. Butterfield, Des Plaines, and Lois A. Thorne, Chicago, Ill., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 8, 1946, Serial No. 660,424
2 Claims. (Cl. 99—19)

1. The method of treating lactalbumin to condition the same to form a colloidal suspension, which comprises making a finely divided mixture of lactalbumin and water, raising the pH value to from 7.3 to 8.0, adding a proteolytic enzyme material selected from the group consisting of pancreatic enzymes and papain while maintaining a temperature of about 100° F. and increasing the temperature to a value to inactivate the enzymes in a time of from 1 minute to 20 minutes, depending upon the strength and proportion of the enzyme material to allow the active material to break down the bonds of the protein molecules and render the same colloidal, but before substantial digestion of the proteins has occurred, and drying the material to form a dry powder which may be kept for long periods of time and which can be reconstituted in a colloidal suspension by the addition of water thereto.



2,457,643
ROTARY PUMP AND PACKING THEREFOR
Michele Caserta, Detroit, Mich.
Original application June 12, 1941, Serial No. 397,763. Divided and this application March 24, 1943, Serial No. 480,278
6 Claims. (Cl. 103—138)

1. In a fluid transfer mechanism including a pump housing providing a cylindrical bore closed at one end and open at the other end, a thrust bearing in said bore adjacent said closed end, a pair of spaced journal bearings, a pump liner positioned between said journal bearings, a rotor journaled in said journal bearings for rotation within said liner and having at one end a driving connection, a shaft cooperating with said connection for driving said rotor and provided with a fixed peripheral flange, and a spring surrounding said shaft and compressively confined between said rotor and said flange, the improvement which comprises providing an attaching flange at the open end of said housing, a gland having an outer peripheral flange adapted to overlie the face of said attaching flange and to be secured thereto, said gland having an intermediate restricted portion providing an annular shoulder and having an inwardly extending annular portion slidably fitting said cylindrical bore and terminating adjacent the outer of said bearings, a resilient packing held under compression by said gland annular portion against said outer bearing and the bore wall, a seal ring between said shaft flange and said annular shoulder on said gland, and a mounting flange for said pump secured to said attaching flange with said gland flange clamped therebetween.

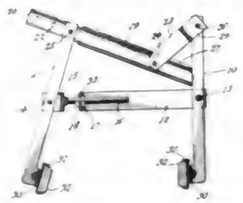


2,457,644
NEEDLE GRINDER
Fred Crossman and Earl A. Southam, Cleveland, and George J. Ruhl, Shaker Heights, Ohio, assignors to The Lindsay Wire Weaving Company, Cleveland, Ohio, a corporation of Ohio
Application January 29, 1945, Serial No. 575,047
5 Claims. (Cl. 51—241)

1. A device of the character described, comprising a grinding member, a shaft therefor, means for pivotally mounting the shaft while permitting rotation thereof so as to vary the angle of the grinding member with respect to the work, other means including parallel links for supporting the first-mentioned means to effect a movement of the grinding member toward and from the work, and second-named means including a device for shifting the first-mentioned

means and the grinding member as a unit with reference to the work.

2,457,645
FRUIT SECTIONIZER
William Warren Cummings, Bradford, Vt.
Application July 3, 1947, Serial No. 758,797
11 Claims. (Cl. 146—3)

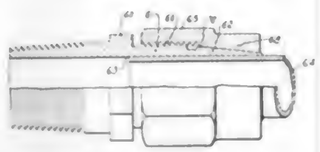


1. A citrus fruit sectionizer comprising a bowl member having a circular collar at the top thereof adapted to receive the peeled fruit, to be arranged thereon with its segmental axis extending vertically, said bowl being sealed by the fruit when supported on said collar, a series of radial scoops corresponding to said fruit segments mounted beneath said collar for stripping the fruit from its membrane, and pumping means for exhausting the air from said bowl member to cause said fruit to pass through said bowl and against said radial scoops.

2,457,646
LIFTING TONGS
Anthony Wilmot Dalferes, Lafayette, La.
Application May 16, 1946, Serial No. 670,165
2 Claims. (Cl. 294—106)

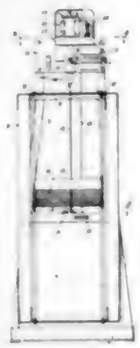
1. A lifting tongs comprising a pair of legs having jaws at one end, a bar connecting intermediate portions of the legs, a fulcrum on the bar on which one leg is pivoted, and a toggle lever comprising a tubular handle member having a slot at one end of its upper portion and a stop below the slot, said tubular member pivoted

to one leg, and an inferior toggle member pivoted to the other leg and to the tubular member with-



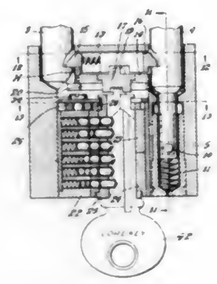
in said slot and adapted to encounter said stop in the locked position of the toggle lever.

2,457,647
METHOD OF MAKING RUBBER ARTICULATED JOINTS
Howard M. Dodge, Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Original application August 3, 1942, Serial No. 453,355. Divided and this application March 3, 1945, Serial No. 580,878
1 Claim. (Cl. 29—148.2)



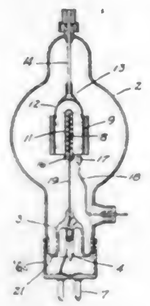
In a method for effecting connection between an inner cylindrical element and a concentric outer cylindrical element of a torsional joint, wherein an annular, deformable, elastic, generally toroidal member of rubberlike material having a substantially round cross section and having a thickness greater than the distance between said inner and outer concentric elements is disposed into a mounting member having an internal bore with a tapered surface ad with is disposed at one end of said outer element, and a leader member having a leading end of smaller diameter than the diameter of the inner element is disposed at the leading end of sai dinner element, and said generally toroidal member is caused to rotate in an inside out manner by relative movement of the leader and inner members with respect to the outer member through a path of decreasing cross sectional area into a cylindrical space between said inner and said outer elements, the steps which comprise regulating the effective length of the leader member and the mounting member so that the deformable member is rotated only so that one side edge of the annular undeformed deformable member is also positioned at the side edge of the deformable member in the deformed state, whereby the side edge is in the unstressed condition of greatest resistance to surface deterioration when exposed to air.

2,457,648
PIPE COUPLING
Verne P. Donner, Palatine, Ill., assignor to Mid-Continent Metal Products Co., Chicago, Ill., a corporation of Illinois
Application May 4, 1946, Serial No. 667,238
6 Claims. (Cl. 285—123)



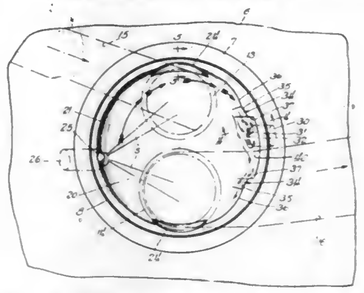
1. In a coupler for the pressuretight coupling of a purely cylindrical tube end, the combination comprising a sleeve having an inner bore for the close fitting admission of a tube and having an axially tapered outer surface, and means for compressing said sleeve circumferentially into radial contact with the portion of said tube wall lying thereunder, said sleeve compressing means surrounding said sleeve and constructed to grip the same for application of an inwardly directed stress to said sleeve which varies along the axis thereof and is approximately proportional to the radial thickness of the sleeve at the respective points of application of said stress tending to equalize the inward pressure exerted on said tube wall.

2,457,649
MACHINE FOR OPERATING ON HEDDLES
Russell P. Drake, Caledonia, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application November 30, 1945, Serial No. 631,994
13 Claims. (Cl. 28—46)



4. In an apparatus of the character set forth, means for supporting a heddle frame in upright position with a stack of heddles slidably supported in the frame, power driven means operative to release said heddles from said stack one by one, means operative in timed relation to the release of the heddles to intercept the same temporarily, feeler means operative to detect the simultaneous release of more than one heddle, and means controlled by said feeler means for stopping said releasing means.

2,457,650
LOCK
Louis M. Dyson, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a corporation of Connecticut
Application February 19, 1946, Serial No. 648,589
9 Claims. (Cl. 70—38)



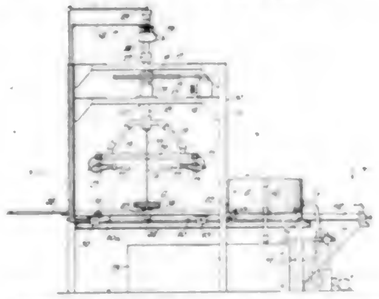
1. A lock mechanism comprising a core adapted to be inserted within a lock casing for operating a locking bolt in said lock; said mechanism comprising a shell, a retainer for retaining said shell within said casing, a sleeve rotatable for operating said retainer, a key plug rotatable for operating said bolt, and a master sleeve for permitting rotation of said key plug with a master key.

2,457,651
ELECTRON TUBE AND METHOD OF MAKING THE SAME
Hubert Eaves, San Mateo, and Paul D. Williams, Palo Alto, Calif., assignors to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application March 18, 1946, Serial No. 655,068
1 Claim. (Cl. 316—19)

The method of making an electron tube having a thoriated tungsten filament, which comprises mounting the filament on a support, immersing the mounted filament in a bath containing finely divided carbon particles in suspension, depositing by cataphoresis a coating of said particles on the filament, withdrawing the filament from the bath, enclosing the filament in the tube envelope, evacuating the envelope, and heating the filament in the envelope to carburize the filament prior to completion of evacuation.

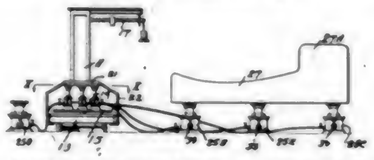
2,457,652
INTERNAL-COMBUSTION ENGINE
James B. Fisher, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a corporation of Wisconsin
Application March 15, 1946, Serial No. 654,688
4 Claims. (Cl. 123—32)

1. In a spark ignition injection engine in which the piston has an open top cupped upper end portion providing with the cylinder roof a combustion chamber as the piston approaches the end of its compression stroke and the charging air enters the cylinder substantially tangentially thereof effective for imparting to the air charge rotation about the cylinder axis persisting substantially throughout the suction, compression and combustion strokes of the piston; said piston having at its upper end a substantially continuous upwardly extending circumferential flange, a deflector element extending generally lengthwise of said piston and projecting from said flange substantially radially inward of said combustion chamber, and a spark plug disposed to have its electrodes adjacent the leading side of said deflector element in respect to the direction of rotation of the fuel-air charge when said piston approaches the end of its compression stroke, said deflector element being effective for deflecting inward of the combustion chamber the rotating fuel-air charge and thereby creating in conjunction with the centrifugal force tending to move said fuel-air charge outward localized eddying of the fuel-air charge at the electrodes of the spark plug.



2,457,653
KNOCKAPART TOY
George E. Froelich, Two Rivers, Wis.
Application January 24, 1947, Serial No. 724,209
1 Claim. (Cl. 46—1)

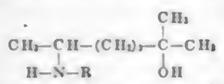
In a knock-down building block toy comprising a skeleton body having a looped end forming a



block storage compartment, a spring actuated platform pivoted to the body, a lip extending from the free end of the platform, a spring controlled lock and release trigger pivoted to the body having a nose engageable with the platform lip, a manually controlled finger extending from the trigger, and a plurality of building blocks adapted to be assembled in fanciful design upon the platform, whereby upon release of the same, the said assemblage of blocks is scattered upwardly.

2,457,654
FLAME HARDENING APPARATUS
Ernst A. Furkert, Chicago, Ill.
Application July 24, 1943, Serial No. 496,022
8 Claims. (Cl. 266—4)

4. Flame hardening apparatus comprising a rotary structure provided with a plurality of burners arranged to direct flames inwardly of the paths of rotation thereof upon a coaxially positioned gear to be heated, a reciprocal gear carrier operable coaxially within and through said structure, means above said structure for operating the carrier, means at the lower end of the carrier arranged for entrance into the axial passage of a subjacent axially aligned gear and comprising means for engaging the gear whereby upon elevation of the carrier by said operating means the gear is elevated into a position within the heating zone of the burners, a reciprocable quench tank operable to and from a position beneath said gear carrier and means within the tank for effecting the operation of said gear engaging means for releasing a gear lowered into the tank by said carrier.

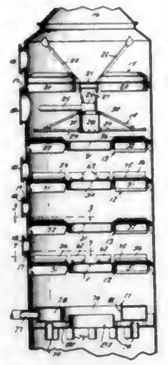


2,457,655
HYDRAULIC SCALE MECHANISM
Robert A. Gifford, Memphis, Tenn.
Application September 25, 1943, Serial No. 503,747
8 Claims. (Cl. 265—47)

3. A weighing mechanism, comprising a platform scale, including a base, a pressure-responsive platform, a scale beam carried by and above said base, and means operatively coupling said platform and said scale beam, a plurality of pressure-responsive hydraulic jacks in a compact group, centrally disposed and seated on said platform, abutment means disposed against the upper ends of said jacks, and anchored to said base, an identical plurality of independently shiftable and usable load supporting hydraulic jacks, and flexible hose connections each respectively connecting a said pressure-responsive jack and a said load-supporting jack, and establishing a passage-way for fluid flow therebetween, while maintaining freedom of shift and placing of said load-supporting jack, said groups of pressure-responsive jacks, comprising one jack seated in the center of said platform, and a plurality of pairs of jacks, the jacks of each said pair respectively being diametrically opposed with reference to said central jack and at equal distances therefrom.

2,457,656
ALIPHATIC AMINO ALCOHOLS AND MEDICINAL PREPARATIONS THEREOF
Horace T. F. Givens, East Orange, and Robert M. Herbst, Short Hills, N. J., assignors to E. Bilhuber, Inc., Orange, N. J., a corporation of New Jersey
No Drawing. Application September 25, 1945, Serial No. 618,579
4 Claims. (Cl. 260—584)

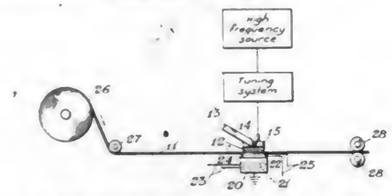
1. The therapeutically useful amino alcohols of the formula



wherein R is a radical selected from the groups consisting of hydrogen, alkyl radicals having from one to five carbon atoms, lower alkenyl, cycloalkyl and aralkyl radicals.

2,457,657
POLYMERIZABLE COMPOSITION
Sanford E. Glick, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application November 4, 1944, Serial No. 562,035
2 Claims. (Cl. 260—22)

1. A polymerizable composition for impregnating castings having a porosity corresponding to that in magnesium castings consisting of 65–80 parts of styrene and 35–20 parts of a reaction product of diethylene glycol, maleic acid and linseed oil acids, said polyester resin having an acid number less than 20 and 40–50% thereof being made from linseed oil acids.



2,457,658
GAS AND LIQUID CONTACT APPARATUS
David P. Graham, Westbury, N. Y., assignor to Peabody Engineering Corporation, New York, N. Y., a corporation of New York
Application September 12, 1946, Serial No. 696,605
6 Claims. (Cl. 261—113)

1. In a gas and liquid contact apparatus, a treating zone comprising an orifice plate carrying a blanket of liquid and containing orifices through which the gas to be treated passes upwardly at a rate to prevent downward flow of the liquid therethrough and baffles over said orifices against which the gases impinge, and a spray zone beneath said treating zone, said spray zone comprising a diaphragm having openings through which said gas passes upwardly, means maintaining a blanket of liquid on said diaphragm and means forming unobstructed passages extending upwardly above said openings and registering therewith, said means having an opening into said liquid blanket to permit liquid to flow into said passages and to be picked up by the rising gas therein to form a spray, said passages being

positioned to discharge the spray onto the under surface of said orifice plate.

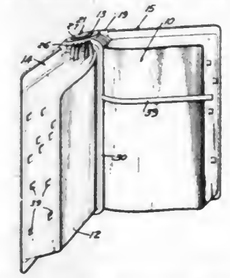
2,457,659
APPARATUS FOR HIGH-SPEED WELDING OF THERMOPLASTIC FILMS
Joseph P. Graham and Harold L. Hearns, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application September 19, 1946, Serial No. 706,889
2 Claims. (Cl. 154—42)

1. In an apparatus for the electrostatic welding of organic thermoplastic films, a grounded fixed electrode presenting a smooth surface to the work, controlled means to heat said electrode to a fixed temperature which is in the range from 50° to 80° C. and is below the heat distortion temperature of the film to be welded, a displaceable suspended electrode co-operative therewith to press the work therebetween and connected electrically to a high frequency source, and means for advancing lapped films between and in sliding contact with both said electrodes.

2,457,660
N-TERTIARY ALKYL AMIDES AND METHOD FOR PREPARING SAME
William F. Gresham, Lindamere, and William E. Grigsby, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 1, 1944, Serial No. 538,342
12 Claims. (Cl. 260—561)

1. A process for the synthesis of organic acid amides having a tertiary carbon atom attached to an amido nitrogen which comprises subjecting a nitrile to reaction with a tertiary olefin in an aqueous medium, containing about 1% to 20%, based upon the weight of water present, of an acid-reacting catalyst, whereby a reaction mixture containing an organic acid amide having a tertiary carbon atom attached to the amido nitrogen is obtained, and thereafter separating the said organic acid amide from the said reaction mixture.

3. A process for the synthesis of N-tertiary butyl formamide which comprises reacting hydrogen cyanide with isobutylene in an aqueous acid medium at a temperature in the range of about 50° to 250° C., and at a pressure in the range of from atmospheric pressure to about 1000 pounds per square inch and separating the said N-tertiary butyl formamide having the formula $HCONHC(CH_3)_3$ from the reaction mixture.

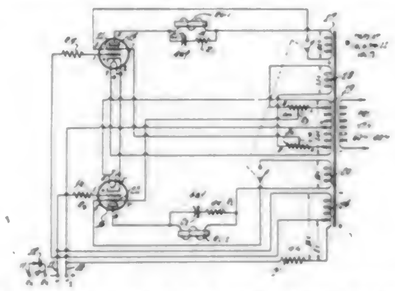


2,457,661
POLYMERIZING VINYL ALKYL ETHERS
Frederick Grosser, Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 22, 1945, Serial No. 637,034
6 Claims. (Cl. 260—90)

1. A process for polymerizing a vinyl ether of the general formula:

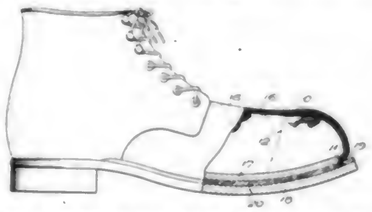
$$CH_2{=}CH{-}O{-}R$$

wherein R represents a hydrocarbon radical which comprises subjecting the vinyl ether in the presence of an inert organic diluent which is liquid at the temperature of the polymerization to the action of an amount of gallium trichloride sufficient to promote the polymerization.



2,457,662
BOOKMARKER
Joe W. Hamilton, West Los Angeles, Calif.
Application September 29, 1945, Serial No. 619,359
2 Claims. (Cl. 116—119)

2. A device of the character described for receiving a book and marking the pages thereof, comprising an outer cover structure having pockets within which the backs of the book are detachably secured, said cover structure extending a distance beyond the opposite ends of the book, a pair of locking members secured to said opposite end extensions of the cover structure and overhanging the bound portion of the pages, each of said locking members comprising an arcuate wall formed with an intermediate slot lying in a plane parallel to the upper and lower ends of the pages, said slot in each of said members communicating with an arcuate recess in rear of said wall, and a plurality of marker members each characterized as having a longitudinal portion to extend between the pages of the book and offset end portions extending in the direction of the locking members whereby the longitudinal portions of each of said marking members will be spaced a desired distance from the binding, the terminating ends of said offset portions be-

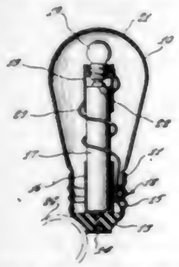


ing resilient and formed with a pair of opposite recesses forming T-shaped ends, said ends being designed to be distorted to extend through the slots in said locking members and to be engaged in said arcuate recesses by said walls contiguous said slots to be held temporarily in articulate connection with the locking means, and index members extending laterally from and forming a part of said marking members.

2,457,663
PROTECTIVE SYSTEM
George D. Hanchett, Jr., Millburn, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 16, 1946, Serial No. 654,862
7 Claims. (Cl. 315—276)

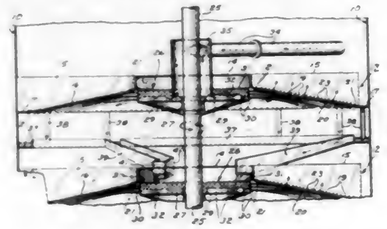
1. The combination of a series circuit including a pair of impedance devices each provided with a terminal intermediate its ends, bias voltage means connected between said impedance means at one of their ends and provided with a midpoint terminal, means connected between said impedance means at the other of their ends for applying a voltage which is opposed to said bias voltage and a value smaller than said bias voltage, and a pair of electron discharge devices having their cathodes connected to the midpoint terminal of said bias voltage means and their shield grids each connected to a different intermediate terminal of said impedance means.

2,457,664
SAFETY SHOE
Raymond B. Harrison, Arlington, Mass.
Application November 4, 1948, Serial No. 58,193
2 Claims. (Cl. 36—77)



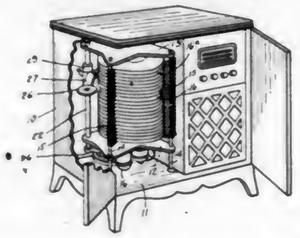
1. In a safety shoe, as a concealed inclusive part of its upper, a rigid, dome-like, metal box toe formed to the desired toe shape; such box toe being entirely disposed in advance of the lateral flexing zone of the upper and the break line of the sole and having a transversely arched rear edge continuously and asymmetrically curving toward the toe end of the shoe to provide rearwardly extended corner portions acting as force resisting buttresses at each rearward side of the box toe, the corner portion of the box toe wall located at the outside of the shoe extending rearwardly of the toe end of the shoe farther than the corner portion located at the inside of the shoe, and the curved rear edge of the box toe overlying the toes of a normal foot within the shoe and being generally parallel to but in advance of the transverse curved line defined by the metatarso-phalangeal joints of said foot, thus providing for maximum dimension of the metal box toe itself without limiting comfortable flexing of the shoe in wear.

2,457,665
TRICK ELECTRICAL LAMP WITH SECRET OPERATION
Albert C. Harjes, Flushing, N. Y.
Application January 17, 1947, Serial No. 722,530
2 Claims. (Cl. 272—8)



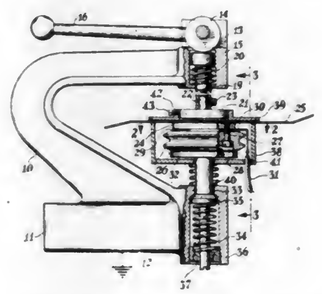
1. An electric lamp trick device comprising a threaded shell of metal representing the threaded shell of a standard lamp bulb, a translucent glass bulb formation fitted in one end of the shell, a block of insulating material secured to the other end of the shell and depending therefrom, a conductor extending through the insulating block and having a conductor disk formation lying over the bottom face of the insulating block, said disk and said shell being so formed and spaced from one another that the gap therebetween can be bridged by a conducting element, a battery secured to the inner end of the conductor and extending upwardly into the translucent bulb, a miniature lamp bulb connected to the upper end of the battery to receive current therefrom, and a conductor extending from the miniature lamp bulb to the threaded shell.

2,457,666
TRICK ELECTRICAL LAMP WITH SECRET OPERATION
Albert C. Harjes, Flushing, N. Y.
Application March 24, 1947, Serial No. 736,864
1 Claim. (Cl. 272—8)



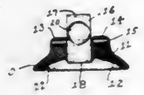
A trick electric lamp bulb device comprising a casing of light emitting material having an open bottom end, a base having a threaded terminal sleeve secured to the open bottom end of the casing and an insulating element in the terminal sleeve, a conductive support on the base and extending upwardly within the casing, a battery removably mounted on the support, a small lamp bulb socket slidably and removably mounted on the upper end of the battery and insulated from the exterior surface thereof, a lamp bulb of small size fitted within the socket and engaging a terminal of the battery, a lead wire extending from the socket to the base, said base including two contact terminals one of which is connected with the lead wire and the other extending from the conductive support to and over a part of the exterior of the insulating element, said base terminals adapted to be bridged by a metal element contained within the hand of the person performing the trick.

2,457,667
GAS SCRUBBER
Robert R. Harmon, Charlottesville, Va., assignor to Peabody Engineering Corporation, New York, N. Y., a corporation of New York
Application February 20, 1946, Serial No. 648,889
5 Claims. (Cl. 261—113)



1. A gas and liquid contact apparatus comprising an upright casing and a treating zone therein, said zone comprising a transverse partition including a plate containing perforations for the passage of gas ascending through said casing, and a sprayer positioned to eject a canopy of liquid spray in a radial trajectory across the underside of said plate, said plate being inclined parallel to the average tangent to the trajectory of said spray so as to obtain maximum washing and its under surface being free from protuberances which could deflect said spray from said surface.

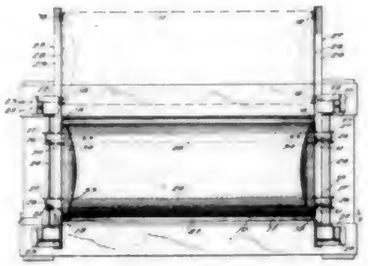
2,457,668
AUTOMATIC PHONOGRAPH
Carl R. Hart, New Haven, Ind.
Application November 1, 1943, Serial No. 508,512
15 Claims. (Cl. 274—10)



1. An automatic record selecting mechanism for a phonograph adapted to reproduce disc records including a magazine for removably supporting a column of records about their peripheral edges and in spaced relation, a record supporting turntable shiftable axially of said column exteriorly thereof, a tone arm carrying a reproducer shiftable with said turntable exteriorly of said column, a selectively positioned support for said turntable and tone arm, means for shifting and positioning said support relative to a selected record, and cam controlled mechanism operable to swing said turntable under and in rotating engagement with the selected record and swing said tone arm into reproducing engagement therewith.

2,457,669
STATIC SUPPRESSOR FOR MOISTURE METERS
Raymond S. Hart, Brooklyn, N. Y.
Application May 9, 1947, Serial No. 747,114
3 Claims. (Cl. 175—183)

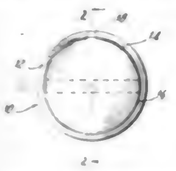
1. In combination with a contactor of the character described, adapted for moisture measurements of sheet material and having input electrodes including a manually displaceable electrode grounded to the body of said contactor and an ungrounded electrode yieldably supported on said body, means for electrostatically shielding said ungrounded electrode and adjacent portions of the sheet material to be measured, said means comprising a conductive cup insulatedly surrounding said ungrounded electrode and displaceable relative thereto, a conductive cover concentrically mounted over said cup, means for electrically and mechanically connecting said cover to said grounded electrode in such a manner that a substantially continuous conductive surface is presented to the sheet material to be measured, resilient means urging said cup toward said cover so as to clamp a portion of said sheet material between the cover and the rim of the cup, and means for grounding said cup to the body of the contactor.



2,457,670
GOLF BALL TEE
Leaman S. Harvey, Waterbury, Conn.
Application April 19, 1946, Serial No. 663,518
8 Claims. (Cl. 273—33)

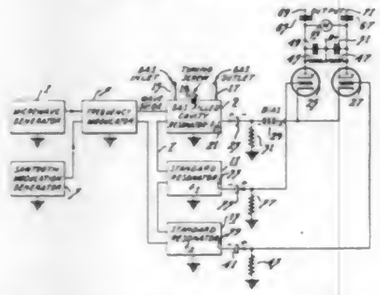
1. In a two-part golf tee, a flexible base having a rectangular central aperture, a flexible ball-

supporting post located within said aperture, and a lateral pivot pin securing said post in said base, said post being adapted to swing in said aperture when the ball is struck, so as not to retard the club head when striking the ball, and friction means for resisting swinging movement of said post, said friction means comprising openings in said post and in said base embracing said pivot pin, whereby said post may be manually adjusted and temporarily maintained in a vertical position without regard to the specific slope of the surface upon which the base may rest.



2,457,671
BURIAL APPARATUS
Wilbert W. Haase, Forest Park, Ill., assignor to Wilbert Manufacturers Association, Forest Park, Ill., a corporation of Illinois
Application September 15, 1945, Serial No. 616,627
10 Claims. (Cl. 27—32)

7. A burial apparatus comprising a pair of substantially parallel guide rails each having a portion adapted to be arranged at one end of a grave opening substantially parallel to an end wall of said grave opening and each having a portion adapted to extend beyond one side of the grave opening so as to enable flanged guide rollers bearing a part of a concrete burial vault to be moved along said guide rails from a point at one side of a grave opening to a point above the grave opening, each of said guide rails having a pair of spaced cut-out openings formed in that portion thereof which is adapted to be arranged at the end of the grave opening and each of said cut-out openings being adapted to have a flexible member of a burial vault lowering apparatus pass therethrough during movement of said flexible member, each of said guide rails having a gate member movably mounted thereon and each of said gate members being adapted to open and close one of said cut-out openings, and said gate members spanning the said cut-out openings in the said guide rails when in closed position so as to enable the said flanged guide rollers on the said part of said concrete burial vault to traverse the said cut-out openings when the said gate members are in closed position.

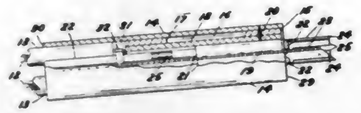


2,457,672
EARRING
Arthur Herman, Brooklyn, N. Y.
Application June 6, 1946, Serial No. 674,800
10 Claims. (Cl. 63—14)

1. An earring comprising a member having a through aperture, a domed element, the base whereof is of approximately the same configuration as the aperture in said member, said element being supported by the member substantially centrally of said aperture, with a slight clearance between said aperture and said element adjacent its base, so that when a piece of fabric is draped over said element, said fabric will be caught between the base of said element and said aperture,

said element being supported independently of the fabric, and means to attach the earring to a wearer's ear.

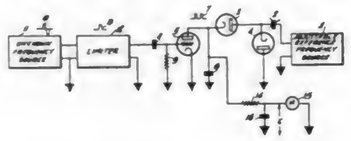
2,457,673
MICROWAVE GAS ANALYSIS
William D. Hershberger, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 1, 1945, Serial No. 626,134
7 Claims. (Cl. 175—183)



1. The method of utilizing a pair of differently tuned standard cavity resonators for measuring the energy loss in a microwave-absorptive gas-filled cavity resonator tuned approximately to the frequency of one of said standard resonators comprising the steps of introducing frequency-modulated microwave signals into all three of said resonators, detecting said microwave signals in all of said resonators, simultaneously controlling the magnitudes of said detected signals derived from said standard resonators in response to said detected signals from said gas-filled resonator, and measuring the difference in magnitude of said controlled detected signals to indicate the microwave energy loss in said microwave absorptive gas.

5. Apparatus for analyzing gas composition including a pair of differently tuned standard cavity resonators, a microwave-absorptive gas-filled cavity resonator tuned to the frequency of one of said standard resonators, a source of frequency-modulated microwave signals, means for introducing said frequency-modulated microwave signals into all three of said resonators, means for detecting said microwave signals in all of said resonators, means for separately amplifying said detected signals derived from said standard resonators, means for simultaneously controlling the gain of said amplification of said signals in response to said detected signals from asid gas-filled resonator, and means for measuring the difference in magnitude of said amplified detected signals to indicate the microwave energy loss in said gas-filled resonator.

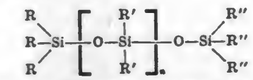
2,457,674
FUNGICIDAL COMPOSITIONS
John W. Heuberger, Newark, Del., assignor to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 2, 1944, Serial No. 566,395
5 Claims. (Cl. 167—22)



1. A fungicidal composition adapted for agricultural use comprising a water-soluble salt of an alkylene bisdithiocarbamic acid, a water-soluble salt of zinc, and lime.

2,457,675
ELECTRODE CONTROL
Robert L. Hinds, Toledo, Ohio
Application August 25, 1945, Serial No. 612,674
2 Claims. (Cl. 219—26)

1. An electrode directing holder comprising a tubular insulation portion, a partition therein, conductor leads into the holder at opposite sides of the partition, an open ended electrode mounting conductor sleeve on each side of the partition connected to a lead and extending from the insulation portion beyond the partition and there having its end tapered back toward the partition, the two sleeve ends thus having their tapered ends diverging to form a V open in extent away from the tubular insulation partition, and an electrode in each sleeve and protruding into the V.

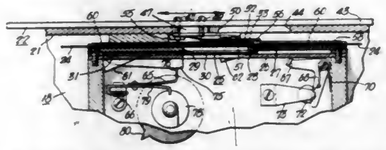


2,457,676
FREQUENCY MEASURING CIRCUIT
Ralph S. Holmes, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 25, 1943, Serial No. 477,164
8 Claims. (Cl. 175—368)

1. A frequency measuring circuit for a source of input signals the frequency of which is to be determined, including a source of reference signals of frequency substantially higher than the highest frequency to be measured, a capacitor, means including said reference source for applying unilateral pulses of substantially equal potential to said capacitor, means responsive to said input signals for discharging said capacitor during a portion of each cycle of said input signals, an integrating circuit, means for applying the resulting charges on said capacitor to said integrating circuit, and means for deriving a voltage from said integrating circuit of amplitude which is an inverse function of said input signal frequency, said derived voltage being of a uniform minimum value in the absence of input signals.

2,457,677
ORGANO-SILOXANES AND METHOD OF MAKING THEM
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application December 15, 1943, Serial No. 514,410
4 Claims. (Cl. 260—448.2)

1. Liquid organopolysiloxanes corresponding to the formula



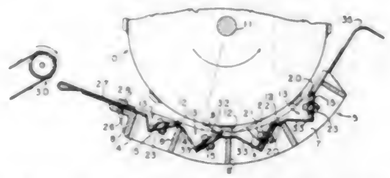
where R, R′ and R″ each represents a monovalent hydrocarbon radical, at least one R and at least one R″ each representing a phenyl radical, and n represents a positive integer.

2,457,678
RESISTOR AND METHOD OF MAKING
Joseph W. Jira, Newburgh Heights, Ohio, assignor to Continental Carbon, Inc., a corporation of Ohio
No Drawing. Application July 13, 1944, Serial No. 544,819
7 Claims. (Cl. 201—76)

5. A resistor comprising, in combination, a non-conductive carrier, a resistance element composed of a thin film of metal on the non-conductive carrier, and a protective coating for the resistance element, said protective coating comprising a layer of fused frit adjusted in its thermal coefficient of expansion by a refractory material of low thermal expansion coefficient of the class consisting of potassium feldspar, said frit comprising essentially lead oxide in the neighborhood of 58 parts by weight, boron oxide in the neighborhood of 5 parts by weight, and silica in the neighborhood of 12 parts by weight, the potassium feldspar comprising an independent dispersed phase in the frit and being included in amount from 5 parts by weight to 30 parts by weight, the amount of the potassium feldspar being determined by the thermal coefficient of expansion of the said non-conductive carrier, the coefficient of expansion being reduced by increasing the proportion of the potassium feldspar.

2,457,679
SLIDING FOCAL PLANE SHUTTER FOR CAMERAS
John J. Jones, Collingdale, Pa.
Application June 3, 1947, Serial No. 752,148
5 Claims. (Cl. 95—55)

1. A focal plane shutter comprising complementary apertured leaves slidable together between retracted and advanced positions and relatively adjustable to vary the extent of registration of said apertures and, thereby, the effective width of the shutter aperture during said movement, manually releasable means for retaining one of the leaves in the retracted position, a tooth projecting from the second leaf, a retractable latch engageable with the tooth to hold the leaf



in retracted position, a cam on the first leaf positioned for engagement with the latch as the said first leaf slides toward the advanced position and operative to retract the latch from the tooth and to thereby release the leaf for movement jointly with the first leaf toward the advanced position, means for adjusting the latch to engage more or less of the total effective height of the tooth and to thereby correspondingly vary the extent of the retractive movement of the latch required to retract it from the tooth, the travel of the last named leaf from the fully retracted position to the point of contact of the cam with the latch being constant irrespective of the adjusted position of the latch whereby the said adjustment of the latch determines the point in the travel of the first leaf from the retracted position at which release of the second leaf occurs.

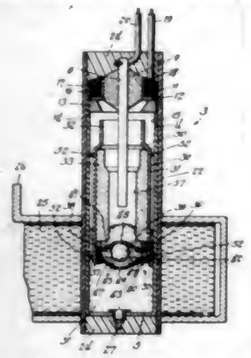
2,457,680

THRESHER CONCAVE WITH RUBBER THRESHING BARS

Eric J. Johnson, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application January 5, 1945, Serial No. 571,706
8 Claims. (Cl. 130—27)

8. In a thresher, a concave frame and means defining a bar-supporting surface extending axially of said concave frame and inclined in the direction of movement of grain at an acute angle to a plane in which lies the axis of curvature of the concave and which intersects said surface, and a flat rubber threshing bar having a width appreciably greater than its thickness and disposed with its flat side against said inclined surface, but with the inner edge projecting upwardly beyond said bar-supporting surface in unsupported relation, and bolt means securing the lower edge of said bar to said concave.



2,457,681

TIME-DELAY PLUNGER FOR RELAYS

John P. Keating, Elkhart, and Glen L. Weimer, South Bend, Ind., assignors to Durakool, Inc., Elkhart, Ind., a corporation of Indiana

Application April 20, 1946, Serial No. 663,684
4 Claims. (Cl. 175—372)

1. As an article of manufacture a plunger open at one end and comprising a substantially hollow cylindrical sleeve member of magnetic metal, a hollow cylindrical liner member of insulating material fitting interiorly of said sleeve member, timing means closing the other end of said plunger comprising a valve chamber having an upper plate member and a lower plate member, said upper plate member having a conical surface portion with the apex thereof disposed toward the open end of said plunger and said lower plate member having a conical portion with the apex thereof disposed in a direction opposite said upper plate member, said upper plate member having a valve seat substantially centrally thereof and having metering orifice means, said lower plate member having a valve seat substantially centrally thereof and by-pass orifice means, and a non-magnetic ball valve disposed in said chamber and movable therein for seating engagement with

one or the other of the valve seats of said plate members.

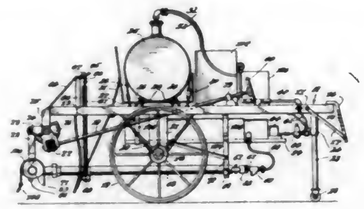
2,457,682

TROLLEY WIRE TAP

Ross Kiser, North Tazewell, Va.

Application April 11, 1947, Serial No. 740,884
1 Claim. (Cl. 173—273)

In a trolley wire tap, in combination, an elongated metallic shank, a metallic trolley wire engaging head rigid with and projecting laterally from one end of said shank, and means to connect a trailing cable to the other end of said shank, said head having opposite faces respectively of concave and convex form in transverse section and tapered toward the outer end of the head, the concave face being disposed at an acute angle longitudinal to the shank, whereby the head will cling to the trolley wire when tilted in one direction to engage the concave face thereof with the wire and will automatically move laterally and drop off of the wire under the action of gravity when tilted in the opposite direction to present the convex face thereof to the wire.



2,457,683

PORTABLE BURNER APPARATUS FOR GENERATING AND BURNING HYDROCARBON VAPOR FUEL

George P. Kittel, West New York, and Paul Wollner, Weehawken, N. J., assignors, by mesne assignments, to Aeroil Products Company, Inc., West New York, N. J.

Application January 10, 1946, Serial No. 640,208
2 Claims. (Cl. 126—271.2)

1. In a portable hydrocarbon burner apparatus of the type including a container for receiving liquid hydrocarbon fuel and having downwardly directed burner jets for burning gaseous hydrocarbon fuel against the surface over which the apparatus is moved, means located between said container and said jets for vaporizing said liquid fuel and for mixing the fuel with air consisting of a heating coil including a plurality of helical convolutions, a pilot burner for directing a flame jet axially through said coil for vaporizing liquid fuel passing therethrough, a pump connected with said heating coil for forcing liquid fuel into said

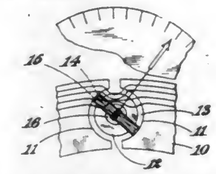
coil against the pressure of vaporized fuel therein, a nozzle connected with said coil and through which the vaporized fuel is forced by said pump and a conduit disposed in axial alignment with said nozzle and having an open end into which the vaporized fuel is directed when issuing from the nozzle to effect an intake of air through the open end of said conduit and the mixing thereof with the vaporized fuel so as to form a combustible mixture.

2,457,684

MANUFACTURE OF SPONGE POLYCHLOROPRENE RUBBER

Norman A. Klemp, Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application March 17, 1945, Serial No. 583,393
4 Claims. (Cl. 260—29.7)



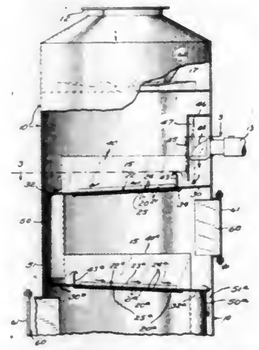
1. The method of recovering a stable liquid composition from an ungelled polychloroprene latex foam containing zinc oxide and alkali silicofluoride which comprises dispersing said foam in an aqueous medium containing material selected from the group consisting of alkali carbonates, borates, phosphates, sulfites, oxalates, ferrocyanides, ferricyanides and chromates and a stabilizer selected from non-ionic surface-active agents which are reaction products of ethylene oxide with material from the group consisting of aliphatic alcohols having more than 8 carbon atoms, aliphatic acids having more than 8 carbon atoms, and phenols, and anion-active surface active agents having the general formula R—SO_3—M, wherein M represents a radical selected from the group consisting of alkali metal, hydrogen, and ammonium, and R represents an organic radical containing at least one group having more than 8 carbon atoms, said anion-active surface-active agent being selected from the group consisting of alkyl sulphates, alkyl sulphonates, sulphonated and sulfated mixed ethers of long and short chain aliphatic groups, sulphonated and sulphated alkyl esters of long chain fatty acids, sulphonated alkyl substituted amides of long chain fatty acids, alkylated aryl sulphonates of the naphthalene and benzene series, hydroaromatic sulphonates of the anthracene and naphthalene series, and alkyl sulfosuccinates.

2,457,685

MOVING-COIL ELECTRIC INSTRUMENT

Edwin Claude Klepp, London, England, assignor to S. Smith & Sons (England) Limited, a British company

Application February 23, 1944, Serial No. 523,608
In Great Britain November 2, 1942
8 Claims. (Cl. 171—95)



1. A moving coil electric instrument of the class described comprising, in combination, two elements formed of magnetic material and spaced apart to provide a gap between them, one of said elements comprising at least one pole of a magnet and the other a core member, two concentrically arranged coils encircling said core member and mounted to rotate together in the same magnetic field, certain stretches of the coils disposed so as to move in said gap, said gap being of substantially constant width along the path of movement of the coils, the cross section of at least one of said elements being such that a part of one of them which faces said gap approaches magnetic saturation, whereby the field strength in the gap decreases along the path of movement of said coil stretches, in a direction away from said part.

2,457,686

GAS AND LIQUID CONTACT APPARATUS

Robert Kopita, Bound Brook, N. J., assignor to Peabody Engineering Corporation, New York, N. Y., a corporation of New York

Application December 19, 1946, Serial No. 717,302
2 Claims. (Cl. 261—113)

1. A gas and liquid contact apparatus comprising a casing having a treating zone therein, said zone comprising a transverse partition including a flat plate containing perforations for the passage of gas flowing through said casing, a distributing weir extending across one end of said plate, means supplying liquid to flow over said weir onto said plate, a drain duct extending across the other end of said plate to receive the liquid after flowing over said plate, said plate being inclined downwardly between said weir and said drain duct by an amount corresponding to the liquid head required to cause the liquid to flow along said plate, whereby the liquid is maintained

at a uniform depth on all parts of said plate, a baffle grid assembly comprising bars extending along said plate in the direction of liquid flow from said weir to said duct, said bars having vertical flanges to direct the liquid flow and horizontal baffles overlying said perforations.

2,457,687

APPARATUS FOR FORMING HOLLOW ARTICLES OF ORGANIC PLASTIC MATERIAL

William H. Kopitke, West Hartford, Conn., assignor to Plax Corporation, Hartford, Conn., a corporation of Delaware

Application January 13, 1945, Serial No. 572,618
4 Claims. (Cl. 18—5)

1. Apparatus for forming hollow articles of organic plastic material by extruding and expanding said material, said apparatus comprising an extrusion head, a nozzle on said head, an extrusion orifice in said nozzle, a mandrel having an air passageway therein mounted in said head in cooperative relation to said orifice for imparting tubular shape to said material, and a device for forming a bottom on said material at the nozzle comprising a plate having a cavity therein, a plunger in said cavity, means loosely connecting said plate and said plunger for relative movement, and means for moving said device into and out of engagement with said nozzle.

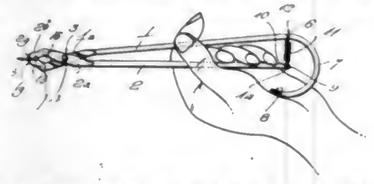
2,457,688

METHYL SILOXANE GUMS AND ELASTOMERS

Robert H. Krieble and John R. Elliott, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

No Drawing. Application June 11, 1945, Serial No. 598,914
6 Claims. (Cl. 260—37)

2. A solid, elastic, curable methylpolysiloxane consisting of methyl radicals and silicon and oxygen atoms containing an average of from 1.98 to 2.0 methyl groups per silicon atom, said elastic methylpolysiloxane having been obtained by condensing a liquid consisting of polymeric dimethylsiloxane containing (*a*) from 0.4 to 5 mol per cent copolymerized monomethylsiloxane and (*b*) copolymerized trimethylsiloxane wherein the number of trimethyl-substituted silicon atoms are present in an amount equal to from 40 to 95 per cent of the number of monomethyl-substituted silicon atoms.



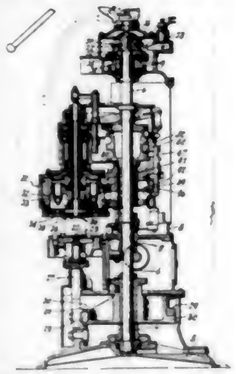
2,457,689

HOLDER FOR FASTENERS

Eldon L. Krieg, South Whitley, Ind.

Application April 7, 1947, Serial No. 739,847
5 Claims. (Cl. 1—47)

1. A tool for gripping and guiding a fastener for performing a driving operation, comprising a pair of pivotally mounted arms terminating in coacting jaws, each having recessed abutting coacting faces, said faces operating to grip and support a fastener in driving position, one of said arms terminating in a curved portion extending substantially around the end of the other of said arms and providing an abutment for limiting the movement thereof and spring means extending between said arms for tensioning said



arms and normally maintaining said coacting faces in closed coacting relation.

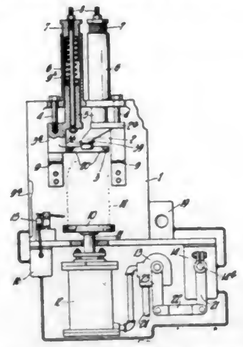
2,457,690

CONTAINER CONTROLLED VACUUMIZING APPARATUS

Alfred L. Kronquest, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Original application August 14, 1941, Serial No. 406,899, now Patent No. 2,391,319, dated December 18, 1945. Divided and this application June 20, 1945, Serial No. 600,565
15 Claims. (Cl. 99—272)

4. In a machine of the character described, a casing open at its bottom and forming a filled container vacuumizing chamber therein, a container supporting pad vertically reciprocable for lifting filled containers into and lowering vacuumized containers from said chamber, means for feeding filled containers onto and vacuumized containers off from said pad, means for sealing the open bottom of said chamber about a filled container therein, means controlled by a shiftable valve for effecting evacuation of said chamber, and means controlled by movement of a filled container to said pad for shifting said valve to its evacuation effecting position thereby providing for evacuation of said chamber only when a container is presented to the chamber for being vacuumized.



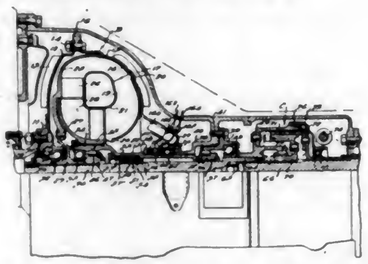
2,457,691

MEANS FOR ASSEMBLING METAL ARTICLES

Raymond R. Kubic and Carl H. Nylander, McKeesport, Pa., assignors to National Tube Company, a corporation of New Jersey

Application August 22, 1944, Serial No. 550,642
2 Claims. (Cl. 219—4)

1. A machine for soldering thin metallic discs around an aperture in a flange disposed interiorly of a cylindrical body member, said body member having an inwardly tapering upper end, comprising a vertically reciprocable platform constructed and arranged to receive the lower end of the said cylindrical body member, a downwardly spring-biased combined guide and electrode disposed above said platform, said combined



guide and electrode having an opening therethrough of the same shape as the tapered upper end of said body member whereby said electrode yieldingly engages the upper end of a body member disposed on said platform and positions it when said platform is lifted.

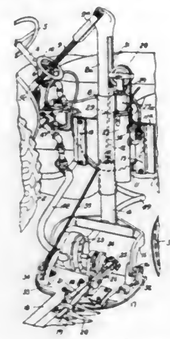
2,457,692

HYDRODYNAMIC TRANSMISSION

Ludger E. La Brie, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Original application December 10, 1941, Serial No. 422,369. Divided and this application December 6, 1943, Serial No. 513,061
18 Claims. (Cl. 74—189.5)

1. In a power transmission for a vehicle having an engine, a fluid power transmitting device drivingly connected to the engine, change speed means drivingly connected to said device and adapted to provide a plurality of different speed ratio drives for said vehicle, and means including control means operative in response to departures from the normal operating physical condition of the fluid in said device and operable at a predetermined condition of said fluid for effecting a change in the speed ratio drive of said vehicle.



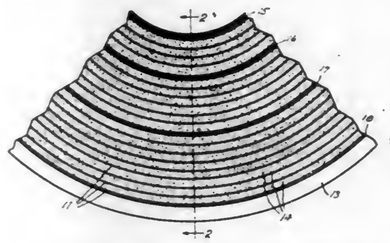
2,457,693

MOWER ATTACHMENT FOR TRACTORS

Walter K. Leicy, Crestline, Ohio, assignor to The Burch Corporation, Crestline, Ohio, a corporation

Application January 24, 1945, Serial No. 574,228
6 Claims. (Cl. 56—25)

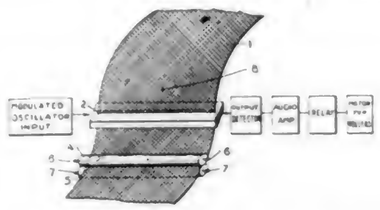
1. In a mower attachment for tractors, in combination, attachment means for securing a mower attachment at one side of the chassis of a tractor, said mower attachment comprising a relatively vertical standard, a cutter bar unit supporting post movable in said standard vertically of the latter, a cutter bar unit supported on said post, including a cutter bar and cutting knife, means operatively associated with the post for



raising and lowering the post, combined with horizontal trunnion means adapted to pivotally connect said standard with a side of the chassis of a tractor vehicle, and means connecting the standard with the chassis of a tractor vehicle adjustable to shift the standard about the trunnion and change the horizontal angularity of the cutter bar unit.

2,457,694

SPIRAL WOUND GASKET

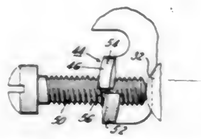


Stanley S. Lippincott, Palmyra, N. J., assignor to Flexitallic Gasket Company, Camden, N. J., a corporation of New Jersey

Application December 10, 1946, Serial No. 715,241
3 Claims. (Cl. 288—27)

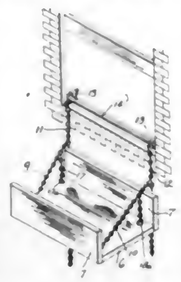
1. A compressible gasket for sealing pipe flanges or the like having a bolt circle external to the gasket, comprising a metal strip of uniform width spirally wound with a strip of compressible material interposed between some of the metal convolutions, said strip of compressible material being interrupted to provide a plurality of stiffening bands spaced radially across said gasket, certain of said bands being located at the inner and outer peripheries of said gasket and others being disposed therebetween within the confines of the gasket, each band comprising a plurality of metal-to-metal convolutions of said metal strip, the number of metal-to-metal convolutions in the respective bands progressively decreasing from the inner to the outer peripheries of said gasket whereby the stiffness of the gasket progressively decreases from its inner to its outer peripheries.

2,457,695
ULTRA HIGH FREQUENCY APPARATUS FOR INSPECTION OF SHEET AND OTHER MATERIALS
Charles L. Liskow, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application September 24, 1945, Serial No. 618,151
1 Claim. (Cl. 26—70)



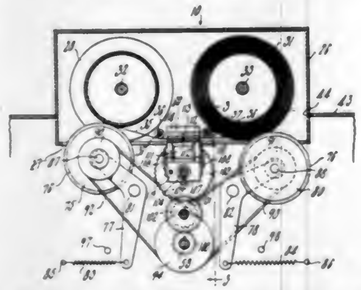
Apparatus for detecting foreign conductive matter in textiles, comprising an ultra high frequency oscillator, a waveguide coupled thereto and having a longitudinal slot, rollers for passing textiles through said slot, a motor for rotating said rollers, a detector coupled to the output of said waveguide, an amplifier therefor, and a relay for stopping said motor, said relay being operated by said amplifier when conductive material passes through said slot.

2,457,696
SYNTHESIS OF UNSATURATED KETONES
George E. Lukes and Ralph C. Swann, Skokie, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application June 15, 1944, Serial No. 540,542
23 Claims. (Cl. 260—597)



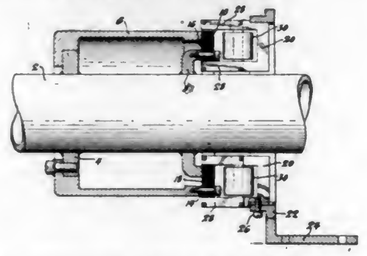
1. The method of synthesizing unsaturated ketones comprising contacting an open-chain olefinic hydrocarbon having at least 3 carbon atoms per molecule with a fatty acid anhydride in the presence of a catalyst selected from the group consisting of aryl su'fonic acids, sulfo-fatty acids and halo-sulfonic acids.

2,457,697
SCREW LOCKING MEANS
George P. Lum, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 25, 1946, Serial No. 699,204
4 Claims. (Cl. 74—526)



1. An adjustable stop mechanism for a lever comprising an arm, a threaded hole through said arm, a screw in said hole supported by said arm, an abutment for said screw to limit the movement of said lever, the portion of said arm defining said hole being divided into two segments, the threads of one of said segments being offset in respect to the threads of the other segment, whereby the threads of said hole frictionally engage the threads of said screw.

2,457,698
SUSPENDER WINDOW SUPPORT FOR WASHING WINDOWS
Carl Mariash, Brooklyn, N. Y.
Application May 18, 1946, Serial No. 670,745
1 Claim. (Cl. 304—24)

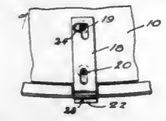


A window support for cleaning windows from the outside, comprising a platform, first chains connected to the outer side of the platform near opposite ends thereof and extending inwardly and diagonally upwardly, chains each of a length correlated with the length of each side first chains connecting the diagonal chains to the inner sides of the platform, a hanger chain connected with the inner end of each diagonal chain, a cross bar connected with the upper ends of the hanger chains and adapted to bridge a window to support the platform in suspended position below the window and the cross bar having an adjustable U-bolt including concave bearing surfaces near each end thereof connected to the upper end of the nearest hanger chain.

2,457,699
MAGNETIC RECORDER WITH FRICTION DRIVE DEVICE INCORPORATED WITHIN THE MAGAZINE
Richard A. Marsen, New York, N. Y., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application March 29, 1945, Serial No. 585,545
15 Claims. (Cl. 179—100.2)

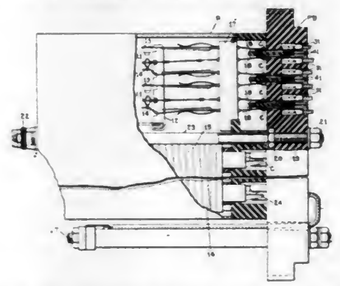
15. A magnetic recording system comprising, in combination, a sound translating unit and a magazine disengageably mounted thereon, said magazine containing a linear magnetic recording medium, and spaced rotatable reels for drawing said medium in either direction longitudinally of said magazine; said sound translating unit comprising a casing having an aperture in a wall thereof for receiving said magazine, and driving mechanism aligned with the aperture; said driving mechanism entering into operative association with the recording medium coiled on said reels upon insertion of said magazine into the aperture in said casing; and releasable latching means automatically operative, upon insertion of said magazine into the aperture in said casing, to retain said magazine in cooperative engagement with said unit; the side walls of said magazine having recesses for engageably cooperating with said latching means.

2,457,700
TORQUE METER
Edward J. Martin, Pleasant Ridge, and Walter E. Sargeant, Ferndale, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 9, 1942, Serial No. 468,374
12 Claims. (Cl. 73—136)



1. In measuring means applicable to a body subject to changes in stress, a plurality of members having good magnetic conductivity and projecting interjacent portions supported on the body at spaced points and solenoid means comprising coil and core means, said core being in juxtaposition to the members whereby they form part of a magnetic circuit and variations in their position will vary the inductance of the coil to give an indication of the stress of the body, duplicate magnetic members mounted in stationary relation adjacent the body and the first magnetic members, duplicate solenoid and core means mounted in juxtaposition to the duplicate magnetic members and indicating means connected to both solenoid means whereby the duplicate solenoid means will balance out the effects of stray magnetic fields.

2,457,701
EMULSION-POLYMERIZATION OF BUTADIENE-1,3 HYDROCARBONS
Charles D. McCleary, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application November 2, 1945, Serial No. 626,444
20 Claims. (Cl. 260—86.5)



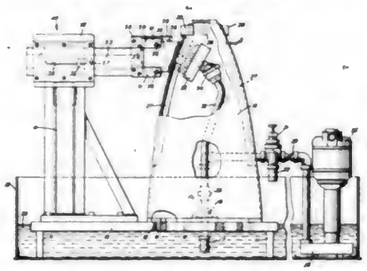
1. In the preparation of a synthetic rubber latex by the polymerization of an aqueous emulsion of polymerizable material selected from the group consisting of butadiene-1,3 hydrocarbons and mixtures of butadiene-1,3 hydrocarbons with up to 70% by weight of the mixture of compounds which contain a $CH_2{=}C<$ group where at least one of the disconnected valences is attached to an electro-active group and which compounds are copolymerizable therewith, the step of adding .05 to 1 part by weight of a quinone per 100 parts of polymerizable material originally present, to the emulsion after polymerization of polymerizable material in the emulsion to synthetic rubber and while said emulsion contains unreacted polymerizable monomeric material.

2,457,702
SHIPPING CONTAINER
Francis L. McGary and Charles E. McGary, Hardinsburg, Ky.
Application October 3, 1944, Serial No. 556,970
7 Claims. (Cl. 217—44)

2. A shipping container comprising a head, a body portion, a hoop surrounding the head end of the body and having openings therethrough, and radially movable bars on said head, said bars being turned up at their outer ends to provide hooks for engaging parts of said hoops to prevent retraction of said bars, said bars having longitudinal guide slots spaced lengthwise of the bars, at least one of the slots having a lateral extension permitting lateral movement of the bar when in projected position, so that endwise movement of the bar is then inhibited.

2,457,703
PLUGBOARD ARRANGEMENT
Joseph F. Merkel, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application November 23, 1946, Serial No. 712,000
4 Claims. (Cl. 173—328)

1. In a plug coupler of the character described for detachably supporting an electro-responsive device providing plug coupled electrical connections for a plurality of pairs of spring contact tips on said device, the combination with a plug board of insulating material having openings opposite said pairs of contact tips and a plug of insulating material secured in each of said openings, said plug having a portion protruding from the front of the plug board separating said contact tips of each pair, said plug having a transverse abutment and two laterally spaced longitudinal abutments in both its upper and lower surfaces within the opening in the plug board, and said plug cooperating with said plug board to form a slot extending through said plug board substantially opposite each of said contact tips above and below said plug, of a contact strip formed for the attachment of a plurality of wires at one end and receivable in said slot from the back of the plug board with wires attached thereto to a limited extent permitting the other end of the contact strip to be supported by the protruding portion of said plug so as to make electrical connection with one of said contact tips when said device is plug coupled to the plug board, said contact strip having a longitudinally



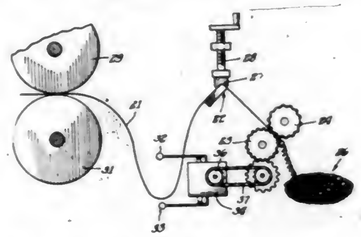
extending detent formed therein of a breadth to be held in longitudinal alignment in said slot between said laterally spaced abutments of said plug, said detent being compressible upon insertion of the contact strip in said slot from the back of the plug board and being effective to lock said contact strip against removal from the back of the plug board by engagement with said transverse abutment of said plug when said contact strip is fully inserted.

2,457,704

MATERIAL SUPPORTING AND COOLING APPARATUS FOR WELDING MACHINES

Donald H. Mitchell, Cranford, and Earl C. Moss, Westfield, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application March 27, 1946, Serial No. 657,560
2 Claims. (Cl. 113—59)



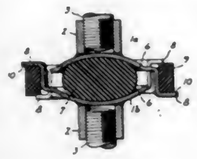
1. A material supporting and cooling apparatus for welding machines comprising a table to support a metal structure having locked-in stresses due to previous welding of a part thereon, a carriage to support a metallic element, means to support the carriage for movement to position the element at selectively variable positions adjacent a surface of the metal structure whereby the element may be welded thereto, and means to direct a coolant to the opposing surface of the metal structure adjacent the metallic element to prevent spreading of heat, during welding of the element to the structure, to the area of the welded part.

2,457,705

WIRE CURLING APPARATUS AND METHOD

Francis D. Moran, Downers Grove, Ill.

Application July 19, 1944, Serial No. 545,556
5 Claims. (Cl. 140—71)



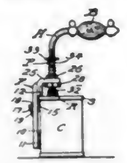
1. Apparatus for curling flat wire comprising a curling curve over which the wire is adapted to be bent, stationary resilient pressure means for holding the wire bent across the curling curve to bend the same, means for delivering the wire in a slack condition to the curling curve, and means for continuously drawing the wire across the curling curve and from between the curling curve and pressure means, whereby to continuously impart a bend along the length of the wire and curl the same.

2,457,706

RESILIENT MOUNTING

Eldon Paul Neher, North Manchester, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application September 6, 1945, Serial No. 614,762
11 Claims. (Cl. 248—358)



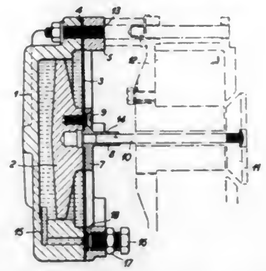
1. A vibration-insulating mounting adapted to be disposed between two relatively vibratable members comprising two rigid connectors, each having attaching means for attachment to one of said relatively vibratable members and a centrally disposed bearing surface, said connectors arranged with said bearing surfaces directed toward each other, a mass of vulcanized rubber-like material disposed between said bearing surfaces with one of two opposite sides of said mass bearing against each of said bearing surfaces, and resilient external locking means carried by said connectors whereby relative movement of said connectors is accomplished only through distortion of said mass.

2,457,707

GAS SAMPLING DEVICE

Wilbur K. Neuman, Skokie, Ill., and Harry M. Slosberg, Ames, Iowa, assignors to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application September 9, 1944, Serial No. 553,412
6 Claims. (Cl. 222—5)



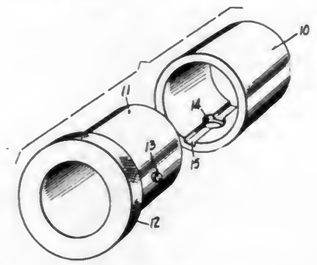
2. A gas sampling device for containers comprising a frame having means for clamping to a container and including a guide, a hollow plunger movable along said guide toward and from a wall of the container and having means at one end for connection to a gas-receiving device, a gas-receiving device connected to said connection means, a hollow piercing point at the other end of the plunger, means engaged with the frame and plunger to move the plunger along the guide and force the point through a wall of the container, and a resilient sealing member surrounding and closely embracing the point and in unstressed condition extending beyond the point and effective to establish a seal around the point and against the can wall prior to penetration of the can wall whereby communication from the interior of the pierced container is limited to the passage through said hollow point.

2,457,708

HYDRAULIC DAMPER

Frederick Newton, Sudbury, England, assignor to Newton Brothers (Derby) Limited, Derby, England, a British company

Application July 16, 1947, Serial No. 761,361
In Great Britain September 11, 1946
2 Claims. (Cl. 188—97)



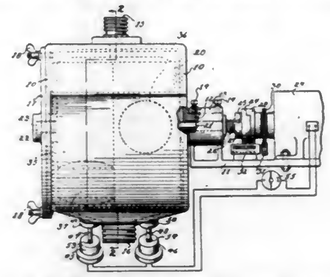
1. A liquid filled dash-pot comprising a metal cylinder closed at one end, having a passage in its wall leading from the interior at the closed end to a mouth in the end of the cylinder wall, a diaphragm of flexible material impervious and resistant to the liquid in the dash-pot sealing the open end of the cylinder, a clamping ring pressing said diaphragm upon the open end of the cylinder throughout the periphery of the diaphragm but not over the area around the mouth of the passage, a piston fitting the cylinder and attached in liquid-tight fashion to the diaphragm, and a leak limiter adjustable in the clamping ring to limit and vary the extent to which the diaphragm can lift from the area about the mouth of the passage.

2,457,709

JIG BUSHING

Arthur H. Nolde, Wauwatosa, Wis., assignor to The Falk Corporation, Wauwatosa, Wis., a corporation of Wisconsin

Application August 11, 1945, Serial No. 610,231
3 Claims. (Cl. 77—62)



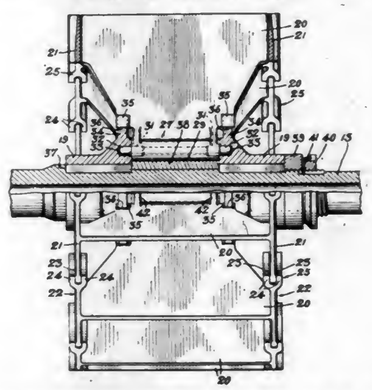
1. In a jig bushing the combination of a liner member, a bushing member adapted for insertion in said liner member, a stud projecting from one of said members, an opening in the other of said members for coaction with said stud to releasably retain said members against separation, and a longitudinal groove extending through said last named member and opening through which said stud is admitted to said opening upon insertion of said bushing member into either end of said liner member, said opening being wider than said groove.

2,457,710

FLUID METER CONSTRUCTION

Ragnar A. Norbom, New York, N. Y., assignor to National Fitch Corporation, a corporation of Delaware

Application May 10, 1946, Serial No. 668,814
1 Claim. (Cl. 73—242)



In a milk flow meter construction, the combination comprising a casing having an inlet connection on its upper side and an outlet connection on its lower side, an integral boss projecting laterally from said casing for supporting said casing, a rotor supported for rotation within said casing on a shaft extending through said boss, said rotor having two cylinders extending therethrough, one cylinder being axially displaced along the rotor axis and at right angles to the other cylinder, a free piston for each of said cylinders and slidable therein, a pair of push rods mounted on said casing adjacent said outlet connection and engageable by said pistons when the piston is at the lower end of its cylinder adjacent said outlet connection, a pair of circuit closers connected in series and engaged by said rods, and a motor-driven means controlled by said circuit closers and connected to said rotor shaft for rotating said rotor 90° each time one of said pistons engages one of said push rods.

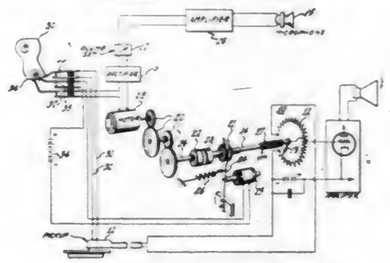
2,457,711

HIGH-TEMPERATURE FAN

Carl Nygren, Michigan City, Ind., assignor to Michiana Products Corporation, Michigan City, Ind., a corporation of Indiana

Application May 19, 1945, Serial No. 594,750
7 Claims. (Cl. 230—134)

1. In a centrifugal fan, a plurality of blades in circular arrangement about a common axis of rotation with their inner portions converging inwardly toward said axis and their outer portions



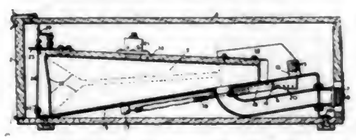
diverging outwardly from said axis, hub members at either side, means to fasten the inner portions of the blades to the hub members to hold them against individual bodily movement outwardly due to centrifugal force, means fastening the intermediate portions of the blades to the hub members against relative rotary movement in driving and segment shaped shroud sections carried by the outer portions of the blades in circular arrangement about the axis to form shrouds for the fan.

2,457,712

METHOD AND APPARATUS FOR NOISE CONTROL OF REPRODUCED SOUND

Harry F. Olson, Princeton, and John Preston, Hopewell, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application September 21, 1945, Serial No. 617,858
4 Claims. (Cl. 179—1)



1. Apparatus for regulating the difference in level between reproduced sound and ambient noise, comprising the combination of a phonograph volume control, an electrical circuit including a pick-up for reproducing sound from a record, a microphone responsive to ambient noise, means for translating ambient noise received by said microphone into electrical energy, means operated by said energy for setting said volume control proportionately to the ambient noise, and selective switching means automatically operable for alternately connecting said setting means and said pick-up to said volume control.

2,457,713

APPARATUS FOR TESTING THE OPERATION OF OXYGEN SUPPLY EQUIPMENT FOR AIRCRAFT

Ronald Roy Osborne and Ernest Graham Dunsford, Farnborough, England, assignors to the Minister of Supply, in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England

Application August 9, 1945, Serial No. 609,880
In Great Britain March 24, 1945
5 Claims. (Cl. 73—40)

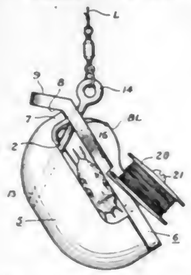
1. Apparatus for testing the operation of oxygen supply apparatus comprising a bellows adapted to be connected to the oxygen supply, a bolt for locking said bellows in the closed position, and spring means for opening said bellows on release of said bolt, a pointer on the movable element of the bellows, a fixed datum in conjunction with which the pointer works to register the volume of oxygen supplied to the apparatus when said bellows is opened under the action of said spring means, on release of said bolt, and means to indicate that oxygen is flowing into the apparatus when said bellows is locked in the closed position.

2,457,714

KNIFE SHARPENER

William R. Pancoast, Evanston, Ill.

Application May 12, 1947, Serial No. 747,427
8 Claims. (Cl. 51—214)



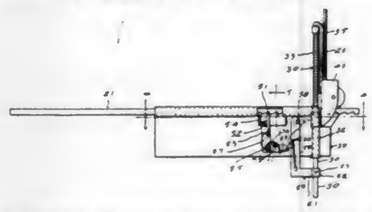
1. In a knife sharpener, an abrasive element having grinding faces on opposite sides thereof, a support for said element, and a pair of diverging magnetized plates disposed one on each side of said element to hold a knife blade at the proper angle to said element during sharpening.

2,457,715

BAIT-HOLDING CASTING BOB

Frederick F. Pazzano, Waltham, Mass.

Application November 5, 1946, Serial No. 707,893
7 Claims. (Cl. 43—41)



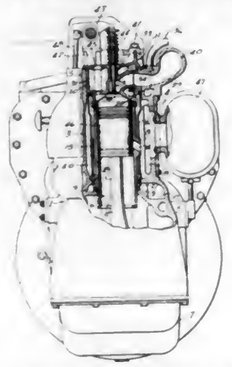
1. A live-bait casting bob comprising a member recessed on one side to receive a live-bait in said recess, a cover for the recess swingably connected to the member, and supporting means for the member and cover secured to the member and extending through the cover, said cover having an opening of such size as to permit the supporting means to be slidably and swingably related thereto.

2,457,716

BUTTER SLICER

Ronald R. Perkins, Dallas, Tex.

Application January 7, 1947, Serial No. 720,531
4 Claims. (Cl. 31—30)



1. A slicing device comprising a tubular housing a cutting member, a carrier for said member, means slidably mounting said carrier at one end of said housing whereby said cutting member may be moved across said one end, a follower in said housing, an elongated toothed bar fixed to said follower, an L-shaped lever rockably carried by said housing, a spring-pressed dog carried by one leg of said lever, engageable with said bar, and a laterally projecting lug carried by the other leg of said lever, and a second spring-pressed dog carried by said carrier engageable with said lug whereby said lever will be rocked to advance said bar during the initial movement of said carrier on the cutting stroke thereof.

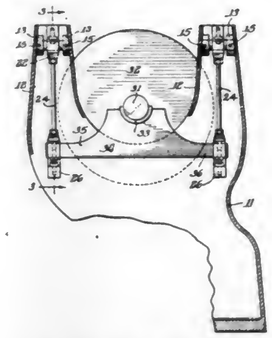
2,457,717

ENGINE COOLING, CYLINDER, JACKET, AND HEAD CONSTRUCTION

Charles Frank Pervier, Port Washington, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a corporation of Wisconsin

Application February 15, 1946, Serial No. 647,819
9 Claims. (Cl. 123—173)

1. In an internal combustion engine a main crank and cylinder supporting frame having a lower crank shaft supporting and enclosing portion and an upper cylinder supporting portion terminating at its upper end in a cylinder head seat, a chambered partition wall disposed between said upper and lower frame portions, said head seat and said chambered partition wall having aligned cylinder receiving openings therein; a head and cylinder assembly disposed in and extending through and held by said aligned openings in said head seat and said chambered partition wall, said head and cylinder assembly comprising a head portion having a coolant chamber therein, a cylinder barrel portion separably united with said head portion, and a coolant jacket surrounding said cylinder barrel portion providing a closed coolant containing chamber surrounding said cylinder barrel extending from the lower end thereof to said head portion, fluid conveying means disposed within said head seat portion joined with and providing egress for coolant from the coolant chamber in said head; and a coolant admission chamber in said chambered partition wall joined with and providing an entrance for coolant into the lower end of said jacket.



2,457,718

BALANCE-TESTING MACHINE ROTOR SUSPENSION SYSTEM

Clyde H. Phelps, Springfield, Ill., assignor, by mesne assignments, to Weaver Engineering Co., a corporation of Illinois

Application May 24, 1945, Serial No. 595,542
5 Claims. (Cl. 74—579)

1. In a suspension structure for at least a portion of a vibratory rotor-shaft bearing-support, the combination of a first suitably supported body having an upper convex partially-spherical surface, a second body having a concave partially-spherical undersurface bearing on and rockable on said upper convex surface, a hanger supported by and depending from said second body, a third body with a concave partially-spherical under-

surface on said bearing-support, and a fourth body on the lower portion of said hanger and having a top convex partially-spherical surface supporting said third body by engagement with its concave undersurface, the curvature of said concave partially-spherical undersurface in each instance being of greater radius than that of its cooperating convex surface.

2,457,719

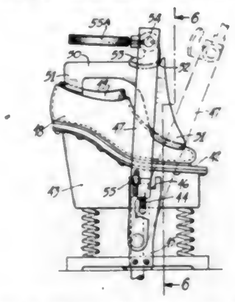
PREPARATION OF EXTRUDED IRON OXIDE CATALYSTS

Paul R. Pine, Berea, and Earl C. Ray, Cleveland, Ohio, assignors to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio

No Drawing. Substituted for application Serial No. 716,436, filed December 14, 1946. This application filed April 3, 1947, Serial No. 739,267
4 Claims. (Cl. 252—259.2)

1. An improved method for the preparation of extruded catalytic bodies, comprising the steps of forming a paste consisting essentially of ferrous carbonate, a compound of a catalytic metal of atomic number from 22 to 30 inclusive excluding iron capable of yielding the oxide thereof on calcination, a compound of an alkali metal capable of yielding the oxide on calcination and water, the proportions being such that after calcination the product will consist essentially of from 2% to 30% of the oxide of said catalytic metal and up to 28% of the oxide of said alkali metal but not less than 70% of iron oxide, percentages being based upon the total weight of the final product, water being present in said paste in proportion suitable for extrusion, extruding said paste to form catalytic bodies of the desired size and shape, heating the resulting extruded bodies at temperatures of the order of 110° C. to 150° C. until uncombined water has been removed and then calcining at temperatures of the order of 900° C. to 950° C. for from 2 to 6 hours.

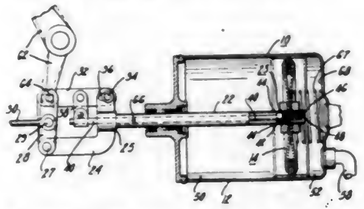
2,457,720



SHOE SOLE PRESSURE DEVICE

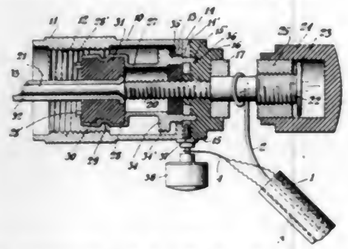
Samuel Plawker, Newark, N. J.

Application August 15, 1946, Serial No. 690,691
3 Claims. (Cl. 12—33)



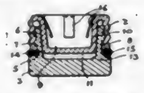
1. In a shoe sole pressure device, in combination, a hollow cup, a pliable covering across the

top of said cup constituting a support for a shoe, a base, springs for yieldably mounting said cup on the base, side arms pivoted to said base and swingable over said shoe, a bridge piece for engaging a lasted shoe at the front and rear portions thereof, a yoke supported in said arms and



movable to engage the bridge to apply pressure to the last shoe against the resistance of said springs whereby said covering engages and conforms the sole of the shoe closely to the shape of the last, and latching means for releasably holding the side arms in an inoperative position.

2,457,721
PRESSURE FLUID FOLLOW-UP SERVOMOTOR
Harold W. Price, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 29, 1943, Serial No. 516,034
3 Claims. (Cl. 121—41)

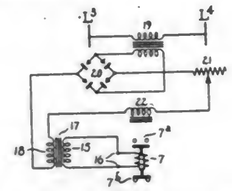


1. A power unit constituting a part of means for operating one of the several control members of an automotive vehicle said unit including a double-ended vacuum suspended motor comprising a cylinder and a power element which, together with the cylinder, divides the motor into two compartments, an air transmitting conduit connected with one of said motor compartments, a motor controlling follow-up valve, including two relatively movable members housed within the motor and operative, by a movement, of said members, to control the admission of air into the other of the motor compartments and to control the by-passing of air from the latter compartment to the first mentioned compartment, and force transmitting means for obtaining feel control and for operating said valve said force transmitting means comprising a valve operating member connected to one of the parts of the control valve and extending through one end of the cylinder of the motor, a valve operating rod housed within said member, and a plurality of closely connected links interconnecting said member and rod and mounted just outside the casing of the motor, one of said links operating as a lever and serving, by virtue of its connection with the remaining links and with the control member, to exert a reactionary force advising the driver of the vehicle of the degree of force exerted by the motor during the operation of said control member.

2,457,722
CONNECTOR FOR COAXIAL CABLE
Charles McDonald Puckette, Jr., Ridgewood, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application March 23, 1945, Serial No. 584,274
7 Claims. (Cl. 174—19)

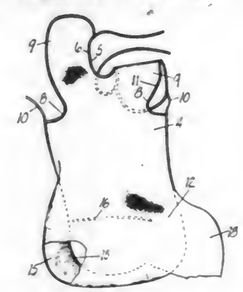
1. A connector for a coaxial cable which comprises electrically connected and mechanically separated coaxial sleeves and a binding post extending through both of said sleeves axially thereof, a metal disc in contact with both of said sleeves, one of said sleeves having an externally threaded portion and the other one an internally threaded portion adapted to engage said externally threaded portion.

2,457,723
ADJUSTABLE GLIDER FOR FURNITURE LEGS
Andrew R. Pura, Toronto, Ontario, Canada
Application July 30, 1947, Serial No. 764,743
3 Claims. (Cl. 16—42)



1. An adjustable glider for furniture legs comprising in combination a base portion having an upwardly extending annular extension formed with a threaded outer surface and a cap having a depending annular flange formed with an internal thread to engage the threaded outer surface of the base extension for adjustment thereon, said cap being formed with a central well adapted to extend within the annular extension of said base and to receive and support a furniture leg.

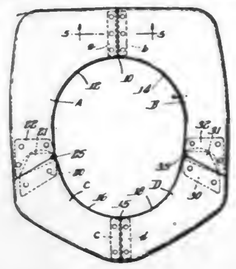
2,457,724
ELECTRIC RELAY FOR USE WITH ALTERNATING CURRENT OF VARIABLE FREQUENCY AND VOLTAGE
Cyril Ernest Randall, Bedford, England, assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application October 9, 1942, Serial No. 461,360
In Great Britain March 25, 1942
3 Claims. (Cl. 172—289)



3. In an alternating current motor controller, in combination, electromagnetic reversing and plugging switches, a relay having a winding to be supplied from one phase of the secondary circuit of a motor, means rendering said relay responsive to the voltage of said secondary circuit

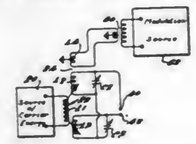
upon initiation of plugging action, for predetermined positioning of said relay and then commutating the circuit connections of said relay

winding, and a condenser rendering said relay winding, after its connections are so commutated, sensitive to joint influence of the voltage and frequency of said secondary circuit.



2,457,725
BIB AND TRAY COVER
Lavinia Bauer Rhowmine, Grand Rapids, Mich.
Application March 25, 1947, Serial No. 736,951
3 Claims. (Cl. 2—49)

1. A combined bib and tray cover comprising a body portion and a tray cover portion formed integrally from a single flat piece of material, the cover portion being a laterally enlarged continuation of the body portion, the body portion having a central neck opening recess extending centrally from the upper edge thereof and opposed arm opening recesses extending from the side to the top edge thereof, the recesses providing shoulder flaps therebetween the outer top edges of which are connected to the side edges of the body portion just below said arm opening recesses by elastic tapes, the edge of the tray cover portion being gathered and provided with an elastic tape whereby the tray portion is provided with inturned edges constituting a pocket adapted to yieldably receive the edges of a tray, and an elastic tape extending between the rear edges of the tray cover portion to apply yielding stress thereto when it is engaged with a tray.

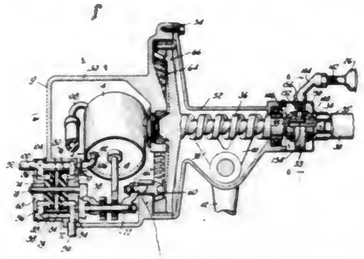


2,457,726
TOILET SEAT
Harper Richards, Chicago, Ill.
Application October 6, 1947, Serial No. 778,069
6 Claims. (Cl. 4—239)

1. A folding toilet seat having a longitudinal axis comprising a pair of like arcuate sections on opposite sides of the longitudinal axis at one end of the seat and a second pair of like arcuate sections, on opposite sides of the longitudinal axis at the opposite end of the seat, each of the sections being arranged in end to end abutting relation with the adjacent sections, pivotal connections on opposite sides of the longitudinal axis of the seat having their axes disposed tranversely of the plane of the seat and joining one section of each pair with the adjacent section of the other pair, and hinge connections

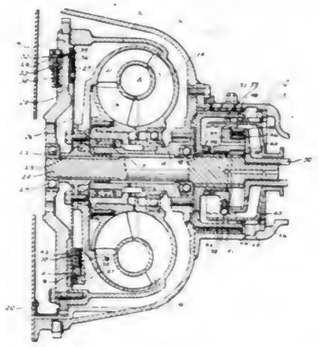
having their axes in mutual alignment with each other and with the longitudinal axis of the seat interconnecting two adjacent arcuate sections on opposite sides of the longitudinal axis of the seat.

2,457,727
ELECTRICAL MEASURING SYSTEM
Clare M. Rifenbergh, Grosse Pointe, Mich., assignor to Armour Research Foundation of Illinois Institute of Technology, Chicago, Ill., a not-for-profit corporation of Illinois
Application September 27, 1940, Serial No. 358,742
11 Claims. (Cl. 73—432)



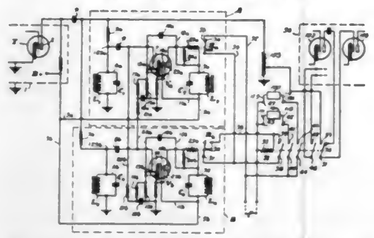
2. In combination, an electrical network including a source of alternating current energy, an output circuit connected to said source to have a voltage impressed thereacross by said source, said circuit having first and second portions each including impedance means and connected so that the voltage across the terminals of said circuit is proportional to the vectorial sum of the voltages across said portions, said portions being tuned to predetermined points differing substantially from resonance so as to produce a predetermined normal said vectorial sum, a modulating element remote from said net work, coupling means including a transmission line of relatively low impedance and at least one transformer between said element and said network, said element being variable so as to vary the tuning of said network and alter said vectorial sum, and additional tuning means coupled to said network and adjustable to compensate for any unbalance from said predetermined tuned relation.

2,457,728
POWER STEERING MECHANISM AND FOLLOW-UP CONTROL VALVE THEREFOR
Evue J. Ringer, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 28, 1945, Serial No. 596,309
8 Claims. (Cl. 180—79.2)



1. In an automotive vehicle provided with a steering mechanism including a pitman arm, a steering wheel and a steering column; power and manually operated means for effecting either a power operation of the steering mech-

anism or a manual operation of said mechanism in the event of failure to effect a power operation of the mechanism, or a combined power and manual operation of said mechanism; said power and manually operated means including a multi-motored vacuum engine a rotary valve for controlling the operation of said engine by providing fluid passages in communication with the re-

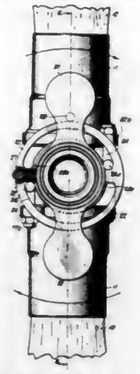


spective motors of said engine, a manually and power operated follow-up to lap valve for both initiating and cutting off the flow of pressure fluid to and from the aforementioned rotary control valve whereby to effect an operation of the multi-motored engine; and force transmitting means, interconnecting the steering wheel, the multi-motored engine, the pitman arm and the follow-up to lap valve.

2,457,729
AUTOMATIC BRAKE CONTROL
Albert O. Roberts and John J. Wharam, Dearborn, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application April 19, 1945, Serial No. 589,164
7 Claims. (Cl. 192—3)

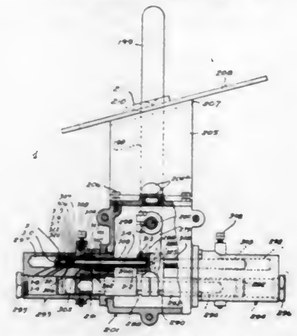
1. In an automotive control device, for vehicles having a transmission brake and a plurality of wheel brakes, a brake operating pedal, brake activating means effective on operation of said pedal to operate both said wheel brakes and said transmission brake, means associated with said brake activating means effective on release of said brake pedal to disengage said wheel brakes while retaining engagement of said transmission brake, an accelerator control, and an interlock between said accelerator control and said associated means to disengage said transmission brake on operation of said accelerator control.

2,457,730
RELAY CONTROL SYSTEM
Gerald G. Roberts, Akron, Ohio, assignor to William O'Neil, Akron, Ohio
Application August 29, 1942, Serial No. 456,630
7 Claims. (Cl. 250—10)



1. A control or signal device adapted to be connected to an audio output portion of a radio receiver and responsive to a plurality of control frequencies to cause a plurality of functional operations, comprising a plurality of circuit portions, each portion having connecting means for connection to a suitable power supply, a grid-controlled electronic tube connected to said connecting means and adapted to pass plate current from said power supply or to substantially prevent current flow, depending on the potential applied to the grid thereof, a relay operatively controlled by a change in said plate current, a filter means for selectively obtaining a higher potential at one of said control frequencies than for others, an amplifier connected to said filter means for increasing the potential at said control frequency, second filter means connected to the output circuit of said amplifier for separating the amplified potental at said control frequency, a rectifier connected to said second filter means for obtaining a rectified potential due to said amplified potential, means for delaying said rectified potential and means for impressing said rectified potential on the grid of an electronic tube in one of the other of said circuit portions, so that when said amplified potential in one of said circuit portions is of substantial magnitude a negative potential due to said rectified current is applied to said grid in another of said circuit portions, said filter means in one of said circuit portions being adapted to selectively obtain a potential at one of said control frequencies and the filter means in other of said circuit portions being adapted to selectively obtain a potential at another of said control frequencies, so that in response to one control frequency flow of plate current in one of said circuit portions is substantially prevented and in response to another control frequency the flow of plate current in the other of said circuit portions is substantially prevented, whereby said relays in said circuit portions are selectively operated in response to said control frequencies.

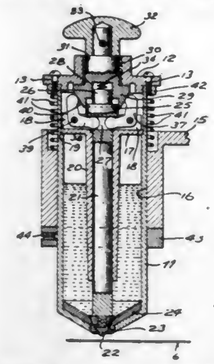
2,457,731
TWO POSITION PITCH-CHANGING MECHANISM
Horace H. Roby, Wichita, Kans.
Application October 13, 1945, Serial No. 622,180
3 Claims. (Cl. 170—162)



1. A two position pitch-changing mechanism for a controllable pitch propeller whose hub assembly includes a blade-supporting spider mounted on the propeller shaft, radial shanks on the spider and mountings on the hub ends of the blades axially rotatable on said shanks, a fly weight assembly freely rotatable with respect to the propeller shaft, a pitch changer plate also

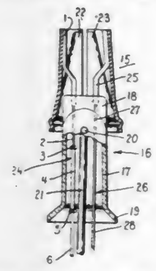
rotatable with respect to the propeller shaft and said plate having arcuate cam slots permitting movement of said changer through an arc corresponding to the range of the pitch change of the blades, separate blade actuating means slid-

able in the slots of the pitch changer and each connected to a blade mounting, contacting members on the fly weight assembly and pitch changer plate operable with increase and decrease in the rotative speed of the propeller to shift the pitch changer.



2,457,732
HYDRAULIC LATCH CONTROL MECHANISM
Edward A. Rockwell, Cleveland, Ohio
Original application June 29, 1943, Serial No. 492,745. Divided and this application October 28, 1944, Serial No. 560,869
14 Claims. (Cl. 192—8)

1. A hydraulic latch comprising a cylinder having an inlet valve therein, a plunger longitudinally reciprocable therein, an inlet valve located around the outside of the plunger and seating on the cylinder, an outlet valve mounted on the plunger, a valve-unseating rod associated with the plunger and means for operating the plunger and valve-unseating rod independently of each other.



2,457,733
GLUE DISPENSER
Francis C. Rodman, Garden City, and James E. Engel, Tottenville, Staten Island, N. Y., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del., a corporation of Delaware
Application April 30, 1946, Serial No. 666,152
4 Claims. (Cl. 91—43)

1. In a device of the character described the combination of a support, a glue pot reciprocally mounted in a bore in said support, an outlet port in the lower end of said pot, a cover removably secured to the upper end of said pot, a cam reciprocally supported by said cover, a disc mounted in said pot, a pair of opposed bell crank levers pivotally supported by said disc in operative relation to

said cam and adapted to be rocked about their pivots by the reciprocation of said cam, a valve operative to open and close said port, and operative connections between said bell crank levers and said valve for lifting said valve in response to downward movement of said cam.

2,457,734
RESISTOR FOR ELECTRIC DISCHARGE DEVICES
Theodore C. Sargent, Swampscott, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application February 1, 1947, Serial No. 725,765
7 Claims. (Cl. 315—58)

1. A lead wire for an electric discharge device comprising an electrode-supporting member, a wire member having one end thereof connected to the electrode-supporting member, a conducting ribbon mounted on the other end of said wire member, a wire-wound resistor having one end thereof connected to and held by said conducting ribbon, a second conducting ribbon secured to the other end of said resistor, and a circuit-connecting member secured to said second conducting ribbon.

2,457,735
BREAKING WATER-IN-OIL EMULSIONS
Michael Savoy, Chicago, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application April 5, 1946, Serial No. 659,883
3 Claims. (Cl. 252—332)

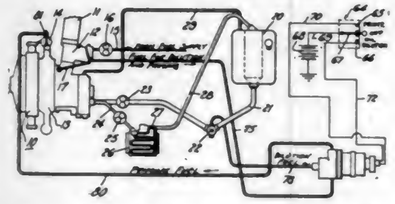
1. The method of breaking water-in-oil emulsions comprising, mixing therewith a small

amount of a demulsifying agent from the group consisting of ammonium salts and alkali metal salts of sulfonated substantially pure pinene and limonene.

2,457,736
WIRE CLOTHESPIN
Bearnard O. Schmidt, Caroline, Wis.
Application July 18, 1945, Serial No. 605,756
1 Claim. (Cl. 24—81)

A clothes pin comprising a pair of divergent integral resilient jaws, one of said jaws being in the form of an elongated loop and the other jaw extending along the long diameter of said one jaw, an elongated bar integral with and extending downwardly from said other jaw, said bar formed with an upper portion extending at an obtuse angle from said other jaw and formed with an offset corrugated lower portion substantially parallel with the upper portion thereof, the bottom end of said lower portion being looped to form one of a pair of lower divergent jaws, a reverted leg integral with said loop extending upwardly adjacent and parallel to said lower portion, a resilient eye formed integral with the upper end of said reverted leg, a second corrugated bar extending downwardly from said eye and diverging from said lower portion of said elongated bar and terminating in a second loop to form the other of the pair of lower divergent jaws, and a locking ring engaging over said bars and said reverted leg for clamping said lower jaws on an article.

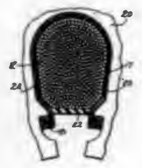
2,457,737
METHOD OF AND MEANS FOR MAKING ARCH SUPPORTS
William M. Scholl, Chicago, Ill.
Application June 12, 1944, Serial No. 539,964
6 Claims. (Cl. 36—71)



1. As an article of manufacture, a single piece blank to be shaped into an arch support, said blank comprising a substantially flat thermoplastic piece having an outline contour generally in keeping with that of an arch support, and said blank also having a relatively wide marginal bevel on the outer side thereof and a relatively narrow and more abrupt marginal bevel on the inner side thereof to provide a smooth edge and to facilitate shaping and provide a better fit of the resultant support in an article of footwear.

2,457,738
THERMOPLASTIC AMINOPLASTS
Milton J. Scott, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 2, 1946, Serial No. 659,157
9 Claims. (Cl. 260—45.1)

1. A thermoplastic resin comprising the condensation product of one mol of a dialkylol melamine obtained by reaction of melamine and an aldehyde and substantially one mol of a para-substituted phenol in which the substituent is a member of the group consisting of organic alkyl, aryl and aralkyl radicals.

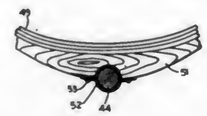


2,457,739
OIL DILUTION AND PRIMER SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Eugene A. Sherrill, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 19, 1946, Serial No. 663,300
14 Claims. (Cl. 123—180)

8. For use with an engine having an oil supply system and a fuel supply system, combined oil dilution and priming means comprising a valve chamber adapted to receive fuel from the fuel supply system, separate discharge ports through which fuel may escape from said chamber, a solenoid valve including a pair of spring biased valve members controlling said ports, a solenoid having a reciprocating armature and electro-magnet coils of opposite polarity arranged to impart reciprocatory movement to the armature, means operatively connecting said armature to said valve members, said connecting means including a reciprocating element having a lost motion connection with said armature and adapted to unseat one of said valve members when the armature is moved in one direction, and another reciprocating element adapted to engage the other of said valve members and unseat the latter when the armature is reciprocated in the opposite direction within the range of said lost motion connection, and an electric circuit including a switch for selectively energizing said coil.

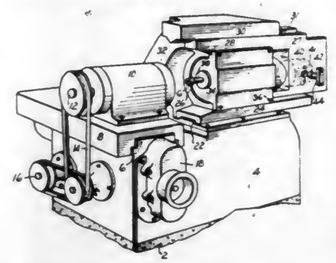
2,457,740
FLUIDPROOF WINDING ELEMENT
Frank J. Sigmund and William S. Hlavin, Cleveland, Ohio, assignors to Sigmund Corporation, a corporation of Ohio
Application December 2, 1944, Serial No. 566,368
12 Claims. (Cl. 171—252)

11. In a dynamoelectric machine employing a magnetizable core having coil slots therein, windings with coil sides in said coil slots and coil heads at the ends of said core, the provision of a covering for said windings including a thin wall wrapper impermeable to penetration of moisture for one area to dissipate heat and thick wall sections having sufficient mass to prevent penetration of moisture for other areas, comprising split impermeable nonmagnetic sleeves for each slot to surround said coil sides and extending to the coil heads, said sleeves providing substantially absolute barrier to the passage of moisture there-



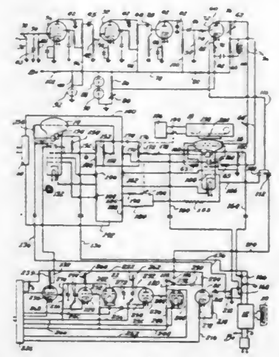
through to said coil sides, a self-contained body comprising a polymerizable and copolymerizable mass sealing the split of the sleeves and encasing the coil heads and sealing the ends of said sleeves, said mass being thick to substantially prevent the penetration of moisture therethrough, whereby said impermeable sleeves will provide thin wall protection and dissipate heat but exclude moisture from the coil sides, and said mass will protect the portions of the windings which cannot be encased in a sleeve.

2,457,741
STABILIZATION OF FATTY MATERIAL
John R. Shipner, South Omaha, Nebr., assignor to The Cudahy Packing Company, Chicago, Ill., a corporation of Maine
No Drawing. Application October 15, 1945, Serial No. 622,483
6 Claims. (Cl. 260—398.5)



1. The process of stabilizing fatty material against oxidative deterioration which comprises incorporating therewith a fatty-material-extract of leaves and stems of *Larrea divaricata*.

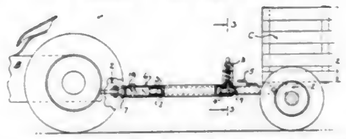
2,457,742
PUSHCART ASSEMBLY
George Soha, New York, N. Y.
Application June 18, 1946, Serial No. 677,581
2 Claims. (Cl. 280—47)



1. In a push cart assembly comprising a pair of mobile cart members each having a body and supporting wheels, a plurality of T-shaped socket members carried by one of said cart members, a plurality of T-shaped coupling members carried by the other cart member and engageable in said socket members, a spring-pressed bolt for locking a T-shaped coupling member in the socket, an upwardly extending operating rod formed integral with said bolt and including a right angular lower end, said bolt extending upwardly from said lower end, and means slidably mounting said rod on an end of said body.

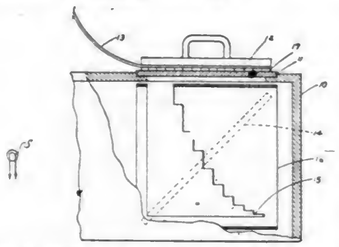
2,457,743
INTERNAL GRINDING MACHINE
Clarence C. Stevens, Forestville, Conn., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 3, 1946, Serial No. 700,958
18 Claims. (Cl. 51—50)

6. In a bore grinding machine, a frame, a work head, a wheel head, a slide for supporting and axially reciprocating one of the heads, the slide being substantially upright and arranged near the front of the frame, the supported head being substantially all within the outline of the slide, upper and lower guideways for the slide, and means for reciprocating the slide, said reciprocating means having a power transmitting connection with the slide in line with the center of gravity of the slide and the head supported thereon.



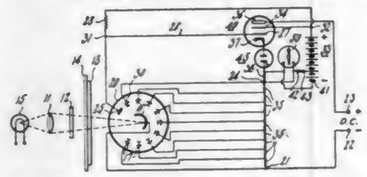
2,457,744
INSTRUMENT USEFUL IN THE ANALYSIS OF VIBRATIONS IN ORGANIZED LIVING TISSUE
Ralph E. Sturm, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a corporation of Delaware
Application July 14, 1942, Serial No. 450,889
15 Claims. (Cl. 128—2.06)

1. Apparatus for providing a distinctive mark of the occurrence of an electric potential wave generated by the heart upon an indication of heart vibrations of a patient produced by a cathode ray tube having its beam deflected in one direction in response to the vibrations, including in combination, an amplifier, means for supplying the input of said amplifier with electric potentials generated by the heart of the patient, means connected to and controlled in response to the output of said amplifier for producing a substantially constant characteristic electrical impulse of brief duration upon occurrence of the



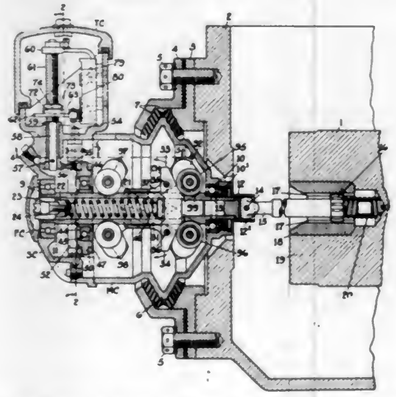
wave, and means for deflecting the cathode ray beam in said one direction in response to said impulse, thereby to provide distinctive marks or beacons indicating the occurrence of the potential waves.

2,457,745
CONVERTIBLE VEHICLE DRAWBAR
Julius J. Suess, West Allis, Wis.
Application September 10, 1945, Serial No. 615,464
1 Claim. (Cl. 280—33.44)



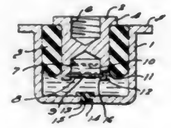
A convertible draw-bar for vehicles comprising a rectangular hollow inner tongue section having alined pairs of vertically disposed upper and lower wall spaced apertures adjacent its inner and outer ends, an outer rectangular hollow tongue section in telescopic union with the inner section, a coupling member at the end of the outer tongue section, and a spring controlled coupling pin secured adjacent to the end of the outer tongue section, the end of the pin being in engagement with the upper wall of the inner tongue section between its pairs of apertures when the tongue sections are freely slidable one upon the other for adjustment, a stud seated in apertures of the outer tongue section for engagement with the end of the inner tongue section, whereby the spring pin is aligned with the inner tongue end apertures to accommodate different lengths of inner tongues whereby said sections may be adjusted to conform to a draw-bar length and locked by the pin engaging one pair of the apertures of the inner tongue section.

2,457,746
SENSITOMETER EMPLOYING REPEATING WEDGE MODULATOR
Monroe H. Sweet, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application November 7, 1944, Serial No. 562,294
5 Claims. (Cl. 95—10)



1. In a time-scale photographic sensitometer the combination of a light source, an exposure plane and means for retaining a sensitized layer at that plane, a stepped exposure aperture the steps of which progressively vary in extent for varying the exposure time during which light from said source is permitted to pass, and by which its effect on the layer is modulated, and means for further varying the effect of said light on the layer including an optical, repeating wedge positioned tranversely of the light beam which passes through said exposure aperture and having steps, the density of each of which varies from a maximum at one edge to a minimum at the opposite, said wedge being so positioned that its steps align with the steps of the said aperture so that each wedge step shall modulate light passing through its respective aperture only.

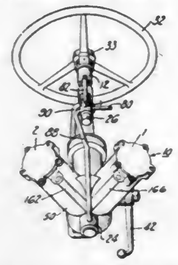
2,457,747
ELECTRON MULTIPLIER TUBE CIRCUITS
Monroe H. Sweet, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application February 15, 1946, Serial No. 647,932
20 Claims. (Cl. 250—27)



1. An electronic measuring circuit comprising, in combination, an electron multiplier tube including an anode, a cathode and intermediate multiplier electrodes arranged therebetween; voltage means connected to the electrodes of said tube for impressing potentials therebetween; a source of potential; variable impedance means connected in electrical series relation with said source and said voltage means and effective to vary the potential drop across said voltage means; multiplier tube anode current responsive means connected in circuit relation with the output of said tube and with said variable impedance means and effective to vary the impedance of the latter, as a function of such anode current, to modulate such impressed potentials as a function of such anode current; and voltage stabilizing means in circuit connection with said anode and the adjacent multiplier electrode and effective to maintain the potential therebetween substantially constant irrespective of variations in such anode current.

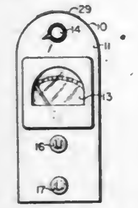
2,457,748
SPEED GOVERNOR FOR RAILWAY VEHICLES
Herbert B. Taylor, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application February 22, 1944, Serial No. 523,462
2 Claims. (Cl. 264—15)

1. In speed governors; in combination; a housing, a hollow rotatable slotted shaft in the housing; means for rotating the shaft; a crosshead received in the slot and slidable therein lengthwise of the shaft; a centrifuge carried by, and rotatable with the shaft, and movable to assume different positions dependent upon its speed of rotation; elastic means biasing the crosshead in one direction; means operatively connecting the centrifuge to the crosshead so as to move the crosshead in the other direction; a cam shaft; a cam on the cam shaft; means operable by the cam; means connecting the crosshead to the cam shaft and including, a spur gear on the cam shaft, a pivoted frame, a toothed sector carried by the frame and in mesh with the gear, a ball bearing with its outer race pivoted to the frame and its inner race slidable on and rotatable with the slotted shaft, and an operative connection between the crosshead and said inner ball bearing race.



2,457,749
ENERGY DISSIPATING ANTIVIBRATION DEVICE
Leon F. Thiry, Belgium, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application May 6, 1944, Serial No. 534,495
14 Claims. (Cl. 248—358)

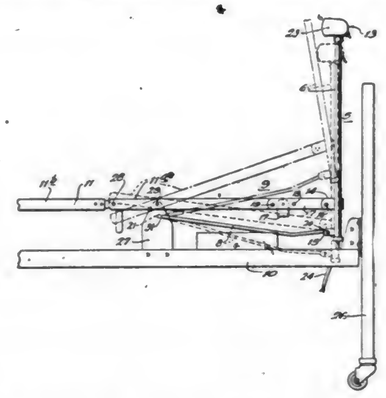
1. A vibration mount, including a pair of coaxial elements having an annular space therebetween, an annular rubber member in said space resiliently connecting said elements and permitting relative movements of said elements only through deformation thereof one of said elements being in the form of a closed ended cylinder and the other a piston movable axially with respect thereto upon deformation of the rubber member, said annular member, said closed ended portion of said cylinder element and an end portion of said co-axial piston element defining a space, means movable with said piston for dividing said space within the closed end of the cylinder into two compartments having a restricted connecting passageway, a liquid substantially filling one of said compartments and partially filling the other, and a gas filling the remainder of said other compartment.



10. A vibration mount, including a pair of coaxial elements having an annular space therebetween, an annular rubber member in said space resiliently connecting said elements and permitting relative movements of said elements only through deformation thereof, one of said elements being in the form of a closed ended cylinder and the other a piston movable axially with respect thereto upon deformation of the rubber member, a compartment formed in said piston element, said annular member, said closed ended portion of said cylinder element and an end portion of said co-axial piston element defining a space, said compartment communicating with said space, a liquid substantially filling said space and partially filling said compartment, a gas filling the remainder of said compartment, said compartment being of substantially smaller volume than said space.

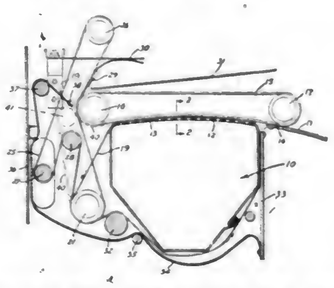
2,457,750
POWER STEERING MECHANISM
Thomas H. Thomas, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 4, 1945, Serial No. 614,319
7 Claims. (Cl. 180—79.2)

5. Power and manually operated or manually operated means for effecting the steering operation of the front wheels of an automotive vehicle including a manually operated steering wheel, a force transmitting member adapted to be connected to the drag link of the steering mechanism, force transmitting means, including a yieldable lost motion connection, for interconnecting the steering wheel and the aforementioned force transmitting member, a two motored engine having the power elements thereof operably connected to one part of the force transmitting means, a two-part distributor valve for controlling the operation of the motors of said engine, one part of said valve controlling one of said motors and the other part of said valve controlling the other of said motors, and a master control valve, operable as a result of the operation of the aforementioned lost motion connection, for initiating and for cutting off the operation of the distributor valve.



2,457,751
TEMPERATURE MEASURING APPARATUS
Clifford J. Thompson, Davenport, Fla., assignor to Fruit Growers Express Company, a corporation of Delaware
Application June 17, 1946, Serial No. 677,391
3 Claims. (Cl. 73—342)

1. In electrical measuring apparatus, the combination comprising a housing, a Wheatstone bridge circuit within said housing, said circuit including resistances, an indicating instrument, a source of energy within said housing and a variable resistance in series therewith, a test resistance within said housing connected in said bridge circuit, a plug-in connector mounted on said housing for connecting said circuit to a plurality of external resistances, said source of energy being connected to said plug-in connector for connection to said Wheatstone bridge circuit when said external resistances are connected to said plug-in connector, and a plurality of switches

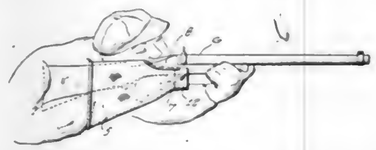


carried by said housing connected to said connector and to said test resistance for simultaneously disconnecting said test resistance and selectively connecting each of said external resistances to said bridge circuit.

2,457,752
ADJUSTABLE LAMP FOR TILTABLE BEDS
Don Carlos Travis, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a corporation of Delaware
Application November 12, 1947, Serial No. 785,222
7 Claims. (Cl. 248—274)

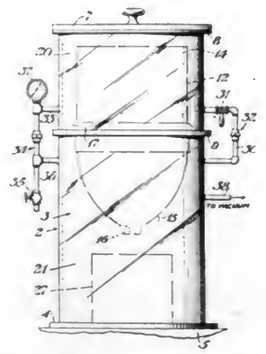
1. A lamp adapted for adjustable association with a pair of relatively movable members and comprising, a lamp post, means for hinging said post on one of said members, and means connecting said post to the other of said members whereby a relative movement of said members will automatically alter the angularity of said post with respect to said one member.

2,457,753
CONVEYING MEANS FOR DRY PRINTING MACHINES
Frederick Otto Trump, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application May 14, 1947, Serial No. 747,898
6 Claims. (Cl. 95—89)



1. In a dry developing machine, the combination of a tank for developing vapors, said tank having a perforated, developing portion through which the said vapors pass, a plurality of channels in the said perforated developing portion of the tank in parallel spaced relation and extending in the direction of travel of material to be developed, a flexible vapor confining and material advancing sleeve overlying the perforated portion of the tank and movable relatively to the surface thereof, a plurality of endless mesh strips cooperating with said vapor confining means to advance the sensitized material to be developed past the developing portion of the tank, each said strip being guided within a channel and having a thickness slightly greater than the depth of the channel so as to support the sensitized material and to lessen the contact pressure between it and the tank surface area intermediate the channels, and means for driving said mesh strips at substantially the same speed as the said sleeve.

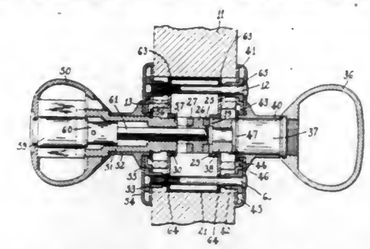
2,457,754
PROCESS OF EXTRACTING DIASTASE
Irwin W. Tucker and Arnold K. Balls, Washington, D. C., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application April 22, 1943, Serial No. 484,080
3 Claims. (Cl. 195—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process of extracting diastase from wheat grain products, comprising treating a wheat grain product with a neutralized aqueous solution of a sulphite salt, at a temperature below that which destroys enzymes, thereby to cause liberation of the diastase in water-soluble form, and recovering the liquid containing the diastase from the treated product.

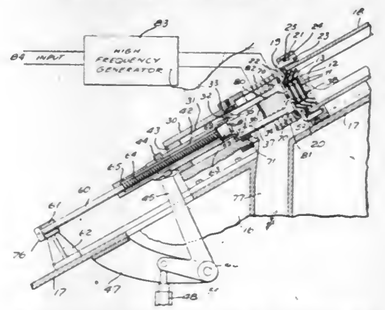
2,457,755
FINGER PROTECTOR FOR TRIGGER HANDS
Walter Ugazio and Edward C. Boccafogli, Clifton, N. J.
Application December 11, 1946, Serial No. 715,376
2 Claims. (Cl. 42—1)

1. A finger protector for trigger hands on a gun having a trigger and breech mechanism, comprising a sleeve cover having ends and adapted to be formed into conical shape about the gun, slide fastener means securing the ends of the cover together and releasable to permit the disposing of the sleeve upon the gun, a U-shaped metal clamp open at the top and embedded in the cover material at the forward end of the sleeve cover, said cover when the ends are joined providing for a longitudinally extending slot at the forward end of the cover and extending from the free end of the U-shaped clamp and adapted to allow the breech mechanism of the gun to project therethrough and to allow the clamp to be located ahead of the gun trigger and screw means extending through the free ends of the clamp to bring the same into clamping engagement with the sides of the breech mechanism, said cover depending downwardly from the gun sufficiently to permit the extension of the arm and hand of the user of the gun so that the finger can be located about the trigger and whereby the same will be protected against the cold.



2,457,756
VACUUM APPARATUS FOR INVESTMENT OF PATTERNS
Joe R. Vest, Phoenix, Ariz.
Application February 24, 1947, Serial No. 730,386
2 Claims. (Cl. 22—36)

2. Apparatus for the investment of patterns in flasks by plaster mold composition whereby occluded gases are removed from said mold composition and from the surfaces of said flask and pattern, comprising, in combination, a vacuum chamber composed of a cylinder having an open top and bottom, a removable lid fitted to close its top, and a supporting pad adapted to close its bottom, and having an inner annular shelf attached to its inner wall approximately midway of its height; a flexible cylindrical mold composition container having an annular flange approximately midway of its height, adapted to removably fit within said annular shelf with said flange sealing thereon whereby it is supported in said chamber and said chamber is divided into upper and lower compartments; the walls of said flexible container converging at the bottom and terminating in a slitted star-shaped boss forming a resilient plaster discharge valve; a pattern investing flask positioned in said lower compartment below said plaster discharge valve; a tube adapted to be connected to a vacuum pump inserted in said vacuum chamber and opening into the said lower compartment thereof; a tube closable by a valve leading from said lower compartment to said upper compartment of said vacuum chamber, and a tube closed by a valve attached to said vacuum chamber and opening into said upper compartment.

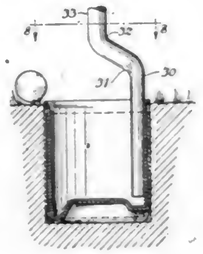


2,457,757
LOCK
Henry G. Voight, Hamden, Conn., and Samuel Oxhandler, Flushing, N. Y., assignors to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application August 6, 1945, Serial No. 609,182
4 Claims. (Cl. 70—144)

1. A door lock comprising a case having mounted therein a bolt and bolt-retracting mechanism, escutcheon plates at each side of the case, knobs rotatably mounted in said escutcheon plates and having shank portions entering the case and there operatively engaging said retracting mechanism, means securing said escutcheon plates to the case in definite relation thereto to insure proper alignment of the knobs with the retracting mechanism, said means comprising sleeves secured to the escutcheon plates, said case having openings to receive said sleeves, a face plate secured to the case, said face plate

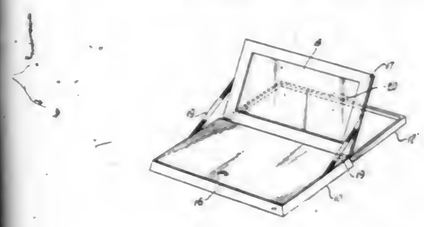
having rearwardly directed flanges, and the forward edges of said escutcheon plates overlapping the rear edges of said flanges.

2,457,758
CAPPING MACHINE FOR FEEDING CAPS THROUGH A HIGH-FREQUENCY HEATING COIL
Herbert G. Vore, Forest Hills, N. Y., assignor to American Seal-Kap Corporation of Delaware, Wilmington, Del., a corporation of Delaware
Application October 30, 1944, Serial No. 561,060
5 Claims. (Cl. 226—88.1)



5. A machine for applying to containers and heat-sealing thereon preformed hood caps having foldable pleated skirts carrying a thermoplastic adhesive coating and having an electrically conductive character at least in the region of said coating, said machine including a magazine containing a supply of said caps, a coil of a size to allow said caps to pass therethrough, means to remove successive caps from said magazine and feed said caps in succession through said coil, and a source of high frequency energy connected to said coil to establish a high frequency electromagnetic field therein whereby the conductive regions of the caps passing through said coil will absorb electromagnetic energy in amounts sufficient to heat said adhesive to plasticizing temperatures.

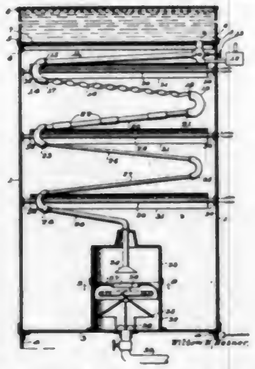
2,457,759
GOLF CUP
George F. Wales, Kenmore, N. Y.
Application May 26, 1944, Serial No. 537,423
4 Claims. (Cl. 273—34)



1. A golf ball receptacle for a hole in a putting green comprising a cup having a cylindrical wall extending to within a short distance of the ground level and a closed bottom formed inwardly to provide an annular well between the

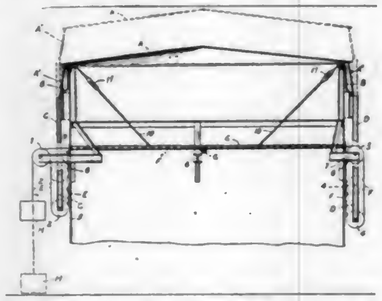
cylindrical wall and said bottom and a removable internal cup having walls the full depth of the hole and being shaped to fit closely into said

outer cup in such manner that the volume of space between the inner wall of the outer cup and the outer wall of the inner cup is less than the volume of said annular well.



2,457,760
COMBINED DISPLAY AND SERVICE TRAY DEVICE
Carl Weissman, Bronx, N. Y.
Application March 7, 1945, Serial No. 581,389
2 Claims. (Cl. 312—149)

1. A combined display and service tray device for use on a sales counter or show case of a jewelry store, said device comprising two principal sections, one section comprising a shallow hollow base having a fabric covered display platform, the other section comprising a thin cover for said platform hinged thereto and provided with means to limit its opening movement to an arc of more than ninety degrees but less than one hundred and forty degrees, the inner surface portion of said cover comprising a reflector, in combination with a shallow tray located in said hollow base and movable outwardly therefrom to a position beneath the cover, when in open position, to enlarge the supporting base of the device.

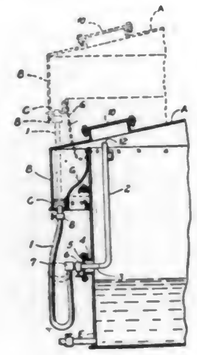


2,457,761
IRRADIATION OF LIQUIDS USING ULTRAVIOLET LIGHT
Wilton W. Wesner, Rancocas, N. J.
Application December 8, 1944, Serial No. 567,237
2 Claims. (Cl. 250—49)

2. Irradiation apparatus comprising a plurality of light penetrable rectilinear tubes, one above the other, at least one of said tubes being of flattened cross-section and spirally twisted, tubular means connecting the adjacent ends of said tubes to conduct substances therethrough continuously downwardly, and ultra-violet ray lamp means

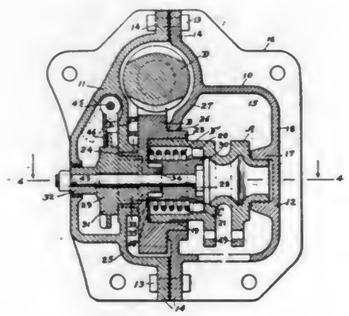
located and disposed to treat the said substance in its passage through the tubes.

2,457,762
BALANCER OR LEVELING MECHANISM FOR GASHOLDERS
John H. Wiggins, Chicago, Ill.
Application December 13, 1945, Serial No. 634,806
3 Claims. (Cl. 48—176)



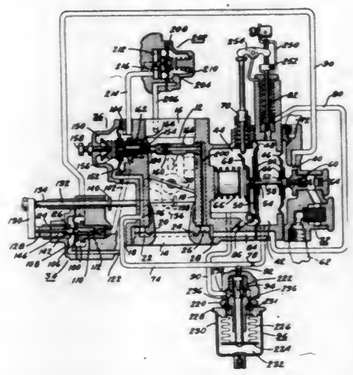
1. A gas holder, comprising a stationary tank, a vertically-movable bell, a pair of flexible members attached to opposite ends of a diameter of the tank, a double wheel mounted on the tank side wall and provided with a wide traction surface over which both of said flexible members travel side by side, a weight attached to both of said flexible members at a point beyond said double wheel and disposed so as to hold both of said flexible members taut and in tight frictional engagement with said double wheel, and vertically-movable guide wheels on the bell, under which said flexible members travel before converging at said double wheel.

2,457,763
CONDENSATE DRAINAGE MECHANISM FOR FLUID STORAGE APPARATUS
John H. Wiggins, Chicago, Ill.
Application August 17, 1946, Serial No. 691,309
10 Claims. (Cl. 48—176)



1. A liquid storage apparatus, comprising a storage tank, a vertically-movable roof that extends beyond the side wall of said tank, a reservoir mounted on said roof so as to receive condensate that drains from the peripheral portion of the roof, a flexible sealing element between

said roof and tank disposed so that condensate on said sealing element will drain into said reservoir, a condensate drain attached to said reservoir and tank for conducting condensate from said reservoir into the interior of the tank, said

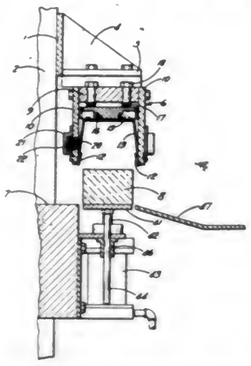


drain having provision for providing for the vertical movement of the roof, and an automatically-operating means for preventing liquid in the tank backing up through said drain and entering said reservoir.

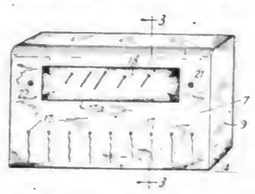
2,457,764
HAND BRAKE
Keith Williams, Buffalo, N. Y.
Application August 7, 1946, Serial No. 688,858
5 Claims. (Cl. 74—505)

1. In a hand brake mechanism, the combination with a rotary chain-winding member; of a rotary driving member; a sliding, shiftable clutch element rotatable with said driving member and having clutching engagement with said chain-winding member; a ratchet wheel fixed to said clutch element for rotation and sliding movement in unison therewith; a pivoted pawl freely swingable in one direction to ratchet over said wheel; means for blocking said pawl against swinging in a reverse direction; and cam means on said ratchet wheel engageable with said pawl in its blocked condition for shifting said ratchet wheel and clutch element to disengage the latter from the winding member when the clutch element is rotated in chain-unwinding direction.

2,457,765
CARBURETOR
Albert H. Winkler, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application July 31, 1943, Serial No. 496,896
5 Claims. (Cl. 261—69)



4. In a charge forming device: a throttle-controlled air-intake passage having a venturi therein anterior the throttle, a fuel conduit leading from a source of fuel under pressure and terminating in a fuel-discharge nozzle located in said passage, a fuel-metering restriction in said conduit, means for regulating the pressure of fuel upstream of said restriction, means for regulating the pressure of fuel downstream of said restriction independently of upstream pressure thereof including a valve controlling flow of fuel to said nozzle and spring-pressed toward closed position and subjected in a valve-opening direction to the pressure of fuel downstream of said restriction and to Venturi suction; said discharge nozzle having an emulsion chamber receiving liquid fuel from the fuel conduit at pressures determined by said valve, a discharge passage communicating the emulsion chamber with the air-intake passage posterior the throttle, and means for supplying air to said emulsion chamber, said discharge passage being calibrated in a manner such as to limit the suction effect on the emulsion chamber to a critical maximum so that under certain conditions of operation, for example, at partly or fully closed throttle when Venturi suction is at a low value and posterior throttle suction is high, the disturbing effect of intake passage suction on the said valve and hence on the fuel-air ratio will be minimized.



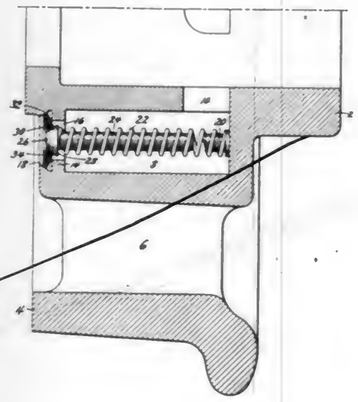
2,457,766
APPARATUS FOR APPLYING METAL CASES TO BRICKS
Clair I. Young, Pittsburgh, Pa., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 9, 1947, Serial No. 753,583
15 Claims. (Cl. 18—1)

1. Apparatus for applying a channel shape sheet metal case with downwardly extending flanges to a refractory brick that is wider than the space between the lower edges of the flanges, comprising a pair of substantially parallel tracks adapted to support the lower edges of the flanges of such a case and to project a short distance up into it, said tracks being spaced apart farther than the upper portions of the case flanges, means for pushing a case lengthwise onto said tracks to

spring the case flanges outwardly into downwardly diverging position, and means adapted to lift a refractory brick up between the diverging flanges high enough to lift them out of engagement with said tracks, whereby the flanges will spring inwardly against the sides of the brick and the encased brick can be lowered between the tracks.

2,457,767
COMBINED SEWING CASE AND PINCUSHION
John A. Zampino, Brooklyn, N. Y.
Application February 15, 1946, Serial No. 647,797
2 Claims. (Cl. 223—107)

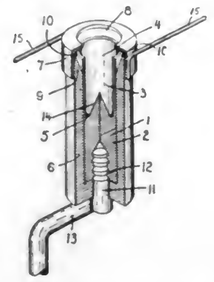
1. A one piece metal sewing cabinet, comprising a base, and a body having end walls, a front wall and a top wall connected to the base to provide an open rear for the cabinet, the top wall having a pendant flange with mounting notches, the front wall of the cabinet having a window opening, a board having an outwardly swelled pin cushion snugly projecting through said opening with the board disposed against the rear side of said front wall, screws demountably connecting the ends of the board to the front wall to hold said cushion under pressure in said window opening, said front wall having a series of thread delivering openings, and means carried by the base for holding a plurality of thread spools for rotation in line with said thread openings.



2,457,768
STYRENE-OIL SOLUBLE NATURAL RESIN-DRYING OIL INTERPOLYMER
James A. Arvin, Homewood, and Wayne B. Gitchel, Chicago, Ill., assignors to The Sherwin-Williams Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application April 19, 1945, Serial No. 589,266
18 Claims. (Cl. 260—23)

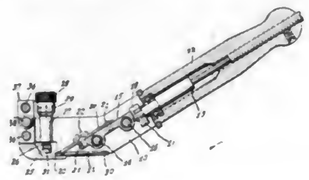
13. An interpolymer of styrene, an oil-soluble natural resin containing a free carboxylic acid group and having an acid value of at least 30 and 5% to 35% by weight of said interpolymer of a drying oil, interpolymerized at temperatures within the range of 300° F. to 550° F., the weight ratio of the resin to styrene being within the range of 1:1 to 9:1.

2,457,769
RESINOUS ESTERS OF POLYHYDRIC ALCOHOLS WITH POLYMERS OF STYRENE AND RESIN ACIDS AND METHOD FOR PREPARATION THEREOF
James A. Arvin, Homewood, and Wayne B. Gitchel, Chicago, Ill., assignors to The Sherwin-Williams Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application August 30, 1945, Serial No. 613,702
14 Claims. (Cl. 260—23)



12. A resinous ester of a polyhydric alcohol and a copolymer of styrene and an oil soluble natural resin having an acid number of at least 30, the weight ratio of said resin to styrene being within the range from 2:1 to 9:1 and the copolymer being formed at a temperature within the range of 300 degrees F. to 550 degrees F.

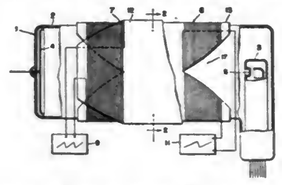
2,457,770
LUBRICATING DEVICE
Fred J. Bogard, Huntington, W. Va., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application September 18, 1943, Serial No. 502,898
5 Claims. (Cl. 308—109)



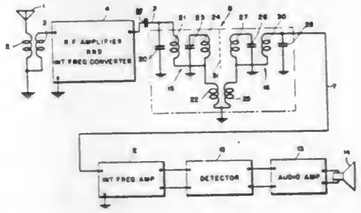
1. The combination with a wheel, of a lubricating device therefor comprising, a reciprocatory valve member mounted in a lubricant receiving cavity in the wheel, a ledge overhanging and partially closing the outer end of said cavity, a truncated conical surface overhanging said ledge, and an outwardly opening cupped disc closing in part the lubricant receiving cavity and bearing on said truncated conical surface and ledge to lock the disc in the wheel, said disc being formed with a valve seat adapted to be engaged by said valve member to seal said cavity against escape of lubricant.

2,457,771
CRATER LAMP
George H. Bouchard, Ipswich, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application January 2, 1947, Serial No. 719,852
2 Claims. (Cl. 176—122)

1. A luminous crater electrode comprising a hollow, electron-emitting metal cylinder closed at one end only, and a conical projection extending upward inside the hollow cylinder from said closed end.



2,457,772
SURGICAL INSTRUMENT FOR SKIN GRAFTING
Harry M. Brown, Indianapolis, and Milford Barron, Anderson, Ind.; Irene Brown administratrix of said Harry M. Brown, deceased, assignors to Irene Phillips Brown, Indianapolis, Ind.
Application August 25, 1947, Serial No. 770,360
13 Claims. (Cl. 128—305.5)

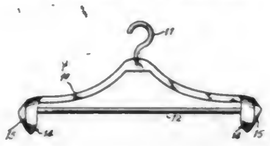


1. A dermatome comprising a hand-holdable frame having a foot-plate to bear against the skin, a knife mounted in said frame to oscillate transversely therein and having a cutting edge in front of and substantially in the plane of said foot-plate, a shaft rotatably mounted in said frame and having a driving connection to said knife to oscillate the latter, and a pressure-plate mounted on said frame to engage the skin in front of the knife, the skin-engaging face of said foot-plate being provided with parallel ribs transverse to the cutting edge of the knife.

2,457,773
DEFLECTING COIL
Madison Cawein, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application May 24, 1944, Serial No. 537,137
8 Claims. (Cl. 175—21)

1. A magnetic deflecting element including a coil and a cylindrical form, said form being notched at each end thereof, said coil consisting of a winding having its longitudinal conductors disposed on one surface of the form, the lateral end conductors being wound through each notch and about the other surface of the form.

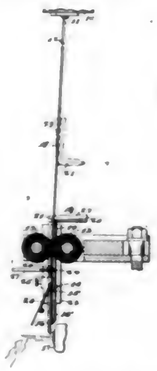
2,457,774
INDUCTIVELY COUPLED BAND-PASS FILTER
Madison Cawein, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application October 30, 1944, Serial No. 561,063
8 Claims. (Cl. 178—44)



6. A composite band pass filter comprising two identical filter sections, each of said filter sections including two identical resonant circuits, each of said resonant circuits having a capacitance element and an inductance element connected in parallel and another inductance element connected in series therebetween, said series inductance element being common to two of said circuits for providing a self-inductive coupling therebetween, said two common inductance elements being optimum-coupled to each other with a mutual inductive coupling therebetween to provide for a broad-band substantially flat response, means for supplying an input signal across a capacitance element of one of said filter sections, and means for deriving an output signal across a capacitance element of the other one of said filter sections.

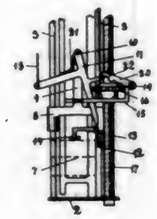
2,457,775
MANUFACTURE OF GLASS FIBERS
Paul Ebaugh, Cambridge, Mass., assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
No Drawing. Application October 27, 1943, Serial No. 508,091
8 Claims. (Cl. 49—77)

1. In the method of making glass fibers in which streams of molten glass are continuously flowed from a supply of molten material, the streams are continuously attenuated into fibers at lineal speeds at least as high as about 10,000 feet per minute, and the fibers are continuously collected into a wound package as they are attenuated, the step of applying to the fibers after they are formed but in advance of their collection into the package a fiber-coating material containing a resin and a combination of a solvent for the resin and a non-solvent for the resin, the non-solvent having a lower volatility than the solvent, the solvent and non-solvent being in such proportions that



the resin will coagulate upon evaporation of at least a part of the resin solvent subsequent to application of the material to the fibers and prior to collection of the fibers with the attendant coagulation of the resin to protect the fiber surfaces.

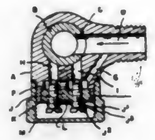
2,457,776
GARMENT HANGER
Harry Goldlust, New York, N. Y.
Application August 16, 1946, Serial No. 691,043
1 Claim. (Cl. 223—92)



In a coat hanger, a shoulder-supporting member adapted to extend interiorly of a coat between the arm holes thereof and a pair of rigid shoulder-shaping members, carried one at each end of said supporting member; each of the shoulder-shaping members comprising a body presenting a pair of intersecting convex-curved surfaces whose line of intersection is an inverted U-shaped edge on said body; the downwardly extending portions of said edges being positioned to lie respectively along the front and back of the interior of the coat along substantially what would constitute the respective junction lines of the arms and torso of a wearer of the coat and the most remote of said surfaces on the shoulder-shaping members, being in downwardly, outwardly divergent relation; the coat being adapted to be supported on the said remote surfaces and along and on said respective edges, whereby the coat assumes the shape it has when worn.

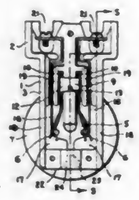
2,457,777
APPARATUS FOR GUIDING AND THREADING FIBERS
William F. Holtschulte, Newark, and Samuel D. Philipps, Granville, Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio, a corporation of Delaware
Application April 7, 1945, Serial No. 587,064
9 Claims. (Cl. 49—17)

6. Fiber producing apparatus comprising a feeder having a plurality of laterally spaced orifices for flowing a corresponding number of streams of glass to form filaments, means for continuously drawing the filaments, a guide having channels therein associated with said drawing means including a removable device having angularly extending grooved guide and comb portions, said guide portion having filament receiving grooves spaced laterally from each other distances which are somewhat less than the spacing between the orifices and in alignment with said channels, and said comb portion having filament receiving grooves which diverge from the receiving ends of the grooves in the first portion and are spaced from each other at the free ends distances which correspond to the spacing between the orifices.



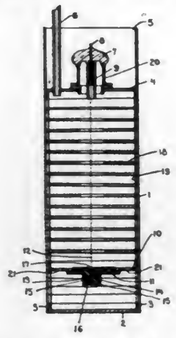
2,457,778
COMMODITY DELIVERY DEVICE FOR COIN-FREED APPARATUS
Axel Jørgensen, Aalborg, Denmark
Application October 2, 1945, Serial No. 619,757
In Denmark November 19, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 19, 1961
3 Claims. (Cl. 312—63)

3. In an article delivery device for a coin-freed apparatus, the combination of a number of vertical spacing rods between two horizontal end plates, a platform slidable on the spacing rods, a bell crank lever pivotally mounted on the platform and adapted to be actuated out of its inactive position, a member secured to the lever in position to eject the uppermost article of a stack of articles when the lever is actuated, a presser foot on the lower end of the lever and adapted to rest upon the uppermost article in the stack, an extension on the platform, a vertical threaded spindle rigidly fixed to the end plates and passing through the extension, an internally threaded ratchet wheel mounted on the spindle and disposed within the extension, a pawl pivoted on the extension and disposed to engage and lock the ratchet wheel during the actuation of the lever while ejecting the uppermost article, and a lug on the lever for raising the pawl out of engagement with the ratchet wheel upon the return movement of the lever to its inactive position to permit said platform to be lowered and the presser foot of the bell crank lever to contact the uppermost article of the stack.



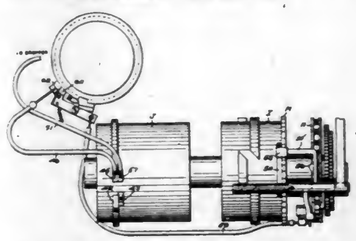
2,457,779
GAS COCK
William S. Kincaid, Detroit, Mich., assignor to The Roberts Brass Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application September 25, 1944, Serial No. 555,683
9 Claims. (Cl. 277—66)

5. In a valve of the character described, a valve body having a valve chamber for the reception of a rotary valve, an inlet passage and a plurality of ports spaced circumferentially around said chamber, an outlet passage leading from said chamber, an outwardly open recess in said body at the outer ends of said spaced ports, a by-pass between said inlet passage and said recess, a removable closure plate for said recess, means carried by said plate for controlling said spaced



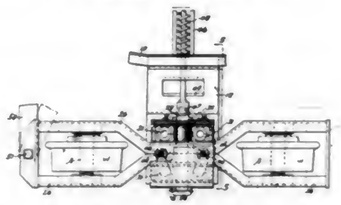
passages, and a rotary valve in said chamber having a port adapted to register with said inlet passage and alternately with said spaced ports.

2,457,780
SOCKET FOR GASEOUS DISCHARGE LAMPS
Solomon Levenson, Marblehead, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application August 16, 1944, Serial No. 549,752
4 Claims. (Cl. 200—51.09)



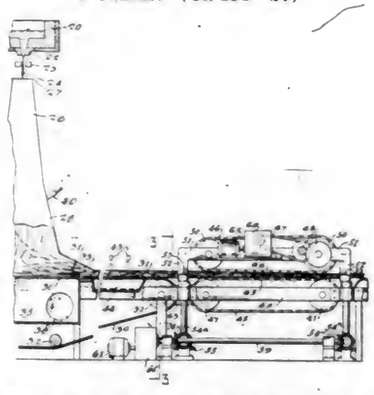
1. A socket for supporting and conducting electrical energy to a fluorescent lamp having spaced contact pins comprising a unitary frame of insulating material presenting an attaching base portion and an upright column portion, a recess in said upright opening away from said base portion and closed at its bottom, a slot extending from the recess to the top end of said frame through which said pins are passed to enter the recess, the surface of the top end of the socket being spaced from the said recess a distance slightly greater than the space between said pins whereby the lamp cannot be inserted in the socket with one pin outside, a conductor member anchored in said frame having a pair of spring contact members extending into said recess in position to be engaged and sprung outward by said pins when a lamp is put into the socket, at least one additional conductor anchored at one end and at its other end extending into the path of said extensions on said first named conductor and means for connecting said second named conductor to a source of electric current.

2,457,781
RAY COUNTER
Herbert Metten, Boston, and Frederic Koury, Somerville, Mass., assignors to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application January 2, 1948, Serial No. 94
8 Claims. (Cl. 250—27.5)



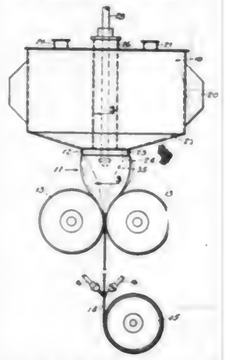
1. In a ray counter tube having a gas filling and an anode, a cathode comprising a bismuth-plated annular metal disc.

2,457,782
HOSIERY KNITTING MACHINE
Eugene O. Nadon, Northfield, Vt., assignor to Vermont Hosiery and Machinery Co., Northfield, Vt., a corporation of Vermont
Application May 25, 1946, Serial No. 672,187
11 Claims. (Cl. 66—14)



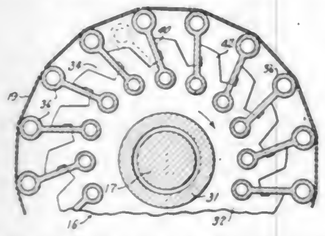
1. In a knitting machine of the type including upper and lower cylinders supporting needles for transfer from one to another and operating instrumentalities associated with them to produce automatically circular hosiery having heel and toe pockets and to knit ribbed, plain and welt leg fabrics and to change automatically from one style of knitting to another, said instrumentalities including a pattern mechanism comprising a swivel cam, a cam drum and at least three sets of needle operating sliders having different lengths of butts; a construction including special cam elements in said pattern mechanism, and connections actuated by them for operating the swivel cam of the machine at an abnormal point in the cycle of operations of the machine to lift out of action two of said sets of needles and to produce on the remaining needles, by reciprocating knitting, a gradually widened section in the stocking immediately above the heel pocket, the pattern mechanism being constructed and arranged to restore the needle arrangement to a condition normal at the start of the regular heel immediately after completing said widened section, and then to proceed with the knitting of the heel pocket in the normal manner.

2,457,783
LATERAL SHIFTING CASTER TRUCK
Robert A. Shields, Bloomsburg, Pa., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application December 10, 1943, Serial No. 513,694
11 Claims. (Cl. 105—179)



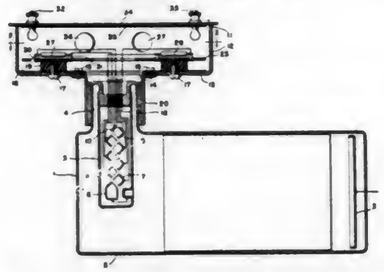
2. In a car adapted to travel along track having curves therein, the combination with a car body of, body bearing members connected to the car body adjacent each side thereof, laterally spaced trucks swingable relative to the car body to permit travel of the body around curves in the track, truck bearing members carried by said trucks and engaging said body bearing members to support the car body, and guide means carried by one of said members and cooperating with curved slots in the other of said members to increase the truck gauge during swinging of the trucks on track curves.

2,457,784
APPARATUS FOR FELTING FIBROUS GLASS
Games Slayter, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
Original application January 6, 1940, Serial No. 312,730, now Patent No. 2,331,145, dated October 5, 1943. Divided and this application September 8, 1943, Serial No. 501,733
9 Claims. (Cl. 154—27)



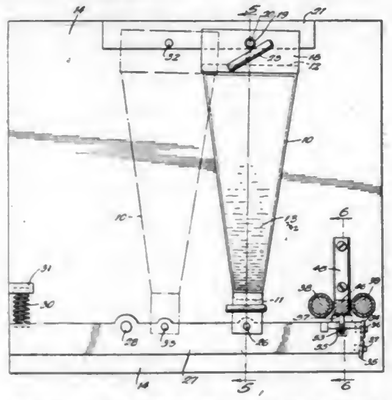
1. Apparatus for forming a coherent mass of interfelted glass fibers which comprises, a conveyor having a mat-supporting surface disposed in a plane, means for continuously moving said conveyor in its plane and thereby continuously advancing a mat supported thereon, liquid applying means in advance of said conveyor for applying a liquid to the mat as it advances to thoroughly impregnate the mat, and means for interfelting the fibers of the liquid-impregnated mat by causing short relative movements between opposite faces of the mat including a member having a mat-contacting surface supported in spaced relation with the said surface of the conveyor and in engagement with the surface of the mat and means for moving the mat-contacting surface of said member relative to the mat-supporting surface of the conveyor in the direction of travel thereof.

2,457,785
APPARATUS FOR MAKING GLASS FILM
Games Slayter and Henry Snow, Newark, Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio, a corporation of Delaware
Application August 18, 1944, Serial No. 550,117
6 Claims. (Cl. 49—17)



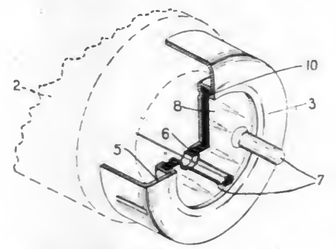
3. Apparatus for forming glass film comprising a container for molten glass, an annular flange depending from the bottom wall of said container, means for flowing the glass from said container and over the inner surface of said flange and from the lower edge of the flange as a thin-walled hollow stream, means spaced from said flange in the direction of stream flow adapted to flatten the stream and seal the interior thereof from the atmosphere, and means for introducing air into the hollow stream that is between said flange and said means to flatten the stream to thereby form a bubble in the stream adjacent the lower end of the flange.

2,457,786
APPARATUS FOR WINDING STRANDS
Games Slayter, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
Application December 22, 1945, Serial No. 636,985
9 Claims. (Cl. 242—111)



1. An apparatus for winding strand material to form a package comprising, a rotatable spindle including a hub having annular radial flanges thereon provided with radially extending substantially V-shaped slots, blades pivotally connected at each end to said flanges adjacent the apex of said slots and movable on an arc within said slots, said blades having rounded outer edges lying at all times wholly without the circumference of said flanges and adapted to receive and support thereon a flexible tube on which the strand is wound, and means for rotating said spindle to swing said blades into contact with said flexible tube.

2,457,787
POTENTIAL DIVIDER
John A. Stagnaro, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application June 2, 1944, Serial No. 538,499
5 Claims. (Cl. 250—175)

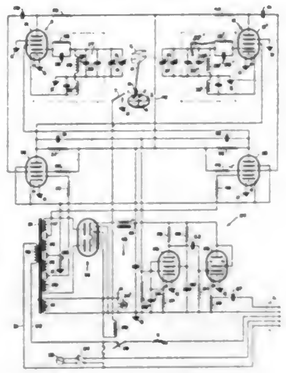


1. An electron tube assembly comprising an envelope containing therein an electron multiplier, and a potential divider permanently mounted on said envelope adjacent said multiplier and having electrical characteristics matched to those of said multiplier, said divider comprising a plurality of series-connected resistors, each of which is matched with and connected to one or more stages of said multiplier.

2,457,788
FILM EXTENSIBILITY TESTING METHOD AND APPARATUS
Johannes A. Van den Akker, Appleton, Wis., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application September 29, 1945, Serial No. 619,387
9 Claims. (Cl. 73—150)

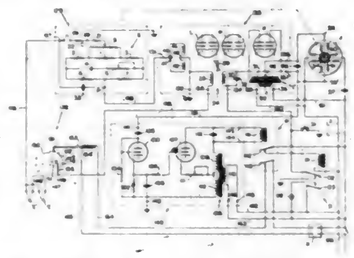
1. A method of ascertaining the extensibility of a film of paint, lacquer, adhesive, or similar material, which comprises applying a relatively thin film of said material to the surface of a relatively thick extensible base having ends to which tension may be applied and having a tapering cross section in a zone between said ends, and applying to said base through said ends a force adapted to effect a predetermined amount of extension of said base within its elastic limit, whereby said film at different points in said zone is subjected to an amount of pull per unit of its cross sectional area at any of said points which varies inversely in accordance with the cross section of the base at said point, and whereby said film may be caused to develop transverse fractures at points of inferior cross section in said zone while elsewhere maintaining its integrity.

2,457,789
LAMP BASE
Waldemar H. von Scheven, Andover, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application January 30, 1947, Serial No. 725,198
2 Claims. (Cl. 176—32)



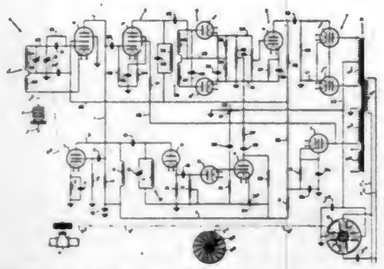
1. A base for tubular lamps comprising a drawn metal cup shaped body having its skirt portion extending over the end of the lamp and presenting a substantially flat bottom said bottom having an offset portion connected to the bottom by a cylindrical side wall to form a chamber, a flat rigid disc of insulating material received in said chamber, a plait in said side wall extending over the peripheral portion of the outer face of said disc, at least one lamp pin fixed in said disc, said offset portion having apertures therein in line with said pins to provide an insulated path for the lamp lead wires through the metal of the cup.

2,457,790
APPARATUS FOR SEQUENTIALLY KEYING AND CONNECTING A PLURALITY OF OSCILLATORS TO A COMMON OUTPUT CIRCUIT
Rudolf F. Wild and Fred J. Curran, Philadelphia, Pa., assignors to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 6, 1945, Serial No. 620,829
7 Claims. (Cl. 250—27)



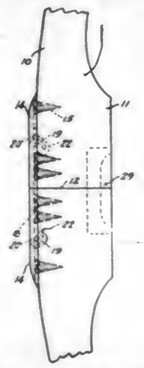
5. In an electrical system including two oscillation generators each having an output circuit and an input circuit for adjusting the oscillation generator to its oscillating and non-oscillating condition in response to a keying signal, an electron discharge device having an output circuit and a pair of input circuits, means to impress a keying signal on one of said input circuits of said electron discharge device to produce an amplified keying signal in the output circuit of said electron discharge device, means connecting the output circuit of said electron discharge device to the input circuit of one of said oscillation generators, and means connect-

ing the output circuit of the other of said oscillation generators to the other input circuit of said



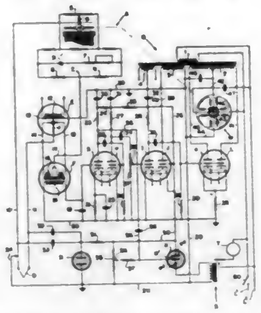
electron discharge device for transmission of the applied oscillation signal to a utilization circuit.

2,457,791
SAFE FAILURE MEASURING AND CONTROLLING APPARATUS
Rudolf F. Wild, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 21, 1946, Serial No. 678,255
13 Claims. (Cl. 318—20)



8. Measuring and control apparatus of the type comprising an electronic amplifying device having an input circuit and an output circuit, a measuring device connected to said input circuit and responsive to variations in the value of a variable quantity and adapted on a change in said quantity to impress a relatively low frequency electric signal indicative of said change on said input circuit, and a control device connected to said output circuit and actuated by and in accordance with said low frequency signal, and in combination with said apparatus, means coupling said input and output circuits to transfer energy from said output circuit to said input circuit and thereby impress a relatively high frequency signal on the relatively low frequency signal impressed on said input circuit, standby means adapted to replace at least one of said devices, switching means operative upon the development of a defect in one of said devices to disconnect said one device from said apparatus and to replace said defective device with said standby means, and means responsive to the disappearance of said high frequency signal in the output circuit of said amplifying device to actuate said switching means.

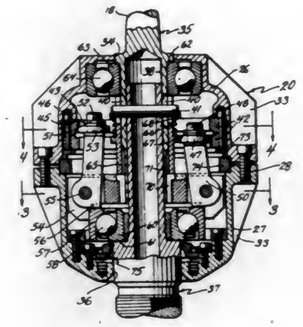
2,457,792
ANTIHUNTING MOTOR CONTROL CIRCUIT
Rudolf F. Wild, Philadelphia, Pa., and Lloyd B. Cherry, Abilene, Tex., assignors to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 21, 1946, Serial No. 678,257
28 Claims. (Cl. 318—28)



11. The combination in a self-balancing system of an electronic amplifying and motor drive network, means responsive to unbalance of said system for impressing on said network an alternating current motor drive signal having a magnitude and phase respectively dependent on the magnitude and direction of system unbalance, a rebalancing motor normally operated by said network in accordance with the magnitude and phase of said signal, and motor damping mechanism comprising an electron discharge device biased to cut-off and adapted when conductive to impress on said network a damping signal opposite in phase to said motor drive signal, balance anticipating means, and an associated differentiating network through which said anticipating means makes said electron discharge device momentarily conductive as system balance is approached.

2,457,793
TAKEDOWN BOW
Fred B. Bear, Detroit, Mich.
Application April 18, 1945, Serial No. 589,041
2 Claims. (Cl. 124—23)

2. A takedown bow split transversely at the handle, and means for connecting the upper and lower limbs comprising small substantially flat plates fastened to such limbs on the outer surface thereof, each of the plates having a hook receiving recess, and a small flat strap having hook ends detachably received in the recesses of the plates, the strap overlying adjacent portions of both of said plates, and means for securing the strap rigidly to one of the plates.



2,457,794
FAILURE INDICATING CONTROL APPARATUS
Herbert A. Clarke, Merion, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 21, 1946, Serial No. 678,254
17 Claims. (Cl. 318—28)

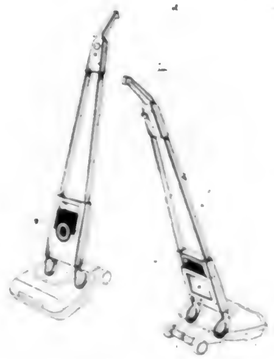
1. A self-balancing measuring and control apparatus combination, comprising a normally balanced circuit network, a thermocouple having terminals connected to said network for measurement of its voltage, and unbalancing the network on a change in its voltage, a reversible motor operable to rebalance said circuit when unbalanced, an amplifier including an input circuit and an output circuit and electronic valve amplifying means connected between said input and output circuits, said motor having a control winding connected to said output circuit, amplifier energizing means for supplying alternating current to said amplifier, and means impressing on said input circuit an alternating current, rebalancing signal which is of the same frequency as said current and varies in magnitude in predetermined proportion to the extent of network unbalance and is dependent in phase on the direction of network unbalance, means associated with said thermocouple and operative on rupture of the latter to impress on said input circuit a second signal differing in character from the first mentioned signal, the last mentioned means comprising a second signal current source having terminals connected to the thermocouple terminals, and means connected to said amplifier and responsive to and actuated by said second signal.

2,457,795
CHIP BREAKING ATTACHMENT FOR DRILLING MACHINES
Milton C. Taylor, Chicago, Ill., assignor, by mesne assignments, to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application September 17, 1945, Serial No. 616,801
10 Claims. (Cl. 77—5)

1. In a device of the class described having a housing and a drive shaft and a drill carrying driven shaft mounted therein for simultaneous rotation and relative reciprocation, an annular cam member supported upon the housing and having an inside cam path thereon with a relief therein occupying a minor portion of the circumference, a fulcrum member supported upon the drive shaft and rotatable therewith, a lever

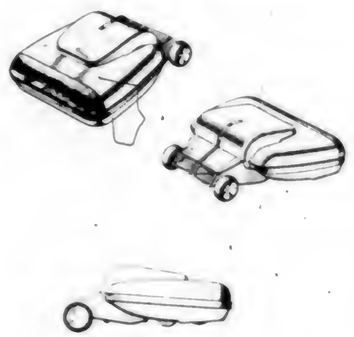
mounted upon the fulcrum member and having a follower upon one arm thereof engaging the cam, and means for transmitting movement of the other arm of the lever to the driven shaft whereby the driven shaft is reciprocated axially once each time said follower moves across said relief a distance sufficient to comminute chips developed by the drill when the drill is in cutting position.

2,457,796
METHOD OF FORMING AND ASSEMBLING CONNECTING SLEEVES
Jesse M. White, Philadelphia, Pa.
Application October 10, 1944, Serial No. 558,097
9 Claims. (Cl. 29—155.55)



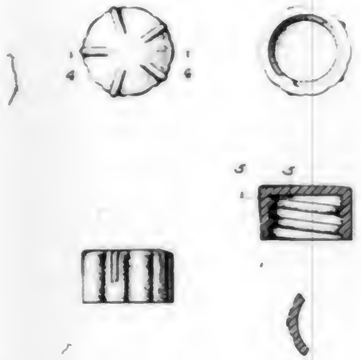
1. The method of assembling a connecting sleeve of the character described which consists in forming an outer insulating sleeve having a bore and carrying a lug extending into said bore forming an inner conducting sleeve of a split construction with a recess intermediate the extremities thereof, constricting said inner sleeve at one end to a greater extent than at the other, and then inserting said constricted end into said outer sleeve, and passing the constricted end past the said lug to cause the latter to be received in said recess.

DESIGNS



DECEMBER 28, 1948

152,182
DESIGN FOR A VACUUM CLEANER
Herbert S. Barnhart, Scarsdale, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application January 9, 1948, Serial No. 143,619
Term of patent 14 years
(Cl. D9—2)

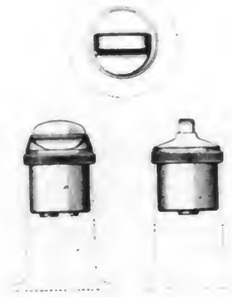


The ornamental design for a vacuum cleaner, substantially as shown and described.

152,183
DESIGN FOR A VACUUM CLEANER CASING
Herbert S. Barnhart, Scarsdale, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application January 9, 1948, Serial No. 143,620
Term of patent 14 years
(Cl. D9—2)

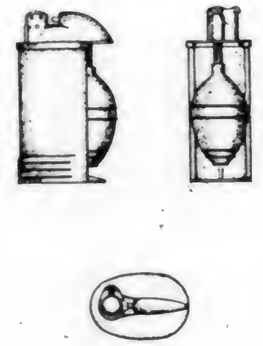
The ornamental design for a vacuum cleaner casing, substantially as shown.

152,184
DESIGN FOR A CONTAINER CAP
Leonard Baron, Whitestone, N. Y., assignor to Hobar Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application June 26, 1947, Serial No. 139,925
Term of patent 3½ years
(Cl. D58—26)



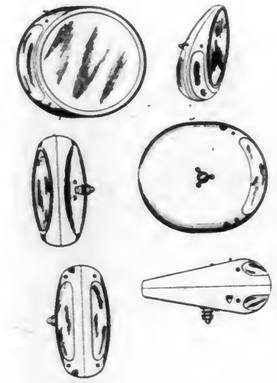
The ornamental design for a container cap, as shown.

152,185
DESIGN FOR A COMBINED TOY SINK, WATER DISPENSER, AND RECEIVER
Herman Barr, New York, N. Y.
Application May 7, 1947, Serial No. 138,891
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for a combined toy sink, water dispenser, and receiver, as shown.

152,186
DESIGN FOR A SEMIAUTOMATIC TABLE LIGHTER
Prosper W. Buchhart, Closter, N. J.
Application December 16, 1947, Serial No. 143,167
Term of patent 14 years
(Cl. D48—27)

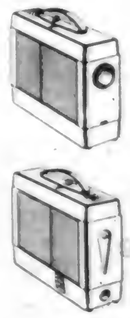


The ornamental design for a semiautomatic table lighter, as shown and described.

152,187
DESIGN FOR A HAND BLOWTORCH
Benjamin Franklin Burnham, Huntington Woods, Mich., assignor to Kerr Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 7, 1947, Serial No. 138,206
Term of patent 3½ years
(Cl. D54—13)

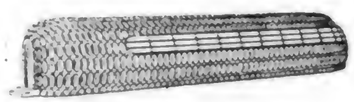
The ornamental design for a hand blowtorch, substantially as shown.

152,188
DESIGN FOR A COMBINED TURN SIGNAL, EXTREMITY MARKER, AND REARVIEW MIRROR
Thomas L. Dalton, Kansas City, Mo.
Application February 26, 1947, Serial No. 137,178
Term of patent 14 years
(Cl. D72—1)



The ornamental design for a combined turn signal, extremity marker, and rearview mirror, as shown.

152,189
DESIGN FOR A COMBINED WRIST WATCH AND STRAP THEREFOR
Gerard B. Desouches, Paris, France, assignor to Cartier, Inc., New York, N. Y., a corporation of New York
Application July 18, 1947, Serial No. 140,370
In France March 17, 1947
Term of patent 14 years
(Cl. D42—8)

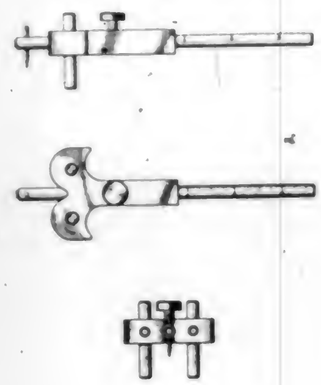


The ornamental design for a combined wrist watch and strap therefor, substantially as shown and described.

152,190
DESIGN FOR A PROJECTOR
Carl R. Diedrich, Chicago, Ill.
Application March 17, 1948, Serial No. 145,188
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a projector, as shown.

152,191
DESIGN FOR A ROADSIDE LUNCHROOM
George Dilts, Davenport, Iowa
Application July 10, 1947, Serial No. 140,179
Term of patent 14 years
(Cl. D13—1)

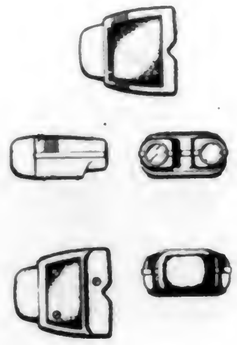


The ornamental design for a roadside lunchroom, substantially as shown and described.

152,192
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application April 7, 1948, Serial No. 145,582
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

152,193
DESIGN FOR A SCRIBER
Clifford A. Duda, Detroit, Mich.
Application April 11, 1947, Serial No. 138,308
Term of patent 3½ years
(Cl. D93—4)

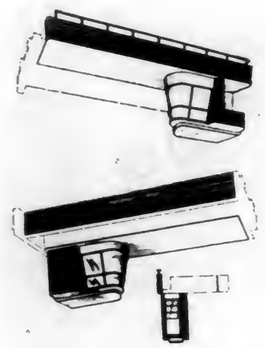


The ornamental design for a scriber, substantially as shown.

152,194
DESIGN FOR AN ASH TRAY
William Forthman, Buchanan, Mich.
Application February 21, 1948, Serial No. 144,659
Term of patent 7 years
(Cl. D85—2)

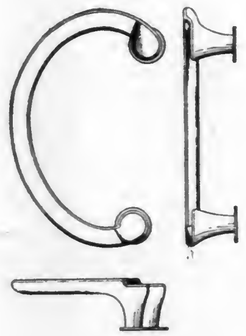
The ornamental design for an ash tray, as shown.

152,195
DESIGN FOR A TWIN VISION TRANSPARENCY VIEWER
Richard P. Fuller, Los Angeles, Calif.
Application August 20, 1947, Serial No. 140,955
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a twin vision transparency viewer, as shown.

152,196
DESIGN FOR A COMBINATION KEY HOLDER AND BOTTLE OPENER
Arthur R. Glidden, Seattle, Wash.
Application May 23, 1947, Serial No. 139,244
Term of patent 3½ years
(Cl. D17—14)

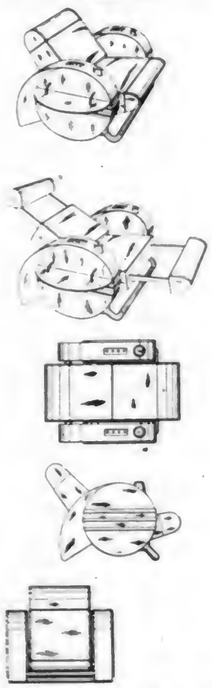


The ornamental design for a combination key holder and bottle opener, substantially as shown.

152,197
DESIGN FOR A BRIDGE CRANE
Folke Malcolm Gustafson and John McLeod Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey
Application November 29, 1946, Serial No. 135,162
Term of patent 14 years
(Cl. D13—1)

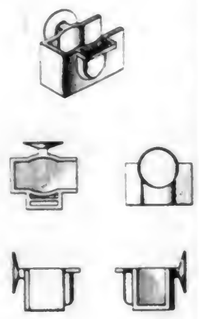
The ornamental design for a bridge crane, substantially as shown and described.

152,198
DESIGN FOR A PULL FOR DOORS AND THE LIKE
Daniel C. Hay, Santa Monica, Calif.
Application December 17, 1946, Serial No. 135,568
Term of patent 14 years
(Cl. D10—8)



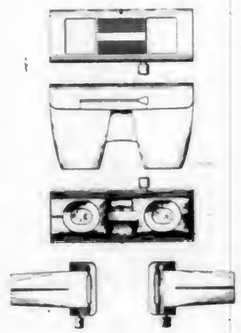
The ornamental design for a pull for doors and the like, as shown.

152,199
DESIGN FOR A COMBINED DIAL AND HANDS FOR A CLOCK
Willard C. Jenkins, Wilmington, Del.
Application March 20, 1947, Serial No. 137,783
Term of patent 7 years
(Cl. D42—10)



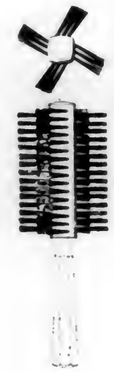
The ornamental design for a combined dial and hands for a clock, substantially as shown and described.

152,200
DESIGN FOR AN ADJUSTABLE LOUNGE CHAIR
Frank J. Luketa, Seattle, Wash.
Application July 14, 1947, Serial No. 140,265
Term of patent 14 years
(Cl. D15—1)



The ornamental design for an adjustable lounge chair, substantially as shown.

152,201
DESIGN FOR A COMBINED CIGARETTE PACK AND MATCH HOLDER
John L. Mack, Sr., Chicago, Ill.
Application October 15, 1947, Serial No. 141,910
Term of patent 14 years
(Cl. D85—2)

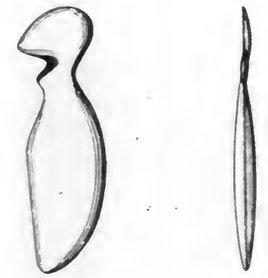


The ornamental design for a combined cigarette pack and match holder, as shown.

152,202
DESIGN FOR A PICTURE VIEWER
Gifford M. Mast, Davenport, Iowa, assignor to Tru-Vue, Inc., Rock Island, Ill., a corporation of Illinois.
Application May 27, 1948, Serial No. 146,641
Term of patent 14 years
(Cl. D61—1)

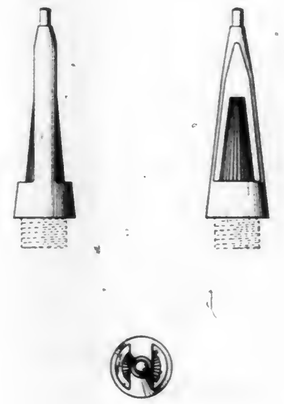
The ornamental design for a picture viewer, substantially as shown.

152,203
DESIGN FOR A HAIRBRUSH
Joseph W. Mayer, Troy, N. Y., assignor, by mesne assignments, to Tek Hughes, Inc., a corporation of New York
Application December 13, 1946, Serial No. 135,480
Term of patent 14 years
(Cl. D86—10)



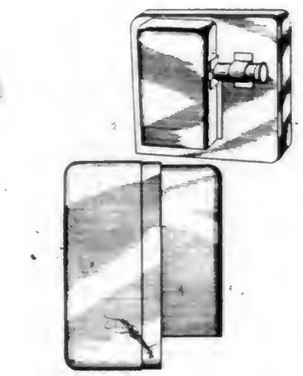
The ornamental design for a hairbrush, as shown and described.

152,204
DESIGN FOR A CANDLEHOLDER
Roy W. Meldrum, St. Paul, Minn.
Application March 26, 1947, Serial No. 137,891
Term of patent 7 years
(Cl. D48—2)

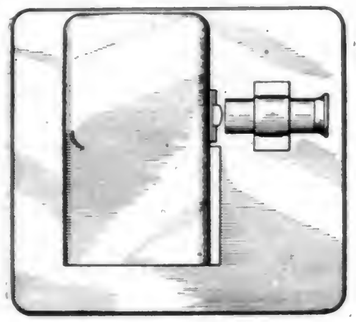


The ornamental design for a candleholder, as shown.

152,205
DESIGN FOR AN ORANGE PEELER
Arthur Miller, New York, N. Y.
Application October 29, 1947, Serial No. 142,193
Term of patent 7 years
(Cl. D22—3)

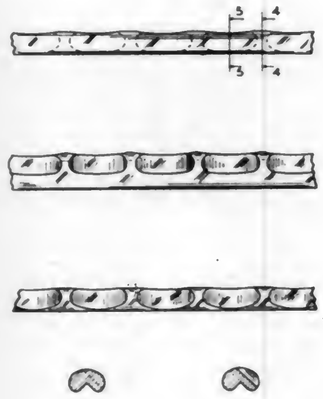


The ornamental design for an orange peeler, substantially as shown.



152,206
DESIGN FOR A TIP FOR A MECHANICAL PENCIL
Lucifer J. Most, Dover, N. J.
Application September 12, 1947, Serial No. 141,351
Term of patent 14 years
(Cl. D74—1)

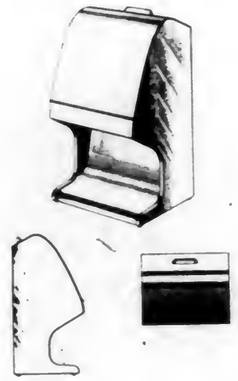
The ornamental design for a tip for a mechanical pencil, as shown.



152,207
DESIGN FOR A PROJECTOR
Otto R. Nemeth, Chicago, Ill.
Application November 18, 1946, Serial No. 134,865
Term of patent 14 years
(Cl. D61—1)

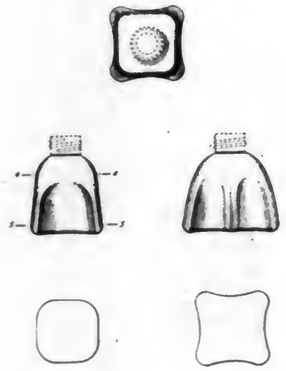
The ornamental design for a projector, as shown and described.

152,208
DESIGN FOR LENS RIM MATERIAL FOR SPECTACLE FRAMES
Martin J. O'Dea, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application March 12, 1947, Serial No. 137,544
Term of patent 14 years
(Cl. D57—1)



The ornamental design for lens rim material for spectacle frames, substantially as shown and described.

152,209
DESIGN FOR A SLIPPER
William M. Page, Marblehead, Mass.
Application May 27, 1947, Serial No. 139,304
Term of patent 14 years
(Cl. D7—7)

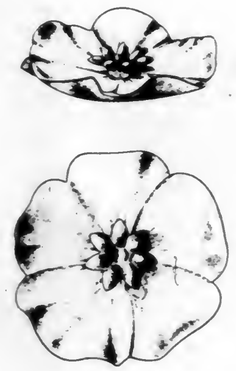


The ornamental design for a slipper, substantially as shown and described.

152,210
DESIGN FOR A DISPENSER CABINET FOR PAPER CUPS OR THE LIKE
Albert A. Perelman, Brooklyn, N. Y., assignor to Lily-Tulip Cup Corporation, New York, N. Y., a corporation of Delaware
Application December 27, 1946, Serial No. 135,807
Term of patent 14 years
(Cl. D52—2)

The ornamental design for a dispenser cabinet for paper cups or the like, substantially as shown.

152,211
DESIGN FOR A BOTTLE
Joseph B. Platt, New York, N. Y., assignor to Pond's Extract Company, New York, N. Y., a corporation of Delaware
Application May 23, 1947, Serial No. 139,247
Term of patent 7 years
(Cl. D58—6)



The ornamental design for a bottle, substantially as shown and described.

152,212
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
Clifford Potts, Zanesville, Ohio, assignor to Louis A. Butler and Arvilla K. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio
Application December 30, 1947, Serial No. 143,439
Term of patent 14 years
(Cl. D85—2)

The ornamental design for an ash tray or similar article, substantially as shown.

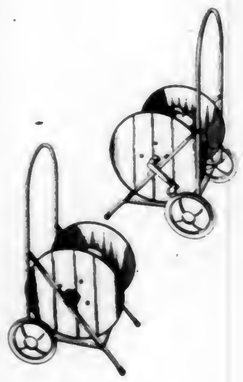
152,213
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
Clifford Potts, Zanesville, Ohio, assignor to Louis A. Butler and Arvilla K. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio
Application January 7, 1948, Serial No. 143,570
Term of patent 14 years
(Cl. D85—2)

The ornamental design for an ash tray or similar article, substantially as shown.

152,214
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
Clifford Potts, Zanesville, Ohio, assignor to Louis A. Butler and Arvilla K. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio
Application January 17, 1948, Serial No. 143,843
Term of patent 14 years
(Cl. D85—2)

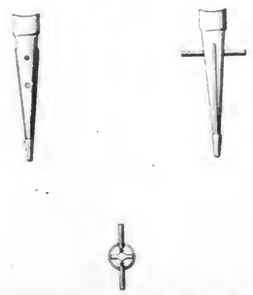
The ornamental design for an ash tray or similar article, substantially as shown.

152,215
DESIGN FOR A DISPLAY STATUETTE OR SIMILAR ARTICLE
Gordon Price, Canton, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application July 25, 1947, Serial No. 140,519
Term of patent 14 years
(Cl. D1—2)



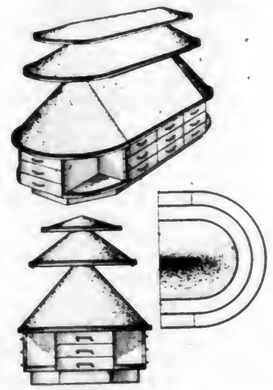
The ornamental design for a display statuette or similar article, as shown.

152,216
DESIGN FOR A COMBINED BROOCH AND LIPSTICK HOLDER
Joseph J. Quethera, Trona, Calif.
Application November 10, 1947, Serial No. 142,411
Term of patent 7 years
(Cl. D86—10)



The ornamental design for a combined brooch and lipstick holder, as shown and described.

152,217
DESIGN FOR A HOSE REEL
William H. C. Rehm, South Westerlo, N. Y., assignor to Clifford B. Hannay and Son, Inc., Westerlo, N. Y., a corporation of New York
Application April 26, 1948, Serial No. 145,975
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a hose reel, substantially as shown.

152,218
DESIGN FOR A GOLF TEE
Leo Reifman, Jackson Heights, N. Y.
Application October 12, 1946, Serial No. 133,911
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a golf tee, as shown and described.

152,219
DESIGN FOR A CUTLERY DISPLAY CASE
Howard M. Schick, Lee's Summit, Mo.
Application December 23, 1947, Serial No. 143,291
Term of patent 14 years
(Cl. D80—9)

The ornamental design for a cutlery display case, as shown.

152,220
DESIGN FOR A SLED
John L. Shailer, Roslyn, N. Y.

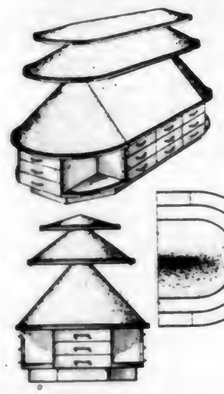
(Cl. D14—3)

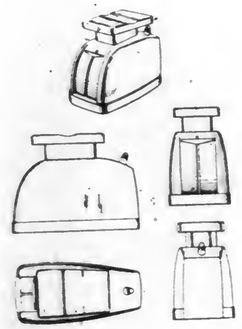


The ornamental design for a hose reel, substantially as shown.

152,218
DESIGN FOR A GOLF TEE
Leo Reifman, Jackson Heights, N. Y.
Application October 12, 1946, Serial No. 133,911
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a golf tee, as shown and described.

152,219
DESIGN FOR A CUTLERY DISPLAY CASE
Howard M. Schick, Lee's Summit, Mo.
Application December 23, 1947, Serial No. 143,291
Term of patent 14 years
(Cl. D80—9)



The ornamental design for a cutlery display case, as shown.

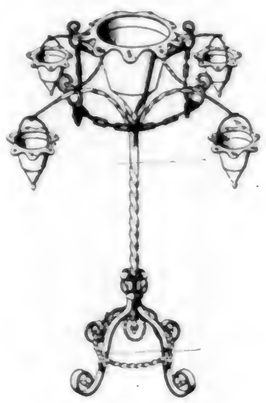
152,220
DESIGN FOR A SLED
John L. Shailer, Roslyn, N. Y.
Application August 31, 1948, Serial No. 148,391
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a sled, substantially as shown.

152,221
DESIGN FOR A POSTAL SCALE
Newson Shewitz, Phyllis L. Sloane, and Anthony Vaiksnoras, Jr., Cleveland, Ohio, assignors to Accurate Parts Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application March 15, 1947, Serial No. 137,613
Term of patent 7 years
(Cl. D52—10)

The ornamental design for a postal scale, as shown and described.

152,222
DESIGN FOR AN EYEGLASS FRAME
George Donald Smart, Los Angeles, Calif.
Application December 29, 1947, Serial No. 143,421
Term of patent 14 years
(Cl. D57—1)

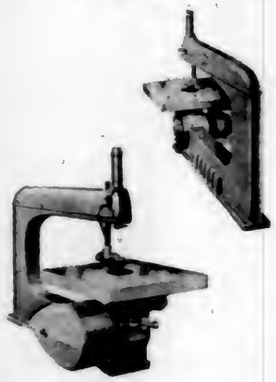


The ornamental design for an eyeglass frame, as shown.

152,223
DESIGN FOR AN EYEGLASS FRAME
George Donald Smart, Los Angeles, Calif.
Application December 29, 1947, Serial No. 143,422
Term of patent 14 years
(Cl. D57—1)

The ornamental design for an eyeglass frame, as shown.

152,224
DESIGN FOR A FLOWER STAND
Frank F. Solak, Klamath Falls, Oreg.
Application November 17, 1947, Serial No. 142,580
Term of patent 14 years
(Cl. D35—3)



The ornamental design for a flower stand, as shown.

152,225
DESIGN FOR A BAND SAW
Clifford Brooks Stevens, Milwaukee, Wis., assignor to Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania
